BUT on the 18th of *June*, 1709, he loſt the Battle at *Paltowa*, which gave a Check to his former reſolute Temper. The Scene was chang'd, and he reduc'd to great Neceſſities, being deſtitute of Proviſions, and the *Muſcovites* having deſtroy'd the Country before him, he was forc'd either to ſubmit to the Enemy, or fight at a great Diſtance. He choſe the latter to his great Mortification, was forced to flee before the ſame Enemy he had juſt now deſpiſed, and what aggravated his Misfortune, was, the Wound he receiv'd in his Foot the Day before the Battle; however, his Lameneſs did not put an End to his Enterprizes, but he cauſed himſelf to be carry'd at the Head of his Army in a Litter; but the Litter, when he was in it, was ſhatter'd to Pieces by a Cannon-Shot, tho' himſelf remain'd unhurt; whereupon he mounted his Horſe, which was alſo ſhot under him, himſelf ſtill remaining unhurt: but his Generals ſeeing this, and his Reſolution ſtill continuing againſt all Probability of either Conqueſt or Safety, they even forc'd him out of the Field, and glad they could ſo eſcape.

THE next Day he croſs'd the *Boriſthenes* with about eighteen hundred Horſe, *Swedes*, *Poles*, and *Coſſacks*, and fled with ſo much Precipitation, that as a Ship chas'd by an Enemy is forc'd to throw overboard ſome Part of her Lading that ſhe may ſail the better, ſo they were forced to diſcharge themſelves of their heavieſt Baggage, amongſt which were ſome large Cheſts of Silver and other Things which might retard their Flight; the Money and moſt valuable Things they caſt into the River *Boriſthenes*, that the Enemy in their Purſuit might not have the Advantage of finding them; the River was broad and the Stream rapid, and as there were not Boats enough to carry them all over with that Expedition that their Occaſions required, the Troopers ventured to ſwim their Horſes over, and a great many both Men and Horſes periſh'd in the River.

BUT under all this Difficulty they had taken Care to ſecure a Coach for the King on the other Side of the River, and ſome light Waggons for thoſe who were weak or diſabled, and the reſt, ſome on Horſeback, and ſome on Foot, all purſued their Journey towards *Oczakow*, but in their Paſſage they went through a tedious Deſart, where they found no Proviſion, nor ſo much as Water, nor a Path, ſo that if they had not had the *Coſſacks* for their Guides, they muſt in all Probability have periſh'd; but tho' the People were very much dejected, it was obſerved that the King kept his Countenance, and did not expreſs the leaſt Concern in this deſolate Condition, but detached ſome *Coſſacks* in Search of Water towards *Oczakow*, which is a little fortify'd Town on the Weſt Side of the united Rivers of *Boriſthenes* and *Bog*, a few Miles above their Influx into the *Black Sea*.

IN ſix Days time they arrived within three Miles of *Oczakow*, and the King ſent to the Baſſa to deſire a Paſſage through his Territories; but before the King's Meſſage arrived at *Oczakow*, the Baſſa having heard of the King's Approach, ſent a Meſſenger to him to offer him whatever he wanted, and at the ſame Time ſent conſiderable Refreſhments to him; but the King and his Company were yet on the contrary Side of the River *Bog* from *Oczakow*, and could not get over for Want of Boats, and the *Muſcovites* being in Purſuit of him, made him very uneaſy: He did not get over till the *Ruſſian* General *Walkonisky* juſt came up with him, but he had the good Fortune to eſcape himſelf, and that was all, for he had the Mortification to ſee five hundred of his Men taken Priſoners by the *Muſco-*

vites, becauſe they could not get over the River quick enough for want of Boats to tranſport them to the other Side.

In this Difficulty the King thought it moſt proper to apply himſelf to the Grand Seignior for Protection againſt the *Muſcovite*, and a Paſſage through the *Turkiſh* Dominions, and diſpatch'd a Letter to him to deſire thoſe Favours, but in the mean Time the Baſſa of *Bender* ſent him an Invitation to come thither, which he accepted, and upon his Arrival was kindly received. The Baſſa pitch'd a Tent for the King on the Bank of the River *Nieſter*, and another for himſelf about one hundred Paces from it. The Baſſa gave him all poſſible Aſſurances of his Friendſhip, and invited him to quarter in the City, but he rather choſe to remain in his Tent, only made Choice of a Place on the other Side of the River, where he encamp'd with his Followers, and there the Officers built Houſes and Soldiers Huts, every one working for himſelf, and living in the Houſe he had built; and by this happy Settlement their Numbers daily increas'd by reaſon of ſeveral *Poles* and *Swedes* that found Means to eſcape from the *Muſcovite* and join'd the King of *Sweden*.

But the King, rather fool-hardy than courageous, ſtill neglected to take any Care of the Wound in his Foot, ſo that by this Time it was become dangerous; for which he was obliged at laſt to ſuffer proper Remedies to be apply'd and made uſe of, and by that Means by the Middle of *Auguſt* he was able to walk. About the Beginning of the ſame *Auguſt*, his Majeſty ſent a Detachment of eight or nine hundred Men to the Frontiers of *Poland*. What was his real Deſign in ſo doing is a Miſtery, but he pretended it was to obſerve what paſs'd there, and promis'd to follow them in a ſhort Time; but the *Muſcovites* having ſeiz'd all the Paſſes leading to *Poland*, and having Parties out as far as *Valachia*, not only intercepted the *Swedes* but made them all Priſoners. This the *Turks* reſented as an unwarrantable Piece of Hoſtility, inſomuch that the *Muſcovite* Ambaſſador at the Port was forc'd to promiſe in his Majeſty's Name that Satisfaction ſhould be made for the Affront; and the further to allay the Reſentment, he was obliged to ſwear that it was done without the *Czar*'s Orders. Some account this a Piece of Policy in the King of *Sweden* to expoſe that Handful of Men to the *Muſcovites* to provoke them to take ſuch an eaſy Prey, and thereby provoke the *Turk* to break with the *Czar*; and altho' the *Turk* did not create a new War with the *Muſcovite* upon this Account, he continued to expreſs ſo much Friendſhip to the King of *Sweden*, that he made him conſiderable Preſents, and ordered a Body of ſeven or eight thouſand Men to aſſemble near *Bender* to convoy him to his own Dominions.

But the King of *Sweden* not thinking a Body of ſeven or eight thouſand Men ſufficient, demanded fifty thouſand for a Convoy; which extravagant Demand the Port reſented, and the *Muſcovites* taking the Advantage of this Difference ply'd the Port with Preſents, that partly the one and partly the other, the *Turk* and the *Muſcovite* inſtead of declaring War contracted a firmer Alliance than formerly.

The King of *Sweden* finding his Demand ſo far from being comply'd with that it was not only rejected but reſented, he began to look upon the Grand Vizier as his Enemy; whereupon he cauſed a Memorial to be drawn up and tranſmitted to the Grand Seignior by General *Poniatowski* on the 13th of *April* 1710. Whereupon the Grand Seignior ſent him a Preſent of Twenty-five fine Horſes with rich Furniture, and an Aſſurance, that he would protect him againſt his Enemies. The Grand Vizier finding the King of *Sweden*'s Succeſs with the Grand Seignior, he likewiſe offer'd a Preſent to the King of *Sweden*, but he rejected it, telling him that brought it, that he did not receive Preſents from his Enemies, nor could he put on that Double-face to take a Preſent from a Perſon that he is endeavouring to deſtroy. This Reſentment run high; the Vizier was depos'd, and the King of *Sweden* pleaſed himſelf with the Thoughts of one being the Occaſion of the other; and whether that was ſo or not, the new Vizier profeſs'd himſelf a great Friend to the King of *Sweden*, and perſuaded the Grand Seignior to ſend him a Preſent of four hundred Purſes.

On the other Hand the Cham of *Tartary* being in the King of *Sweden*'s Intereſt, prevail'd with the Grand Seignior to declare War againſt *Muſcovy*; upon which he was ſo reſolutely bent, that he depoſed both the Grand Vizier and the Mufti for oppoſing it; upon which a new Vizier and a Mufti were choſen, and the Mufti's Declaration of the Lawfulneſs of the War was publiſhed, and the *Czar*'s Ambaſſador at *Conſtantinople* was ſeiz'd and impriſon'd, and circular Letters diſpatch'd to all the Baſſa's and Generals of the *Ottoman* Forces to be in a Readineſs againſt next Spring to march under the Command of the new Grand Vizier, and in the mean Time to corroborate the Matter. The Tartar Cham held frequent Conferences with the King of *Sweden* at *Bender*, as to the beſt Method of proſecuting the intended War, and the Cham's Troops were already making their Winter Campaign, the Winter Seaſon, when the Rivers are frozen over, being the beſt Time for their Incurſions.

When the Horſe Tails or Standards had been ſome time expoſed before the Gate of the Seraglio, the new Vizier was preſented with a rich Sabre ſet with Jewels. This the Grand Seignior gave him as a Token or Badge of the full Power and Authority wherewith he had inveſted him; and when he had aſſembled his Army of two hundred thouſand Men, he begun his March towards the Frontiers. The *Czar*, on the other hand, had an Army, and tho' they were well-diſciplin'd Men, yet they were vaſtly ſhort of the *Turks* in Number, the *Ruſſians* being but ſeventy thouſand, and the Vaivod of *Moldavia*, tho' conſtituted Prince of that Country by the Grand Seignior, yet he join'd the *Czar* with ſix thouſand more, and had repreſented the People of that Country to the *Czar*, as well affected to him, and ready to riſe unanimouſly in his Favour whenever he ſhould appear in that Country; which Encouragement was an Inducement to the *Czar* to venture farther into the *Turkiſh* Territories than he would otherwiſe have done without eſtabliſhing Magazines, and making ſuch Proviſion as is uſual on marching into an Enemies Country; but the reſt of the *Moldavians* as well as the *Valachians* continuing faithful to the Port, the *Czar* was diſappointed of the Help he expected, and was reduc'd to very great Hardſhip, and loſt almoſt one Half of his Army by Death or Deſertion, and the reſt being almoſt ready to periſh for Want of Food, and cloſely purſued by the *Turks*, intrench'd themſelves on a Spot of Ground almoſt ſurrounded by the River *Pruth*; and here they were put to great Extremity, the Officers having nothing to eat for two Days together, and the common Soldiers much worſe; the Horſes died on Heaps for Want of Forage; and in this Condition they were three times attack'd by the Janizaries Sabre in Hand, and yet notwithſtanding their miſerable Condition, they bravely defended themſelves againſt the Janizaries every Time, which little abated their Courage, and obliged them to give the *Muſcovites* a Breathing time, till the *Turkiſh* Artillery arrived, for till then they durſt not charge them any more.

Whe-

When the *Turkiſh* Artillery arrived, they fired upon the *Muſcovite* Intrenchments with two hundred Pieces, for they had ſix hundred Braſs Guns in their Train; and altho' the *Muſcovites* had but a hundred Pieces, yet they did more Execution in proportion; but after above an Hour's firing on each Side, the *Muſcovites* hung out a white Flag, and deſired to capitulate with the *Turks*; being glad of a Truce, was ſigned that very Day, wherein the Czar obliged himſelf to ſurrender *Aſoph*, and alſo to demoliſh his Forts towards the Mouth of the *Don* or *Tanis*, and to evacute *Poland*.

During theſe Tranſactions, the King of *Sweden* receiv'd Advice that the Czar was ſurrounded by the *Turks*, but he had not heard of the Truce between the Grand Vizier and the Czar, and thereupon he mounted his Horſe in all Haſte, in Hopes to find the Czar in that diſtreſs'd Strait that he had heard he was in, and made the beſt of his Way to the Vizier's Quarters in Hopes to add to the Czar's Misfortune, by detaining him, indeed, as a cloſe Priſoner; but ere he arriv'd, the Truce between the Grand Vizier and the Czar was ſign'd, and the Czar diſcharg'd, and was marching off juſt as the King of *Sweden* arriv'd; who nettled at his Diſappointment, boldly and paſſionately upbraided the Vizier with his Conduct in loſing ſo fair an Opportunity of detaining the Czar to deliver him a Priſoner to the Grand Seignior, and ſo eager was he to retrieve the Opportunity that the Vizier had loſt of detaining the Czar, that he deſired twenty thouſand of the Vizier's Troops to go along with him in Purſuit of the Czar, not doubting but with their Help to bring the Czar back Priſoner to the Grand Seignior; but the Vizier would by no Means violate the Truce he had ſign'd with him, but on the contrary ſupply'd the Czar's Army with Proviſions, as if there had never been any Enmity between them.

The Vizier was now ſo far from being directed or adviſed by the King of *Sweden*, that he endeavoured to perſuade him to return home to his own Dominions, either by Way of *Germany* or *Poland*, but he refuſed to move without fifty thouſand Men for a Convoy; which the Vizier not only refuſing, but reſenting, took away his Penſion which the Port allow'd him, thereby to haſten or rather force his Departure out of their Dominions; but the indefatigable King of *Sweden* had Recourſe to other Methods, and preſented a Memorial to the Grand Seignior, which had ſo far the deſired Effect, that the King of *Sweden* had the Satisfaction of ſeeing that Grand Vizier depoſed, becauſe he had diſcharged the Czar upon his bare Promiſe only of delivering up *Aſoph*; which not being done according to the Czar's Promiſe, the Grand Vizier was caſhier'd for diſcharging him upon his own Promiſe only, and the ſucceeding Vizier reſtored to the King of *Sweden* his former Penſion; who now thinking himſelf eſtabliſh'd as a Native, or rather a naturaliz'd Perſon of the Place, built himſelf a little ſtone Palace at *Bender*, as if he was ſettled there for many Years, or for Life: at which his Troops, who waited at *Bender* for his Departure, were ſurpriz'd, and deſired to know what his Majeſty intended to do, that they might direct their Meaſures accordingly, but he gave them no Anſwer, only ordered his Miniſter at the Port to ſolicit for a thouſand Purſes, or five hundred thouſand Dollars to defray the Expence of his Journey to his own *Swediſh* Territories.

But in all this Time the *Muſcovites* had not, according to Agreement, deliver'd *Aſoph*, nor evacuated *Poland*, which ſo provok'd the Grand Seignior, that he again declared War againſt the *Muſcovite*, and confin'd the Czar's Miniſter at *Conſtantinople*: This pleaſed the King of *Sweden*, as hoping now that he ſhould ſee his Deſire upon his Enemy the Czar; but the Port was ſo far from conſulting the King of *Sweden*, or deſiring his Aſſiſtance in the Caſe, that they continually preſs'd him to a Departure, and made him ſenſible that he could not oblige the Grand Seignior in any thing more than in quitting his Dominions; and to get rid of him the ſooner, ſent him twelve hundred Purſes to defray the Expence of his Journey, but lodg'd it in the Baſſa of *Bender*'s Hand, with an Order not to pay it to him till he was ſure he was ſetting forward upon his Journey Home.

The King of *Sweden* hearing of the Money being come, and himſelf under great Neceſſity, importun'd the Baſſa to deliver it to him forthwith: but the Baſſa deny'd, telling him, that he was order not to deliver the Money till the Moment of his Majeſty's Departure; or, if he would venture to diſpenſe with that Order, yet he could not do it without the Conſent of the Cham of *Tartary*; but the King making ſolemn Promiſes, that he would ſet forward on the very Day that the Grand Seignior ſhould appoint; and both the Baſſa and the Great Cham reſpecting him very much, they were ſoon prevail'd upon, tho' contrary to the Order of the Grand Seignior, to let him have the Money.

When he had got the Treaſure in Poſſeſſion, he was not in ſo much Haſte for his Journey as he pretended, but ſquander'd it away, and ſent to his Reſident at *Conſtantinople* to ſolicit the Grand Seignior for a thouſand Purſes more. They finding him trifle at this rate, and the Froſt coming on, which was the moſt proper Time for travelling, and finding that nothing but a poſitive Order, without any Conditions or Delay, would take Place with him, the Cham of *Tartary* gave him direct Orders to march on the fifteenth Inſtant, but neither did he regard that Notice; whereupon the Cham intimated to him, that if he did not quit *Bender*, according to the laſt Notice given him, they would expel him by Force: To which he anſwer'd, that if they did ſo, he would repel Force by Force. The Baſſa finding him ſo obſtinate as well as trifling, and having gone beyond his Orders in giving his Majeſty the Money before he ſet forwards, he came to the King, and in the moſt compaſſionate manner beſought him to begin his March at the Time appointed, adding, that if the King did not begin his Journey as he was order'd, it would not only coſt him his own Head, but he was afraid ſome Violence would be offer'd to his Majeſty; but the King ſeemingly without any Concern ſignified that he would juſtify his Conduct to the Grand Seignior: But the Baſſa reply'd, that the Sultan would not ſtay to hear a Juſtification, but would puniſh a Perſon, if but ſuſpected of the Crime he was charged with.

But all his Solicitations were in vain, the King had ſpent moſt of the Money, and reſolved not to ſtir without a thouſand Purſes more. When the Baſſa acquainted the Cham with the King's Obſtinacy and Reſolution, he began to think himſelf in Danger for being ſo eaſily perſuaded out of the Money before the Time that he was order'd to deliver it; however finding it was in vain for them to endeavour any more to perſuade the King to depart, they jointly ſent an Expreſs to the Port to acquaint him with the whole Affair, and to excuſe themſelves by avering, that it was at the King's earneſt Solicitations and Promiſe to depart, that they delivered him the Money. The Grand Seignior reſenting the King of *Sweden*'s impertinent Demands, cauſed his Miniſter to be arreſted at *Adrianople*, (the Court being then removed thither, and the King of *Sweden*'s Miniſter along with them to purſue his Solicitations) and a Divan being aſſembled upon this Occaſion, the Grand Seignior made the following Speech:

I had

I had ſcarce any Knowledge of the King of Sweden *till his Defeat at* Pultoway *threw him upon my Dominions, I cannot believe I ſtand in need of him, nor have I any Reaſon to love or fear him; but, without conſulting any thing but the Rules of Hoſpitality and my own Generoſity, I have received and maintained him almoſt three Years and a half, with near ſix thouſand Perſons, as well* Poles *and* Coſſacks *as* Swedes, *who follow'd his Fortunes; I have loaded him with Favours, granting him four hundred Purſes for his particular Occaſions ſoon after his Arrival, beſides a Purſe a Day for his Table, allowing his Miniſters and Interpreters Penſions proportionable to their Quality, with Proviſion of all kinds for themſelves and their Houſes. Some Weeks ſince he demanded a thouſand Purſes to enable him to defray the Expences of returning to his own Dominions, and I granted him twelve hundred, with a numerous Convoy, which is ready at* Bender, *with all Things neceſſary for ſuch a Journey, as Horſes Waggons, &c. and now all Things are ready, he declares he is not ready to ſet out, and will not ſtir without another thouſand Purſes; if therefore, after I ſhall have again notified to his Prince that he departs inſtantly, and he ſhall refuſe to go, can any Chriſtian Potentate think it unjuſt, if I compel him to it by Force?* To which the whole Divan unanimouſly anſwer'd, *No. But ſhould he perſiſt in his Refuſal, and oppoſe Force by Force, can I be accuſed of violating the Laws of Hoſpitality if this ungrateful Prince happen to be kill'd in the Conteſt?* To which the whole Divan anſwer'd, *No.* And the Mufti gave his Fetfa, allowing the Juſtice of ſuch a Proceeding; upon this, Orders were ſent to the Baſſa of *Bender* and the Cham, to notify once more to the King, in the Sultan's Name, that the King ſhould depart out of the Sultan's Dominion, or if he did not immediately, they would proceed to Force, and that they would take away his Penſion, and diſcharge the Guard of Janizaries that were given him for his Protection, and ſurround his Quarters ſo as no Proviſion could be brought him. This Meſſage the Baſſa deliver'd to him on the ſecond of *January* 1712, adding that it was now a proper Seaſon to march, and that if he did not depart upon this Notice the Porte would uſe open Violence. He ſeem'd to hear them with Patience till they mention the Word *Violence*, but then turn'd his Back upon the Baſſa without any Anſwer, but only telling him he was not ready yet, that he did not fear their Threats, but if he was attack'd he would defend himſelf; whereupon the Baſſa retired.

His Guard of Janizaries was immediately taken away, upon which he order'd his Men to barricade his Palace, himſelf alſo working with his own Hands, and the Ground being too hard, and their Time too ſhort, to caſt up a regular Intrenchment, they made a Breaſt-work with Waggons, Tables, Chairs, Dung, and the Rubbiſh of Stables, which they demoliſh'd for that Purpoſe; and the King knowing that his Allowance was taken off, he ſhew'd his Reſentment of it, by taking nineteen of the fineſt Horſes which had been preſented to him, and order'd them to be ſhot a little without the Camp, to let them ſee that he neither wanted their Allowance nor their Preſents; but the Horſes were not all waſted, for they made a glorious Feaſt for the *Tartars*. The Day after he rid in a ſort of a Triumphant Manner through *Bender*, as it were in Defiance of them, although he had ſcarce ever been in the Town before.

In the mean Time ſeveral Detatchments of *Tartars* block'd up the *Swediſh* Camp, to cut off all their Supplies, and the Country about were forbid to furniſh them with any Proviſions, and when any *Swedes* were found ſtraggling out of the Camp, they were taken and made Priſoners, and the *Turks* made Preparations to attack the *Swediſh* Camp; which the King's Chaplains ſeeing, threw themſelves at his Feet, begging of him not to expoſe the ſhatter'd Remains of *Pultoway* to the Violence of the *Turks* and *Tartars*, arguing that every Prince was Maſter of his own Dominions, and it was no Injuſtice in the *Turks* to require Strangers, whom they had harbour'd and reliev'd, to return home, and even compel them to it too if they would not depart without it, and if they would drive them out, it would be very ungrateful in them to fight and kill thoſe Benefactors, for no other Reaſon but to remain in their Country whether they would or no; but the King interrupted them, and ſaid, if you have a Mind to preach, chuſe another Place and other Auditors, our Buſineſs here is to fight, and ſo turn'd his Back upon them without giving them any further hearing.

In a ſmall Time after about three thouſand Janizaries march'd out of *Bender*, with a ſmall Train of Artillery, to attack the *Swediſh* Camp, crying *Alla, Alla*, (the Name of God,) as they always cry at an Attack. The Han and the Baſſa march'd after them with a Body of Horſe, and with theſe Forces they inveſted the little *Swediſh* Camp on every Side; and when they had got all Things ready for an Attack, they ſent once more to the King to know whether he would depart quietly before they uſed any further Hoſtilities, but the King would not ſee the Meſſenger, but only bid them tell him that he was ready to defend himſelf when ever he ſhould be aſſaulted; however, his Generals and Officers endeavour'd what they could to diſſuade him from ſuch an obſtinate and unequal Engagement in a ſtrange Country; where, if it could be imagin'd poſſible for them to defeat the ſmall Party that at preſent attack'd them, they could never hold their Victory long, but would bring the Nation about their Ears, and be ſure to be overpower'd with Numbers at laſt; and if it was poſſible for them both to gain the Victory and maintain their Ground, yet it would be an indelible Blot upon the *Swediſh* Name for them to fight and plunder their Benefactors who had reliev'd them in their Diſtreſs; with theſe and ſuch like Arguments they thought to have diſſuaded him, but ſtill in vain, for he only anſwer'd, *You have acted formerly like brave Men, but now you talk like Cowards.* One of his Officers therefore, to gain Time, and if poſſible to prevent an Attack, acquainted the *Turkiſh* Aga, that the King his Maſter could not depart, unleſs they gave him more Time to prepare for his intended Journey to his own Dominions.

The Aga no ſooner returned with this Anſwer, but the *Turkiſh* Forces reſolving not to to be trifled with any longer, began to beat Drums, ſound Trumpets, and ſtrike up their other Warlike Muſick, and the bold King of *Sweden* anſwer'd with the ſame, whereupon the *Turkiſh* Artillery began to play; but Mr. *Grothuſen* went over to the Baſſa to deſire a little Reſpit; but the Baſſa anſwered, in ſhort, that the Sultan's Orders would admit of none, and ordered the Aga of the Janizaries to begin the Attack, and promiſed eight Ducats a Man, to every one that ſhould have any Hand in taking the King of *Sweden* alive: But Mr. *Grothuſen* apply'd himſelf to the Janizaries in ſoft Terms, alledging, that as they had given Quarter to the *Muſcovites*, he hop'd they would not be more ſevere with the *Swedes*, whom they had call'd Brethren; we only deſire Time, and are deny'd: upon which many of them, eſpecially thoſe who had received Favours from the *Swedes*, cry'd out, *You ſhall have Time, we will do nothing againſt you.* And ſome of the moſt obſtinate turn'd back, and threatned to fire if he pretended to force them. Others, to juſtify their own Obſtinacy, ſpread a Report, that the Baſſa's Orders, as he call'd it, were feign'd, and by that Means clogg'd his Men with a Sort of a Doubt or Heſitation, which made them more indifferent in

acting

acting againſt the King of *Sweden*; whereupon the Baſſa commanded his Aga to lead the Forces back to *Bender*, and the Baſſa follow'd them.

But the Cham of *Tartary*, a little more reſolute, remain'd in the Field, and ſent Word to the Baſſa at *Bender*, that if the Janizaries would not obey his Orders, and fight under his Command, he would attack the *Swedes* without them with his own Guards only: When the Baſſa heard this, he ſummon'd the Captains of the Janizaries together, and deſir'd them to go the next Day to the *Swediſh* Camp, and to deſire the King in a friendly manner, as he knew they were not his Enemies, to truſt himſelf in their Hands, and only march a Mile from his Camp, that they might then juſtly ſend Word to the Grand Seignior that his Orders were executed, and that the *Swedes* were indeed upon their March. The Janizaries approv'd of his Propoſal, and further unanimouſly declar'd, that if the King of *Sweden* refuſed this Propoſal, they would begin the Attack the next Minute.

Accordingly the next Morning, being the firſt of *February*, the Captains of the Janizaries went to the King's Quarters, and in Order to ſucceed the better, they took with them *Sellam Agaſi*, the King's favourite Interpreter, and addreſs'd Mr. *Grothuſen* and Mr. *Mullern*, the King's chief Miniſters, to deſire them to perſuade him not to provoke them to uſe Violence, as they muſt do if he refuſed to move immediately; but if he would ſet forwards, they would convoy him wherever he pleas'd, and protect him from all Enemies.

While theſe Diſputes were depending, the King receiv'd a Letter from his Envoy at *Adrianople*, (the Grand Seignior's Court being there at that Time) aſſuring him that there had been three Divans aſſembled, the Grand Seignior preſent at every one, of which it was agreed *nemine contradicente* to drive the King of *Sweden* out of *Bender*, as an ungrateful Perſon, and unworthy of the Civilities he had receiv'd amongſt them, and that they had obtain'd the Mufti's Fetſa to put every one to the Sword that ſhould make the leaſt Reſiſtance; but neither the Letter nor the Perſuaſion of his Officers had any Effect upon him, but on the contrary, he ſent to the Officers of the Janizaries to order them to retire, or he would burn their Beards, which is the greateſt and moſt contemptible Indignity that can be offered to a *Turk*; and when his Officers undertook to adviſe or perſuade him, he interrupted them, telling them, *It was not a Time to preach but to fight.*

The Janizaries, affronted at this unmannerly Uſage, call'd the King *Iron-Head*, and in a Paſſion return'd to *Bender*, and inform'd the Baſſa what an ungrateful Return they had met with for all their paſt and intended Kindneſs, and withal prompted the Baſſa to attack him, telling him they were ready to march and put the Grand Seignior's Orders in Execution that Moment, and, the Affront being reſented on all Sides, Orders were given to renew the Attack with the utmoſt Vigour; which they began with the Word *Alla, Alla*, (in the Name of God) as before, but advanced in great Diſorder, and had they met with a vigorous Defence, their Attack had been to little purpoſe; but the *Swedes* not being able to make any powerful Reſiſtance, the *Turks* ſoon forc'd their Intrenchments, and not above ſixty in five or ſix hundred making any Defence, the greateſt Part of them ſurrendered themſelves as Priſoners, and in leſs than half an Hour the King found himſelf in a great Meaſure deſerted.

But ſtill his Courage, or rather his Reſolution, did not fail, but he apply'd himſelf to the few Men he had yet left, ſaying, *Let thoſe who have any Courage left follow me, and I'll prefer them*, and upon theſe Words he diſmounted, and about thirty of his common Domeſtick Servants followed him, while he made his Retreat Sword in Hand to his Palace, where he found the *Turks* in Poſſeſſion, plundering every Apartment as faſt as they made themſelves Maſters of them, only one Apartment the King's Chief Miniſter with only two and twenty *Swedes* defended, and kept Poſſeſſion of.

In the mean time the King gain'd the Weſtern Door of his Palace, and charg'd the Enemy with great Fury; but endeavouring to break through the Crowd he fell down, and a Janizary taking that Advantage, diſcharg'd a Piſtol at him, but it only ſing'd his left Eye-brow, and the Bullet graz'd upon his Noſe, without doing him any other Damage, but the ſame Bullet wounded General *Hordth* in the Arm, and diſabled him ſo, that he was eaſily made a Priſoner.

The King recovering himſelf, and being well ſupported by his Followers, join'd thoſe who were defending themſelves in the Palace; but when he review'd his Garriſon that was in his Palace, he found that when all together they did not amount to above one or two and forty Men; but he encouraging them by his Promiſes and Example, they attack'd thoſe *Turks* who ſurrounded him, and endeavour'd to make him a Priſoner, but he kill'd two with his own Hand, and having wounded a third, he cleft the King's Cap, and thinking to follow his Blow, and make the next Stroke fatal, the King caught his Scymeter to break the Force of his Stroke, by which his Hand was wounded; and while the King was thus engaged, another Janizary, for the ſake of the Reward offer'd for taking the King Priſoner, ruſh'd upon him, and puſh'd him againſt the Wall, ſeiz'd him by the Collar and call'd out for Aſſiſtance; but Baron *Spar*'s Cook coming up to relieve the King, ſhot the Grenadier dead, and diſcharg'd the King, for which the King afterwards made him a Captain.

When the King found himſelf thus diſengaged, he again reſum'd his Station at the Head of his People, and renewing the Fight, recover'd the great Hall in leſs than an Hour, and from thence he paſs'd to his own Chamber, where he found the *Turks* and *Tartars* at work plundering for what they could get; moſt of them upon his Approach jump'd out at the Window, but he found two ſculking in a Corner with their Piſtols cock'd, but either by the ſudden Conſternation they were in, or for what other Reaſon is unknown, he run them both through at once with his long Sword before they ſo much as attempted to fire at him, and another that he found in another Corner, begg'd for Quarter, which his Majeſty granted on Condition he would go and give the Baſſa an account of this Rencounter.

By this time his Majeſty had loſt eight or nine out of the little more than Forty Men he had; however, by the help of the reſt he clear'd the reſt of the Apartments of all the *Turks* and *Tartars*, who eſcap'd through the Windows and Doors as faſt as they could; whereupon the King commanded all the Doors and Windows to be ſhut, only leaving room to fire through the Windows upon the Beſiegers, who ſtill continually encreaſed.

The *Turks* having by this time loſt above two Hundred of their Men, and their Cannon doing but little Execution, either by the Unskilfulneſs of their Gunners, or the Hurry and Confuſion in which they fir'd, they were reſolv'd to go a nearer way to Work, which was by ſetting the Houſe on Fire, to accompliſh which the *Tartars* were order'd to faſten lighted Matches and other Combuſtibles to their Arrows, and ſhoot them at the wooden Roof while the Janizaries heap'd up Straw, Wood, and other Fuel againſt the Doors and ſet that on Fire, and while the Houſe was burning ſtill, the beſieg'd King and his ſmall Company continued firing for ſome time; but the

Flames encreasing, the King, with seven or eight of his Men, got upon the Roof with Sabres and Hatchets, thinking to break it down and extinguish the Flames; but finding this in vain, they went to seek for Water, but could find no Liquid but only Wine and Brandy, they handed it by Hatfuls from one to another to throw in the Fire, which instead of extinguishing made it rage the more.

When they found it in vain to endeavour any more to extinguish the Flames, and they had continued till the Roof was dropping in, it was then proposed to quit that House, and go to Mr. *Mullern*'s new House, which, being all of Stone, the Fire could not so soon affect; this was agreed upon, and they sallied out with their Arms in their Hands; but the *Turks*, assuring themselves that the *Swedes* must either quit the House or be burnt with it, and supposing they would chuse the former, had planted Janizaries in all the Avenues, by which Means the King and his small Company were soon surrounded, who falling violently on the King, crush'd him down, and no less than one and twenty Janizaries fell upon him, every one so eager to be intitled to the Reward for taking him, that those who could not come at his Person, endeavour'd to get a Scrap of his Cloaths, as a Badge of their Title to the Reward offer'd for taking him.

Having now got the King in Possession, they immediately convey'd him to the Bassa's Tent; where he still retain'd his resolute Temper to that degree, that he would neither sit down at the Bassa's Invitation, or give any Attention to what was said to him, and as the King would not sit down, the Bassa in Compliment stood up likewise, and express himself as being sorry that the King had laid him under a Necessity, as he call'd it, to use Violence; but the King, regardless of the Compliment, haughtily answer'd him, that he was never afraid of Death, and that if his Men had done their Duty, they would not have had him so soon.

The Bassa perceiving that his Majesty would neither sit nor enter into Conversation, he order'd a Horse to be brought richly accoutred, upon which his Majesty, at the Bassa's Entreaty, mounted, without speaking one Word, and was carried to the Bassa's Palace in *Bender*, where his principal Officers and Ministers were permitted to attend him; in a few Days he was put into a Waggon cover'd with red Cloth, having one of his Generals with him, and another Waggon was provided for two others of them, and Horses for about sixty *Swedes* of his Attendance, and all were sent under a strong Guard of two Hundred Horse to *Demir-tash*, a Mile from *Adrianople*, where the Porte gave him to understand that he was welcome to *Demir-tash*, and that if he pleas'd he might remain there as long as he liv'd, and they would supply him with Necessaries for his Subsistence.

Altho' there was not much ready Money paid him, yet the Allowance of Provision was so large, that several of the *Swedes* sold part of it to the *Greeks* for ready Money to purchase other Trifles that they wanted, and the Vizier allow'd the King five and twenty Crowns a Day for Wine for his Table.

But notwithstanding that the Grand Seignior used the King of *Sweden* with so much Civility, yet he did not forget to resent the Liberties that the Bassa of *Bender* and the Cham of *Tartary* had taken, in giving him the Money contrary to Order, and several other Favours for which the Cham was deposed and succeeded by his Brother, and the Bassa was banish'd to a little Island in the *Mediterranean*, and all his Effects seiz'd for the use of the Government.

The King of *Sweden* continued about a Year longer in *Turkey*, endeavouring to excite the Grand Seignior to declare War against the *Czar*; but when he found all his Endeavours were in vain, he inclined to return Home to his Dominions, and accordingly the Grand Seignior order'd him three Hundred Horses and sixty Waggons, besides making him a handsome Present, and the King set forward the first of *October*, being convoy'd to the Frontiers by a Body of *Ottoman* Troops, and pass'd Incognito through *Germany*, declining to receive the Favours and Honours due to a Crown'd Head, and offer'd him by his Imperial Majesty.

I presume this Compendious Account of the Transactions of the King of Sweden, *during his long Absence at* Bender, *will not be deem'd an unnecessary Digression, especially as it was the Subject of so much Conversation, and so many Conjectures during the time of his said Absence, some supposing he would never return, others that he was dead, and would undertake to confirm that Opinion, by asserting that the Word* Bender *signified a* Grave, *whilst others thought him Invincible and Impregnable; but by his coming Home he convinc'd one Party that he was not dead, as well as he prov'd to the other that he was not Invincible, by his being kill'd by a Cannon Ball after his Return to his own Dominions.*

CHAP. III.

Of the Province of Bulgaria *and* Servia.

THE next Province to the Southward upon the West Coast of the *Black Sea*, is *Bulgaria*, which is therefore bounded on the East by the *Black Sea*, on the North by the River *Danube*, by which it is separated from *Bessarabia*, *Moldavia*, and *Walachia*, or *Valachia*; it is also bounded on the South by Mount *Hamus*, which divides it from *Romania*, and by *Servia* on the West; it was anciently part of *Mysia Inferior*.

Chief Towns.

Chief Towns are, 1. *Sophia*, situate on the River *Ischar*, near a Hundred Miles South of the *Danube*, and near the same Distance Westerly from *Adrianople*; it lies in the Road from *Belgrade* to *Constantinople*, it was antiently call'd *Sardica*, but was call'd *Sophia* from the Empress of *Justinian* of the same Name, as being rebuilt in her time; it stands on a pleasant Plain between two Mountains, one of which is cover'd with Snow in the Heat of Summer, (but this is to be imputed to the Height of the Mountain rather than the Coldness of the Climate) in less than forty-five Degrees Latitude. The Springs or melting of the Snow afterwards drain'd through the Pores of the Earth, descending from those Mountains, supply the Town with Plenty of excellent Water; it is remarkable for the Baths naturally hot, of great Use for the curing of many Distempers, but though its Name from so great an Empress makes it famous, yet it is not wall'd or any ways fortify'd.

Silistria City.

2. *Silistria*, a City on the same River, but to the Northward of *Sophia*, and nearer to the *Danube*; it is about seventy Miles to the Northward of *Sophia*, and is the Seat of a Bassa—— 3. *Nicopolis* upon the same River *Ischar*, at the Influx of that River

River into the *Danube*; it was near this Place that *Bajazet* detain'd *Sigiſmund* King of *Hungary*. There are ſome other Places mention'd by ſome Geographers, which upon Enquiry either belong to the Land of *Utopia*, or are but inconſiderable Villages, when found by Travellers in *Bulgaria*; the Country is very Mountainous, and interſpers'd with Fruitful Valleys, which yield good Corn and Graſs; the Inhabitants are moſtly Chriſtians, they follow Huſbandry, and cultivate thoſe Lands that are capable of it, and are very Hoſpitable to Strangers, but is ſo much infeſted with Robbers in the narrow Paſſes between the Mountains, which is the unavoidable Road between *Conſtantinople* and *Belgrade*, that Sir *Paul Ricaut* gives us an Account of three hundred Merchants travelling that Road that were deſtroy'd by a Gang of Robbers conſiſting only of eighteen, who having hemm'd them in, and the Paſſage being ſo narrow between the Skirts of the Mountains, did more Execution with tumbling Stones down upon them, than they did with their Arms. It was by the help of thoſe Natural Fortifications that the Natives ſo long reſiſted the Force of their Enemies the *Grecian* Emperors.

The Province of *Servia* (anciently call'd *Myſia Superior*, becauſe it lies higher up the *Danube*) is bounded on the North by the Rivers *Save* and *Danube*, by *Bulgaria* on the Eaſt, by *Albania* and *Macedon* on the South, and on the Weſt by a Branch of the River *Save*, which divides it from *Boſnia*; the principal City is *Belgrade*, but as it and ſeveral adjacent Towns were conquer'd in the Year 1718, and are now in Poſſeſſion of the Emperor of *Germany*, I ſhall defer enlarging upon it till I come to ſpeak of the Imperial Dominions and Conqueſts; but as the Emperor's taking it could not alter the Situation of the Place, I ſhall only obſerve that it ſtands at the Meeting or Conflux of the *Save* and *Danube*, and that the Country is well water'd, and is compos'd of a great Variety of Mountains and Plains, Woods and Champagne; it produces good Corn and Wine where it is cultivated, and the more barren Parts are ſtor'd with Minerals, and the Country in general enjoys a very temperate Air.

Boſnia. As for the Province of *Boſnia*, its Bounds and Situation has been deſcribed before in the firſt Chapter of the Deſcription of the *Turkiſh* Empire, and therefore, ſhall only obſerve here, that the Emperor having taken *Belgrade* in the Year 1718, he reduc'd a great part of that Province to his Obedience.

Moldavia, Bulgaria, and Valachia. *Moldavia* and *Valachia* are to the Northward of *Bulgaria*, being ſeparated from it by the River *Danube*, and were Part of the antient *Dacia*: theſe Provinces underwent a Revolution in the Year 1686, the *Poles* that Year over-running the Country, and reducing it in general to the Emperor's Government, by taking of ſeveral of the fortify'd Places or greateſt Towns, but the Emperor reſign'd them up ſince at the Peace of *Carlowitz*, and they are now Tributary to the *Turks* as they were before.

Our next Stage is to be in *Romania*, but as by the Way we are to paſs over the Mountains of *Hæmus*, a ſmall Deſcription of them cannot be amiſs; they are call'd by the *Greeks*, *Balcan*; they ſeparate *Bulgaria* and *Servia*, or the antient *Myſia*, on the North of them from *Romania* and *Macedonia*; they are a Ridge of Mountains, continuing more or leſs from *Pontus Euxinus*, or the *Black Sea* to the *Adriatick Sea*, or Gulph of *Venice*, in that part of thoſe Mountains which border upon *Romania*; there are but two Paſſges, one of which was made by the Emperor *Trajan* ſo narrow and ſtrong, that a ſmall Force is able to defend it againſt a numerous Army. The other is near the River *Saltiza*, which tho' not quite ſo narrow or ſtrait as the other, yet being ſo full of Rocks and dangerous Precipices, may likewiſe be eaſily defended againſt a powerful Army; and as for thoſe Parts they are not much eaſier penetrated, as we have an Inſtance in *Perſeus*, the laſt King of *Macedonia*, who when he had fortify'd theſe Straits, conceiv'd it impoſſible for the *Romans* to find any Paſſage, for when the Straits between the Mountains are block'd up, if they would aſcend them in order to find a Paſſage, yet the Tops are ſo exceſſive cold to thoſe who come out of the Heat below, that Travelling there is altogether impracticable.

CHAP. IV.

Treats of Romania, *or the antient* Thrace, *with a Deſcription of the Great Capital* Conſtantinople, *as alſo of* Adrianople, Trajanople, Philippipoli, Gallipoli, &c.

Bounds of Romania. ROMANIA, antiently call'd *Thrace* or *Thracia*, is the moſt conſiderable Province of all *Turkey* in *Europe*, bounded by the above-mention'd Mountains of *Hæmus* on the North, by the *Black Sea*, *Boſphorus* and *Propontis*, on the Eaſt, on the South by the *Archipelago*, and by *Macedonia* on the Weſt; it was once Tributary to the *Macedonians*, it was conquer'd by the *Romans* under the *Caius Stribonius Cucio*, the Proconſul, and in the Poſſeſſion of the Eaſtern Emperors, till it fell into the Hands of the *Turks* about three Hundred Years ago; the moſt conſiderable River of this Province is the *Mariza*, formerly call'd the *Hebrus*; it riſes at the Foot of Mount *Rhodope* on the Borders of *Macedonia*, and running Eaſtward to *Philippipoli* and *Adrianople*, and then turning to the Southward, fall into the *Ægean Sea* or *Archipelago*.

Chief Towns. The chief Towns of this Province are, 1. *Conſtantinople*, the antient *Byzantium*. 2. *Adrianople*. 3. *Trajanople*. 4. *Philippipoli*. 5. *Gallipoli*. 6. *Seſtos*. 7. *Heraclea*. 8. *Rodoſto*: Of theſe in Order.

Conſtantinople. 1. The chief City in the Province, and as ſome ſay, the fineſt Harbour in the World, is *Conſtantinople*, ſo well known in antient Hiſtory by the Name of *Byzantium*, by the *Turks Stamboul*, and by the *Europeans* it is very frequently call'd the *Porte*, inſomuch that that Appellation is underſtood ſynonimouſly to mean the City of *Conſtantinople*, or the *Grand Seignior* himſelf, as *Money was ſent from the Porte*, or *Orders were ſent from the Porte*, &c. Indeed Authors differ about the Reaſon of that general Name the *Porte*, ſome alledging that it is call'd the *Porte* by way of Eminence, as being ſuppoſed the fineſt Port or Harbour in the World, as above; but ſome think it is rather call'd ſo from the Name of one of the Gates of the Emperor's Seraglio which fronted the Town, and was ſo call'd; but whatever be the Reaſon of that Name, it

it is moſt commonly known to us by the Name of *Conſtantinople.*

Situation. IT is ſituate in between 41 and 42 Degrees of North Latitude, it was rebuilt, (or rather indeed built) by *Conſtantine the Great*, and call'd by him *Nova Roma*, and hence the Province formerly *Thrace*, was call'd *Romania*; but after *Conſtantine* the Builder died, they chang'd its Name, and in Honour to his Memory call'd it *Conſtantinople*, and I call him the Builder rather than only the Rebuilder, becauſe it ſtands not exactly on the ſame Ground where *Byzantium* formerly ſtood, and the firſt Foundation of the Walls, as well as of the new Town, were actually laid by him, and it was he that firſt tranſlated the Imperial Seat from *Rome* to this Place, which after the Diviſion of the Eaſtern Empire, continued to be the Seat of their Emperors; but it was taken from the *Greeks* by the *French* and *Venetians* in the Year 1203, and retaken by the *Paleologi*, *Anno* 1254, but *Mahomet* the Second took it from the *Chriſtians* on *Whitſunday*, in the Year 1453, ever ſince which time it has continued to be the Capital of the *Turkiſh* Empire.

IT is ſomewhat in the Form of a Triangle, two Sides of which are waſh'd by the Sea; the Harbour is about three Miles long, and the *Boſphorus* before the City is but about a Mile over, it being the narrow Paſſage between the *Propontis* and the *Black Sea*, and as this Province of *Romania* was formerly call'd *Thrace*, this narrow Paſſage is what we read of in antient Hiſtory by the Name of *Boſphorus* of *Thrace*; the Water is ſo deep, or, according to the Sailors Phraſe, it is ſo ſteep too on *Conſtantinople* Side, that a large Ship may lie very near the Shore and her Keel not touch the Ground. This City affords an exceeding fine Proſpect, eſpecially from the riſing Ground about *Scutari* on the other Side of the *Boſphorus*, from whence *Conſtantinople*, by an eaſy Aſcent from the Water Side, ſhews itſelf to the beſt Advantage, for you may ſee at one View an innumerable Quantity of Moſques, with their Domes and Turrets; the Seraglio and Caſtle of the ſeven Towers, with their Globes and gilded Spires, interſpers'd with Groves of Trees and other Greens, makes a moſt delectable Appearance.

Seraglio. THE Seraglio ſtands upon a Point on the Larboard Side or Left Hand going out of the *Propontis* into the Harbour, and underneath the Seraglio, between it and the Sea, on the Declivity of the Hill, are the Gardens belonging to it, ſuppoſed to be the Place where *Old Byzantium* once ſtood. At the other or Southermoſt Angle of *Conſtantinople* ſtands the Caſtle call'd *Seven Towers*, which was built when this Place was in the Poſſeſſion of the *Chriſtians*, and is now the Place where State Priſoners are confin'd; and at the other Angle quite within the Harbour may be ſeen the Ruins of *Conſtantine*'s Palace; the Town is incompaſſed by a Wall pretty ſtrong towards the Land, but of little Conſequence towards the Sea. In this Wall are twenty-two Gates, five open to the *Propontis* before you go into the Harbour, eleven open to the Harbour, and the other five on the back part of the Town towards the Land; the Gates open to the *Propontis*, and to the Harbour have their reſpective Landing Places and Stairs. The Circumference of the whole City of *Conſtantinople* (exclusive of *Galata*, which is on the other Side of the Harbour, and of all the other Suburbs) is computed at about twelve Miles, which at a diſtance makes a very extenſive as well as beautiful Proſpect.

BUT it appears beſt at a Diſtance, for when a Traveller comes within it, he finds his Expectation much deceiv'd, for the Houſes are low, and moſtly built of Wood, and jutting over in many Places ſo much, that one may almoſt ſtep croſs from one to another, which makes the Streets dark and dirty, as well as narrow; and as their Combuſtible Fabricks are crowded ſo near together, if a Fire happens it can ſeldom be extinguiſhed till it comes to ſome Garden or dead Wall, or other vacant Place; but this in general: Let us now come to ſome Particulars worth our Notice.

AND firſt of the *Seraglio*, which is ſuch a magnifi- *Seraglio* cent Edifice, that as a late Author obſerves, it is rather a Collection of Palaces than one ſingle Palace, there being continually new Apartments and Conveniences added to it, according to the Fancy of the new Emperor, and thoſe built upon new Ground, without demoliſhing the Old to make room for them; the Materials exceed the Workmanſhip, the former being Rich, but the latter very Mean; they are cover'd with Lead, by which they are known to belong to the Grand Seignior, that being a piece of Dignity not allow'd to any Subject there. The principal Entrance into the Seraglio is call'd by the *Turks*, *Capi*, or *the Porte*, by way of Eminence, and by this Name the *Ottoman* or *Turkiſh* Empire is now known; but whether that Name is taken from this Gate is ſtill a Queſtion, or rather an Improbability, for there is nothing Magnificent in this Gate, except the Materials, which are all of Marble. There is an *Arabick* Inſcription over it in Gold and Azure, which ſhews that this and the Emperor's Palace were both built by *Mahomet* the ſecond, but this Gate is not diſtinguiſh'd from the next by the Number of Guards, there being forty or fifty *Capigi*'s at each, who are known by their high ſtiffned-Caps when they are upon Duty; they have no Arms, but a little Staff in their Hands, for even the Janizaries themſelves never go arm'd in the Towns, and laugh at the *Francks*, or the *European* Chriſtians that reckon the Sword a Part of their Dreſs where they are in no Danger.

WITHIN the great Gate above-mentioned, which *Hoſpit.* is open to every Body, there is the firſt Court or Duor, which is conſiderably longer than broad; on the Right Hand is an Hoſpital or Infirmary, built more for Conveniency than Beauty or Shew; however, the Sick are ſo well taken care of and indulg'd here, eſpecially in Drinking Wine, which they are allow'd here for Medicine and the Recovery of Health, that ſome of them will get in upon a very ſlight Diſtemper, or even counterfeit Sickneſs to enjoy the Privilege of Drinking; ſo little Conſcience do they make of Drinking it, if they can come at it by any Pretence whatſoever, notwithſtanding that their Religion ſtrictly forbids it.

ON the Left Hand of this Court, there is an old Building with a Cupola over it, ſaid to have a Chriſtian Temple; here the Arms and other Spoils and Plunder of the Chriſtians are repoſited; here are alſo Lodgings for the ordinary Servants of the Seraglio, and the Mint for coining Money. The ſecond Court, which is alſo open to every Body, is call'd the Court of the *Divan*; in this there are ſeveral Graſs-Plats, ſurrounded with Trees, with Fountains in the middle of them, and the Walks are pav'd with Marble; round this Court runs a large Gallery, low, but tolerably well built, and ſupported by a vaſt Number of fine Marble Pillars: On the Right Hand ſtands the Treaſury, and a Stable where ſome Horſes are kept, ſaid to be the fineſt in the World; theſe are for the Grand Seignior's own Riding, their Bridles, Saddles, and other Furniture being proportionably ſplendid, the Houſen every where ſhining with Gold and Silver, and enrich'd with precious Stones, but neither the Treaſury or the Stables have any thing magnificent in their Architecture.

ON

On the Left Hand of this Court are the Kitchens, being ſeveral large handſome Buildings with Cupola's over them, but they have no Chimneys, only Holes in the Sides of the Cupola's to let out the Smoak, the Hearth being always in the middle of the Room. As for the Number of People that inhabit the Place in the ſeveral Capacities, it is difficult to determine, but the beſt Eſtimate that can be made is from the Quantity of Proviſions expended every Year, which Mr. *Mortraye* obſerves by the Report of ſome of the Cooks, who aſſured him that there was no leſs than Thirty Thouſand Oxen, Twenty Thouſand Calves, Sixty Thouſand Sheep, Sixteen Thouſand Lambs, Ten Thouſand Kids, an Hundred Thouſand Turkeys and Geeſe, an Hundred Thouſand Pigeons, and Two Hundred Thouſand Fowls and Chickens, beſides Wild Fowl and Fiſh; of one Sort of the latter, viz. Turbet they expend at leaſt One Hundred and Thirty Thouſand, and all theſe Articles are expended or conſum'd in the Seraglio in one Year's time; the Turbet is moſt delicious Eating, and ſo plenty in the Seas thereabouts, as well as other ſorts of Fiſh, that the *Turks* can pick and chuſe what they like beſt, and for that Reaſon any ſort of Shell-fiſh of what kind ſoever is ſeldom taken or made uſe of amongſt them.

Proviſions yearly expended in the Seraglio.

There is never any Perſon, but only the Grand Seignior himſelf, is allow'd to be ſeen on Horſeback in this ſecond Court, or Court of the Divan, and ſo profound a Silence is kept in all the Courts of the Palace, that notwithſtanding the vaſt Number of Inhabitants and Reſort of Strangers, eſpecially in the firſt Court where the Servants wait, there is not the leaſt Murmur or Voice heard, but all as quiet as if no Body liv'd there; but being confin'd to that Silence, has put them under a Neceſſity of converſing with their Fingers, which every Perſon is oblig'd to learn that would be admitted to Court, the Grand Seignior himſelf being very much Maſter of, and delighted with that ſort of Converſation.

The Divan.

The Divan is at the farther end of the Upper Court; this is the Place for aſſembling Councils of State, and determining Publick Affairs, and hence it is that the Council when met there is call'd a *Divan*; beyond this no Stranger is admitted unleſs Ambaſſadors who paſs to the Hall of Audience, where the Grand Seignior has a Throne erected, being almoſt quite cover'd over with Pearl and precious Stones; the Hall of Audience is very richly furniſh'd, the Roof and Sides caſt a reſplendent Luſtre with Gold and Azure, and adorn'd with the fineſt of Paintings after the *Perſian* Manner; the Divan is but a low Building, its Height much ſhort in proportion to the large Space of Ground that it poſſeſſes.

Inſide of the Seraglio

It is difficult for a Stranger to penetrate or be introduced further into this ſpacious and ſumptuous Building, only Mr. *Mortraye* procur'd himſelf an Opportunity by a Stratagem; for the Court being remov'd to *Adrianople*, and he having contracted an Acquaintance with a *French* Watch-maker, who was ſent for to rectify and keep in Order ſome fine Clocks that the Grand Seignior had had preſented to him, and the Watch-maker having of Courſe an Opportunity of going into the Rooms where the Clocks were, Mr. *Mortraye* attended him as a Servant, and by that means could give us the following further Account of the Seraglio.

They were conducted by a black Eunuch firſt into the great Hall, becauſe there was an *Engliſh* Clock in a rich Caſe that wanted to be put in Order, and while the Watch-maker was at Work, Mr. *Mortraye* was making his Obſervations, and tells us that the whole Room was lin'd or wainſcotted with *China* Tiles, and all the Roof and the Cieling of the Cupola was adorn'd with Gold and Azure. In the Hall, under the middle of the Cupola, was a Fountain, the Baſon of which was a fine green Stone or Marble, ſuppoſed to be Jaſper; this, as well as other Artificial Fountains, ſerve for their Ablutions, which always precede their Prayers, eſpecially in the Harams of the Women, who always when they enter their Moſques or Temples, have the Alchoran read to them in thoſe great Halls, which ſerve inſtead of Chapels on thoſe Occaſions; thoſe Halls have large Windows, not only glaz'd but have Lattices before them, and round the Room againſt the Walls are Benches cover'd with rich Carpets, where the Ladies air themſelves, and divert themſelves with ſeeing the Gardens.

They were conducted from thence by ſeveral little Rooms like the private Cells of Monks or Nuns, but infinitely excelling them in Richneſs of Furniture; in one of them was a fine Pendulum Clock wanted to be repair'd, it ſtood upon a Maſſy Silver Table before a Looking-Glaſs, whoſe Frame was Silver gilt, curiouſly wrought and embelliſh'd with Foliages in Relievo; two high Stands of maſſy Silver ſtood at the end of a rich Sopha or Bench, which was cover'd with plain green Silk, which was only a Cover or Caſe for the Bench, which was a very rich Brocade with a Gold Ground, the Cuſhions were of green Velvet richly wrought; this Chamber appear'd more beautiful than the Hall, as to its Paintings and Gildings; the bottoms of the Windows were above the Reach of the talleſt Man, the Glaſs was painted in a confuſed manner, but no Repreſentation of any living Creature was upon it.

When the Watch-maker had done his Buſineſs, and Mr. *Mortraye* had finiſh'd the Obſervations that he had Opportunity for, they were led through many fine Halls and Chambers, the Floors of which were cover'd with rich *Perſian* Carpets, and adorn'd with fine Sopha's and gilded Cielings, and from thence they paſs'd to the Sea-ſide through the Gardens, which were full of Cypreſſes and other green Trees planted without any manner of Order; they had not gone above twenty Paces from the Houſe towards the Gardens till they came at a Pillar of Granite Marble of one ſingle Piece, which ſeem'd larger and about a third part higher than *Marcian*'s Pillar; it ſtood upon a ſquare Pedeſtal, adorn'd with ſome mutilated Feſtoons and *Latin* Inſcriptions, but by length of time they were defac'd and not legible, eſpecially to Mr. *Mortraye*, who was obliged to attend their Motions, and could not ſtay to make particular Obſervations of any thing that he ſaw.

What is moſt remarkable beſide, is the Pleaſure-houſe over-againſt *Galata*; it is ſupported by twelve Marble Pillars, it is richly furniſhed, and painted after the *Perſian* manner; to this Place the Grand Seignior often comes to take Water or divert himſelf with viewing the Shipping. There is alſo another Pleaſure-houſe on that ſide of the Seraglio next to the *Boſphorus*, higher than that before-mentioned; it is built on Arches, which ſupport three Salons cover'd with giled Cupola's; to this Place the Grand Seignior frequently comes with the Ladies, attended with the Mutes, and Dwarfs, and other Seraglions, to take the Air and divert himſelf.

Pleaſure-houſe

But Beſides the Buildings, Gardens, and Squares which are more particularly for Pleaſure, there are others in which the inferior Servants, and ſome of the Officers lodge, and all manner of Stores and Proviſions are laid up. As on the Left Hand of the Entrance going down to the Water Side, there are prodigious Piles of Wood for Fuel for the uſe of the Palace, there being ſome Thouſands of Baltagi's or Hatchet-men, who are young luſty Slaves

employ'd continually to cut it down and pile it up, and carry it to the ſeveral Apartments as they have Occaſion for it. And on the other Side, or the Right Hand going down, there is a large Square where they exerciſe thoſe that are intended for Military Employments, the Grand Seignior himſelf being often preſent at their Exerciſes.

Other Palaces.

THERE are ſeveral other Seraglio's or Palaces in *Conſtantinople* beſides the Grand Seignior's, but they make but a poor Appearance when one is near them; nor dare they do otherwiſe, leſt they ſhould be thought to vie with the Grand Seignior, or be thought too Rich, and thereby endanger the ſeizing of his Poſſeſſions; but though theſe Places make no ſplendid Appearance without, except their being encompaſs'd with high Walls, yet within they have generally noble Apartments, adorn'd with Gold and Azure, the Flowers cover'd with rich Carpets, and the Walls freqently lin'd with Tiles in Imitation of *China* Ware; there is generally in every Room a broad Bench about a Foot high againſt the Wall, cover'd with better Carpets than thoſe upon the Floor, and embroidered Cuſhions put upon it. The Womens Apartment is ſeparated from the reſt, and is deem'd ſo ſacred, that none but Women enter it, except the Maſter and his Eunuchs, and ſo ſtrictly do they obſerve that, that if a Criminal makes his Eſcape thither, the Officers of Juſtice will not follow him in, but wait his coming out. They have frequently Fires in *Conſtantinople*, which do a great deal of Miſchief, and the general Method uſed to put a Stop to it, is to employ a great Number of thoſe Baltagi's or Hatchet-men to deſtroy twenty or thirty Houſes round the Houſe that is burning and on each ſide of it, that the Fire may meet with little or nothing to work upon but the Houſe that is already on Fire, and then it will ſtop of courſe when that is burnt. Theſe Fires are moſt frequently occaſioned by the *Turks* ſmoaking Tobacco in their Beds, which they are ſuch Bigots to, that they will not be reſtrain'd from it, notwithſtanding the Danger that attends it, and the ſevere Penalties which the Law inflicts upon thoſe that do it when once they are known

Publick Buildings.

THEY take great Delight in their Temples and publick Buildings, to have them beautiful and magnificent, and amongſt Travellers, the ſeven Royal Moſques or Temples are not the leaſt worth Notice, they not being encompaſs'd and hid by Houſes or Tradeſmens Shops, as the Churches are among the *European Chriſtians*, but ſtand ſingle within ſpacious Incloſures, planted with fine Trees, and adorn'd with noble Fountains.

St. Sophia

THE Principal of theſe ſeven Moſques is call'd *St. Sophia*; it has a very advantageous Situation, being over-againſt the great Gate of the Seraglio, in the moſt beautiful part of the Town, upon an Eminence from whence there is a gradual Deſcent to the Sea: It was formerly a Chriſtian Temple, built by the Emperor *Juſtin*, who liv'd about two Hundred Years after *Conſtantine the Great*, enlarg'd and beautified by *Juſtinian*, and dedicated to the Wiſdom of God; whereupon it obtain'd the Name of *Agia Sophia*, which Name it ſtill retains, notwithſtanding that it is converted or rather perverted from a Chriſtian Temple to a *Turkiſh* Moſque; it is of a ſquare Form, being 570 Foot long, and four Hundred Foot broad, but appears round within. There is a Portico or Piazza twelve Yards deep, ſupported by Marble Pillars extends the whole Length of the Front. This Piazza, which in the time of the *Greek* Emperors ſerv'd as a *Veſtibulum*, and has a Communication with the Church by nine folding Doors, the Arches being all of Marble, and the Leaves of Braſs adorn'd with Baſſo Relievo, extremely Magnificent, and the middlemoſt of thoſe Doors is very large. This *Veſtibulum* is join'd to another parallel to it, which has only five brazen Doors, the Leaves whereof were charg'd with Croſſes, but there are now left only the upright Beams, the croſs Beams being taken away. The *Turks* have built a large Cloiſter parallel to theſe *Veſtibulums*; in it are the Cells or Lodgings of the *Mollas* and other Officers belonging to the Moſque.

THE greateſt part of this Building is cover'd by a Cupola of admirable Workmanſhip, and at the Foot of the Dome or Cupola runs a Piazza of thirty Foot deep or broad, which ſupports a Gallery of the ſame Breadth, by ſome call'd *Conſtantine*'s Gallery; it was formerly ſet apart for the Women. There are two leſſer Galleries over this, which makes a handſome Figure in the time of the *Ramezan*, when they are all filled with Lamps; the Cupola is thirty-ſix Yards from Side to Side, and is ſupported by four vaſt Pillars about eight Fathoms thick, the Arch is illuminated by four and twenty Windows placed round it at equal Diſtances; from the Eaſt End of this Dome we paſs on to the Demi-Dome in a ſtrait Line; this was formerly the Sanctuary of the Chriſtians, and their great Altar was plac'd here; there are in this Moſque one Hundred and ſeven Pillars of various Kinds of Marble, of which ſome are Porphyry, ſome *Egyptian* Granite, and the whole Dome is lin'd with curious Marble and exquiſite Workmanſhip.

Solymania

THE next Moſque to *St. Sophia* for Beauty and Workmanſhip is *Solymania*, ſo call'd from its firſt Founder *Solyman* the ſecond; the Outſide of this Moſque may be ſaid in ſome Meaſure to exceed that of *St. Sophia*, the Windows being larger and better diſpoſed, the Galleries more regular and ſtately, and the Whole compoſed of the fineſt Stones brought the Ruins from of *Chalcedon* and *Troy*; the Mauſoleums of its Founder *Solyman* and his *Sultana*, are behind this Moſque, cover'd with Noble Domes; there is over *Solyman*'s Coffin, a rich Piece of Embroidery repreſenting the Town of *Mecca*, and at the Head of the Coffin is a Turbant with a Tuft of Heron's Feathers enrich'd with precious Stones, the whole Tomb being illuminated with a vaſt Number of Lamps and Tapers, and Religious People attend conſtantly to read the *Alchoran*, and pray for the Souls of the Deceaſed, and have ſtated Salaries for their ſo doing.

THERE is another Moſque founded by the Mother of *Mahomet* the fourth; it is a very handſome Structure, and is much the ſame Model and Materials with *St. Sophia*, and being the moſt frequented Part of the Town, is nobly illuminated on Rejoicing Days; for they do not only fill the Galleries and Minarets with Lamps, but by Cords faſten'd from one Minaret to another, and little Lamps fix'd to them; they repreſent the Name of the Grand Seignior or a beſieg'd Town, or a Battle or any other Fancy ſuitable to the Occaſion of Rejoicing, very artfully.

THE New Moſque built by Sultan *Achmet* is another fine Building; the Entrance is through a large Court which leads to a Portico or Piazza, over which is a Gallery ſupported by Marble Pillars, beyond which is a large ſquare Cloiſter which joins to the Moſque, over which there is a ſtately Dome with ſlender Minarets or Steeples, as in the reſt; but the chief Ornaments of this, as well as the reſt, are branch'd Candleſticks, Ivory Balls, and Chryſtal Globes, one of which contains a little Galley rigg'd, another the Model of the Temple, and every one of them contains ſome Curioſity or other.

THERE are ſeveral other Moſques built by different Founders, as *Sultan Selin*, *Sultan Mahomet*, *Sultan Bajazet*, &c. but they being much of the ſame Form, but of inferior Magnitude and Beauty to what has already been deſcribed, a farther Account of them is needleſs.

BUT

Atmeidan. But another noted Place in *Conſtantinople* is the *Atmeidan*, or the antient *Hypodrome*; it is a famous Square ſtill, as formerly dedicated to the Exerciſe of Horſemanſhip, throwing of Darts in a full Career, &c. and formerly the Horſe Races were run there; it is near ſeven Hundred Yards long, and about one Hundred and ſeventy broad, but the Statues and Obelisks that formerly appeared very grand, are much defac'd; but there ſtill remains an Obelisk of Granite Marble, being one ſingle Piece of fifty Foot tapering upwards, and terminating in a Point, and charg'd with Hieroglyphicks, the Remains are to be ſeen, but are now unintelligible. but by the Inſcriptions on the Baſe it appears that *Theodoſius* the Emperor ſet it up again after it had lain on the Ground a conſiderable time, and the Engines uſed in raiſing it are repreſented in Baſſo Relievo; it had at firſt a Brazen Pine-Apple on the top of it, but that was thrown down by an Earthquake. A little diſtance from hence is another Obelisk compoſed of ſeveral pieces of Marble, but the top of it is fallen, and the reſt is in a ruinous Condition; it was formerly cover'd with Braſs Plates ſet off with *Baſs Reliefs*; former Authors give an Account of a Column repreſenting three Serpents twiſted together, which was deem'd a Charm againſt Serpents, with which this Country was very much infeſted, but late Travellers tell us it is now demoliſh'd.

Burnt Columns. There is a Street in *Conſtantinople*, call'd *Adrianople-ſtreet*, in which is a Column call'd the *Burnt-Column*; it is ſo black and ſcorch'd, that it is hard to find what it is made of, tho' ſome think it is Porphyry. There is alſo the Hiſtorical Pillar, ſo call'd as being cover'd with Figures repreſenting the Hiſtory of the Victories of the Emperor *Arcadius*; it is of plain Marble, and is about one Hundred and Forty-ſeven Foot, or Forty-nine Yards in Height; amongſt the many fine wrought Figures that are upon this Pillar, there is the Emperor ſitting in an Elbow Chair in a Fur Gown; the Imperial Standard is held over his Head by two Angels, with this Motto or Device wrought in it, *Jeſus Chriſt is a Conquerer.*

Hiſtorical Pillar.

Exchange. The Grand *Beſaſtin*, or *Exchange* is admirable, both for the manner of Building, and the Order of diſpoſing of it; here all manner of Handicraft Trades have their Shops in their reſpective Parts of the Exchange, one part of it being aſſigned to the Goldſmiths, another to the Mercers, a third to the Drapers, &c. for different Trades never mix together, but according to what Tradeſman a Perſon wants, he may go to their reſpective Part of the Exchange, and find all the Shops belonging to that Trade together, and take his Choice as he pleaſes; here are alſo the richeſt Merchandize expoſed to Sale all Day, and at Night the Exchange is lock'd up, and the Dealers retire to their reſpective Lodgings in the City. There is alſo another Exchange, where Goods of leſs Value are ſold; but in other Parts of the City there are no Shops or any Trade carried on, or Goods ſold except in the Market-places, and that only for Fleſh and other Eatables.

Caravanſera's. The Caravanſera's, or publick Inns for the Entertainment of Travellers and Merchants, are many of them ſtrong Stone Buildings, and generally built all much after the ſame Form, *viz.* there is commonly a large ſquare Court, in the middle of which is a Fountain; every Side of the Square is a continued Row of Cloiſters, through which the People go to their Lodgings; alſo over the Cloiſter is a Gallery with Lodging Rooms behind it; when a Merchant comes to *Conſtantinople*, and wants both Lodgings and Warehouſe-Room, he need only ſpeak to the Porter or Houſe-keeper, and he may be furniſhed with both, paying only about the Value of half a Crown at Entrance, and two or three Aſpres [Half-pence] a Day, and what they do pay is not applied to the maintaining of thoſe that attend, for the Caravanſera's are built, and the Attendants maintain'd either at the Expence of ſome particular well-diſpos'd Perſon, or out of the Money devoted to Charitable Uſes, to which that which Merchants or Gentlemen give for their Lodgings is apply'd among the reſt, but there are ſome Caravanſera's where they not only give Lodgings gratis, but give the Travellers Rice and Fleſh into the Bargain, but People in any tolerable Circumſtances ſeldom will accept of thoſe Favours without making ſome Returns, or elſe buy their own Proviſions, which is here exceeding Cheap.

Slave Market. They have their Bazars or Market-places where they buy and ſell Slaves of both Sexes, as we do Cattle, which (as a certain Author juſtly obſerves in his Deſcription of *Conſtantinople*) is very ſhocking to the *European Chriſtians*; but it is ſurpriſing to me that thoſe *European Chriſtians* ſhould without the leaſt Remorſe make a Trade and a Practice of that which they think ſo ſhocking in others: How many not only *Europeans*, but *Engliſh Chriſtians*, and Profeſſors of the Reform'd Religion too, not only buy, but ſteal their Fellow Creatures of the Human Species to carry to Market under the Name of Slavery, and rejoice as much in their Succeſs in the Numbers they catch, and the good Price they make of them, as they would in catching and ſelling Fiſh or any other Creatures made for Man's Uſe? and I humbly conceive it is a vaſt leſs Degree of Barbarity in the *Turks*, who bring their Slaves to their own Markets, where they have a Chance of being bought and employ'd there, without being ſhov'd aboard a Ship, and tranſported like ſo many Felons, than it is in thoſe Chriſtians who make a Trade of ſtealing them from their Parents and Families, and carry them to a remote Quarter of the World, where they have no Chance of ever ſeeing their Relations again, and perhaps when old and paſt their Labour, live unprovided for, and die miſerable.

But to return to the Slave-Market at *Conſtantinople*, here Men purchaſe Wives, Concubines, or Servants, agreeing for the Price as we do Cattle in *Smithfield*, or in Country Fairs; this Slave-Market is a large Square, where both Sexes are expos'd to Sale, but more Women than Men; the Male Slaves ſtand out in the middle of the Square, but the Females are kept in little Apartments adjoining to it, where Chapmen go to cheapen and purchaſe them. Thoſe who are diſtinguiſh'd for their Beauty or ſome other Accompliſhments fit to recommend them to People of Condition, thoſe the Merchants keep up in their own Houſes, and bring them up to Singing or Dancing, or other Qualifications, to render them deſirable, and when a Chapman comes to purchaſe one that he fancies, and that ſhe alſo likes to go with, ſhe will uſe the moſt endearing Expreſſions to induce him to purchaſe her, but there is always a ſtrict Guard kept over them to prevent the Chapman's trying his Ware before he has purchas'd, for a Girl is not reckon'd worth half the Money after ſhe has loſt her Maidenhead that ſhe was before, and when the Terms are agreed upon (provided ſhe be a Maid) there are old Matrons appointed to examine their Virginity, and give in their Report to the Seller and Buyer according to their Opinion, *or perhaps a little Reward given the Matrons by the Seller, may purchaſe a Maidenhead for ſome of them that have loſt it, and the Purchaſer think himſelf well off too, when he has her recommended by ſuch proper Judges.*

Harbour. The Harbour of *Conſtantinople* is a large Creek, by which Ships come out of the *Boſphorus* up to the Gates and Landing-Places of the City; the Creek ex-

extends about three Miles up into the Land, and is about a Mile broad at the Entrance, but grows narrower higher up, till it comes to nothing, but only a little River, which comes in at the Head of it. On the other Side of the Creek or Harbour, oppoſite to *Conſtantinople*, is a large Town call'd *Galata*, to which People uſually croſs from *Conſtantinople* by the Wherries, where the Water is about half a Mile broad, or it is common to go by Land, for going up to the Head of the Harbour, there is no Water to croſs, except the little River that falls into it as above-mentioned, and the Journey is pleaſant enough, becauſe there are ſeveral remarkable Things in the way, as firſt the *Ocmeidan* or Field of Arrows, a ſpacious Place where the *Turks* practiſe Archery, and alſo here they come when a War commences, to implore Succeſs to their Arms, and Victory over their Enemies.

Ocmeidan.

The next thing remarkable in the Way is *Caſſumpaſha*, a ſort of a Village where the Arſenal is; here all the Gallies and Ships are built, here being no leſs than one Hundred and twenty arch'd Docks. The Captain Baſſa reſides in the Arſenal, and has the Command of all the Workmen and Marines. From *Caſſumpaſha* there is only a ſmall Space, containing ſome Burying-Grounds; beyond is *Galata*, a handſome Town, and the private Houſes generally better Buildings than thoſe of *Conſtantinople*; in this Place every Sect has the free Exerciſe of their Religion, the Chriſtians have almoſt the ſame Liberty as in *Chriſtendom*, and the *Turks*, who refrain from Wine more by the Reſtraint of their Laws than for Conſcience or Inclination, have Taverns and publick Houſes, and drink Wine with all poſſible Freedom, and thoſe *Turks* that live in *Conſtantinople*, and are denied Wine there, do often croſs the Water to take a Dole.

Fiſh-market.

The Fiſh-Market in *Galata*, is down by the Sea Side, where is great Plenty of all kind of Fiſh, exceeding good and cheap. A little beyond *Galata*, only over ſome Burying-Grounds, is a Place call'd *Pera*; here all the Chriſtian Ambaſſadors have their Reſidence, except thoſe of the Emperor and *Poland*, who are allow'd to reſide within the Walls of *Conſtantinople*; the Houſes in *Pera* are generally handſomer than thoſe in the City, and moſtly inhabited by People of Figure and Character; from *Pera*, paſſing down a great Deſcent, you come to *Tophana*, ſo call'd becauſe all their Artillery is caſt here; but altho' we name theſe Places as ſo many diſtinct Towns or Villages, yet there being nothing but the Harbour between them and *Conſtantinople*, they are generally reckon'd a part of that great City, or at leaſt Suburbs to it, and may as well be accounted ſo, as *Southwark* or *Wapping* may be call'd either the Suburbs or a part of the City of *London*; and if we take thoſe Places in under the Name of *Conſtantinople*, it may be ſaid to be thirty Miles about, though the City within the Walls is not above twelve Miles about, excluſive of the great Seraglio, which of itſelf is three or four Miles in Circumference.

Old Seraglio

But beſides this, which by way of Eminency is called the *Seraglio*, there is another in *Conſtantinople* of about two Miles in Compaſs, call'd the *Old Seraglio*; to this Place the Ladies of the deceaſed Emperors are remov'd upon the Acceſſion of a new one, and from hence they never come out, except ſome of them ſhould have the good Fortune to be re-choſen, and re-inſtated in the great Seraglio by order of the ſucceeding, or rather now preſent Emperor; here are alſo kept, as in Exile, thoſe of the Royal Blood who are ſuffer'd to live.

Scutari.

Over-against the Opening of the Harbour of *Conſtantinople*, but on the *Aſian* Shore on the other Side of the *Boſphorus*, ſtands *Scudaret* or *Scutari*, which ſome reckon a Part of *Conſtantinople*, though ſeparated from it by the *Boſphorus*, where it is a Mile broad and ſtanding in *Aſia*, and yet it is not amiſs to call it ſo, if we conſider that it is the Rendezvous of the Merchants and Caravans of *Armenia* and *Perſia* trading to *Conſtantinople*, and not only ſo, but the Emperor has a ſumptuous Palace and ſpacious Gardens at *Scutari*, to which he ſometimes retires from the Hurry of Buſineſs in *Conſtantinople*.

A little to the Weſtward of *Scutari*, and almoſt over-againſt the Grand Seraglio in *Conſtantinople*, is the Town of *Calcedon*, of which little is now to be ſeen but the Ruins, and as nothing of it now remains ſufficient to give a Perſon any tolerable Idea of what it has been, I ſhall ſay no more of it.

Adrianople.

The ſecond City for Dignity and Magnificence in this Province is *Adrianople*, ſo call'd from the Emperor *Adrian*, who rebuilt it after it had been demoliſh'd by an Earthquake; this is the antient *Oreſtes*, ſo call'd from its firſt Founder; it is about a Hundred and forty Miles Weſt, Northerly from *Conſtantinople*; it ſtands in a low Fruitful Country, a heathful Air, and a pleaſant Situation, which induces the Grand Seignoir often to remove the Court to this Place, and the laſt Sultan eſpecially was ſo fond of it, that he could ſcarce be prevail'd upon to return to *Conſtantinople*; here is a magnificent Seraglio, and ſome noble Moſques, but their private Buildings are but mean, and the Streets as dirty as thoſe at *Conſtantinople*; it is computed about ſeven or eight Miles in Circumference, including Gardens and all, and is ſaid to contain a Hundred Thouſand Inhabitants: when the *Turks* took in the Year 1362. they made it the Imperial Seat, which had before been at *Bruſa* in *Natolia*, and this continued to be the Metropolis of the Empire till the taking of *Conſtantinople*, which has been the Capital of the Empire ever ſince.

The Exchang

The *Biſiſtin* or Exchange of this City, is very remarkable, it being near half a Mile in Length, and between three and four Hundred Shops on the Sides, furniſh'd with rich Goods, and near it is a cover'd Street or Cloiſter a Mile in Length, all full of Shops, and crowded with Buſineſs, every Trade having a particular Part of the Exchange allotted them, where they are to be found, and not diſpers'd up and down, and found with Difficulty, as in *London* and other Places in *England*.

Moſque

The Moſque built by Sultan *Selin* is the chief in the City, but the Form and Materials being much the ſame as before deſcribed at *Conſtantinople*, and there being little Difference, except in the Dimenſions or ſometimes in the Materials of which they are compoſed, it is not worth while to enlarge upon a Deſcription of them.

Trajan

The next great Town is *Trajanople*, ſo call'd from the Emperor *Trajan*, the Builder of it; it is about forty Miles South Eaſterly from *Adrianople*, it was once an Archbiſhop's See, but now an obſcure Place.

Philipp.

Weſt a little Northerly from *Adrianople*, and upon the ſame River, is *Philippipoli*, ſo called from *Phillip* King of *Macedon*, the Father of *Alexander the Great*; it is about eighty Miles from *Adrianople*, and is now a large City ſituate on a ſpacious Plain on the River *Mariza*, or it may rather be ſaid that a part of it ſtands upon the Declivity of a Hill, and the reſt upon a Plain. This is generally allow'd to be the Place whoſe Inhabitants are call'd in the New-Teſtament the *Phillippians*, and to whom St. *Paul* wrote his Epiſtle under the Title of the *Epiſtle to the Phillippians*, which we now receive as a part of Canonical Scripture, and they now ſhew the Remains of two antient Brick Chapels, in one of which the *Greeks* ſay St. *Paul* preach'd, which indeed there is the utmoſt Reaſon to believe, it not being to be ſuppoſed that St. *Paul* would have wrote

an Epiſtle to People that he would not have preach'd to if he was upon the Spot, and Opportunity fell in his Way.

THE Walls of *Philippoli* are now in a ruinous Condition; there are indeed ſome *Greek* Inſcriptions over the Gates, but obliterated and ſcarce legible, and their Monks are ſo ignorant of the Hiſtory of the Place, or its Original, that they give the utmoſt Attention to any Stranger while he relates any thing of the Antiquities of the Place, but never make any Collections, and conſequently are as far to ſeek, and as induſtrious to enquire when the next Travellers comes. This City was taken by the *Turks* in the Year 1360, and is now an Archbiſhop's See.

Gallipoli. ANOTHER large Town is *Gallipoli*, ſituate at the Mouth of the *Propontis*, or Sea of *Marmora* on the *Thracian Cherſoneſe*, or according to the Terms now, it is on the *Weſtern* or *European* Side of the *Propontis*, South Weſt of *Conſtantinople*, and where the Sea of *Marmora* is about five Miles over. It is reckon'd about a Hundred Miles South Weſt from *Conſtantinople* between it and the *Dardonelles*, it has two Ports for the Reception of Ships or Gallies; the Exchange is a handſome Building, and has ſeveral Domes cover'd with Lead, but their common Buildings low and mean, and their Doors not above two Foot and a half high, being made ſo low to prevent the *Turks* riding into their Houſes to inſult and diſturb them where they find the Doors high enough for their Reception on Horſeback. There are ſuppoſed to be about ten Thouſand *Turks* in this City, three or four Thouſand *Greeks*, and the *Jews* are very numerous. This is the firſt Capital Place that ever the *Turks* poſſeſſed in *Europe*, and is ſo convenient a Paſſage from *Aſia* to the antient *Thrace*, (now *Romania*) that other *Mahometan* Princes who had any Deſigns upon this Province, did commonly firſt attempt *Gallipoli*.

Seſtos. THE antient *Seſtos* is the next remarkable Place, it is about twenty-five Miles South-Weſt of *Gallipoli* on the *European* Side, and upon the Shore of the *Helleſpont*; this and the old Caſtle of *Anatolia* on the Eaſtern Shore are the Caſtles call'd the *Dardanelles*, this is the Place of the Amours of *Hero* and *Leander*, which doubtleſs in itſelf was Fact, but now ſo confounded inſtead of being improv'd with the Poetical Flights of our old Authors, that no body knows how much of it to believe; but as thoſe Fictions have crept into the Schools (nay even into our Chriſtian Schools too) he would almoſt be deem'd a Scholaſtick Heretick that would not believe all theſe Poetical Fictions to be Fact, nor dare a great many of the newly initiated Pupils believe the contrary.

THIS is the Place where *Xerxes* laid his Bridge of Boats over the *Helleſpont*, which is here about two Miles wide, and the Caſtles call'd the *Dardanelles* bound for *Conſtantinople*, but the Paſſage is too broad, and the Fortification too weak to hinder the Approach and Paſſage of a powerful Fleet to *Conſtantinople*, and for that the *Turks* were in the utmoſt Surprize when the *Venetians* obtain'd a Victory (if it was worth the Name of a Victory) at the *Dardanelles*, becauſe they apprehended that their next Attempt would be to ſail up to *Conſtantinople*, Bridge of Boats.

Note, *The Reader is to obſerve, that in ſailing from the* Archipelago, *to the* Black Sea, *the Strait paſſing the* Dardanelles *is call'd the* Helleſpont, *the broad Sea between that and* Conſtantinople, *is the* Propontis *or Sea of* Marmora, *and the Strait between* Conſtantinople *and the* Black Sea *is the* Boſphorus, *anciently call'd* Boſphorus of *Thrace.*

Heraclea or *Araclea* is ſituate upon the *European* Shore of the *Propontis*, between *Conſtantinople* and *Gallipoli*; it has been famous for the Amphitheatre erected by the Emperor *Severus*, who to ſuppreſs the Power of *Byzantium*, the antient City near whoſe Ruins *Conſtantinople* now ſtands as before obſerv'd, transferred their Privileges to *Heraclea*; it has a Harbour, but it neither has Water enough for large Veſſels, nor is it ſafe for any, by Reaſon of ſome Rocks that lie almoſt even with the Water at the Entrance of it. *Heraclea*, *Rodoſto.*

Rodoſta is but a ſmall Diſtance from *Heraclea*, on the ſame Coaſt, it is a large and populous Town, and has a good Trade; it is inhabited by *Turks*, *Greeks*, and *Jews*, who have their reſpective Churches and Synagogues, and the free Exerciſe of their Religion.

CHAP. V.

Of the State of the Chriſtian Religion in Turkey, *and more particularly of the* Greek *Church, with the Juriſdiction of their ſeveral Patriarchs; their Feſtivals, Sacraments, Oaths, &c.*

IT will be needleſs here to repeat any Account of the *Mahometan* Religion, *Mahomet* and his Religion being fully deſcribed in Chap. XV. and XVI. of the Hiſtory of *Perſia*, and therefore in order to introduce the ſucceeding Account of the State of the Chriſtian Religion in *Turkey*, I ſhall only obſerve that the *Mahometans* or *Turks* tolerate all Religions, but never encourage or reward the Profeſſors of any but their own; and the Chriſtians in thoſe Countries are perſecuted and oppreſs'd even to this Day; they allow them ſome Churches indeed, but the greateſt part of the Chriſtian Churches are either deſtroy'd or converted into Moſques for the *Mahometan* Worſhip, and they will neither allow the repairing of thoſe Chriſtian Churches now in Ruins, nor the Building of any upon a new Foundation, without extorting an exhortant Fine from the poor Chriſtians for that Privilege. There were ſeveral Churches deſtroy'd by Fire in *Conſtantinople* and *Galata* in the Year 1660. which the Chriſtians, not apprehenſive of any Affront it would be to the Government, rebuilt at their own Charge; but an Edict was immediately iſſued out and executed too, for the demoliſhing of them, but it has ſince been found that a little Money given to the proper Magiſtrates will purchaſe a Diſpenſation and Churches built upon that Foundation ſtand undiſturb'd.

THERE are ſome Severities that the Chriſtians in *Turkey* labour under, as if he ſpeaks irreverently of the *Mahometan* Religion, he muſt either die or turn *Mahometan*; there is no Mitigation of his Sentence, and the ſame if he is detected of too much Familiary with a *Turkiſh* Woman, for then no leſs than loſing his Life or renouncing Chriſtianity can atone for the Crime in this Part of *Turkey*; and if Severities.

a Man, drunk or ſober, raſhly profeſſes himſelf to be a *Mahometan*, he is obliged in earneſt to ſtand by the Religion he profeſt in Jeſt, or to loſe his Life for his ſo inadvertently profeſſing to be a *Mahometan*.

No Chriſtian is allow'd to wear any Part of the Garb by which a *Mahometan* is diſtinguiſh'd, as a white Turbant, a yellow Slipper, or the like, of which if they are detected they undergo ſevere Penalties, and ſometimes the profligate *Mahometans* do not ſtick to charge the Chriſtians with thoſe Crimes, tho' without any Foundation, only to extort Money from them, and yet there is no Place for the Chriſtian to appeal to for his own Juſtification.

Four Patriarchs. THE *Greek* Church is very extenſive, but our Buſineſs now is to treat of thoſe Chriſtian Churches in the *Turkiſh* Dominions, and they are divided into, or diſtinguiſh'd by the four Patriarchſhips of *Conſtantinople, Alexandria, Antioch, and Jeruſalem.*

Patriarch of *Conſtantinople.* 1. AS *Conſtantinople* is now the Metropolis of the Empire, ſo its Patriarch is the firſt in Point of Dignity, and his Juriſdiction the largeſt, extending over all leſſer *Aſia*, except the two Eaſtermoſt Provinces, which border upon *Syria*, and in *Europe* he hath *Romania*, *Macedonia*, and the reſt of *Greece*; alſo *Dalmatia*, *Albania*, *Valachia*, and *Moldavia*, and the Iſlands of the *Archipelago*, he ſtiles himſelf Archbiſhop of *New Rome*, [*Conſtantinople*,] and *OEcumenical Patriarch.*

Patriarch of *Alexandria.* 2. THE Patriarch of *Alexandria*, his Juriſdiction extends over *Egypt*, *Lybia*, and Part of *Arabia*; he ſtiles himſelf, *By the Mercy of God, Pope and Patriarch of the Great City of* Alexandria, *and OEcumenical Judge* or *Patriarch of all Egypt*, *Pentapolis*, *Lybia*, and *Ethiopia*. It is ſaid that this Patriarchſhip was founded by *St. Mark*, and hence *Alexandria* is ſometimes call'd the Seat of that Apoſtle. The Metropolitan of the *Abyſſines* was till of late conſecrated and confirm'd by him. This Patriarch uſually reſides at *Grand Cairo*, for the Conveniency of the Chriſtians of his Communion, they being very numerous in this City, and by that means he can have more ready Acceſs to the Viceroy, in caſe of any Diſturbance or grievous Oppreſſion that requires to be remedied.

Patriarch of *Antioch.* 3. THE Patriarch of *Antioch* has under his Juriſdiction the Churches of *Syria* and *Meſopotamia*, and the Provinces of *Iſauria* and *Celicia* in the leſſer *Aſia*; he ſtiles himſelf, *By the Mercy of God, Patriarch of the Great City of* Antioch, *call'd* Theopolis, *and of all the Eaſt*; he uſually reſides at *Damaſcus* or *Scham.*

Patriarch of *Jeruſalem* 4. THE Patriarch of *Jeruſalem* has *Paleſtine*, and Part of *Arabia*, and ſtiles himſelf, *By the Mercy of God, Patriarch of the Holy City of* Jeruſalem, *and of all* Paleſtine, *the Holy Mount Sion, Syria, Arabia, beyond Jordan, Cana of Gallilee*, &c.

THESE four Patriarchs are pray'd for in their publick Liturgies, and when a Union was propos'd between the *Latin* and *Greek* Churches in the time of Pope *Alexander* the Fourth, his Name was join'd in the Prayer to the four Patriarchs; but at the Return of the *Greek* Commiſſioners to *Conſtantinople*, it was obliterated, and his Holineſs was excluded out of their Prayers; but there is commonly a titulary Patriarch of *Conſtantinople* of the Popes appointing, and alſo a Biſhop who is inveſted with the Power of a Legate. The other Sects of Chriſtians, as *Armenians*, *Maronites*, *Jacobites*, &c. have their reſpective Patriarchs as well as thoſe before mentioned.

THE Chriſtians in *Turkey* are ſo inur'd to Slavery, by the Treatment they meet with from the *Turks*, that it is even become Natural to them, and as they have no Hopes of ever being deliver'd from their Bondage, they never attempt it, only ſometimes flatter themſelves by the Succeſſes of the *Muſcovites* that by their Means their Church will once more become Triumphant, and to corroborate this Belief, the *Turks* have a Prophecy, intimating, that *the Ruin of their Empire will be compleated by the Muſcovites*, which is not improbable if we conſider their Situation and the Enterpriſing Genius of ſome of their Princes; and to this we may add, that the *Muſcovites* are of the *Greeks Church*, and would doubtleſs ſoon be join'd by the *Greek* Chriſtians in *Turkey*, in caſe they ſhould penetrate into the Bowels of that ſpacious Empire.

IF we conſider the Artifices uſed by the *Turks*, to promote the *Mahometan* Religion, and the cruel Oppreſſions and Diſcouragements the Chriſtians labour under in *Turkey*, how deſtitute they are of all Helps of Learning, being depriv'd of the Benefit of Schools or publick preaching, few of them being able to read, and no Sermons preach'd among them except at the Patriarchal Church of *Conſtantinople*, and that only in *Lent* or *Chriſtmas*; if we conſider this, and what little Helps or Encouragements they have to ſupport them under their Chriſtian Reſolutions, and what Temptations they lie under to abandon it for their own Temporal Eaſe and Advantage, it ſeems to be owing to an extraordinary Support from Divine Providence that any of them ſhould continue to hold faſt their Profeſſion of Chriſtianity, but next to that ſome of our Chriſtian Travellers impute their ſteady Perſeverance to their ſtrict Obſervation of the Feaſts and Faſts of the Chriſtian Church; for the moſt ignorant of them can remember, or by Enquiry find out the Approach of thoſe Holy Solemnities, at which times they flock to the Solemnization of thoſe Days in Crowds, and thereby retain and refreſh their Memory of our Saviour's Birth, Crucifixion, Reſurrection, and Aſcenſion, with the Suffering and Martyrdom of the Apoſtles and other Saints; theſe glorious Examples animate them to endure patiently the Tryals that their Religion expoſes them to.

Fixed Feaſts. *Their fix'd Feaſts beſides thoſe obſerv'd in the Church of* England, *are*,

1. THE Nativity of the Bleſſed Virgin, *Sept.* 8.
2. THE Exaltation of the Holy Croſs, *Sept.* 14.
3. THE Death or Tranſlation of *St. John the Evangeliſt*, Sept. 26. for they retain a Belief that he never died, from theſe Words of our Saviour, John 21. 22. *If I will that he tarry till I come, what is that to thee?* but that is not a Proof that he ſhould never die; but *Polycrates*, Biſhop of *Epheſus*, aſſures us that he died, and was buried there, as he relates in a Letter to *Victor*, Biſhop of *Rome*, which is preſerv'd by *Euſebius* in his Church Hiſtory, *Lib.* 3. *Chap.* 31. and is alſo found in other Authors.
4. THE Martyrdom of *Demetrius* the Proconſul, who was piere'd thro' with Launces at *Theſſalonica*, by the Command of *Maximian*, Octob. 26.
5. *St. John Chryſoſtom*, Nov. 13.
6. *St. Nicholas*, Biſhop of *Myra* in *Lycia*, Confeſſor under *Dioclefian* and *Maximian*, Dec. 6.
7. *St. Spiridian*, Biſhop and Confeſſor under *Maximian*, having had his Right Eye ſtruck out and Ham-ſtring'd on his left Leg, was condemned to work in the Mines, but afterwards was preſent at the Council of *Nice*; they keep his Feaſt *December* 12.
8. *St. Ignatius*, the third Biſhop of *Antioch* from *St. Peter*; he was thrown to the Wild Beaſts in the Amphitheatre at *Rome* under *Trajan*, Decemb. 20.
9. *St. Anthony*, one of the firſt Founders of the *Monaſtick* Order in *Egypt* under *Decius*, Jan. 17.
10. *St. Athanaſius* and *St. Cyril*, Biſhops of *Alexandria*, *Jan.* 18.

11. *St.*

11. *St. Gregory* of *Nazianzen*, ſtiled the Divine, is on the ſame Day with *St. Paul*, Jan. 25.

12. *St. Baſil*, *St. Gregory*, and *St. Chryſoſtom*, three famous Biſhops they celebrate together, *Jan.* 30.

13. *St. Blaſius*, Biſhop of St. *Sebaſte* in *Armenia*, put to Death by the Emperor *Diocleſian*, Feb. 11.

14. The Forty Soldiers, call'd in the Calender the Forty Martyrs, who being expoſed in a Lake near *Sebaſte*, were frozen to Death under *Licinius*, *March* 9.

15. *St. George* of *Cappadocia*, martyr'd under *Diocleſian*, April 23, the ſame (for which I know no Reaſon) that is now call'd the Patron of *England*.

16. *Conſtantine the Great*, and his Mother *Helena*, whom they call equal to the Apoſtles, *May* 21.

17. *St. Marina*, Virgin and Martyr of *Antioch*; ſhe was the Daughter of *Ædiſius*, a *Pagan* Prieſt, who was very intimate with *Julian* the Apoſtate: The *Roman Catholicks* call this *St. Margaret*, and thoſe Eaſtern Chriſtians celebrate a Day to her Memory, *July* 17.

18. *Elias* the Prophet, *July* 15.

19. *Paraſceve*, Virgin and Martyr, who had her Head ſtruck off, *July* 26.

20. *St. Panteleemenon*, Phyſician and Martyr, who ſuffer'd at *Nicomedia* in *Bythinia* under *Maximian*, *July* 27. the *Roman Catholicks* call him *Pantaleon*.

21. The Transfiguration of our Saviour, *Auguſt* 6.

22. The Death of the Bleſſed Virgin, *Aug.* 15. commonly call'd the Aſſumption, and a great deal of Ceremony is uſed upon this Occaſion, that Day relating to her Triumphant Aſcenſion into Heaven by the Aſſiſtance of Angels. The Inſtitution of this Solemnity is by *Nicephorus* attributed to *Mauritius* the Emperor about the Year of our Lord Six Hundred.

And beſides theſe ſolemn Feſtivals, they commemorate ſome Saint or Martyr in their Monaſteries almoſt every Day, tho' not with the Solemnity of thoſe above-mentioned, ſo that we need not think it a Wonder that there is ſome Black Letter'd Saint or other in the Calender for almoſt every Day in the Year.

Vigils. Their Prieſts and Deacons, and other Perſons more particularly devoted to Religion, ſtrictly obſerve the Vigils or Eves before theſe ſolemn Feſtivals, ſpending the whole Night in Praying and Reading the Goſpels, or the Life of that Saint, whoſe Feſtival they are commemorating, officiating by Turns, and as one grows weary, another ſupplies the Place; and when the Feſtival Day comes on, they begin their Exerciſe about four or five in the Morning, and continue till about Noon; the Ordinary Prayers begin when the Congregation is pretty full, and then the Life of the Saint is read to the People in Vulgar *Greek*, containing the moſt remarkable Paſſages of the Saint's Life, with his Sufferings and Martyrdom, and concluded with moral Reflections and Applications very affecting, and to which the People are very attentive. The Sacrament is celebrated with great Solemnity, and every one brings his Gift or Preſent, as Bread, Wine, Oil, Wax Candles, Frankincenſe, as their Abilities will permit, and the Service of the Church requires; and upon theſe Occaſions their Charity is commonly very extenſive.

Moveable Feſtivals. The other Feſtivals that are moveable, are govern'd by *Eaſter*, which is the grand Feſtival as in *England*, their Account being the ſame with ours, and *Eaſter* Day is called the Holy Day, or the Great Lord's Day by way of Emphaſis, and by ſome of them it is call'd the Paſſover of the Reſurrection. Upon this Day, and the two following, which we call *Eaſter Holidays*, they, when they meet one another in the Street, inſtead of ſaying, *Good Morrow*, or ſome ſuch common Salute that we uſe, he that ſpeaks firſt, ſays, *He is Riſen*, and the other anſwers, *He is Riſen indeed.* The ſtrict Obſervation of thoſe Feaſts and Faſts, and keeping up thoſe formal Salutes at *Eaſter*, and other proper Times ſuitable to the Occaſion, is ſaid to be the chief Support of the Chriſtian Religion in thoſe Heatheniſh Countries where they have not the Advantage of publick preaching, nor the Scripture in their own Mother Tongue ſo common as we have it in *England*.

Annual Faſts. They have four annual Faſts, the firſt is about our *Lent*, before *Eaſter*, and ſeems to be intended as a time of Mortification, preparatory to the ſolemnizing of *Eaſter*; it continues eight and forty Days, during which time they eat no Fleſh, nor any Fiſh, except Shell Fiſh, which they eat becauſe they think they have no Blood; they never eat any thing made of Milk during that time, but on the *Saturdays* they allow the uſe of Oil and Wine, and on *Lady-Day* and *Sundays* they eat ſome ſorts of Fiſh, which they are not allow'd to uſe at other times in *Lent*.

Paſſion Week. The Week before *Eaſter* is call'd the Great and Holy Week, or the Paſſion Week; they call our *Sunday* the Lord's Day, and our Seventh Day or *Saturday*, they call the Sabbath; the other five they diſtinguiſh by their Order, as Second Day, Third Day, &c. On the *Thurſday* before *Eaſter*, the Ceremony is perform'd by the Patriarch of *Conſtantinople* to waſh the Feet of twelve Monks in the Patriarchal Church; theſe twelve Monks repreſent the twelve Apoſtles, and this Ceremony is perform'd in Imitation of our Saviour's waſhing the Feet of his Diſciples; every one of the twelve Monks bears the Name of the Apoſtle he repreſents, but none of them care to repreſent *Judas* without a Promiſe of Preferment.

Their ſecond Faſt begins the fifteenth of *November*, and continues forty Days, *viz.* till *Chriſtmas*, but in this Faſt they are not under ſuch ſevere Reſtrictions as to Eating and Drinking, as in the former, but allow themſelves Oil and Wine, and all manner of Fiſh.

The third Faſt is kept in Honour of the Bleſſed Virgin; it begins the firſt and ends the fourteenth of *Auguſt*; the Day following being the fifteenth, is the Day of her Aſſumption, as before obſerv'd. The fourth Faſt is moveable, and not always of a like Duration, for it begins the *Sunday* after *Whitſunday*, and ends at the Feaſt of *St. Peter* and *St. Paul*, *June* the 29th; there are ſeveral other Faſts, but leſs material, and not ſo ſtrictly obſerv'd.

Greek Churches. The *Greeks* have yet about ſix and twenty Churches in *Conſtantinople*, and ſix in *Galata*; there are alſo ſeveral Chriſtian Churches in the Towns and Villages near *Conſtantinople* on both Sides of the *Boſphorus*; the Patriarchal Church at *Conſtantiple* is but an ordinary Building, without any great Ornament; here they have ſeveral Relicks lock'd up in Cheſts, which they keep to ſhew to Travellers that will gratify them; but what they put the greateſt Value upon, is a Piece of Black Marble, which they ſay is a piece of the Pillar to which Chriſt was tied when he was ſcourg'd; it is incloſed in a Brazen Grate, leſt it ſhould by degrees be pilfer'd away by Superſtitious or Sacrilegious People; for it is currently believ'd, that the Powder made of this Stone will infallibly cure Fevers and Agues.

The Women never mix promiſcouſly with the Men in the Churches, but are in an Apartment by themſelves, it is ſeparated from the Church by a Lattice, where they can look thro' and ſee the

the Men, but cannot be diſtinctly ſeen themſelves; there are three Tables in the Chancels of their great Churches, on the middlemoſt of which only it is Lawful to conſecrate the Elements. This Table is of Stone fix'd to the Wall, and is call'd the Holy, the Divine, and Myſtical Table, over which there is a little Croſs; and on the Left Hand towards the North, is a little Table, where they place Holy Gifts or Preſents. They generally burn Lamps before the Altar, and ſometimes in the Body of the Church; the *Turks* denying them the Uſe of Bells, they ſupply that Defect by beating with a Hammer upon a Board or Iron-plate, to give People Notice to go to Church, or at certain Hours of the Day.

THE ſevere Courſe of Life which the Monks confine themſelves to, is much admir'd there by a great many of the Order of St. *Baſil* in *Greece*, eſpecially on Mount *Athos*; alſo in *Aſia* there are thoſe of the Order of St. *Anthony*, they live chiefly about Mount *Libanus*, and Mount *Sinai*; they live retir'd, and have their Convents in the moſt obſcure Places; their Innocency and Strictneſs of Life has gain'd them great Eſteem, even of the *Turks* themſelves, inſomuch that they ſeldom give them any Diſturbance.

Three Degrees of Monks

THESE Monks are rank'd in three Degrees or Orders, according to their Age, Sanctity, and Experience; the Novices or young Sort, on their Admiſſion vow Chaſtity and Obedience, and to undergo chearfully all the Auſterities of a Monaſtick Life; and when their Novitiate is compleated, they advance a Degree higher, and commence compleat Monks, changing their coarſe Hair Cloath, for a Coat which they call a leſſer Habit; but the Angelical or Divine Habit, as they call it, is reſerved for thoſe who are particularly remarkable for their Sanctity and Auſterity of Life; ſuch are allow'd to wear what they call the great Habit, which is only a Hood thrown over their Heads and Shoulders.

THE chief Reſidence of thoſe Monks is upon Mount *Athos*, a Promontary jutting into the Sea, in the North Weſt Part of the *Archipelago*, about ſeventy Miles to the Eaſtward of *Salonachi*, or *Theſſalonicha*; it is now call'd *Monte Sancto*, from the great Concourſe of theſe Monks there; there are two and twenty Monaſteries upon it, ſeveral of which belong to the *Bulgarians*, and one to the *Ruſſians*; and it is generally thought that the Monks reſiding in them all, amount not to leſs than four Thouſand Perſons; no Woman is ever ſuffer'd to come within Sight of theſe Convents, and thoſe which are near the Sea, are fortify'd, to ſecure them from Rovers who ſometimes land here.

IT is ſaid theſe Monks keep ſtrictly up to their Primitive Inſtitution, which was ſo much admir'd in the Primitive Ages of Chriſtianity; they are punctual in their publick Devotions at the appointed Hours, and their ſpare time is employ'd in the Buſineſs of the Convent, every one knowing his own Employment; for ſome are Mechanicks, others attend the Vineyards or Husbandry, ſome make Cloaths for the reſt, others go a Fiſhing; every Man follows his reſpective Calling or Buſineſs, only the Clergy are exempted from ſecular Employment, their Leiſure time being ſpent in Tranſcribing Greek Books, and viſiting the Sick; but as they are ſo numerous, it ſometimes happens, in an unkind Seaſon, they are forc'd to ſend out ſome of their Party to beg Relief for the reſt, and they ſeldom return empty-handed; for it is known they never uſe thoſe Means but in extream Neceſſity.

Food.

THEY eat no kind of Fleſh or Fiſh that has Blood in it; their chief Food is Shell Fiſh, Olives, Beans, and other Pulſe; alſo Onions, Melons, Raiſins, and what their Gardens afford; their Bread is a coarſe ſort of Bisket twice bak'd, and with this ſort of Diet, they generally enjoy a good State of Health, and live to a good old Age; they faſt every *Monday*, *Wedneſday*, and *Friday*, only allowing themſelves a Piece of Bisket and a Draught of Water after Evening Prayers; but on the other Days they eat what Meat they think lawful, and drink Wine too, but it is ſaid that in their great *Lent* ſome of them will faſt for forty eight Hours together.

BUT there are ſome Hermits amongſt the *Greeks*, who live more abſtemious Lives than the Monks of Mount *Athos* or Mount *Sinai*, eating nothing but Herbs, nor drinking any thing but Water, and ſuch a Streſs do the Religious *Greeks* lay upon Faſting, that ſome of them account it a leſs Sin to be guilty of Fornication, Drunkenneſs, Curſing, Revenge, and the like, than to violate or neglect an appointed Faſt, and that a zealous Monk will rather die than in any Diſtemper to taſte the leaſt Morſel of Fleſh.

THE modern *Greeks* allow of ſeven Myſteries or Sacraments, *viz.* 1. Baptiſm, 2. Unguent of Chriſm. 3. The Euchariſt or the Lord's Supper deliver'd in the Elements of Bread and Wine. 4. Penance. 5. Holy Orders. 6. Matrimony. 7. Oil with Prayer; but of all theſe they hold only Baptiſm and the Lord's Supper to be generally neceſſary to Salvation, as inſtituted by our Saviour himſelf.

THE firſt Sacrament is Baptiſm, upon which they lay ſo great a Streſs, that they entertain very hard Thoughts of the future State of thoſe that die without it; and where they find a Child's Life in Danger, they allow any Lay Perſon, Male or Female, to adminiſter it if a lawful Miniſter cannot be had at that Inſtant; but if the Child is in a likely way to live, they bring it to Church, Baptiſm. where there is a Font about a Foot and a half deep with Water in it, which in the Winter-time they warm and perfume with Sweet Herbs; upon this this the breathes, and makes a Croſs, and pour Oil upon it three times in form of a Croſs with this Compoſition he annoints the Child, ſaying, *The Servant of God*, A. B. *is baptized in the Name of the Father, and of the Son, and of the Holy Ghoſt*, Amen, dipping the Child under the Water at the Naming of each Perſon of the Trinity, ſpeaking the Words with a Deliberation ſufficient to give himſelf the Opportunity of repeating the dipping three times diſtinctly, the Godfather anſwering at every Emerſion, *Amen*; but ſometimes they think it ſufficient to pour the Water three times on the Child's Face, inſtead of dipping, with the ſame Ceremony as before. We may obſerve there is a circumſtantial Difference between the Baptiſm of the *Greeks* and that of the *Latins*, the *Greeks* ſaying, *the Servant of the Lord*, A. B. *is baptized*, &c. *And the Latins*, A. B. *I baptize thee*, &c. and theſe Circumſtances, however trivial in themſelves, have occaſioned great Differences between the *Latins*, and *Greeks*, though both Chriſtian Churches.

Unguent of Chriſm.

UNGUENT of Chriſm is a ſort of Confirmation, and is never adminiſtred to thoſe who have not been baptiz'd, tho' reckon'd a diſtinct Myſtery or Sacrament from Baptiſm, and adminiſtred to Children that have been baptized, tho' yet in their Infancy; it is call'd by ſome the Obſignation or Seal of Confirmation, and they that have receiv'd it when young, have it not repeated when grown up. This Ceremony is perform'd by anointing the Forehead, Eyes, Noſtril, Mouth, Ears, Breaſt, Hands and Feet, the Prieſt ſaying in the mean time, *The Seal of the Gift of the Holy Spirit*, *Amen*. The Oil uſed in this Ceremony is compos'd of Styrax, Balſam, Myrrh, Caſſia, and the Decoction of

of ſeveral curious Drugs and Plants, mix'd with Wine and Oil, and this Compoſition is put in round Vials, or ſometimes into Alabaſter Boxes in Alluſion to the Alabaſter Box of Ointment, which was broke and pour'd upon our Saviour's Head, *Mark*, xv. 3.

Euchariſt. THE Elements made uſe of in the Euchariſt are Bread and Wine, which are preſented for that Purpoſe by the People, and are carried by the Prieſts and Deacons to the Altar; the top of the Loaf is mark'd with a large Square, with ſix Letters in it in four Squares, as follows:

$\overline{\text{I C}}$	$\overline{\text{X C}}$
N	K

THESE Letters ſtand for *Jeſus Chriſt overcometh*, but the Ceremonies they uſe in the Conſecratin of the Elements are ſo numerous, that to give account of them all, would be only fit for a Treatiſe of the Ceremonies of the *Greek* Church, and the other Sacraments, beſides Baptiſm and the Lord's Supper, being not reckon'd by themſelves *generally neceſſary to Salvation*, we ſhall not regard them as ſuch, but paſs on from *Romania*, or the antient *Thrace*, to the other *Turkiſh* Provinces in their proper Order.

CHAP. VI.

Treats of the Provinces of Macedonia, Albania, Epirus, *and* Theſſaly.

MACEDONIA is bounded on the North by *Romania* and *Servia*, and on the Eaſt by ſome Bays of the *Archipelago*, by *Theſſaly* on the South, and by *Albania* on the Weſt. The chief Towns are, 1. *Salonichi*, or the ancient *Theſſalonica*, ſituate at the Bottom of a Gulph of the ſame Name, in the *Ægean* Sea in the North Weſt Part of the *Archipelago*, in about 41 Degrees of Latitude; this Town is ſaid to have been built by *Caſſander* and *Theſſalonica*, Siſter to *Alexander the Great*; St. *Paul* preach'd here, and writ his two Epiſtles to the Inhabitants of this Place, then call'd *Theſſalonians*: It is at preſent a Biſhop's Sea, and the Seat of a *Turkiſh* Baſſa; it is a Town of good Trade, and of great Reſort by the Weſtern Nations of *Europe*, the *Engliſh* having a Conſul there. We import from this Place good Silk, *Turky* Leather, Cotton, Bees-wax, and other Commodities. Tho' this Place is in a Province of *Turkey*, yet there are a great Number of both *Jewiſh* and Chriſtian Inhabitants in it, there being thirty Chriſtian Churches, and as many *Jewiſh* Synagogues: It was taken by the King of *Sicily* from the *Grecian* Emperor in the Year 1180, and ſoon after recover'd by *Andronicus Paleologus*, and ſold to the *Venetians* in the Year 1313, and was taken from them again in the Year 1321 by *Amurath* the ſecond, and remained in the Hands of the *Turks* ever ſince that Time.

Jannina. 2. *Iannina* or *Pella*, South Weſt from *Theſſalonica*; the *Macedonian* Kings formerly reſided here, as was the Caſe with *Philip* King of *Macedon*, by which means it became the Birth-place of his Son *Alexander the Great*; but it is now declined into an inconſiderable Town, no Marks of its antient Grandeur remaining, except ſome Marble Pillars and other noble Ruins.

Contella. 3. *Conteſſa*, a ſmall Town, and of but little Trade, about eighty Miles to the Eaſtward of *Theſſalonica*; it ſtands in a Bay of the ſame Name in the *Archipelago*; between this and *Theſſalonica* is Mount *Athos*, or *Monte Santo*, of which in the laſt Chapter; only I ſhall obſerve, that *Pliny* reports Mount *Athos* to be ſo high, that its Shadow reach'd to the Iſland of *Lemnos*, which is about ſixty Miles; and the Truth of this may well be accounted for, if we conſider that Mount *Athos* is to the Weſtward of *Lemnos*, and at the ſetting Sun, the Shadow of any Object may be ſaid to be of an infinite Length, let the Object be of what Length it would; and I humbly conceive that too little Geography, and too much Credulity have made many things in former Times, and diſtant Places, ſeem to be Wonders, and Subjects of abundance of poetical Airs, which at this Time and Place would be no Wonder at all; and yet on the other hand the vaſt Height of thoſe Hills, is not altogether a Fable, becauſe notwithſtanding the low Latitude they were in, *viz.* about 40 Degrees North, yet the tops of them are always cover'd with Snow.

4. *Cavalla*, a little Town over-againſt *Conteſſa*, from whence the Bay is ſometimes call'd *Cavalla* Bay. Cavalla.

5. *Philippi*, ſo call'd from its being enlarged and beautify'd by *Philip*, Father of *Alexander the Great*, King of *Macedon*; it was antiently call'd *Dathus Thuaſſus*, and lies on the Confines of *Thrace*, at the Foot of Mount *Pangeus*, near which Place was fought that famous Battle between *Brutus* and *Caſſius* on one Party, and *Auguſtus* and *Mark Anthony* on the other, in which the latter gain'd the Victory; here are ſtill to be ſeen the Ruins of a noble Amphitheatre and other magnificent Buildings. Philippi.

6. *Amphipolis*, or *Empoli*, ſituate on the River *Strimon*, about ten Miles above, where it falls into the Bay of *Conteſſa*; it is now but an inconſiderable Town, tho' formerly the Capital of *Macedonia*. This Country was famous for their King *Philip*, and eſpecially his Son and Succeſſor, *Alexander the Great*, who conquer'd *Greece*, and all the then known World, (if the Poetical Hiſtorians of the Times do not ſtretch a little) who add, that all this was ſo ſmall a Morſel for his inſatiable conquering Sword, that he ſat down and wept becauſe there was no more to conquer. Amphipolis.

THE Province of *Albania* lies on the Weſt ſide of *Macedonia*, between it and the Gulph of *Venice*, which two are therefore the Eaſt and Weſt Bounds thereof. *Servia* bounds it on the North, and *Epirus* on the South. The chief Towns are *Scodra*, call'd by the *Turks*, to whom it is ſubject, *Iſcodar*, ſituate on a Hill near the River *Boiana*, about five and twenty Miles from the Gulph of *Venice*; it is thought to have been the Seat of the antient Kings of *Illyricum*; it is ſtill a large City, and a Biſhop's See. The Province of Albania.

Alessio. 2. *Alessio*, or *Lyssus*, on the River *Drino*, near its Influx into the Gulph of *Venice*, where it grows so wide, that it is call'd by some the Gulph of *Drino*: This Town is famous for the Sepulchre of *Scanderbeg*, who died here 1467; he resisted the whole *Turkish* Power for a considerable time with a small Number of Men, and defeated them in two and twenty several Engagements.

3. *Dulcigno*, a Sea Port in the Gulph of *Venice*, about forty Miles to the Westward of *Alessio*, of which there is nothing remarkable. 4. *Croya*, situate on the River *Lizane*, thirty Miles from the Gulph of *Venice*, and about as many to the Southward of *Alessio*; this was the Residence of *Scanderbeg*, after whose Death the *Turks* soon got it in Durazzo their Possession. 5. *Durazzo*, or *Dyrachium*, of the *Romans*, a noted Sea Port in the Gulph of *Venice*, a common Landing-Place for those who came from the South Part of *Italy* to *Greece*: it was formerly a considerable City, memorable for being the Place of *Cicero*'s Exile, and for the Retreat of *Pompey*, when he fled from *Cæsar*, and transported himself hither from *Brundusi* in *Italy*; but it is now a Village, not otherwise of any great Note. 6. *La Valona*, is at the Entrance of the Gulph of *Venice*, about forty Miles to the Southward of *Durazzo*, and antiently a strong Place, but now declining.— We shall now pass to the Southward to *Epirus* and *Thessaly*, and defer the Description of *Dalmatia* and *Bosnia* till we come to treat of the Imperial and *Venetian* Territories.

The Province of Epirus. *Epirus*, call'd by some *Canina*, is bounded on the North by *Albania*, and on the East by *Thessaly*, by *Achaia* on the South, and by the *Ionian* Sea, and the Gulph of *Venice* on the West; its longest Dimensions from North West to South East is about a hundred Miles, and the shortest or Breadth is about sixty; it is separated from *Albania* by the *Ceraunian* Mountains, or Mountains of *Chimera*, and from *Thessaly* by the Mountain *Mezua* or *Pindus*. The chief Towns are, 1. *Chimera*, in the North Part of the Province on the Sea Coast, about eighty Miles to the Southward of *Durazzo*, and twenty to the Northward of the Island of *Corfu*; it is a Bishop's See, and a Place of a tolerable good Trade. 2. *Butrinto*, upon the same Coast, about thirty Miles South East of *Chimera*; it is now but an obscure Village, tho' formerly a good Town and a Bishop's See. 3. *Ambracia*, now *Arta* or *Larta*, the Residence of the Kings of *Epirus*; it is situated at the Bottom of a Gulph of the same Name, about sixty Miles from *Lepanto*, and as many from *Butrinto*. 4. *Prevesa*, between *Butrinto* and *Lepanto*; this is said to be the Place where *Nicopolis* once stood, which was built by *Augustus Cæsar*, in memory of the Battle of *Actium*, where he defeated *Mark Anthony*'s Fleet. 5. *Higalo*, at the Mouth of the said Bay, where *Actium* once stood, formerly considerable, but now a poor Place.

The Province of Thessaly. *Thessaly*, is now known to some by the Name of *Janna*; it is bounded on the North by *Macedonia*, on the East by the *Archipelago*, by *Achaia* on the South, and by *Epirus* on the West. The chief Towns are, 1. *Larissa*, or as the *Turks* call it, *Asiababa*, situate near the famous Mount *Olympus*, near the River *Peneus* about eighty Miles South Westward from *Salonichi*, or *Thessalonica*, and about sixty North West of the *Negropont*: *Larissa* is memorable for being the Place of *Achilles*'s Birth; it is now an Archbishop's See, and a Town of good Trade. Dr. *Brown* describes it in these Words:

Larissa. It is situate on the River *Peneus*, the most considerable of the Country; it has the famous Mount *Olympus* on the North, and the Plains of *Thessaly* on the South, and is inhabited by *Christians*, *Turks*, and *Jews*, there being several *Christian* Churches, as well as *Turkish* Mosques, and also some handsome Exchanges for transacting Affairs of Merchandize; it is situate on a pleasant rising Ground, on the upper part of which the Grand Seignior has a Palace, where he kept his Court in the Year 1669, to be as near *Candia* as he could, during the War there, and yet to have the Conveniency of Hunting and Hawking, for which the Country about *Larissa* is very proper. That Summer being very hot, the Sultan retired to Mount *Olympus* for the Benefit of the Air, as he intended it; but the Air was there so piercing cold, that it cost the Lives of many of his Followers, who were obliged to attend the Court; for coming out of the violent Heat of the Climate below, and being further heated with ascending the Mountain, they found at the top such a cold Air, which so suddenly affected their open Pores, that the sudden Change from excessive Heat to the like Degree of Cold, so affected their Stomachs, that some of them, not only Men, but Camels, Horses, &c. died in three or four Days, especially those who drank of a Spring whose Water was of a whitish Colour, and the Sultan himself, notwithstanding the Cordials and other means he had for the Preservation of his Health, was ill several Days, and *in Danger of dying by Cold in a hot Country*.

Olymp. It has been reported by the *Greek* Poetical Historians, that *Olympus* reaches beyond the Clouds, and has thence been reported to be the Residence of *Jupiter*, and the Gods, so much talk'd of, and almost realiz'd to the Pupils in Christian *Latin* Schools, but the Author I am now quoting, believes the *Alps* to be high; but the Reason he assigns for that Opinion, is, that upon the Mount *Olympus* there was no Snow in *September*, whereas on the *Alps* the *Pyrenæan* and *Carpathian* Mountains, there is Snow all the Year; but whether this may be any Proof of the *Alps*, &c. being higher than *Olympus*, is another Question, if we consider their different Situations, Mount *Olympus* being so near the *Ægean* Sea, that may contribute to the more early dissolving the Snow than upon the Inland Mountains; but if they think that because the top of *Olympus* is sometimes hid by the Clouds, it must be the Residence of some of the Heathen Gods, they may as well believe the same of several Mountains, both in *Wales* and divers Parts of *England*; but it is to be hoped Christianity has expelled these Notions out of *England*, except so much of them as the *Latin* Schools retain, and propagate and make them as much Matters of Learning, as if they were Matters of Faith.

Farsa. 2. *Farsa*, or the antient *Pharsalus*, memorable for a Battle between *Pompey* and *Cæsar* fought near this Place; it is about thirty Miles South, Westerly from *Larissa*. 3. *Tricala* on the River *Peneus*, about fifty Miles to the Westward of *Larissa*, where formerly stood a Temple dedicated to *Æsculapius*. 4. *Janna*, Janna. which at present gives Name to the Country or Province of *Thessaly*; it is a handsome Town, situate on a Lake of the same Name, and stands about forty Miles to the Northward of *Lepanto*. 5. *Demitrias* upon a Bay of the same Name; it is fifty Miles to the Eastward of *Larissa*, and is now frequently call'd *Sinus Pelasgicus*. 6. *Volo*, antiently call'd *Pegasa*, on the North Side of the said Bay, forty Miles Eastward of *Larissa*, it has a tolerable good Harbour in the *Ægean* Sea. 7. *Armiro*, or *Erenia*, at the bottom of the said Bay, about twenty Miles to the Southward of *Demitrias*; it is mentioned by several antient Authors, as being the Port from whence the *Argonauts* set sail. 8. *Zeiton*, Zeitou. about thirty Miles from *Armiro*, and as many to the Westward of the *Negropont*, over-against which is a Bay of the same Name of *Zeiton*. In this Province are, (besides Mount *Olympus*) the Mountains of *Pelion* and *Ossa*, both to the Southward of *Olympus*, between which and *Ossa* are the celebrated

Plains

Plains of *Tempe*, which the *Greek* Poets in their Hyperbolical Flights repreſent as a perfect Paradiſe; it produces Oranges, Lemons, Citrons, and Pomegranates, and Grapes as large as Damſons; alſo large rich Figs, and the beſt taſted Melons in all the whole Country; their Fields alſo abound with Almonds, Olive-trees, Ever-greens, Cotton, Sweet-Herbs, &c.

Perſons. As to the Perſons of this Province of *Theſſaly*, Dr. *Brown* tells us they are generally well made, with black Hair and Eyes, and a freſh ſanguine Complexion, and that their Women are generally celebrated Beauties. The *Macedonians*, who inhabit to the Northward of them, are more weather-beaten and rough, and thoſe of the *Morea* to the Southward of them, are of a ſwarthy Complexion, ſo that whether we compare *Theſſaly* with thoſe to the Northward, or thoſe to the Southward of it, it much exceeds both in Fruitfulneſs of the Soil, and Beauty of the Inhabitants; and under this Light, when thus compared with its Neighbours, it is probable the Poets found themſelves induced to give it the Epithet of a celeſtial Paradiſe.

CHAP. VII.

Of the Province of Achaia, *or* Grecia Proper, *now known to ſome by the Name of* Livadia.

ACHAIA is the Province, or the People mentioned by St. *Paul*, 1 *Cor.* xvi. 15. and 1 *Theſſalonians*, the firſt Chaper, verſe 7, and 8. *Corinth* being ſituate at the Bottom of the Gulph of *Lepanto*, which ſeparates *Achaia* from the *Morea* on the South; as for the other Limits of *Achaia*, it is bounded both on the Eaſt and Weſt by the Sea, *viz.* the *Ægean* Sea, or more particularly the Sea of *Negropont* on the Eaſt, and the *Ionian* Sea, or Entrance of the Gulph of *Venice* or *Adriatick* Sea, on the Weſt, and by *Theſſaly* on the North. The Chief Towns are, 1. *Athens*, the once famous Nurſery of Learning amongſt the *Greeks*; and conſidering in what early Ages *Athens* flouriſh'd, it is very probable that in its Time it was the greateſt Academy in the World; it was the Place from whence St. *Paul* writ his two Epiſtles to the *Theſſalonians*, as appears by the Subſcription at the Concluſion of each.

Athens. 1. *Athens* is ſituate in the Gulph or Bay of *Engia*, and is about forty Miles to the Eaſtward of the *Iſthmus*, upon which *Corinth* ſtands, and is in about thirty-eight Degrees of Latitude North. It ſtands near the middle of a large beautiful Plain, in a healthful Situation; the River *Iliſſus* runs on the South Eaſt of the City, and running South and South-Weſt by the Hill, anciently call'd the *Muſeum*, paſſes about a Bow-ſhot from the Caſtle, where it joins another Stream, and in its Way waters a Wood of Olive Trees about ſix Miles in Length, which is ſaid to be the greateſt Wealth and Ornament of that *Athenian* Plain; ſome think this River is the antient *Eridanus*, which is very probable, if we conſider that there was ſuch a River, and that this, according to many concurrent Circumſtances, is moſt likely to be the ſame; and as for its being tranſlated into Heaven, it is no Proof that it was not, but rather that it was a River upon Earth, whoſe delectable Streams excited the *Greek* Poets to aſſign, or at leaſt to allow it a Place amongſt the celeſtial Conſtellations.

Situation. The Town of *Athens* does not at preſent lie round the Caſtle as formerly, but more on the North-Weſt Side of it, extending along the Plain about a Mile and a half, at the continued Breadth of about half a Mile, the Circumference about four Miles; the Streets of the Town are but narrow, which indeed cauſes it to contain more Inhabitants in the ſame Space, being pretty well peopled, but it has now no Walls for Defence, and in ſeveral other Reſpects falls far ſhort of its antient Grandeur; for it formerly took up a conſiderable Part of the Plain, and was join'd by long Walls to the two Sea-Ports *Phalera* and *Pyræus*, one Wall being four, and the other five Miles in Length. When it was in its Grandeur it gave Laws to other Nations, and was deem'd the Seat of the Muſes, where Wit, Eloquence, and Learning, and all Arts and Sciences were brought to a greater Perfection than in any other Part of the known World.

Number of Inhabitants. The Town is now ſuppoſed to contain about ten thouſand Inhabitants, of whom the greater Part are Chriſtians; and the Inhabitants, even under this degenerate State, are allow'd to retain a good Share of Wit and Learning, if compar'd with their Neighbours. The City is divided into eight Wards, or Diſtricts, out of one of each of which the Chriſtians chuſe one of the graveſt to decide Differences between the Chriſtians in an amicable Way.

Dreſs. The uſual Dreſs of the preſent *Athenians* is a long black Veſt, and over it a Coat, or Cloak, lin'd with Fur, which they hang upon their Shoulders; they have only a Scull-cap on their Heads, and on their Legs thin black Boots, which, not being garter'd up, lie in Wrinkles upon their Legs, and they wear no Slippers as the *Turks* do. The Women wear a long looſe Coat about them of colour'd Cloth, as red or green, &c. and over it a ſhort Silk Veſt, or at leaſt of fine Woollen Cloth lin'd with rich Fur, furniſh'd with Plate Buttons as big as Walnuts; their Hair is plaited, and hangs down their Backs, with Bunches of Silver Buttons faſtened to the Ends of the Treſſes; but going to Church they wear a thin Linnen Veil.

Cathedral. The Cathedral in *Athens* is but an ordinary Building, not much, if at all, excelling our common Pariſh Churches, but of common Churches and Oratories there are near two Hundred, of which there are but two and fifty that have their particular Prieſts, and wherein divine Service is ſtatedly perform'd; the reſt are ſeldom uſed, except upon certain Days only to commemorate the Founders and Benefactors of them. There are ſeveral Convents of Monks and Nuns in the Place. The *Turks* have five Moſques here; one of which is in the Caſtle, and was antiently the Temple of *Minerva*, which is own'd by moſt Authors to be as fine a Building in its Kind, if not the fineſt, of any in the World; it ſtands in the middle of the Caſtle, and all built of exceeding fine white Marble; it is two hundred and ſeventeen Foot nine Inches long, and ninety eight Foot ſix Inches broad; and has an Aſcent every Way of five Steps, which ſerve as a Baſis to the Portico; which is ſupported by forty ſix channell'd Pillars, of the *Doric* Order, which

Temple of *Minerva*.

go

go all round the Temple, *viz.* fifteen on each Side, and eight at each End, beſides the Corner Pillars; theſe Pillars are forty two Foot high, and ſeventeen Foot and a half in Circumference, and the Diſtance between every two is ſeven Foot four Inches; the Portico bears up a Front and Frize round about the Temple, charg'd with Hiſtorical Figures of exquiſite Work and Beauty; the Figures, in the Front call'd the *Eagle*, appear of their natural Bigneſs, notwithſtanding their Height, being Relievo, wonderfully well carv'd; but their Repreſentations are differently interpreted by different Authors; the Cella of the Temple without is a hundred and fifty eight Foot in Length, and ſixty ſeven in Breadth.

Temple of *Eriethens.*

On the North Side of *Minerva*'s Temple is, or rather was, the Temple of *Eriethens*, a double Building. The leſſer, by which they enter the greater, is twenty nine Foot long, and one and twenty broad; the other is ſixty three Foot and a half long, and thirty ſix broad; the Roof is ſupported by *Ionick* Pillars, channell'd; but the Chapiters are a mixture of the *Ionick* and *Dorick* Orders.

Theatre of *Bacchus*

Deſcending from the Caſtle there is on the Left Hand the Theatre of *Bacchus*; the Seats of the Spectators are upon the Riſe of the Rock, and contains ſomething more than a Semicircle, whoſe Diameter is two hundred and forty three *French* Feet; and the whole Body of the Scene ninety one Paces, or above a hundred and fifty Yards; the Scene is oblong, and though the antient Seats are ruin'd, yet there is ſome Appearance of the Places where they have been; the whole Fabrick (by what remains of it,) appears to have been of white Marble.

Portico of *Eumenes.*

To the Eaſtward of this Theatre, and in the ſame Line with the Front of it, there are yet to be ſeen ſome Foundations of Arches, ſuppoſed to be the Remains of the Portico of *Eumenes*, where the Tragedians got their Plays by heart, and was the Place where the Citizens walk'd, not only to take the Air, but to hear News, and converſe with Men of Learning, and divert themſelves by walking in Company with Philoſophers and ingenious Men; and hence *Ariſtotle*'s Diſciples were call'd *Peripetaticks* from their diſputing as they walk'd.

Peripetaticks.

Adrian's Pillars.

South-East from the Caſtle are thoſe beautiful Pieces of Antiquity call'd *Adrian*'s Pillars, ſuppoſed to be the Remains of his Palace, and continues ſtill to be the greateſt Ornament to it, and to the whole City; theſe Pillars, with their Chapiters and Baſes, being fifty two Foot high, and ſeventeen Foot nine Inches about; they are of white Marble, channell'd, and of the *Corinthian* Order; there are now only ſeventeen of thoſe Pillars left ſtanding; but it appears by the Plan upon which they ſtand, and the Order of thoſe that are left, that there have been ſix Rows of them, twenty in each Row, in all an hundred and twenty, built by the Emperor *Adrian*; here was that famous Library that the Emperor *Adrian* collected, and a *Gymnaſium* bearing his Name; here was celebrated the Games called *Adrianalia*, inſtituted by him; about this *Gymnaſium*, or Monument, ſtood a hundred Pillars of *Egyptian* Marble.

Temple of *Theſeus.*

Without the Town, to the Northward, is the Temple of *Theſeus*, like the Temple of *Minerva* before ſpoken of, as to its Matter, Form, and Order, but far ſhort of it in Magnitude, for the Portico is but an hundred and one Foot in Length, and forty four Foot and a half broad, the Cella fifty four Foot long, and twenty broad, but it is a fine Piece of Architecture not to be excell'd, if equall'd, by any in the Country of its Dimenſions; the Relievo expreſſes the Hiſtory of *Theſeus*, with the Locks and and Arts of Wreſtling to admirable Perfection.

There is yet ſtanding in *Athens* the Tower of *Andronicus*, being an Octagonical Priſm, with the Figures of the eight Winds well done, the Names of the Winds ſtill remaining legible in fair *Greek* Characters, on that Quarter of the Tower which fronts it, as North, North-Eaſt, *&c.* the Roof is made of triangular Planks of Marble, which lean together, and all the Vertexes meeting in a Point, forms an obtuſe Pyramid; here is alſo a little round Fabrick, call'd the Temple of *Hercules*; it is excellent Workmanſhip, but not above ſix Foot Diameter. There are alſo the Remains of many other Buildings in *Athens*; as the Gate of the Emperor *Adrian*, his noble Aqueduct, the *Stadium*, where the publick Games were ſolemnized, the Ruins of the *Areopagus*, of the *Odæum*, or Muſick Theatre, and of the Temple of *Auguſtus*, and *Jupiter Olympus*, and other memorable Atiquities; which furniſhes ſuch Variety of Entertainment to the Traveller, that it may be ſaid to be the beſt worth viewing of any Place in *Europe*.

Tower of *Andronicus.*

There are now four publick Bagnio's in *Athens*, and the Town is well ſupply'd with Water by ſubterraneous Aqueducts from the Rivers *Eliſſus* and *Eridanus*, being diſpers'd by Pipes under Ground to the publick Reſervoirs, or Fountains, and alſo to the private Houſes, as the New-River Water is in *London*. Here Corn, Wine, Oil, Fleſh, Fiſh, and Fowl, and all Sorts of Proviſions abound, and are cheap, and the contiguous Country produces Plenty of Hares and Partridges. What is chiefly exported from *Athens* is Raw Silk, *Turkey* Leather, Oil, Wool, and Wax, but the Trade of the Place at preſent is not very conſiderable.

Bagnio's.

And with reſpect to Learning, it may be ſaid of *Athens* that *Oracles are ceas'd*, for Learning is now far from being the Staple Commodity of this Place, which was once reckon'd the Seat of the Muſes; few of the Natives underſtand either *Latin* or their antient Mother Tongue the *Greek*, in its primitive Beauty and Purity; and yet Travellers at this Day obſerve, that there is ſomething viſible in their Deportment; their Civility, and genteel as well as courteous Behaviour, excelling that of their circumjacent Neighbours, which, as they have not the Advantage of Education as formerly, they impute to the Serenity of the Air, in which *Athens* is ſituate; and if a fine Air alone has that Effect, what would not the happy Concurrence of ſo good an Air, aſſiſted by a liberal Education, do?

Athens declin'd.

I ſhall conclude this Deſcription of *Athens* with a brief Hiſtory of it ſince it was firſt built. —— *Cecrops* an *Egyptian* was the Founder of the City, and their firſt King, about eight hundred and thirty Years before the building of *Rome*, and above three thouſand three hundred and fifteen Years ſince this preſent Year 1733, and conſequently one thouſand five hundred and eighty two Years before the Birth of our Saviour. *Athens* continued a Monarchy about five hundred and fifty Years, when *Codrus*, their ſeventeenth and laſt King, died; after which they were govern'd by *Archontes*, a ſort of Magiſtrates, who at firſt held the Government during Life, but were afterwards changed every ten Years, and at laſt every Year. Under theſe they bravely defended their Country and Liberties for five hundred and thirty Years, till *Pyſiſtratus* tyrannically uſurp'd the Government; his Family held it forty Years, and then were expell'd by *Cliſthenes Alcmeonides*, who ſtil'd himſelf *Archon*, altering the Numbers or Names of the Tribes. After this they engaged in a War with the *Perſians*, and defeated the numerous Armies of *Darius* and *Xerxes*, and that with an inconſiderable Force, under the Command of *Miltiades* and *Themiſtocles*. After this the *Lacedemonians* came againſt them, over-power'd them, and

Hiſtory of *Athens.*

Athenians defeat the *Perſians.*

and took *Athens*, placing thirty Governors over them, who exerciſed their Authority with inhuman Tyranny and Cruelty; but their Dominion was ſhort-lived, and they were deliver'd from this State of Slavery by the Conduct of *Thraſibulus*, and their General *Epaminondas*, who, with the Aſſiſtance of the *Thebans*, defeated the *Lacedemonians* at the Battle of *Leuctra*, which Turn of their Affairs ſo animated their Spirits, that purſuing their Blow, they began to extend their Conqueſts, and made themſelves almoſt entire Maſters of the *Egean Sea*, or *Archipelago*, and the Iſlands in it, and croſſing the *Levant*, took ſeveral Places upon the Coaſt of *Egypt*, inſomuch that it was ſaid they had not leſs than a thouſand Cities under their Command, and this their Grandeur continued, and they held the Sovereignty of *Greece* threeſcore and ten Years; but the *Lacedemonians* and *Thebans* (the latter of which had formerly aſſiſted them againſt the *Lacedemonians*,) equally envying their Happineſs, and fearing their Power, jointly fomented a War againſt them, and obliged them to quit a conſiderable Part of their late Conqueſts, and a Peace enſuing, they gradually degenerated into Luxury and Idleneſs; which the *Macedonians* obſerving, took this Opportunity to lay the Foundation of the *Grecian* Monarchy; in Order to which *Philip* King of *Macedon* broke the Power of the *Athenians* by Sea, and made himſelf Maſter of the *Egean Iſlands*, which was a good Step toward the future Succeſs of his Son *Alexander the Great*, who afterwards compleated the Conqueſt of *Athens*, and then that of the reſt of all *Greece*.

They were next ſubject to the *Romiſh* Government; their Emperors were ſome of them very indulgent, and ſuffer'd them to enjoy ſo much of their antient Liberties as to be govern'd by their own Laws. The *Romans* were very proud of being the Governors and Protectors of this renowned City, the Nurſery of ſo many learned Men. The Emperor *Adrian*, being in his Youth choſen *Archon* of this City, took ſuch a liking to it, that when he became Emperor, he reſtored it to its antient Beauty, and granted them many Privileges; he alſo inſtituted publick Games, which in Honour of him were call'd *Adrianalia*, and a thouſand Wild Beaſts were given them every Year to be hunted in the *Stadium*; He built a magnificent Palace for himſelf; he alſo built a Library, and Schools for teaching the Liberal Arts; he alſo built the Temple of *Jupiter Olympus*, and in other Reſpects ſo enlarged and beautify'd the City, that it was afterward call'd *New Athens*; the Walls were built in the Time of *Valerian*.

Conſtantine the Great was a very great Benefactor to them, and *Conſtantine* the Second gave them ſeveral Iſlands in the *Archipelago*: But in the Reign of *Arcadius* it was plunder'd by *Alarick* King of the *Goths*, when *Greece* and *Italy* underwent the ſame Fate; tho' *Zozimus* in that Part of his Hiſtory, relates that *Alarick* ſpared *Athens* for fear of *Achilles*, whom he imagin'd he ſaw fighting upon the Walls of the City.

In the thirteenth Century *Bajazet*, Emperor of the *Turks*, took it, but the *Venetians* ſoon retook it under the Command of *Reinerius Acciaclo*, a *Florentine*; but in the Year 1455, in the Reign of *Mahomet* the Second, the *Turks* retook it again, they not being able to defend it, for want of the Aſſiſtance they expected from the *Latins*, who refuſed to ſend them any Re-inforcements, except they would conform to them in Doctrine and Ceremony, which one inſiſting upon, and the other refuſing, *Athens* was taken by the *Turks* for want of Union among the Chriſtians to defend it; and being now in the Poſſeſſion of the *Turks*, they maintain'd their Property till the Year 1687, when the *Venetians* made themſelves Maſters of it again; but in the late War with the *Venetians* it was rendered to the *Turk*, and the Grand Seignior now continues Sovereign of *Athens*.

2. *Elenſis*, is near the Sea, about ſixteen Miles North-Weſt from *Athens*; it is now frequently known by the Name of *Lepſina*; this Place formerly rivall'd *Athens* for Imperial Dignity, till *Theſeus* reduced it, and now little of it is to be ſeen but Ruins; at this Place was the Temple of *Ceres*, which is now little better than a confuſed Heap, the beautiful Marble Pillars and Cornices ſo confuſedly buried in the Rubbiſh, that it is hard to diſcover the original Form of it; Mr. *Wheeler* found here a Part of the Statue of the Goddeſs *Ceres*, *viz.* from the Head to below the Middle; it is a Coloſſus of white Marble, about three Times as big as the Life, ſhe has a Girdle about her Waiſt, and two Belts croſſing each other upon her Shoulders, her Breaſt appear very natural, but the Face is much disfigur'd, her Hair hangs down behind, and is tied back, ſhe hath on her Head a Basket, carv'd on the Outſide with Cluſters of Wheat-Ears, Bundles of Poppies, Roſes, and Veſſels; for they have a Tradition that it was ſhe that firſt taught the *Greeks* to ſow Corn; and even among thoſe Chriſtians where Heathen Maxims, and the Fables of thoſe Pagan Gods are not quite extirpated, they maintain and teach Notions of ſeveral Gods, and amongſt the reſt of *Ceres*, the Goddeſs of the Harveſt, or ſometimes Goddeſs of Plenty in general. *Elenſis.* Goddeſs *Ceres.*

3. *Megara*, about five and twenty Miles to the Weſtward of *Athens*; it was once the Capital of a conſiderable State; it is built upon two Rocks, about two Miles from the Shore of the *Saronick* Gulph; but it is now reduced, and moſt of what is left ſtands upon one of thoſe Rocks, it conſiſting at preſent of only three or four hundred poor Cottages inhabited by Chriſtians, but it ſtill retains its antient Name. *Megara.*

4. *Delphos*, now call'd by ſome *Caſtri*; it ſtands upon a rugged Mountain, about ten Miles to the Northward of the Gulph of *Lepanto*; this Mountain is a Part of the famous *Parnaſſus*; the Aſcent to *Delphos* is above two Leagues, but when a Perſon is there, he is not half Way to the Top of *Parnaſſus*; (of which below.) This was once a great City, and famous for the Temple of *Apollo* being in it, but more particularly for the dark Cave, from whence the *Pythian* Prieſteſs pronounced her Oracles, ſitting on a Tripos, ſwelling and foaming like one poſſeſs'd, the more to ſurprize her deluded Followers; and yet this has made ſuch a Figure in Hiſtory, that they muſt have read very little that have not read of the *Delphick Oracle*, or the Oracle of *Delphos*, but now ſuch *Oracles are ceas'd*, and *Delphos* is but an inconſiderable Place, containing not above two hundred Houſes, but they are chiefly inhabited by Chriſtians. *Delphos.*

We have obſerved before that *Delphos* ſtands upon a Side, or Part of the Mount *Parnaſſus*, but when at *Delphos*, the towering Top, or rather Tops, of *Parnaſſus*, appear of vaſt Height, notwithſtanding the Aſcent to *Delphos*, from whence it appears to have two Tops, and from them, or in another Poſition, many other Summits appear; but between theſe two is a Cleft, by which the Water ruſhes down with an impetuous Rapidity after a Shower of Rain, which with its melting the Snow, with which the Tops of thoſe Mountains are perpetually cover'd, cauſes the Water to deſcend with the Violence above-mention'd. This is the famous *Parnaſſus* ſaid to be ſacred to *Apollo* and the Muſes: and below the Cleft above-mention'd, is a Well, where the *Pythian* Prieſteſs, or Propheteſs, and thoſe of her Diſciples that pretended to Inſpiration, uſed to bath, and drink its Water; there are Marble Steps to deſcend into it, and Niches for Statues cut in the Rock. Not far from *Parnaſſus* ſtands the famous Hill, or Moun- *Parnaſſus* Mountain

tain of *Helicon*, ſo much talk'd of by the *Greek* Poets; this Mountain is by them alſo conſecrated to *Apollo*; this is not inferior to *Parnaſſus* either in Height or Compaſs, they are both rocky Mountains, always cover'd with Snow. This was the Native Country of the Poet *Heſiod*, who was born at *Aſcra*, a Town on the Weſt Side of thoſe Mountains, between them and the *Ionian Sea*.

Lepanto. 5. *Lepanto*, antiently called *Naupactus*, and now by the *Greeks Epactus*; it is near the Mouth of the Gulf of the ſame Name, formerly call'd the Gulf of *Corinth*; it is ſituate between forty and fifty Miles to the Weſtward of *Delphos*, and about eighty Weſt of the Iſthmus of *Corinth*; it ſtands on a very ſteep Hill, cloſe to the Sea, with a Deſcent every Way, that Side next the Sea being built cloſe down to the Shore; on the Top of the Hill is a little Caſtle, and on the South Side of the Town is a little Harbour, with a Tower on each Side of the Entrance, planted with Braſs Guns, and the Mouth of the Harbour is ſo narrow that a Chain of fifty Foot long is enough to ſecure it, but it is likewiſe ſo ſhallow, that no Veſſels but Barks or Gallies, or ſuch ſmall Craft, can enter; there are fruitful Vallies on each of the three Sides of it, which produce Oranges, Citrons, Lemons, Olives, Wines, and Corn. The Trade of this Place conſiſts in Leather, Oil, Tobacco, Rice, and Corn, and as good Wine as any *Greece* produces.

Livadia. 6. *Livadia*, an antient Town, and gives Name to the Country; it ſtands on the Gulf of *Lepanto*, about twenty Miles to the Weſtward of the Iſthmus of *Corinth*; it is built round a pointed Hill, on the Top of which is an old Caſtle; the River *Hercyna* riſes here, and produces ſuch a plentiful Stream that it turns twenty Mills in the Town, within a Bow-ſhot of its Source. There are four or five Chriſtian Churches in this Town, and about as many *Turkiſh* Moſques; the Town is well inhabited, and has a tolerable Trade in Woollen Stuffs and Rice; it was formerly famous for the Oracle of *Trophonius*, which was in a Cavern in the Hill, and publick Games were inſtituted in Honour of this ſuppoſed Deity.

Thebes. 7. *Thebes*, ſituate in the thirty-ninth Degree of Latitude, about forty Miles to the Northward of the *Iſthmus* of *Corinth*, and twenty Miles Weſt of *Negropont*: It ſtands on a riſing Ground, between two little Streams; it is declined from its antient Grandeur, and now only that Part which was the Caſtle, is inhabited. The preſent Walls ſeem very antient, and have ſquare Towers of hewn Stone, very exactly laid; the Figure of the Caſtle, (in which all the Town is now compriſed) is Oval; the Houſes are higher, and better built than is common in this Country; it is about three Miles in Circumference, and contains about four thouſand Inhabitants, moſtly Chriſtians; whatever Temples or publick Buildings may have been in this Town, or mention'd by Authors, there is not one, nor ſo much as the Ruins of one to be ſeen at preſent.

Marath. 8. *Marathon*, is ſituate near the Gulph of *Negropont*, and about forty Miles North Eaſtward from *Athens*; here was fought that memorable Battle between the *Athenians* and *Perſians*, wherein the latter were defeated by a ſmall Number of the former. (*See the Hiſtory of* Athens *in the foregoing Part of this Chapter.*) This City is now reduced to an inconſiderable Village.

Aulis. 9. *Aulis*, is a Sea Port Town about twenty Miles to the Eaſtward of *Thebes*, where the *Grecian* Fleet rendezvous'd when they were preparing for the Siege of *Troy*.

Platæa. 10. *Platæa*, is ſituate between *Thebes* and *Athens*; it was here that the *Lacedemonians*, under the Command of *Pauſanias*, obtained a remarkable Victory over the *Perſians*, which entirely ruined the intended Enterprize of *Xerxes* againſt *Greece*. This is moſt of what Hiſtory gives us account of concerning *Platæa*; nor can the Travellers of this Age add any thing to it, the Town being ſo entirely demoliſh'd, that ſcarce any of the Ruins of it are to be ſeen.

CHAP. VIII.

Treats of Peloponeſus, *or* Morea.

Names. THIS Country was firſt call'd *Argos Achaium*, to diſtinguiſh it from *Argos Peláſgicum* in *Theſſaly*; afterwards *Ægialia* from *Ægialus* King of the *Cicyonians*; then *Apia* from *Apis*, the third King of *Argos*; but it had its preſent Name *Peloponeſus* from *Pelops* the Son of *Tantalus*, who planted a Colony here, and was ſome time Sovereign of the *Peninſula*; and as for its other Name *Morea*, it is ſaid to be derived from *Morus*, a Mulberry-Tree, either becauſe it reſembles that Leaf in Form, or becauſe of the Plenty of thoſe Trees which this Country produces.

Bounds. THE whole *Peninſula* is bounded on the North with the Gulph of *Lepanto*, the *Iſthmus* of *Corinth*, and the Gulph of *Engia*, formerly call'd the *Soronick Gulph*; it is bounded on all the other Sides by the Sea, *viz.* on the Eaſt by the *Ægean*, on the South by the *Mediterranean*, and on the Weſt by the *Ionian* Sea, and is contained between thirty-ſix Degrees odd Minutes, and thirty-eight and odd of North Latitude. The Principal Rivers are, 1. *Carbon* or *Orſea*, antiently *Alpheus*, which River it is ſaid paſſes under the *Ionian* Sea, and riſes again in *Sicily*; but for this we have only the Authority of the *Greek* Poets, and thoſe that know how to diſtinguiſh Facts from Figures in their Writings, may know how much to believe of this. Other Rivers are, 2. *Eurotas*, whoſe Source or Spring is in *Arcadia*; it paſſes thro' *Laconia*, and meets with the Sea in the Gulph of *Paſſel Rampani*. 3. *Planizza*, formerly call'd *Inachus*. 4. *Pamiſſus*, or *Spinazza*, which falls into the Gulph of *Coran* near *Calamata*. 5. *Sty*, whoſe Waters are ſo exceſſive cold, that they are generally fatal to thoſe that drink, and is hence call'd one of the Rivers of Hell.

THE *Morea* is uſually divided into four Parts or Diſtricts, *viz.* 1. *Saccania*, or *Romania Major*, containing the antient *Argya*, *Sycionia*, and *Corinthia*; it is bounded by the Gulph of *Engia* on the North, the *Archipelago* on the Eaſt, *Napoli de Romania* on the South, and the Dutchy of *Clarenza* on the Weſt.

2. *Zachonia*, or *Braccio de Mano*, which comprehends the ancient *Arcadia* and *Laconia*, and is bounded on the North by *Saccania*, on the Eaſt by the *Ægean* Sea, by *Sapienza* on the South, and by the Diſtrict of *Belvidere* on the Weſt.

3. *Belvidere* is bounded on the North by *Clarenza*, and is ſeparated from it by the River *Carbon* or *Orſea*

Orſea on the North, by *Zachonia* on the Eaſt, on the South by the Sea of *Sapienza*, and on the Weſt by the *Ionian* Sea.

4. The Dutchy of *Clarenza* comprehends *Achaia Proper*, and is bounded on the North by the Gulph of *Lepanto*, by *Saccania* towards the Eaſt, on the South by *Zachonia* and *Belvidere*, and by the Gulph of *Putras* on the Weſt.

Succania. As to the firſt of theſe, *viz. Succania* or *Romania Minor*, the chief Towns are, 1. *Naupha*, now *Napoli de Romania* called *Napoli de Romania*, at the Bottom of a Gulph in the *Ægean* Sea, which now goes by the ſame Name, but was formerly call'd *Agricola Sinus*. The Town ſtands South of *Corinth*, upon a Promontary or Cape, which ſhooting out into the Sea, divides itſelf into two Points, which make a little Bay, and forms a Harbour, whoſe Entrance is ſo narrow, that no more than one Veſſel can enter at a time, and the Paſſage by Land is of ſuch difficult Acceſs, as being a narrow ſtrong Strait between the Mountain *Palamida* and the Sea, that it is difficult to approach it, and the Citadel, which is about a hundred Yards from the City, having the like advantageous Situation, renders the Place, if not impregnable, yet one of the ſtrongeſt Towns and generally the Capital of the *Morea*; it is ſuppoſed to contain ſixty Thouſand *Grecian* Inhabitants, beſides others, and is now an Archbiſhop's See.

Argos Peloponeſiacum. 2. *Argos Peloponeſiacum*, ſo called to diſtinguiſh it from *Argos Pelaſgicum* in *Theſſaly*; it is ſituate on the River *Inachus* or *Naio*, about thirty Miles South of *Corinth*, and to the Weſtward of *Napoli*: It was formerly a magnificent City, and Capital of a Kingdom, till *Perſeus* remov'd the regal Seat to *Mycene*, ſince which time it has been a poor Place, tho' dignify'd by being a Biſhop's See, and has a Citadel for its Defence.

Corinth. 3. *Corinth*, antiently *Ephyra*, in the 39th Degree of Latitude; it ſtands at the South End of the *Iſthmus* of *Morea*, between the Gulphs of *Lepanto* and *Eugia*, fifty Miles to the Weſtward of *Athens*, and eighty Miles to the Eaſtward of *Patias*: It is about two Miles from the Gulph of *Lepanto*, and ſix Miles from the *Seronick* Gulph, or Gulph of *Eugia*. The Town is in two Parts, the South Part is in and near the Caſtle on the Top of a Hill, and the North Part is about a Mile diſtant from the Caſtle, upon an eaſy Deſcent towards the Gulph of *Lepanto*: The Houſes are not contiguous or diſpos'd in Streets, as is common in Cities and great Towns, but eight or ten near together, with their Gardens belonging to them, and Orchards or Corn Fields between one Hamblet or Diviſion and another; the largeſt Hamblet or Plot of Houſes is where the Market Place is, and contains about a hundred Houſes; from the lower Town to the Caſtle is an Aſcent for about a Mile, ſo ſteep, that near the Caſtle it is impoſſible to aſcend it, without turning and winding to and fro to gain the Caſtle, which is ſituate on a very high Rock, with a Precipice on every Side, but the South Side where the Entrance is, the Windings having carried you half round the Hill, upon which the Caſtle ſtands, before you can come at the Top, and from this South Side of the Caſtle there runs a Ridge of Hills two or three to the Southward, which makes the Caſtle acceſſible on that Side only, and here an Enemy may approach it, if not repuls'd in time. Moſt of the Trading Inhabitants have Houſes in the Caſtle, to ſecure their Effects from Rovers, and theſe Houſes in the Caſtle are the moſt ſecure, but thoſe in the lower Town are the moſt pleaſant, being planted round with Orange, Lemon, and Cypreſs Trees; there are three or four Moſques, and five or ſix ſmall Churches in the Caſtle, and two or three of each in the lower Town, but Chriſtianity is at a very low Ebb here, and yet it continues to be a Biſhop's See; it was to the Inhabitants of this Place that the Apoſtle *Paul* writ his two Epiſtles to the *Corinthians*, which we have in the New Teſtament as part of Canonical Scripture.

The Caſtle ſtanding upon an Eminence affords a moſt beautiful Proſpect, for to the Eaſtward is the *Seronick* or *Eugian* Gulph, with the Iſlands of the *Archipelago* before it, which ſeem to cloſe the Mouth of the Gulph. To the Weſtward is the Gulph of *Lepanto*, which may be ſeen as far as beyond *Sicycon*; the Plains of *Corinth* that way is water'd by two Rivulets; it is rich Ground, and well planted with Vineyards and Oliveyards, and has many little Villages interſpers'd, which adds to the Beauty of the Proſpect. On the North the Sight is bounded by the lowring Tops of thoſe famous Mountains of *Parnaſſus* and *Helicon* before deſcrib'd, and to come nearer Home, the lower Town, which, as before obſerv'd, is alſo to the Northward of the Caſtle, appears from that Eminence, and at that Diſtance in little Knots of Houſes, ſurrounded with Groves, Gardens, and Vineyards, intermix'd with Corn Fields. Theſe different Views of various Objects, render the whole admirably pleaſant; but their Properties being ſo precarious, by reaſon of the Inroads of Enemies, and the Rapaciouſneſs of Governors, abates much of the Sweetneſs of their Enjoyments.

Iſthmus. The narroweſt Part of the *Iſthmus* of *Corinth* is about ſix Miles Eaſt Northerly from *Corinth*, near a Village call'd *Heixmila*; it was once propoſed to cut a Channel thro' this *Iſthmus* from the Gulph of *Lepanto* to the Gulph of *Eugia*, to make the *Morea* an entire Iſland; but it was never put in Execution; becauſe, as they tell us, they were forbid by the Oracle. The *Iſthmian* Games, ſo call'd as being perform'd here, were perform'd on Part of Mount *Oneius*, where may ſtill be ſeen the Ruins of a Town, and the Remains of the *Iſthmian* Theatre, with the Ruins of ſeveral Temples, dedicated to the Sun, *Neptune*, *Diana*, *Pluto*, *Bacchus*, &c. and there are yet remaining ſome Pieces of the Foundation of the Wall built from Sea to Sea by the *Lacedemonians*, to defend *Morea* from the Incurſions of the *Athenians* and other Enemies, which Wall the *Venetians* repair'd, when they had the *Morea* in Poſſeſſion.

Sicyon. 4. *Sicycon*, now *Baſilica*; this was once the Capital of *Sicyona*; it ſtands on the River *Aſopus*, about twenty Miles Weſterly from *Corinth*, and four Miles from the Gulph of *Lepanto*; there is nothing now to be ſeen of it but Ruins, particularly of a Theatre and Stadium; the Walls of the Caſtle, and of ſeveral Churches and Moſques, and, 5. *Nemæa*, famous for the Grove where antiently the *Herculean* Games were exerciſed; it is about five and twenty Miles South of *Corinth*; it is now but a ſmall Village; as is alſo, 6. *Mycene* or *Charia*, about ten Miles North of *Argos*, which was formerly a Capital of a Kingdom.

Zachonia. In the Diſtrict of *Zachonia* or *Lacedemonia*, are theſe Towns, viz. 1. *Lacedemon* or *Sparta*, or rather the Ruins of them, upon which or near the ſame Place ſtands the preſent *Miſitra*, near the River *Eurotas* in the South Eaſt Part of the *Morea*, about forty Miles to the Southward of *Napoli de Romania*. *Lacedemon* is ſuppoſed to have been built a Thouſand Years before the Building of *Rome*; the City was round, and about ſix Miles in Circumference. This is the Place to which the famous *Lycurgus* left his Laws and Rules for Government, which he contrived to make almoſt perpetual; but they were afterwards govern'd by the *Ephori*, or five Magiſtrates, but *Cleomenes* depoſed them, and uſurp'd the Crown, which he held but for a ſmall time, till he was conquer'd by

by the *Macedonians*, and his Country annex'd to that Monarchy.

Miſiſtra 2. *Miſiſtra* is an Epiſcopal See; it has a Caſtle ſituate upon the riſing Ground of Mount *Tagetus*, upon which within the Caſtle ſtood Temples dedicated to *Diana*, *Lypatheria*, and *Minerva Penachaide*; the Town is at the Foot of the Caſtle, and conſiſts chiefly of two ſpacious Streets, and ſeveral ſmall ones croſſing them; there is a Noble Fountain in the old Market-place, and a Church built moſtly out of the Ruins of *Minerva*'s Temple; here are three Marble Temples, *viz.* that of *Helen*, *Hercules*, and *Venus*, and the Remains of ſeveral other antient Buildings, particularly in the middle Suburb is a Church exceeding fine, and there is ſtill to be ſeen without the Walls the Grove of Palm Trees, with the *Dromas*, where the *Spartans* had their Races, Wreſtlings, and other Exerciſes for which they were ſo famous.

Malvaſia. 3. *Malvaſia*, antiently *Epidaurus*; it ſtands on a Rock in the Sea, about forty Miles to the Eaſtward of *Miſiſtra*, but has a Communication with the Continent by a Wooden Bridge; here is a tolerable Harbour, defended by a Citadel; and what is very Remarkable, tho' it ſtands upon a Rocky Iſland in the Sea, yet it is well ſupplied with Water by its own Springs, and has fine Gardens and Vineyards about it. It is a Biſhop's See.

Chieſa. 4. *Chieſa*, a ſtrong Town ſtanding upon a high Rock about two Miles from the Sea, and fifteen from Cape *Matapan*; this is the Place where the antient *Vitulo* ſtood; there are other Places in the *Morea*, which the *Greek* Poets magnified to eminent and remarkable Places; but as now the Places or ſcarce their Ruins are to be ſeen, a further Account of them is needleſs.

Belvidere. The next Province is *Belvidere*. The chief Towns are, 1. *Modon*, it is a ſtrong Place, has a commodious Harbour and a good Trade. 2. *Navarina*, an antient Town near the Sea, about thirteen Miles North of *Modon*; it is eſteemed the beſt Harbour in the *Morea*, which was ſuppoſed to be the Reaſon why Sultan *Ibraham* appointed it to be the Rendezvous of his Fleet in his Expedition againſt *Candia*. 3. *Belvidere*, which gives Name to the Dutchy; it ſtands on the River *Peneus*, fifteen Miles Eaſtward from the *Ionian* Sea. 4. *Arcadia*, on the Weſtern Coaſt of the *Morea*, from whence the Bay now ſo called took its Name. 5. *Olympia*, ſituate upon the River *Alpheus*, near its Influx into the Sea in the Gulph of *Arcadia*; it was anciently famous for the Games inſtituted by *Hercules* in the adjacent Fields every fifth Year, where the young Nobility of *Greece* contended for the Prize, and put a prodigious Value upon a Victory obtain'd; from hence came the *Æra* of the *Olympiades*, and the Name of the *Olympick* Games.

Clarenza. In the Dutchy of *Clarenza*, is, 1. *Patras*, ſituate upon a riſing Ground, about half a Mile from the Sea, ten Miles to the Southward of the Entrance of the Gulph of *Lepanto*. *Auguſtus Cæſar* brought his Fleet into this Habour, and conferr'd great Honours upon the Place; it ſtands upon a Hill, and has a pleaſant Deſcent every way into a fruitful Valley, well planted with Lemons, Oranges, and Citrons. The Sea that flows between this Place and the Iſland of *Cephalonia* takes its Name from this Place.

2. *Clarenza*, of which little appears now but the Ruins; but what is yet to be ſeen of the Walls is ſo ſtrongly cemented together, as if it was all one Stone; and as a late Traveller obſerves, nothing but Gun-powder or an Earthquake could have ſeparated thoſe prodigious heavy Parts of the Wall one from another, which now appears in the Ruins.

Caminitz. 3. *Caminitza*, of which there is little remarkable except its antient Name *Olenus*; it is now a Biſhop's See, under the Archbiſhop of *Patras*.

CHAP. IX.

Of the Iſland of Candia, *or* Crete.

Gort. THE Iſland of *Candia* or *Crete*, is in the *Mediterranean*, and may be ſaid to be at the Entrance of the *Archipelago*, in the thirty-ſixth Degree of North Latitude; and as to the Bounds of it, it has the *Archipelago* on the North, the *Morea* on the North Weſt, and *Natoli* or *Aſia Minor* on the North Eaſt, and the *Mediterranean* on Eaſt, South, and Weſt. *Lethe* is one of the largeſt Rivers in the Iſland, if it may be call'd a River. Upon it ſtood the City of *Gortyna*, once the Capital of the Iſland. In this Iſland is the famous Mount *Ida*, of which the antient *Greek* Poets give ſuch admirable Romantick Accounts; but Mr. *Tournefort*, a late Traveller, the Truth of whoſe Account there is no room to queſtion, tells us, that altho' this famous Mountain covers a great part of the middle of the Iſland, yet it is nothing but a huge barren Rock, without any thing agreeable, either as to Proſpect or Enjoyment; and the ſame Author, after he had been a Simpling upon Mount *Ida*, tells us, that whatſoever Side they look'd, they ſaw nothing but Quagmires, and deep Abyſſes cover'd with Snow, except the Sea, which from the top of the Mountain they could ſee both on the North and South of the Iſland; but when they came at the Foot of the Mountain, they came into a large open Valley, planted with Olives, Mulberries, Walnuts, and other valuable Fruits; here the Villages ſtand thick, and they have extraordinary good Water. The chief Towns are,

Gort. 1. *Gortyna*, once the Capital of the Iſland, whoſe magnificent Ruins ſufficiently demonſtrate what it has been; it was ſituate upon the River *Lethe*, about ſix Miles to the Southward of Mount *Ida*, near the Entrance of the Plain of *Meſſaria*, the moſt fertile in the whole Iſland; but now Corn and Graſs grows where *Gortyna* once ſtood, and yet prodigious Quantities of Ruins appear, of Marble, Jaſper, and Granate Stone, of exquiſite Workmanſhip; here yet remains Part of one of the City Gates, with a multitude of Pedeſtals, rang'd two and two in paralled Lines; they are ſuppoſed to have ſupported ſome Columns in the Front of ſome Temple; there are abundance of fine Capitals and Architraves, but the *Turks* have carried many of them away to patch up ſome poor Buildings, according to their indolent Performance; amongſt which in particular are two antique Columns, of fine Workmanſhip, ſet at a Garden Gate, which it is to be ſuppoſed, the ſlothful *Turks* did not make uſe of for the Value of the Matter or Workmanſhip, but becauſe they found them ready made to their Hands, and could they have had a fine Gate at the ſame Price, there is no Reaſon to queſtion but they would have made uſe of that as a Gate to the Garden, but as it is, there is nothing but

a ſorry Hurdle to fill up the Space. At the North-Weſt End of theſe Ruins there is the Remains of the Metropolitan Church, and of a Monaſtery near it; and not far from thence there are to be ſeen ſome Parts of the Arch of an old Aqueduct, the Arch whereof is ſix or ſeven Foot high. There are yet Medals extant at *Gortyna* of the Heads of *Germanicus*, *Caligula*, *Trajan* and *Adrian*.

A ſubterraneous Labyrinth.

Before I paſs on to the Deſcription of the other Towns in *Candia*, it may not be amiſs to take notice of what is remarkable in the Neighbourhood of *Gortyna*; particularly a ſubterraneous Paſſage, or Labyrinth, under a little Hill, at the Foot of Mount *Ida*; which, by an unknown Number of intricate Windings, without any appearance of Regularity, runs quite through the Hill: The Entrance into it is by a Paſſage, or natural Opening, about twelve or thirteen Yards broad, but ſo low that in ſeveral Places in the Entrance, a Man of a common Stature is oblig'd to ſtoop; the Floor is rugged and uneven, as if it was only the Work of Nature; but the Roof is flat, made by Beds of Stone laid horizontally. The moſt dangerous Part of the great Alley is about thirty Paces from the Mouth of it; for here are ſeveral Paths, among which if a Man miſſes the right, he is immediately bewilder'd in Intricacies, from whence it is difficult to extricate himſelf, for which Reaſon Travellers commonly take Guides. Mr. *Tournefort* gives us the following Account of his Expedition:

The Guides led him and his Company through the middle Alley, having firſt poſted one of their People at the Mouth of the Cavern, that in Caſe they did not return in Time, or might be ſuppoſed to be loſt, they might fetch help from the adjacent Villages to ſeek them, and help them out, and the better to direct thoſe that might follow them upon that Occaſion, they paſted up at every Turning Scrolls of Paper, number'd 1, 2, 3, *&c.* and alſo they ſcatter'd Straw on the Ground all the Way as they went, that if they could not go to the further End they might be ſure to find the ſame Way back that they went; and with theſe Precautions they arrived at the principal Alley, which is not ſo difficult as the reſt, and is about two thouſand Yards, or little more than a Mile and half a Quarter long, and that reaches to the End of the Grotto, or Labyrinth; where there are two beautiful Apartments for thoſe People to reſt who care to venture themſelves ſo far.

These two Rooms are almoſt round, cut out of the Rock, about four Fathom wide; here they found ſeveral Names and Dates cut in the Rock, as is common for Travellers to do when they meet ſuch Pieces of Antiquity. I ſhall wave the different Opinions of People as to the Original of this Labyrinth, or rather conclude it Natural, or the Effect of ſome Earthquake, as to its firſt appearance; however, it might afterwards be improv'd by Art, to make the two Rooms and the Paſſage to them more commodious; I ſhall only obſerve that what Mr. *Tournefort* found here confirm'd him in his Opinion of the Vegetation of Stones, for he tells us, that in the Letters, Figures, or other engraving there in the Rock, thoſe that ſeem'd to be of a very antient Date, and that doubtleſs had been concave at firſt, were ſome of them become plain, and ſome convex, and ſtood up like Baſſo Relievo, as he makes the Compariſon, and that the new Matter, or Stone, that fill'd up the Concavity was whitiſh, though the original Rock was grey; this Callofity he thinks is form'd by the nutritious Juice of the Stone, which gradually flows in to ſupport Nature and ſupply the Vacancy, and in proceſs of Time is petrify'd, and again incorporated with the Rock itſelf; and I am very ready to believe the Probability of this, if we conſider that in a Green Wound in a Man, the Effuſion of Blood being ſtopp'd, the nutritive Juice gently flows to the Wound, and furniſhes Matter, which, with proper Care and Aſſiſtance, becomes Fleſh, uniting or incorporating with thoſe Parts which were ſeparated. But to proceed, the next remarkable Town is,

Candia.

2. *Candia*, or *Crete*, which gives Name to the Iſland, and is the Capital of it; it is an Archbiſhop's See, ſituate on the the North Shore, about the Middle of the Iſland; it was once a good Harbour, but now ſo choak'd up, that it is of no Uſe but for Boats or very ſmall Veſſels, but large Ships lie under the Iſland of *Dia*, almoſt oppoſite to the Town. The City of *Candia* is but like the Skeleton of a City, if compared with what it was when the *Venetians* had it in Poſſeſſion; it was then a ſtrong Place, and had a flouriſhing Trade, but now nothing remains in Repair except the Market-Place, and two or three principal Streets, the reſt being in Ruins, and has been ſo ever ſince the laſt Siege, which was the moſt obſtinate that I remember to have read of in any Hiſtory, for it was of more than twice the Duration of the remarkable ten Years Siege of *Troy*; for the *Turks* invaded it in the Year 1645, and after ſeveral fierce Attacks, in which they loſt conſiderable Numbers of their Forces, they were forced to retire to a greater Diſtance; however, they continued the Blocade till the Year 1667, perpetually alarming the Garriſon, and intercepting their Proviſions, and renewing their Attacks; but the *Turks* not being able to block them up by Sea, they had continually freſh Supplies, ſo that the Garriſon held out till 1669, and at laſt ſurrender'd, when they had been ſtorm'd ſix and fifty Times; in this Siege the *Venetians* loſt upwards of eighty thouſand Men, and the *Turks* above a hundred and eighty thouſand, and the City was almoſt depopulated and demoliſh'd.

Canea.

Canea, or *Cydon*; it is a Sea-port, about a hundred Miles to the Weſtward of *Candia*, upon the North Coaſt of the Iſland; there is now to be ſeen the Ruins of a noble Arſenal, what remains ſtanding of it are the Arches of the Work-houſes, where they fitted out their Galleys; the Walls and publick Buildings are entirely neglected and ruin'd, and no care taken to keep them in repair.

Retimo.

4. *Retimo*, on the ſame Northern Coaſt of *Candia* *Iſland*, and about half Way between the Town of *Candia* and that of *Canea*; it was a wall'd Town, and had a tolerable good Harbour, but both are now in a ruinous Condition. There is alſo, 5. *Spina Longa*, a good Harbour and a ſtrong Caſtle, upon the ſame North Coaſt, and towards the Eaſt End of the Harbour.

The Iſland is generally inhabited by *Greeks*, *Armenians*, *Jews*, and *Turks*, but the laſt carry the Superiority in Point of Government. Of Animals, the Country produces Sheep, Hogs, Hares, Rabbits, Poultry, Pigeons, *&c.* but no Deer, or any Sort of Wild-Beaſts, are ever found there; they have Corn, Wine, Oil, Silk, Wool, Honey, Wax, Laudanum, and ſome Cotton; they have good Wheat, but ſcarce know how to uſe it, ſo that their Bread is not extraordinary; but their Wine is exceeding good, and thoſe Parts of the Iſland which are capable of Cultivation, and improv'd accordingly, are exceeding fruitful.

CHAP. X.

Of the Islands of Cyprus *and* Rhodes.

THE Island of *Cyprus* is in the North-East Part of the *Levant*, the Middle of it is in about thirty-five Degrees of North Latitude; about sixty Miles South of *Caramania*, and thirty Miles West of the Coast of *Syria*, said to have its Name *Cyprus* from its abounding with Cypress Trees. Chief Towns are, 1. *Nicosia*, the Capital of the Island; it was a large Place, but much fallen to decay since the *Turks* got it in their Possession; it was formerly the Royal Seat of the Kingdom, and is now the Residence of the Viceroy, it is situate near the Middle of the Island; the Cathedral of St. *Sophia* is converted into a Mosque for the *Turkish* Worship, but it is still an Archbishop's See, and there are three or four *Greek* [Christian] Churches in the Place; the *Latins* and *Armenians* have also several Churches here. 2. *Famagusta*, or *Salamais*, on the South-East Coast of the Island, almost over-against *Tripoli* in *Syria*, formerly a good Harbour, but now fallen to decay; 3. *Silines*; and, 4. *Lymisso*, or *Amathus*, both on the South Coast, near *Cape de Gate*; the latter is now the best Harbour in the Island; the most remarkable Mountain here is also call'd *Olympus*, it is about eighteen Leagues in Circumference, and well planted with Trees; there are no remarkable Rivers, only Streams occasion'd by the Rains, collecting themselves in the Valleys as they descend from the Mountains.

Chief Towns.

Produce.

THE Country produces Corn, Wine, Oil, Salt, Wood, Cotton, and some Silk, for which they have a considerable Trade; the Country produces Plenty of Fowl, as well as the Sea of Fish, for the Use of the Inhabitants. The *Europeans*, especially the *English Turkey* Company, have Consuls and Factors here. When the Christians had it in Possession there was near a thousand populous Villages and handsom Towns in it, but it has felt the Effect of *Turkish* Indolence, and now half the Lands lie uncultivated, and most of the Buildings which the *Venetians* erected while they were Masters of the Island, are neglected or demolish'd; it is now inhabited by *Turks*, *Jews*, *Greeks*, *Armenians*, *Maronites*, and some few *Latins*, but the *Greeks* are most numerous of the Sects of Christians, tho' the best of their Churches were taken from them, and converted into Mosques when the *Turks* became Masters of it.

THERE are several Sorts of Earth in this Island fit for the Painter's Use, and especially red, yellow, and black; there has been found here a Stone, or Mineral, of which they made a Sort of Thread, which they wove into a Sort of a Linnen Cloth, which would not consume in the Fire, and when they want to clean it, they put it in the Fire till the Dirt or Foulness is burnt out of it, and it comes out white and clean. They are afflicted with such Swarms of Locusts about a certain Time of the Year, that they appear like Clouds at a Distance, and all the Fruits of the Earth would be in danger of being devour'd by them was it not for a North Wind, which usually happens about the same Time, and drives them away. —— But to make the Description of *Cyprus* compleat, it is proper to give a Compendium, or Abstract of the History of the Place, which take as followeth:

History of Cyprus.

THIS Island was at first govern'd by several Petty Sovereigns, who were afterwards reduced to the Dominion of the *Egyptians*, and next to their Neighbours, the *Phenicians*; each of those Nations having Colonies on the Coast, and thereby keeping the Inland Country in Subjection to them; but it was not long afterwards that *Cyrus*, King of *Persia*, invaded them, and found the Island govern'd by nine Petty Kings, and, tho' he brought them under an Annual Tribute, yet he suffer'd them to retain the Name and Authority of Kings, as before, in their respective Dominions.

THE next Revolution it underwent was by the Conquest of *Alexander the Great*, and in the Division of his Empire, *Cyprus* fell to *Ptolemy*, King of *Egypt*, and continued in his Line till the *Romans*, seeing the Wealth of the Country, sent *Porcius Cato*, who not only reduced it to the Subjection of the *Romans*, but plunder'd the Island, carrying Spoils to *Rome* to the Value of seven thousand Talents; the *Saracens* afterwards plunder'd it, but it return'd to the Obedience of the *Greek* Emperors again about the Year 1191. *Richard* the First, King of *England*, putting in here for fresh Water, in his Voyage to the *Holy Land*, met with a very disagreeable Reception, whereupon he subdued the Island, and surrendered his Right to *Guy Lusignan*, titular King of *Jerusalem*, in whose Family it remain'd till the Year 1423; when the Sultan of *Egypt* invaded the Island, taking *John*, the then King, Prisoner, but restored him for a great Ransom, and a Tribute of forty thousand Crowns a Year; and about *Anno* 1473, the tributary Prince then reigning made it over to the Senate of *Venice*; who held it about a hundred Years, till *Selemas*, the *Turkish* Emperor, as Sovereign of *Egypt*, claim'd a Title to *Cyprus*; and his Grand Vizier, *Mustapha*, setting down before *Famagusta*, the strongest Place in the Island at that Time, obliged the Governor to surrender in the Year 1570; but when the *Turk* had got Possession, he could no longer forbear his natural, or rather unnatural, Barbarity, and murder'd the principal Inhabitants in cold Blood; and as for the Governor, who bravely defended the Place to the last Extremity, he was so far from applauding his Courage, (as is often the Case when a courageous Commander becomes a Prisoner of War to a generous Enemy,) that he caus'd him to be flay'd alive, and hang'd up at the Yard's Arm of his Ship, and having reduc'd the whole Island, and kill'd the chief Inhabitants, he spar'd the Artificers and Mechanicks, allowing them the free Exercise of their Religion, only paying the Tribute that he imposed upon them. Amongst the rest of his Plunder, he took Prisoner a beautiful *Cyprian* Lady, which he sent with the rest of his Booty to his Master the Grand Seignior, being as much as loaded two Ships; but the virtuous, as well as resolute, Lady preferring her Modesty before her Life, and chusing rather to die than to be prostituted to the Grand Seignior's unlawful Embraces, she found Means to blow up both the Ships, and voluntarily sacrificed her own Life with the Lives of all the Sailors and Passengers; and some Historians applaud this her undaunted Resolution, but I must own I think it will be very difficult to prove that this Preservation of her Chastity could attone for the wilful Murder of so many innocent Persons; indeed, so much Virtue was very remarkable in a Lady brought up in an Island consecrated to *Venus*, and where prostituting their

Bodies were accounted a Part of the Religion, or an Act of Obedience to their Patroneſs, as was the Caſe in *Cyprus*, where the Females never refuſed to perform this Piece of Worſhip to their Goddeſs *Venus*, either with Strangers at home, or with the moſt remote of Foreigners from abroad; however, this Iſland has produced not only great Poets and Philoſophers, but it was the native Place of *Barnabas*, who, with St. *Paul*, firſt planted Chriſtianity here; on which Account the Archbiſhop of this Place was made independant of the See of *Antioch*, tho' all the Eaſtern Biſhops were formerly ſubject to it.

Rhodes. The next remarkable Iſland is *Rhodes*, in the South-Eaſt Entrance of the *Archipelago*, in between 36 and 37 of North Latitude; it was formerly call'd *Aſteria*, *Ethræa*, *Corymbia*, and other Names, but it is now known by the Name of *Rhodes*; as for the Reaſon of its going by that Name, the Account that we have from the *Greek* Hiſtorians carry ſuch a Face of Fable and Fiction along with it, that I think the Hiſtory may be ſupplied with Matter more true and uſeful. The chief Towns in *Rhodes*, are, 1. *Rhodes*, of the ſame Name with the Iſland, and on the North-Eaſt Part of it; it has a tolerable good Harbour; the Town is about three Miles in Circumference; the Streets are broad, ſtrait, and well paved, and the largeſt is paved in the Middle with Marble, from End to End. In this Street is yet to be ſeen the Apartments of the Knights of *St. John of Jeruſalem*, and the Palace of the Grand Maſter, but very much decay'd; and the Grand Maſter's Palace is now only a Priſon for the Chams of *Tartary*, whom the Grand Seignior baniſhes hither when he depoſes them. The Church of St. *John* is now a Moſque. The City is defended by three Walls and as many Ditches, and is reckon'd one of the ſtrongeſt Fortreſſes in all the Sultan's Dominions; it is inhabited chiefly by *Jews*, *Turks*, and Chriſtians, but the Chriſtians are not allow'd to have their Dwellings within the Walls, bnt only their Shops or Warehouſes, but retire at Night to their Houſes without the Walls. There are two other, once conſiderable, Towns in the Iſland, named *Lindus* and *Camirus*, but now there is no Place of Note, either for Strength, Trade, or Buſineſs, but only *Rhodes*.

Air. The Air is healthful and the Country pleaſant, the Trees and Herbs always green; they have excellent Wine, and Plenty of all Things for the Support and Comfort of Life, except Corn, and that they have in great Plenty from the main Continent of *Natolia*.

Coloſſus of the Sun. It is at *Rhodes* that the famous Coloſſus of the Sun was, which was ſo much ſpoke of in Hiſtory, of which take the following Account: It ſtood at the Mouth or Entrance of the Harbour of *Rhodes*, which though it was fifty Fathom wide, the Coloſſus, which had all the Proportions of a Man, only the Face of it repreſented the Sun, it ſtood with one Foot on one Side of the Harbour, and the other on the other; the Ships that came in or out of the Harbour ſail'd between its Legs; the Height of it was ſeventy Cubits, the Thumb was as thick as a Man could graſp in his Arms, and the Fingers as thick as an ordinary Man; it carried in one Hand a Light-houſe for the Direction of Veſſels into the Harbour; it was thrown down by an Earthquake, and lay till the *Saracens* took *Rhodes*; they beat it to Pieces, and ſold it to a *Jew*, who tranſported it to *Egypt*, and in carrying it aſhore they loaded nine hundred Camels with the Braſs; 'tis true, the whole Account of it ſeems almoſt beyond human Belief, nor will it add much to the Credit of it to conſider into what extravagant Flights, and figurative Expreſſions, the poetical Authors have launch'd into who have writ of of the Hiſtory, but eſpecially the Rarities or Wonders of thoſe Parts of the World; indeed, from the Concurrence of Hiſtory, it would ſeem that there was a Coloſſus of an extraordinary Size, and called the Coloſſus of the Sun, but thoſe exorbitant Dimenſions ſeem rather to be the figurative hyperbolical Expreſſions of one Author being taken for Fact by another, that has magnified this Coloſſus to this monſtrous Size.

As to the Abſtract, or Summary, of the Hiſtory of this Iſland; the Inhabitants ſo improv'd the Advantage of their Situation, that they became the moſt conſiderable Maritime Power in all the *Mediterranean*, and preſcribed Laws for the Regulation of Navigation and Commerce; thoſe Inſtitutions became ſo publick and univerſal, that they were known by the Name of the *Rhodian* Laws, and by them all Maritime Cauſes were decided in all the Provinces of the *Roman Empire*. The *Rhodians*, apprehenſive of falling under the Dominion of the *Macedonians*, they entered into an Alliance with the *Romans*, whom they aſſiſted againſt *Philip*, the Father of *Perſeus*, and afterwards againſt *Antiochus*; for which laſt Service the *Romans* annex'd the Provinces of *Lycia* and *Caria* in *Natolia* to their Dominions; and they continued ſo faithful to the *Romans*, that when all the other Iſlands revolted to *Mithridates* King of *Pontus*, they ſtood it out for their Maſters, the *Romans*, but retain'd their own Freedom, till at laſt ſome Liberties that they took was reſented by the *Romans*, as too inſolent, whereupon they loſt their Independency, and the *Romans* annex'd them to the Empire as a Province of it, and ſubject to it, till the Year 1124; at which Time it was reduc'd by the State of *Venice*, but recover'd again in the Year 1227; the *Turks* conquer'd it in 1283; but the Knights of *St. John of Jeruſalem*, being driven from the *Holy Land*, took it about the Year 1308, and held it upwards of two hundred Years; when it was at laſt taken by *Solyman the Magnificent*, and has been ever ſince belonging to the *Ottoman Empire*, and the late Inhabitants, the Knights of *St. John of Jeruſalem*, retired to *Malta*.

CHAP.

CHAP. XI.

Treats of the Islands of Scarpanto, Stampalia, Coos, Samos, *and* Patmos.

Scarpanto.

SCARPANTO was antiently call'd *Carpathus*, and being situate between the Islands of *Candia* and *Rhodes*, that Sea is call'd the *Carpathian* Sea; it is a Mountainous Rocky Island, about 60 Miles in Circumference. The chief Town is of the same Name with the Island; it stands towards the Western Coast of it, and has a pretty good Harbour, but the Island produces little except good Quarries of Marble; its chief Inhabitants are *Greek* Christians, but it is under the Government of the *Turks*.

Stampalia.

To the North Westward of *Scarpanto*, and South West from the Coast of *Natolia*, is *Stampalia* or *Astypalæa*; it is about fifty Miles in Circumference; there is but one Town in the Island inhabited by *Greek* Christians; the Town is on the South Part of the Island, and has a pretty good Harbour belonging to it.

Coos.

Coos, now call'd *Longo*, or *Stanchio*, lies North West from *Rhodes*, and not twenty Miles from the Coast of *Natolia*; it is of a longish Form, and about eighty Miles in Circumference: it has one large Town of the same Name, and a good Harbour, defended by a Castle; this is a Rendezvous for the *Turkish* Galleys, and for their Shipping in their Passage from *Constantinople* to *Egypt*. The Western Part of it is a fine Champion Country; but tho' the East Part is more Mountainous, from whose Springs plenty of Rivulets descend to the lower Ground, and make them exceeding Fruitful, the Wine of this Island was very much valued at *Rome*; here are also great plenty of Cypress and Turpentine Trees, and medicinal Plants, both for Beauty and Profit. Here was anciently a Temple dedicated to *Esculapius*. This was the Native Place of *Hypocrates*, and several eminent Physicians and Philosophers, and particularly of *Apellas* the Painter, who drew that famous Picture of *Venus* rising out of the Sea naked; it was first hung up in one of the principal Temples of the Island, but was afterwards remov'd to *Rome*, and dedicated to *Julius Cæsar*, for which Favour the Inhabitants had a great part of their Annual Tribute remitted them. The Inhabitants are mostly *Greeks*, but the Garrison are *Turks*.

Samos.

The Island of *Samos* lies off of *Ephesus*, about two Leagues from the Continent of *Natolia*, and about fifty Miles to the Southward of *Smyrna*, about ninety Miles in Circumference. In this as well as other Islands in the *Levant*, they seldom have Rain, Thunder, or Lightning, but in Winter. There is a great Ridge of Mountains runs cross the Middle of the Island from East to West, composed mostly of white Marble cover'd with Vegetable Earth, which produce Trees, Plants, and fine Springs, the most remarkable of which runs to the Southward by *Juno*'s Temple, and falls into the Sea on the South Side of the Island: There are several Harbours in the Island, as *Scian* on the West; *Tigani*, the Port to the antient City of *Samos*, on the South; but *Vari* on the North is much the best Harbour in this Island. *Juno* and *Samia* the Sybil are said to be Natives of the Island, as well as the two famous Philosophers *Pythagoras* and *Polycrates*.

The Number of Inhabitants are computed at about twelve Thousand. The *Cadi*, the *Aga*, and his Lieutenant, are *Turks*, and are chiefly employ'd in Levying the Grand Seignior's Duties; but Civil Affairs, or Differences, are determined by Magistrates chosen by the *Greeks* from amongst their own People. The *Samians* are an inoffensive People, and thereby live at ease, and are less tyranniz'd over, than the Christians in other Parts of *Turkey*. *Cora* is the chief Town and Residence of the Bishop, whose Revenue is about two Thousand Crowns a Year. The Ecclesiasticks have the greatest Share in the Government, for there are about two Hundred Priests and a much greater Number of Monks, who possess seven Monasteries; there are also four Numeries, and above three Hundred private Chapels in the Island.

Coa.

The Chief Towns are, 1. *Cora* on the South Side of the Island, adjoining to the Ruins of the antient City of *Samos*, within two Miles of the Sea; it is a pleasant fertile Country, but sickly of late by Reason the Waters which formerly discharg'd themselves into the Sea now Stagnate on the Plain. The Town contains about six Hundred Houses, but not fully inhabited. 2. *Vari* above mention'd, it lies on a Descent of a Mountain, about a Mile from the Port of the same Name; in it are about three Hundred Houses, and six Chapels, all meanly built; however, as a Sea-Port it is the most considerable in the Island. There are other large Villages, but do not deserve to come under the Denomination of chief Towns; nor does History give any particular Account of them, perhaps, because they do not produce any thing that is a proper Object for the poetical Fancy of a *Greek* Author, to magnify and enlarge upon. There are in this Island abundance of Mountains, Rocks, and Precipices; but the Plains, especially about *Cora*, are Fruitful and Pleasant. The Mountains produce two Sorts of Pine Trees, one Sort of which grows to a Height fit for Ships Masts, and yield abundance of Turpentine, but the others are only a common sort. They have Wine, Olives, Pomegranates, Mulberry Trees, Figs, Corn, Honey, Wax, Scammony, Apples, Roses, and very fine Silks. There are also Cattle, Oxen, Sheep, Goats, Wild Deer, Wild Hogs, Hares, Partridges and other Game. Their Wool is so good, that the *French* import great Quantities yearly from thence, which, with what they have from other Parts of *Turkey*, supplies them so well that they have the less need of that Commodity from *England*. There are also some Iron Mines in *Samos*. The Emery Stone is also found here, and the Oaker is found near *Vari*, which makes a fine Yellow. There is good Jasper near *Platano*, but the chief Substance of the Mountains is white Marble. Their Wine and Brandy is so wholsome, that Mr. *Tournefort* tells he met with a Monk a Hundred and twenty Years old, that had drank any sort of Liquor in the Island but Wine and Brandy.

Antiquities.

The most remarkable Antiquities in this Island, is the Ruins of the once famous City of *Samos*, which stood on the South Side of the Island, near the Sea, not far from where *Cora* now stands. The North Part of the Town stood on the Side of a Hill, and the lower Part ran along the Sea Shore: Port *Tigani*, which is the Galley Port of the Antients

tients, is in Form of a Creſcent, or half Moon, on the Left Horn whereof was the famous *Jette*, which *Herodotus* reckons amongſt the Wonders of *Samos*, being a Hundred and twenty Foot high, and one thouſand two hundred and fifty Foot into the Sea: From Port *Tygani* there is an Eminence, upon which are abundance of Marble Tomb Stones, but without any Inſcription to diſcover whoſe they are,

The Wall.

At this Place begins the Wall of the upper Town, on the Declivity of a Mountain, and continues the whole Length of it; the Ruins of the Wall being now all that is to be ſeen of it, prove it to have been very magnificent, being ten or twelve Foot thick, with Marble Towers at proper Diſtances: The Deſcent of the Mountain towards the South facing the Sea was cover'd with Buildings, in Form of an Amphitheatre, and a little lower is the Ruins of the Theatre; from whence going down to the Sea, there are abundance of broken Pillars, which by the Order in which they ſtand, ſeem to have ſupported ſome Temples or Portico's; and the like is to be ſeen in ſeveral other Places in the Iſland, ſuppoſed to be of the ſame Uſe.

By what appears of the Ruins of the City of *Samos*, it ſeems to have taken up all the Space between *Corea* and the Sea, which is above two Miles, and to have extended as far as the River, which runs beyond the Ruins of *Juno*'s Temple: There has been a noble Aqueduct cut thro' a Mountain, by which the Water was convey'd to the City of *Samos* from the Head of the River *Metelinous*. The Ruins of the Temple of *Juno*, the Protectreſs of *Samos*, according to the Fictions of the Heathen Poets, is above five Hundred Paces from the Sea, and about the ſame Diſtances from the River *Imbraſus* towards Cape *Corea*. There were in the Courts of this Temple, three Coloſſus like Statues, ſtanding on the ſame Baſe, repreſenting *Jupiter*, *Hercules*, and *Minerva*, but theſe *Mark Anthony* carried to *Rome*.

Patmos, or Patina.

Patmoſa, or *Patina*, as it is now call'd, is the antient *Patmos*, where St. *John* writ his *Revelation*, *Rev.* i. 9. It is South Weſt of *Samos*; it is about twenty Miles in Circumference, but one of the barreneſt Iſlands in the *Archipelago*, full of Rocks, and ſtony Mountains, with ſcarce either Trees or Herbage upon them; there are no Rivers in the Iſland, nor ſcarce any Springs but what are dry in the Summer. The Port *La Scala* on the North Side of the Iſland, is one of the fineſt Harbours in the *Archipelago*, tho' *Sapſila* and *Gricon* are very good Havens, but thoſe commodious Rendezvous for Shipping make it ſo infected with Pyrates and Rovers, that the Inhabitants are forced to quit the Shore, and retire to the Mountains. The Convent of St. *John* is ſituate upon a Precipice about three Miles to the Southwards of *La Scala* Harbour; it is a ſtrong Building with ſeveral Towers like a Caſtle; the Chapel is ſmall, and poorly painted; but the Convent has a Revenue of ſix Thouſand Crowns a Year annex'd to it, and they have Plate to a conſiderable Value; but what is moſt obſervable, as being in a *Turkiſh* Country, is two large Bells, which hang in the Gate-way, the *Turks* very rarely allowing any ſuch thing in their Dominions; but the Veneration for the Memory of St. *John* induces them to allow the Monks of *Patmos* this Privilege. There are about a Hundred Monks belonging to this Monaſtery, ſixty of whom are Reſident, and the reſt are employ'd in Manuring the Farms in the adjacent Iſlands.

Hermitage of the Apocalypſe.

There is a Building, call'd the *Hermitage* of the *Apocalypſe*, which is a Dependent on the Convent of St. *John*, and makes but a poor Figure; it ſtands on the Side of a Mountain; the Way to it is rugged and narrow, and cut thro' a Rock. The Chapel is between forty and fifty Foot long, and between twenty and thirty broad. On the Right Hand is St. *John*'s Grotto, the Entrance whereof is about ſeven Foot high, with a ſquare Pillar in the Middle. There is in the Roof a Crack in the Rock, through which they ſay the Holy Ghoſt dictated to St. *John* the Revelation which he wrote; and altho' I would not be ſo credulous as to impoſe all verbal and ſuperſtitious Traditions upon the Belief of the Reader, as indiſpenſible Matters of Faith; yet, on the other hand, I would conſult Probabilities before I would raſhly reject them; and if ſo, then firſt the Book of the *Revelation* was writ in the Iſle of *Patmos*, Rev. i. 9. Secondly it was, or at leaſt introduced, preceded by a Voice, as of a Trumpet, &c. *Rev.* i. 10. and it is not at all difficult to believe that ſuch a tremendous Voice might be convey'd to him through the Cleft of a Rock.

Preſent State of *Patmos*.

As to the preſent State of this Iſland of *Patmos*, the lateſt Account we have of it, is by Mr. *Tournefort*, who tells us, that there are not above three Hundred Men upon the Iſland at preſent, but that there are at leaſt twenty Women to one Man; they are tolerably handſome in themſelves, but to make themſelves handſomer, as they think, they diſfigure themſelves with Paint, thinking thereby to make Strangers fall in Love with them, and are very willing to go along with Strangers, that offer their Service, to keep them Company.

Government.

There are no *Turks* or *Latins* live in the Iſland, but moſtly *Greeks*, only a Publican from the *Turks* comes yearly to collect the Poll and other Taxes; but their Civil Magiſtrates are of their own chuſing, and of their own People, as in *Samos*. The Biſhop of *Samos* is their Dioceſan, but their Prieſts frequently have Ordination from other Biſhops. They have Corn and Wine of their own Growth; they have alſo Plenty of Partridges, Quails, Pigeons, Snipes, and other Game. I need not take Notice that there are few, if any Cattle upon the Iſland, becauſe I obſerv'd before, that there is very little or nothing for them to eat.

CHAP. XII.

Gives a Description of the Islands of Nicaria, Scio, Mitylene, *or* Lesbos, *and* Tenedos

Nicaria.

TO the Westward of *Samos*, about five or six Leagues, is the Island *Icaria*, so call'd from *Icarus* the Son of *Dedalus*, who being drowned in this Sea, the Island had its Name given in Memory of him, tho' some derive its Name from the *Phenician* Word *Icaure*, which signifies full of Fish; however the Name is now alter'd, or rather corrupted to *Nicaria*; it is a long narrow Island, about sixty Miles in Circumference; a Chain of rugged Mountains run quite through the Middle of it from end to end, but they are cover'd with Wood, and supply'd with good Springs. Their chief Trade, if it may be so call'd, is the Sale of their Pines, Oaks, and other Fire-wood, which they carry to the adjacent Islands for Fuel. They are miserably poor, and not ashamed to beg where ever they come, which they had rather do than work to improve their Land, which would bring both Corn and Fruit, if manur'd and cultivated. Their Bread is Dough Cakes about half baked, of which they only bake a Quantity sufficient for one Meal at a Time, or just as they need them, and in all their Actions they express a more than Brutish Slothfulness, nor do they encourage any sort of Trade, but trust to just what the Earth produces, and that is the Reason why few of their Neighbours or Strangers trouble their Heads to converse with them; yet there is one Advantage arises from thence, and that is, that their Language comes nearer the antient *Greek*, than that of those other Islands, who converse more with Strangers.

Scio.

THE next considerable Island to the Northward of *Samos*, is *Scio* or *Xio*, or by some call'd *Chios*, about eighty or a hundred Miles West from *Smyrna*; it is above a hundred Miles in Circumference, its longest Way is North and South, and it is narrowest in the Middle; it is rocky and mountainous, having no Springs that endure all the Summer; it is not less subject to Earthquakes than *Smyrna*.

THERE is but one City in the Island, and it is of the same Name, *Scio*; it is situate about the Middle of the Eastern Coast; it is well built if compar'd with the Buildings in that Part of the World, for it has been in the Hands of the *Genoese*, and several of their Families yet remain there; they built a Castle close to the Sea, which is yet standing; the City is surrounded with a Ditch and a Wall with round Towers, the Garrison consists of about fourteen hundred Men; this Port is a Rendezvous for Shipping in their Passage between *Syria*, or *Egypt*, and *Constantinople*; there is also commonly a Squadron of *Turkish* Gallies in this Port. There are about fifty or sixty Villages in the Island, besides Farms and Plantations almost all over the Country; the *Greeks* are the most numerous of the Inhabitants; for in the Year 1701 it was computed that there were in the Island about ten thousand *Turks*, three thousand *Latins*, and a hundred thousand *Greeks*, in all one hundred and thirteen thousand Inhabitants.

Scio taken.

THE *Venetians* took it in the Year 1694, but in a Year's Time the *Turks* took it from them, forbidding the *Latins* to wear Hats, as had been usual for them here, and obliged them to shave themselves, and to quit the *Genoese* Habit, and also to alight from their Horses at the entering the Gate of the City, and humbly to salute every *Turk* they met.

Roman Catholick encouraged.

THE *Roman* Catholicks had for a while the free Exercise of their Religion in this Island, a Privilege they obtain'd by the Intercession of the *French* King, and then Divine Service was perform'd with the same Ceremonies as in the Pope's Territories; the Priest carried the Host to the Sick at Noon-Day, and the Procession of *Corpus Christi* was perform'd with the utmost Solemnity, the Clergy walking in their proper Habits, under Canopies, and bearing Censers in their Hands, and all was perform'd with so much Ceremony, that the *Turks* call'd *Scio Little Rome*, and suffer'd them to enjoy all this without Interruption; but the *Turks* envying them that Advantage, found Means to pick a Quarrel with the *Latins*, under a Pretence of their being concern'd in the late Revolution, and so deprived them of their new Privilege; and now their Cathedral is turn'd into a *Turkish* Mosque, and so is the *Dominican* Church, and the Jesuits Church is converted into an Inn, and those of the *Capuchins* and *Recollects* pull'd down; the *Latin* Bishops was forced to fly to the *Morea*, and the Priests, who remain'd behind, were made subject to the Capitation Tax, but were exempted by the *French* King's Intercession.

BUT still the *Greek* Bishop remains the same as before, having three hundred Churches under him, besides Chapels, with which the Island abounds, their Monasteries and Nunneries also enjoy large Revenues; the most considerable Convent is that of *Neamoni*, or *New Solitude*, it is about five Miles from the City, it pays Yearly five hundred Crowns Capitation Tax to the *Turk*; there are in that House about a hundred and fifty *Greek* Monks, who never eat together but on *Sundays* and *Holidays*, and provide for themselves all the rest of the Week, the House allowing them only Bread, Wine, and Cheese, but the richer Sort do not confine themselves to that Allowance, but live very voluptuously.

New Solitude.

THIS Cloister is so large and well endow'd that it looks more like a Town than a Convent; it has an eighth Part of the Revenue of the whole Island, and rather more, for they have fifty thousand Crowns paid them Yearly, besides Gifts and Legacies; for every new Member pays in a hundred Crowns at his Admission, and when he dies two Thirds of his Substance goes to the House, nor can any Relation enjoy the other Third without becoming a Member, so that in short it may be said that all the Effects of the Deceas'd go to the House. This Convent stands on a little Hill, surrounded with rugged disagreeable Mountains and Precipices, which kind of Situation the *Greek* Monks commonly make choice of, quite contrary to the Catholicks, who commonly build their Monasteries in the most agreeable Places they can meet with, and indeed Solitude, rather than a Diversity of pompous Objects, might, one would think, be the most proper Situation for the Exercise of Abstinence and Religion. The Church of this Convent is reckon'd one of the best in the *Levant*, the Columns and Chapiters are of Jasper, dug in this Island, but the Painting is very mean, like that of the rest of the *Greek* Churches.

Manners.

THE Inhabitants are accounted witty and sharp, especially in Tricking and Over-reaching, but Learning bears a very low Value among them; they

are

are extravagant in their Pleaſures, and Drunkenneſs is an ordinary Vice, or rather none at all, with them; it is common with them, as well in the City as in the Country Villages, to dance promiſcuouſly in a Ring on *Sunday* Evenings, and ſometimes till *Monday* Morning, any Stranger preſent, that deſires it, being welcome to join in the Dance, and participate of the Diverſion.

Perſons. The Men are generally tall and well-ſhap'd, but no agreeable Aſpect; however, the Women are extreamly handſom and beautiful, and their Habit exceeding neat and pretty, to which if we add their Vivacity, Wit, and good Humour, they may juſtly be eſteem'd the moſt agreeable Women in the World; they enjoy their full Liberty to converſe, ſing, play, dance, or ſtand at their Doors or Windows, without any of thoſe Reſtraints that abundance of Women in the Eaſtern Countries are kept under; even a Stranger may addreſs them, and have as courteous an Anſwer as in any other Nation; their Nuns are courteous and kind to Exceſs, their uſual Work is embroidering with Gold, Silver, or Silk, and they work exceeding pretty Flowers in their Purſes, Handkerchiefs, *&c.*

Government. The whole Country is under the Government of a Cadi, or Civil Magiſtrate, if it is peaceable Times; but in Times of War the Forces are commanded by a Baſſa, and then there is an Aga of the Janizaries, with three hundred Men, reſides here, but he has only half that Number in Times of Peace. The *Greeks* are diſtinguiſh'd into three different Ranks, or Degrees, and tax'd accordingly; the firſt pay ten Crowns a Head annually, the next three, and the meaneſt two and a half. The *Greeks* are allow'd to chuſe twelve out of their own People in the City to regulate Matters, and preſide over the Community, and in every Village they chuſe ſix for the ſame Purpoſe, and theſe generally determining all Differences, they ſeldom have occaſion to go before the Cadi.

Produce. One great Misfortune which this, as well as others of the *Archipelagian Iſlands*, labours under is, that it does not produce Corn enough to ſupply the Inhabitants, and that is the Reaſon why thoſe Iſlands can never maintain them long againſt the *Turks*, except they have the *Morea* or *Candy* to ſupply them with Proviſions; for if the *Turks* block up all their Supplies of Proviſions from thoſe Iſlands, which cannot furniſh themſelves, they ſtarve them into a Compliance of Courſe. *Scio* produces great Plenty of Wine, and it is ſaid the firſt Red-Wine was made here; the beſt Vineyards are thoſe of *Meſta*, which produced the *Nectar* of the Antients, ſo much admired: They plant their Vines on the Hills, and the Vintage is in *Auguſt*; as to the Ordering their Grapes, they let them dry ſeven or eight Days in the Sun, and having preſs'd them, they let the Liquor ſtand in Tubs in a cloſe Cellar to work; when they make their beſt Wine, they mix ſome white Grapes with their black, which gives the Wine the Reliſh of a Peach Kernel.

They have ſome Olives and Silk, but they neither of them amount to Merchandize, but are moſtly manufactured and conſumed in the Iſland; there are in ſome Parts of the Iſland Abundance of Orange, Citron, Mulberry, Pomegranate, and Turpentine Trees, and the beſt Maſtick in the World. The Maſtick-Tree ſpreads wide, and in a circular Form, ten or twelve Foot high; the largeſt of them grows to about a Foot Diameter in the Body, they are cover'd with a rough greyiſh Bark; the Leaves are about an Inch long, half an Inch broad in the Middle, and narrow at the Ends; from the joining of the Leaves grow Flowers, in Cluſters like Grapes, as does the Fruit, or Berry, which follows them; in each Berry is a white Kernel: The Tree blows in *May*, and the Fruit is ripe after Harveſt, or towards Winter; but the Gum is the moſt valuable, and is properly the Maſtick, which they draw from the Tree by cutting the Bark of the Trunk croſs-wiſe; next Day the Juice diſtils in ſmall Drops, which they call Tears, which by degrees congeal, and form the Maſtick Grains, which harden on the Ground, and are then ſwept up and ſifted; but if it happens to rain in the mean Time, the Maſtick is all loſt; the principal Time of cutting the Trees is about *Auguſt*, tho' they cut them again in *September*, but they yield a leſs Quantity of Maſtick; they never cut the Branches at all. The Ladies of the Seraglio uſe a great Deal of Maſtick for chewing, to ſweeten their Breath and preſerve their Teeth.

Deſcription of the Maſtick Tree.

Turpentine-Tree. The Turpentine-Tree grows wild in the Borders of the Vineyards and by the Highway Sides; it is about as high as the Lentisk, or Maſtick-Tree, and hath a reddiſh Leaf; the way of drawing the Turpentine out, is by wounding the Body of the Tree with a Hatchet, between *July* and *October*, and the Turpentine runs down upon flat Stones, put upon the Place to receive it; it is a natural Balſam, and an excellent Thing for the Stomach. They have a Sort of Figs in this Iſland of which they make Brandy, of which they ſend great Quantities to the neighbouring Iſlands. The Partridges may be reckon'd a tame, or domeſtick Fowl, and People keep Flocks of them, as we do of Hens and Geeſe, and every Village has a common Servant, who calls them out of their Owner's Houſes in a Morning, and leads them into the Fields, and upon a Call which he gives them in the Evening they all come to him, and he leads them to the Village, where they all repair to the Houſes of their reſpective Owners.

Great Men. This Iſland has produc'd ſeveral great Men, as *Ion*, the Tragick Poet, *Theopompus*, the Hiſtorian, *&c.* But beſides them this Place contends with ſome others for being the native Place of *Homer*; and to confirm this Opinion, they ſhew Travellers a Place, which they ſay was *Homer's* School, at the Foot of Mount *Epos*, by the Sea Side, about four Miles from the City of *Scio*: It is a flat Rock, wherein has been hew'd a Kind of a round Baſon, of about twenty Foot Diameter; the Brims of it are made to ſit on, and in the Middle there is a ſquare Stone about three Foot high, and the ſame in Breadth, where it is ſaid he ſate in the Middle of his Scholars; but as no leſs than ſeven great Cities contended for the Honour of his Birth, and every one pretends to give ſome valid Proofs of their Aſſertion, I ſhall not pretend to decide the Debate amongſt ſo many contending Parties.

Homer's Birth-Place.

Mitylene. *Mitylene*, or *Lesbos*, is another of the Iſlands of the *Archipelago*, North-Eaſtward from *Scio*, and not far diſtant from the Coaſt of *Natolia*; it is about fifty Miles long, and five and twenty broad; there are between the barren Mountains ſome fruitful Valleys and Plains, which produce Plenty of Corn. The chief Town is *Mitylene*, now call'd *Caſtro*; it ſtands on a rocky Promontory, on the North Part of the Iſland, having two Forts belonging to it, beſides a Caſtle and a ſtrong Garriſon, to defend it from the Pyrates and Rovers, who very much infeſt thoſe Seas. There are above a hundred Villages in this Iſland, of which one is call'd *Eriſſa*, ſuppoſed to be the *Eriſſus* of the Antients, where *Theophraſtus* and *Phanias*, eminent Diſciples of *Ariſtotle*, were born; as was alſo the famous *Arion*, whoſe Skill in Muſick was ſuch, that he is ſaid by it to have charm'd the Dolphin which carried him aſhore; *Epicurus* read Lectures at *Mitylene* two Years, and as long did *Ariſtotle* reſide here; *Pittacus*, one of the ſeven Wiſe Men, and *Sapho*, the Poeteſs, were Natives

of

of this Place; and in ſhort few Iſlands, if any, have produced Men of greater Genius than this Iſland, and yet ſo degenerate in their Morals, that it became a Proverb in *Greece*, when deſcribing a profligate Perſon, *He lives like a* Lesbian.

Produce. BESIDES Corn, as above mention'd, this Iſland produces excellent Wines, and good Oil, and the beſt Figs in the *Archipelago*; there are Pine-Trees which yield a Sort of a black Gum, which ſerves for the Uſe of Pitch. The Iſland is govern'd by a Cadi and a Janizary Aga, who have the Government of the Iſland, and reſide at the City of *Caſtro*, or *Mitylene*.

Tenedos is about ſixty Miles to the Northward of *Mitylene*, and about two Leagues from the *Natolian* Coaſt; it is about fifty Miles in Circumference, and is the Iſland behind which the *Grecian* Fleet retired when they firſt pretended to raiſe the Siege of *Troy*, and afterwards ſurpriſed it. The moſt remarkable of the Produce of this Iſland is their excellent *Muſcadine* Wine, which exceeds any in the *Archipelago*. The Iſlands hitherto deſcribed are generally reckon'd to belong to *Aſia*.

Tenedos

CHAP. XIII.

Gives a Deſcription of the Iſlands of Delos, Mycone, Naxos, Paros, *and* Antiparos; *with a particular Account of the ſurprizing* Grotto *in the Iſland of* Antiparos.

THIS Parcel of Iſlands is call'd by ſome the *Cyclades*, becauſe they are diſpoſed round about the Iſland of *Delos*; ſome ſay they are fifty-three in Number, however in a clear Day twenty of them may be ſeen at once; the Chief of them is *Delos*, of an oblong Figure, about twice as long as it is broad; it lies near the Middle, between the *Natolian* and *Morean* Shores; and has the South Part of *Mycone* on the Eaſt, the Channel between *Mycone* and *Tinos* on the North, and the Iſland *Rhenia* on the Weſt; ſome call it *Little Delos*, or if the Iſland *Rhenia* be included with it, it bears the Name *Zdeli*, in the Plural Number. This Iſland was held in great Veneration by the Antients, becauſe it was held to be the Birth-Place of *Apollo* and *Diana*; for which Reaſon the Iſlands about it ſent thither Prieſts, Sacrifices, and Choirs of Virgins, and inſtituted great and publick Feſtivals in Honour of *Apollo*; Sir *George Wheeler* tells us there were but twelve of thoſe *Cyclades* at firſt, but the above mention'd Superſtition of the Veneration paid to *Apollo*, drew ſuch a Concourſe of Inhabitants, that they not only comprehended moſt of the Iſlands in the *Egean Sea*, but the Humour ſpread itſelf through moſt of *Greece*, and upon the Deſtruction of *Corinth* by the *Romans*, moſt of the Wealth and Trade of that City remov'd to *Zdeli*, being thereto induced by the Conveniency of the Harbour, and by its Situation between *Europe* and *Aſia*, as well as between *Egypt* and *Syria* to the Southward, and *Conſtantinople* to the Northward, but eſpecially on Account of the Immunities and Freedom from Cuſtoms and Impoſitions which thoſe Iſlands then enjoy'd; and thoſe Privileges were continued to it till the Time of *Mithridates*, who deſtroy'd its Wealth and Power; ſince which Time the Iſlands of *Delos* and *Rhenia* are quite deſerted, and ſerve only as a Retreat and a Shelter for Pyrates.

Remaining Antiquities. THE following Account of the preſent State of this Iſland we have given us in a particular Manner by Sir *George Wheeler* and Monſieur *Spon*, who were both upon the Iſland together; and ſince that by Mr. *Tournefort*, from whoſe Relation we have extracted the enſuing Deſcription of this Iſland: Sir *George Wheeler* relates, that landing on the North-weſt Part of this Iſland, he ſaw a ſquare Foundation, with eleven Granite Pillars, then ſtanding about, and within it; this Place the People call'd the Schools, from a Tradition that the Schools were antiently there. About a Stone's Caſt from thence they found a Pedeſtal of a Statue, in a large oval Foundation; it was dedicated to *Mithridates Euergetes*, in the Time that *Seleucus* of *Morathan* was Gymnaſiarch, or chief Governor, of the Schools, and another Inſcription to the ſame Purport at a great Diſtance from the other two; the oval Foundation is about five hundred Yards in Length, and above three hundred in Breadth; and the Ground within it is ſo much below that without it, that the Wall about it is five Foot high on the Inſide, and but even with the Ground without; which has given Reaſon to conjecture that this was a Reſervoir or Baſon, wherein they floated ſmall Veſſels, to exerciſe their mock Naval Fights; there were ſome Pillars then remaining on the Brink of it, which made them conclude that it had been formerly ſurrounded by ſome Building or Galleries now demoliſh'd.

Apollo's Temple. FURTHER to the Eaſtward they found a Heap of Ruins of white Marble, which they concluded belong'd to the Temple of *Apollo*, becauſe they found the Body of his Statue among them; but the Temple is ſo entirely deſtroy'd, that one cannot give any tolerable Gueſs at the Form of it; and as for the poor Demi-God, he has neither Hands, Feet, nor Head left; but the Shape of his Locks are yet to be ſeen upon his Shoulders, with Marks in the Curls, where 'tis ſuppoſed Jewels were ſet; his Girdle ſeems alſo to have been richly adorn'd, and on his Left Shoulder he had a Mantle; the Shoulders of the Statue were about ſix Foot broad, and the other Parts (what was left) in proportion: When *Wheeler* was there about three Years before, it ſtood upright, with the Head and Arms on; but then a Commander of a Ship attempting to carry it away, and finding it too heavy for him, he broke off the Head, Hands, and Feet, and took them along with him. They found alſo among the ſame Ruins half the Body of a Woman, and juſt by it the Body and Forepart of a Centaur, both admirably well carv'd; and many other Things they found, as Images, and the like, which ſeem'd to have been Ornaments of the Temple Walls.

A fair Portico. NEAR the Weſtern Shore they found the Remains of a wonderful Portico of Marble, whoſe Architraves, Pillars, and other Parts, tho' exquiſite Workmanſhip in themſelves, are now in the utmoſt Ruin and Diſorder; but they found by an Inſcription on one of its Architraves, that it was founded by *Philip* of *Macedon*; the Pillars were of the *Corinthian* Order, angular towards the Baſe, and channell'd upwards. Near the South End of this Portico, and on the Weſt Side of a little Rocky Mountain,

tain, call'd, Mount *Cynthus*, were the Ruins of a Theatre, ſomething more than a Semi-circle, whoſe Diameter to the utmoſt Wall is about two hundred Foot; it is all built of white Marble, and every Stone cut in the Form of a Diamond; there are yet ſome of the Seats remaining. Paſſing further Eaſt over abundance of Ruins, they aſcended Mount *Cynthus*; it conſiſts of Marble of ſeveral Colours, ſome Reddiſh mix'd with Black, ſome Yellow and Black, and ſome of a light grey. On the Sides of the Hill were the Remains of ſeveral Buildings of excellent Marble, curiouſly wrought, as appears by the Pedeſtals, Pillars, and other Fragments, yet remaining; amongſt which are ſeveral Pillars, particularly one dedicated to *Latona*, the Mother of *Apollo* and *Diana*. The Iſland is Rocky and Barren, and affords little of the Neceſſaries of Life except a little Game, and Water is very ſcarce; yet there are ſome Springs in the Iſland which are never dry; one of them is the Fountain *Inopus*, which had four and twenty Foot Water in it in the Summer-time.

Soil.

Rhenia, or the great *Delos*, is ſeparated from the Leſſer, by a Channel near half a Mile broad; it is about eighteen Miles in Circumference; the Mountains are very high; they afford excellent Paſture, and would produce good Corn, if they were cultivated; but this, as well as the other *Delos*, is quite abandon'd and neglected, only the People of *Mycone* ſend Shepherds over hither with Horſes, Oxen, Sheep, and Goats, but they are forced to watch them very narrowly to preſerve them from the Rovers. Mr. *Tournefort* ſaw above ſix Score Altars among the Ruins, moſt of which look'd then very Magnificent. They are moſtly Cylindrical, adorn'd with Feſtoons with Heads of Oxen, or Rams. They are commonly about three Foot and a half high, and three Foot Diameter. One of the Altars had a Bunch of Grapes hanging below the Feſtoons, which made them ſuppoſe it was dedicated to *Bacchus*. So devout is their Worſhip, that that drunken Deity muſt be allow'd his Share. The beſt Port in this Iſland is *Maſtick-Port*, from the great Numbers of Maſtick-Trees growing about it.

Rhenia.

Myconе.

The Iſland of *Myconе*, is about three Miles to the Eaſtward of the Leſſer *Delos*; it is about five and twenty or thirty Miles in Circumference; there is a good Harbour on the Weſt part of the Iſland, by which ſtands the Town, without any Wall or Fortification. One great Baſon or Reſervoir ſerves the Town with Water; there are very few Wells, and little Wood in the Iſland. The higheſt of the Mountains, tho' not very high, is called Mount *Elijah*; the Soil produces Wine, Corn, Figs, and ſome Olives. There are computed to be about five hundred Sea-faring Men in the Iſland; but they go moſtly under the Reputation and Character of Pyrates and Rovers. It is ſuppoſed there are about three Thouſand Inhabitants in the Town, but the Women appear much the moſt, probably becauſe the Men are many of them at Sea. The chief Trade of this Harbour, if it may be call'd a Trade, is its being the Rendezvous of Rovers; hither they bring their Plunder, and for the Conveniency of the Harbour for that Purpoſe, they ſettle their Wives and Families here; their Women have a greater Character for Beauty than Chaſtity, an Inſtance of which we have of an *Engliſh* Captain, who during his Stay there, had ſeveral Temporary Wives; but not content with them, he purchas'd a young Girl of her Father, who with a ſeeming Reluctance ſuffer'd herſelf to be carried Aboard, being accompanied to the Water Side by a Multitude of Women, and about a Hundred Girls from eleven to fifteen Years of Age, who, as the Boat drew off with their Companion, pull'd their Coats as high as their Middle, and ſhew'd what Sex they were; but whether this is their way of taking Leave of one another, or they ſhew'd their Goods to try if the Sailors had a Mind to purchaſe any more of them, I cannot take upon to determine.

Mount *Elijah.*

Trade.

A Woman bought.

The Inhabitants are moſtly Chriſtians of the *Greek* Church, and have Magiſtrates of their own Religion, but they have every Year a *Turkiſh* Officer comes to collect the Taxes they pay to the Porte. A *Turkiſh* Cadi alſo comes ſometimes to hold a Court, and gives Notice to thoſe who have any Controverſies to decide, to come before him, bringing their Evidences along with them, and contrary to the Inclinations of moſt of the Inhabitants of the other Iſlands, they chuſe frequently to come before the Cadi's Tribunal, rather than ſubmit to the Determination of their own Magiſtrates. There are no leſs than fifty *Greek* Churches in *Mycone*, and alſo ſome Monaſteries, and the Nunnery of *Paleo Caſtro*, which ſtands upon a Hill in the middle of the Iſland, near which is the Church of St. *Marina*, where they celebrate one of their great Feſtivals annually on the 17th of *July*, and afterwards drink and dance all Night; but the People in general ſo little value a Monaſtick Life, that their Monaſteries are almoſt out of Uſe, and the Convents that are inhabited, have not above five or ſix Brothers apiece in them, except the great one, where there is about a Dozen.

Religion and Government.

Naxia, or *Naxos*, lies 2 or 3 Leagues to the Eaſtward of *Paros*, and is to the Southward of *Mycone*; it is near a Hundred Miles in Circumference, and is pleaſantly diverſified with Mountains and Valleys, Champain as well as Wood Lands, and well water'd with Springs and Streams, ſome of which are ſtrong enough to turn Mills. There is not one good Port in the Iſland, nor any great Town, but one, but ſeveral Villages, to the Number of forty or fifty; the Town is ſituate on the South Part of the Iſland, and the Caſtle flank'd with great Towers in the moſt elevated Part of it. The Palace of the Dukes of the *Archipelago*, was in a Square in the middle of the Caſtle, and their Deſcendants are ſtill in Poſſeſſion of the Scite of the Caſtle; the *Greeks*, who are the moſt numerous, poſſeſs all that Part of the Town between the Caſtle and the Sea. There is an inconceivable Enmity between the *Latins* who live in and about the Caſtle, and the *Greeks* who live near the Sea, inſomuch that a *Latin* of Quality will ſooner marry the meaneſt Peaſant of their own, than a *Greek* Lady, and for want of Women of their own, and rather than marry a *Greek*, have procur'd Diſpenſations from *Rome*, to marry their firſt Couſins; but notwithſtanding this Emulation between the *Latins* and *Greeks*, the *Turks* uſe them both alike, nor dare they attempt to wear any *Turkiſh* Habit, or any thing but a red Cap upon their Heads in the Preſence of the Commander of even the leaſt of the *Turkiſh* Galliots; but in their Abſence they reſume their wonted Pride, wear their Velvet Caps, brag of their Pedigrees, and what not; and the Women are as vain as the Men, for you may ſee the Ladies returning from the Vintage with thirty or forty Females, ſome riding on Aſſes, ſome on Foot, one carrying a pair of Stockings, another a Towel, a third a Diſh; and thus they make a Show of their Miſtreſs's Cloathing and Furniture, and in this manner they make a kind of a Publick Entry upon ſuch a trifling Occaſion, the Lady at the Head of them, the Children and Servants in the Middle, and the Husband brings up the Rear.

Naxia or *Naxos.*

The chief Employment or Diverſion of the Gentlemen is Hunting, there being plenty of Deer and other Game. There are two Archbiſhops in the Iſland, tho' there are not reckon'd above eight Thouſand Inhabitants; one Archbiſhop is of the

Religion. *Latin*, and the other is of the *Greek* Church; the *Latin* Archbiſhop is nominated by the Pope, and is call'd *Metropolitan*. The *Capuchins* have alſo a Settlement here, and zealouſly apply themſelves to proſelyte *Greeks* to the *Latin* Church, but dare not attempt to convert the Muſſulmen or *Mahometans*, for fear of the impending Puniſhment, which is inflicted with the utmoſt Expedition and Severity upon any who are found endeavouring to draw a *Mahometan* over to the Chriſtian Religion; beſides Churches in the Cities and Villages, there are ſeven or eight Monaſteries in the Iſland, beſides a great Number of Chapels diſpers'd up and down in the Country.

Government. THEY chuſe their Governors themſelves, and amongſt their own People, only there is a *Cadi* or *Mahometan* Judge ſometimes ſent among them, to whom, if Differences run ſo high, or the Caſes of the moſt material Conſequences, they may make the final Appeal, and while this Officer reſides there, he is little leſs than abſolute both in Civil Caſes and Corporal Puniſhment, ordering whom he pleaſes to the Baſtinado or other Puniſhment as he pleaſes, and keeps the Iſland in ſo much Dread, that almoſt all petty Differences diſperſe and vaniſh upon his Approach.

THERE is yet ſtanding upon a little Rock in the Sea, about a Musket Shot from the Caſtle, a beautiful Marble Gate, among a heap of magnificent Ruins of Marble and Granite; but Authors differ in their Conjectures, as to what the Building has been. Mount *Dia*, the higheſt in the Iſland, formerly gave Name to the Iſland, and there is yet to be ſeen on a rough Block at the Bottom of the Mountain a *Greek* Inſcription, intimating, that this is the Mountain of *Jupiter the Preſerver of Flocks*, and there is a Grotto at the Bottom, where they have a Tradition, that the *Bachantes* celebrated the *Orgies*.

Paros. ABOUT ſix or ſeven Miles to the Weſtward of *Naxa* lies the Iſland of *Paros*, which is about forty Miles in Circumference; the chief Town is *Parechia*. There are ſeveral fine Marble Columns lying along, or Horizontally in the Walls, as if the Walls had been built partly out of the Ruins of ſome magnificent Structures, as is part of the Town probably, for there are to be found all over the Town fine Architraves, Pedeſtals, and other Marks of Antiquity in carved Marble of curious Workmanſhip; the Marble of *Paros* is the moſt eſteemed of any of the Iſlands of the *Archipelago*.

Induſtrious. THE Inhabitants of this Iſland, are generally more induſtrious than their Neighbours, and by that Means have plenty of Corn and Wine, as they alſo had of Oil, till the *Venetians* deſtroy'd their Olive Yards; they feed Cattle of almoſt all kinds, and their Meat is very good; but they have a Scarcity of Mutton, becauſe they bring the Sheep up in the Houſes, and feed them with Fruits and Bread, which makes it admirably good.

Their own Magiſtrates. THE *Turks* have ſo much Confidence in the *Greeks* of this Iſland, that they truſt the *Greek* Magiſtrates with the Adminiſtration of Juſtice, and do not ſend a Cadi of their own as in the other Iſlands. There are ſeveral good Harbours in this Iſland, eſpecially that of *St. Mary's*, where a whole Fleet may ride ſecure; there is alſo a Harbour, call'd *Drio*, on the Weſt Coaſt of the Iſland. Beſides the Capital, *Parechia*, there are ſeveral Villages in the Country, and Churches and Chapels ſtand pretty thick; but of all the Churches in the Iſland the *Madona*, without the City of *Parechia*, is the moſt beautiful in all the Iſlands of the *Archipelago*, and yet, as the Columns were made out of the Ruins of old *Paros*, they are not confined to any Order of Architecture, but appear to be a Piece of Patch-work, when compar'd to any curious Structure.

THE moſt valuable Piece of Antiquity yet diſcover'd here, is a Piece of Marble, whereon was engraven the moſt noted *Greek* Epocha's, from the Reign of *Cecrops*, the Founder of the *Athenian* Monarchy, to *Diogenes* the Magiſtrate, being the Space of thirteen hundred Years; it was purchaſed by the *Engliſh*, and is now lodg'd in the Theatre of *Oxford*; and from hence it is that we have gain'd the Knowledge of the Original, or Foundation, of the moſt famous Cities in *Greece*, and when the greateſt Men of that Country liv'd.

Antiparos. THE Iſland *Antiparos* lies about a Mile from *Paros*; it is a flat Rock about ſixteen Miles in Compaſs, it is in ſome Places cover'd with a Strata of vegetable Earth, which produces Corn for the Inhabitants of a ſmall Village, which ſtands by the Sea Side, and contains about three or fourſcore Families.

A Grotto. BUT what is moſt remarkable is a magnificent Grotto, which being one of the greateſt Curioſities of Nature of that Kind, which that, or perhaps any other Part of the World, has produced, take the following Deſcription of it in Mr. *Tournefort*'s own Words, who was in it, and a curious Obſerver of it:

THE Entrance is ſtrait and troubleſome, but when they were in they diſcover'd, by Torch-light, one of the moſt pleaſant Scenes that ever they beheld, and what render'd it the more Surprizing, was, that it was purely the Workmanſhip of Nature; after they had paſs'd this difficult Entrance, it was about forty Fathom high, and fifty broad, the Roof is a very good Arch, embelliſh'd with Variety of natural Fret-work, and in ſome Places they ſaw the exact Reſemblance of Bunches of Grapes, Feſtoons, and Launces of a ſurprizing Length, and on both Sides were Cavities, like little Cloſets, or Cabinets; and amongſt other curious Works, if they may be ſo call'd, or rather Productions of Nature, there was a large Pavilion, which ſo exactly repreſented the Roots, Branches, and Heads of Colliflowers, as if Nature intended to ſhew how ſhe can operate in the Vegetation of Stone; all theſe Figures are of white Marble, tranſparent and chryſtaliz'd, and many of them cover'd with a white Bark, and when ſtruck, they, by the help of the Cavity of the Grotto, ſound like Copper; there were alſo ſeveral Columns of Marble, planted like Trunks of Trees, on the Tuft of a little Rock; Mr. *Tournefort* thinks theſe Stems of Marble certainly vegetate, for not a Drop of Water is known to fall in that Place, and if it did, it is not conceivable how a few Drops, falling from a Height of five and twenty Fathom, ſhould form cylindrical Pieces, terminating like round Caps; (this Mr. *Tournefort* delivers as his Conjecture;) *But I muſt beg leave to ſubjoin, that this is no Proof that the Water does not penetrate through the Roof of the Grotto, and if that be granted, it is not difficult to conceive that ſuch Water, after ſo many Turnings and Windings through the Joints of the Rocks, may have acquired ſo much of the Nature of Stone, and may be ſo much impregnated with it, that by the Time it has penetrated to the Grotto, it may be capable of Petrification, and the Exuberances flowing from it may congeal, as Water upon the lower End of an Icicle, or Tallow at the lower End of a Candle, when making, and become a Sort of Stone, and form the irregular ludicrous, or natural, Shapes of Things which are ſeen in the Grotto.* But to proceed with Mr. *Tournefort*'s Deſcription: In the furthermoſt Part of the Grotto appears a Pyramid, on which the Marqueſs of *Nointel* cauſed Maſs to be ſaid in the Year 1673; it ſtands by itſelf, and is about twenty-four Foot, adorn'd with ſeveral Chapiters fluted, of a dazzling Whiteneſs,

as

as is all the reſt of the Grotto; this Pyramid he thinks the fineſt Plant of Marble in the World, for, (according to his own Words,) *It is impoſſible that this ſhould be done by Droppings of Water, it is much more probable that theſe Congelations, and ſome others, which hang downwards in the Grotto like monſtrous Iſicles, were produced by Vegetation*; but here I would add, that nothing can be produced by Vegetation without ſome Supply of Moiſture, or Nouriſhment; and this ſeems rather to be a Confirmation of what I have above aſſerted, *viz.* that this Moiſture, which produces the Vegetation, is ſupply'd by the Rain penetrating through the Rock, as above, and furniſhing this vegetable Supply.

The Marqueſs of *Nointel*, the *French* Ambaſſador to the Grand Seignior, paſs'd the three firſt Days of the *Chriſtmas Holidays*, *Anno*. 1673. in this Grotto, being attended by above five hundred Perſons; there were a hundred large Torches of Wax, and four hundred Lamps, all alight at the ſame Time, and burnt Day and Night, and were ſo advantageouſly placed, that no Church could be better illuminated; and when the Hoſt was lifted up in Celebration of the Maſs, they gave Fire to four and twenty Patereroes, plac'd at the Entrance of the Cavern, which gave a Report, as being confin'd in the Cavern, beyond Imagination to conceive; and ever ſince that the above-mention'd Pyramid has been deem'd the Altar of the Grotto. The Top of this Mountain, over this Grotto, is cover'd (it may almoſt be ſaid pav'd) with tranſparent Chryſtalizations, like common Talc, the reſt of the Mountain is cover'd with *Cretan* Thyme, Cedars, and Lentisk-Trees; of which ſee before.

CHAP. XIV.

Of the Iſlands of Cerigo *and* Melos.

Cerigo. TWO or three Leagues diſtant from the South Eaſt part of the *Morea*, is the antient *Cytherea*, now call'd *Cerigo*; this, according to the fictitious Poetry natural to the *Greeks*, was the Country of *Venus*, and the Native Place of fair *Helen*, whoſe Rape occaſioned the Siege of *Troy*. It is a Mountainous Rocky Iſland, about forty or fifty Miles in Circumference; it produces but little Corn, Wine, or Oil; nor is it very populous, they have plenty of Sheep and Poultry, and good Store of Game. The chief Town is on the South Side of the Iſland, and has a tolerable ſtrong Caſtle, ſituate on a Precipice, and the Harbour under is not amiſs, only expoſed to the South Winds.

Melos. *Melos*, or *Millo*, is an Iſland of a round Form, ſixty or ſeventy Miles in Circumference; it lies about forty or fifty Miles to the Eaſtward of the South Eaſt Part of the *Morea*, and as much to the Northward of *Candia*; it is ſaid to be called *Melos*, from the abundance of Honey it produces; it is generally Mountainous and Rocky, but interſpers'd with fruitful Plains. In the North Weſt Part of the Iſland, is one of the beſt Harbours in the *Levant*; and about two Miles from thence up in the Country, is the Town of *Millo*, which is the only Place of any Note in the Iſland; the Town is tolerably well built, and contains about five thouſand Inhabitants, but it is a filthy Place, for their Hogſties ſtand in the Front of their Houſes, between them and the Street, and there they throw out their Dirt and Naſtineſs, which is very offenſive to Strangers, and renders the Country very unhealthy.

Of the Foundation of Allum and Sulphur. In coaſting round the Iſland, eſpecially in a Boat, being low and near the Water, there are ſeen abundance of ſubterraneous Paſſages, thro' which the Sea Water is convey'd to the minuteſt Cavities of the ſpungy Rocks, of which this Iſland is chiefly compoſed; and from this perpetual ſoaking with the Salt Water, Mr. *Tournefort* thinks that the perpetual ſubterrraneous Fires which are diſcover'd here, are occaſioned, being agitated and corroborated by ferruginous Matter and Sulphur, which is common all over the Iſland, and that theſe Materials are heated by being drench'd with the Sea Water, convey'd to them as above, produces the Allum and Sulphur, with which this Iſland more than others in its Neighbourhood abounds.

The following Conjectures I ſhall deliver in Mr. Tournefort's *own Words, and as they carry with them the utmoſt Face of Probability, I ſhall judge in Favour of them, and then leave every Perſon to judge for himſelf. His Words are theſe:*

" 'Tis highly probable that Salt undergoes much " the ſame Proceſs as that which we put into our " Retorts, that is, the Fire which is continually " heating the Bowels of this Iſland, cauſes an a- " cid Spirit to ſeparate from this Salt, not unlike " what we draw from Sea Salt by common Fire; " and to this Acid muſt be referr'd the Pro- " duction of Allum and Sulphur, the moſt common " Minerals here; for this Liquor penetrating in- " ſenſibly the hardeſt Rocks, diſſolves them, in- " corporates with them, and is converted into " Allum, of which we can hardly make a Queſtion, " becauſe by pouring Spirits of Salt upon com- " mon Stones or Chalk, alluminous Concretions " are produced, and the ſame acid Spirits mix'd " with the Brimſtone, which pervades the Viens " of the Earth, occaſions the Formation of Sul- " phur, which is only a fat Subſtance fix'd by an " acid Spirit. Now the Water of the Sea is not " only Salt, but Bitter and Fat; and this may be " the Reaſon that Sulphur is ordinarily found in " Places near the Sea, where Earthquakes are " alſo moſt frequent, Witneſs thoſe great Volca- " noes, out of which iſſue Flames of Fire, *viz.* " *Veſuvius*, *Stromboli*, *Ætna*, the *Canaries*, &c. In " theſe Iſlands there are Fires which have burnt " ever ſince the World began. The Sulphur of " *Melos* is beautiful, of a Greeniſh Shining Caſt, " which made the Antients prefer it to that of " *Italy*; it is found here in large Pieces when " they did the Ground, and in huge Veins in the " Quarries where they get their Mill-ſtones. Thus " the Iſland of *Melos* is a perpetual Laboratory, " wherein is continually preparing Spirits of Salt, " Allum, and Sulphur, by means of the Sea Wa- " ter, Iron and Rock, and by the ſingular Struc- " ture of the interior Parts of the Iſland, which " are ſo form'd as to ſtrain the Fat and Saline " Parts of the Sea Water, and thoſe Parts are

" put

" put in Motion by the Violence of the Burnings, " excited therein continually, which Burnings " produced by the Spirit of Salt, gives Birth to " the Sulphur and Allum before-mentioned.

THE Waters in this Island of *Melos* are not good to drink, especially in the low Grounds, where they participate so much of the Smell of Sulphur; here are Baths at the Foot of a Hill, between the Town and the Port of *Melos*; the Entrance into them is so narrow, that a Person of a common Size is obliged to stoop to go into them; but being in, you are immediately in a Chamber form'd by Nature, adjoining to which there is a Bason or Reservoir of Luke-warm Salt Water, in which People sit and bathe, and the Place is so hot, that it causes the Sweat to gush out in large Drops, and these are esteem'd much better than artificial Baths. Below these Baths, nearer the Shore, are several little Springs as hot as one can endure his Fingers in them. On the North Part of the Island, near the Village of *Castro*, is a purging Spring, which rises upon the very Edge of the Sea; there is also another a little distance from this; they are both Luke-warm, but have no Salt Taste; with these the *Greeks* of the Island do once a Year purge and drench themselves.

Baths.

BUT altho' this Country abounds with Allum, yet the Mines are not wrought; for the *Greeks*, knowing that if they work the Mines they shall lay themselves liable to new Exactions from the *Turks*, chuse rather to lose the Benefit of their Mines, than to pay the Duties imposed upon 'em; or in other Words, chuse rather to let their Lands by Fallow, than pay the Tythes or Duty upon the Crop. These Allum Mines are about a Mile, or a Mile and a half from the Town of *Melos*. Their Entrance is narrow, but being in, you come into Chambers or Vaults four or five Foot high, and nine or ten broad, crusted almost throughout with Allum, which grows in the Form of flat Stones, from nine to fifteen Lines thick, and as they take away these, new ones succeed in their Places.

Feather'd Allum.

THERE is in these Mines a sort of Allum, call'd *Plumous*, or Feather'd Allum, so call'd because instead of parting into Scales, it rises in white soft Threads or Filaments, like the Feathers of a Quill; and this is supposed one of the most curious Things in the *Levant*, as a part of the product of Nature; it rises in large Lumps, composed of Threads as fine as Silk, silver'd over and shining; they are an Inch and a half or two Inches in Length, and have the same Taste as the Stone Allum; the Stones thro' which this Allum grows, is very light and friable.

A Grotto.

ABOUT four Miles to the Southward of the Town, and close to the Sea Side, is a Grotto, between seventy and eighty Foot deep, into which the Sea Water penetrates in rough Weather; this Grotto is fifteen, sixteen, eighteen, and in some Places twenty Foot high; it is all crusted over with Allum Sublimate, in some Places as white as Snow, and in other Places reddish, Gold-Colour, and in some Places like the Chymical Flowers of Salt-Armoniack; and all the Rocks round the Cavern are lined with such Concretions.

A sulphureous Grotto.

A FEW Paces from this Grotto, on the Sea Shore, is another Grotto, the Bottom of which is fill'd with Sulphur that burns continually, so that there is no going into it, and all the Places about it cast out a continual Smoak, and sometimes Flames of Fire, and in several Places here about is found Sulphur perfectly pure, and always burning, but never is exhausted.

THERE are other Places from whence, Drop by Drop, distils a Solution of Liquid-Allum, which is supposed to be the same that *Pliny* call'd by that Name, and assigns in a particular Manner to this Island of *Melos*. Travellers have observed, that where-ever a Person puts his Head into a Hole in any Rock in this Island, they perceive a considerable Heat; and in one Part of the Island there is a Spot of Ground which burns perpetually, and all the Fields about it smoak like a Furnace; the Surface is as yellow as Gold with the Sulphur which covers the Earth.

Liquid Allum.

IT is observed that this spungy, hollow, rocky Ground of *Melos*, being a kind of a natural Stove, gently warms the Superficies of the Earth in most Places, and causes it to produce the best of Fruits, especially Grapes, Figs, and the most delicious Melons; and so fruitful is the Soil that it never requires to lie Fallow, but in different Years it produces different Crops, as Wheat, Barley, Beans, Pease, Melons, *&c.* their Fields are like so many Gardens, separated by Stone Walls, and produce Varieties of what can be expected from a Garden. They have Butcher's Meat, Fowl, Fish, and Game in great Plenty. And, although the Air is but unwholsome and sickly, and a Burning-Lake near them, or it may rather be said under them, which they may every Day expect to break out and destroy them and their Country, they are a secure thoughtless People; they live happy upon the good Things they enjoy, and never fret or reject themselves at the Thoughts of *Turkish* Tyranny, or the burning Caverns in the Bowels of the Island, of which they stand in perpetual Danger.

THE Inhabitants of *Melos* are generally Seafaring Men, and very active, to serve as Pilots in the *Archipelago*. The Women wear Breeches, which is indeed necessary, because their Coats are so short as scarce to reach to their Knees. The Inhabitants are mostly *Greeks*, but there is a *Latin* Bishop, and a Monastery of *French* Capuchins in the Town of *Melos*, but there is very few of their Clergy. The *Greek* Bishop has a great many Churches under his Care, besides thirteen Monasteries: the most considerable of which is that on Mount *Elijah*; from whence there is a very entertaining Prospect of several of the *Archipelagian* Islands; and what makes the Situation more agreeable is, that there is a Rivulet runs down thro' the Gardens, and Groves of Orange, Olive, and Cedar Trees, surround the Convent, which, all taken together, makes a most agreeable Solitude.

Govern-ment.

THERE are two *Turkish* Magistrates in the Island, the Cadi, or Civil Officer, and the Vaivode, military one; their chief Charge is to take Care of the Sultan's Duties, and next to fill their own Pockets, by their Extortions from the poor *Greeks*; for although the *Greeks* here, as in other *Archipelagian Islands*, have the Privilege to chuse one of their own Brethren to be a Magistrate to determine trifling Differences, yet the last Appeal, if it rises so high, must be made to the Cadi, and so Christian Differences are ultimately determined by *Turkish* Judges.

CHAP.

CHAP. XV.

Gives a Deſcription of the Iſlands of Argentiere, Siphanto, Serpho, Stenoſa, Nicouria, Amorgos, *and* Caloyero.

Argentiere. WITHIN leſs than a Mile to the Northward of *Melos*, lies an Iſland now call'd *Chimoli*, but it was formerly called *Argentiere*, from the Silver Mines that were wrought here, but there are none open at preſent; it is about eighteen Miles in Circumference; there is but one poor Village in the Iſland, and all about it is a mountainous, hungry, barren Soil, and produces nothing worth Notice, except the *Terra Cimolia*, or *Chimolian* Earth, mention'd by the Antients; it is a white heavy Chalk, but it is of little or no Uſe, except in whitening their Linnen.

Siphanto. ABOUT thirty-ſix Miles to the Northward of *Melos* is *Siphanto*, or *Siphno*, formerly call'd *Merope*; it is about forty Miles in Circumference; both the Air and Water here are exceeding good and wholſom; the whole Iſland in general is a Rock of Marble, cover'd with a thick Strata of rich Earth, which produces Corn, Vines, Oil, Capers, Figs, Seſamum, and ſome Silk, which is reckon'd very good; there is Plenty of Poultry, as alſo of Wild-Fowl and other Game. There are five or ſix Villages in the Iſland, containing, by Eſtimation, about five thouſand Inhabitants. There is a Caſtle on a Rock by the Sea Side, ſuppoſed to ſtand on the Ground where *Appolonia* once ſtood.

THERE are in this Iſland not leſs than five hundred *Greek* Chapels, and about ſixty Prieſts, whoſe Buſineſs it is to ſay divine Service in every one of them once a Year, which is on the Anniverſary of their Dedication. Here are four Convents of Monks, and two of Nuns; it is in the Dioceſs of the Biſhop of *Melos*. There are both Lead and Gold Mines in the Iſland, eſpecially the latter, for which it was famous; but the preſent Inhabitants pretend they know not where they are; whether it is really ſo, or the *Greeks* do not care that the *Turks* ſhould reap the Benefit of them, I cannot determine, but certain it is they do not work any of them at preſent; and the latter is the more probable, by ſome Inſtances of their Conduct; for there were ſome *Jews* ſent from *Conſtantinople*, by Order of the Porte, to examine the Gold Mines, and carry back ſome of the Ore: but the Natives apprehending that they ſhould be obliged to work them for the *Turk*, if he once found the Benefit of them, they bribd the Maſter of the Galliot, who was to carry the Ore and the *Jews* to *Conſtantinople*, and he accordingly ſunk the Veſſel, and ſent the Ore and the *Jews* to the Bottom, but as himſelf was Author of the Accident, he took Care to have the Boat ready to ſave himſelf and Company.

THERE was another Time a Company of *Jews* ſent to *Siphanto* on the ſame Errand, but the Natives hired a Rover to attack them, who ſent them packing; ſo that they deſiſted from any further Attempts upon the Gold Mines of *Siphanto*. And 'tis ſaid the Rovers do much more than the Prieſts towards preventing Apoſtacy among the *Greeks*, for as ſoon as they find any of them turn'd *Turks*, they immediately ſeize them, and carry them into Slavery to *Malta* or other Places; and as the *Greeks* are more numerous than the *Latins* in theſe Iſlands, and upon that Account often inſult them, they, for Redreſs, take the firſt Opportunity to apply to a *Malteſe* Corſair, and by their Help procure their inſulting Adverſary to be well baſtinado'd; for though the *Greeks* are much the greateſt Number, yet the *Latins* being ſupported by the Pope, the *French* King the *Venetians*, the *Malteſe*, &c. they maintain their Ground againſt the *Greeks*.

Serphanto. ABOUT twelve Miles North-Eaſt from *Siphanto* is the Iſland of *Serpho*, or *Serphanto*; it is a rugged mountainous Iſland, between thirty and forty Miles in Circumference. In this Iſland there are Mines of Iron and Load-ſtone, ſome of which lie ſo ſhallow that the Waſhing of the Rain lays them open, but the beſt Load-ſtones lie deep. There is a pretty good Port in the Iſland; and about three Miles from it is a Town, built round a frightful Rock, and there are no more Towns in the Iſland, only a ſmall Village. The Inhabitants are all *Greeks*; the Catholicks, perhaps a little biaſs'd by Prejudice, ſay they are a very ſlothful People, and that their Ground lies much in waſte, and their Crops are inconſiderable for want of cultivating their Land.

Government. THERE is a Vaivode reſides here to take care of the Sultans Duties, he is alſo inveſted with an arbitrary Power to inflict corporal Puniſhment upon the Chriſtians when he ſees fit, without any legal Proceſs, or Form of Trial. The Natives are merry, and delight much in compoſing Satirical Songs, dancing, and carouſing, and ſometimes hold it Day and Night, eſpecially at their great Feſtivals.

Stenoſa. *Stenoſa* lies about eighteen Miles North-Eaſt of *Naxos*, or *Naxia*, deſcribed before in Chap. XIII. it is about twelve Miles in Circumference. It's chief Inhabitants are a few Shepherds, who keep ſome Flocks of Goats belonging to the Monks of *Amorgos*, (hereafter to be deſcribed in this Chapter) who, in return for their Attendance, ſend them a Supply of Biſcuit once in a Quarter of a Year.

Nicouria. THE Iſland of *Nicouria* lies about a Mile from *Stenoſa*; it is a Block, or Rock of Marble, about five Miles in Compaſs, in the Midſt of the Sea, but there is not much to be found upon it but Goats and Partridges, the Goats very poor and lean. What is moſt obſervable in this Iſland, is the Multitude of little Chapels, erected upon thoſe Parts of the Rock that are moſt difficult of Acceſs, as believing their Labour in climbing up to them to be meritorious; and it is ſuppoſed that the Reaſons why theſe Chapels are ſo numerous in this Iſland is, becauſe Materials for Building are ſo Plenty; and to that we may add the Zeal of the *Greeks*, few of whom of any Subſtance dying without leaving a Legacy, according to his Ability, towards the erecting ſome or other of thoſe Oratories.

WHEN they have aſcended, with indefatigable Labour, to one of theſe Chapels, they croſs themſelves fifteen or twenty Times, more or leſs, according to the Importance of the Affair they are treating with the Saint, or Image, about, and at every Signing bow their Heads almoſt to the Ground; if their Lamp is not alight, they ſtrike Fire and light it, burning two or three Grains of Incenſe before the Image, or Saint, they are addreſſing, to whom they recommend their Affairs; and if Things have not anſwer'd their Expectation, they ſometimes expoſtulate with him or her: The good

Women commonly bring a little Oil for the Lamp, or a Wax Candle, or Money to buy ſome, and, if they can, they produce a Prieſt to ſay divine Service before the Saint, but if they cannot, their own private Devotion ſerves.

BETWEEN thirty and forty Miles South-Eaſt of *Naxia*, and two or three Leagues from *Nicouria*, *Amorgos.* lies the Iſland *Amorgos*, above-mention'd, between thirty and forty Miles in Circumference. The beſt Harbour is upon the South Shore of the Iſland. The Town is built in Form of an Amphitheatre, on the Side of a Rock; where ſtands the old Caſtle of the Dukes of the *Archipelago*, who reſided here; they have no *Turkiſh* Magiſtrate conſtantly reſiding here, but are generally govern'd by Magiſtrates of their own chuſing from among themſelves. There is a large *Greek* Monaſtery about three Miles from the Town, by the Sea Side, to which the beſt Ground in the Iſland belongs; the Convent is ſituate towards the Bottom of a frightful perpendicular Rock, having Cells for a hundred Caloyers, or Monks; the Entrance is very difficult; it is at the Corner of the Building, which they aſcend by a Ladder, and being there, they go up a very narrow Stair-Caſe; and indeed every Way it is ſo difficult of Acceſs, and ſuch an unpoliſh'd Place, that it looks more like a Retreat or Shelter for Theives than a Convent of Religious.

A miraculous Urn. THERE is a Chapel about four Miles from hence, ſituate in the pleaſanteſt Part of the Iſland, where they ſhew a miraculous Urn, which, the Natives give out, ſometimes ſuddenly fills itſelf with Water, and at other Times as ſuddenly and miraculouſly becomes dry. To this Urn People repair as to an Oracle, to enquire about Buſineſs of Importance; as, ſhall the Sick live or die, ſhall Buſineſs ſucceed, *&c.* Their Method is to go juſt when they find the Impulſe upon them, without any previous Enquiry whether the Well be full or empty; and if they find it full they look upon it as an Anſwer in their Favour, but if empty the contrary; indeed ſome, that are not ſo credulous, think it is acted by a Prieſt, or Papa, who has the Care of it, and can fill or empty it at Pleaſure. I neither can prove nor deny the Fact, but, as an Inſtance of the Poſſibility and Probability of it too, I know a Well, call'd St. *Gowen*'s Well, cloſe by St. *Gowen*'s Chapel, under the Rocks by the Sea Side in *Pembrokeſhire*, that is ſometimes full of Water, and ſometimes quite empty; it is reckon'd miraculouſly medicinal as well as prophetical; for when any diſtemper'd Perſon comes to ſeek a Cure by uſing it, if at their coming they find it dry, they look upon it as an infallible Omen of their Diſtemper being mortal and paſt cure; but more of this Well when we come to the Deſcription of that Country, I have only given this Hint to prove the Probability of the Urn before deſcribed being attended with the Viciſſitudes or Properties above-mention'd. Their Grapes are good, they have Plenty of Corn and Wine, and furniſh their Neighbours with thoſe Commodities; they have alſo Oil ſufficient to ſupply themſelves.

Caloyero is a hideous ſteep Rock in the Sea, about *Caloyero.* twelve Miles from *Amorgos*; but being remarkable for nothing, except the Multitude of Falcons Neſts found there, I ſhall not trouble the Reader with any further Deſcription of it.

CHAP. XVI.

Treats of the Iſlands of Nio, Sikino, Policandro, *and* Santorini.

BEFORE I give a particular Deſcription of the Iſlands above-mention'd, I ſhall only obſerve that there are other Iſlands, as *Cheiro*, *Skinoſa*, *Rachia*, &c. but they being ſuch barren, rocky, inconſiderable Iſlands, producing little or nothing but Graſs to feed a few Goats, they are not worth taking any further Notice of.

Nio THE Iſland of *Nio* is thirty Miles North-Weſt from *Santorini*, and twenty-four Miles from *Naxia*; it is about forty Miles in Circumference, and was formerly call'd *Ios*, from the *Ionians* its firſt Inhabitants. This is one of the Places that contend for being famous for being the Burial-Place of *Homer*, but they cannot produce any viſible Remains of his Tomb. They have ſome good Ports, and the Men of the Iſland are eſteem'd good Pilots in their own and the neighbouring Seas.

Sikino. EIGHT Miles from *Nio* is *Sikino*; it is about twenty Miles in Circumference; it produces abundance of Figs, and the beſt Wheat in the *Archipelago*. The Town, which is alſo call'd *Sikino*, is built upon the Precipice of a Rock, and ſeems to hang over the Sea; it contains about two hundred Inhabitants. There is never a Port belonging to the Iſland.

Policandro. *Policandro* lies to the Weſtward of *Sikino*; It is about eight Miles in Circumference; it has no Harbour, and but one Town, which ſtands about three Miles from the Sea, containing upwards of a hundred Families of *Greeks*; it is generally a rocky parch'd Iſland, but yet they find ſo much of it fit for Cultivation, that it ſupplies them with Corn ſufficient for their own Uſe, as alſo of Fleſh and Fowl, and they drive ſome Trade with the Cotton the Iſland produces. Here are two Convents of Monks, and one of Nuns; there is in the Iſland a Chapel, call'd St. *Michaels*, ſtanding upon ſo high a Hill, that in a clear Day may be ſeen from thence all the Iſlands in the *Archipelago*.

Santorin THE Iſland *Santorini*, corruptly ſo call'd from St. *Irene* the Patroneſs of this Iſland, was formerly call'd *Thera* and *Caliſte*; it is five and twenty Leagues to the Northward of *Candia*; it is in Form of a Creſcent, and about thirty-five Miles in Circumference. The rocky Iſland *Therafia* lies between the two Points of the Creſcent, and defends the Bay from the Violence of the Waves and Weather, thereby making it a ſafe and commodious Harbour, at the Bottom of which is the Caſtle of *Scaro*, or *Caſtro*, upon a Rock that is inacceſſible from the Harbour; there are alſo two other Caſtles, one on each Point of the Creſcent, about which there inhabit two or three hundred Families. There is a Town, call'd *Pirgo*, ſituate upon a Hill of Pumice-Stone, out of which the Natives dig or make Caves; but the Rocks of Pumice-Stone (if they may be ſo call'd) are cover'd with a Strata of Vegetable Earth, which, compared with ſome other Iſlands in its Neighbourhood, may be ſaid to make it like a fruitful Garden; for it produces Grapes, Barley, and Cotton in great Plenty, and ſome Wheat. Their Wine is the Colour of Rheniſh, ſtrong and ſpirituous, it is exported all over the *Archipelago*, and up as high as *Conſtantinople*; this and their Cotton is the chief Trade of the Iſland. The Men and Women go Sharers in the Labour, the

the Women cultivating the Vineyards while the Men are abroad vending their Wine.

Cotton. THEIR Cotton grows on a Shrub like a Goosberry-Buſh, and is not replanted every Year as in other Places. They have no Oil, and ſcarce any Fruit but Figs; their Bread is coarſe Barley-Biſcuit; there is ſaid to be but one Spring in the Iſland, and what Water they have beſide is Rain Water preſerved in Ciſterns; they pickle their Meat in Salt and Vinegar, and dry it in the Sun till it be as hard as Stock-Fiſh; they ſometimes boil it, but more commonly eat it raw, becauſe the Iſland produces little or no Fuel. There are computed to be about ten thouſand Inhabitants upon the Iſland, all *Greeks*, but about one Third of them is of the *Latin* Communion, and under a *Latin* Biſhop; but they are viſited generally every Year by a *Turkiſh* Cadi, or Judge itinerant, here as well as in other Iſlands.

Volcanoes and new Iſlands. THE following Account of Volcanoes, and new Iſlands ſpringing up in this Part of the *Archipelago*, we have from Mr. *Thevenot* and other Authors, whoſe Integrity is indiſputable. They tell us that the Sea about all the Coaſt of *Santorini* is black, and the Land burnt and ſcorch'd, occaſion'd by a rocky Iſland which aroſe out of the Sea ſome Years ago, vomiting out Flames of Fire; and, which is more, *Pliny* tells us that the Iſland of *Santorini* itſelf aroſe out of the Sea by a Volcano, tho' ſo large as to be thirty-five Miles in Circumference, as before obſerv'd; but whether that be ſo, or the Name of the Iſland has been miſtaken or miſ-apply'd, yet certain it is, three other ſmall Iſlands, two in the Harbour and one without, have been raiſed out of the Sea by thoſe ſubterraneous Fires. The firſt of theſe Iſlands, called the *Great Burnt Iſland*, was rais'd and firſt appear'd above the Surface of the Sea after an Earthquake, a hundred and ninty-ſix Years before our Saviour's Incarnation, and was improv'd to twice it's firſt Bigneſs in the Year of our Lord 726, by increaſing till it join'd another, which roſe out of the Sea after the former, and in the ſame Manner, with a terrible Noiſe and Concuſſion; the Space between them filling up, by the ſame Means themſelves were rais'd, and making them both one Iſland. There is a *Latin* Inſcription upon a Marble at *Santorini*, which ſhews that the like happen'd in the Year 1457, only with this Difference, that the ſubterraneous Fire having rais'd an Iſland five or ſix Foot above Water, a vaſt Quantity of Rocks form'd a Space of about a Mile in Circumference, open'd a Paſſage for the Sea Water to enter, by which the Fire was extinguiſh'd, and the Middle of that Space remain'd ſo low, that the Sea flowing into it by a ſubterraneous Paſſage, made a Sort of a Lake, which continues to be ſo to this Day.

White Iſland. ANOTHER new Iſland is a little without the Harbour, call'd the *White Iſland*, the Earth with which it is cover'd being as white as Chalk; *Pliny*, who liv'd in the Time of the Emperor *Veſpaſian*, tells us it aroſe above the Surface of the Sea in his Time. There is alſo another Iſland, call'd the *Little Burnt Iſland*, which, according to the Relation of it given by the antient Inhabitants of *Santorini*, was form'd, or at leaſt firſt appear'd above Water, in the Year 1573. And between this and the *Great Burnt Iſland* there began another Iſland to ariſe in the Year 1707, which continually increas'd till it came to be ſix Miles in Circumference. The Volcano which form'd this Iſland was preceeded by violent Shakings of the Earth, follow'd by a thick Smoke in the Day Time, and Flames of Fire by Night, which proceeded out of the Sea, and theſe were attended with terrible roaring Noiſes under Ground, like Thunder or the firing of Guns.

Another new Iſland. FATHER *Goree* was at *Santorini* in the Year 1707, when this Iſland firſt appear'd, and was very curious in obſerving the ſeveral Steps of its Progreſs every Day for above a Year, and he tells us it did not riſe equally either as to Time or Quantity, but it ſometimes increas'd on one Side only, and ſometimes one Side decreas'd as the other increas'd. He obſerved a Rock to riſe out of the Sea, forty or fifty Paces from the Iſland, which grew higher every Day for four Days together, and then ſunk again and never appear'd any more; but ſome others which diſappear'd as this did, appear'd again afterwards.

THE Sea in the Harbour of *Santorini* often chang'd its Colour to green, reddiſh, and yellowiſh, and a Stink aroſe out of it which annoy'd all the whole Iſland, and was ſuppoſed to proceed from the Sulphur with which the Sea was cover'd; they alſo ſaw Rocks riſe in the Sea on every Side of the Iſland, and growing bigger, they ſpread themſelves till they were united to the firſt, and to one another, and became all but one Iſland; the Smoke increas'd, and, there being no Wind, it aſcended in a Pillar of Smoke to an incredible Height in the Day time, but in the dark Night it appear'd like a Pillar of Fire, and during its Continuance there was an intolerable Stench for about a Day and a half, but then a South-Weſt Wind ariſing, it carry'd the Smoke to the Iſland *Santorini*; it deſtroy'd their Vintage, and their Grapes appear'd ſhrivell'd, like dry'd Raiſons; their Silver and Copper was black and tarniſh'd, and the Natives began to be afflicted with Pains in their Heads; the Sea in ſome Places boil'd and bubbled up, and Fiſh were found dead upon the Shore; Noiſes were heard under Ground like Thunder, or the firing of Cannon, and Flames of Fire darted high up into the Air, and in a Moment diſappear'd. Our Author one Night obſerv'd ſixty Openings in the Iſland, which all threw out Fire, and the next Morning the Iſland was very much advanc'd in Height: ſometimes ſuch large Stones were caſt up into the Air, that they endanger'd both the Natives aſhore and the Ships at Sea. The 15th of *April* 1708, was a ſurprizing terrible Day upon that Account, there being Stones thrown up that Day ſo large that they endanger'd the Building, and with ſuch Force, that ſome of them fell into the Sea at above two Miles Diſtance from the Iſland.

THESE convulſive Motions beginning to decreaſe in *May* 1708, Father *Goree* and the Latin Biſhop of *Santorini* took a Boat, and thought to have gone to the new Iſland; but in their Paſſage the Sea ſmok'd at ſuch a Rate that it indue'd them to put their Hands into the Water, and accordingly, they found it ſo very hot that they thought fit to retreat from their intended Curioſity before they came within five hundred Paces of the *New Iſland*; however, they went afterward to the *Great Burnt Iſland* to view the new Iſland from thence, and judg'd it to be about two hundred Foot high, and of an oblong Form, about five or ſix Miles in Circumference. The laſt Account we have of the State of the new Iſland was in the Year 1711, when the Smoke and Noiſe were more moderate, and the Inhabitants being uſed to it, were under leſs Apprehenſions of Danger, but the Iſland then continued to encreaſe in Magnitude.

Nanſio. THE antient *Anaphe*, now the Iſland of *Nanſio*, is to the Eaſtward of *Santorini*, there is no Harbour in it; it is a rocky mountainous Iſland, about ſixteen Miles in Circumference; it produces ſcarce any Plants or Herbage, but has Abundance of fine Springs upon it. The Inhabitants are all of the *Greek* Communion, the Biſhop of *Siphno* is their Dioceſian. *Religion.* They, like moſt of the other Iſlands, are viſited now

now and then by a *Turkiſh* Cadi in his Circuits. The Country produces Abundance of Wax and Honey; they have but little Corn, and what they have is in Danger of being eaten up with Partridges, who breed ſo faſt, that they are forced to deſtroy their Eggs as much as they can, to prevent their Increaſe. Here the Ruins of a Temple dedicated to *Apollo* are ſtill remaining, conſiſting of Pieces of Marble Columns and a very beautiful Architrave, and at a ſmall Diſtance from thence there is a Chapel built out of the Ruins of that, and dedicated to the Virgin.

CHAP. XVII.

Gives an Account of the Iſlands Thermia, Zia, Syra, Macroniſi, Andros, *and* Tenos.

Thermia. THERMIA takes its Name from the hot Baths that are found upon it, it lies North-Eaſt from *Melos*; it is not very mountainous, but with Cultivation it yields Plenty of Barley, Wine, and Figs, but they have Scarcity of Wheat; they have Silk and Cotton enough for their own Uſe; here is alſo Plenty of Honey, Wax, and Partridges. There are about fourteen or fifteen Churches of the *Greek* Communion. There are many hot Springs in the Iſland; the hot Baths are in the Middle of a Valley, where there are ſtill ſome Remains of Buildings that have been erected about them.

Zia. The Iſland *Zia*, or *Ceos*, is about twelve Miles to the Weſtward of *Thermia*, it is ſix or ſeven Leagues to the Eaſtward of the Main Continent of *Greece*; it is about fifty Miles in Circumference. There were formerly four famous Cities in the Iſland, but now only one, call'd *Carthea*, remains: It is ſituate on the Side of a Hill, and has three Rows of Houſes running acroſs, which being all flat Roof'd appear like a Theatre one above another, that when a Perſon is walking along by the Doors of one Row of Houſes he is upon the flat-roof of the Row that is below it, and there are ſcarce any other Streets but the Tops, or Roofs, of the Houſes, whereby to paſs from one Door to another. The Citadel is neglected and quite in Ruins; and tho' the Town did extend over the Plain to the Port at the Sea-ſide, yet now what is left, ſtands three or four Miles from it. The Port is on the North-Weſt Part of the Iſland, and will admit of the largeſt Veſſels. In the Valley, at the Bottom of the Declivity on which the Town ſtands, are innumerable Pieces of broken Marble Columns and Baſes, and other Remains of Antiquity, hard to be known what they have been.

Streets on the Tops of Houſes.

Joulis. The antient, but now ruinous City of *Joulis*, takes up a whole Mountain. Here is an antient Temple, whoſe Columns have their Shafts half plain half fluted; and from this Temple is a Deſcent to the Sea-ſide, through a noble Stair-caſe cut in Marble, where is the Remains of a Woman's Statue, ſaid to be that of the Goddeſs *Nemeſis*, but the Hands and Head are broke off. There is yet to be ſeen in this Iſland a Way of above three Miles in Length, pav'd with flat Stone, ſuppoſed to have been done when *Greece* was in its flouriſhing State. The Inhabitants are moſtly *Greeks*.

Silk and Camblet are the chief Manufactures, inſomuch that ſome affirm that Silk-Stuffs were firſt invented in this Iſland. They have ſufficient Plenty of Corn and Wine, and their Figs are reckon'd extraordinary; but they have no Oil and very little Wood. It is ſaid that this Country being formerly very populous, there was a Law enacted, that if any Perſon lived to the Age of ſixty Years, he ſhould then be taken off by Poiſon, or ſome violent Means, to prevent his being chargeable; and to make Room for the reſt, and this became ſo cuſtomary, that it leſſen'd the Terror of it, and People living to that Age as willingly reſign'd to Death as a Man would to go to Bed when the proper Hour is come.

To the Eaſtward of *Zia* is the Iſland of *Syra*, about five and twenty Miles in Circumference. There is a Port by the Sea-ſide, where the antient City of *Syros* ſtood; but the chief Town now is about a Mile from thence, and is built round a little ſteep Hill, in the Form of a Pyramid. The *Latins* boaſt of a great Superiority in this Iſland, and are ſaid to be Men of great Piety and Probity, as well as Induſtry in improving their Manufactures, eſpecially that of Cotton. They have alſo Plenty of Barley, Wine, Figs, and Olives, and ſome good Wheat; they have but little Wood, tho' the Air in this Iſland be more cool and moiſt than in the adjacent Iſlands. *Syra.*

Macroniſi, or the antient *Helena*, is about five or ſix Leagues from the Coaſt of *Attica*, and between it and *Zia* before mention'd; it was once a famous Iſland, but now produces little but Graſs and Herbage, the Plants in this Iſland, according to Mr. *Tournefort*'s Account of it, exceeding for Largeneſs and Beauty thoſe of the other Iſlands in the *Archipelago*. *Macroniſi.*

Twelve Miles from *Syra*, and eighteen from *Zia*, is the Iſland of *Joura*; it is about twelve Miles round, but it is a poor, barren, abandon'd Place, having no Towns, nor any Inhabitants but Shepherds, *Joura.*

About forty or fifty Miles North-Eaſt of *Zia*, is the Iſland of *Andros*; it is a large Iſland, about a hundred Miles in Circumference, but much longer from North to South than the Breadth from Eaſt to Weſt. The chief Town, call'd the *Port of Lower-Caſtle*, is ſituate near the Sea, and, by the old Marble Monuments, it appears to have been built upon the Ruins of ſome magnificent City; and though the Materials of the preſent Buildings are very valuable, yet the Architecture is ſo mean, and the Work ſo poorly put together, that they make a very poor Appearance. There are a great Number of Caſtles and Towers to defend the Inhabitants from the Rovers, and in theſe the Cadi and People of Figure have generally their Reſidence. *Andros.*

There are thirty or forty Villages in the Iſland, the Number of whoſe Inhabitants are computed to amount to four or five Thouſand. They have the Privilege of chuſing a Magiſtrate of their own to determine common Cauſes; but they, as well as the Inhabitants of the reſt of the *Archipelagian Iſlands*, are obliged to ſubmit to the Deciſion of a *Turkiſh* Cadi, an Aga, or Colonel, of the Janizaries; the Natives are moſtly of the *Greek* Communion. There is a very delightful Plain between the chief Town and the Village of *Livadie*, it is planted with Oranges, Lemons, Mulberry-Trees, Figs, *Inhabitants.* *Land.*

Figs, Pomegranets, &c. and agreeably ſupply'd with Water by moſt pleaſant Springs and Rivulets.

As to their Habits, the Women of *Andros* have ſhort Coats ſcarce reaching ſo low as their Knees, but their Shifts about three or four Inches lower; they wear five or ſix Gowns, and a great Roll of Cloth about their Waiſts. A Part of the Pride of their Dreſs conſiſts in the Largeneſs of their Sleeves, which ſome have ſo full that they reach almoſt down to the Ground; they wear white Cloth Stockings and Slippers, and a Piece of Linen round their Heads, which alſo hangs down and covers their Breaſts. The common Dreſs of the Men is a Veſt and red Cap, and inſtead of Shoes they commonly wear Pumps or Slippers, as in other Places in the Eaſt.

This Iſland is very fruitful, yielding abundance of Wine, Oil, and Barley, and ſome Wheat; but their richeſt Commodity is Silk, of which it is computed they make above ten thouſand Pound Weight every Year. They diſtil a Sort of a Liquor from the Fruit of the Arbute-Trees for Drink; and their general Food is Goats-Fleſh, Poultry, Veniſon, with Partridges and other Game, but their Seas afford but little Fiſh.

Tine. The Iſland of *Tine* is about ſixty Miles in Circumference; its longeſt Dimenſions are from South-Eaſt to North-Weſt; it lies about a Mile or two South-Eaſt from *Andros*; it is high mountainous Land, compos'd moſtly of Rocks of Marble, tho' in ſome Places cover'd with a Strata of fertile Earth. There are now two or three Houſes on the Southern Shore, where it is ſaid the Capital of the Iſland once ſtood, and is ſtill call'd the City; that which is the chief Town now is about four or five Miles from the ſaid City, up a ſteep rocky Hill; it is defended by a Caſtle; and, beſides this chief Town, there are thirty or forty Villages extremely populous. The Country is well water'd and fruitful, producing Corn, Wine, and a conſiderable Quantity of a Sort of Silk; which, not being fine enough to weave into Stuffs, they make into Stockings and Gloves. The Inhabitants have a more decent Dreſs than in moſt of the neighbouring Iſlands, as having been longer under the Dominion of the *Venetians* than the reſt. Here is a *Latin* Biſhop, and more of the Natives are of the *Latin* Communion, in proportion, than in any of the adjacent Iſlands. *Dreſs.*

The Caſtle of *Tine* ſtands upon an Eminency, and affords a very agreeable Proſpect to ſeveral other of the *Archipelagian Iſlands*, as *Jura* Weſt, *Syra* South-Weſt, *Andros* North-Weſt-Northerly, *Paros* South, *Delos* South-Eaſterly, *Scio* North-Eaſt-Northerly, *Samos* Eaſt-Northerly, *Nicaria* Eaſt, *Mycone* South-Eaſt, *Amorgos* South-Eaſt-Southerly, *Naxia* South-Eaſterly.

CHAP. XVIII.

Of the Iſlands in the Gulf of Eugia, *as* Porus, Colouri, Negropont, Skyros, Lemnos, Imbros, Samothrace, *and* Thaſſus.

THE Gulf or Bay of *Eugia* is made by the Promontory of *Suniam*, or *Cape Colouni*, on the *Attick* Shore; and Cape *Skillo* on the *Peloponeſian* Shore. In this Gulf are ſeveral little Iſlands, of the chief of which we ſhall give a brief Account in their Order. And firſt,

Eugia. *Eugia*, or *Eugina*, is about eighteen Miles from the *Attick* Shore and twelve from the *Morea*, it is about thirty Miles in Circumference; but, tho' it is ſo large, there is no Harbour in it, nor any City, Town, or Village, except that of *Eugia*, or *Eugina*, the ſame Name with the Iſland; there are about eight hundred Houſes in the Town, and alſo a Caſtle a little above it, from whence there is a very fine Proſpect; for from hence may be ſeen in clear Weather both the *Attick* and *Morean* Shores, as well as ſeveral of the *Archipelagian Iſlands*.

Antiquities. There yet remain two Pieces of Antiquity, both being the Ruins of Temples; one of which is ſuppoſed to be that of *Venus* mentioned by *Pauſanias*, of which there are now but two Pillars ſtanding, with a Piece of an Architrave upon them; it is ſituate at the North-Weſt End of the Town. The other is about four Miles from the Town, and is ſuppoſed to be the Temple which *Æacus*, the firſt King of this Iſland, dedicated to *Jupiter*; it is not long ſince there were twenty Pillars of this ſtanding, with their Architraves upon them, and many others lying on the Ground; being of the *Dorick* Order, channell'd or fluted, two and twenty Foot and a half long, and the Architraves thirteen Foot and a half long, and three broad, and, by the Order in which they are placed, there ſeems to have been fifty in Number, about ſeven or eight Foot from one to another.

Produce. This Iſland affords Plenty of Corn, Cotton, Honey, Wax, Almonds, and other Sorts of Fruit; and Partridges are ſo Plenty that they are a Nuſance rather than an Advantage; for there are ſuch an abundance of them, that they would deſtroy all their Crops if their Breed was not ſuppreſs'd; in order to which they are ſummon'd annually to deſtroy their Eggs at the proper Seaſon, to prevent their growing ſo numerous and detrimental to the Fruits of the Earth.

Porus. The Iſland of *Porus* is ſituate near the *Morea*, between *Eugia* and *Cape Skillo*; it is about eighteen Miles in Compaſs, and inhabited by the *Albaneſſes*; it was formerly call'd *Calabrea*; but is not now remarkable for any Thing but *Demoſthenes*'s being baniſh'd hither, where he poiſon'd himſelf to prevent his falling into the Hands of his Enemy *Antipater*.

Colouri. *Colouri*, formerly call'd *Salamis*, is ſeparated from the Promontory of *Amphalia*, ſix or ſeven Miles from *Athens*, by a Straight not a Mile over; it is about fifty Miles in Circumference. There is a Bay on the Weſt Side of the Iſland, about eight Miles broad and three deep; at the Bottom of which is a Harbour and a Town, call'd by the ſame Name with the Iſland; there are about a hundred and fifty Houſes in it, but they are poor, mean, low Buildings. There is alſo a Village, called *Ambelachi*, which ſtands upon the Straight towards *Athens*, on or near the Place where the antient *Salamis* once ſtood, which, if its Extent may be computed by its Ruins, appears to have been four or five Miles in Compaſs. The King of this Iſland was the famous *Ajax*, who join'd the *Grecian* Navy with his Troops and twelve Ships, when they went to begin the ten Years Siege of *Troy*.

Negropont. To the Northward of the Gulph of *Eugia* is *Negropont*, which ſtretches North-Weſt and South-Eaſt along the Eaſtern Coaſt of *Achaia*; it is an

Iſland ſeparated from the main Continent by a Channel, called *Euripus*; which is in one Place ſo ſhallow and narrow, that Geographers generally make that narrow Place an Iſthmus, by which they join the Peninſula of *Negropont* to the main Continent of *Achaia*; it was formerly called *Eubæa*, and by the modern *Greeks Egripos*; whoſe chief Town, of the ſame Name, ſtands on the South-Weſt Coaſt of the Iſland, and has a Communication with the main Continent by a Stone Bridge; in the Middle of which is a Draw-bridge for Galleys to paſs through, between the Continent of *Achaia* and the Iſland of *Negropont*; ſo that it is indeed an Iſland, becauſe Veſſels can ſail round it, though ſometimes repreſented as a Peninſula, by Reaſon of its Communication with the main Continent by the Bridge above-mention'd.

The Town within the Walls is about two Miles in Circumference, and the Suburbs contain more Inhabitants than the Town, and are moſtly Chriſtians. The Viceroy of this Iſland and the adjacent Parts of *Greece*, is alſo Captain Baſſa, or Admiral of the *Turkiſh* Fleet. When *Mahomet* the Second conquer'd this Iſland, and had put the *Venetian* Governor to Death, he made Love to his Daughter; but ſhe, abhorring the Embraces of him that had murder'd her Father, refuſed him with the utmoſt Contempt; whereupon he cut her to Pieces with his Scymitar; upon the Account of which Suffering, her Memory is deem'd ſacred among the *Venetians* that inhabit in this Iſland.

On the Eaſt of *Negropont*, and towards the North Part of the Iſland, ſtands the Caſtle of *Caſtro*; a populous Place and a Biſhop's See, ſubject to the Archbiſhop of *Egripos*. Here is ſuch Plenty of Corn, Wine, Fruit, Fleſh, Fiſh, and Fowl, that our Countryman, Mr. *Wheeler*, relates, that when he was there Wine was two Pence a Gallon, Fleſh a Halfpeny, and Fiſh a Farthing a Pound, in the City of *Egripos*; tho' there is moſt commonly a Fleet of Galleys in the Harbour, which enhances the Price of Proviſions.

A ſtrange Property of the Tide of the *Euripus*.

But what is particularly remarkable here, is the Irregularity or Uncertainty of the Tide in the *Euripus*; of which the above-mention'd Mr. *Wheeler* gives the following Account, *viz.* The Tides are ſometimes regular and ſometimes irregular in the *Euripus*, according to the different Ages and Phaſes of the Moon; the Ebbing and Flowing is perceiv'd ten or a dozen Leagues, on each Side of the Straight, where the Town of *Egripos* ſtands, in the little Bays along the Shore: They are regular the three laſt Days of the Old Moon, and the eight firſt of the New, the ninth Day they become irregular, and continue ſo to the Tenth, Eleventh, Twelfth, and Thirteenth; but on the Fourteenth they are regular again, and continue ſo till the Twentieth: On the one and twentieth they begin to be irregular again, and continue ſo till the Twenty-ſeventh: When they are irregular they flow and ebb twelve, thirteen, or fourteen Times in twenty-four or twenty-five Hours; and, at theſe Times, the Water flows about half an Hour, and ebbs about three Quarters of an Hour; but when the Tides are regular they are govern'd by the ſame Rule, according to the Moon, as in the main Ocean, ebbing and flowing twice in twenty-four or twenty five Hours; the Ebbs and Floods taking up equal Time, and falling back about three Quarters of an Hour every Day, as is common in *England*; but in the *Euripus*, when the Tides are regular, they flow and ebb but about a Foot or little more, and continue ſome Space of Time both at high Water and low Water, that they cannot be perceived either to ebb or flow. Theſe various Properties of the Tide may, I think, be ſaid to be peculiar to the *Euripus* only; and therefore it is no Wonder if what was reported of *Ariſtotle* be true, who, it is ſaid, lived upon this Iſland, and prying eagerly into the Reaſon of theſe Irregularities of the Tide in the *Euripus*, and not able to find out the true Cauſe of thoſe regular Irregularities (if I may ſo call them) threw himſelf into the ſame *Euripus*, the Myſtery of whoſe Flux and Reflux he was not able to find out, ſaying, *If I cannot comprehend thee, thou ſhalt comprehend me.*

The Iſland of *Skyros* lies about ſix or ſeven Leagues to the Northward of *Negropont*; it is full of Rocks and Precipices; it is of a Triangular Form, and is about ſixty Miles in Circumference. The Temple of *Pallas* ſtood in a Town, call'd *Skyros*, by the Sea-ſide, of which there yet remain ſome of the Ruins to be ſeen; it ſeems to have been a ſumptuous Temple, and dedicated to that Goddeſs, as ſhe was deem'd the Protectreſs of this Iſland. The Town of *Skyros* is a Biſhop's See, tho' the Iſland is not very populous, there not being much above three hundred Families (*Greeks*) in the Iſland. The Country affords Plenty of Corn, Wine, Wood, and Water.

There are ſeveral other inſignificant ſmall Iſlands, between *Skyros* and the Gulph of *Theſſalonica*, or *Saloniki*, but as they are not worth any Deſcription, I ſhall paſs them by, and proceed to the Northward to *Stalimene*, or the antient *Lemnos*, which is an Iſland of a Quadrangular Form, in the North Part of the *Egean Sea*, above a hundred Miles in Circumference. The chief Town is of the ſame Name with the Iſland, and on the Weſt Side of it. The Iſland is in the Poſſeſſion of the *Greeks*.

This Iſland is not ſo barren and mountainous as ſome of the reſt; it produces Corn, Wine, and other Neceſſaries of Life; but Wood and Water are very ſcarce. The principal Product, peculiar to this Iſland, is a Sort of Earth of excellent Virtue in curing Wounds, expelling Poiſon, ſtopping Fluxes, and other Uſes in Medicine; it is call'd *Terra Lemnia*, or *Lemnian* Earth, from the Name of the Iſland; it is not allow'd to be ſold abroad, till it be firſt made up in little Balls and ſeal'd by the *Turkiſh* Officers, from whence it is call'd by ſome *Terra Sigillata*, or ſeal'd Earth, and under both theſe Names we have it in *England*. The *Greeks* are very ſtrict as to the Time of their beginning to gather it, which is on the ſixth of *Auguſt*, for which they make religious (or rather ſuperſtitious) Preparations before they begin to touch any in order to gather it: There is only one Hill in all the Iſland that affords this Earth, the Surface whereof being open'd, they diſcover a Vein ſomething like the Earth which is caſt up by Worms; the Quantity they gather is directed by the Prieſts, who, when they think there is enough gather'd, cauſe the Earth to be cloſed up again till the next Seaſon; and, before they diſpoſe of any, they firſt ſend a certain Number of Bags of it to the Grand Seignior, and then ſell the reſt to Foreign Merchants, or any other with whom they can trade, and agree for Price.

When the *Venetians* had Poſſeſſion of this Iſland there were forty or fifty Towns and Villages in it, but it is now but thinly peopled. The beſt Port in this Iſland is call'd *Mudro*; it is on the South-Eaſt Coaſt of it; and above it ſtands a Town, with an indifferent Caſtle garriſon'd by the *Turks*, who are now in the Poſſeſſion of the Iſland. There is another Town alſo, which is built near the Ruins of the antient *Hepheſtiades*, memorable for the Temple of *Vulcan* which was built here upon the Account of a fictitious Notion of the *Greek* Poets, that *Vulcan*, being a deform'd decrepid Brat, was kick'd out of Heaven by *Juno*, and, to add to the Misfortune of his Deformity, he was lamed in the Fall; but falling upon this Iſland, he was thence

thence called *Lemnius*, and, lame as he was, was worſhipp'd as a Deity by the People of this Iſland.

Lembros. BETWEEN *Lemnos* and the *Thracian Cherſoneſe* is the Iſland of *Lembros*, but it is famous for nothing but Mountains and Woods, which are good Shelter for Wild-Beaſts and Game, with which it abounds.

Samo-thrace. *Samondrachi*, or the antient *Samothrace*, is an Iſland oppoſite to the Coaſt of *Thrace*; it was once called *Samos*, but there being another Iſland called *Samos* in the *Archipelago*, and this being upon the Coaſt of *Thrace*, it is called *Samothrace* to diſtinguiſh it from the other *Samos*. There are ſeveral good Ports in this Iſland, but the beſt and largeſt is on the North Side, over which the chief Town is built, being of the ſame Name with the Iſland.

Thaſſus. To the Weſtward of *Samondrachi* lies the Iſland of *Thaſſus*, near the Mouth of the Gulph of *Contteſſa*: It is a fruitful Iſland, about forty or fifty Miles in Circumference, affording Plenty of Wine and Wood, and in the Mountains are Quarries of excellent Marble, call'd *Thaſſian* Marble by Way of Diſtinction for its Goodneſs; there were alſo Mines of ſeveral Sorts of Metal, but I do find that they work any of them now. The chief Town is on the North Part of the Iſland, on a Plain not far from the Sea.

I have been pretty large and particular in the Deſcription of thoſe Archipelagian Iſlands, *not onl becauſe that, even in a large Map, they make ſuch a ſmall Appearance, as if they ſcarce afforded either Trade or Inhabitants, but alſo becauſe they were once under the Government and Diſcipline of the* Greeks; *a People, who, I think I may ſay, without any Apprehenſions of Oppoſition or Contradiction, were once the moſt polite People that ever the World produc'd.*

CHAP. XIX.

Of the Trade, Weights, Meaſures, and Coins of Turkey.

IF we conſider the Situation of the *Turkiſh Empire*, and the Footing that the Grand Seignior has got in theſe three great Parts of the World, *Aſia*, *Europe*, and *Africa*, but eſpecially the two firſt, it is not difficult to conceive what Opportunities the *Ottomans* have for the Improvement of Trade, if their Indolence did not counter-balance and deſtroy all the other Advantages; for were we to enumerate all the concurrent Teſtimonies they have of a flouriſhing Trade, under ſo many diſtinct Heads, it may be ſaid that the Grand Seignior has, *Firſt*, an extenſive Empire; *Secondly*, in very many Places, a fruitful Soil, as may have been obſerved in the foregoiug Deſcription of the ſeveral Parts of it; *Thirdly*, a better Opportunity of exporting his own Product, and importing that of other Countries, than any Nation in *Europe*; for by the *Perſian Gulph*, and alſo by the *Arabian Gulph*, or *Red Sea*, he may maintain a Communication between his own Dominions and thoſe of *China*, *India*, and all the Spice Iſlands, &c. and by the *Levant* or *Mediterranean*, he may maintain a Correſpondence even as far as himſelf pleaſes, his Territories both in *Europe*, *Aſia*, and *Africa* bordering upon it, *viz. Egypt* in *Africa*, *Syria* and *Natolia* in *Aſia*, and *Romania*, *Macedonia*, and indeed all *Greece* in *Europe*; and to this we may add *Fourthly*, not only his great Plenty of Timber and all other Materials for Building, and the Quantity of Naval Stores for ſupplying and fitting out vaſt Numbers of Ships; but alſo the Millions of Men which are entirely uſeleſs; which were they diſciplined and improved in Maritime Affairs, as the late great Precedent, *Peter* Czar of *Muſcovy*, did, both by himſelf and innumerable Multitudes of his unpoliſh'd Subjects, I queſtion not but the Grand Seignior might have been able by this Time to have furniſh'd out more, both Merchantmen and Men of War, than any Monarch in the World.

BUT if we look upon the preſent Situation of Affairs in the *Turkiſh* Dominions, we find an extenſive Empire, and a fruitful Soil, not only lying uncultivated, but ſuffer'd to run to Deſtruction; and where-ever the *Turkiſh Empire* has gain'd Ground, and got Poſſeſſion, Deſolation has generally been the unavoidable Conſequence; witneſs the numberleſs Ruins of Temples and other ſumptuous Buildings, whoſe Remains yet diſcover the Curiouſneſs of the Workmanſhip, tho' ſcarce ſufficient to deſcribe the Dimenſions or Proportion of the whole Building; and ſuch have frequently occur'd in this Hiſtory of the *Turkiſh Empire*, as melancholy Teſtimonies of the Truth of this Aſſertion, and of the deſtructive Maxims by which they govern.

AND as to the Trade of the *Perſian Gulph*; the chief Town is *Boſſora*, ſituate at the Mouth of the *Tygris*, or Head of the Gulph, it has more Trade than any if not all the Ports in the Gulph, and at the Seaſon there is a numerous Concourſe of Foreign Merchants from all Parts; but the *Turks* have no Share in what may properly be call'd the Trade of this Gulph, but may rather be ſaid to have a Benefit by the Trade, than to have a Trade themſelves, for they never have ſo much as one Ship here, but the chief Advantage they reap by the Trade here, is the Duties on Goods imported and exported, and the Taxes laid on the Trade of the adjacent Country, in which the Tributary Prince of *Boſſora* has a conſiderable Share: And the King of *Muſcat*, a Prince of *Arabia*, commands the Navigation of both theſe Gulphs, the *Perſian Gulph*, and the *Arabian*, or *Red Sea*, as well as all the *Ethiopick Ocean*, and yet he is not dependent upon or accountable to the Grand Seignior. And as for the Coaſt of *Arabia*, between thoſe two Gulphs, where the *Turks* had good Harbours, the Effect of their univerſal Indolence was found here as well as elſewhere, and, for want of Induſtry to fortify and maintain them, they were ſoon beat out of them, and became an eaſy Prey to their Enemies, inſomuch that they are now very little regarded by the Inhabitants: The *Turks* have indeed ſome Gallies and other Veſſels in the *Red Sea*, trading from Port to Port there, but ſeldom if ever ſail beyond the Straights of *Babelmandel*, or out of the *Red Sea*, which can never be call'd a foreign Trade; and what Trade they have in the *Mediterranean* is moſtly confined to the *Levant*, to tranſport the Product and Manufactures of one Province to another amongſt themſelves; but they never make any long Voyages to diſtant Countries,

or

Iſland ſeparated from the main Continent by a Channel, called *Euripus*; which is in one Place ſo ſhallow and narrow, that Geographers generally make that narrow Place an Iſthmus, by which they join the Peninſula of *Negropont* to the main Continent of *Achaia*; it was formerly called *Eubæa*, and by the modern *Greeks Egripos*; whoſe chief Town, of the ſame Name, ſtands on the South-Weſt Coaſt of the Iſland, and has a Communication with the main Continent by a Stone Bridge; in the Middle of which is a Draw-bridge for Galleys to paſs through, between the Continent of *Achaia* and the Iſland of *Negropont*; ſo that it is indeed an Iſland, becauſe Veſſels can ſail round it, though ſometimes repreſented as a Peninſula, by Reaſon of its Communication with the main Continent by the Bridge above-mention'd.

The Town within the Walls is about two Miles in Circumference, and the Suburbs contain more Inhabitants than the Town, and are moſtly Chriſtians. The Viceroy of this Iſland and the adjacent Parts of *Greece*, is alſo Captain Baſſa, or Admiral of the *Turkiſh* Fleet. When *Mahomet* the Second conquer'd this Iſland, and had put the *Venetian* Governor to Death, he made Love to his Daughter; but ſhe, abhorring the Embraces of him that had murder'd her Father, refuſed him with the utmoſt Contempt; whereupon he cut her to Pieces with his Scymitar; upon the Account of which Suffering, her Memory is deem'd ſacred among the *Venetians* that inhabit in this Iſland.

On the Eaſt of *Negropont*, and towards the North Part of the Iſland, ſtands the Caſtle of *Cariſto*; a populous Place and a Biſhop's See, ſubject to the Archbiſhop of *Egripos*. Here is ſuch Plenty of Corn, Wine, Fruit, Fleſh, Fiſh, and Fowl, that our Countryman, Mr. *Wheeler*, relates, that when he was there Wine was two Pence a Gallon, Fleſh a Halfpeny, and Fiſh a Farthing a Pound, in the City of *Egripos*; tho' there is moſt commonly a Fleet of Galleys in the Harbour, which enhances the Price of Proviſions.

A ſtrange Property of the Tide of the *Euripus*.

But what is particularly remarkable here, is the Irregularity or Uncertainty of the Tide in the *Euripus*; of which the above-mention'd Mr. *Wheeler* gives the following Account, *viz.* The Tides are ſometimes regular and ſometimes irregular in the *Euripus*, according to the different Ages and Phaſes of the Moon; the Ebbing and Flowing is perceiv'd ten or a dozen Leagues, on each Side of the Straight, where the Town of *Egripos* ſtands, in the little Bays along the Shore: They are regular the three laſt Days of the Old Moon, and the eight firſt of the New, the ninth Day they become irregular, and continue ſo the Tenth, Eleventh, Twelfth, and Thirteenth; but on the Fourteenth they are regular again, and continue ſo till the Twentieth: On the one and twentieth they begin to be irregular again, and continue ſo till the Twenty-ſeventh: When they are irregular they flow and ebb twelve, thirteen, or fourteen Times in twenty-four or twenty-five Hours; and, at theſe Times, the Water flows about half an Hour, and ebbs about three Quarters of an Hour; but when the Tides are regular they are govern'd by the ſame Rule, according to the Moon, as in the main Ocean, ebbing and flowing twice in twenty-four or twenty five Hours; the Ebbs and Floods taking up equal Time, and falling back about three Quarters of an Hour every Day, as is common in *England*; but in the *Euripus*, when the Tides are regular, they flow and ebb but about a Foot or little more, and continue ſome Space of Time both at high Water and low Water, that they cannot be perceived either to ebb or flow. Theſe various Properties of the Tide may, I think, be ſaid to be peculiar to the *Euripus* only; and therefore it is no Wonder if what was reported of *Ariſtotle* be true, who, it is ſaid, lived upon this Iſland, and prying eagerly into the Reaſon of theſe Irregularities of the Tide in the *Euripus*, and not able to find out the true Cauſe of thoſe regular Irregularities (if I may ſo call them) threw himſelf into the ſame *Euripus*, the Myſtery of whoſe Flux and Reflux he was not able to find out, ſaying, *If I cannot comprehend thee, thou ſhalt comprehend me.*

The Iſland of *Skyros* lies about ſix or ſeven Leagues to the Northward of *Negropont*; it is full of Rocks and Precipices; it is of a Triangular Form, and is about ſixty Miles in Circumference. The Temple of *Pallas* ſtood in a Town, call'd *Skyros*, by the Sea-ſide, of which there yet remain ſome of the Ruins to be ſeen; it ſeems to have been a ſumptuous Temple, and dedicated to that Goddeſs, as ſhe was deem'd the Protectreſs of this Iſland. The Town of *Skyros* is a Biſhop's See, tho' the Iſland is not very populous, there not being much above three hundred Families (*Greeks*) in the Iſland. The Country affords Plenty of Corn, Wine, Wood, and Water.

There are ſeveral other inſignificant ſmall Iſlands, between *Skyros* and the Gulph of *Theſſalonica*, or *Saloniki*, but as they are not worth any Deſcription, I ſhall paſs them by, and proceed to the Northward to *Stalimene*, or the antient *Lemnos*, which is an Iſland of a Quadrangular Form, in the North Part of the *Egean Sea*, above a hundred Miles in Circumference. The chief Town is of the ſame Name with the Iſland, and on the Weſt Side of it. The Iſland is in the Poſſeſſion of the *Grecks*.

This Iſland is not ſo barren and mountainous as ſome of the reſt; it produces Corn, Wine, and other Neceſſaries of Life; but Wood and Water are very ſcarce. The principal Product, peculiar to this Iſland, is a Sort of Earth of excellent Virtue in curing Wounds, expelling Poiſon, ſtopping Fluxes, and other Uſes in Medicine; it is call'd *Terra Lemnia*, or *Lemnian* Earth, from the Name of the Iſland; it is not allow'd to be ſold abroad, till it be firſt made up in little Balls and ſeal'd by the *Turkiſh* Officers, from whence it is call'd by ſome *Terra Sigillata*, or ſeal'd Earth, and under both theſe Names we have it in *England*. The *Greeks* are very ſtrict as to the Time of their beginning to gather it, which is on the ſixth of *Auguſt*, for which they make religious (or rather ſuperſtitious) Preparations before they begin to touch any in order to gather it: There is only one Hill in all the Iſland that affords this Earth, the Surface whereof being open'd, they diſcover a Vein ſomething like the Earth which is caſt up by Worms; the Quantity they gather is directed by the Prieſts, who, when they think there is enough gather'd, cauſe the Earth to be cloſed up again till the next Seaſon; and, before they diſpoſe of any, they firſt ſend a certain Number of Bags of it to the Grand Seignior, and then ſell the reſt to Foreign Merchants, or any other with whom they can trade, and agree for Price.

When the *Venetians* had Poſſeſſion of this Iſland there were forty or fifty Towns and Villages in it, but it is now but thinly peopled. The beſt Port in this Iſland is call'd *Mudro*; it is on the South-Eaſt Coaſt of it; and above it ſtands a Town, with an indifferent Caſtle garriſon'd by the *Turks*, who are now in the Poſſeſſion of the Iſland. There is another Town alſo, which is built near the Ruins of the antient *Hepheſtiades*, memorable for the Temple of *Vulcan* which was built here upon the Account of a fictitious Notion of the *Greek* Poets, that *Vulcan*, being a deform'd decripid Brat, was kick'd out of Heaven by *Juno*, and, to add to the Misfortune of his Deformity, he was lamed in the Fall; but falling upon this Iſland, he was thence

thence called *Lemnius*, and, lame as he was, was worſhipp'd as a Deity by the People of this Iſland.

Lembros. BETWEEN *Lemnos* and the *Thracian Cherſoneſe* is the Iſland of *Lembros*, but it is famous for nothing but Mountains and Woods, which are good Shelter for Wild-Beaſts and Game, with which it abounds.

Samothrace. *Samondrachi*, or the antient *Samothrace*, is an Iſland oppoſite to the Coaſt of *Thrace*; it was once called *Samos*, but there being another Iſland called *Samos* in the *Archipelago*, and this being upon the Coaſt of *Thrace*, it is called *Samothrace* to diſtinguiſh it from the other *Samos*. There are ſeveral good Ports in this Iſland, but the beſt and largeſt is on the North Side, over which the chief Town is built, being of the ſame Name with the Iſland.

Thaſſus. To the Weſtward of *Samondrachi* lies the Iſland of *Thaſſus*, near the Mouth of the Gulph of *Conteſſa*: It is a fruitful Iſland, about forty or fifty Miles in Circumference, affording Plenty of Wine and Wood, and in the Mountains are Quarries of excellent Marble, call'd *Thaſſian* Marble by Way of Diſtinction for its Goodneſs; there were alſo Mines of ſeveral Sorts of Metal, but I do find that they work any of them now. The chief Town is on the North Part of the Iſland, on a Plain not far from the Sea.

I have been pretty large and particular in the Deſcription of thoſe Archipelagian Iſlands, *not onl. becauſe that, even in a large Map, they make ſuch a ſmall Appearance, as if they ſcarce afforded either Trade or Inhabitants, but alſo becauſe they were once under the Government and Diſcipline of the* Greeks; *a People, who, I think I may ſay, without any Apprehenſions of Oppoſition or Contradiction, were once the moſt polite People that ever the World produc'd.*

CHAP. XIX.

Of the Trade, Weights, Meaſures, and Coins of Turkey.

IF we conſider the Situation of the *Turkiſh Empire*, and the Footing that the Grand Seignior has got in theſe three great Parts of the World, *Aſia*, *Europe*, and *Africa*, but eſpecially the two firſt, it is not difficult to conceive what Opportunities the *Ottomans* have for the Improvement of Trade, if their Indolence did not counter-balance and deſtroy all the other Advantages; for were we to enumerate all the concurrent Teſtimonies they have of a flouriſhing Trade, under ſo many diſtinct Heads, it may be ſaid that the Grand Seignior has, *Firſt*, an extenſive Empire; *Secondly*, in very many Places, a fruitful Soil, as may have been obſerved in the foregoiug Deſcription of the ſeveral Parts of it; *Thirdly*, a better Opportunity of exporting his own Product, and importing that of other Countries, than any Nation in *Europe*; for by the *Perſian Gulph*, and alſo by the *Arabian Gulph*, or *Red Sea*, he may maintain a Communication between his own Dominions and thoſe of *China*, *India*, and all the Spice Iſlands, &c. and by the *Levant* or *Mediterranean*, he may maintain a Correſpondence even as far as himſelf pleaſes, his Territories both in *Europe*, *Aſia*, and *Africa* bordering upon it, *viz. Egypt* in *Africa*, *Syria* and *Natolia* in *Aſia*, and *Romania*, *Macedonia*, and indeed all *Greece* in *Europe*; and to this we may add *Fourthly*, not only his great Plenty of Timber and all other Materials for Building, and the Quantity of Naval Stores for ſupplying and fitting out vaſt Numbers of Ships; but alſo the Millions of Men which are entirely uſeleſs; which were they diſciplined and improved in Maritime Affairs, as the late great Precedent, *Peter* Czar of *Muſcovy*, did, both by himſelf and innumerable Multitudes of his unpoliſh'd Subjects, I queſtion not but the Grand Seignior might have been able by this Time to have furniſh'd out more, both Merchantmen and Men of War, than any Monarch in the World.

BUT if we look upon the preſent Situation of Affairs in the *Turkiſh* Dominions, we find an extenſive Empire, and a fruitful Soil, not only lying uncultivated, but ſuffer'd to run to Deſtruction; and where-ever the *Turkiſh Empire* has gain'd Ground, and got Poſſeſſion, Deſolation has generally been the unavoidable Conſequence; witneſs the numberleſs Ruins of Temples and other ſumptuous Buildings, whoſe Remains yet diſcover the Curiouſneſs of the Workmanſhip, tho' ſcarce ſufficient to deſcribe the Dimenſions or Proportion of the whole Building; and ſuch have frequently occur'd in this Hiſtory of the *Turkiſh Empire*, as melancholy Teſtimonies of the Truth of this Aſſertion, and of the deſtructive Maxims by which they govern.

AND as to the Trade of the *Perſian Gulph*; the chief Town is *Boſſora*, ſituate at the Mouth of the *Tygris*, or Head of the Gulph, it has more Trade than any if not all the Ports in the Gulph, and at the Seaſon there is a numerous Concourſe of Foreign Merchants from all Parts; but the *Turks* have no Share in what may properly be call'd the Trade of this Gulph, but may rather be ſaid to have a Benefit by the Trade, than to have a Trade themſelves, for they never have ſo much as one Ship here, but the chief Advantage they reap by the Trade here, is the Duties on Goods imported and exported, and the Taxes laid on the Trade of the adjacent Country, in which the Tributary Prince of *Boſſora* has a conſiderable Share: And the King of *Maſcat*, a Prince of *Arabia*, commands the Navigation of both theſe Gulphs, the *Perſian Gulph*, and the *Arabian*, or *Red Sea*, as well as all the *Ethiopick Ocean*, and yet he is not dependent upon or accountable to the Grand Seignior. And as for the Coaſt of *Arabia*, between thoſe two Gulphs, where the *Turks* had good Harbours, the Effect of their univerſal Indolence was found here as well as elſewhere, and, for want of Induſtry to fortify and maintain them, they were ſoon beat out of them, and became an eaſy Prey to their Enemies, inſomuch that they are now very little regarded by the Inhabitants: The *Turks* have indeed ſome Gallies and other Veſſels in the *Red Sea*, trading from Port to Port there, but ſeldom if ever ſail beyond the Straights of *Babelmandel*, or out of the *Red Sea*, which can never be call'd a foreign Trade; and what Trade they have in the *Mediterranean* is moſtly confined to the *Levant*, to tranſport the Product and Manufactures of one Province to another amongſt themſelves; but they never make any long Voyages to diſtant Countries,

or

or ſeldom, if ever, trade with People of a different Faith from their own; but what Trade is carried on between Chriſtendom and *Turkey*, is all perform'd in Forrign Bottoms, and not in the *Turks* own Ships; if we buy their Goods we fetch them, and if we ſell them our Goods, we carry them in our own Ships; and therefore they have no Benefit by the Navigation, and the chief of what they get by Trade is by dealing one with another, and proceeds from the Cuſtoms and Duties of Imports and Exports; and this is their Method of trading with all the Eaſtern Parts of the World as well as the Weſtern, the *Turkiſh* Ships never either fetching home foreign Goods, or carrying their own abroad.

Black Sea. As to the *Black Sea*, it is almoſt ſurrounded by the *Turkiſh* Dominions, and therefore what Trade is there is likewiſe among themſelves, and conſiſts chiefly in Naval Stores and Proviſions; here alſo the *Turks* import great Number of Chriſtian Slaves, taken by the *Tartars* in their Incurſions into Chriſtendom, or ſuch as their *Jewiſh* or Chriſtian Factors buy up and barter for in *Circaſſia*, *Mingrelia*, and the Places adjacent, where the Female Children are generally fair and beautiful, which one would think ſhould be a great Inducement to the Parents to keep them and bring them up, although with the utmoſt Labour and Difficulty, rather than ſell them into *Turkey*; but the Caſe is quite otherwiſe with them, for they are ſo far from apprehending, that the Female Children that they ſell into *Turkey* are going into perpetual Slavery, that they ſell them with a View of their being prefer'd, and hope that their Beauty and Merit will procure them Admiſſion into the Families of the greateſt Princes, and thereby raiſe the Fortune of themſelves and Families; and although the ſelling of Children looks barbarous, yet it is very often a great Step towards the Preferment both of themſelves and Parents; and was it not for theſe Supplies of People from abroad, the Empire would not be ſo populous as it is, although at beſt it is ſtill but thinly peopled.

Trade by Land But beſides what Trade is carried on by Sea in *Turkey*, (but not by *Turkiſh* Ships, as above obſerved,) there are great Quantities of rich Merchandize daily tranſported to and from *Perſia*, *Arabia*, and *Tartary*, by Caravans of Camels and Mules; but this Trade, as well as that by Sea, is not managed by the *Turks*, but chiefly by the *Armenian* Chriſtians or *Jews*. The Mahometan Subjects, living in *Turkey*, do not ſo much regard Trade as Preferment in the Church, the Army, or the Civil Government, leaving Mechanick Employments to their Slaves, and Traffick to the deſpiſed Chriſtians; which indeed is one, if not the only Reaſon for their allowing Chriſtians the Exerciſe of their Religion, becauſe they are glad to converſe and traffick perſonally with Chriſtians abroad, which the *Turks* will not do.

As to the particular Trade between *England* and *Turkey* I ſhall diſtinguiſh it under the two Heads of Imports and Exports; and firſt, of Goods proper to be exported from *England* to *Turkey*: *English Goods proper to be ſent to Turkey.* Theſe are chiefly of our own Manufacture; as, Long and Short Cloths, Stuffs, Perpetuana's, Haberdaſher's Ware, Coney-Skins, Clock-work, Gold and Silver Watches, wrought Iron and Braſs, Glaſs, Lead, and Tin, *&c.* and all theſe, and whatſoever elſe they deal with us for, are carried to them in our own Ships, theirs never trading ſo far abroad, or ſailing into thoſe Nations whoſe People are of a different Faith, as has been obſerved before.

Turkiſh Goods imported to England Goods which the *Engliſh* import from *Turkey* are Raw *Perſian* Silk, Carpets, Goats-hair, Mohair Yarn, Goats-Wool, Cotton-Wool, Cotton Yarn, Dimities, Burdetts, Shagreen-Skins, Cordovants Blue, Red, and Yellow; *Arabian* Coffee, Rhubarb, which comes from Eaſtern *Tartary*; Turpentine, Storax, Gum-Seneca, Gum-Tragacanth, Gum-Arabick, Opium, Organum, Galls, Maſtick, Wormſeed, Senna, Zedoary, Emery-Stones, Terra-Lemnia, or Sigillata, taken up in the Iſland of *Lemnos*, as before obſerv'd in the Deſcription of that Iſland; alſo China-root, Pomegranate Peels, Sponges, Piſtachio-Nuts, Dates, Almonds, Wine, Oil, Figs, Raiſons, Mother of Pearl, Viſui-valinia for Dying, Sal-Armoniack, Allum, Botargo, Roman Vitriol, Box-wood, Bees-Wax, and Saffron.

Prices. It is impoſſible to be exact in giving an Account of the Prices of the ſeveral Goods imported from *Turkey*, becauſe they vary according to the Plenty or Scarcity of them, or according to the Situation of Affairs as to Peace or War. But ſetting aſide theſe Circumſtances, take the following general Account of the Prices of *Turkey* Goods, as we had it from an eminent *Turkey* Merchant, and is as follows:

Sherbuffe Silk, and *Ardepett* Silk, imported from *Smyrna*. Sold by the Battman of 2400 Drams, which ought to hold out eleven great Pounds of twenty-four Ounces (as this and all Raw Silk is ſold) or ſixteen Pounds and an half of ſixteen Ounces to the Pound, is worth about ſixty-five Dollars *per* Battman; the firſt Sort, without the Charges of Cuſtom, *&c.*

	Dollars.	
Cotton Wool	14	*Per* Kental of 100 Rotilo's, which ought to weigh 122 Pounds *Engliſh*.
Cotton Yarn as in goodneſs	20 to 37 ½	
Galls	20	
Vallinia	1 ¼	
Box-wood	1 ½ to 2	
Bees-wax	44	

Goats Wool the Oque of 800 Drams, or five Poudd ſix Ounces *Engliſh*, three Dollars and three Fourths.

	Dollars.	
Scamony	7 ¼	*Per* Oque of 400 Drams, or 2 lb. 11 Oz. *Engliſh*.
Wormſeed	1 ½ to 2	
Roman Vitriol	½	
Mohair Yarn from	1 ½ to 5	
Scio Turpentine	2	
Gum Tragant	½	

Cordovants Blue, Red and Yellow, one Dollar *per* Skin.

Weights.

2400 Drams, or ſixteen Pounds and a half *Engliſh*, is one Battman of *Smyrna*.
180 Drams, one Rotilo.
146 Drams, is one Pound *Engliſh*.
250 Drams, is one Rotilo of Opium.
120 Drams, is one Rotilo of Saffron.

720 Drams, is one Rotilo of *Aleppo*.
700 Drams, is one Rotilo of White Silk.
680 Drams, is one Rotilo of *Perſia* Silk.
The Kental of *Perſia* is 28 Battmans.

Meaſures.

The Pike is 27 Inches *Engliſh*, by which is ſold all Cloth, Wrought Silk, *&c.*

Coins.

Gold and Silver Coins of all Countries paſs in *Turkey* for their Value.

The Coins of the Country are Aſpers, Pararrs, Zelotes, and half Zelotes.

An

An Aſper is about the Value of an Halfpenny. Three Aſpers make one Pararr. Forty Pararrs make one Dollar. A Zelote is two thirds of a Dollar.

Gold Coins.

Zingerlees are worth two Dollars and two thirds. Tomilees are worth two Dollars and a half each.

Ambaſſador and Conſuls

For the Protection of our *Turkey* Trade, and Support of the *Engliſh* Intereſt in the Grand Seignior's Dominions, his Excellency, Mr. *Stanyan*, at preſent reſides at *Conſtantinople*, in the Quality of Ambaſſador of *Great Britain* to the Porte, Mr. *Pournell* Conſul at *Aleppo*, Mr. *Bodington* Conſul at *Smyrna*, Mr. *Wheake* Conſul at *Grand Cairo*, Mr. *Stevens* Conſul at *Theſſalonica*, or *Salonichi*, and Mr. *Hefferman* Conſul at *Cyprus*. Mr. *John Cary* reſides at *Tripoli* under the Character of Vice Conſul, and Mr. *Brutus Brown* is Vice Conſul at *Scanderoon*; which, tho' it be but a Viceconſulate, is one of the moſt profitable Poſts in the Diſpoſal of the *Turkey* Company; there being greater Quantities of Goods exported and imported here to and from *England*, than at any other Port in *Turkey*. It is to be remark'd alſo, that the Raw Silk imported from the Grand Seignior's Dominions, is for the moſt Part of the Growth of *Perſia*: The Silk which is of the Growth of *Turkey* being manufactur'd and ſpent there. There are no Wrought Silks imported into *England* from *Turkey*, or any other Country, becauſe they are at preſent prohibited by Act of Parliament: But the *Turkey* Burdetts, which have a Mixture of Silk, are however pretty much worn amongſt us.

CHAP. XX.

Of the Marriages, Divorces, Concubinage, and Funeral Rites of the Turks *in* Europe.

Two Sorts of Wives

THE Marriages in *Turkey* may be diſtinguiſh'd into two Sorts: One during Life, if there be no ſufficient Cauſe of Divorce in the mean Time, and the other during Pleaſure, or upon ſuch Conditions as the Parties can agree upon; but this muſt be done before a Magiſtrate: And beſides thoſe Wives, they make uſe of their female Slaves as Concubines, without any other Contract than being their own by Purchaſe; but ſuch can ſcarce be called Wives, becauſe both Mother and Children continue to be Slaves, and as much the Property of the Man as Cattle are that are purchaſed in *England* or elſewhere, and deſcend to the next Heir as other Eſtates or Moveables do, or are otherwiſe diſpoſed of according to the Father's Will; but in caſe the Wife dies or is divorced, then what he agreed to allow his contracted Woman goes among the Children he has by her.

The Marriages even of the firſt Sort may rather be called Bargains than Marriages, as indeed we need not go out of *England* for Inſtances of that Kind; for the Agreement or Bargain is generally made when the Parties are either too young or too far aſunder to chuſe for themſelves; but the Fathers, or neareſt Relations, commonly make the Bargain and ſettle the Conditions, which, being recorded before a Judge, is thought ſufficient to make them Man and Wife, without falling in Love with one another, much leſs any Courtſhip; nor is even ſo much as a previous Acquaintance required, and the Marriage is ſo far from being publickly ſolemnized, that the Woman is not ſo much as required to be preſent when herſelf is contracted for in Marriage.

Marrying

The Manner of performing the Rites of Marriage, if it may be ſo called, is, that the Woman, veil'd from Head to Foot, is ſet upon a Horſe, with a Canopy held over her Head, her whole Fortune going before her; which conſiſts of her Baggage and Wardrobe, and ſuch Furniture and Utenſils as her Father is able or willing to give her; and with this, and a large Train of her Acquaintance and Relations, and the Country Muſick and Dancing before her, ſhe is brought in great Pomp to the Bridegroom's Houſe; where the Males and Females, each in ſeparate Apartments, are entertain'd, and ſpend the Day merrily, as is uſual in other Countries upon ſuch Occaſions.

The Day being thus ſpent, and Night coming on, the happy Minute of Conſummation is impatiently expected by the Parties concern'd, and the Lady is led by an Eunuch to the Bridal Chamber, or if ſhe is a Woman of a lower Station, it is thought ſufficient to have her conducted to Bed by ſome of her female Acquaintance; but be that how it will, ſhe is left in her Bedchamber with only her Spouſe, who, according to their Cuſtom, is himſelf to undreſs her, and the Bride, as well as other Women in this Country, wearing Breeches tied with Strings, the waggiſh Females that dreſs her in the Morning, put ſuch long Strings to her Breeches, and tie them in ſo many crabbed croſs-grain'd Knots, and it being contrary to their Nuptial Laws for him to uſe any Violence, by cutting or breaking the Strings, or to fight his Way through, any other Way than by undoing all the Knots, it commonly proves a great Trial of his Patience and Induſtry too, before he can get her undreſt to anſwer his Purpoſe, in going to bed as a new-marry'd Bride.

First Sort of Wives

A *Turk* is allow'd four Wives, (I mean of the firſt Sort, for the reſt I can ſcarce call Wives,) but of theſe they ſeldom take more than one, except with a View of advancing themſelves by the ſecond, third, or fourth Marriage, and in this Caſe they are all deem'd lawful; but it ſeems not much leſs than impoſſible to avoid perpetual Contention where there are four rival Miſtreſſes, equal in Authority, in the ſame Family; only in this Caſe the Man ſtands Umpire, and his Vote alone carries it as to which of the four Wives ſhall be Miſtreſs of the Family.

Second Sort of Wives

The ſecond Sort of Wives are contracted with only for a Time, and are moſt commonly taken when a Merchant or Traveller has Occaſion to reſide in a Place for ſome conſiderable Time which is at a great Diſtance from his own Home; in this Caſe the Terms of Cohabitation are agreed upon, and regiſtered before a Magiſtrate, and the Woman is taken to his Bed with very little Ceremony, and diſmiſs'd with leſs, if any at all.

The third Sort.

The Third Sort are the Female Slaves, who by the Maſter's Choice are admitted, or rather invited, to his Bed; but, by their Laws, theſe muſt be no Subjects either of the Chriſtian or Mahometan Religion, but ſuch Chriſtian Females as, according to their Laws, are become their

Property, either by Capture or Purchaſe, either taken in the Wars or bought in the Market, and their Iſſue are deem'd Slaves as well as their Mothers, except they either become *Turks* by Religion or are naturalized by their Laws; but if either of theſe happen, they are upon the ſame Foot with the Children of the contracted Wives.

These Concubines are ſo far diſtinguiſh'd from their Miſtreſſes, that they wait upon them with uncommon Diligence, and are ſo obſervant to their Commands, that if they give them but a Sign, whether a Nod or a Wink, generally imperceptible to Strangers, all the Miſtreſs's Orders are executed in the Family, without Noiſe or Contradiction, where the Women are ſubmiſſive, and the Orders of the Maſter obey'd, without any Diſpute to the Contrary.

Divorce. But if any diſguſt ariſes which the Husband thinks material, they have recourſe to that common Remedy, a Divorce, and by a Separation put an End to all Conjugal and Family Diſputes; and on the Man's Part it is thought a ſufficient Cauſe for a Divorce if he only alledges that *She finds no Favour in his Eyes*, but then even the Divorces are conditional; for if he cannot charge her with any particular Fault, but only in general that he does not like her, as above, he muſt pay the whole Sum that he previouſly agreed for in Caſe of Death or ſuch Divorce; and this Conſideration makes Divorces leſs frequent than they might be otherwiſe ſuppoſed to be, if Men's Wills were arbitrary, and no Conditions required previous to a Divorce, but only that a Man ſhould be able to procure it upon every Pretence of a Pique againſt his Wife; and what may be another Reſtraint to a Man from too haſtily divorcing his Wife, is, that ſhe, when divorced, is immediately at Liberty to marry again, but the Man is not allow'd to engage with another Wife before his divorced Wife is married, and himſelf has undergone the Mortification of ſeeing her enjoy'd by another.

Adultery is reckon'd ſo heinous a Crime, that if a Woman is taken in it, it is look'd upon as capital; and if the Man is taken in Adultery along with another Man's Wife, it is no Crime for the Woman's injur'd Husband to kill the adulterous Man upon the Spot. *Adultery.*

There are alſo Conditions upon which the Wife may obtain a Divorce; as, when her Husband does not allow her the neceſſary Supplies of Food, Fire, or Clothing, or if he be impotent, or ſpends ſo much of his Time with his Female Slaves, that he does not bed with her once a Week as the Law directs: In ſuch Caſes ſhe may not only obtain a Divorce, but recover of her Husband the Sum agreed upon in Caſe of Separation. Indeed thoſe Women who can ſuffer themſelves to be rival'd in the Marriage Bed, and be content to participate with their Slaves in their Husbands Embraces and Converſations, find very little elſe to diſturb them; for it is the Men's Ambition to have their Wives Apartments commodious and agreeable, and their Furniture and Habits as rich as their Circumſtances will admit; they have all poſſible Attendance and Diverſion at Home, and Liberty to viſit their Relations abroad; their Baths are Places of publick Reſort, where the Females meet with Aſſemblies of their own Sex, and divert themſelves and one another by ſhewing their Jewels and rich Dreſſes, and boaſting of their Husbands Favours; and they pleaſe themſelves ſo with theſe Amuſements, that thoſe of them that can ſubmit to be Partners only in the Husband's Bed, and to be but a Quarter of a Wife, or one of the four or more that her Husband enjoys, thoſe of the *Turkiſh* Wives that can put up with this, reckon themſelves the happieſt Women in the World, as being ſo well provided for in what their chief Ambition aſpires after, and putting ſo ſlender a Value upon thoſe Privileges, which, tho' never ſo diſcontented, they know they cannot be ſure to engroſs entirely to themſelves.

A DESCRIPTION OF THE *TURKISH EMPIRE* IN AFRICA.

CHAP. I.

Of the Situation and Extent of Egypt; *with a Deſcription of* Pompey's *Pillar, the River* Nile, *and other Things remarkable.*

Name of *Egypt.*

EGYPT was formerly called *Miſraim*, ſuppoſed from *Miſraim*, the Son of *Cham*, who was the Son of *Noah*; it has alſo been called *Coptus*, and from thence the Inhabitants were call'd *Cophties*, as the *Egyptian* Chriſtians are at this Day; the *Turks* call it *El-Kibit*, or the overflow'd Country; they having ſo little Knowledge of other Parts of the World, that they thought *Egypt*, or the River *Nile*, was the only Inſtance of thoſe annual Inundations; but it was afterwards call'd *Egypt*, from *Egyptus*, the Brother of *Danaus*, who was once Sovereign of it, which Name it retains and is known by amongſt all *Engliſh* Geographers to this Day.

Situation. *Egypt* is ſituate on the North-Eaſt Part of *Africa*, being bounded on the North by the *Mediterranean*, and on the Eaſt by the *Red Sea* and *Iſthmus* of *Suez*, which makes all *Africa* become a *Peninſula*, and ſeparates it from *Aſia*; the Empire of *Abyſſinia* and *Nubia* bound it on the South, and the Deſarts of *Barca* on the Weſt; its Length from North to South is about ſix hundred Miles, *viz.* from Latitude 21 to Latitude 31 Degrees North, but the Breadth is ſcarce one Third ſo much.

Air. It is but an unwholſome Air, and more ſo by Reaſon of the noiſome Vapours which ariſe from the ſtinking Mud which covers the Ground, eſpecially the lower Part of it, after the overflowing of the *Nile*; and if to this we add the exceſſive Heat of the Country, occaſion'd not only by the Climate, but by the Sandy Deſarts which encloſe *Egypt* on three Sides, all theſe render the Air unwholſome and the Country unhealthy; and beſides there are ſo few Springs in the Country, that they are under a Neceſſity of building their Towns and Habitations near the *Nile*, which they do upon ſuch little Eminences, as either Nature has left or Art produced; ſo that during the overflowing of the *Nile* the Towns appear like ſo many Iſlands, and the Communication with one another at that Time is only by Boats.

Diviſion. *Egypt* in general is divided into Lower, Middle, and Upper *Egypt*. *Lower Egypt* ſome confine to that Triangular Iſland that is contain'd between the *Mediterranean* and thoſe two Branches of the *Nile*, one of which runs into that Sea at *Roſetto*, and the other at *Damietta*, ſeparating themſelves a little below *Old Cairo*; but there is a great Extent of the Country both Eaſtward and Weſtward of this Iſland, and of thoſe Branches of the River that bound what they call *Lower Egypt*.

Chief Towns. In *Lower Egypt* the chief Towns are, 1. *Alexandria*, 2. *Roſetto*, 3. *Damietta*, or the antient *Peluſium*.

Alexandria. 1. *Alexandria* may be call'd the Capital of *Egypt*, and the beſt Harbour therein; it was built by *Alexander the Great*, or at leaſt much enlarged by him, and called by his Name, about three hundred Years before our Saviour's Incarnation. It ſtands about a hundred Miles to the Weſtward of *Grand Cairo*, and forty Miles to the Weſtward of the Weſtermoſt of the two Branches of the *Nile*, upon a low Promontory which runs out into the *Mediterranean*, and forms a Harbour on each Side of the City, but one of them is almoſt choak'd up and little frequented: The Ground upon which *Alexandria* ſtands is ſo low, that the Mariners cannot diſcern it till they come very near it; which was the Occaſion of their building that famous high Watch-tower, ſo frequently mention'd in Hiſtory, for a Sea Mark. The Country is a barren ſandy Deſart, affording very little Proviſion or Fruit, and leſs Water; for thoſe that are near forty Miles from the River *Nile* have no Water but what is brought from thence; and this Conveyance was formerly perform'd by a Canal, but that being now neglected and choak'd up,

moſt

most of the Water, in the dry Season, is carried from the River *Nile* to those remote Parts upon the Backs of Camels.

The Town of *Alexandria* was about seven Miles in Circumference, but indifferently built, except one Street, and the Houses which face the Harbour; the rest is now all in Ruins, except Part of the Walls, which yet shew themselves to be magnificent Ruins, or the Remains of some valuable Pieces of Antiquity; for there still remain great square Towers at about two hundred Paces from each other, and a little Tower between each two. There is in every one of the larger Towers a spacious Hall, supported by an Arch and great Pillars of *Thebaick* Stone, and over the Hall are several other Rooms, and on the Top a Platform of a hundred Foot square; every Tower was capable of containing a Garrison of two hundred Men, and had a Cistern in it, into which the Water of the *Nile* was convey'd.

The antient City of *Alexandria* was built upon Arches, which were supported by Marble Pillars, and under the Houses were Cisterns to receive and retain the Waters of the *Nile*, being either convey'd thither by the Canal above-mention'd, or by Aqueducts, or brought upon Camels to ravish them; and tho' those Methods of supplying them from the River *Nile* do now in some Measure fail, yet they use them to receive the Rain Water, when, by the Defect of their Aqueducts, the said Supplies from the *Nile* are wanting.

Amongst the Ruins of *Alexandria*, are several fine Pillars of Porphiry and Granite, with Hieroglyphicks upon them; these having been formerly the chief Ornament of the antique *Egyptian* Buildings. The Gates still remain, and are compos'd of *Thebaick* Stone and Granite; and where they dig amongst those Parts that are quite demolish'd, they find such Plenty of Marble and Porphiry, that they put no more Value upon it than we do upon common Stone, in those Parts of *England* where it is dug out of the common Quarries, and every one has it for the Labour of digging.

Pompey's Pillar.

The finest Piece of Antiquity, which is now standing and belonging to *Alexandria*, is *Pompey's* Pillar: It stands about two hundred Paces out of the Town, and was erected by *Julius Cæsar* in Memory of his Victory over that great Man; *Pompey*, flying to *Alexandria* from the Battle of *Pharsalia*, and being murder'd some where upon this Part of the Coast of *Egypt*.

The Height of this remarkable Piece of Antiquity is seventy Foot, and the Circumference twenty-five Foot; and, altho' these Dimensions are in themselves large, yet what increases the Wonder is, that it is all one entire Piece of Granite Marble, or some Composition as durable, beautiful, and every Way so much like it, that it is asserted by some to be real Marble; and indeed its long duration, and the likeness it retains to Granite Marble, would almost put it out of dispute and prove its being so, if it was not for the Improbability, not to say Impossibility, of finding Engines to raise such a Stone, or Carriages to bring it to the Place where it now is; and hence some imagine it to be an artificial Composition, cast upon the Spot where it now stands, and in the same Form; and this Opinion is corroborated by a Conjecture that the antient *Egyptians* had an Art of casting Stone, imitating, or rather excelling, the most beautiful natural Marble; and this seems much more probable than that one Marble Pillar of such a Bulk and Weight should be convey'd, either by Land or Water, from any Place where Marble is taken up, to the Place where this Pillar now stands; and if it should be objected, that we cannot, in this Time and Place, cast the same, or as good a Sort of Marble, it may be easily answer'd, that probably we have either lost the Art, or have not the Ingredients proper for such a Composition; and altho' most Arts, when once acquired, are commonly rather improv'd than lost, yet it is not always so, as witness that antient Art of Painting upon Glass, which, I believe, most will own is very much impair'd, if not quite lost, as to the Excellency of former Performances.

There is another Curiosity at *Alexandria*, but we must beg Leave of our Readers to take it upon Trust from us, as we did from Those upon the Spot: It is a Piece of a round Stone Pillar, about two Foot high, upon which they say St. *Catharine* was beheaded, and that it is at this Day stain'd with her Blood and Fat. There is also a Church, call'd the Church of St. *Mark*, now in Possession of the *Egyptian* Christians, call'd *Cophties*; here is the Pulpit in which they tell us St. *Mark* used to preach, and a Picture of St. *Michael*, drawn, as they say, by St. *Luke*. St. *Mark* was the first Patriarch of *Alexandria*, and, as it is related, suffer'd Martyrdom there in the Year 64; and they further say, that his Body was reposited in this Church till the *Venetians* transported it to *Venice*. The Island *Pharos*, on which the famous Light-house, or Watch-tower stood, which was esteem'd one of the Wonders of the World, was formerly separated from *Alexandria* by a Channel a Mile broad, but is now join'd to the Continent, and in the room of the *Pharos* is built a Castle, call'd the *Pharillon*, which serves as a Sea-Mark to Mariners to this Day.

St Catharine beheaded

St. Mark martyr'd

The next considerable Town to *Alexandria*, is *Rossetto*, which stands fifty Miles to the Eastward of it, and was formerly the Place of *Cleopatra's* principal Residence, being seated upon the best Branch of the River *Nile*, which falls into the Sea five Miles below this Town. There is a Bar which prevents large Vessels entring the River, hazardous for lesser Barques in stormy Weather. The Form of the City is almost round, being about six Miles in Circumference, and containing, as 'tis said, near eighty thousand Inhabitants: Whereas there are not above fifteen thousand in *Alexandria*, according to *Gimelli*. *Rossetto* is reckoned one of the prettiest Towns in *Egypt*; having a fine Piazza, and several handsom Hans or Caravansera's; the private Houses also are well built for *Turkey*, and encompass'd with pleasant Gardens, which make it look more like a Village than a City, especially since it is without Walls. There is a tolerable brisk Trade, and Plenty of all Things; but they are put to very great Inconveniences for want of fresh Water some Months in the Year, when the Water of the River is brackish, being mix'd with that of the Sea.

Rossetto City.

About an hundred Miles to the Eastward of *Rossetto*, and as much North-East of *Grand Cairo*, stands the City of *Damietta*, or *Peluſium*, upon the most Easterly Branch of the River *Nile*, four Miles distant from the Sea: It was antiently a considerable Port, and the Country about it affords Plenty of Fruits and Provisions; but the other Branch of the *Nile*, on which *Rossetto* is situated, is more frequented. Seventeen Miles to the Southward of *Damietta*, on the same Branch of the *Nile* towards *Grand Cairo*, lies the City of *Mansoura*, and on both Branches of the *Nile* the Villages and Towns stand exceeding thick; some pretend to have counted no less than three hundred between *Rossetto* and *Grand Cairo*, and assure us, there are not much fewer on the *Damietta* Branch. This Part of *Egypt*, which is enclosed by the two Branches of the *Nile* and the Sea, and antiently call'd *Delta*, from its triangular Figure, is much the most fruitful

Damietta or Peluſium.

Part

Part of *Egypt*, and the moſt conveniently ſituated for a foreign Trade; and *Alexandria*, which lies not far from the Weſtern Mouth of the River, being the only Harbour upon the Coaſt, had the greateſt Trade of any Town in the World, when the rich Merchandize of the Eaſt was brought hither by the *Red Sea*, and from hence diſperſed to all the Kingdoms of *Europe*: but upon the finding out the Paſſage to *India* by the *Cape of good Hope*; this, and all the Towns in *Lower Egypt*, found a very ſenſible Decay in their Trade.

Middle Egypt lies to the Southward of *Lower Egypt*; the Capital City whereof is *Grand Cairo*, the Seat of the Beglerbeg, or Viceroy of the whole Kingdom. It is ſituated in twenty-nine Degrees odd Minutes Northern Latitude, about a Mile and a half diſtance from the Eaſtern Bank of the River *Nile*, being built upon a Plain, at the Foot of a Mountain, of a triangular Form, and about ten Miles in Compaſs. The private Houſes are built of ill burnt Bricks, or Clay, and the Streets are narrow: It muſt be very populous, there being frequently thirty or forty People in a very little Houſe: But thoſe Travellers who talk of its containing five Millions of Inhabitants, are certainly very much miſtaken in their Calculations, and ſhould they include *Old Cairo*, *Bulack*, and other Towns which are at a diſtance from the City, as ſome of them do, the Inhabitants muſt nevertheleſs fall very ſhort of five Millions; eſpecially if we conſider the Unhealthfulneſs of the Place, and the Numbers the Plague ſweeps away once in ſeven Years. The Houſes have flat terraſs'd Roofs, and, tho they have no very grand Appearance on the Outſide, they are many of them beautiful enough: Thoſe of the Quality are built about large Courts or Squares; their Halls pav'd with Marble, and cover'd with handſome Domes, ſometimes open at the Top to let the Air in; the Walls and Roofs of the principal Apartments ſhine with Gold and Azure, and the Floors are laid with rich Carpets.

Middle Egypt

THEIR Moſques are ſome of them very magnificent, but many of them poor Buildings ſcarce ten Paces ſquare; however, their Numbers ſeems to make amends for their Dimenſions, for 'tis reported that there are no leſs than twenty-five thouſand of them in *Cairo*; but I am apt to think there muſt be the miſtake of a Figure in this Account, for five and twenty hundred Temples would be abundantly ſufficient for a City which is not more than ten Miles in Circumference, eſpecially where the Women never enter them, any more than the *Jews* and Chriſtians, who are no inconſiderable Part of the Inhabitants.

THE Caſtle ſtands on the Top of the Hill, on the South Side of the City, of which it has a noble Proſpect. It is two or three Miles in Circumference, and looks like another City: There are the Remains of ſome ſtately Buildings and Marble Pillars of a prodigious Size in it; the Walls are high and thick, and ſtrengthened with Towers after the antient Way of Fortification; and there are ſeveral ſubterraneous Vaults, or Paſſages, leading to diſtant Towns, as is given out; but what our Travellers ſeem to be moſt taken with here, is a deep Well, which has obtain'd the Name of *Joſeph*'s Well, being in the higheſt Part of the Caſtle, two hundred and eighty-two Foot deep; this and one more being all the Springs that are to be found in the Kingdom of *Egypt*. They ſhew alſo the Ruins of a noble Building, which they pretend was *Joſeph*'s Hall where he ſat in Judgment; and here are ſtill remaining thirty fine Pillars of *Theban* Marble, with Part of the Roof overlaid with Azure. The Caſtle is the Reſidence of the Viceroy, and in it are a great many Artificers, who work for the Government, as well as a numerous Garriſon.

THERE are ſcarce any wide Streets in *Cairo*, except thoſe of the great Bazar, or Market-Place, and the Khalis or Canal, a low Street which runs through the Middle of the City, from one End of it to the other, in which the Water ſtands one half of the Year, and is dry the other: It is into this Canal, or Street, they let the River *Nile* when it is at the Height, and from thence diſtribute the Waters to their Gardens, and the adjacent Country.

THE River *Nile*, or *Abanchi*, which in the *Abyſſine* Language ſignifies the Father of Rivers, hath its Source, as is generally held, in eleven or twelve Degrees Northern Latitude, in the Empire of *Abyſſinia*: But whether the *Portugueſe* Jeſuits, as is pretended, or any other Perſons, have diſcover'd the very Fountain it iſſues from, is very much queſtion'd I perceive; the Country where it riſes, as ſome of the Natives relate, being cover'd with vaſt impenetrable Woods. This River runs a Courſe of about fifteen hundred Miles, from South to North for the moſt Part; and a little below *Cairo* dividing itſelf into two Branches, one inclining to the Eaſt and the other to the Weſt, falls into the *Mediterranean*, the Mouths being about an hundred Miles aſunder. As for any other Branches of this River, our modern Travellers take no Notice of them, and probably thoſe that have been mention'd by antient Writers, were only Canals cut from one of theſe, particularly the Canal which was made to convey the Water from the River to *Alexandria* ſeems in our Maps to be laid down for one: However certain it is, there are no other Branches navigable at this Day than thoſe of *Damietta* and *Roſſetto*. At *Old Cairo*, while the River is contain'd within the Bounds of the ordinary Channel, I don't find it is broader than the *Thames* at *London*, and in the dryeſt Seaſon of the Year is fordable in many Places. In the upper Part of the Stream there are ſeven Cataracts, where the Water falls in Sheets from a very great Height, cauſing a prodigious Noiſe; but through *Lower Egypt* it ſlides along with a very gentle Stream, and Paſſengers are ſeldom ſurpriz'd by Tempeſts on it, as 'tis obſerv'd. The Water is very thick and muddy, eſpecially when it is ſwell'd by thoſe heavy Rains which conſtantly fall within the Tropicks, and which annually cauſe the Rivers to overflow the Lands, for many Miles before they reach the Sea, particularly in *Tonquin*, *Siam*, *Bengal*, &c. And theſe alſo leave a proliſick Mud, which yields a vaſt Increaſe, like that which the *Nile* leaves in *Egypt*; and tho' the Waters of all theſe Rivers be very thick, when they have ſtood ſome Time they are not unwholſome nor unpalatable, and ſome eſteem them preferable to Spring Water, on account of the long Courſe they run, in Latitudes where the Sun has ſo much Influence.

River Nile.

THERE are great Rejoicings annually in *Egypt*, when the River *Nile* riſes to a certain Height, for upon this depends the fruitfulneſs of the Country; and the cutting of the Banks to let it into their Canals, from whence 'tis diſtributed into their reſpective Fields, is ſolemniz'd as one of their greateſt Feſtivals. The River begins to ſwell uſually in the Month of *May*, and on the 28th of *June* they publiſh it in *Cairo* and other Towns by a Cryer, how much the Water is encreas'd. The Viceroy has a Palace upon an Iſland oppoſite to *Old Cairo*, in which there ſtands a Pillar divided into Picks, (a Meaſure about the Length of two Feet) Every Day there are Officers appointed to view this Pillar, and obſerve how much the River is riſen, who give Notice to the ſeveral Cryers to

publiſh it in their reſpective Quarters; and when the River is high enough, the Banks are cut to let it into the Khalis or Canal which runs through *Grand Cairo*, and in the dry Seaſon forms one of the fineſt Streets in that Town, as has been intimated already. Mr. *Thevenot* relates, that he attended twice at this Ceremony of cutting the Bank of the River to let it into the Khalis: The firſt Time was in the Year 1657, when the Viceroy being abſent from *Cairo*, the Sous-baſſa came with his Guards to the End of the Khalis, and alighting from his Horſe, gave the firſt Stroke with a Mattock towards breaking down the Bank, and mounting again, rode along the Khalis thro' *Grand Cairo*, while the Workmen were employ'd in demoliſhing it: He ſtopp'd before the Doors of the *Frank* Conſuls, which open into the Khalis, who made him a Preſent on this Occaſion; after the Baſſa follow'd a Mob, ſinging and hollowing, and expreſſing their Joy in ſuch a Manner as the Vulgar uſually do: Some time after came the Water pouring in, of which they had Notice by a louder Shout than ordinary; ſeveral Men ſwam in the Stream, and other merry Fellows in Boats, attended with Muſick, row'd through the City. In *October*, the *Nile* ceaſing to riſe, the Water ſtagnates in the Khalis, and has a very noiſome Smell occaſion'd by the Filth which is thrown into it, as well as by the Stagnation, inſomuch, that the very Money and Plate is tarniſh'd with the Vapour.

Another Year, on the fifteenth Day of *Auguſt*, our Author went to *Boulac*, a Town which ſtands upon the *Nile*, about two Miles from *Grand Cairo*, to ſee the Preparations that were making for cutting the Banks, and he obſerved ſeveral Acaba's, or Galleys, lying in the River, in the Sterns whereof were noble large Rooms, like thoſe in their Houſes, ſome of them twelve or fourteen Paces Square, and ſurrounded with Rails and Balluſters gilded and painted, and the Floors cover'd with rich Carpets and Cuſhions: About ſeven in the Morning the Viceroy arriv'd in great State; as he paſs'd a Sheep was kill'd in ſeveral Places, and three or four more on the Bank of the River, when he entered into his Galley. All the Beys, or Lords of *Cairo*, went with the Viceroy in his Barge, and having ſail'd as high as *Old Cairo*, he was ſaluted by the Guns of the other Veſſels, which follow'd him in Order. The Sails of the Viceroy's Galley were of ſeveral Colours, and work'd with large Red Roſes, and the Flags and Streamers in this and the other Galleys made a very pretty Appearance on the Water; the Trumpets and other Muſick alſo play'd as they paſs'd, while the Guns fir'd and the People ſhouted to expreſs their Joy; and in this Manner they mov'd gently along, till they came to the Place where the Bank was to be open'd to let the Water into the Khalis: Here the Mob were waiting in Crouds, and there being two Paſt-board Towers fill'd full of Squibs and Fireworks, theſe were let off as the Baſſa paſs'd; the People in the mean Time broke down the Bank to give the Water a Paſſage into the Khalis, and Boat Loads of Sweetmeats were thrown into the River, for which they jump'd in and ſcrambled. The Viceroy mov'd forwards to his Palace in the Iſland over againſt *Old Cairo*; and Bonfires, Illuminations and Fireworks were continued for three Nights ſucceſſively. There were two vaſt Machines, particularly repreſenting a Man and a Woman of gigantick Stature, plac'd before the Viceroy's Palace on the River, which took up no leſs than two thouſand Lamps to illuminate them; all Galleys, Barges, and other Veſſels alſo are hung full of Lamps, where the Muſick plays, and Fireworks with great and ſmall Shot are let off continually.

The letting the Water of the *Nile* into the Canals was antiently attended with great Rejoicings, when they us'd alſo to ſacrifice a Boy and a Girl, which our Author thinks gave Occaſion to the preſent Generation to repreſent human Figures in their Fireworks at this Solemnity. When the Khalis or Canal is full, there are Men who ſwim in it with heavy Iron Chains on, attended by Boats full of People, with Drums and Trumpets, and all kind of Muſick the Country affords. One of theſe Mr. *Thevenot* aſſures us, he ſaw with his Hands tied behind his Back, and his Feet bound with an Iron Chain of ten Pounds weight, who ſometimes ſtood upright on the Water, and did not ſeem to move; and in this Manner he came from *Old Cairo*, where the Canal begins, thro' *Grand Cairo* to the End of the Canal, being at leaſt a League; and for a Reward the Viceroy gave him a fine Veſt, and a thouſand *Maidens* *, beſides what he collected of the Spectators, which was very conſiderable. There was another of theſe Fellows, who ſwam in Chains from one End of the Canal to the other, with a Pipe in his Mouth, and a Diſh of Coffee in his Hand without ſpilling it. The River uſually continues to increaſe from *May* to *September*, two, three, or four Fingers Breadth a Day, and decreaſes gradually in like Manner.

* A Coin of about three-pence.

The Fertility of *Egypt*, as has been long obſerv'd, is to be aſcrib'd chiefly to the Overflowing of this River, which leaves a fattening Slime behind it; for the Soil is naturally a barren Sand; but the Fields the Water has cover'd are ſome of them ſo very rich, that the Husbandman is forc'd to mix Sand with the Earth, or his Grain would be too rank.

CHAP. II.

Of the famous Pyramids of Egypt, *the Time, Manner, and Occaſion of building them; and of their Embalming their Dead; with an Account of the* Egyptian *Mummies and Catacombs.*

The Pyramids.

BETWEEN three and four Leagues to the Weſtward of *Grand Cairo*, on the other Side of the *Nile*, ſtand thoſe three vaſt Pyramids, ſo juſtly the Admiration of all that view them: That which has ſuffered leaſt by Time and Weather, and is the faireſt of the Three, is ſituated on the Top of a Rock, in the Sandy Deſart of *Lybia*, about a Quarter of a Mile to the Weſtward of the Plains of *Egypt*, above which the Rock riſeth an hundred Feet or more with an eaſy Aſcent: Upon ſo advantageous a Riſe, and ſo ſolid a Foundation, is this Pyramid erected. Each Side of this Pyramid, at the Baſis, is ſix hundred ninety-three Feet, according to the *Engliſh* Standard; its perpendicular Height is four hundred ninety-nine Feet; but if we take it as the Pyramid aſcends, incli-

inclining, then the Height is equal to the Breadth of the Baſis, namely, ſix hundred ninety-three Feet. But notwithſtanding the Height of this Pyramid has been ſo much admir'd, Mr. *Greeves* obſerves, that the Spire of St. *Paul*'s Church in *London*, before it was burnt, exceeded the Height of this Pyramid, being, according to Mr. *Camden*, five hundred and thirty-four Feet perpendicular from the Ground. But to proceed, the whole Area of the Baſis of this Pyramid we are deſcribing, contains four hundred eighty thouſand two hundred forty-nine ſquare Feet, or eleven Acres of Ground, and 1089 of 43560 Parts of an Acre.

THIS Pyramid is aſcended on the Outſide by Steps, the loweſt Step being four Feet in Height and three in Breadth, running about the Pyramid in a Level: The ſecond Step or Degree is like the firſt, each Stone being almoſt four Feet in Height and three in Breadth, but retires inwards from the Firſt near three Feet; in the ſame Manner is the third Row of Stones plac'd upon the Second, and ſo in Order the reſt, like ſo many Stairs riſing one above another to the Top; which does not end in a Point, as Mathemathical Pyramids do, but in a little Flat or Square, conſiſting of nine Stones, beſides two that are wanting at the Angles. The Steps or Degrees by which we aſcend, are not, as has been intimated, all of an equal Depth, but the higher we aſcend, ſo much the more they diminiſh, and therefore a right Line extended from any Part of the Baſis (on the Out-ſide) to the Top, would equally have touched the outward Angle of every Degree or Step, before the Stones were waſhed and impaired by the Air and Rain; but they are ſo worn and mouldered away at preſent, that they cannot conveniently be aſcended, except on the South Side, or at the Eaſt Angle on the North. The Breadth and Depth of every Step is one entire Stone, many of them thirty Feet in Length, and the Number of Steps from the Bottom to the Top is two hundred and ſeven.

IT has been reported by many Travellers, that a Man ſtanding on the Top of this Pyramid, could not ſhoot an Arrow beyond the Bottom, but the Arrow muſt neceſſarily fall upon the Steps: But it is very certain that a good Bow and a ſtrong Arm will ſend an Arrow much further. The Relation alſo that theſe Pyramids caſt no Shadows, is of equal Credit with the former; for, as Mr. *Greeves* obſerves, if he had not ſeen them caſt a Shadow at Noon-Day, yet Reaſon, and the Art of Meaſuring Altitudes by Shadows, does neceſſarily infer as much. In Summer time indeed, and for almoſt three Quarters of the Year, at Noon-Day, the Pyramids caſt no Shadow; but in the Winter time at Noon Day, and every Morning and Evening in the Year, they certainly caſt a Shadow proportionable to their Bulk: And 'tis obſervable, that *Thales Mileſius*, above two thouſand Years ago, took the Height of theſe Pyramids by their Shadows, according to *Pliny* and *Laertius*.

ON the North Side of this Pyramid, aſcending thirty-eight Feet up an artificial Bank of Earth, there is a narrow ſquare Paſſage, leading into the Pyramid, about three Foot and a half high, and three Foot and a quarter broad, being a very ſteep Paſſage, and running downward ninety-two Feet and a half: The Structure of it has been the Labour of ſome exquiſite Hand, as appears by the Smoothneſs and Evenneſs of the Work, and the cloſe knitting of the Joints. Having paſſed with lighted Torches through this narrow Strait, (for at the further End of it, it grows ſo very narrow, that they are forced to creep upon their Bellies) they land in a Place ſomething larger, but Travellers obſerve nothing worth Deſcription in it, except the monſtrous Bats which inhabit it, exceeding a Foot in Length. The Length of this obſcure broken Place, contains eighty-nine Feet, the Breadth unequal, ſuppoſed to have been dug for the Diſcovery of ſome hidden Treaſure. On the Left Hand of this, adjoining to the narrow Entrance through which they firſt paſſed, they climbed up a Stone eight or nine Foot high, where they enter'd upon the lower End of the firſt Gallery, the Pavement whereof riſes gently, and conſiſts of ſmooth poliſhed Marble, of a White and Alabaſter Colour, being about five Foot in Height, and as much in Breadth. This Gallery contains in Length an hundred and ten Feet. At the End of this begins a ſecond Gallery, a very ſtately Piece of Work, not inferiour either in Materials or Workmanſhip to the moſt magnificent Buildings. The Length of this Gallery is an hundred and twenty-four Feet; and here Mr. *Greeves* obſerves, that if we conſider the narrow Entrance at the Mouth of the Pyramid, by which they firſt deſcend, and the Length of the firſt and ſecond Galleries, by which they aſcend again in one continued Line, and leading to the Middle of the Pyramid, we may eaſily apprehend the Reaſon of that ſtrange Eccho of four or five Voices, mention'd by *Plutarch*, or rather of a long continued Sound, which is heard on diſcharging a Musket at the Entrance: For the Sound being ſhut in, and carried in thoſe cloſe ſmooth Paſſages, as in ſo many Pipes or Trunks, finding no Iſſue out, reflects upon itſelf, and cauſes a confus'd Noiſe and Circulation of the Air, which by degrees, vaniſhes as the Motion ceaſes. But to return: This ſecond Gallery is paved and lined with white poliſhed Marble, cut in vaſt Squares and Tables, and of the ſame Materials is the Roof; and the joining of the Stones are ſo cloſe that it is ſcarce diſcernable. The Height of this Gallery is twenty-ſix Feet, and the Breadth ſix, having Benches on each Side of poliſhed Stone. Paſſing from the ſecond Gallery, through a little ſquare Hole, into ſome Cloſets, or little Chambers, lin'd with *Thebaick* Marble, they enter a very noble Hall, or Chamber, which ſtands in the Center of the Pyramid, equidiſtant from all the Sides, and almoſt in the midſt between the Baſis and the Top. The Floor, Sides, and Roof of this Room, are all made of vaſt and exquiſite Tables of *Thebaick* Marble. From the Top to the Bottom of it there are but ſix Ranges of Stone; and the Stones which cover it are of a ſtupendious Length, like ſo many huge Beams lying flat, and traverſing the Room; and nine of theſe cover the Roof. The Length of this Hall is ſomething more than thirty-four *Engliſh* Feet, the Breadth ſeventeen Feet, and the Height nineteen Feet and a half. Here ſtands a Tomb, ſuppoſed to be that of *Cheops*, or *Chemmis*, King of *Egypt*, the Founder of the Pyramid, being one entire Piece of Marble, hollowed, and uncovered at the Top, and ſounds like a Bell on being ſtruck. There are no Signs of any Corps having been laid in it; and *Diodorus*, above ſixteen hundred Years ago, writes, that *Chemmis* the Builder of this Pyramid, and *Cephren* the Founder of the next, notwithſtanding they deſign'd theſe Structures for their Sepulchres, it ſo happen'd that neither of them were buried in them; for the People, being exaſperated on Account of the Hardſhips they had ſuffered in the erecting them, and by their repeated Cruelties and Oppreſſions, threatned to tear their dead Bodies in Pieces, and throw them out of their Sepulchres: Whereupon they commanded their Friends to bury them privately in ſome obſcure Place. This Tomb is made of the ſame Stone with which the Room is lined, namely, of Marble ſtreaked and ſpotted

with

with red, white, and black Spots, which some call Thebaick Marble; but Mr. *Greeves* supposes it to be Porphiry.

The Figure of this Tomb is like an Altar, hollowed within, the Stone smooth and plain, without any relief or embossed Work on it. The exterior Superficies contains seven Feet three Inches and an half in Length, and is three Feet three Inches and three Quarters deep, and as much in Breadth. The hollow Part within is little more than five Feet in Length, and two Foot in Depth and Breadth. From which Dimensions, Mr. *Greeves* justly observes, as well as from the embalmed Bodies he saw in *Egypt*, that there is no Decay in Nature, but that the Men of this Age are of the same Stature they were three thousand Years ago. It is not easy to conceive how this Tomb was brought into the Room where it now stands, it being impossible it should enter by the narrow Passages, above describ'd, which makes some conclude it was raised up hither from without, before the Room was finished, and the Roof closed up. But I am apt to think there is some Way left to come at this Place, which is not yet discovered; the Entrance whereof may be so artificially closed up, as not to be discerned: For it can scarce be believed, that any Prince should direct his dead Corps to be dragged through such a long narrow Sink, as has been described, to be laid in his Sepulchre. The Position of the Tomb is exactly North and South, but it is distant from the East Side of the Chamber as far again as it is from the West.

Second Pyramid

As we pass from the first Pyramid to the second, we see the Ruins of a Pile of Building all of square polished Stone, supposed to be the Habitation of the Priests. The second Pyramid is supposed to be built by *Cephren*, the Brother of *Cheops*. The Stones thereof are white, and not near so large as those of the former, nor do the Sides rise by Degrees, or Steps, like the other, but are all plain and smooth; the whole Fabrick, except on the South, being very entire, and free from any deformed Ruptures and Breaches; and the Dimensions, both as to the Height and Breadth, are equal to the first; but there has been no Entrance yet discovered into it, nor is it known whether there be any Rooms or Apartments within, though it is highly probable there are, this being designed for the Sepulchre of another *Egyptian* King. This Pyramid has on the North and West Sides two very stately Buildings, thirty Feet in Depth, and fourteen hundred in Length, hewn out of the solid Rock. These, 'tis supposed, were design'd for Lodgings of the Priests, but have no other Entrance into them than such square Openings hewn out of the Rock, of the same Bigness with those described in the first Pyramid, and within are square Chambers arched and made out of the natural Rock.

Third Pyramid.

The third Pyramid stands a Furlong distant from the second, upon an advantageous Rising of the Rock, which makes it seem equal to the former at a Distance. But Mr. *Greeves* observes, that, notwithstanding *Diodorus Siculus*, *Strabo*, *Pliny*, and some modern Writers affirm it is built great Part of it with black, or *Ethiopick* Marble; the whole Pyramid, however, seems to be of a clear white Stone, something better and brighter than that of either of the former Pyramids. Each Side of the Basis is three hundred Feet and something more, and the Height the same. There are several other Pyramids dispersed about the *Lybian* Desart, Mr. *Greeves* reckons up twenty, most of them much inferior in Bulk to any of the former; but there is one, which stands twenty Miles South and by West of those above described, of the same Dimensions with the first, with Steps, or Degrees, on the Outside, but more decay'd than the former: It has also an Entrance on the North Side, but blocked up, so that there is no getting in to see the Apartments.

The Occasion of building them.

The next Thing disputed, is the Occasion of erecting these Pyramids; the general Opinion is, that they were erected for Sepulchral Monuments; and for a Confirmation of it, *Ibn Abd Alhokm*, the *Arabian*, relates, that *Almamon* the Calif of *Babylon*, when he caused the largest Pyramid to be open'd, between eight and nine hundred Years since, *found in it, towards the Top, a Chamber with an hollow Stone, in which there was a Statue like a Man, and within it a Man, on whom was a Breast-Plate of Gold set with Jewels; upon the Breast-Plate lay a Sword of inestimable Price, and at his Head a Carbuncle of the Bigness of an Egg, shining like the Light, and upon him were written Characters with a Pen which no Man understood.* *Pliny* conjectures, that the Reason the *Egyptian* Kings put themselves to this vast Expence in erecting their Tombs, was partly out of Ostentation, and partly out of State Policy, by keeping the People in Employment, to divert them from Mutiny and Rebelion, But there is this further Reason given, which sprung from the Theology of the *Egyptians*, who believ'd that *as long as the Body endur'd, so long the Soul continued with it*; which was also the Opinion of the *Stoicks*. *For this Reason the* Egyptians *kept their Dead embalmed, that the Soul might continue with it a great while, and not pass suddenly into another Body; and for the same Reason they inclosed them in the most durable Buildings, endeavouring thereby, as much as in them lay, to render them eternal.* *The* Egyptians *alone, says St.* Austin, *believe the Resurrection, and for that Reason carefuly preserve their dead Bodies, by drying them up, and rendring them as durable as Brass.* And certain it is, many of these embalm'd Bodies, or Mummies, have remain'd entire three thousand Years and upwards. Of this embalming *Herodotus* and *Diodorus* speak very particularly: There are, says *Herodotus*, those who profess the Art of Embalming: When the Body is brought to them, they shew certain Patterns of dead Bodies in Wood, of different Prices, and the Friends of the Deceased having agreed in what Manner they will have it done, the Embalmers first draw out the Brain with a crooked Iron by the Nostrils, then they infuse Medicaments [*Mr.* Greeves *relates, that having caused the Head of one of the noblest Sort to be opened, in the hollow of the Skull he found the Quantity of two Pounds of these Medicaments, which had the Consistence, Blackness, and Smell of a kind of Bitumen or Pitch, which became soft by the Heat of the Sun,*] Afterwards with a sharp *Ethiopick* Stone they cut the Belly, and having taken out all the Guts, they purge and wash them with Palm Wine, then they cleanse them with beaten Myrrh, Cassia, and other Odours, they sew it up again: Then they salt it with Nitre, hiding it seventy Days, for longer it is not lawful to salt it; after this they wash the Corps, binding it up with Fillets, and wrapping it up in a Shroud, of Silk or Linen, they besmear it with Gum. The Relations then prepare a Coffin in the Similitude of a Man, into which they put the Corps, and place it in a Reconditory in the House, setting it upright against the Wall; and then with great Expences prepare for the Funeral. *Diodorus Siculus* adds, that every Member of the Body by this Embalming is kept entire: The Hairs of the Eyebrows and Eye-lids remain, the whole Shape of the Body continues unchang'd, and the very Countenance may be known; and many of the *Egyptians* keep the dead Bodies of their Ancestors in magnificent Houses for several Ages. *Tully* relates, that the *Egyptians* embalm their Dead and keep them in their Houses above Ground. *Lucian* adds, they bring the

And to Entertain the Dead.

the dead Body (I ſpeak what I have ſeen) as a Gueſt to their Feaſts and Entertainments; and neceſſitous Perſons have ſometimes pawn'd their Fathers and their Brothers for Money. They have a Cuſtom, ſays *Diodorus Siculus*, of depoſiting the dead Bodies of their Parents as a Pledge, and it is the greateſt Reproach not to redeem them, and if they neglect to do it, they themſelves are depriv'd of Burial.

HAVING thus by Art found out Ways to make the Body durable (ſays Mr. *Greeves*) that the Soul might continue with it, which elſe would, according to their Opinion, have paſs'd into another Body, (of whom *Pythagoras*, 'tis ſaid, borrow'd his Tranſmigration,) the next Care of the *Egyptians* was to provide Conditories, which might be as laſting as the Body, and in which it might remain ſafe from the Injuries of Time and Men. The *Egyptians*, ſays *Diodorus Siculus*, make ſmall Account of the Time of this Life which is limited; but that which after Death is join'd with a glorious Memory of Virtue they highly value. They call the Houſes of the Living, Inns, becauſe they inhabit them but a ſhort Space; but the Sepulchres of the Dead they term eternal Manſions, becauſe they continue with the Gods for an infinite Space: Wherefore in the Structure of their Houſes they are not very ſolicitous, but in exquiſitely adorning their Sepulchres they think no Coſt ſufficient. However, tho' the *Egyptians* were of Opinion, that as long as the Body endur'd, the Soul continued with it; yet it did not quicken or animate the Corps, but remain'd there only as an Attendant, or Guardian, unwilling to leave her former Habitation.

THE Reaſon why the *Egyptians* built their Sepulchres in the Form of Pyramids, Mr. *Greeves* conceives, was, becauſe this is the moſt permanent Form of Structure; being neither over preſs'd by its own Weight, or ſo ſubject to the ſinking in of Rain as other Buildings are. Or, they might hereby intend to repreſent their Gods; for antiently the *Gentiles* expreſs'd them either by Columns faſhion'd like Cones, or elſe by Quadrilateral Obelisks; after the *Egyptian* Manner of which, our Author ſays, he ſaw ſeveral ſtanding entire.

Diodorus Siculus relates, That the *Egyptians* worſhipp'd the Sun under the Name of *Oſiris*, as they did the Moon by the Name of the Goddeſs *Iſis*; and therefore as *Iſis Cornigera* (in which Portraiture our Author obſerv'd her Statue at *Alexandria*,) did repreſent the Horns of the Moon, or *Luna Falcata*; ſo theſe quadrilateral Pyramids, or Obelisks, might not unfitly reſemble the Rays of the Sun, or their God *Oſiris*; for *Diodorus* and *Plutarch* term *Oſiris*, *Many Eyes*, or *Many Rays*; which being emitted, as the *Opticks* demonſtrate, in Pyramidical or Conical Forms, might not unaptly be repreſented in either Figure. And hence the *Phœnicians*, Neighbours to the *Egyptians*, 'tis thought, imitated their Idolatry, worſhipping the Sun, whom they named *Heliogabalus*, in the Similitude of a Cone. *Pauſanias* conjectures, this Manner of repreſenting the Gods to have been the firſt and moſt antient among the *Grecians*. And *Clemens Alexandrinus* imagines it to have been the firſt kind of Idolatry in the World, and therefore well agreeing with the Antiquity of the *Egyptians*. But the Sepulchres of the *Egyptians* were not always in the Form of Pyramids, as appears by thoſe *Mercuriales Tumuli* mention'd by *Strabo*, which were Spherical; and by thoſe *Hypogæa*, or Caves, ſtill extant in the Rocks of the *Lybian* Deſart. *Strabo* writes, That, paſſing near *Siene* in the upper Parts of *Egypt*, over a very even Plain, about an hundred Stadia in Length, all the Way almoſt on both Sides he ſaw thoſe Mercurial Tombs; a great Stone, ſmooth and almoſt Spherical, of that black and hard Marble of which Mortars were made, plac'd upon a greater Stone, and on the Top of this another, ſome of them lying by themſelves: The largeſt of them were twelve Feet Diameter, and all of them more than half as much. As for the other kind of Sepulchres, I ſhall have Occaſion to mention them in ſpeaking of the Mummies.

Mummies and the Sepulchres where they were buried; called *Catacombs* by ſome

THE Mummy-Pits, as they are call'd by our modern Travellers, are in the *Lybian* Deſarts, three or four Leagues diſtant from the three great Pyramids, and a little to the Weſtward of the Place where the City of *Memphis* once ſtood. The Pits are ſquare, and built of good Stone, according to ſome Travellers; but others ſay they are hewn out of the ſolid Rock. When the People, who have the Care of the Mummies, have removed the Sand from the Surface, they take up a great Stone which covers the Mouth of the Pit, and let down thoſe who would view them by Ropes; or a Man may go down by putting his Feet into the Holes on the Sides; but the ſhalloweſt of them are thirty-two Foot deep. At the Bottom of the Pit are ſquare Openings and Paſſages, ten or fifteen Foot long, which lead into ſquare arched Rooms, in which the embalmed Bodies lie, ſome of them in Cheſts or Coffins of Wood, others in Stone Coffins, ſhaped like a Man, with his Arms ſtretched out by his Sides. *Thevenot* relates, that he ſaw a very large Body, in a very thick Coffin of Wood, which was not at all rotten; they obſerved it to be Sycamore, which in *Egypt* is called *Pharaoh*'s Fig-Tree, and not ſo ſubject to rot as other Wood; and the Shape of the Face of the Perſon within was cut in emboſſed Work, as thoſe of the Stone Coffins are. Some of theſe Coffins are made only of Pieces of Linen Cloth, gummed or glued together, which are as ſtrong as the Wooden ones. *Thevenot* ſays, he brought one of the Heads of theſe Mummies entire to *Paris*; it was covered with Billets or Pieces of Sear Cloth, ſo neatly fitted, that one might ſee the Shape of the Eyes, Noſe, and Mouth; the reſt of the Body was ſwathed with little Bandages of Cloth, wrapped about ſo often, that our Author thinks there might be a thouſand Ells in it. But from this Account it is very evident, that the naked Face of the dead Corps was never expoſed at their Feſtivals, as was intimated by the aboveſaid Hiſtorians, but only the Buſt or Shape of it, cut in the Coffin in which it was encloſed. With theſe Mummies are uſually found little Images of ſeveral Sorts; ſome made of Copper, others of Stone, and others of ſeveral Sorts of Earth, being the Figures of Birds and Beaſts, which the Natives ſell to the *Franks* at very eaſy Rates; for the *Turks* have ſo little Curioſity, that they will not give more than the Value of the Materials for any thing of this Kind.

THE Danger of entering the Pyramids and Mummy-Pits is intimated by ſeveral Travellers, on Account of the thieviſh *Arabs*, who watch all Opportunities of plundering thoſe who come to view them: But no Gentleman has given us ſo lively a Deſcription of the Hazard People run, whoſe Curioſity leads them to viſit theſe Places, as our Countryman Mr. *Hill*: Whether every Circumſtance be literally true, I will not take upon me to determine, poſſibly he may have indulged his Poetical Vein a little, as he is ſuſpected to have done on ſome other Occaſions; but, if we may believe him, he was not only an Eye-Witneſs, but of the Party, in the following Adventure.

HAVING procured a Guide at *Cairo*, Mr. *Hill* tells us, he, with three other Gentlemen, ſet out in the Evening to viſit the Catacombs, and having travelled all Night over a Sandy Deſart, they ar-

arrived at a Place where they obſerved Stones of a vaſt Size, which covered the Entrance of the Mummy-Pits, whereupon they alighted, and having with a great deal of Labour removed one of the largeſt Stones, they were ſurpriſed to find a Ladder of Ropes already fixed in the Pit; but imagining it might have been forgot by ſome Travellers who had lately viſited the Place, they went down with their Piſtols in their Hands, and lighted Torches, but had not advanced many Yards in the Vault, before they found two Men in *European* Habits, lying dead croſs the Paſſage, and between the Feet of one of them there lay a Pocket-Book, in which was written, in *Italian*, to this Effect:

> Lorenzo *and* Ferdinando Bonavoglia, *dear unhappy Brothers, born at* Piſa, *a City of* Italy, *died here by Grief and Hunger, barbarouſly ſhut in, and loſt for ever,* June 18, 1701. *Good Chriſtian, if thy dear Eyes ſhall read our Miſery, pray for our Souls. O* Jeſus, *O* Mary, *Mother of God, hear and pity us.*

Mr. *Hill* and his Company were in the utmoſt Conſternation at this Accident, and began immediately to apprehend their own Danger; their Guide trembled, which encreaſed their Fears, and made them return in haſte to the Place where they came down, but to their Aſtoniſhment they found it ſhut, and the Ladder taken away. The Dread and Horror that ſeized them at that Inſtant, according to my Friend *Aaron*, are not to be conceived: Our Travellers, however, did not yet deſpair, but agreed to ſearch every Corner of theſe diſmal Manſions, in Hopes of diſcovering ſome other Paſſage out. They had not marched far before they ſaw ſix *Arabs* ready to attack them, which created no ſmall Terror in them; they had, however, the Preſence of Mind to fire their Piſtols, whereupon the Aſſaſſins fled out at another Paſſage they had made into the Catacombs, and being purſued ſwiftly by our Countrymen, to their inexpreſſible Joy, they found the chearful Rays of Day-light once more break in upon them, and with incredible haſte aſcended after the Aſſaſſins, giving them no Time to ſtop their Paſſage.

When they came up they ſaw the *Arabs* running away with their Beaſts, but a Party of *Turks* being upon the Patrol, obliged them to quit their Prey, and remounted our Travellers again. It was afterwards diſcovered that the two *Italian* Gentlemen, above-mention'd, had been betrayed by their Guide to the *Arabs*, with whom he held Correſpondence, for which he was afterwards impaled alive.

The Sphynx

In ſpeaking of the Pyramids, I ſhould not have omitted mentioning the Coloſſus, or at leaſt the Head of one, which ſtands near the largeſt Pyramid. It is uſually called a *Sphynx*, the upper Part whereof ſhould reſemble a Woman, and the lower Part a Lion, by which the *Egyptians*, in their Hieroglyphicks, repreſented a Harlot; intimating the Danger of being ſmitten with a beautiful faithleſs Woman, whom the fond Lover would probably, in the End, find as cruel and rapacious as a Lion. This Figure, at leaſt what appears of it now, has nothing more of it diſcernible than from the Shoulders upwards, and yet is near thirty Foot in Height, and ſeems to have been hewn out of the ſolid Rock. It is a Queſtion whether there ever was any more of the Figure than is to be ſeen at preſent, though *Pliny*, and ſome of the Antients, give it a Belly, and much larger Dimenſions, making it to be an hundred and two Feet in Compaſs; and ſome of our modern Writers pretend, that there is a ſubterraneau Paſſage from the firſt Pyramid to the Head, which is hollow; ſuggeſting that the Heathen Prieſts uſed to deliver their Oracles from thence; but it does not ſeem well proved to me that there is any ſuch Paſſage under Ground from the Pyramid to the *Sphynx*, or that any Oracles were ever deliver'd from hence,

Another Curioſity in *Egypt*, mentioned by antient and modern Writers, is a Labyrinth near the Banks of the River *Nile*, towards the *Upper Egypt*, built by King *Pſamniticus* the Firſt. The greateſt Part of it is under Ground, and it contains, within the Compaſs of one Wall, twelve Palaces, and a thouſand Houſes, the Walls, Pillars, and Roofs of Marble; to this there was only one Entrance, and ſo many intricate Turnings and Windings, that it was impoſſible for a Stranger to find his Way thro', or get back again, if he had entered it without a Guide. The Marble, 'tis ſaid, was laid with that Art, that there was neither Wood or Cement uſed in the whole Fabrick.

The Ruſh, or Weed, which grows by the Banks of the River *Nile*, called *Papyri*, deſerves alſo to be remembred here. This, being divided into thin Flakes, and moiſtned with the glutinous Water of the River, they preſs'd or beat in much the ſame Manner as we do our Rags, till they made it fit to write on; and of this kind of Paper that vaſt Library of Books was chiefly compoſed, which *Ptolemy Philadelphus* collected, and placed in *Alexandria*.

I proceed now to deſcribe the Situation of ſome other Towns in *Middle Egypt*, and firſt *Eulac*; it is ſituated on the Eaſt Side of the River *Nile*, about five or ſix Miles above the Place where the *Nile* divides, and forms the *Delta*, and two Miles to the Weſtward of *Grand Cairo*, and is the Port Town to that City, and by ſome reckoned a Suburb of it. The Town contains about four thouſand Families, and has a pretty good Trade, all Veſſels going up the *Nile* making ſome Stay, and paying their Duties here. 2. *Old Cairo* ſtands about two or three Miles higher up the ſame River, over againſt the Place where the famous City of *Memphis* once ſtood, and is about half a League diſtant from *Grand Cairo*. This Town makes no great Figure at preſent, being for the moſt Part in Ruins; though the Situation of it on the Bank of the River, renders it much cooler, and more commodious than the new *Cairo*, in the Opinion of moſt Travellers. As for *Memphis*, which is ſuppoſed to have ſtood over-againſt it on the Weſt Side of the River, and was once the Metropolis of the Kingdom, there are ſcarce any Ruins left to diſcover where it was, though it is thought to extend a pretty Way to the Weſtward of the *Nile*, on Account of the Burying-Places, or Repoſitories of the Mummies, above-mentioned, which reach ſeveral Leagues into the Country, and are ſuppoſed to be the Tombs of the antient Inhabitants of *Memphis*. 3. *Matarea*, ſituate about five Miles North-Eaſt of *Grand Cairo*. Here it is reported that the *Virgin Mary* and her Husband *Joſeph* reſted, when they fled with our Saviour from *Herod*, and that, being very thirſty, a Spring iſſued ſuddenly out of the Earth for their Relief. But however that be, 'tis certain that there is a Well in this Town, and that there is not above one Well more of good Water in the whole Country. 4. *Suez*, which ſtands upon the *Red Sea*, about eighty Miles to the Eaſtward of *Cairo*: This is the Port where the Grand Seignior's Galleys, in the *Red Sea*,, rendezvous; and whither they bring Coffee, Drugs, and other Merchandize, from *Arabia* and *India*; which makes it crowded with People at ſome Seaſons of the Year, while at others it is almoſt deſerted, on account of the Heats, and the Scarcity of freſh Water; and I don't find that the Town contains above two hundred Houſes at preſent, though it was here-

heretofore a conſiderable City, and ſuppoſed to be the antient *Arſinoe*.

Upper Egypt. In the *Upper Egypt*, antiently called *Thebais*, or *Thebaida*, and at preſent *Sayd*, the chief Towns are, 1. *Sayd*, antiently *Thebes*, the Capital of the Kingdom; by *Strabo* called *Dioſopolis*, or the *City of Jove*, and by other Writers *Hecatompolis*, or the *City with an hundred Gates*. 2. *Aſna*, or *Sienna*, in the South of *Egypt*, ſituate on the Weſt Side of the *Nile*. The River is navigable to this Place, but a little beyond we meet with the Cataracts, and all Merchandize is put on Shore, and carried by Land, till the Veſſels are paſt them. 3. *Girge*, or *Grege*, on the Weſt Side of the *Nile*, ſituate in twenty-five Degrees odd Minutes North Latitude. 4. *Coptus*, once a great City, and the Capital of *Egypt*, from whence the Natives obtained the Name of *Cophti*, lies upon the *Nile*, in the Latitude of twenty-ſix Degrees odd Minutes: But moſt of the Towns of *Upper Egypt* are now in Ruins, or reduced to inconſiderable Villages, and poſſeſſed by *Arabs*, or *Cophti* Chriſtians; the Trade being diverted another Way, eſpecially from thoſe which lie upon the *Red Sea*, where I do not find one conſiderable Town mentioned by Travellers on the *Egyptian* Side, except *Suez*, above deſcribed, and that ſeems to be very much declined. The *Latin* Fathers at *Cairo*, who have ſome of them gone up the *Nile* into *Upper Egypt*, entertain us chiefly with an Account of the noble Ruins they meet with there; vaſt Columns of Marble and Porphiry, which lie half buried in the Ground, and Statues, and Obelisks of a prodigious Size, with Hieroglyphicks upon them: But their Accounts are ſo confuſed, that I can only learn there were once in this Part of *Egypt* very conſiderable Towns and magnificent Buildings, which the Claſſicks alſo acquaint us with. There are alſo remaining in *Upper Egypt* great Numbers of *Cophti* Chriſtians, who have their Biſhops to preſide over them, and own the Patriarch of *Alexandria* for their Head; but ſo ignorant in the principal Articles of their Faith, if we may believe the *Latins*, that they ſcarce deſerve the Name of Chriſtians; and it ſeems they ſtill preſerve the *Jewiſh* Rite of Circumciſion, which, the Fathers boaſt, they have convinced many of thoſe about *Cairo* and *Alexandria* of the Abſurdity of.

CHAP. III.

Of the Government of Egypt; *alſo of their Animals and Husbandry, with the Original of the* Gypſies.

History of the Egyptian Sove reigns. CHAM, the Son of *Noah*, is generally held to be the ſame with *Jupiter Hammon*; and *Miſraim*, his Grand-Son, the ſame with *Oſiris* the great Deity of the *Egyptians*; and from him, 'tis ſaid, deſcended the Race of Monarchs who had the general Denomination of *Pharaohs*; but from whom, or how, the Word *Pharaoh* came to be the Stile of their Kings, I find no ſatisfactory Reaſon given.

A. M. 3435. There are reckon'd above ſixty Princes of the Line of theſe *Pharaohs*, and they reign'd, as 'tis ſaid, in an uninterrupted Succeſſion, to the Year of the World 3435, when *Pharaoh Pſammiticus*, the ſecond Monarch of that Name, was conquer'd by *Cambyſes* II. King of *Perſia*, who united *Egypt* to that Empire, under which it remain'd till the Reign of *Darius*, being upwards of an hundred Years; when it revolted from that Crown, and became an independant Kingdom again (*Amyrtæus* being their firſt King after that Revolt) in which State it continued about fifty Years, when *Ochus* King of *Perſia* recover'd the Dominion of it again; and it remain'd ſubject to the *Perſian* Monarchs, till *Alexander the Great* defeated *Darius*, when it fell under the Power of that Prince, with the reſt of the Provinces of the *Perſian Empire*.

A. M. 3640. The Race of the Ptolemies. After the Death of *Alexander*, *Ptolemy* the Son of *Lagus*, or, as others inſinuate, the Son of *Philip* of *Macedon*, and conſequently half Brother of *Alexander*, found means to mount the Throne of *Egypt*, and render it an independant Kingdom once again, whoſe Succeſſors, Kings of *Egypt*, ever after retain'd the Name of *Ptolemies*; in which Line it continued between two and three hundred Years, the laſt Sovereign being the famous *Cleopatra*, Wife and Siſter to *Ptolemy Dionyſius* the laſt King, and Miſtreſs to *Julius Cæſar* and *Mark Anthony* ſucceſſively. 3975.

It was *Ptolemy Philadelphus*, Son of the firſt *Ptolemy*, who collected the *Alexandrian* Library, ſaid to conſiſt of ſeven hundred thouſand Volumes; and the ſame Prince cauſed the Scriptures to be tranſlated into *Greek*; but whether by ſeventy-two Interpreters, and in the Manner as is commonly related, is juſtly queſtion'd. The *Ptolemies* ſometimes extended their Dominion over great Part of *Syria*, and were frequently at War with the Kings of *Syria*, in which they met with various Succeſs. After the Death of *Cleopatra*, this Kingdom fell under the Power of the *Romans*, and was uſually govern'd by a Gentleman of *Rome*, it being thought too hazardous truſting ſo conſiderable a Command with a Senator. When it was made a Province of the Empire it was look'd upon as the Emperor's peculiar, and afterwards made an entire Dioceſs of itſelf, ſubordinate to the *Præfectus Prætorio Orientis*; and while it was under the Dominion of the *Romans*, the Nation in general embrac'd Chriſtianity: It remain'd a *Roman* Province till the Reign of *Heraclius* the Emperor of *Conſtantinople*, when the People, being diſguſted with their Governors, call'd in *Omar*, the third Caliph of the *Saracens*, and ſubmitted themſelves to the Mahometan Power, being about the Year of our Lord 640. But ſure the Adminiſtration of the *Greek* Emperors muſt be very grievous, which could induce a Chriſtian Nation to make choice of a *Saracen* for their Sovereign.

Egypt a *Roman* Province.

Embrace Chriſtianity.

Invites in the *Saracens*, *A. D.* 640.

The Caliphs of *Babylon* were Sovereigns here till about the Year 870, when the *Egyptians* ſet up a Caliph of their own, call'd the Caliph of *Cairo*, to whom the *Saracens* of *Africk* and *Spain* were ſubject; but the Governors of the Provinces, or Sultans under the Caliphs of *Babylon* and *Cairo*, ſoon wreſted the Civil Powers out of the Hands of their Caliphs, or High-Prieſts, leaving them only a Shadow of Sovereignty.

870 Caliph of *Cairo*.

About the Year 1160, *Aſſaraddin*, or *Saracen*, General of *Norradin*, the *Saracen Sultan* of *Damaſcus*, ſubdued the Kingdom of *Egypt*, and uſurp'd the Dominion of it, being ſucceeded in this Kingdom by his Son *Saladin*, who reduced alſo the Kingdoms of *Damaſcus*, *Meſopotamia*, and *Paleſtine*, under his Power, and, about the Year 1190, took *Jeruſalem* from the Chriſtians. It was this Prince who eſtabliſh'd a Body of Troops in *Egypt*, like the

Aſſaraddin 1160. Conquers *Egypt*, ſucceeded by *Saladin*.

the preſent Janizaries, compoſed of the Sons of Chriſtians taken in War, or purchaſed of the *Tartars*, to whom he gave the Name of *Mamalukes*, which, 'tis ſaid, ſignifies no more than Slave, which, among the Forces of the Mahometan Princes, is look'd upon as a Title of great Honour, as it expreſſes their being devoted in a peculiar Manner to the Service of their Sovereign, and conſequently they are entitled to greater Privileges than other Subjects. The Poſterity of *Aſſareddin* enjoy'd the Crown till the Year 1242, when the *Mamalukes* depoſed *Elmutan*, as they had done his Father *Melech Aſſalach* ſome Years before, and ſet one of their own Officers upon the Throne; the firſt King of the Race of the *Mamalukes* being *Turquemenius*. Theſe *Mamaluke* Sultans were engaged in continual Wars with the Chriſtians, in *Syria* and *Paleſtine*, till *Araphus* the ſixth Sultan entirely diſpoſeſs'd the Chriſtians of the *Holy Land*; the ninth Sultan, *Melechnaſſor*, ſubdued the Iſland *Cyprus*, and made it tributary to *Egypt*.

1242. *Mamalukes* uſurp the Crown.

1255.

1291.

1423

1501. About the Year 1501, *Campſon Gaurus*, the fifteenth Sultan of the *Mamalukes*, entering into an Alliance with *Iſmael* the Sophy of *Perſia*, againſt *Selimus*, the third Emperor and tenth King of the *Ottoman* Family, the Confederates receiv'd ſeveral memorable Defeats: And *Tonombeius* II. who ſucceeded *Campſon Gaurus*, was depoſed and murder'd by *Selimus*, and, according to ſome Accounts, hang'd up at one of the Gates of *Grand Cairo*. *Gazelle*, one of the Grandees of the *Mamalukes*, maintain'd a War for ſome Time againſt *Selimus*, but was at length defeated, and *Egypt* made a Province of the *Ottoman Empire*.

1517 *Selimus* [illegible] and [illegible] it to the *Ottoman* Empire

The Mamalukes are it ſelf a Nurſery for Soldiers, from whence the preſent Janizaries, compoſed of the Sons of Chriſtians taken in War, or purchaſed of the *Tartars*, to whom he gave the Name of *Mamalukes*, which, 'tis ſaid, ſignifies no more than Slave, which, among the Forces of the Mahometan Princes, is look'd upon as a Title of great Honour, as it expreſſes their being devoted in a peculiar Manner to the Service of their Sovereign, and conſequently they are entitled to greater Privileges than other Subjects. The Poſterity of *Aſſareddin* enjoy'd the Crown till the Year 1242, when the *Mamalukes* depoſed *Elmutan*, as they had done his Father *Melech Aſſalach* ſome Years before, and ſet one of their own Officers upon the Throne; the firſt King of the Race of the *Mamalukes* being *Turquemenius*. Theſe *Mamaluke* Sultans were engaged in continual Wars with the Chriſtians, in *Syria* and *Paleſtine*, till *Araphus* the ſixth Sultan entirely diſpoſeſs'd the Chriſtians of the *Holy Land*; the ninth Sultan, *Melechnaſſor*, ſubdued the Iſland *Cyprus*, and made it tributary to *Egypt*.

About the Year 1501, *Campſon Gaurus*, the fifteenth Sultan of the *Mamalukes*, entering into an Alliance with *Iſmael* the Sophy of *Perſia*, againſt *Selimus*, the third Emperor and tenth King of the *Ottoman* Family, the Confederates receiv'd ſeveral memorable Defeats: And *Tonombeius* II. who ſucceeded *Campſon Gaurus*, was depoſed and murder'd by *Selimus*, and, according to ſome Accounts, hang'd up at one of the Gates of *Grand Cairo*. *Gazelle*, one of the Grandees of the *Mamalukes*, maintain'd a War for ſome Time againſt *Selimus*, but was at length defeated, and *Egypt* made a Province of the *Ottoman Empire*.

The *Mamaluke* Sultans were always choſen, by a Majority of *Mamalukes*, out of their own Body, who were ſo jealous of the Kingdom's being made hereditary, that they ſcarce ever elected the Son of the preceding Sultan; and if the Choice ever happen'd to fall upon ſuch a one, they were ſo apprehenſive of its being made an ill Precedent, that they never reſted till they depoſed him.

The preſent Government of *Egypt*

Since the *Ottoman* Emperors have had the Dominion of this Kingdom, they have always govern'd it by a Viceroy, ſtyl'd the Baſſa of *Grand Cairo*: But as *Egypt* is ſubdivided into ſeveral inferior Governments, theſe Governors, I perceive, are not ſent from *Conſtantinople*, or appointed by the Viceroy, but are Natives of *Egypt*, and ſeem to be veſted with Sovereign Power in their reſpective Diſtricts, and to have the Command of the Militia of the ſeveral Provinces; and are many of them of the Race of the *Mamalukes*. 'Tis true, the Viceroy has a conſiderable Body of Spahi's and Janizaries about *Cairo*, to keep them in Awe; and every one of theſe petty Princes, 'tis ſaid, is obliged to mount the Viceroy's Guard in his Turn, with a Body of the National Troops.

There is a perpetual Jealouſy between the *Turkiſh* Baſſa and theſe *Egyptian* Royalets; ſometimes the Baſſa will take upon him to depoſe one of them, and perhaps take his Head; and there are Inſtances, on the other Hand, where they have depoſed the Baſſa, and compell'd the Porte to ſend them another more acceptable to them: And the Grand Seignior has thought fit to humour them in it, rather than hazard the Revolt of ſo rich a Province, which is now eſteem'd the Granary of *Conſtantinople*, as it was antiently of *Rome*; for this is a Soil ſo fertiliz'd by the *Nile*, that it is not in the Power of the *Turks*, it ſeems, to render it barren. But one great Reaſon of its continuing to be manur'd, is, that they are yet govern'd by their own Princes, and have an Inheritance in their Lands, which are Privileges very few of the Subjects of *Turkey* enjoy beſides: Neither dare the *Turkiſh* Government to overload this People with Taxes, for fear of a general Revolt; Inſomuch that, except what the Viceroy and his Creatures illegally extort from them, the whole Revenue raiſed by the Government, does not amount to a Million of Money, of which two Thirds are ſpent within the Kingdom, and not more than one Third comes into the Grand Seignior's Treaſury.

The State and Condition of the *Egyptian* Royalets, and their Subjects, may be gather'd from the Account Mr. *Thevenot* gives of one of them, call'd *Mahomet Bey*, who came to *Grand Cairo* when he was there. This Prince, or Bey, as Mr. *Thevenot* ſtiles him, was then Bey of *Girge*, and had been Miniſter to *Haley Bey*, the former Bey of *Girge*, a City about fifteen Days Journey from *Cairo* up the *Nile*. *Haley Bey* was in his Life-time one of the richeſt and moſt potent of all the *Egyptian* Princes, and had conſtituted, by his ſole Authority, three others of his Officers Beys of as many Diſtricts, beſides the preſent Bey of *Girge*; and left behind him when he died (if we may credit the Relation the People of *Cairo* gave Mr. *Thevenot*) fourſcore thouſand Camels, as many Aſſes, and a vaſt Treaſure in Money and Jewels; among which there was one Cup made of a Turkeis, worth an hundred thouſand Crowns. In his Palace at *Grand Cairo*, there was never ſpent leſs than a thouſand Crowns a Day in his Abſence, and much more when he was preſent. His Succeſſor, *Mahomet Bey*, whoſe Publick Entry into *Grand Cairo* our Author ſaw, was exceeding magnificent. The Baſſa, it ſeems, had twice ſent for him to account for what he was in Arrear to the Government; deſigning when he had him in his Power to depoſe him, and procure another to be appointed Bey in his Room; which *Mahomet* ſuſpecting, he did not obey the Summons, till he had aſſembled a Force ſufficient to defend him againſt any violent Meaſures the Baſſa might take; who, hearing he was come within three Days Journey of *Cairo*, attended with great Forces, ſent him Orders not to advance: And, it ſeems, the other Beys, and the Cadeliſquier, were at this Time ſo much in *Mahomet*'s Intereſt, that they had determin'd to depoſe the Baſſa, if any Thing were attempted againſt their Friend the Bey of *Girge*. This Prince therefore, depending on his Forces, and the Friends he had in the Capital, ſlighted the Baſſa's Orders, and continued his March; and, when he came near the City, all the Beys and Perſons of Diſtinction went out to compliment him on his Arrival.

Theſe Congratulations, or rather Cabals, having continued ſome Time, a Day was appointed for the Bey's Entry, and the Baſſa went to a Palace in the great *Meidan*, or Square, in order to receive him; the Bey not thinking it ſafe to come within the Walls of the Caſtle. The *Arab* Troops, arm'd with Launces and Sabres, march'd before their Prince, and drew up in the great Square, where the Baſſa alſo had order'd the Janizaries and other Troops of his Houſhold to attend. The *Arabs* were all well mounted and tolerably cloath'd, and were in Number about three thouſand, having ſixteen Caſcheffs, or Governors of ſo many petty Diſtricts which belong'd to the Bey, at the Head of them: After theſe was carry'd the Bey's Horſe-Tail, or Standard, follow'd by two thouſand Musketeers on Horſeback, and after them five hundred Foot in the Bey's own Pay; then came ſix led Horſes, as if the Baſſa himſelf had been there, with ſeveral Chiauks and Janizaries belonging to the Baſſa, in their Caps of Ceremony; two Pages of the Bey's and ſix of the Baſſa's, with their Silver Gilt Caps and Plumes of Feathers; and after them the Bey in Perſon, follow'd by his Houſhold, conſiſting of three hundred Men. The ten Firſt of theſe were cloath'd

cloath'd in Green Velvet, arm'd with Bows and Arrows and Sabres; and the next ten in Yellow Sattin, arm'd with a Launce, Shield and Sabre: the reſt were arm'd with Carbines and Sabres, and after them came the Country Muſick. When the *Bey* came to the Palace in the *Meidan*, he alighted, where the *Baſſa* waited to receive him; and treated him with Coffee, Sherbet and Perfumes, after the manner of the Country: He alſo order'd a hundred *Caftan's*, or rich Veſts, to be given to his principal Attendants; after which the *Bey* took his leave, and was attended by the *Kiaca*, or Steward of the *Baſſa* to his Palace, which was an Honour ſeldom done to a *Bey*. The Prince ſaluted all the People as he paſs'd, who ſhouted and wiſh'd him a thouſand Bleſſings; being much better affected to their *Beys* than to the *Turks*: And when the *Beys* are at their Governments, they do not much dread the *Turkiſh* Power, it ſeems. *Mahomet* kept two thouſand Men about his Palace for his Guard all the while he was at *Cairo*; and the reſt of his Forces encamp'd at a little diſtance from the Town. He never went abroad but he was attended by three thouſand Horſe; and while he ſtay'd at *Cairo* he preſented the *Baſſa* with fourſcore Purſes (every Purſe is of the value of 500 *Dollars*.)

Notwithſtanding the mutual Civilities which paſs'd between the *Baſſa* and *Bey* at this Interview, the next Year the *Baſſa* enter'd into a formal War againſt him; and having corrupted ſome of the *Arab* Troops, in whom he moſt confided, he cauſed him to be ſtrangled; looking upon his own Government to be very precarious while ſo potent and popular a Prince as *Mahomet Bey* was living.

Some things *Egypt* is remarkable for.

Hatching Chickens in Ovens.

There ſtill remain ſome remarkable things to be related of this Country, which every Traveller who paſſes through it takes notice of; as firſt, their way of hatching Chickens in Ovens. They put their Eggs in Ovens, ſays *Thevenot*, which are heated with ſo temperate a Warmth, and imitates ſo well the natural Heat, that Chickens are form'd and hatch'd in them: Theſe Ovens are under Ground, and the Hearth of them cover'd with Cotton or Flax to lay the Eggs upon. There are twelve of theſe Ovens together, ſix on a ſide, two Stories on each ſide the Paſſage, that is three Ovens above and three below on each Hand: They begin to heat the Ovens about the middle of *February*, and continue to heat them about four Months: They heat their Ovens only with the hot Aſhes of Oxen or Camel's Dung, which affords a ſmothering heat without any viſible Fire; this they lay at the Mouth and the further end of the Oven, changing it and putting in freſh Dung every Day: This they continue to do for ten Days, and then lay in the Eggs, ſometimes eight thouſand in an Oven; after eight or ten Days they pick out the good from the bad, which are diſcover'd by holding them to a Lamp, then they put out the Fire, and having laid one half of the Eggs in the upper Ovens, they ſhut up all cloſe, and let them lie about ten Days longer, when the Chickens are hatch'd; but there are few of them which have not ſome defect, 'tis obſerv'd and nice People think they can diſtinguiſh one of theſe Pullets from another by their Palates. It has been diſputed I perceive, whether this can be effected in any other Country beſides *Egypt*, where the natural heat of the Climate is thought to contribute much towards theſe Productions: But Mr. *Thevenot* tells us, that the Duke of *Florence* ſent for ſome of the *Cophti's* (who only follow this Buſineſs) and hatched Chickens in *Italy* in the ſame manner.

Another thing which creates Admiration in the credulous Traveller, as well as the ſuperſtitious Natives, both *Chriſtian* and *Mahometan*, is the pretended annual Reſurrection of Bones, in a certain Burying-Place near *Old Cairo*, on *Good-Friday* and the two preceding Days, according to the old Stile, by which both the *Greeks* and *Cophti's* reckon. Mr. *Thevenot* relates, that he went to the Place on *Good-Friday*, to ſee what grounds they had for this Belief, where he found a Multitude of People aſſembled, and the *Turks* going in Proceſſion with their Banners or Colours flying, on Account of a *Sheik*, or Holy Man, who was interred here, whoſe Bones annually appear, and take the Air with the reſt; and the *Turks* offered up their Prayers there, with great Devotion.

The annual Reſurrection of Bones.

There were a great many Skulls and Bones, Mr. *Thevenot* obſerved, upon the Place, and every one aſſured him they were juſt riſen out of the Earth; nor is it poſſible, he ſays, to make them think otherwiſe, for he enquired of ſome, who ſeemed to have more Senſe than the reſt, and they averr'd it to be true, and that while a Perſon was looking one way, the Bones came out of the Earth on the other Side, frequently within two Foot of him. *Thevenot* laughed at them, and ſaid they had probably been ſcattered there by ſome of their Saints; but he was ſuſpected to be an Atheiſt for his Pains, and in Danger of being mobbed, and therefore thought it Prudence to conceal his Thoughts, and not be too officious in undeceiving them, this being an Error, of which the *Cophti's* and *Greeks* are as tenacious as the *Mahometans*. And Dr. *Heylin*, a Gentleman of good Senſe, ſeems to give ſome Credit to the thing, as poſſibly many of us might have done, if we had lived in thoſe Times, when the wiſeſt Men were not entirely free from Superſtition. Witneſs the great Lord *Clarendon*, and his Woodſtock Dæmon, Dr. *Heylin* relates the Fact out of an Author, who aſſures us, that *Stephen Dupleis*, a ſober diſcerning Man, was an Eye-Witneſs of the Miracle, and touched ſeveral of the riſing Members, (for the firſt Account we had of this Matter, was, that entire Limbs appeared, cloathed with Fleſh and Blood, and afterwards retired to their Tombs) and that as he was about to touch the Head of a Child, a Native of *Cairo* cryed out to him, *Hold, hold, you know not what you do!* A ſtrange forerunner, ſays Dr. *Heylin*, of the Reſurrection of the whole Body, (if it be of undoubted Credit, as he adds) for the Doctor could not give entire Credit to the Story it ſeems, though it came from an Eye-Witneſs, even in thoſe credulous Times.) But ſurely we do not want any ſuch Inſtances as theſe to ſupport the principal Articles of our Faith: And it is but too juſt an Obſervation, that the introducing ſuch ridiculous Stories as a Confirmation of our Religion, when the Falſity of them comes to be diſcovered, are no ſmall Prejudice to it, and induce weak Minds to imagine there is as little Foundation for thoſe real Miracles, by which the World was at firſt convinced of the Truth of *Chriſtianity*, as for theſe pretended ones.

The Animals which *Egypt* is remarkable for, are, firſt the Crocodile, formerly thought to be peculiar to this Country, but I don't find any material Difference between theſe Creatures and the Allegators at the Mouth of the *Ganges*, and in other Rivers of *India*. They are both of them known to be amphibious Animals, accuſtomed both to Land and Water. They grow to a prodigious Length, twenty Feet and upwards. In Shape they are like a Lizard, with four ſhort Feet, rather Claws, and ſome of them ſo large as to ſwallow a Man. They have a flat Head, their Eyes indifferently large, and their Back covered with broad Scales, like ſome antiquated Pieces of Armour. They ſeem to move with greateſt Strength and Agility in the Water; and though

Crocodiles.

they run a great Pace by Land, yet their Bodies are so long and unweildy, that they cannot easily turn, whereby their Prey escapes them on Shore. They watch therefore in the Sedge and other cover by the Sides of Rivers, and so much resemble the Trunk of a Tree, that, 'tis said, Travellers have mistaken them for such, and unwarily been surprised. As for his Tears and alluring Voice, which the Antients ascribe to him, I need not intimate that these are pure Poetical Fictions. They take them by digging deep Pits near the River, which are covered over, especially when the Water rises to a considerable Height, for then they most usually get out upon the Shore. When they are taken in a Pit, they let them fast several Days, and then hamper them with Ropes, with running Knots, and muzzle their Snouts, and the *Franks* most commonly purchase them to send to *Europe*. Some of their Skins stuffed may be seen in *London*. Notwithstanding they grow to such a prodigious Bulk, it seems they proceed from an Egg no bigger than a Turkey's, hatched in the warm Sand.

The Sea-Horse

The *Hippopotamus*, or Sea-Horse, is another amphibious Animal which frequents this River. Mr. *Thevenot* says, he say one of them which was taken at *Girge*, on the *Nile*, in the Year 1658, which was immediately afterwards brought to *Cairo*. It was about the Bigness of a Camel, of a tawny Colour, the hinder part made much like an Ox, and the Head like an Horse; its Eyes and Ears small, but it had great open Nostrils; thick large Feet, almost round, and four Claws; the Tail like an Elephant's, and not more Hair than there is upon an Elephant. In the lower Jaw it had four great Teeth, half a Foot long, two of them crooked, and as big as the Horns of an Ox, and the other two strait, but standing out in Length. Some *Janizaries* shot it as it was grazing on the Land. It received several Shot before it fell, the Bullets hardly piercing the Skin, but one that happened to hit the Jaw, brought it down. These Monsters are very rare, even in *Africk*, for there had been no such Animal seen there for many Years before.

As to the little Bird *Trochileus*, which is said to live on the Meat she gets out of the Crocodile's Teeth: And the Rat *Ichneumon*, of whom there is a Tradition, that he jumps into the Crocodile's Mouth, and eats his way out again through his Belly, I presume there have been but few Witnesses of these Feats of Activity, and therefore must beg leave to suspend my Faith in these Things, till we receive better Evidence of the Facts than we have hitherto done.

Camelion.

The Camelion is reckoned among the remarkable Animals of *Egypt*, but he is not peculiar to this Country. In Size and Shape it something resembles a Lizard, and is, in a true Light, of a greenish Colour, but assumes the Colour of most things it stands near. It was thought formerly to have lived only upon Air, but has been observed to take Flies, by darting out his Tongue, which is of an extraordinary Length: However, those that have kept them in Boxes observe, that they will live several Months without any Nourishment but what they draw in with their Breath.

Ostritch.

The Ostritch is another Animal, very common in the Deserts of *Egypt* and *Arabia*. They are the tallest Fowls we meet with any where, and will strike a Blow like a Horse, with their huge Feet. Their Backs are shaped almost like a Camel's, and they run a prodigious Pace, assisted by their Wings, which are of little Use to them in flying, for they can scarce raise themselves from the Ground, and the *Arabians* frequently ride them down. Their Eggs, which are of the Bigness of a Foot-Ball, they hide in the Sand till they are hatched, and never sit upon them. But both the Bird and its Eggs being frequently brought to *England*, needs no farther Description here.

The Basilisk, or Cockatrice.

The Serpent called the Basilisk, or Cockatrice, whose very Eyes dart certain Death, if we may credit the Antients, are said to be found also in *Egypt*, and I have heard some modern Travellers averr, that there are Serpents in some parts of the World, which by fixing their Eyes upon little Birds, will bring them down from the Tops of Trees; which Fact, tho' it be unmannerly flatly to deny, when a grave Gentleman says he has seen it, yet if there have been such an Instance, possibly it did not proceed from any Poison the Animal emits, either from its Eyes, or the Effluvia of its noxious Body; but probably the Brightness of his Eye, like those Glasses the Fowler uses, may tempt the unwary Bird to approach him, till he comes within his reach. But upon second Thoughts, as there are Poisons which will operate very strongly on smelling them, I should not entirely reject that Opinion, which supposes a Bird may be brought from the Top of a Tree, by the poisonous Smell, which attends some Animals, were I but entirely satisfied that the Fact was true. But as I would be very cautious of relating any thing as a piece of History which carries an Air of Improbability with it, so I would not reject every thing that appears strange to us, provided it was well supported. We are not sufficiently acquainted with the Nature of things to pronounce positively, that by one means or other a Bird cannot have been drawn into the Jaws of a Serpent standing at some Distance: But I must confess, I am more enclined to believe it only a Simile of the antient Poets, to illustrate how fatally young Fellows are frequently drawn in, and taken Captive by the Eyes of some fair Charmer, to their eternal Destruction.

The Asp.

The Asp is another little Serpent found in this Country, by whose Bite, the celebrated *Cleopatra* and her Ladies chose to die, the Poison operating suddenly, and throwing the Party into a deep Sleep, though its Effects are said to be various, some who are wounded by it dying in a laughing Fit, and others weeping.

Other Animals.

But to proceed, *Egypt* is as famous for Camels, Dromedaries, and fine Horses, as the neighbouring Country of *Arabia*. Oxen, Buffaloes, Goats, and Sheep are to be met with also in great plenty here; especially the Sheep, with fat Tails, which weigh several Pounds. They abound also with Poultry, Geese, Ducks, *&c.* And a great Variety of small Birds; but Fish is not very good or plentiful, unless it be in those Countries which lie on the Sea, and near the Mouth of the *Nile*. Upon the retiring of the Waters of that River to the usual Channel, a Multitude of Frogs and other Insects are produced; and was there not a large Fowl, like a Stork, which constantly devours them, they would, according to a late Writer, be annually afflicted with the Plague of Frogs.

The *Christians* of the Country are all condemned to ride upon Asses here, as well as in some other Parts of *Turky*; but it happens they have a pretty good Breed, which will keep to a Dog Trot, especially if you hire a Servant with the Ass, as the *Franks* usually do, to prick him forward with a Goad. The governing part of the Nation reserve the riding on Horses, as a peculiar Privilege to themselves: But on long Journeys when they cross the Deserts with the Caravans, most People make use of Camels and Dromedaries.

Husbandry

As to the Husbandry of the *Egyptians*, we are told, that they have no more to do, than to harrow their Grain into the Mud on the Retiring of the Waters of the *Nile* into its proper Channel,

and

and in *March* following they ſeldom fail of a plentiful Harveſt; but they reſerve Water to let into their Rice-Fields, from time to time, as they do in other Countries, for this is a Grain that grows in Water till the Harveſt in all Countries. As to Peas and Beans, and other kinds of Pulſe, Travellers relate, they have them almoſt all the Year round. And thoſe Lands, which are not ſown, yield good Crops of Graſs for their Cattle. But as I don't find they make any of their Graſs into Hay here, any more than in the Eaſtern Countries, I preſume their Camels and Horſes live chiefly on Barley, or Barley Meal made up into Paſte, as they do there. Our Countryman, Mr. *Sandys*, ſays of the Country about *Roſſetto*, the antient *Canopus*, that there is not a Place under Heaven better furniſhed with Grain, Fleſh, Fiſh, Sugar, Fruits, Roots, *&c.* than that Country is. Both within and without *Cairo*, the ſame Author acquaints us, are great Numbers of fine Orchards, watered by little Channels, as they do their Fields, in which grow variety of excellent Fruits, ſuch as Oranges, Lemons, Apples of Paradiſe, Sycamore Figs, Dates, Almonds, Caſſia, Galls growing on Tamarisk, Apples of the Size of Berries, Plantains, a Fruit of the Shape and Bigneſs of a Cucumber, without Stones or Kernels, the Pulp exceeding luſcious, which we meet with alſo in *India*, and other Places, where they have the ſame Notion with the People of *Egypt*, that this was the Fruit which tempted our firſt Parents, adding, that of the Leaves of this Tree they alſo made themſelves Aprons, the Leaves being two or three Foot long. Some of the Fruit Trees about *Cairo*, bear all the Year, and moſt of them keep their Leaves. The Corn Fields beyond are planted with Palm Trees, which are not at all prejudicial to the Grain, but both together afford a moſt delightful Proſpect. They have ſome Vines alſo in *Egypt*, which bear a Black Grape, but not proper for Wine, however, this is in ſome meaſure ſupplyed by the Liquor drawn from Palm. There are a great Variety of Melons alſo, and Cucumbers in their Kitchen Gardens, the laſt of which, the People eat raw, without any ill Effects; nor do they want any Garden Stuff almoſt, that we have in this part of the World. Garlick and Onions, which once were deified here, they have ſtill in great Plenty, though they have not that extravagant Veneration for them, as their Anceſtors had.

Inconveniencies and Diſtempers.

The principal Inconveniencies and Diſtempers People are ſubject to in this Country, Mr. *Thevenot* tells us are, firſt, exceſſive Heat, ſo intollerable, that a Man knows not how to ſet about any Buſineſs; and in the Summer Nights, there is no ſleeping quietly for Musketoes, or Gnats; there are always Swarms of them buzzing about; the beſt Remedy againſt them is to have a fine Cloth tacked cloſe round the Bed, but ſome of them will get in and torment a Perſon notwithſtanding. Another Inconvenience is, the Sand, which inſinuates it ſelf every where, inſomuch that you will find the Bed-Cloths full of it, and as hot as if they had been warmed with a Pan of Coals.

A Pain in the Stomach, Foreigners eſpecially are very ſubject to, which proceeds from their going open breaſted, which chills their Bowels, and Cauſes dangerous Fevers and Fluxes, eſpecially in Autumn, when the River overflows the Country. Another Diſtemper which reigns here, is the Swelling of the Scrotum, and ſore Eyes are almoſt univerſal in Summer Time, occaſioned by the ſcorching Heat reflected from the Sand, and the Duſt it ſelf, which is very ſubtle and ſalt, is pernicious to the Sight. Mr. *Thevenot* relates, that a *French* Merchant of his Acquaintance, loſt his Sight by it, as many of the Country People do; and others were ſo afflicted with it, that they were in the extreameſt Torture, crying out Night and Day for a Fortnight or three Weeks together, and could get no Sleep. You will hardly ſee any Body abroad in Summer time, that is perfectly free from this Diſtemper, and moſt of them with little Slips of Blue Stuff hanging over their Eyes. Mr. *Thevenot* ſays, he eſcaped ſore Eyes himſelf, which he imputes to his waſhing them frequently with cold Water. The ſwelling of the Legs attended with ſharp Pains is another Inconvenience many People ſuffer at *Cairo*, and when the Water of the *Nile* begins to riſe, there are few People but are troubled with an Inflamation, which runs over the whole Body, and when they drink they feel ſharp pricking Pains all over them, as if a hundred Needles run into them at once.

The Plague generally viſits them once in ſeven Years, during which Time it is obſerved to take a Tour round the *Ottoman* Empire, but is ſometimes at *Cairo* two Years together. All Diſeaſes are more fatal in *Egypt*, during the *Hamchin*, or Hot Winds, than at any other Time, and they generally begin about the ſeventh of *April*, and laſt fifty Days. They bring abundance of Sand into the Town which gets into the Chambers, Trunks, and Boxes, let them be never ſo cloſe; and many People who travel with the Caravans at this time of the Year periſh by theſe Winds; as ſoon as the Hot Winds ceaſe and the Dews begin to fall, ſay ſome, or as others, when the *Nile* begins to riſe, all Diſtempers, even the Plague it ſelf ceaſes to be Mortal; ſo that this noble River conſtantly brings Health and Plenty with it when it overflows the Country, and may well be the Occaſion of that annual Joy they expreſs on its riſing to a certain height.

As for Phyſicians, or Remedies, the *Mahometans* in *Egypt* ſcarce uſe any, adhereing immoveably to their Doctrine of Fate; and therefore when the Plague is in a Family, viſit their Neighbours as at other times, and don't ſcruple to wear the Cloaths of a Man that died of it.

Diverſions of the Mob.

The Streets of *Cairo*, like other populous Cities, are infeſted by Juglers, Ballad-ſingers and Fortune-Tellers; and among other Amuſements to wheedle the common People out of their Money, they lead about dancing Camels: Theſe Animals are taught to Dance when they are young, by being ſet upon a heated Floor, which gives them a great deal of Pain, and makes them lift up their Legs as if they were dancing; at the ſame time they beat upon a Drum, and thus they deal with the Creature for about half a Year; after which, when ever he hears the Noiſe of a Drum he ſtrikes into a Dance. Their Fortune-Tellers breed up little Birds, which when any Perſon comes to enquire concerning the ſucceſs of his Affairs, carry him a little Scroul of Paper ready prepar'd, in which he finds his good or bad Fortune written: And this I find ſome People give as much attention to as to an Oracle; which brings me to enquire into the firſt Riſe of that raſcally People call'd *Gypſies*. Thoſe pretended Fortune-Tellers that infeſt moſt Countries in *Europe* and *Aſia*, and who are generally held to be of *Egyptian* Extraction, at leaſt the firſt of them were ſuch. They are call'd in *Turky Zinganees* from their Captain *Zinganeus*, who when *Sultan Selimus* made a Conqueſt of *Egypt*, about the Year 1517, with ſeveral other *Mamalukes*, and as many Native *Egyptians* as refuſed to ſubmit to the *Turkiſh* Yoke, retired into the Deſarts, where they liv'd by Rapine and Plunder, and frequently came down into the Plains of *Egypt*, committing

Gypſies, their Original

ting great Outrages in the Towns upon the *Nile* under the Dominion of the *Turks*; and idle People frequently reſorting to them, in hopes of participating in their Plunder; they encreaſed at length to ſo formidable a Body, that the *Turks* were glad to come to a Treaty with them, wherein it was agreed they ſhould lay down their Arms, and be permitted to exerciſe any other Callings, with the ſame Privileges other Subjects enjoy'd: But the *Zinganees*, having been long uſed to a Vagabond rapacious Way of Living, and compoſed of a Mixture of Nations, who, during their Depredations upon all Mankind in the Deſarts, had loſt all Senſe of Religion, and became averſe to the following any Art or Science, began to have recourſe to their former Ways of Rapine and Robbery; and tho' they were often forgiven by the *Turks*, for fear of another Inſurrection, yet it being found at length that they were not to be reclaim'd, the Government were compell'd to baniſh the *Zinganees* their Country, and a Power was given to any Man to kill a *Zinganee*, or make him his Slave, if he was found in *Egypt* after a limited Time; and this Edict was ſo well executed, that a *Zinganee* was not to be ſeen in *Egypt* for ſeveral Years after; at leaſt any that dar'd profeſs themſelves ſuch; for it ſeems they agreed to diſperſe themſelves, in ſmall Parties, into every Country in the known World; and as they were Natives of *Egypt*, a Country where the Occult Sciences, or the Black Art, as 'twas call'd, was ſuppoſed to have arrived to great Perfection, and which in that credulous Age was in great vogue, with People of all Religions and Perſwaſions; they thought that they could not pitch upon a more effectual Way to gain a Subſiſtance, and yet indulge that lazy wandring Life they had been uſed to, than by ſetting up for a more than ordinary Skill in foretelling future Events; and as they had, by a profligate Life, quite eradicated all Principles of Honour and Conſcience, no doubt they had a View of ſupplying their Neceſſities by other Means, when Fortune-telling ſhould fail them. There needed no Teſtimonials that they were of *Egyptian* Extraction, the Swarthineſs of their Complexions demonſtrating as much wherever they came. And what makes me give the greater Credit to this Account of the Original of our *Gypſies*, is an Act of Parliament which I find made in the 22d of *Henry* VIII. being about fourteen Years after the Conqueſt of *Egypt* by *Selimus* the *Turkiſh* Emperor, wherein it is recited, *That, whereas certain Outlandiſh People, uſing no Craft or Merchandize to live by, but going from Place to Place in great Companies, uſing ſubtil and crafty Means to deceive the King's Subjects, bearing them in Hand, that they by Palmiſtry can tell Mens and Women's Fortunes; and ſo many Times ſubtilly deceive the People of their Money, and commit divers Felonies and Robberies. It is enacted, That all ſuch Offenders, commonly called* Egyptians, *who ſhall remain in this Realm for the Space of one Month, ſhould be adjudg'd Felons; and that every Perſon who ſhould import ſuch* Egyptians *ſhould forfeit for every Offence* 40 *l.*

But in the 5th Year of Queen *Elizabeth*, it being found, that ſeveral Natives of our own Country were ſo much in Love with this idle profligate way of Living, that they frequently liſted themſelves among theſe *Egyptians*, and diſfigur'd their Faces that they might appear ſuch, uſing an unintelligible Cant, which other People were as much Strangers to as to the Language of *Egypt*: It was enacted by the 5th of *Eliz.* Cap. 20. *That every Perſon, who ſhould be ſeen or found within this Realm, in the Company and Fellowſhip of theſe Vagabonds commonly call'd* Egyptians; *or counterfeiting, or diſguiſing themſelves by their Apparel, Speech, or otherwiſe, like to ſuch Vagabonds, and ſhould continue ſo to do, either at one or ſeveral times, by the Space of a Month, ſhould be adjudged Felons, and loſe the Benefit of Sanctuary and Clergy, provided that this Act did not extend to Children under fourteen Years of Age:* For they travell'd with Children, which were their greateſt Protection it ſeems, as they are to the Vagabonds of this Age; few People caring to apprehend or puniſh the Parents, or reputed Parents, for fear of bringing a Charge of Children on themſelves, or the Places where they reſided; and this might be one Reaſon that theſe People encouraged Propagation, and laid no reſtraints on thoſe of their Tribe, but ſuffer'd the neareſt Relations to couple together like the common Herd; which might alſo be one Inducement for ſo many looſe profligate People to join them, as occaſioned the above-mentioned Statutes to be made in *England*. But notwithſtanding theſe Laws had that good Effect, as to rid the Country of all Foreign *Gypſies*, we find there are too many of their Diſciples remaining amongſt us to this Day. But in *Turky*, and other Countries where they have not been thus reſtrain'd by Laws, their Parties are larger and more formidable than with us, and many of this kind of Vagabond People are to be found at this Day, even in *Egypt* itſelf.

The Reaſon theſe People are ſtill tolerated in *Turkey*, may be, that they do there, at leaſt of late Years, apply themſelves to ſome Handicraft Buſineſs, particularly the making of Edge-Tools, which they are very excellent at; carrying their Tents and Utenſils upon Aſſes, and uſually pitching their Black Camp near ſome great Town, where, by Working, Thieving, or Fortune-telling they make a pretty good Proviſion for their Bellies, but do not much trouble themſelves about Clothing or Furniture: And when the People begin to be weary of their pilfering Tricks, they move off to ſome other Part of the Country: They have a Prophecy, it ſeems, amongſt them, that they ſhall recover the Dominion of *Egypt* again, and the *Turkiſh Empire*, after a certain Period, ſhall be deſtroyed, which Mr. *Hill* has given us in *Engliſh* Verſe, as follows:

Years over Years ſhall roll,
Ages o'er Ages ſlide,
Before the World's Controul,
Shall check the Creſcent's *Pride.*
Baniſh'd from Place to Place,
Wide as the Ocean's Roar,
The mighty Gypſie *Race*
Shall viſit every Shore.
But when the hundredth Year
Shall three Times doubled be,
Then ſhall an End appear
To all their Slavery:
Then ſhall the Warlike Powers
From diſtant Climes return;
Egypt *again be ours,*
And Turkiſh *Turrets burn.*

It is now about two hundred Years ſince the firſt Inſtitution of the *Gypſie* Tribes, and poſſibly the *Turkiſh Empire* may be deſtroy'd in a hundred more, if the Chriſtian Princes themſelves do not ſupport it, as they have long done, by their ſcandalous Diviſions: But that ever that abandon'd Race ſhould obtain the Dominion of *Egypt* again, this Part of the Prophecy I believe very few People will have any Faith in.

CHAP.

CHAP. IV.

Of the Religion of the Egyptians; *as alſo of their Hieroglyphicks and Pilgrimages.*

Religion of the Mahometans.

AS to the Religion of the Mahometans of *Egypt*, it differs but little from that of the *Turks*, only, 'tis obſerved, that the *Moors*, or *Arabians*, who at preſent make up the Bulk of the People here, are much more ſuperſtitious and zealous in their Way than the Mahometans of *Turkey*; and have their *Santo's*, or Puritans, among them, for whom they expreſs an extraordinary Veneration, but the *Turks* deſpiſe the Hypocrites.

Santo Saints.

MANY of theſe *Santo's*, Mr. *Thevenot* relates, go perfectly naked about the Streets, without the leaſt Rag to cover them, ſuffering their Hair to grow to an unreaſonable Length. In this Condition they viſit the Houſes of Perſons of Diſtinction, and ſit down to Dinner with them without any Invitation, and leave their Tables with as little Ceremony as they enter'd; and it is look'd upon as no ſmall Bleſſing to a Houſe to receive a Viſit from theſe People. It is no Fiction, this Author aſſures us, that many Women who have no Children, will kiſs their Priapus with great Veneration, in order to obtain a great Belly. There are many other Sorts of *Santo's* in *Egypt*, for whom the Vulgar expreſs a mighty Reſpect: But a certain *Turkiſh* Baſſa, it ſeems, had ſo little regard to their pious Pretences, that he ſent as many of them as he could apprehend to the Galleys.

Religion of the antient Egyptians.

THE Religion of the antient *Egyptians* I ſhall not take upon me to deſcribe, any further than to obſerve that they paid divine Honours not only to the Planets, but to ſeveral Sorts of Birds and Beaſts, and even to Leeks and Onions, if they are rightly repreſented to us, but the Beaſt they moſt ador'd was a black Ox, under the Name of *Apis*. But whether their Veneration for theſe Creatures proceeded from an Opinion that they were animated by ſome noble Soul, (for the Doctrine of Tranſmigration ſeems to have its Original here) or whether they only ador'd the Divine Power manifeſted in theſe Creatures, I do not find decided; but as the *Egyptians* are univerſally acknowledged to be a learned ingenious People, we may depend upon it they had ſome ſpecious Reaſon at leaſt, for their Devotion towards theſe Things.

Religion of the Cophti.

THE Poſterity of the antient *Egyptians* are held to be the preſent *Cophti* Race, among whom, 'tis generally held, St. *Mark* firſt planted Chriſtianity, and was the firſt Biſhop of *Alexandria*, then the Metropolis of *Egypt*. His Succeſſors, according to Dr. *Heylin*, were continually choſen out of the Presbytery, or Cathedral Clergy, till the Time of *Heraclas* and *Dionyſius*, and afterwards out of the Clergy at large. Their Juriſdiction was ſettled by the Council of *Nice*, over all the Churches of the Dioceſs of *Egypt*, which included *Lybia*, *Pentapolis*, and *Egypt*, properly ſo called; and afterwards the *Ethiopian*, or *Abaſſine* Churches became ſubject to this Patriarch, and have ever ſince acknowledged a Relation to him. Upon the revolting from the *Greek* Emperors, and putting themſelves under the Dominion of the *Saracens*, the Chriſtian Religion ſenſibly decayed; but much more ſince the Conqueſt of that Kingdom by the *Turks*, which happened about two hundred Years ago, and there are not now thought to be fifty thouſand of them in the Country. They are deemed Hereticks, on Account of their holding but one Nature in Chriſt. They alſo retain the Rite of Circumciſion, as well as Baptiſm; and hold that no Baptiſm is valid, unleſs adminiſtred by the Prieſt in the open Church. They give Infants the Sacrament of the Euchariſt alſo as ſoon as chriſtned, and admit Marriages in the ſecond Degree of Conſanguinity, without a Diſpenſation; and in their Liturgies read a Goſpel written by *Nicodemus*. They differ from the Church of *Rome* in adminiſtring the Sacrament of the Lord's Supper in both Kinds; and allow neither extreme Unction, or the Euchariſt, to be adminiſtred to the Sick. Neither do they agree with that Church in the Points of Purgatory or praying for the Dead; but the *Roman* Miſſionaries boaſt, that they have made good Catholicks of great Numbers of them of late; however, the Patriarch of *Alexandria* ſtill retains his Authority, and has not ſubmitted to the Infallibility of the Pope, as I can learn.

THEY ſay Maſs in the *Coptick* and *Arabick* Languages, and when they ſing the Paſſion, and come to the Place where 'tis ſaid *Judas* betrayed our Saviour, the Congregation cry *Arfat*, that is to ſay, *Horned Beaſt*, or Cuckold. And when they read that *Peter* cut off the Ear of the High-Prieſt's Servant, they all anſwer *Aſia Boutros*, or *Well done* Peter. And, if we credit the Accounts the *Roman* Miſſionaries give, both of Clergy and People, they are intolerably ignorant; but ſomething in this Caſe muſt be imputed to Prejudice. Mr. *Thevenot* relates, that they have a Legend of our Saviour's Life, during his Minority, which ſays, that an Angel every Day brought him Food from Heaven; and that our Lord ſpent his Infancy in making Birds of Clay, which he afterwards breathed upon, and they flew away. It relates alſo, that a roaſted Cock being ſerved up at the laſt Supper, and *Judas* being gone out to betray our Lord, he commanded the roaſted Cock to go after him, who brought Intelligence that *Judas* had ſold him, and for this Service the Cock was admitted into Paradiſe: And 'tis obſervable, that *Mahomet* has inſerted this Fable of the Cock's being admitted into Heaven, with ſome Alteration, in his Alchoran. I ſhall here add the Obſervations of Father *Brothais* on *Upper Egypt*, as I find them inſerted in our Philoſophical Tranſactions, which are as follow:

Obſervations on Upper Egypt.

'I have ſpent three Months of 1669 in a Voyage to the *Upper Egypt*, accompanied with my Brothers, the Fathers *Charles* and *Francis*, all of us aſcending upon the *Nile* as high as three hundred Leagues above *Cairo*, being two Days Journey on this Side of the *Caſcata's* of the *Nile*. I there admired Store of Idol Temples, yet entire together, with very antient Palaces filled with Statues and Idols. I counted in one Place alone ſeven Obeliſks, like thoſe at *Rome*, and above an hundred and twenty Columns in one Hall, of the Bigneſs of five Braſſes, filled within and without, from the Top to the Bottom, with Hieroglyphick Letters, and with Figures of falſe Deities. I found Statues of white Marble, and ſome of black, of the Bigneſs of three Perſons, with their Swords on their Sides, and of

'an hard Stone; particularly there was a Man 'and a Woman of the Height of eight Fathoms at 'leaſt, tho' ſeated in Chairs, and well propor- 'tioned; there were alſo two other Statues of 'black Marble, repreſenting Women with Globes 'on their Heads.

'We meet but with two Places where Anti- 'quities are to be ſeen, one whereof is called '*Lazon*, and the other *Candion*, which is a very 'antient Caſtle, and, according to the Tradition 'of the Country, formerly the Reſidence of a 'King. Nor indeed is this hard to believe, even 'before one enters it, conſidering in the Ave- 'nues to the ſaid Caſtle the great Number of '*Sphynxes* ſtanding on a Row, and turning their 'Heads towards the Alley. This Idol, with 'the Head of a Woman and the Body of a Lion, 'was once adored as a Deity by the *Egyptians*. 'They are diſtant from each other about two 'Paces, and are twenty Foot long. I walked in 'Alleys, ending at four Gates of the Caſtle, and 'for ought I know there may be more of them, 'ſince I went but half the Round of the Caſtle, 'which is very ſpacious. I reckoned ſixty of them 'on the Side of one Alley, and as many over 'againſt it; and fifty one in another Alley; the 'Alleys being about as broad as the Mall. The 'Gates of the Caſtle are of an extraordinary 'Height, covered with excellent Stones; mea- 'ſuring one, which makes the Height of it, I 'found it twenty-ſix Foot long, and proportion- 'ably thick. I believe there are above a Million 'of Figures in Profile, none in Front: I ſpeak of 'thoſe which are graven on the Walls and Pillars. 'That which moſt pleaſed me, was the Ground, 'where the Azure and other Colours, which are 'like Enamel, appear as freſh as if they had 'been laid on but a Month before. There are 'Temples ſo ſpacious, that three thouſand Peo- 'ple may ſtand on the Roof with eaſe. In the 'ſame Caſtle there is a Pond, the Water where- 'of is bitter, ſet about with fine Stone.

'There are a great Number of Chriſtian '*Cophti's* in this Country, who have many Mona- 'ſteries and antient Churches, but poor. We 'have paſſed many Places where was neither 'Prieſt or Church, but only the poor People, 'like Sheep without a Shepherd.

'*An Account of the Porphiry Pillars in* Egypt, *by Dr.* Robert Huntington.

Porphiry, an Account of it.

'IT may be, I think, taken for granted, that 'there is no Quarry, or rather Rock, of 'Porphiry, in all the lower Parts of *Egypt*. For 'ſo far as the *Nile* overflows is perfect Soil; and 'the Boundaries of this Overflow (which are 'never ten Miles from the Channel that I ſaw, 'generally ſcarce half of it, and in ſome Places 'but a Mile or two, the *Delta* excepted, which is 'univerſally covered all but the North Side to the 'Sea, and a little to the Eaſt for ſome Miles above '*Damietta*) are riſing Hills of Sand, beyond which 'is perfect Deſart, upon the *Africk* Side. [Higher 'South, I have been told, there are Rocks nearer 'the River, and in ſome Places they ſtraiten it.] 'Under theſe Sands there is a yielding Stone, not 'much harder than Chalk, but not ſo white, and 'very eaſily managed, as at the Mummies deep 'ſpacious Vaults, which were the old Repoſito- 'ries for the Dead. And the like may alſo be 'ſaid of thoſe Cells or Sepulchres, which are 'hewn purely out of the rocky Earth, three 'Quarters of a Mile to the South of *Alexandria*. 'Albeit, nearer to the Sea there are Stones of a 'harder Kind, and with which they build, but 'by their mouldring away, as appears by the Re- 'mains of Houſes within the Walls of the City, 'tis plain they cannot endure the Weather, 'which is ſufficiently corroding there; the Iron, 'which once plated their thick wooden Gates, 'being moſtly eaten away, and the deep Charac- 'ters upon the Sides of theſe very Porphiry Pil- 'lars exceedingly defaced. Indeed about *Mem- 'phis*, that is, near the Pyramids, they have a 'milder Air, and the Hieroglyphicks cut in theſe 'Stones will laſt well enough, but if they are re- 'moved into a rougher, they will crumble and 'ſcale, as I found by Experience: For having 'procured four Stones, the beſt marked with 'thoſe Figures of Antiquity I could meet with, 'and ſent them down to *Alexandria*, in order to 'their Tranſportation into *England*, I found them 'upon my ſecond Voyage into *Egypt*, very much 'injur'd, being put into the Cuſtom-Houſe-Yard, 'where they lie ſtill embargoed by the Aga. 'But yet further into the Country, there are 'Mountains of harder Stone. In the *Nitrian*, 'now the Deſart of St. *Macarius*, and not far 'from the Lake where the true Nitre incruſtates 'on the Top of the Water, there are many, and 'ſome of them not utterly unlike Porphiry. That 'which neareſt reſembles its Colour, but not its 'Conſiſtence, is the Vein that produces the Earle 'Stone, of which there are many in the *Babr Ba- 'tama*, a great Sand Valley.

'However, I cannot pronounce there is no 'Porphiry hereabouts, for in the chief Monaſtery 'of the four now remaining, (of three hundred 'ſixty-ſix,) dedicated to the Bleſſed Virgin, the 'two Stones which ſecure their Entrance are of 'the like, if not the very ſame Subſtance, which 'I more particularly obſerved upon the Account 'of their ingenious Contrivance: For the People 'lying otherwiſe at the Mercy of the roving *Arabs*, 'with theſe two Mill-Stones, for that's their 'Make, thus make good the Gate, or Paſſage, 'into which they run them, and then drive a 'great wooden Wedge between them on the In- 'ſide, which ſo faſtens them that they cannot 'be mov'd but on the Inſide: And of ſuch a Sort 'of Porphiry is the noted *Sphynx*, that mighty 'Head and Shoulders yet ſtanding by the Nor- 'thern Pyramids. I have indeed been told of a 'Place upon *Mount Sinai*, whence this Porphiry 'came: And they pretend to ſhew the very 'Rock, where the two excellent double Rows of 'Pillars in the Church of *Bethlehem* were hewn; 'though I went away ſatisfied it was quite a dif- 'ferent Sort of Stone. Another tells of a Pillar 'of the ſame Make, yet lying there, and if this 'be certain you need ſeek no further. Albeit I 'muſt tell you, that the Stones brought from 'thence, with the Repreſentation of a Buck (as 'termed) upon them, though reddiſh, are of a 'much finer, and more even Texture. Father '*Carlo Franciſco D'Orleans*, now Superior of the '*Capuchins* at *Cairo*, who went three hundred 'Leagues up the *Nile*, told me of many Temples, 'Statues, and Pillars at that Diſtance, tho' I 'can't be ſure he ſaid there were any of Porphiry; 'but ſince it was in *Thebais*, why may we not 'ſuppoſe them of that Black, White, and Red 'ſpeckled Marble, famous in the World, and 'wherewith the leſſer Pyramid perhaps was 'cruſted, yet to be ſeen upon the Ground about 'it, which when poliſhed looks finely.

'Thoſe which I have my ſelf ſeen, are one of 'them at *Matarea*, three or four Miles Eaſt of '*Grand Cairo*, and two at *Alexandria* juſt within 'the Wall upon the North ſide of the City, (for '*Pompey's* Pillar, as they call it, half a Mile 'without the Gate to the South, is quite of ano- 'ther Make and Matter.) One of theſe is thrown 'down and broken in pieces, but was of the 'ſame Dimenſions, for Length and Thickneſs, as

'the

‘ the other. The *Franks* call them *Agulia's*, the ‘ *Engliſh* particularly *Cleopatra*'s Needles, but the ‘ Inhabitants content themſelves with the gene- ‘ ral Name of Pillars. They have no Baſis or ‘ Pedeſtal above Ground, and if they ever had ‘ they muſt needs be very deep in the Earth. The ‘ Stone it ſelf is ſomething more lively than the ‘ Porphyry of St. *John*'s Font at *Epheſus*, much ‘ more vivid than thoſe four tall ſquare Pillars at ‘ *Tadmor*, or *Palmyra*, which are each of them, ‘ I think, but of one piece; whilſt all the reſt ‘ exceeding many of another ſort of Stone, are of ‘ ſeveral pieces, and round. The Clearneſs of ‘ its Complexion may perhaps be attributed in ‘ part to the Air which corrodes them, eſpecial- ‘ ly upon the North and Eaſt. The Hieroglyphick Character, with which they are engraven, ‘ is perhaps the aboriginal *Egyptian* Letter, long ‘ ſince worn out of common Uſe in the Country, ‘ as the *Samaritan*, ſo 'tis now generally called, ‘ was amongſt the *Jews*, and bears proportion ‘ with the *Chineſe*, now in Uſe, where each Cha- ‘ racter repreſents a Word, or perhaps a Sen- ‘ tence; and moreover it ſeems to be written in ‘ the ſame way from Top to Bottom, as may be ‘ ſeen by the Board I brought from a Door in the ‘ Village *Succara*, next to the Mummies, the ‘ largeſt Piece of *Egyptian* Writing perhaps at ‘ this Day in *Europe*. I confeſs that in the Vaults, ‘ or Prieſts Chambers cut out of the Rock cloſe ‘ by the ſecond Pyramid, the whole Walls are ‘ inſcribed therewith, but I ſpeak of an Original. ‘ And if all that is there written were but exactly ‘ copied, it might be then lawful to hope that ‘ the Language ſo long ſince dead and buried in ‘ the Houſe of Bondage, might have its Reſur- ‘ rection in the Land of Liberty.

‘ That ſuch vaſt Monuments might be remov'd ‘ from Place to Place is difficult indeed, but not ‘ impoſſible; for ſome of theſe Mountains, from ‘ whence they are ſuppoſed to be dug are near the ‘ *Red Sea*; and *Suez*, which ſtands upon it, from ‘ *Cairo* is but two or three Days Journey, and the ‘ *Nile* leſs. How poſſible it is to convey mighty ‘ Weights by Water let the Obelisks of *Rome* de- ‘ clare, which were all of them brought from this ‘ very Country: And that ſuch things may be ‘ done by Land too, tho' not by every one, is ‘ plain enough, becauſe we ſee they have been ‘ done. At *Balbeck*, which is fourteen Hours ‘ from *Damaſcus* (others ſay but ſeven) whither I ‘ went accompany'd by Mr. *Anthony Balam* and ‘ Mr. *Joſeph Verney*, there is a Stone about ſixty ‘ Foot long, on the North ſide of the Caſtle-Wall, ‘ and two more of ſixty each; and I believe we ‘ ſaw the Way they travelled, having left one of ‘ their Company, tho' not quite ſo big in the ‘ Road as a Monument there to this very Day.

Several Obſervations on the ancient Hieroglyphicks.

The Obſervation that Doctor *Huntington* makes, that the primitive Way of Writing among the *Egyptians* ſeems to have been the ſame as among the *Chineſe* at this Day, has a great deal of probability in it, and he might have carried it further perhaps, and added that all Nations expreſs'd themſelves the ſame way originally; for as Words were in uſe long before Letters were known, ſo there is no doubt every People fix'd upon ſome certain Characters to expreſs their Words, and to record ſuch Actions as they thought deſerved it; and theſe were as generally underſtood as their reſpective Languages. It was a kind of ſhort Hand, where every Character expreſs'd a Word, and ſometimes a Sentence; and theſe Characters obtain'd the Name of *Hieroglyphicks*. But when that more certain Way of compoſing Words by Letters came in uſe, 'tis no wonder that *Hieroglyphicks* were laid aſide, nor can it be expected we ſhould interpret thoſe myſterious Characters any further than the Antients were pleaſed to interpret them to us, as they have done in ſome few Inſtances, unleſs ſome of the Learned in the primitive Ages ſhould riſe again to inſtruct us. From entire Characters the Antients proceeded to write the Conſonants of every Word, and left the Reader to ſupply the defect of Vowels; and thus, it ſeems, were the Scriptures of the *Old Teſtament* penn'd, which People beginning to read variouſly, ſome of the Learned added Accents, or Marks to ſupply the Place of Vowels, and thus the *Hebrew* is written at this Day; but every other Nation almoſt has introduced Vowels, which is found much the moſt eaſy and intelligible way of Writing, and there ſeems to be little room left for further Improvements on this Article at preſent.

From Dr. *Huntington*'s Obſervations, and ſome other learned Gentlemen upon Marble and Porphyry, it ſeems pretty evident that the Antients had not the Art of caſting Stones in imitation of them, as has been ſuggeſted by ſome Writers; and that the true Porphyry is very ſcarce, tho' there are ſome kinds of ſpotted Marble which reſemble it ſo nearly, that an unwary Eye may be deceiv'd, particularly that which has paſs'd for Porphyry among the Ruins of *Tadmor* or *Palmyra* is another kind of Stone, according to the Doctor, tho' ſeveral Gentlemen who view'd thoſe Ruins, it ſeems, took it for ſuch. But whether the Porphyry uſed at *Alexandria* and in other noble Buildings in *Egypt* were dug in the *Arabian* Mountains to the Eaſtward of the *Red Sea*, or in *Thebais* call'd *Upper Egypt*, I find is very uncertain, tho' the general Opinion has been that *Thebais* afforded the fineſt Stone in the World, and the moſt curious Marble has obtain'd the Name of *Thebaick* Marble. How thoſe vaſt Columns and Obelisks were brought either from *Thebais*, or the *Arabian* Mountains, the Doctor does not pretend to inform us; but having concluded there is no ſuch thing as caſt Marble, he ſays, we may be aſſur'd the Antients had Carriages which would tranſport ſuch a vaſt Bulk from one Place to another, becauſe we find thoſe Pillars in Places far diſtant from any ſuch Rocks or Quarries from whence they were hewed; and there is no doubt they had ſuch Carriages, if there never was any ſuch thing as caſt Marble; but it were to be wiſh'd the Antients had left us ſome Hints upon what kind of Carriages, or with what Draught Cattle they were able to carry ſuch a prodigious Bulk and Weight by Land as *Pompey*'s Pillar is ſaid to be.

I ſhall conclude the State of *Egypt* with the Account Mr. *Thevenot* gives us of the annual Preſent the *Grand Seignior* ſends from *Grand Cairo* to *Mecca* with the Pilgrims, which amounts to one third of the value of the Revenues of this Kingdom. All the Particulars contain'd in this Preſent are by the *Franks* call'd *Mahomet*'s Veſt, and are wrought in the Caſtle of *Cairo*.

The Pilgrimage from Cairo to Mecca, with the Grand Seignior's Preſent.

At the time appointed for the Caravan to prepare for *Mecca*, the Preſents are brought with great Solemnity from the Caſtle, through the City to the Palace of the *Emir Adge*, who is Captain of the Caravan of Pilgrims, which our Author had the Opportunity of ſeeing perform'd. In the beginning of the Proceſſion came the Servants of the *Beys* or Lords of *Cairo*, followed by the *Chiaux*, *Azapes* and *Janizaries*; and after them the *Beys* in Perſon, of whom the *Emir Adge*, and ſeveral other Officers, had rich *Coſtans*, or Coats on, preſented them by the *Baſſa* on this Occaſion: Then came the *Janizaries* of the *Divan* followed by Men carrying four very long Pieces of Crimſon Velvet, embroider'd with *Arabick* Letters of Gold as large as ones Finger, and others carried

carried a large Door-piece of Velvet embroider'd in the ſame manner; after theſe came a Camel well harneſs'd, carrying a great Pavilion or Tent of Crimſon Sattin embroidered with Gold, and ſhap'd like a Bell, with a great gilt Ball on the top of it; then a little ſquare Pavilion, carried by a Man, and ſome other Utenſils, which were all to be employ'd in hanging and adorning the *Caaba*, or little Temple of *Mecca*: After theſe great Numbers of Banners and Colours were carried in Proceſſion, all the *Santo*'s with Drums and Muſick attending them; the People in the mean time preſſing and crowding to touch the Sacred Utenſils, and thoſe that could not get near enough threw a piece of Linnen to touch them, holding one end in their Hands that they might draw it back again; and it is not to be conceiv'd with what Devotion they would kiſs the Thing that had touch'd but a Rope employ'd in the ſacred Preſent, which was to adorn the Place they eſteem moſt Holy.

Theſe Ornaments being lodg'd at the Palace of the *Emir Adge*, two Days after he went out of Town encamping near the City. The Cavalcade on this Occaſion was not very different from the former, only there were ſix Field Pieces, which the *Emir* always carries with him on theſe Expeditions: There were alſo a great many little Children mounted on Camels and Horſes, who were the Sons of the *Emir*'s Officers, and ſeveral Camels loaden with Proviſions for the Journey. A Multitude of Santo's in ſtrange Antick Habits alſo follow'd dancing and ſcruing themſelves into a Thouſand ridiculous Shapes and Poſtures, like Maſquers at a Carnival, as our Author expreſſes himſelf. At length came the Bleſſed Camel which carried the Pavilion above-mention'd, richly dreſs'd out, with another to relieve him when he was weary.

Five Caravans of Pilgrims annually

It is wonderful, our Author obſerves, to ſee the Multitudes which come from all Places to perform this Pilgrimage, there being no leſs than five Caravans of them (*viz.*) That of *Cairo*, which conſiſts of *Egyptians*, and of all thoſe that come from *Conſtantinople* and the Neighbourhood of it. That of *Damaſcus*, in which are all the Pilgrims of *Syria*. That of the *Magrebins*, or thoſe who come from the Weſtward, conſiſting of the Natives of *Barbary*, *Fez* and *Morocco*, who meet at *Cairo*, and thoſe of *Perſia* and *India*. Thoſe who come from *Fez* and *Morocco* undergo the greateſt Fatigue, travelling by Land over large Deſarts, in which they employ a whole Year, and one half of them uſually die in the Journey. The Caravan of *Cairo*, our Author ſays, was very numerous when he was there; there being in it four *Beys* or Princes, and ſeveral other great Lords, beſides an hundred thouſand other Pilgrims, as was given out; but he underſtood afterwards they did not amount to a fifth Part of that Number. The *Emir Adge*, or Captain of the Caravan has uſually fifteen hundred Camels to carry his Baggage, and ſell to thoſe who loſe their own, for many of them die in the Way, and he has five hundred Camels alſo to carry Water only.

The *Emir Adge* having encamp'd ſome time cloſe to the City, remov'd twelve Miles further to the *Birque*, being a great Baſon, or Reſervatory of Water, about twelve Miles to the Eaſtward of *Cairo*, and is the Rendezvous of all the Caravans. The *Emir Adge* decamp'd from thence on the eighth of *Auguſt*, it being the Cuſtom for the Caravan of *Cairo* to ſet out ſeven and fifty Days after the beginning of the *Ramadan* that they may be at *Mecca* at the time preſcrib'd: The next Day, being the ninth of *Auguſt*, the Caravan of *Magrebins*, which came from the Weſtern Part of *Africk*, ſet forward; theſe do not depend on the *Emir Adge* of *Cairo*, but have a Chief of their own. They travel chiefly in the Night to avoid the Heat, which is inſupportable, and when there is no Moon they have Men who carry Torches, and either in their Camps, or on the March, that infinite Numbers of Lights which are ſpread over the Deſarts make a noble Illumination.

There are other Reaſons for going this Pilgrimage to *Mecca* beſides pure Devotion: Many go upon the Account of Trade, Merchandize being brought thither from almoſt every part of the known World; and ſome go, 'tis ſaid, to eſcape the Puniſhment of their Crimes: For let a Man have been guilty of the moſt notorious Facts, he is never call'd in Queſtion if he makes this Journey afterwards, but obtains a general Indemnity, and the Character of a Saint, on Account of the Fatigue and Hazard he has undergone to ſee the Holy Place. But whatever may be the true Inducement to the undertaking this Journey, all perform it with abundance of ſeeming Devotion, repeating or ſinging ſome Verſes of the *Alchoran* all the Way they go; and beſtowing their Charity according to their reſpective Circumſtances: As to their Behaviour when they arrive at the Holy Place I have given an Account of it already in treating of the *Perſian* Pilgrims.

About ſix Weeks after the ſetting out of the Caravan from *Cairo*, it being computed that they are ready to return, an *Aga* marches from *Cairo* to guard the freſh Proviſions which People ſend to their Relations in the Caravan; all which are ſeal'd up to be deliver'd to thoſe they are directed. The *Aga* has a great Number of Camels aſſign'd him for this Service; and uſually meets the Pilgrims half Way, being very well paid for his Trouble. The Year our Author was in *Egypt* the Caravan return'd and incamp'd at the *Birque* twelve Miles from the City on the thirteenth of *November*, and the Caravan of *Magrebins* arrived there the Day before; ſeveral People came from *Cairo* to the *Birque* to meet their Friends, and welcome them Home; and upon theſe Occaſions they Salute and Kiſs all they know five or ſix times; and indeed, there is nothing to be ſeen in the City but Kiſſing and Congratulations for five or ſix Days ſucceſſively, or elſe People lamenting the Death of their Relations who died in their Journey.

The Pilgrims are forty five Days in their Journey from *Cairo* to *Mecca*, and as many in returning, beſides the time they ſpend there; but they make very eaſy Journeys, often ſtopping to unload and load the Camels, of which many die as well as of the People. They find but very little Water in the Way, and that exceeding bad, and freſh Proviſions they meet with none but what they carry with them. What incommodes them moſt are the Hot Winds, which frequently ſuffocates, or otherwiſe deſtroys them: In one Day, it ſeems, there dy'd ſeveral hundreds of Pilgrims by the Hot Winds in this Journey; and not leſs than ſix thouſand belonging to the Caravan of *Cairo* died by one Misfortune or other. And thoſe who return alive are ſo alter'd and extenuated that they can hardly be known by their Friends; notwithſtanding which there is not a Year but many Women and Children perform this Pilgrimage.

Thoſe who have made this Journey are called *Adge*, or Pilgrims, and are in great eſteem in the Countries where they live ever after. The *Emir Adge* amaſſes vaſt Sums in this Command; for beſides his other Profits he is entitled to the Effects of all that die in the Journey, of which Perquiſite alone he made three hundred thouſand *Piaſtres* this Year, there were ſo many of the Pilgrims that died: He is alſo Supreme Judge of all the People under his Charge during the Expedition.

COMPENDIOUS HISTORY
OF THE
FOUR MONARCHIES,
VIZ.
The *Aſſyrian*, *Perſian*, *Grecian*, and *Roman*.

Before I enter upon the Second Part of the Hiſtory of the World, *I aſſure myſelf that the following ſummary Account of the Four Eaſtern Monarchies will be very proper and uſeful, becauſe the Scene of three of them,* viz. *the* Aſſyrian, Perſian, *and* Grecian *was in that Part of the World already treated of,* viz. *in* Aſia, *and* Turkey *in* Europe. *I could not before confine myſelf to thoſe particular Monarchies, without interrupting the Courſe of the* Hiſtory; *nor, on the other Hand, would this Work have been a* Compleat Univerſal Hiſtory, *if I had omitted a particular Account of Empires ſo famous in the antient Records of Time. There are a great many that have read and heard of thoſe four antient Monarchies, and find them neceſſary Subjects of Diſcourſe in general: As nothing therefore can contribute more to the underſtanding of their Hiſtory, than the Time when, the Place where, and the crown'd Heads under whom, any Thing therein mention'd was tranſacted; the following genuine Narrative of them, embelliſh'd with all the above-mention'd Circumſtances, ſufficiently large to render the whole intelligible, and yet ſo compendious as not to tire the Reader, will doubtleſs be very acceptable.*

CHAP. I.

Of the Aſſyrian, *called by ſome the* Babyloniſh, Monarchy.

By whom founded.

THE *Aſſyrian* Monarchy was founded by *Nimrod* the Son of *Cuſh*, *Gen.* x. viii. *Cuſh* was the Son of *Ham*, *Gen.* x. vi. and *Ham* was the Son of *Noah*, *Gen.* x. i. The Capital of *Nimrod*'s Empire, or as it is called *Gen.* x. 10. *The Beginning of his Kingdom*, was Babel, *or* Babylon, *and* Erech, *&c.* The *Erech* there ſpoken of is *Chaldea*, call'd by ſome Geographers to this Day *Eyraca Arabick*, which ſignifies the *Arabian Erech*, or *Chaldea* in *Arabia*. [Of which ſee more in Chap XI. of the *Turkiſh Empire*, Page 250 of this Book.] This great aſpiring *Nimrod*, whoſe Ambition ſeem'd to extend beyond the Bounds of ſublunary Monarchies, is ſaid to be the Projector of the Tower of *Babel*; for which if we had not the Authority of Scripture Hiſtory, it would ſcarce be believ'd that it could ever have enter'd into the Heart of any human Being to have propoſed ſuch an extravagant Undertaking; but to avoid Repetitions, I ſhall refer the Reader for the Shape and Dimenſions of it to Page 250, above-mention'd.

Jam. b. SOME Hiſtorians and Interpreters of Scripture, ſay, that it was *Nimrod* that alſo built the great City of *Nineveh*; but this Opinion is grounded upon an ambiguous Tranſlation of the eleventh Verſe of the tenth Chapter of *Geneſis*, which ſome interpret, (having ſpoken of *Nimrod* in the tenth Verſe) *He* (meaning *Nimrod*) *went out into Aſſyria and builded Nineveh*; for the Word *Aſſur* there may be tranſlated *Aſſyria*; but our *Engliſh* Tranſlation reads it, *Out of that Land went forth Aſſur and builded Nineveh*, &c. and call'd that Country *Aſſyria*: Of which ſee more Chap. XII. Page 253, in the Deſcription of the *Turkiſh Empire*.

It was obſerved at the Beginning of this Chapter, that *Nimrod* was the Third in a Lineal Deſcent from *Noah*; and tho' it is generally believed that he was the Predeceſſor of *Belus*, yet ſome think he was the ſame Perſon, and that his boundleſs Ambition excited him to change his Name from *Nimrod* to *Belus* or *Bell*; becauſe *Bell* or *Bal*, in the *Chaldean* Language, ſignifies a ſort of a Deity, as *Baal*, *Baal-Zephon*, &c. and whether this *Belus* was the ſame with *Nimrod* or no, yet it is certain he was deified by the People, as will further appear in the Reign of his Succeſſor *Ninus*. *Belus* ended his Reign in the Year of the World 1774, which was a hundred and eighteen Years after the Flood of *Noah* had deſtroy'd all the World. *Belus.*

Ninus began to reign in the Year of the World 1774; he enlarged *Niniveh*, which had been built before by *Nimrod*, or by *Aſſur*, (*Nimrod*) and called it by his own Name *Niniveh*, or the City of *Ninus*; it continued to be an *exceeding great City* when *Jonah* was ſent to it, *Jonah* iii. 3. ſee a Deſcription of it Page 253. This *Ninus* ſet up the Image of his Father *Belus* to be worſhipped, which continued till it was deſtroy'd by *Daniel* the Prophet, after it had ſtood above ſixteen hundred Years, according to the Hiſtory of the Deſtruction of *Bell* and the *Dragon*, Verſe 22. *Ninus* reigned fifty two Years, and then was deſtroy'd by *Semiramis*, his Wife, to make Way for herſelf to govern. The Project by which ſhe executed her Deſign was this, ſhe prevail'd upon him to inveſt her with all the Royal Power and Dignity for only five Days, and he, willing to try how ſhe could govern, granted her Requeſt; and in that Time ſhe made him away, under a Pretence of making Room for her Son *Ninias*; but when ſhe found herſelf in Poſſeſſion, ſhe would not quit it for her Son. *Ninus.*

Semiramis. *Semiramis* was first married to one *Menon*, who accompanied *Ninus* in his Expedition against *Zoroaster*; but being a Woman of Wit and Resolution, as well as Beauty, *Ninus* married her, and she requited him as above. She began her Reign in the Year of the World 1826, and after the Flood 170; she very much enlarged *Babylon*, but was at last overthrown by *Staurobates* upon the Banks of the River *Indus*, after she had reigned forty-two Years, a lustful and tyrannical Queen.

Ninias. *Ninias* succeeded his Mother, *Semiramis*, and began his Reign in the Year of the World 1868, and after the Flood 212 Years; but there is little recorded of him, except his effeminate gluttonous Temper, and under him, and after him, this Monarchy degenerated into Indolence, Security, and Effeminancy, insomuch that the very Names of those Monarchs are lost in History for near twelve hundred Years.

Sardanapalus. *Sardanapalus* is the next that History makes mention of. He began to reign in the Year of the World 3059, and after the Flood 1403; but he was so far from a noble masculine Spirit, that he rather seem'd ambitious to fill up the Measures of the Debauchery of his Predecessors; retiring from his Nobles to toy among the Ladies, dress in their Habits, and even spin amongst them; till *Arbaces* and *Beloch*, possess'd of an heroick Resentment, found Means to cut him off, and agreed that *Arbaces* should settle himself to the Eastward, among the *Medes* and *Persians*, and *Beloch* should succeed to the Government of *Assyria*.

Beloch. *Beloch*, or *Belesor*, is supposed to be the same with the *Hebrew Pul*, or *Phul*, 2 *Kings* xv. 19. He began his Reign in the Year of the World 3079, and after the Flood 1423, and is said to be that King of *Niniveh* that so exceedingly humbled himself at the Preaching of *Jonah*, Chap. ii. 6, 7, 8, 9.

Tiglath Pilesar. *Tiglath Pilesar* succeeded *Beloch*; see more of him and of *Beloch*, 1 *Chron.* v. 16. he, in the Days of *Pekeh*, the Son of *Remaliah*, carried away captive most of the Inhabitants on the East Side of *Jordan*. *Ahaz* King of *Judah* sent to him, to desire him to save him out of the Hand of the King of *Syria*, 2 *Kings* xvi. 7. to Verse 10, *&c.* he began his Reign in the Year of the World 3186, and after the Flood 1530.

Salmanesar. *Salmanesar* is next after *Tiglath Pilesar*; he began his Reign in the Year of the World 3216; and as his Predecessor had attack'd *Galilee* and the Places East of *Jordan*, so did he by *Samaria*, and carried *Israel* away Captive, 2 *Kings* xvii. 6. as he also did *Tobit*, *Tob.* 1, 2. but after he had reigned fourteen Years, he was succeeded by

Sennacherib. *Sennacherib*; who reigned over *Assyria* in the Time of *Hezekiah* King of *Judah*; which History see at large in 2 *Kings* xix. and *Isaiah* xxxvii. where we find he was slain by *Adrammelech* and *Sharezer* his Sons, who thereupon escaped into *Armenia*. He began his Reign in the Year of the World 3230, and after the universal Deluge 1574.

Esarhaddon. *Esarhaddon*, after a short Reign of *Sennacherib*, succeeded him, 2 *Kings* xix. 37. but we do not find that History, either sacred or prophane, mentions any Thing remarkable transacted by him, either offensive or defensive; for he was set upon and subdued by *Berodach Baladan*, Governor of *Babylon*, as you read more at large 2 *Kings* xx. 12.

Berodach Baladan. *Berodach Baladan* began to reign in the Year of the World 3326: He sent Letters to *Hezekiah*, King of *Judah*, to congratulate him upon his Recovery, when he had a Promise of fifteen Years added to his Life; and this Compliment was probably the Effect of Policy in *Berodach Baladan*; for while he was Governor of *Babylon*, the Imperial Seat of *Assyria* was at *Niniveh*, but he found Opportunity to shake off the Yoke of the *Medes* in *Artices* Time; and not content with that, attempted to discharge himself from all Subjection to the *Assyrians* likewise, and to remove the Imperial Seat to *Babylon*; and for the better managing of that Design, and securing his own Person and Interest, he cunningly sent those Presents and Compliments to *Hezekiah*, King of *Judah*, in order to begin and contract an Alliance with him. And *Hezekiah*, on the other Hand, as a grateful Return, shew'd the Messengers all his Silver, Gold, Treasure, and other precious Things that were in his House, (Verse 13) for which *Isaiah* severely reproved him, (Verse 17) as doubtless foreseeing by Prophetick Spirit, that the Sight and Knowledge of so much Riches would be a Temptation to the *Babylonians* to attempt to plunder the Kingdom of *Judah*, for the sake of the Riches which they had seen there; and this *Isaiah* prophecy'd of in the 17th Verse above-mention'd, and it was fulfill'd in the very next Reign, *viz. Nebuchadnezzar*, King of *Babylon*, see 2 Kings xxiv. 3. and Chap. xxv. 13.

Nebuchadnezzar the Great succeeded *Berodach Baladan* in the Year of the World 3355. It was he that brought this first Monarchy to its highest Pitch, by his Victories over the *Jews* and the neighbouring Nations; he conquer'd *Egypt*, as was prophesied, or rather promised to him, *Ezek.* xxix. 19. It is needless to repeat the Life and Actions of *Nebuchadnezzar*, they being so largely hinted at in the four first Chapters of *Daniel*, and other Places of Scripture, to which we refer our Readers. *Nebuchadnezzar.*

Evilmerodach, who was the Son of *Nebuchadnezzar*, succeeded him in the Year of the World 3387; it is supposed he had the Management of the Kingdom during the Time of his Father's conversing with the Beasts, *Dan.* iv. 31, 32, 33. but now in his own Reign, the *Medes* and *Persians* prove victorious against him, which the *Egyptians* taking the Advantage of, revolted from the Obedience which his Father *Nebuchadnezzar* had but just subdu'd them to; he was slain in a Battle against the *Medes*, and taken from the Government of his declining Empire. *Evilmerodach.*

Baltasar began his Reign in the Year of the World 3393. He was so far from retrieving the lost Dignity of the Empire, that he only serv'd to fulfil that Prophecy in *Jeremiah*, Chap. xxvii. 7. when speaking of *Nebuchadnezzar*, it is said, *All Nations shall serve him, and his Son, and his Son's Son, until the very Time of his Land come, and then many Nations and great Kings shall serve themselves of him*; but I need not enumerate his Extravagancies; his drinking Wine before a thousand of his Lords, his prostituting the Vessels to the Use of his Wives and Concubines, which his Grandfather *Nebuchadnezzar*, had taken out of the Temple at *Jerusalem*, his praising the Gods of Gold, *&c.* the Hand-writing upon the Wall, and the Interpretation of it by *Daniel*, are all amply treated of in the fifth Chapter of *Daniel*; which, towards the Conclusion, brings us to the Death of *Belshazzar*, or *Baltasar*, and to *Darius* the *Median* taking the Kingdom: And here ends the *Assyrian*, or *Babylonish* Monarchy, that great Empire being declin'd, and the Race extinct. *Baltasar.*

CHAP.

CHAP. II.

Of the Persian *Monarchy.*

In order to the better understanding the Succession of the Persian *Monarchy, it is proper to look back and observe, that* Sardanapalas *was cut off by* Beloch *and* Arbaces; *the former of whom succeeded in the Government of* Assyria, *and the latter,* viz. Arbaces, *settled himself Eastward, among the* Medes *and* Persians; *and as the* Assyrian *Line of* Beloch *is now extinct, the Line of* Arbaces, *now a* Persian, *put up for Monarchy. History gives us an Account of nine in a lineal Descent from* Arbaces, *but, as their Names are not material, it is sufficient that, according to* Justin's *Example, we come as low as* Astiages, *of whom we read in the Apochryphal Account of the Destruction of* Bell *and the* Dragon, *Verse* 1. Astiages *had a Daughter, named* Maudana, *married to one* Cambyses *a* Persian, *to whom she bore* Cyrus, *whom* Astiages *plotted to make away; this made* Cyrus, *in his own Defence, expel both* Astiages *and* Darius, *who succeeded* Baltasar, *as observed at the Conclusion of the last Chapter, which he accomplish'd, and so extinguish'd the first Monarchy of the* Assyrians, *to set up the second Monarchy of the* Persians, *as follows:*

Cyrus.

CYRUS was the first Founder of the *Persian* Monarchy, about the Year of the World 3421, and 1765 Years after the Flood. His first Expedition was against his Grandfather, *Astiages*, to requite him for his cruel Design of conspiring his Death in his Youth; but he was more merciful than *Astiages*, for he not only saved his Life, when he had him in his Power, but offer'd him a Government among the *Medes*. *Astiages* not caring to return again to rule there, *Cyrus* placed him in a Government amongst the *Hyrcanians*; after which he vanquish'd *Crœsus* of *Lydia*, but sav'd his Life, and made him his chief Counsellor, and he proved very faithful to him. Then he fell upon the *Greeks* of *Ionia*, and conquer'd them; afterwards he, with *Darius Medus*, whose Daughter he married, fell upon *Babylon*, took it, and kill'd *Baltasar*. (For all that has been hitherto said of *Cyrus* was transacted while *Baltasar* was alive, and consequently before the Government was entirely in *Cyrus*'s Hand; nor could he then be said to be sole Conqueror, while his Partner and Father-in-Law *Darius* was alive, because he was Sharer in his Conquest of *Babylon*; but *Darius* did not live long, and when he died *Cyrus* had no Rival left, and then he was sole Emperor; so that now, and not till now, it may be said the *Persian* Monarchy began.) The last Expedition that he undertook was against the *Scythians*, where first defeating *Spargapices* by a Stratagem, his Mother *Tomaris*, in a second Conflict, overthrew *Cyrus*, and cutting off his Head, she threw it into a Vessel of Blood, and cruelly cried, *Now glut thyself with Blood, which in thy Life thou hast so thirsted after.*

Cambyses.

Cambyses, the Son of *Cyrus*, succeeded him, about the Year of the World 3433. He overthrew the *Egyptians*; and intending to fall upon the *Carthaginians*, his Sailors, who were *Phenicians*, refused to undertake the Expedition, by Reason of a League between them and the *Carthaginians*. His Death was occasion'd by a Wound with his own Sword, which fell out of the Scabbard as he was mounting his Horse.

AFTER *Cambyses* there was an *Interregnum*, during which the Government was usurp'd by the *Magi*, or Wise-men of the Country.

Darius.

Darius Histaspis next sway'd the *Persian* Sceptre, about the Year of the World 3441, and after the Flood 1785; and the better to confirm his Title, he married *Atossa*, the Daughter of *Cyrus*; and then recover'd rebellious *Babylon* by a Stratagem, executed by a Man, who was either out of his Senses or extravagantly faithful to his Master's Interest: His Name was *Zopirus*, one of *Darius*'s Noblemen; he cut off his own Lips and Nose, and otherways pitifully mangled his Face, and in that frightful Condition went to *Babylon*, and made the Inhabitants believe, that the Tyrant, as he called him, *viz.* his Master *Darius*, had so abused him, and desired them to furnish him with Forces to be revenged on him for his Inhumanity; which they were very glad to grant: But when he had got them under his Command, he employ'd them against *Babylon*, and again subjected it to his Master *Darius*. When *Darius* was defeated by the *Scythians*, the *Greeks* rebell'd against him; and he, coming with a numerous Army to reduce them to their former Obedience, was overthrown by *Miltiades*, the *Athenian*. This Defeat, and the Rebellion of the *Egyptians*, together with the unhappy Differences between his Sons, who should succeed him, shortned, or rather put a final Period to his Life.

Xerxes.

Xerxes, the younger Son of *Darius*, succeeded his Father, in the Year of the World 3466; he was Grand-child to *Cyrus*, by his Daughter *Atossa*. This *Xerxes* is said, by Mr. *Prideaux* and other Historians, to be that *Ahasuerus*, mention'd *Esther* i. 1. who made a great Feast at *Shushan* the Palace; see *Chap.* XII. *of* Persia, *Page* 203, and see more of his Life in the Book of *Esther*; he had a Son by *Esther*, whose Name was *Artaxerxes*.

Artaxerxes Longimanus.

Artaxerxes Longimanus came next to the Crown, in the Year of the World 3487, and soon revenged the Death of his Father and Brother upon his great Uncle *Artabanus*. He was more favourable to the *Jews* than his Predecessors had been, for his Mother *Esther*'s sake; but yet the Adversaries prevail'd so far, as to get a Stop put to the building of the Temple at *Jerusalem* during his Reign, and till the second Year of the Reign of *Darius Nothus*, the Successor of *Artaxerxes*; see *Ezra* iv. 24.

Darius.

Darius Nothus commenc'd King of *Persia* in the Year of the World 3527: It was in the Reign of this *Darius* that *Haggai* and *Zachariah* began to prophesy, *Ezra* v. 1. *Haggai* i. 1. and *Zach.* i. 1. he set forward the rebuilding of the Temple, *Ezra* vi. he had two Sons, the elder of which, *viz.*

Artaxerxes Mnemon.

Artaxerxes Mnemon, succeeded *Darius*, in the Year of the World 3546; but being of a mild Temper, his younger Brother *Cyrus* endeavour'd to lord it over him, and put up for Monarch of *Persia*; and in order thereto he hired a Company of resolute *Greeks*, with whom he met his Brother, and overcame him; but, being puff'd up with the Victory, his Presumption cost him his Life.

Ochus.

Ochus, his younger Son came to the Crown of *Persia*, or the Crown to him, in the Year of the World 3589; and being willing to tyrannize, without Controul or Competitor, he made away with all his Brethren that he had any Apprehensions might rival him; he also caused

forty

forty thouſand *Sydonians* to be barbarouſly butcher'd in cold Blood, for only being peaceable Supplicants for his Favour. He recover'd *Egypt*, that had revolted from the *Perſians* in the Reign of his Grandfather *Darius*; in which Expedition the Generals *Mentor* and *Bagoas* commanded, but notwithſtanding ſuch ſignal Service, his Tyranny over them was ſo intolerable, that *Bagoas* gave him a Potion which caſt him into his laſt Sleep, and the next Succeſſor was his Brother

Arſes — *Arſes*, or *Arſames*; who mounted the *Perſian* Throne in the Year of the World 3612: But, according to the old Proverb, *They that love the Treaſon, hate the Traytor*; ſo tho' *Bagoas*, by the Murder of *Ochus*, ſet *Arſes* upon the Throne, yet *Arſes* conſpired his Death for his villanous Way of performing it; but *Bagoas*, being appriſed of the Deſign, found Means to ſend *Arſes* after his Brother, and then the Blood Royal, in a direct Line, was extinct; however *Bagoas* had provided a Friend of his, and Couſin-German to *Arſes*, to ſucceed.

Darius Codomanus — *Darius Codomanus* began to reign in the Year of the World 3615; altho' he was but a Couſin to *Arſes*, yet, when the direct Line was extinct, his Acceſſion to the Throne was very eaſy, as being of high Eſteem at Court, by reaſon of his overcoming a Champion that had challeng'd the *Perſian* Army; but, tho' he was of *Bagoas*'s own chuſing, yet the Guilt of the treacherous *Bagoas* flew in his own Face, for what he had done to *Ochus* and *Arſes*; and being ſenſible what he deſerved for ſuch Treachery, he did not think himſelf ſafe while *Darius* was alive, and therefore reſolved to diſpatch him alſo, in the ſame Manner as he had done the other two; but *Darius*, being inform'd of his wicked Deſign, received the fatal Cup with a ſeeming Pleaſure, but made *Bagoas* drink it up himſelf, and ſo put an End to his wicked and treacherous Life.

This *Darius* lived a Life of Luxury and Security; which *Alexander* (afterwards the Great, the Son of *Philip* of *Macedon*) obſerving, he came upon him, and gave him three fatal Overthrows: The firſt at the River *Granick*, where, notwithſtanding all the Advantages that he had of his Enemies, all his Forces, for want of Diſcipline and Reſolution, ſhamefully fled; the ſecond at *Iſſus*, where his Army was defeated, his Brother ſlain, his Mother, Wife, and all his Court Ladies taken captive, and himſelf forced to caſt away his Crown, and with Difficulty to eſcape with his Life; and laſtly at *Arbela* he had a final Overthrow, when thinking to eſcape by Flight, he was betray'd by his two Commanders, *Nabarzanes* and *Beſſus*, and miſerably murder'd. And thus was the *Perſian* Monarchy quite extinct, and the Victory turning altogether in Favour of *Alexander*, he was ſole Conqueror; ſo that in him begun the *Grecian* Monarchy.

CHAP. III.

Of the Third, or Grecian *Monarchy.*

Alexander the Great. — *ALEXANDER*, commonly diſtinguiſh'd by the Epithet of *Great*, was the firſt Founder of the *Grecian* Monarchy, as has been before obſerved, about the Year 3620: He was the Son of *Philip*, King of *Macedon*, and being brought up under the famous *Epaminondas*, the *Theban*, he was inſtructed in the Policy, as well as the Conduct, neceſſary in martial Affairs: If to this we add, that when *Philip* died, *Alexander* had his experienc'd Soldiers and Officers coming immediately into his Service; all theſe Advantages, and *Alexander*'s natural Fortitude and Braveneſs of Spirit, contributed very much to his ſucceeding Greatneſs, and Succeſs in future Undertakings.

He form'd a Deſign againſt *Perſia*, but firſt prudently reſolved to ſettle *Greece* in a State of perfect Obedience, leſt domeſtick Broils ſhould divert him from, or diſturb him in, his foreign Expeditions; and as *Thebes* was ſo ſtubborn as to give him an unneceſſary Trouble in the intended Reduction, their Ruin was the Effect of his Indignation, to make them a Terror to the reſt; and yet he ſo far reſtrain'd his otherwiſe exaſperated Paſſion, that he pardon'd the Lady *Timoclea*, and preſerved the Race of *Pindar* the Poet, purely out of the Reſpect he had to Learning and Virtue.

Having thus ſettled his *European* Dominions, he went into *Aſia*, and overthrew *Darius* at *Granvick*, as mention'd towards the Concluſion of the foregoing Chapter, and then foraged all *Phrygia* and the Coaſts thereabout at Pleaſure; from thence he paſſed into *Syria*, and advanced the poor Gardener, *Abdolominus*, to be King of *Sidon*: Then, after a ſeven Months Siege, he took *Tyre*; but (*according to* Joſephus) not only ſpared *Jaddus*, the High-Prieſt of the *Jews*, but alſo the City of *Jeruſalem* and the Temple, honouring them with many Immunities and Privileges. Paſſing from thence into *Egypt*, they ſurrender'd as ſoon as he ſet Foot in the Country: He burnt *Perſepolis* in *Perſia*, and conquer'd *Porus* when he withſtood him in *India*; but at laſt dy'd in *Babylon*. Some think his Death was haſten'd by Poiſon, and that *Ariſtotle* and *Caliſthenes* were ſuſpected of it, but without ſufficient Proof. He left his Dominions *To the Worthieſt*; which ambiguous Will occaſion'd ſeveral Competitors, who had each of them Ambition enough to conceit himſelf the Perſon meant. This occaſion'd ſome Strife and Bickering among them for the Succeſſion, till at laſt they agreed upon another Son of *Philip* of *Macedon*.

Antigonus — *Antigonus*, *Philip*'s Son by a Concubine, took upon him the Title of King in the Year of the World 3629, and ſettled himſelf in *Leſſer Aſia*; but was continually harraſs'd by the Rival Kings, who thought their Right, by *Alexander*'s Will, equal to his: His greateſt Conflict was with *Eumenes*, ſir-named *the Valiant*, who held *Antigonus* hard to it, till he was betray'd by *Agyraſpides*. *Perdiccas* alſo form'd a Force againſt ſome of his Dominions, but was quite defeated in *Egypt*. He was afterwards overcome at *Ipſus*, near *Epheſus*; and after various Viciſſitudes in his Succeſs, and Changes of Fortune, he was ſlain by the united Forces of *Seleucus*, *Lyſimachus*, and *Ptolemy*.

Demetrius Poliorcetes — *Demetrius Poliorcetes*, the Son of *Antigonus*, was in the ſame War in which his Father was ſlain; but not meeting with the ſame Fate, he ſurvived, and ſucceeded to the Kingdom in the Year of the World 3651. He was a great Help to his Father when living, and when he came to the Throne himſelf, he ſpread his Conqueſts Eaſtward as far as *Babylon*, which he ſubdued, and then went to *Athens*; where he block'd them up ſo cloſe, that

a dead Mouse happening to fall from the Roof of a House, in which were a Man and his Son, they quarrell'd between themselves which should have it. He married his beautiful Daughter, *Stratonice*, to *Seleucus Nicanor*, of *Babylon*, thinking thereby to strengthen his Alliance, but it proved otherwise; for shortly after this new Son-in-Law, *Seleucus*, join'd with *Ptolemy*, King of *Egypt*, and put an end to the Reign of *Demetrius*, who was succeeded by his said Son-in-Law.

Seleucus Nicanor annex'd all his own *Asian* Dominions to those of *Demetrius*. He erected nine Cities, and call'd them all by his own Name, *Seleucia*, with some other Appellation to distinguish them from one another; and at last put so little Value upon his Father-in-Law's Present of a Wife to him, which was the beautiful *Stratonice* above-mention'd, that when his Son, *Antiochus Soter*, fell so desperately in Love with her, that *Cupid*'s Wound could not be heal'd without her, he bestow'd her upon him, and at his Death left him also the Kingdom.

Antiochus Soter then succeeded, in the Year of the World 3668. I find nothing remarkable recorded of him in History, except his Cruelty to the *Jews*, and that he had by his Wife, *Stratonice*, who was first his Mother-in-Law, a Son, named *Antiochus*.

Antiochus, sir-named *Theos*, Son of *Antiochus Soter*, succeeded his Father. He and *Ptolomy Philadelphus*, King of *Egypt*, were perpetually at Variance, and could never be reconciled, till *Antiochus* put away his Wife, *Laodice*, by whom he had two Sons, *Seleucus Calinicus* and *Antiochus Hierax*, and in her stead married *Berenice*, Daughter of the said *Ptolemy*; but this forc'd and unnatural Alliance did not hold long, (and is supposed to be that spoke of by the Prophet *Daniel*, *Dan.* xi. 6.) for upon the Death of *Antiochus Theos*, the enraged and wrong'd *Laodice* falls upon her late Husband's rival Wife, *Berenice*, and her young Son, which she had by *Antiochus*, and, notwithstanding the solemn Oath of her own Son, *Seleucus Calinicus*, who promised to protect *Berenice*, they were both put to Death. Even the View of a peaceful Accommodation could not attone for such an unnatural Crime.

Seleucus Calinicus next mounts the Throne, in the Year of the World 3704. And altho' one would think he had Provocation enough to fall upon his rival Mother, and her spurious Issue, when his own Mother had been put away for her sake, yet his consenting to the Murder of her, when by the most solemn Vow he had obliged himself to protect her, was reckon'd such a base ungenerous Action, that the Poets, or else the Astronomers, have given her, or at least her Hair, a Place as a Constellation in the Heavens, by the Name of *Coma Berenices*; which is a Cluster of small Stars that are very near the Northern Tropick, and come to the South with the Beginning of *Libra*. This Cruelty to her was so resented by her Brother, *Ptolomy Euergetes*, the Son of *Ptolemy Philadelphus*, that he fell upon *Seleucus*'s Dominions, and took Part of *Syria* from him; but *Seleucus*, by the help of his Brother *Hierax*, recover'd it; which being done, and he again settled in his own Dominions, the late perjur'd *Seleucus* makes a separate Peace with *Ptolomy Euergetes*, without the Advice or Consent of his Brother *Hierax*; at which *Hierax* was so exasperated, that he waged War against his Brother, and drove him out of *Syria*. *Eumenes* in *Bythinia*, *Arsaces* in *Parthia*, and also the *Gauls*, taking the Advantage of those Disturbances, and loving to fish in troubled Waters, began to plunder every where. *Ptolomy*'s Soldiers slew *Hierax*; *Seleucus Calinicus* was kill'd by a Fall from his Horse, and left two Sons behind him, *viz.* *Seleucus* and *Antiochus*, who reign'd in their Turns.

Seleucus succeeded his Father in the Year of the World 3724, but he continued but two Years, and little is recorded of him, but that he was slain by his own Soldiers, and left his Dominions to his Brother. *Seleucus.*

Antiochus Magnus began his Reign in the Year 3726: He attack'd *Philopater* King of *Egypt*; but finding him too hard for him, was glad to make Peace with him, and set upon the *Romans*, who had taken upon them the Guardianship of young *Ptolomy Epiphanes*, of *Egypt*; but being continually beat by them, he retired beyond the Mountains of *Taurus*, and left his Dominions on this Side to the Mercy of his Enemies. *Hannibal*, having been overcome in the second *Punick* War, fled to him for Refuge; but he that could not defend himself being unlikely to protect him, *Hannibal* in despair made himself away, to prevent his being deliver'd to the *Romans*. When most of his other Attempts proved abortive, he went to rifle and plunder the Temples and Treasures of the God *Belus*, or *Bel*, and was there slain by the enraged Multitude, in Defence of their supposed Deity; he left three Sons, *Seleucus Philopater*, *Antiochus Epiphanes*, and *Demetrius*. *Antiochus Magnus.*

Seleucus Philopater was the eldest, and succeeded to the Kingdom in the Year of the World 3763. This is he, who being told what Treasure was in the Temple of *Jerusalem*, 2 *Mac.* iii. 6. sent *Heliodorus* to fetch it, Verse 7. who being affrighted and beat by an Apparition, Verse 24, 25, 26. and returning to the King, he told him, Verse 38. that if he had an Enemy, or a Traitor, he might send him, and he should return well scourged, if he escaped with his Life at all. While the two Brothers of *Seleucus* were Hostages at *Rome*, he thought himself secure from all Attempts on their Part, and indulged himself in all manner of Licentiousness; but the second Brother, *Antiochus Epiphanes*, finding Means to escape from *Rome*, drove his Brother out, and succeeded in the Kingdom. *Seleucus Philopater.*

Antiochus Epiphanes began to reign in the Year of the World 3775: He pretended at first to be Guardian to *Demetrius*, the Son of his deceas'd Brother; but probably fearing that he was bringing up a Bird to pick out his own Eyes, he was no sooner settled but he remov'd all Danger and dispatch'd him. He made an Attempt upon *Egypt*, but the *Romans* hav'd him from it: He then, without any Mercy, fell upon the *Jews*, with a Resolution to extinguish their Religion and destroy their Temple; and, amongst other barbarous Cruelties, martyr'd old *Eleazar*, and also a Woman and her seven Sons all in one Day. (See the sixth and seventh Chapters of the second Book of *Maccabees*.) He caused the Image of *Jupiter Olympus* to be set up on God's Altar, and Sacrifices offer'd to it. His last Expedition was into *Persia*, to the once famous City of *Persepolis*, to plunder the Temple of *Namea*; he pretending to have a Right to her in Marriage, and that he would seize that Treasure for her Dowry, 2 *Mac.* i. 13, 14. But the Priests and the Multitude were too many for him, and sent him away without either Wife or Dowry, and he return'd with Shame to *Ecbatane*, still thundring out Threatnings of Revenge against the *Jews*, till smitten with a filthy incurable Disease; his Flesh falling away, Worms coming out of his Body, and himself not able to bear his own Smell; and in this Condition he gave up the Ghost, nauseous in his Life, and leaving a Stink behind him at his Death. See 2 *Mac.* ix. *Antiochus Epiphanes.*

Antiochus Eupater.

Antiochus Eupater ſucceeded him about the Year 3786, but he reign'd but two Years, till his Uncle *Demetrius*, third Son of *Antiochus Magnus*, came home from *Rome*, where he had been an Hoſtage in *Seleucus Philopater's* Time, and ſoon diſpatching *Antiochus Eupater*, ſucceeded to the Throne.

Demetrius Soter.

Demetrius, ſir-named *Soter*, began his Reign in the Year of the World 3788: When he was ſettled, *Alcymus*, coveting to be High-Prieſt, complain'd to him of the Conduct of *Judas Maccabeus*, 1 *Mac.* vii. 6. whereupon he diſpatches *Bacchides*, and the new made High-Prieſt, *Alcymus*, againſt *Judas*, to ſubdue him; but they not ſucceeding, he ſent his General *Nicanor*, Verſe 26, 27. but he was ſlain alſo, Verſe 43, as was alſo *Demetrius*, *Mac.* x. 50. by *Alexander* his Nephew, called for Diſtinction *Alexander Bala.*

Alexander Bala.

Alexander Bala took Poſſeſſion of the Throne next after *Demetrius*, about the Year of the World 3799: He made a League with *Ptolomy Philometer*, who gave him his Daughter *Cleopatra* to Wife; but *Philometer* ſoon afterwards deprived him of his Wife and his Kingdom, whereupon *Alexander* fled into *Arabia*, where he was ſlain and his Head preſented to *Philometer*. (ſee 1 *Mac.* x. xi.) He left one Son, named *Antiochus*; but his Predeceſſor, *Demetrius Soter*, had two Sons, *Demetrius Nicanor* the Elder, and *Antiochus Sedetes* the Younger.

Demetrius Nicanor

Demetrius Nicanor ſucceeded in the Year 3804; but his Brother *Sedetes* joined with *Tryphon*, and with the Concurrence of the *Aſmonian Jonathan*, expell'd him from the Throne, *Tryphon* privately intending to fix himſelf upon the Throne; but diſappointed of his Deſign, and reſolved, if poſſible, to ſupplant his late Partner in Rebellion, *Sedetes* went into *Arabia*, and, by means of one *Malchus*, procured *Antiochus*, the Son of *Bala*, to ſucceed.

Antiochus Entheus aſcends the Throne in the Year of the World 3807; but he dying before he had reign'd a Year,

Antiochus Entheus.

Tryphon, above-mention'd, aſcends the Throne, *Anno Mundi* 3808: He overcame *Nicanor*; he alſo betray'd and ſlew *Jonathan*, *Mac.* xii. 48. and *Joſephus*, in his *Antiquities*, Book iii. Cha. 12. tells us, that *Simon*, *Jonathan's* Brother, was made General of the *Jews*, and beſieged *Tryphon* in *Dora*; but he eſcaping from thence to *Apamea*, was there ſlain by *Antiochus Sedetes*, the younger Son of *Demetrius Soter*, before-mention'd.

Tryphon.

Antiochus Sedetes ſucceeded in the Year of the World 3811: He was Brother to *Nicanor*, now in Captivity; but he reign'd but ten Years, and invading *Arſaces* was ſlain by him.

Antiochus Sedetes.

Nicanor, then returning from Captivity, began his Reign in the Year 3821; but after an obſcure Reign of only three Years, he died.

Nicanor.

Antiochus Gryphus, the Son of *Nicanor*, next ſucceeds: His younger Brother *Cyzicenus* perpetually vex'd him with Wars and Diſſentions; and being aſſiſted by *Seleucus*, *Phillippus*, and *Demetrius*, Sons of *Gryphus*, and alſo by *Antiochus* their Uncle, their continual Broils ſo weaken'd themſelves and one another, that they became an eaſy Prey to their Enemies; when being ſurpriſed by *Tigranes* of *Parthia* they were overcome, and a final Period put to the *Seleucian* Line. *Cyzicenus* himſelf was alſo ſoon after ſubdued by the *Romans*, and *Syria* made a Province ſubject to the *Roman Empire.* And thus the *Grecian* Monarchy expired, and made Room for the fourth Monarchy of the *Romans.*

Antiochus Gryphus.

CHAP. IV.

Of the fourth, or Roman *Monarchy.*

The firſt of theſe four Monarchies beginning in the Infancy of the Poſt-Diluvian World, *the Æra's, or Periods, from whence we dated the Acceſſion of the ſeveral Monarchs, were the Creation of the World, and the Flood of* Noah; *but the* Aſſyrian, Perſian, *and* Grecian *Monarchies bringing us down ſo near to the happy Year of the Birth of our Bleſſed Saviour, which ought, with all Chriſtians, to be accounted as a Beginning of Time, we ſhall, in the following Account of the* Roman *Monarchy, take our Date from thence.*

Julius Cæſar.

THE *Roman* Monarchy may properly be ſaid to begin with *Julius Cæſar*; who gain'd early and great Fame by his Exploits and Conqueſts in the *Galliſh*, *German*, and *Britiſh* Wars; alſo in the Civil Wars againſt *Pompey*, his Wars in *Alexandria*, and in *Africa*, againſt *Cato*, who ſlew himſelf at *Utica*; and in *Spain* againſt *Sextus Pompeius*; in all which, reckon'd together, he is ſaid to have won fifty ſet Battles. When he was ſettled in the Dictatorſhip, he reform'd the Calendar, which we now uſe in *England*, under the Name of the *Julian* Account, in Oppoſition to that call'd the *Gregorian* Calendar, corrected by Pope *Gregory* in the Year 1582, and now uſed in *Holland*, and the *Roman* Catholick Countries; and gave his own Name to the Month *July* in Memory thereof, it being formerly call'd *Quintilis*, as being the fifth incluſive from *March*. He was the firſt *Cæſar*, and left that Title to his Succeſſors: He began his Reign in the Year of the World 3902, and before the Birth of our Saviour forty-ſeven Years.

Auguſtus.

Auguſtus Cæſar began to reign in the Year of the World 3907, and before *Chriſt* forty-two Years: In his Time all the World was taxed, as it is ſaid *Luke* ii. 1. When *Auguſtus* had vanquiſh'd all his Enemies abroad, and ſuppreſs'd all his Diſturbers at home, he ſhut up the Temple of *Janus* as a Token of an univerſal Peace. And in this Time, and in the forty-ſecond Year of the Reign of *Auguſtus*, our bleſſed Saviour was born, after which *Auguſtus* reigned fourteen Years.

Tiberius Cæſar began in the Year of *Chriſt* 14: He was only the Son-in-Law of *Auguſtus*, being begot of his Wife *Livia*, who had two Sons, this *Tiberius* and *Druſus*, by her former Husband *Tiberius Nero*; he was victorious againſt the *Germans*, for which his Father in Law *Auguſtus* gave him his Daughter *Julia* to Wife, but ſoon had her divorced from him. Our Saviour ſuffer'd in the eighteenth or nineteenth Year of his Reign.

Tiberius.

Caius Caligula begun in the Year 37: He was the Son of *Germanicus* by *Agrippina*, Daughter of *Julius*, and Grandchild to *Auguſtus*: He ſet up his own Statue in the Temple of *Jeruſalem*, and was very cruel to the *Jews* for denying to worſhip it, by

Caius Caligula.

by the Name of *Jupiter Caius*; he erected Stews, deflower'd his own Sisters, and spared neither Maids nor Matrons that his un-limited Lust required: But after his wicked Living, his two Officers, *Cassius Cherea* and *Cornelius Sabinus*, slew him, his Wife and Daughter, all together.

Claudius. *Claudius*, the Son of *Drusus*, the Son of *Tiberius Nero* above-mention'd, succeeded in the Year 41. He would not be honoured with Sacrifices as his Predecessor affected to be; he banish'd the tumultuous *Jews* out of *Rome*, and provided for the Poor in the Famine foretold by *Agabas*, *Acts* xi. 28. which happen'd in his Days. He received his Death by Poison, given him by his Wife *Agrippina*, to introduce her Son *Nero* to the Throne.

Nero. *Nero*, the Son of *Domitian*, began *Anno* 54: He seem'd devoted to Virtue the first five Years, and as visibly degenerated afterwards, debauching what Women he pleased; of whom his own Mother was one, and afterwards murdering her he spared not her dead Corps. He kill'd his Wife *Octavia*, and kick'd to Death his beloved *Poppæa*; and also killed *Seneca* and *Burrhus* his faithful Counsellors: He set *Rome* on Fire, and charged it upon the Christians: He begun the first Persecution, under which *Paul*, and some say *Peter*, suffer'd at *Rome*: And continuing so intolerably wicked, his Soldiers deserted him; when finding his Friends had all forsaken him, he kill'd himself to prevent another's doing it.

Galba. *Galba* succeeded in the Year 67: He was so strict in his Discipline, that his Name was enough to terrify his Soldiers to their Duty; but being soon weary of his Tyranny they slew him.

Otho. *Otho* then succeeded, *Anno* 68: He was well beloved, but a Man of no Resolution, and being overthrown in three several Attempts, and despairing of Success, as being conscious of his own Weakness, he chose rather to put an End to his own Life than draw others to Ruin by his want of Conduct, which accordingly he did.

Vitellius. *Vitellius* began *Anno* 68; but so despised his Subjects, that he had a Saying, *Good is the Smell of a dead Enemy, but better is that of a dead Citizen*; and he got himself as much despised by them; for his Partizans forsook him, dragg'd him through the Streets, pelted him with Mire, and at last threw him into the River *Tyber*.

Vespasian. *Vespasian* came next to the Throne, *Anno* 69: he repair'd the Ruins of *Rome*, shew'd his Aversion to Flatterers and Court Sycophants, and hated base Lust and Revelling: He readily forgave Injuries, tho' a Man of so much Resolution, that he had a *Latin* Motto, which is in *English*, *An Emperor should die standing*.

Titus. *Titus*, his Son, succeeded him, *Anno* 79: His Government was so mild and prudent, that he was sir-named *The Delight of Mankind*; it is said he held a Principle, *never to dismiss a Suitor with a sad Countenance*; and when at Night he had enumerated the Actions of the Day, if he found that that Day he had done no Good, he would cry out, *I have lost a Day*. The Conquest of *Jerusalem* made him famous, and his Grief for the Burning of the Temple was a Proof of the Mildness and Humanity of his Temper; of all which see more in *Josephus*'s History of the Wars of the *Jews*.

Domitian. *Domitian*, the Brother of *Titus*, succeeded next: He set on Foot the second grand Persecution, *Anno* 92, when *John* was banish'd into *Patmos*, and wrote his *Revelation*: He assumed the Title of Lord and God, and was slain by his own Servants.

Nerva. *Nerva* was the next Successor, *Anno* 96: His Government was short but good: In his Time St. *John* returned from his Banishment: He provided for the Poor, and forbad incestuous Marriages; he reign'd but two Years.

Trajan. *Trajan*, a *Spaniard*, next sway'd the *Roman* Scepter: He is said by some to be just, moderate, and valiant; but his Valour seem'd wrong employ'd, for he rais'd the third Persecution. The *Jews*, tho' weaken'd by the late Destruction of *Jerusalem*, made Head against *Trajan*, to the Ruin of a hundred thousand of them, and the suppressing of their Power.

Adrian. *Elius Adrian* took Place *Anno* 118. The fourth Persecution began under him; but by the Intercession of *Aristiades* and *Quadratus*, it was so much mitigated against the Christians, that he would have builded them a Church without Images, had not some about him told him, that it would be dishonourable to the rest of the Gods. The *Jews* arose up in Arms against him, which so exasperated him, that he demolished the City of *Jerusalem*, and, as a Token of absolute Ruin, plow'd up the Streets, and at a small Distance built another City out of its Ruins, calling it after his own Name *Elia*, setting the Image of a Sow over the Gate in Contempt of the *Jews*. He built the Wall in *England* (call'd therefore the *Roman* Wall) from *Newcastle* to *Carlisle*, near 80 Miles long, to separate the *Scots* and *Picts* from the Southern, or *English* Inhabitants. He settled his Kingdom before he died upon

Antoninus Pius. *Antoninus Pius*; who began *Anno* 138: He was well affected to Christians, and esteem'd learned Men; he govern'd his Actions by an Opinion, that *It is more Credit to preserve one Citizen, than to destroy a thousand Enemies*. His Son

Antoninus Philosophus. *Antoninus Philosophus* follows in the Government *Anno* 161: He raised the fifth Persecution against the Christians, in which *Polycarp* and *Justin Martyr* suffer'd.

Commodus. *Commodus* succeeds *Anno* 180: He was a debauch'd Prince, and made an untimely End by a Draught of Poison from his Sweetheart *Martia*; which when he had drank they immediately strangled him, to make quick as well as sure work with him, and get him out of the Way.

Pertinax. *Pertinax* had the Name of Emperor next, *Anno* 193; but thinking too hastily to rectify the Disorders that *Commodus* had left, he was murder'd by the *Pretorian* Bands, and left his Empire in Disorder after less than a Years Reign.

Didius. *Didius* next mounted the Throne, *Anno* 193, rather by Purchase than Right; but *Niger* in *Syria*, and *Albinus* in *Britain* laid claim to it; and *Didius* being slain in his Palace,

Septimus. Severus. *Septimus Severus* next takes Place, *Anno* 193. Here were three Emperors in one Year. This *Severus* raised the sixth Persecution; and, after some Victories in the East, ended his Days at *York* in *England*, after he had reigned eighteen Years.

Bassianus. *Bassianus* began *Anno* 211; noted for nothing but Cruelty and Debauchery; and, in an Expedition against the *Parthians*, going to ease himself, he was slain by one *Martial* a Centurion.

Macrinus. *Macrinus* took the Government upon him *Anno* 217: He made a dishonourable Peace with the *Parthians*; he admitted his Son Co-Emperor with himself; but an End was put to their joint Reign by their own Soldiers, who put an End to both their Lives.

Antoninus Heliogabalus. *Antoninus Heliogabalus* succeeded *Anno* 218: He was the Bastard of *Bassianus* by *Simiamira* a Strumpet, and afterwards used his Mother incestuously himself; he had a Senate of Women, who made Laws as to what Women should wear, how they should take Place, and the like; his Soldiers murder'd him in a Privy, and afterwards threw him into *Tyber*.

Alexander Severus. *Alexander Severus*, Cousin to his Predecessor, came next to the Imperial Dignity, *Anno* 222: He

was

was mild to the Christians, was strict in Discipline, and an Enemy to Idleness: He would not allow the buying and selling of Places, but bestow'd them according to Merit: He was so averse to having any Trade carried on in Bubbles and imaginary Views, that he caused one of those Sort of Traders to be stifled with Smoke, because he had made a Trade of Smoke instead of Substance; but he, together with his Mother, were slain by his own Soldiers, near *Mentz* in *Germany*.

Maximinus — *Maximinus Thrax* succeeded *Anno* 235. His Tyranny so irritated his Soldiers, that they set up *Quercianus* in opposition to him, but he was soon overcome; but his Senate encouraging his Competitors against him, he hasted to *Rome* to be revenged of them; but at the Siege of *Aquileia* both he and his Son were slain by his own Soldiers. He was gradually rais'd to the Imperial Dignity from a common Soldier, merely on Account of his Stature and Stomach; being the largest Man and the greatest Eater in the whole Army.

Gordianus — *Gordianus* next mounts the Throne, *Anno* 239: He is taken Notice of only for his Success against *Sapor* of *Persia*, but was made away by his General.

Philippus — *Philippus Arabs* succeeded, *Anno* 244, but he and his Son were both slain by his own Soldiers.

Decius — *Decius* next sway'd the Scepter, *Anno* 251; he was Author of the eighth Persecution.

Trebonianus. — *Trebonianus Gallus* betray'd *Decius* and his Son to the *Goths*, where they both perished, and *Trebonianus* reigned *Anno* 252, but he was soon betray'd and dethroned, and

Valerian. — *Valerian* succeeded him *Anno* 255: He raised the ninth Persecution against the Christians, in which *Cyprian* suffer'd, and *Laurence* was roasted on a Gridiron; but this haughty Prince being afterwards taken by *Sapor*, King of *Persia*, he used him as a Footstool to mount his Horse by; and his Son, whom he had before made Partner with him in the Government, succeeded him, *viz.*

Galienus. — *Galienus*, *Anno* 260: He never moved to redeem his Father from, or relieve him in, his Slavery; but spent his Time in Gluttony and Idleness, till he was overcome and slain by *Claudius*.

Claudius. — *Claudius* then succeeded, *Anno* 267: He overthrew the *Goths* by Sea and Land: When *Claudius* was sick upon his Death-bed, his Brother *Quintilius* thought to have succeeded; but being too weak to conquer, and unwilling to be conquer'd, he open'd a Vein and bled himself to Death.

Aurelianus came next to the Crown, *Anno* 269: It was he that brought *Zenobia*, Queen of *Palmyra*, Prisoner to *Rome* in Golden Chains: As his Greatness so his Cruelty increas'd, till he was betray'd by his own Secretary and slain. *Aurelianus*

Tacitus appears next in the Imperial List: He began *Anno* 277, but dy'd before he had reign'd a Year. *Tacitus*

Probus next succeeds, *Anno* 277: He subdued the *Germans* on the West, the *Persians* on the East, and other *Roman* Enemies; and for his good Service the very Soldiers that chose him made him away, when he had reign'd five Years. *Probus*

Carus and his two Sons all reign'd, severally, successively in one Year, *Anno* 283; and being all dead, *Aper* thought to have had the Empire, but was slain in the Attempt by *Diocletian*. *Carus*

Diocletian then acceeded to the Throne, *Anno* 284: He was told that he should be Emperor when he had slain a Wild-Boar; and, allowing the Expression to be figurative, he concluded this *Aper* that he had slain was the Boar meant, because his Name imply'd as much: He was puff'd up with Pride, and those that used to kiss the Hand or the Knee of other Emperors must kiss his Foot: He rais'd the tenth and severest Persecution, wherein Churches were overthrown, Bibles burnt, and all possible Barbarities used: He made *Maximianus* Co-partner in his Government; and being weary of his new invented Cruelties, his Partner and he agreed to quit all Government and live as private Men, which they did: His Cruelty against the Christians had been so odious, that amongst the Competitors for the Government, he that was most tender to the Christians stood fairest for the Succession; whereupon *Diocletian.*

Constantius Chlorus was elected, *Anno* 304: He was of so good a Disposition, and so willing to encourage the Christian Religion, that in the Choice of his Soldiers he chose the Professors of Christianity and rejected the Idolaters. He dy'd peaceably at *York*, after divers Victories over his Enemies, and was succeeded by *Constantine the Great*; after whom the Succession continued in a Race of Christian Emperors. *Const. Chlorus.*

Virtue of imaginary hereditary Right, contrary to the Conſtitution of the Republick; not but that formerly they had ſuch a Regard for the Royal Family, that they ſcarce ever elected a King but what was a Branch of it for eight hundred Years together. The King's eldeſt Son is ſtil'd, by way of Eminency, *The Prince of* Poland; the other only Princes, as Prince *Alexander*, Prince *Conſtantine*, &c. his eldeſt Daughter is alſo call'd *Princeſs of* Poland, the reſt only Princeſſes; but when a new King is elected his Children take theſe Titles, and the Children of the deceas'd King bear only the Sir-names of their Families, annex'd to the Title of Prince, as Prince *James Sobieski*, &c.

Council. It is obſerved before that none but Natives of *Poland* can be of the King's Council, or of the Senate; and theſe two Bodies, jointly with the King, can make Acts to bear the Authority of Laws, till repeal'd by the Diet. And by Cuſtom they have now prevail'd ſo far, as to receive and ſend Ambaſſadors, make Alliances, and declare Peace and War when no Diet is ſubſiſting, tho' that is contrary to the third Article of the *Pacta Conventa*, which he ſigns at his Acceſſion; but as the Senate is not ſo tumultuous a Body as the Diets generally are, they are thought the moſt proper to treat with foreign Princes, jointly with the King himſelf, upon Affairs of Conſequence, and that require Diſpatch.

Senate. The Senate conſiſts of Biſhops, Palatines, &c. The Palatines are Governors of the Palatinates, and conſequently may be call'd the Repreſentatives of their reſpective Provinces, and could not be Senators without being poſſeſs'd of ſuch high Poſts, in the King's Gift. The Caſtellans are Lieutenant-Governors, or Commanders of Diſtricts, or Sub-diviſions, in the Provinces; and they, as well as the Palatines, have their Commiſſions directly from the King's own Hand.

Eccleſiaſtical Senators. Eccleſiaſtical Senators are the two Archbiſhops, viz. of *Gneſna* and *Leopol*, and their Suffragans, fourteen in Number. Thoſe under the Archbiſhop of *Gneſna*, are the Biſhops of *Cracow*, *Cujavia*, *Poſen*, *Plocko*, *Vilna*, *Varmia*, *Samogitia*, and *Culm*. Thoſe ſubject to the Archbiſhop of *Leopol* are the Biſhops of *Chelm*, *Camina*, *Luceoria*, *Premiſlia* and *Kiovia*.

The Archbiſhop of *Gneſna*, who is alſo Primate of *Poland*, and firſt Senator, had that Title given him by the Council of *Conſtance*; and by a Decree of the Council of *Lateran*, he ſtiles himſelf the *Pope's Legate born*. At an Inter-regnum he rules as King; and when there is a King upon the Throne the Primate's Power is not much inferior to his; for the Primate receives Appeals from other Biſhop's Courts, and when he attends the King, he has a Golden Croſs carried before him, and the Great Chamberlain receives him at the Foot of the Stairs; the King comes out of his Chamber into the Anti-chamber to meet him, and introduce him into his own Chamber.

Ten great Officers. The ten great Officers, who are by their Poſts entitled to be Senators, are, 1. the Great Marſhal, or Great Steward of *Poland*; 2. the Great Marſhal, or Great Steward of *Lithuania*; 3. the Great Chancellor of the Kingdom; 4. the Great Chancellor of *Lithuania*; 5. the Vice Chancellor of *Poland*, and 6. that of the Dutchy; 7. the Great Treaſurer of the Crown, and 8. that of the Dutchy; 9. the Little Marſhal of the Crown, and 10 that of the Dutchy: And the Officers of the Dutchy of *Lithuania* have as much Authority as thoſe of *Poland*, only the latter take place of thoſe of *Lithuania* when they are aſſembled in the Senate in *Poland*; but when the Court is in *Lithuania*, the Officers of that Dutchy have the Preference, and when ſome of the Officers of *Poland* are abſent, the Officers of the Dutchy ſupply their Places.

The Grand Diet is ſummon'd by the King, or, in an Inter-regnum, by the Primate; and, according to Agreement, there are always to be two Seſſions, or Diets, held at *Warſaw* in *Poland*, and the Third, *viz.* one in three, is generally held at *Grodno* in the Province of *Lithuania*.

Calling the Diet. When the King intends to hold a Diet, he ſends Circular Letters to the Palatinates of the Provinces, to acquaint them with the Time when, and the Place where, the Diet is to be held, and the Heads of the Articles, which between him and the Senate are determin'd to be debated upon, and the Time it is to hold, which ſeldom exceeds ſix Weeks.

The firſt Buſineſs in the Diet is to chuſe a Marſhal, or Speaker, in which Affair they are ſometimes ſo tumultuous, that the whole ſix Weeks is ſpent and the Marſhal not choſe at laſt, and conſequently no Buſineſs enter'd upon; but as ſoon as he is elected, he with the reſt of the Deputies attend the King in the Upper Houſe, or Senate Chamber; where the Great Chancellor, in the King's Name, propoſes all the Matters to the Diet that are intended to be the Subjects of their Debates; which are commonly about the Election or Marriage of their King, the making Alliances with foreign Princes, declaring War or Peace, impoſing Taxes, raiſing Forces, naturalizing Foreigners, and the like; and in both Civil and Criminal Cauſes the laſt Appeal is to the General Diet.

The Members of the Diet wear no diſtinguiſhing Habit, but dreſs more or leſs rich, according to their Abilities and Inclinations, and ſit in the Diet with their Sabres girt on: The King ſits on a Throne, advanc'd a little above the reſt, at the upper End of the Senate-Houſe; the Biſhops ſit a little lower, next the Throne, on the Right Hand and on the Left; the Primate at the Head of thoſe on the Right Hand, and the Archbiſhop of *Leopol* at the Head of thoſe on the Left; next to them, on the Right Hand, ſtand the five Great Officers of *Poland*, who are Senators; and on the Left thoſe of *Lithuania*; the Lay Senators next takes their Places; and behind them the Deputies, or Repreſentatives, of the Palatinates, the loweſt Claſs of the Members of the Diet.

Every Member, while in the Diet, has Liberty of Speech, without Reſpect of Perſons; ſo that the King himſelf is not only contradicted with ill Language, but ſometimes threatned, and that with the ſame Freedom as the meaneſt Member: And if ſome, more impudent than the reſt, either of their own accord, or put upon it by a Party, will talk Nonſence for an Hour together, on Purpoſe to drown and confound the Debates about ſomething upon the Carpet, there is no Remedy but Patience; ſuch Perſons often cauſe a Matter to be poſt-poned, or ſometimes quite thrown out, purely by dint of Noiſe, when, if every Member had a fair hearing, a great Majority would appear in it's Favour: And for this Reaſon they often break up without concluding any Thing, and the Senate is at laſt forc'd to determine Affairs; which, by the Conſtitution of the Republick, they have no Authority to do, that being the Prerogative of the Diet only.

Every *Poliſh* Gentleman is a petty Sovereign in his own Eſtate, and in moſt Caſes above the Cognizance of the Superior Courts; his Tenants being look'd upon as his Vaſſals or Subjects, over whom, in petty Caſes, he exerciſes a Sort of an abſolute Power without Contradiction: But in Criminal Caſes, as, if he kill one of his Tenants, he is liable to a Fine; and if he raviſh a Tenant's Wife or Daughter the Family are enfranchiz'd, enjoying what they held before, and he loſing their Service as a Puniſhment for his Crime; but there is no Corporal Puniſhment inflicted upon him.

CHAP. IX.

Of the Military Officers, Forces, and fortified Towns in Poland.

UNDER the Name of *Poland* we also include the great Dutchy of *Lithuania*, whose combin'd Forces, when all the Gentry are summon'd to appear on Horseback, as at an Election, or the like extraordinary Occasion, are computed to amount to an hundred and fifty thousand Horse, besides Foot; but in fact, those that actually appear in the Field upon such a Summons fall vastly short of that Number. And as for their Army, or Military Force, even in Time of War, they seldom exceed forty thousand Men, and in Time of Peace scarce half that Number; and these are so dispers'd in their respective Palatinates, and so little regard the Summons when sent them, that an Enemy may over-run half the Country before they can be assembled; which doubtless contributed very much to the King of *Sweden*'s Success when in *Poland*, he being generally in the Field, ready for an Enterprize, while the *Poles*, who should have resisted, were so far to seek, and required such a Time to assemble, that he often accomplish'd his Designs with little Opposition.

Grand Generals. THEY have two Grand Generals, one for the Kingdom, and the other for the Dutchy; they both have their Commissions from the King, and hold them during Life; these Generals are usually chosen out of the greatest Senators; they are independent upon each other, nor is there any Superiority between them, any further than that, when they meet, the *Lithuanian* pays the Compliment of giving Place to the *Polander*; and where they are both engaged in a general Battle, the *Poles* take the Right, and the *Lithuanians* the Left; but their Authority is equal, and not to be controul'd by any Order, even by the King himself, but they march and quarter their Troops when and where they think fit: When the King is in the Army he has the absolute Command of it, without any Competitor in Authority, any further than as he thinks fit to depute proper Persons to assist him him in the Command.

Their Lieutenant Generals act in the Absence of, or in Subordination to, the Grand Generals, and usually succeed them at their Decease. Other great Military Officers are the Standard-bearer, the Master of the Artillery, the Commanders upon the Frontiers against the *Tartars*, *&c.* and the Colonel of the King's Guards, who has the sole Command of that Body when the King is in the Field, but is at other Times subject to the Generals. These Guards are regular Troops, and (under a *Saxon* Prince, as the late *Augustus* was) are commonly compos'd of *Germans* and other Foreigners, and commanded by a *Saxon* Colonel; but of late, by the Importunity and Uneasiness of the *Poles*, the King agreed that they should receive their Orders from the Crown General. The Sarosta's are Governors of Cities and Castles; and the Burgraves are their Lieutenant Governors, and Commanders of the Soldiery in their respective Districts.

THE Body call'd *Hussars* are the *Polish* Horse; they amount to about fifteen hundred, enclosed in Armour from Head to Foot, and arm'd with Pistols, Lances, and Sabres. There is another Body call'd *Towarzyss*; their Armour is a Breastplate, Helmet, and Gorget; their Weapons are Bows and Arrows, Carabines, and Sabres; both these Bodies are select Men, and adorn their Heads with Feathers of Ostritches, Cranes, Turkies, *&c.* they cover their Armour with Skins of Tygers, Bears, Leopards, *&c.* which makes them look very terrible in the Field. There is also another Body of seven thousand Horse; these Men wear Armour; their Dress differs from the former, but they may wear Feathers if they please; these Troops are all separate and independant, and not incorporated into any Regiment. But there is a fourth Kind of Horse, and the most numerous; they have no Armour; their Weapons are Bows and Arrows, and Sabres; and they are distinguish'd by a short Cloak, or Mantle, over their Cloaths; but neither they nor any other Troops are distinguish'd by any particular Colour, as in most other Nations. They have of late left off their Lances, Bows and Arrows, and more frequently have taken to the Use of Fire-Arms.

Foot. THE *Polish* Foot Forces are of little Use, but serve for Pioneering and other Drudgery. The *Cossacks* fight either on Foot or Horseback, according as they are provided, or may do the most Execution. But if the *Poles* want Infantry, to carry on a Siege, or the like, and the King a Native of *Poland*, they hire Forces of the *Germans*, or other Foreigners; but when the King is not a Native, as was the Case when *Augustus*, Elector of *Saxony*, was King of *Poland*, he supply'd them with Foot Forces from his own Dominions of *Saxony*, or from his Confederate the *Moscovite*; which whatsoever Pretence *Augustus* might have for bringing them there, of assisting the *Poles* against their Enemies. the Republick had much rather have been rid of them.

THE National Troops as compos'd of the Gentry, as above-mention'd, are not oblig'd to march beyond their own Frontiers, or to remain in the Field above six Weeks at a Time; which has often destroy'd Enterprizes which were otherwise the most promising, had the Government had a Power to extend them beyond the Time and Place limited, as their View of Success and other Circumstances of the Undertaking required; but they insist so much upon those Privileges, (as they think them) that if they happen to gain a Victory, they had rather quit it when they have done, than stay in the Field beyond the limited Time to maintain their Conquest. And this Security and Indolence of the *Poles* gives their King (if Elector of *Saxony*) an Opportunity of quartering his *Saxon* Troops amongst them, under a Pretence of defending them, though at the same Time he is only intending to oppress and enslave them; and that there may be a greater Necessity for his *Saxon* Troops, he does not desire the *Poles* to improve themselves in the Art of War; which Want of Discipline, their little regard to Order or Command, and the frequent Bickerings of one Province against another, with the frequent Disorder and Confusion of their Diets, make their Power as little regarded abroad as their Consultations are at Home.

BUT another Thing, which makes the *Polish* Forces do so little Execution abroad, is the common Soldiery (who otherwise might probably be pre-

prevail'd upon to travel) have no Magazines, nor so much as Victuallers or Suttlers to supply the Army if they had Money, nor are they paid above once in half a Year; so that they are forced to carry what Provisions they can along with them, and when that is all eaten up, and their Half-Year's Pay not come due, they must either return home, or live upon the Plunder of the Country, or Province, where they are, which indeed they make little scruple of; and hence they may be said to oppress rather than defend the Country.

Fortifications. THEIR Fortifications are generally like their Military Discipline, poor and out of Order: The strongest they have on the *Turkey* Side is *Caminec*; and that so weak, that its remaining so long in the Possession of the *Turks*, might justly be imputed to the Ignorance and Unskilfulness of the *Poles* to manage a Siege against it, rather than to the Strength of the Place. *Cracow* may be call'd a strong City, if compar'd with other *Polish* fortified Places; but in the Wars between the *Swedes* and the *Poles*, it could scarce ever hold out a Week's Siege, but was alternately surprized by one, and taken from the other, when the Possessor had not an Army to cover it; which was all they had to trust to, so little could they depend upon their Fortifications.

THE *Poles* are so far from looking upon it as a Disadvantage to have so few fortified Places, that they impute the Preservation of their Country and Liberties chiefly to the Want of them; for should an Enemy penetrate into the Country, they think they would be forc'd to retire as soon as they advanc'd, because there are no Fortresses where they could erect Magazines, or fix themselves secure, but would be obliged to retire as soon as the Provision and Ammunition they brought with them were consum'd. And besides, they think that if there were many fortified Towns, the King might place Garrisons in them, and by that Means bridle the Subjects at his Pleasure, and deprive them of the Liberty and other valuable Privileges they now enjoy.

WE have not yet taken Notice of *Dantzick*, which being an independant City, is regularly fortified. But we shall be able to give the Reader a better Account of this Place in our Supplement to the History of *Poland*, when the Differences between the two present Competitors for the Crown of *Poland* are adjusted. *Dantzick*

CHAP. X.

Of the Courts of Justice and Religion of the Poles; *also of their Physicians, Diseases, Marriages, and Funerals; and of their Condition with respect to other Nations; concluding with some further Account of the* Cossacks.

THOSE *Polish* Gentlemen, or Petty Sovereigns, mention'd towards the Conclusion of Chap. VIII. have their several Courts, of which they make their Stewards and Officers Judges. The next Courts are those of the Starostas, or Governors of Cities and Castles, which usually have large Districts belonging to them; here the Staroста, or his Deputy, administers Justice; but there is an Appeal from thence to the higher Courts of Justice, two of which are held in *Poland*, and one in *Lithuania*: Those in *Poland* are held alternately, at *Lublin* and *Petricow*; and that for *Lithuania*, at *Wilna*, *Minski*, or *Novogrodesk*; but the last, or highest Appeal, is to the See of *Rome*; upon which Account the Pope's Nuncio, who resides constantly in *Poland*, and keeps a Court there, draws considerable Sums of Money from the *Polish* Subjects.

Religion. FROM the *Pacta Conventa*, and other Laws and Customs of *Poland*, it is evident that the establish'd Religion of *Poland* is that of the *Roman* Catholicks, to which they are zealously bigotted; for there being many *Lutherans* and *Calvinists* among them, and in the adjacent Parts, the *Poles* are the more zealous in the Practice and Defence of their own Religion in Opposition to the other. In *Prussia* the Majority are *Lutherans*, and, by the Treaty of *Oliva*, are to be defended and protected in the Exercise of their Religion. Also in *Courland* the establish'd Religion is the *Lutheran*, but not without a Mixture of *Roman* Catholicks and *Calvinists*. But in other Parts of *Poland* the *Roman* Catholicks amount to a vast Majority, and exercise their Power with an equal Cruelty over their Protestant Fellow-Subjects; witness the bloody Massacre at *Thorn*, in the Year 1724, already spoken of, the Memory of which, Time itself will never be able to obliterate.

WE have some particular Instances of the Zeal of the *Polish Roman* Catholicks; for they would not marry or contract Alliances with Christians of a different Persuasion: As in the Case of *Uladislaus* V. who refused the Crown of *Bohemia* because the *Hussites* prevail'd in that Kingdom. And in the Reign of *John Casimir*, the *Swedes* were expell'd *Poland* because they were *Lutherans*; and now no *Greek* or Protestant is admitted to sit in the Senate, or Diet, or in the Courts of Judicature; and finally, as was observed in the eleventh Article of the *Pacta Conventa*, the King is oblig'd to be a *Roman* Catholick.

THE *Socinian* Religion prevails pretty much in *Poland*; and, notwithstanding that there have been Acts in several Reigns to extirpate People of that Persuasion, yet they so much encourage even *Mahometanism* itself, that there are reckon'd above thirty thousand *Tartars* who profess that Religion. The *Armenians* and *Greek* Churches are allow'd, and have their Bishops, Priests, &c. And of *Jews* some reckon not less than a Million of them dispers'd in *Poland*, who meet with great Indulgence from the Government.

THEY never consult Church History in the Practice of the Primitive Times, whereby to form a regular Method of Church Government; but seem to be acted by an implicit Faith, being entirely govern'd by the Decisions of the Church of *Rome*; and if any Thing therein is contrary to Reason itself, they prevent its being expos'd, by not suffering any Person to enquire into the Reasonableness of their Tenets.

THE *Sclavonian* Language is commonly used in *Poland*, but with such different Dialects, in the several Provinces, that they scarce understand one another; there are so many Consonants made use of in their Words, that if they did not found Langua

more

more Vowels in ſpeaking than they inſert in writing they could not pronounce what they write. But as there are whole Towns or Villages in *Pruſſia*, whoſe Inhabitants are of *German* Extract, the *High Dutch* prevails among them, and the Terms of Art are generally in that Language. The *Ruſſian* and *Tartarean* Languages are alſo ſpoken on their reſpective Borders; and the *Jews* have in ſome Places introduc'd the *Hebrew* Tongue. The *Latin* is the chief Language taught at their Schools, which are common in almoſt every Village, and their Girls learn in the Nunneries.

Diſeaſes and Phyſick.

THE moſt eminent of their Phyſicians are commonly *Germans*, *French*, and *Italians*, the *Poles* not much applying themſelves to thoſe Sort of Studies; though we hear of one illiterate Quack, that lived in a Wood about ſix Miles from *Warſaw*, that undertook to cure the *Veneral Diſeaſe*, which is very common here. But the Diſtemper more peculiar to *Poland* is call'd the *Plica*; in which the Hair of the Head is matted together, and generally hangs in twiſted Ropes down to the Middle. Thoſe that have this Diſtemper, if their Hair be kept ſhort, yet it will be ſo matted in one Night's Time that it is impoſſible to clear it; and if they cut it off to prevent matting together, it cauſes a Dimneſs of the Sight, and ſometimes total Blindneſs, with Pain in the Head and Limbs, and ſometimes Puſtules all over the Body. This Diſtemper ſeems to be peculiar to the Place rather than the People, for Foreigners frequently have it when in *Poland*, but with this Difference, that they can cure it by cutting off their Hair, without any other Inconveniency attending it. The Scurvy, Pluriſy, Malignant Fevers, *&c.* are ſeldom found to be of ſuch ill Conſequence in *Poland* as in *England*, and other Countries.

Marriages and Funerals.

THERE is nothing remarkable in the Marriages or Funerals of the *Poles*, only that they both are commonly very pompous and expenſive: At a Marriage the Company make Preſents to the Bride, which generally amounts to a conſiderable Fortune. The Eſtate of the Father is, by the Laws of *Poland*, to be equally divided among his Children, except any of them go into a Monaſtery, and then their Parts are divided among the reſt; and this very often happens to be the Caſe, the Parents frequently encouraging the younger Children to engage in a Monaſtick Life, that the eldeſt may have the Eſtate, which would otherwiſe dwindle away to a Trifle for each, when divided and ſubdivided down amongſt a numerous Iſſue.

OF all the Neighbours that *Poland* has to be afraid of, the *Ruſſians* are the worſt; who (although before the Time of the late Czar, *Peter the Great*, they were an unpoliſh'd undiſciplined People, yet) now are new modell'd and diſciplin'd by that Prince, have caſt off that Contempt under which they lay, both from the *Swedes* and *Poles*, and are become the moſt formidable Power in the North: And the *Poles*, though a numerous People, yet are unſtable, and, for want of Union and Order, are not able to make Head againſt any Invader in their own Defence, much leſs to act offenſively againſt any other Power; whereas, were they all unanimous, it is much to be queſtion'd whether any *European* Prince could be able to make any Impreſſion upon them; but they are not the only People that make themſelves leſs formidable abroad by their Diſcontents and Diviſions at home.

Some further Account of the *Coſſacks*.

THE *Zaporowski Coſſacks*, who inhabit the Weſtern Shores of the *Nieper*, or *Boriſthenes*, near the Cataracts, are deem'd Subjects of this Kingdom; but thoſe on the Eaſt Side are reckon'd to belong to *Ruſſia*, according to their Situation; but it is ſometimes according to their Inclination; for of the *Poles* and *Ruſſians* theſe *Coſſacks* ſometimes put themſelves under the Protection of the one, and ſometimes of the other; and ſometimes they will engage in the Service of the *Turk* himſelf, according as who uſes them beſt, or gives them moſt Money.

THESE *Coſſacks* are but of late ſtanding, as not being heard of till the Sixteenth Centuary; and, as they are generally of the *Greek* Communion, they are ſuppoſed to derive their Original from ſome opprels'd People in the *Ruſſian* or *Turkiſh* Dominions, who fled for Refuge to thoſe Rocks and Mountains which lie towards the Mouth of the River *Boriſthenes* for Shelter from their Oppreſſors; where being increas'd to ſome Thouſands, they infeſted the *Black Sea*, and made Deſcents into ſeveral Parts of *Turkey*, advancing ſometimes almoſt to the Gates of *Conſtantinople* itſelf. Their Boats are flat-bottom'd without any Keel; they are about ſixty Foot long, and ten or twelve Foot broad; they are lined ſo thick on the Outſide with Bundles of Willows or Reeds, that a ſmall Stroke againſt a Rock cannot hurt them, nor will they ſink though full of Water, being born up by the Bundles aforeſaid; theſe Boats, with twelve or fifteen Oars on a Side, will row with incredible Swiftneſs, and outdo the ſwifteſt *Turkiſh* Galley.

ABOUT *Autumn*, it is common for about a hundred of theſe Veſſels, mann'd with ſixty or eighty Men each, having two Fire-locks a-piece to run down the *Boriſthenes*, from the above-mention'd Rocks and Cataracts, towards the *Black Sea*; and although the *Turkiſh* Galleys lie at the Mouth of the River to intercept their Paſſage, yet the *Coſſacks* row through the Reeds which grow at the Mouth of the River *Boriſthenes*, for three or four Leagues together, where the *Turkiſh* Galleys cannot come, nor can they overtake them when once they are got paſt them; all that they can do is to give Notice to the Coaſt of the *Black Sea*, and the adjacent Country, that the *Coſſacks* are out, as they term it, for they plunder and ravage all, where-ever they come. It is never known where they will make their Deſcent, only they ſeldom go far up the Country, or ſtay long in a Place, but make off with their Booty with Precipiration, before any Force can aſſemble to ſuppreſs them, and retire to the Mouth of the River *Boriſthenes* again. They are ſometimes met with by the *Turks* in their Return, who know nearly the Time when to expect them.

THIS Country lying between *Turkey*, *Ruſſia*, and *Poland*, was entirely deſerted by reaſon of the perpetual Ravages of the *Tartars*, which made it unſafe for any People to inhabit, till the *Coſſacks* (as ſavage as the *Tartars* themſelves) poſſeſs'd themſelves of it: Their Poſſeſſion was but ſmall at firſt, but is now extended to an hundred Leagues in Length, and forty in Breadth; and the Weſt, or *Poliſh* Side of the *Nieper* is exceeding fruitful.

Stephen Battori, who commenc'd King of *Poland* in the Year 1577, firſt taught the *Coſſacks* the Art of War, and employ'd them to ſerve againſt the *Turks*; and they afterwards ſerv'd *Poland* as a Barrier againſt the *Tartars*, till the *Poles* uſing them ill, they join'd the *Tartars* and *Ruſſians* againſt them, and ravaged and plunder'd their Country. While the Grand Seignior had *Kaminec* and the *Ukrain*, which was from the Year 1677 to 1699, the *Coſſacks* on the Weſt Side of the *Nieper* were ſubject to *Turkey*; but by the Peace of *Carlowitz*, it was agreed that they ſhould be ſubject to *Poland*, under whoſe Dominion they now remain; but are of little Uſe, but to harraſs an Enemy's Frontiers, or purſue their flying Troops.

A DESCRIPTION OF THE EMPIRE OF *MOSCOVY*, or *RUSSIA*.

CHAP. I.

Of the Situation and Extent of the Ruſſian Empire; *alſo of the Air and Climate, and of the Seas, Lakes, and Rivers, with which it is water'd.*

Boundaries and Extent.

IF we take the *Ruſſian Empire* in its full Extent, and include the additional Conqueſts, as they now ſtand annex'd to that Crown, it is bounded by the *Frozen Ocean* towards the North; and towards the Eaſt by *Chineſian Tartary*; by the *Calmucks*, the *Caſpian Sea*, *Coban Tartary*, *Georgia*, the *Palus Meotis*, and the *Leſſer Tartary* on the South; and by the *Bothnick Gulph*, the *Baltick Sea*, and *Poland*, on the Weſt. The Eaſtern Bounds of that Part of *Moſcovy* which lies in *Europe*, is the River *Tobol* till it meets with the River *Iris*, whoſe Name it afterwards bears, till thoſe united Rivers fall into the River *Oby*, and go by that Name: The South Part of *Moſcovy* in *Europe* is divided from *Moſcovy* in *Aſia* by a Line drawn from the River *Tobol* to the Mouth of the River *Don*, or *Tanais*. Its Length from North to South is from 45 Degrees to 70, about fifteen hundred Miles; it extends indeed further North, the North Cape (about which our Ships trading to *Archangel*, are obliged to ſail) lying in near Seventy-one and a half North Latitude, but it is ſcarce habitable in any higher Latitude. It contains about fifty Degrees of Longitude, which accounted in Latitude 57. 30, the Middle between the two extreme Latitudes, is above ſixteen hundred Miles in *Europe*; beſides his vaſt Dominions and numerous Provinces in *Aſia*; which contain about thirty-ſix Degrees of Longitude, or one thouſand one hundred and ſixty Miles more, in all about two thouſand ſeven hundred Miles; and conſequently the Czar's Dominions in the Continent of *Europe* and *Aſia* is by much the largeſt Tract in that Continent ſubject to one Monarch.

THE late Czar of *Moſcovy* taking the Advantage of the Civil Wars in *Perſia*, wherein the *Perſians* deſtroy'd one another and weaken'd themſelves, made his new Conqueſts near and beyond the *Caſpian Sea*; but as the *Perſians* will not quit their Claim to his new Acquiſitions, we ſhall not at preſent reckon them any Part of the Czar's Dominions.

Name.

THE Province of *Moſcow* gives Name to the whole Empire, and the general Name of *Moſcovy* includes *Ruſſia*, and all the Czar's antient Dominions; but *Caſan*, *Aſtracan*, the *Coſſacks* and *Circaſſians*, and the large Country of *Siberia*, as well as *Livonia* and *Finland*, being late Acquiſitions, do yet retain their own Names.

Climate.

THE longeſt Day in the South Part of *Moſcovy*, is about fifteen Hours and a half, it being in a leſs North Latitude than the Southermoſt Part of *England*; but at the North Cape above-mention'd the Sun never ſets from the Beginning of *May* to the Middle of *July*; nor does it ever riſe from the Beginning of *November* to the Middle of *January*. During the Winter (which continues ſeven Months, or, in the Northermoſt Part of *Moſcovy*, eight or nine) the whole Country is cover'd with Snow, a Yard or two thick, and the Rivers are all frozen up; the Air is ſo exceeding ſharp, that Water ſprinkled in ſmall Drops up into the Air freezes in falling, before it can reach the Ground: And many People, who having Buſineſs there in the Summer, are unwarily overtaken by the Winter before they get away, have loſt their Fingers, Toes, or Noſes, by the exceſſive Sharpneſs of the Cold. I myſelf, in a Voyage to *Archangel*, in the Year 1710, came over the Barr, homeward bound, on the twenty-ninth of *September*; when it ſnow'd at ſuch an exceſſive rate, that it was difficult to attend Buſineſs upon the Deck; but we were obliged to get out to Sea, leſt we ſhould be frozen up, and the River cloſed with Ice, as it was within four Days, *viz. October* the third, as we were told the next Year, when we went thither; and that the Ice did not break up, or the River

The Author's Voyages to *Archangel*

River open, till the third of *May* following, ſo that the River was actually frozen up for ſeven Calender Months. When theſe exceſſive Snows begin to fall, they can pretty ſafely predict the cloſing of the River with the Froſt: For when in thoſe ſevere Froſts the Snow falls in ſuch vaſt Quantities upon the Surface of the Water, it moiſtens, and would diſſolve if the Froſt would permit it; but inſtead of that, tho' as it falls it moiſtens, yet the Froſt being ſo ſevere, it freezes again, and by this Means the Ice will be increas'd to ſeveral Inches in Thickneſs in a few Hours time, till by degrees it begins to choak, and the Stream to ſtagnate, and then it is an eaſy Prey to the inveterate Froſt, and is ſoon congeal'd to Ice from Top to Bottom, or from the Surface of the Water to the Bottom of the River.

Archangel lies in about Latitude ſixty-five North; but in our Way home we were obliged to come about to the Northward of the North Cape, which lies in about ſeventy-one and a half; and that Year, about the Middle of *October*, we were drove ſeveral Degrees to the Northward of the Cape; where the Froſt was ſo ſevere, that, notwithſtanding what may be ſaid of Salt Water not freezing, we were obliged to ſet Men, with Sticks in their Hands, that as ſoon as the Spray of the Sea broke, or fell upon the Tacks, or Sheats, or any Rope that hung over-board, they might immediately beat it off, before it had Time to freeze, and by degrees render the Rope uncapable of paſſing through the Hole or Pulley in which it was to move.

In this homeward bound Paſſage, one of the Ships in our Company had a Man on board, who was not only unactive but ſleathful, and though ſome violent Exerciſe was the beſt way to get Heat, and preſerve the Limbs, this Man, in the exceſſive cold Weather, had recourſe to his Hammock for Shelter: where, for want of Exerciſe, he became unable to move, and before we arrived at *London*, he loſt the Nails of his Fingers and Toes: but what became of him afterwards I know not.

But altho' the Ice in *Archangel* River breaks up, and the River opens, near the Beginning of *May*, yet the Ice is ſo thick, that it is a long Time before the Iſlands of Ice, after they are floated out to Sea, are diſſolv'd, as I obſerv'd in the Year 1716, upon an outward bound Paſſage to *Archangel*. We were that Year ſo early, that we were off of the North Cape, in the greateſt North Latitude of all the Paſſage, on the tenth of *June*, when the Sun was in the Northern Tropick; by by which Means we had the Sun five or ſix Degrees above the Horizon at Midnight, a very agreeable Sight for thoſe who delight in thoſe Aſtronomical Speculations; but proceeding on our Voyage, we enter'd the *White Sea* in a ſmall Time more; where we met with ſuch Iſlands and Shoals of Ice, that had not the Days been very long, and the Sun, even at Midnight, depreſs'd but very little below the Horizon, which made the Nights alſo very light, it would have render'd our Paſſage into the *White Sea* very difficult. But in other Voyages that I have been, neither coming home ſo late as in the firſt mention'd Voyage, nor going out ſo ſoon as in the laſt, there were no ſuch remarkable Extreams to be obſerv'd.

But to return, (if this may call'd a Digreſſion) When the Summer approaches, and the Snow is melted, it is immediately ſucceeded by a beautiful verdant Spring; the Earth is cover'd with green Herbs and Flowers, and the Corn, or Grain, ſown in *April* or *May*, is ripe and ready to be reap'd in *Auguſt*. And I have obſerv'd, during my Reſidence at *Archangel*, that Corn (a great deal of which is a Sort of Barley) that is not ripe about the Time the Sun croſſes the Autumnal Equinox, will not ripen, naturally, at all that Seaſon: However, to make the beſt of ſuch late Crops, when the Seaſon is elapſed for ripening them upon the Ground, they cut them down ripe or not ripe, provided the Ears, though green, be tolerably full of Corn; they make them up in very little Sheaves, and tying two together by the Bands they are bound with, they hang them by two and two over Rails, fix'd along from Poſt to Poſt for that Purpoſe; and by this means they ripen, and change Colour, ſooner than ſtanding upon the Root; but the Corn is ſmall and ſhrivell'd, and affords but little Kernel, but a thick tough Shell: And of this, without any further dreſſing, they make a coarſe ſort of Rusk, or Bread, which not only themſelves make uſe of, but many of the *Engliſh* Ships lay in for a Store of Bread for their Paſſage home.

In the Middle of *Moſcovy* their Soil is generally ſo rich, that they do not uſe any Dung to manure their Land; and this they impute to the Snow lying ſo long upon the Ground, as to enrichen and mellow it: But this is not to be underſtood of the Northern Parts of *Moſcovy*; for they are barren, and produce but very little either Corn or Herbage.

But before we leave *Archangel*, or theſe Northern Parts of *Ruſſia*, or *Moſcovy*, I would note, that I have obſerved in the Heat of their Summer, which is about *July* and the firſt half of *Auguſt*, the Weather is much hotter there than ever I found it in *England* when at the hotteſt; and as an Effect of that Heat, thoſe troubleſome Inſects call'd Moskettoes, a ſmall Sort of ſtinging and ſinging Gnat, are as plenty and troubleſome too as in other hot Countries. This Heat cannot be attributed to the Son's Nearneſs to their Zenith at Noon, for at his greateſt North Declination he is above forty-one Degrees diſtant from the Zenith of *Archangel*, whereas at the ſame Time he is but twenty-eight Degrees from the Zenith of *London*: But I impute the Increaſe of this Heat to the Continuance of it; for though the Sun at Noon is much nearer to us than to them, yet the Sun at Midnight is as much nearer to them than to us; for at our (and their) longeſt Day, the Sun is abſent from our Hemiſphere above ſeven Hours and a half, and depreſs'd below our Horizon at Midnight about fifteen Degrees: This great Diſtance and long Abſence gives the Vapours Time to riſe, and the Earth time to cool; whereas at *Archangel*, which is in about ſixty-five North Latitude, the Sun, when in the Northern Tropick, is depreſs'd but one Degree and a half below the Horizon at Midnight, when loweſt, and at the ſame Time riſes at *Archangel* twenty-five Minutes after one in the Morning, and ſets not till thirty-five Minutes after ten at Night. And his Abſence from their Hemiſphere continuing but two Hours and fifty Minutes in twenty-four Hours, and even then he being but a Degree and a half below the Horizon, if this almoſt un-interrupted Preſence of the Sun, and the ſmall Diſtance he is from them when abſent, be conſider'd, no Wonder that the Air contracts ſuch a Warmth as to propogate thoſe troubleſome Inſects, when there is no ſuch Thing with us. *What an Oven is once hot, a ſmall Fire, if continued in it without Intermiſſion, will keep it warm.*

But to come a little further to the Southward: We have the following Account of *Peterſburgh* from a Gentleman that reſided there, which we ſhall give in his own Words, becauſe we will not impoſe upon the Belief of our Readers. He tells us, 'They have very little Comfort in their Winter 'Days; for though the Sun may be a little above 'the Horizon for two or three Hours, it is ſel-

'dom

'dom seen on Account of the thick Fogs, which so 'darken the Air, that it may rather be call'd 'Dawn than Day-light.'

I am afraid this Gentleman had not Astronomy sufficient to correct his Geography; for although we know the Weather there in the Winter to be as dark and foggy as he intimates, yet, by his Leave, in Latitude sixty North the Sun, when in the Tropick of Capricorn, *rises sixteen Minutes after nine in the Morning, and sets forty-four Minutes after two in the Afternoon, and consequently is above the Horizon five Hours twenty-eight Minutes, the shortest Day in Winter in Latitude sixty North, which is much more than two or three Hours.*

But to proceed: The Cold begins in *August* and continues till *May*; the Ice in their Rivers is an Ell and a half thick, and is seldom melted till after the Snow be gone. Their best Defence against the Cold is Fur-Coats, and Muffs, and Boots lined with the same, of Value according to the Person's Fancy or Ability.

On the other Hand, the Weather in Summer is almost as troublesome as that in Winter, by the frequent Tempests of Lightning and Thunder; but they soon blow over, and are follow'd by fine Weather. In the Heart of *Moscovy* the Gnats and Flies are as troublesome as at *Archangel*; which renders the Summer very incommodious to Travellers.

Seas. The Seas of *Moscovy* are the *Frozen Ocean*, the *White Sea*, the Gulph of *Finland*, the *Bothnick Gulph*, and the *Baltick Sea*; we shall not take in the *Black Sea*, for since the Czar has quitted *Asoph*, and the rest of the Forts he built near the Mouths of the Rivers *Don* and *Boristhenes*, his Communication with the *Black Sea* seems to be quite cut off. The *White Sea*, call'd by some the Bay of *Archangel*, lies between *Moscovite Lapland* on the West, and *Samoieda*, vulgarly *Shammucks Land*, on the East. The *English* finding this Bay, or Sea, and thereby a Communication with *Archangel*, enjoy'd the sole Benefit of that Trade for many Years, till supplanted, or however rivall'd, by the *Dutch*. The next is the Bay, or Gulph, of *Finland*, which divides *Livonia* from *Finland*, and may well be call'd one of the Seas of *Moscovy*, because they possess the Country on both Sides of it. The *Bothnick Gulph* is reckon'd among the Seas of *Moscovy*, the East belonging to them, and the West to *Sweden*. The *Baltick* may in some Measure be said to be one of the Seas of *Moscovy*, because they are in Possession of *Riga* and *Revel*, and some other Ports in it, but as other Princes participate so much of the Coasts of this Sea, we shall defer speaking any more of it, till we come to give a particular Description of other Kingdoms bordering upon it.

Lakes. The most considerable Lakes are, 1. *Ladoga*, 2. *Onega*, 3. the *White Lake*, 4. the Lake *Ilmen*, 5. *Worsero*, 6. *Pepus*.

Lagoda Lake has a Communication with the Gulph of *Finland*, by the River *Nieoa*; on which River the City of *Petersburg* is since built: We are told by a certain Author, that this Lake *may be* four or five hundred Miles in Circumference; that it is very large is certain, but to me it seems imprudent and unjust in any Author to magnify Things to that Degree, that, because they are surprizing in themselves, they do not think them sufficiently so, till they have distorted them beyond the Bounds of Probability; however, this Lake is, by the best Geographers, allow'd to be about a hundred and twenty Miles long, and forty Miles broad, (its greatest Dimensions being from North to South) and its Circumference, at that rate, above three hundred Miles; the South Part of it is about fifty Miles to the Eastward of *Petersburgh*. 2. *Onega Lake*, as large as the former, and North-Eastward from it; it extends to the Northward within a few Leagues of the *White Sea*. 3. To the Southward of *Onega* is the *White Lake*, the Source of the River *Shacksena*; being one of those Branches which, when united, form the River *Volga*, or *Wolga*. 4. The Lake *Ilmen*, near the City of *Novogrod*, above a hundred Miles South from *Ladoga*. 5. The Lake *Worsero*, near *Pleskow*, on the Confines of *Livonia*. 6. The Lake *Pepus*, which lies to the Southward of *Worsero*, and has a Communication with it. This Country lying very low abounds with Lakes, the rest of which being not worth our Notice, we shall therefore proceed to the Rivers of *Moscovy*; of which the most considerable are:

Rivers. 1. The River *Oby*, which with the River *Intis*, or *Itis*, that falls into it, is accounted the East Bounds of *Europe*, as has been observed above; this River rises in *Calmuck Tartary*, and running North above two thousand Miles, falls into the Sea near *Waygat's Straights*. 2. The *Rha*, or *Wolga*; it rises in, or near, the *White Lake*, and having run above two thousand Miles to the Southward, it falls into the *Caspian Sea*, below *Astracan*. 3. The *Don*, or *Tanais River*, has its Source in a Lake in the Province of *Rezan*, and, with various Courses, winding to the Southward and Eastward, it falls into the *Palus Meotis*, near *Asoph*. 4. The River *Nieper*, or *Boristhenes*, rises in the Province of *Moscow*, and running first West, and then to the Southward, along near the Borders of *Poland*, it falls into the *Euxine*, or *Black Sea*, near *Okzakow*. 5. The River *Dwina*, upon the Banks of which *Archangel* is built; it rises in a Lake in the Province of *Wologda*, from whence one Branch of it is first call'd *Wologda River*; it runs to the Northward, and winding afterwards to the Westward, it falls into the *White Sea*, a few Miles below *Archangel*. There is another *Dwina*, between *Courland* and *Livonia*, which falls into the *Baltick*, near *Riga*. There are other Rivers less considerable, and therefore not worth a particular Description.

CHAP. II.

Treats of the Provinces of Samoieda, Mesleen, Dwina, Syrianes, *and* Reubeniska.

SAMOIEDA is the Northermost Province in *European Russia*; it is bounded on the North by the Frozen Ocean, and on the East by the River *Oby*; it is bounded on the West by the *White Sea*, but its Extent to the Southward is uncertain.

Samoieda. 1. Under the general Name of *Samoieda* we include *Petzora*, *Condora*, and *Oustrich*. The People

People in this Part of the World have scarce any Towns, but live in Huts or Caves, contrived on the declining Ground, or the Side of a Hill; the larger Sort of them have the Door and some Part of the Hut above Ground, and the back Part dug into the Hill under Ground; that Part that requires a Roof is frequently cover'd with Bark of Trees, laid shelving over one another, as we lay our Tiles or Slates, to carry off the Rain.

2. South-West from *Samoieda* is the Province of *Messeen*; its chief Town is of the same Name, near the Sea; and hence the Bay, or Gulph, made by *Catsnose-Point* and the Island of *Candenose*, is call'd the *Messeens Gulph*; this Province is also bounded on the West by the *White Sea*.

3. To the Southward of *Messeens* lies the Province of *Dwina*, bounded on the North and West by the *White Sea*, and towards the East by the Province of *Syrianes*, and by *Rubenska* on the South. The chief Town is *Archangel*, situate about ten or twelve Miles up the River, in about sixty-five Degrees of North Latitude. The Town is about two Miles long on the North Side of the River, and extends about a Mile from the River to the North, or Out-Parts of the Town. The only Building of Note is the Palace, as some of our *English* Authors render the Word; but the *Russian* Inhabitants of *Archangel* call it the *Palott*; it is a spacious Oblong, situate near the River's Side; it is about three Times as long as it is broad, and is built of white Free-Stone; and on the Inside it is divided into three large Squares, by Rows of Merchants Houses and Warehouses. These Squares are call'd by the Names of the respective Merchants or Factors that use and possess them; as, the first is call'd the *English Palott*, the middlemost the *Dutch Palott*, and the furthest the *Russia Palott*; and they have their Keys, or Landing-Places, before the Gates of their respective *Palotts*, as the *English*, the *Dutch*, and the *Russia* Bridges, all built of Timber; which, by Reason of the Easiness of the Descent to the River and in it, are obliged to be projected a great Way into the River, to come into Water deep enough to have the Paws to float a-breast of them, to load and unload Goods.

These Paws are flat-bottom'd Vessels, having no Keel, and therefore not fit to turn to Windward, or to carry any Sail, except the Wind be large. I have seen one at *Archangel* which stow'd above three hundred Bundles of Hemp, and did not draw above three Foot and a half Water.

The River at *Archangel* is near two Miles broad; and on the other Side, opposite to *Archangel*, is a small Village, call'd *Durrop*, where the *English* and *Dutch* Sailors go a-shore to buy Diaper and Linnen, and the like, as at *Archangel*. The River at the Town being so broad, it is likewise so shallow, that is not safe to put a Ship down to above eleven Foot Draught of Water off of the Bridge; but Ships of greater Burthen are put to that Depth at the Town, and then fall down to a Place call'd *Sullensburg*, about two Miles below the *English* Bridge, to take in the rest of their Loading and Provisions.

The Custom-House is also in the *Palott*, and serves also for a Court of Justice, where Grievances are redrest, and petty Criminals punish'd according to their Demerit. I remember one of our Ship's Company having cast off his Coat and Waistcoat, in hot Weather, to assist in stowing in the Paws, before he had done Work his Cloaths were stolen; whereupon he immediately apply'd to the Custom-House, and they order'd him to go sit upon the *Russia* Bridge, where he lost his Cloaths, and he should have them brought there to him; but with a strict Caution that he should not abuse or affront the Man that should bring them. He conform'd to their Orders for the sake of his Cloaths, and accordingly a Man brought him his Cloaths, and, falling upon his Knees, deliver'd them to him and march'd off; but what sort of Confederacy, or ready Communication, there is between the Custom-House and the Thieves, I am at a Loss to understand, but I know by Experience that the generality of the poor vulgar *Russians* will *Crawl Groet*, that is, they are very thievish.

But besides the Petty Court of Justice above-mention'd, there are also held at *Archangel* Courts of Justice for the Province of *Dwina*. The Castle, or Residence of the Governor, is a mean Place, surrounded only with a wooden Wall, within which are the Houses of several Handicrafts and Mechanicks; and in this Place they have an Annual Fair, during which Time the *Russians* expose their Goods to Sale. The Shipping, as has been above observ'd, seldom remaining there after *September*, about which Time the Frost comes on, and the Rivers being froze and turn'd to Ice, gives the *English* Gentlemen, and the *Russians* too, residing at *Archangel*, an Opportunity of travelling upon the Ice, with their Sledges and Horses, to *Moscow*, or other the more Southern and warmer Parts of *Moscovy*; for when the Rivers are froze, and the Snow hardened, that it will bear the Horses and Sledges, is the Time that they appoint for their Travelling, as much as we appoint the best of Summer, when the Roads are good, for our Travelling in *England*.

Buildings.

There are no Stone Buildings in *Archangel*, except the *Palott* above-mention'd, the rest of the Houses being generally built of Wood, not cut into Boards, but a little roughly squared and piled upon one another; and although the Trees be nearly strait, yet when they are not exactly so, nor they have not Art or Care enough to make them so in the cutting, they supply the Defect by stuffing in Moss, where they do not join exactly, to keep the Air out; but, notwithstanding the ordinary Way of their common Building, the *English* Merchants and Factors have their Houses wainscoted and smooth on the Inside. They have commonly a Stove in every Room, in Form of a Table, or rather a Tomb-Stone, within which they keep a Fire in cold Weather, and can heat it, and thereby the Room, to what degree they please, according as the Season requires, there being no Fire to be seen in the Room, but it is to be felt with a kind of stifling Heat at the first Entrance.

Paving.

The Streets are pav'd with Timber instead of Stone, the Tree being cut a little flat on the upper Side; but the Streets being so full of Dirt, Rubbish, and Horse Dung, makes them very dirty and slippery, till the Snow falls and the Frost comes on, and then they all tread down smooth and level. The *Lutherans* and *Calvinists* have each of them a Church here; but in the Winter-time they assemble generally in the Minister's House, for the sake of the Stoves keeping them warm, and, the Inhabitants in the Winter-time being mostly out of the Town, their Congregations are very thin at that time of the Year.

That have all Sorts of Provisions plenty at *Archangel*, especially Poultry, Fish, Wild Fowl, Patridges, and other Game. There is a sort of a Patridge that turns white in the Winter. They have also a Wild Fowl somewhat like our Turkeys; the Cock is of a black Colour mix'd with a deep Blue. They have Plenty of a sort of Hares, which turn white in Winter. They have Plenty of Salmon, Perch, and the best Sort of fresh Water Fish; so cheap, that any moderate Appetites may dine for a Penny a-piece; and their Butchers Meat is not above a Penny a Pound the latter

End of Summer, which is indeed the only Time to have good Beef in *Russia*; for their Summer continuing so short a Time, they have no great Opportunity of laying up a Stock of Hay, which occasions their Cattle to be almost starv'd in the Winter-time; and in the Beginning of Summer, when the Snow is melted and gone away, the Spring comes on at once; and they putting their Cattle into this fresh Grass which had scarce any Flesh left upon them in the Winter, they fatten apace; and tho' the Cattle be old, the Beef on their Backs, laid on in the Summer, may be said to be new, or young. And this I take to be a Reason why *Russia* Beef, bought there in *August* or *September*, is so much admired in *England*; our Ships trading to *Archangel* seldom coming home without some Quantity of *Russia* Beef on board, for Presents to their Merchants, Owners, or Relations here in *London*.

Liquors. They have tolerable good Beer at *Archangel*, but it is neither so clear nor keeps at Sea so well as our *English* Beer. The Government engross the Brewing to themselves; no private Person is allow'd to brew without a Licence from the proper Officer. Their Wine and Brandy is mostly *French*, generally convey'd thither by the *Dutch* Ships in Summer-time. But they make a sort of a CornSpirit of their own, which is almost the Colour of Water, and has a sort of a smoaky Taste: with this the vulgar *Russians* will fuddle in hot Weather, as if it was a more agreeable Liquor; but the Cheapness makes amends to them that know no better.

The *English*, *Dutch*, *French*, *Hamburghers*, &c. used to trade hither yearly. I think I have seen to the Number of not much less than a hundred Ships of several Nations at *Archangel* at a Time; and then the Czar's Revenue arising from the Trade of *Archangel*, was computed to amount to near a hundred thousand Pounds a Year. But the *Moscovite* having now several good Ports in the *Baltick*, and the late Czar having remov'd the chief Trade of *Russia* to *Petersburgh*, and compell'd his Subjects to carry their Merchandize to that Place, there is small Hopes at present of *Archangel*'s ever retrieving its lost Trade.

The Island of *Podesemsk* lying in the Mouth of *Archangel River*, makes it fall into the Sea in two Channels, by either of which Vessels may go up to *Archangel*; but the Northermost is most used, as being the nearest Way. And on the other Mouth stands the Town of *St. Nicholas*, near the Sea. About fifty Miles up the River stands the Town of *Colmogorod*; it is a large open Place, without either Castle or Walls to defend it, nor is it any Place of Trade.

The fourth Province that comes under our Notice is *Syrianes*; it is to the Eastward of *Dwina*, and some Geographers extend it as far East as the River *Oby*: We have little more Knowledge of it than that it consists mostly in large Forests, where the Natives hunt for Furrs; the same may be said of the Province of *Permia*, of which we find nothing else remarkable.

The Province of *Reubeniska* is bounded by the *White Sea* on the North, and the *Dwina* on the East: The chief Town is *Usgorodischna*, which stands upon the West Banks of the River *Dwina*.

CHAP. III.

Of the Provinces of Lapland, Finland, *and* Ingria; *with a particular Account of the Island of* Cronslot, *and the City of* Petersburg.

Moscovite Lapland. WE shall now pass over the *White Sea*, and come over to *Moscovite Lapland*, call'd by some *Russian Lapland*; it is bounded on the North by the Main Ocean, on the East and South by the *White Sea*, and on the West by *Swedish Lapland*. It is divided into three Parts, *viz. Mourmanskoi Leporie* towards the North-West: The chief Town, as it is call'd, is *Kola*; I say as it is call'd, for in the Year 1708 there were but twelve Houses in the Town, and they such small Huts, that they scarce deserved the Name of Houses. They were mostly inhabited by Fishermen; who went a fishing there in the Summer-time, and went over to *Archangel* before the Winter came on. It stands on a River of the same Name, the Entrance into which, with the Island of *Kilduyn*, makes a good Road for Ships upon Occasion, in their Passage to and from *Archangel*. 2. *Bellamoreskoy*, or the South Part of *Lapland*: The chief Town is *Candelax*, in the North-West Corner of the *White Sea*. 3. *Treskoy*, the Easternmost Part of this Country: The chief Town is *Warsiga*, on the South-East Corner of *Lapland*, over-against *Catsnose*. This is so uncomfortable a Climate, that it has not very plenty of Inhabitants; they in the North Part of *Mouremanskoy* never seeing the Sun from about the tenth of *November* to the tenth of *January*, and having but very little Benefit of it for some Time sooner in *November* and later in *January*.

The Soil of this Country produces no Grain or Corn of any kind, and but very little Fruit. Their Animals are Deer, Elks, Foxes, Ermins, Martens, Bears, Wolves, and other Beasts; which they hunt for their Furrs, the staple Commodities of this Country. They have no Salt, nor probably do they know the Use of it in preserving Flesh and Fish, as having never been used to it; but the Flesh and Fish that they would keep, they dry upon the Rocks in the Frost, and then it will keep in the Winter-time long enough to be expended while it is good. Some say (though I have never seen it) that they beat their dry'd Fish to Powder, and make a Sort of a Paste, which serves them as Bread, and doubtless as Meat too, for they have no Oxen, Sheep, or Hogs, nor have they any Horses in that Country. The Natives are generally swarthy, with broad flat Faces like the *Tartars*, and short black Hair, but so timorous and untractable that they can never be brought under any Discipline.

Drink. They have no Drink, but Water or Broth, or sometimes they procure a little Brandy in Exchange for their Furrs, for as for Money they are entire Strangers to it. Their Dress is of the Skins of Beasts, which in Winter-time they wear with the Hair inwards, their Beds and Bedding being also made of the same. When they are in pursuit of their Game, they slide with an incredible Swiftness over the Ice and frozen Snow, with

with wooden Scates; or the better Sort are drawn on Sledges by the Rein-Deer. The Sledges are somewhat in the Form of Boats, only flat behind, and the Traces by which they are drawn are fastened about the Necks of the Deer that draw them; the Traveller that sits upon the Sledge, having a Rein tied to each Horn of the Deer, by which, and the Deer being broke to it, as a Horse to his Bridle, they can turn and command them as they please. They have no Thread or Cordage to make their Reins or Traces of, but supply that Defect with Thongs of the Beasts Hides, or with the Guts of some Animal scrap'd, and twisted, somewhat like our Catgut, but in a coarse Manner.

Of their Witchcraft, &c.

As to the pretended Witchcraft of the *Laplanders*, their selling a fair Wind to any that will give them a Price, and sending a Storm after those that affront them, to destroy both Ship, Men, and Cargoe, such silly Opinions I should not have mention'd, but only to expose them, and the Weakness of those that believe them. I have sail'd several Times along all the Coast of both *Swedish* and *Moscovite Lapland*, and never either found any such Thing, or ever convers'd with any using that Trade, that had observed any worse Weather there than elsewhere, except such as may be expected from a Climate so near the Pole; but our *English* who impute that to Witchcraft, Fairies, Conjuration, &c. bewray their own Ignorance of the Nature of the Globe, and the Principles of Geography; and if upon Sight of those People they conceit them to look like Witches, Wizards, Conjurers, &c. it may rather be imputed to the Inclemency of their Climate, whose various Seasons are so different and so disagreeable to those of us that inhabit in the Temperate Zone, that none of us covet their Situation, or desire to invade their Territores: And hence they have very little Conversation with any but their own unpolish'd Natives; so that if by Chance a few *English*, *Dutch*, or *French* Men, or those of any other civiliz'd Nation, approach any of them, they are startled, and look like wild People, or perhaps Witches; but if they can procure a small Gratuity under a Pretence of selling a fair Wind, I conclude them much more cunning in taking that Reward, tho' they laugh at the Giver when they have got it, than he that thought himself wiser than they were, and gave it; and it is still more Matter of Sport and Ridicule, when the credulous Purchaser, not finding the Winds to answer the Condition of his Agreement, imputes their blowing too hard, or not at all, or contrary to the Point he agreed for, &c. to his own Mistake, in undoing the Knots given him, or the the like, rather than to any Defect in his *Lapland* Witch; but People now-a-days of but common Capacities are generally above being impos'd upon by those fallacious Opinions.

It is observ'd that, notwithstanding their cold Climate and hard Fare, they are commonly long-lived; and, what is yet more remarkable, if they are removed to a warmer Climate and better Diet, they seldom live long.

Finland

The Province of *Russian* or *Moscovite Finland*, is so call'd because the Czar has by Conquest annex'd it to his own *Moscovite* Dominions. It is bounded by *Lapland* on the North, by the *Ladoga* and *Onega* Lakes on the East and South-East, by the Gulph of *Finland* on the South, and on the West by the *Bothnick Gulph*. This Country is divided into seven Parts, or Provinces. 1. *Cajania*, call'd by some *East Bothnia*, the most Northerly Province: The chief Town is *Cajaniburg*, a Fort on the North-East Side of the Lake *Ula*, near the North Part of the *Bothnick Gulph*, and in Latitude sixty-five. 2. *Savolaxia*, to the Southward of *Cajania*: The chief Town is *Koskinpa*, in about Latitude sixty-two; it stands on a Lake, call'd *Jende Lake*, which has a Communication with the Gulph of *Finland*. 3. *Kexholm*, to the Eastward of *Savolaxia*: Chief Town is also *Kexholm*, or *Carelgorod*, on the West Side of *Ladoga Lake*. 4. *Carelia*, between *Ladoga Lake* and the Gulph of *Finland*: The chief Town is *Wybourg*, on the North-East Corner of the Gulph of *Finland*; it has a very good Harbour. 5. *Nylandia*, or *Newland*: The chief Town is *Helsingros*, or *Helsing-fort*, on the North Shore of the Gulph of *Finland*. 6. *Finland Proper*, included between the *Bothnick Bay* on the West, and the Gulph of *Finland* on the South: The chief Town is *Abo*, on the East Coast of the Gulph of *Bothnia*, and near the South Part of it, where it meets with the Gulph of *Finland*, in near sixty-one Degrees of North Latitude. 7. *Tavistia*, an Inland Province, bounded by *Cajania* on the North, *Finland Proper* on the West, *Nyland* on the South, and *Savolaxia* on the East: Chief Town is *Tavistia*, or *Croneburg*. This Country is full of Lakes, Bogs, and Bushes; and has few Villages, but only some Houses and Huts dispers'd up and down; but towards the Coasts of the Gulphs of *Bothnia* and *Finland* the Soil is better, and some tolerable Towns are to be found. The Northern *Finlanders* differ but little from the *Laplanders*; but the Southern, who converse and trade with the *Swedes*, and other trading People in *Europe*, are a little more polite in their Conversation and Behaviour.

The next Province, to the Southward of *Carelia*, is *Ingria*, or *Ingermanland*, from which it is separated by the River *Nieva*, or *Nye*; this has *Carelia* and the Lake *Ladoga* on the North, *Estonia*, a Province of *Livonia*, on the West, *Great Novogorod* towards the South, and *Belozero* towards East. Chief Towns were *Notteburg*, or *Slutelburg*, upon the River *Nieva*; and *Ivanagorod*, over-against *Narva*, upon the same River, which is a strong Place. There are also other Towns of less Note, as *Coporea* and *Jamogorod*; but the chief Town, which for Trade and Populousness may now be call'd the Capital of the *Russian Empire*, is *Petersburg*, the Foundation of which any Person of a very moderate Age may yet remember.

Petersburg

The City of *Petersburg* is built upon both Sides of the River *Nieva*, as well as some Islands in the River; it is situate at the Eastermost Part of the Gulph of *Finland*, in about sixty Degrees of North Latitude, and near thirty Degrees of Longitude East from *London*.

The late Czar of *Moscovy* being at War with *Sweden*, in the Year 1702, and having taken first the City of *Notteburg*, and afterwards the Fortress of the *Nyeschants*, which is lower down the River; and penetrating still towards the Sea, he found, in the Mouth of the River, several Islands, which he thought if he could get Possession of, he could by that Means open a Communication with the *Baltick*. Whereupon he built a Fort upon one of them, and also fix'd a Detachment of Troops upon the Island *Retusari*, in the Gulph of *Finland*; near which Island all Ships are obliged to pass that sail for the River *Nieva* (upon which *Petersburg* now stands;) and finding this Island to make a very commodious Harbour for his Men of War, he built upon it the Fortress of *Cronslot*, which is, in their Language, *Crown Castle*, and it was the Rendezvous, or Harbour for his Men of War; which caused a Concourse of People to it; he therefore built also a Town, which, together with the Castle, and even the Island itself, go all by the Name of *Cronslot*; and since the Building of that Town and Fort the Island is scarce ever known by the Name of *Retusari*.

The

THE Czar, pleas'd with his advantageous Situation, began to think that if he ſhould build a City here, and make it the Capital of his Empire, it might be a Means to keep the *Swedes* at a greater Diſtance from his Frontiers, and they at that Time were the moſt formidable Enemies he had; nor was this all; for he thought he could better eſtabliſh a Trade with the reſt of the Nations in *Europe* from *Petersburg*, than he could from *Archangel*, in the *White Sea*, beyond the North Cape.

THIS Opinion of his ripen'd into a full Determination to erect a Royal, or Capital City, which might deſerve to be eſteem'd the Metropolis of ſo great an Empire; and for that Reaſon he ſummon'd Artificers and Labourers from all Parts of *Ruſſia*; but he met with ſuch Difficulties in the Undertaking, that ſcarce any, but a Perſon of his Reſolution, could ever have accompliſh'd it; for, notwithſtanding that he exerted himſelf with his uſual Vigour, yet the Progreſs of the Work was ſo clogg'd, as if ſome inviſible Obſtacle had been at the Bottom; ſometimes, when there did not want Money, the Miniſters, Officers, and Overſeers of the Work, were not there to give the neceſſary Orders, as if they were averſe to the Undertaking, and did not care that any new Place ſhould rival their antient City of *Archangel*, or their Capital of *Moſcow*; other whiles there was no Proviſion to be had for the Workmen, or at other Times no neceſſary Implements, as Wheelbarrows, Shovels, or neceſſary Tools for the Workmen's Uſe, or Huts for them to lie in; and, in ſhort, the Work went on with ſuch ſmall Expedition, as if ſome of the *Lapland* Witches abovemention'd, had caſt one of their Spells, or Charms, over it, to incumber its Progreſs.

BUT all this could not abate the Edge of his Reſolution; he had ſet his Heart upon his new City, and, to prevent any Neglect in the Performance, he attended the Work frequently himſelf; and by this Means the Labourers and Mechanicks grew very numerous, and when they had not Bags or Baskets for them all, they carried their Building Materials in the Skirts of their Garments; but when the Workmen were grown ſo numerous, they wanted Proviſions ſo much, that many poor Creatures ſuffer'd, and dy'd for Want.

BUT, notwithſtanding all this, the Czar perſiſted in his Deſign, and having got ſome Part finiſh'd, he order'd ſeveral of his Nobility, Merchants, and Tradeſmen, to ſettle there, to people his new Colony: Several of the Inhabitants of *Finland* and *Livonia*, who had their Houſes burnt, and their Effects deſtroy'd, in the late Wars, did alſo reſort hither; as did alſo abundance of Seafaring Men and Merchants, which were the People he chiefly encourag'd; inſomuch that the Place ſoon became extreamly populous, and in a few Years the City contain'd above ſixty thouſand Houſes.

ONE great Inconveniency that attends *Peterſburg*, is its low Situation; the whole Country hereabouts being flat and low, and thereby expoſed to Floods and Inundations, whereby abundance of People and Cattle have been drown'd, and ſome of the Fortifications waſh'd away. The River *Nieva* is about half a Mile broad as it runs through the City, and yet is ſo deep and rapid, that they think the Building a Bridge over it is impracticable; and as he was willing to have as many Watermen brought up as he could, he choſe rather to ſee the Men row the Paſſengers over in Boats than build Bridges; and now it is common at *Peterſburg* for People of Faſhion to have their own Boats and Watermen, and a foreign Miniſter has a Boat and four able Watermen allow'd by the Government.

THERE are ſome handſome Stone Churches, Palaces, and other Buildings, in *Petersburg*; but the common Houſes are Wood, as at *Archangel*; the Roofs are cover'd with thin Deal Spars, lin'd with Lath, and cover'd with Turf or Bark, laid over one another like our Tiles; the common Sort are but one Story high, and ſeldom contain any more than one Room. The Ground about *Petersburg* is low and marſhy, and brings little or no Corn, eſpecially in a wet Year: They have ſome Turnips and Cucumbers; there is a ſweet little ſort of Cabbage very plenty at the Seaſon. But the chief Dependance of *Petersburg* for Corn, Flower, Fruit, and the like, is upon the Country towards the Middle of *Moſcovy*, where theſe Things are plenty, and whence they are ſent by Water (by the Rivers and Lakes) down to *Petersburg*. *Bu*

THE Iſland of *Cronſlot* is about twelve Miles or more below, or to the Weſtward of, *Petersburg*, at the Bottom of the Gulph of *Finland*; the Channel up to *Petersburg* is on the South Side of *Cronſlot*, which was a barren deſolate Iſland, only the Czar obſerving its commodious Situation, fortified it for the Security of his Men of War; he firſt built the Fort or Citadel, and afterwards the Town of the ſame Name. In this Harbour the Czar's Men of War lay at firſt, but when their Number increas'd to forty or fifty Ships of the Line, the greateſt Part of them were then laid up at *Revel*, and continue to be ſo at preſent, when they are not out upon any Expedition. *Cron*

THE South Coaſt, over-againſt *Petersburg*, affords a very agreeable Proſpect; being all the way adorn'd with Pleaſure-Houſes and Country-Seats. When the Czar conquer'd *Ingria*, he granted the Eſtates of the former Inhabitants to his Officers and Servants. But this Coaſt, over-againſt *Cronſlot*, being much the more deſirable, he parcelled out amongſt his principal Nobility, who moſt of them built their Country Seats here. They ſtand upon a riſing Ground, a ſmall Diſtance from the Shore, and afford a moſt agreeable Proſpect to thoſe who ſail up the River to *Petersburg*; and when aſhore the Land thereabouts is tolerably good, and diverſified with Woods, Meadows, Paſtures, and Gardens. Here the once famous Prince *Menzikoff*'s Seat is; it is three Story high, and hath two Wings, which, with the Gardens, ſtretch down to the Sea Side. The late Czar had alſo two or three Palaces upon this Coaſt, very handſomely built.

THE *Ingrians* and *Carelians* were formerly a poor illiterate People; but ſince the Czar conquer'd them, and not only annex'd them to his Dominions, but compell'd them to participate of the Improvements and Education which himſelf promoted and delighted in, they both know more and live better than before, and have no Cauſe to lament their being ſo conquer'd; and eſpecially as *Petersburg* may be ſaid to be the Capital not only of *Moſcovy* in general, but of *Ingria* and *Carelia* in particular, (as *London* is not only the Capital of *England*, but more particularly of *Middleſex*) the Inhabitants of thoſe Places were ſo far from being detrimented by the Czar's Conqueſt of them, that they were tranſlated (whether they would or no) from their ſtarving Condition, to be the circumjacent Country of the Czar's new Capital.

WHEN the Czar had thus eſtabliſh'd *Petersburg*, his next Buſineſs was to make it popular, and a Place of Literature; in order to which he inſtituted a Marine Academy, for the Encouragement of Navigation; to which he obliged every conſiderable Family in *Ruſſia* to ſend ſome of their

Sons

Sons or Kinſmen, (more or leſs, in Proportion to the Dignity of their Families) above ten and under eighteen Years of Age, to learn Navigation, the Languages, Riding, Fencing, *&c.* He alſo ſet up Woollen and Linnen Manufactures; the latter of which was, according to their Capacities, improv'd very much at *Archangel* before *Petersburg* was thought of, and more ſince it is come to what it now is; witneſs the great Quantities of *Ruſſia* Linnen brought formerly from *Archangel*, and now from *Petersburg*. Here is a Workhouſe, where not leſs than fourſcore young Females are employ'd in Spinning; in which if their own Genius, and the Advice of their Matron, will not prompt them to Induſtry and Improvement, the Whip, or ſome other Correction, muſt. There are alſo ſeveral Improvements made in their Growth of Hemp and Flax, which were not known ſome few Years ago.

They have alſo Paper-Mills and Powder-Mills, with Laboratories for Gunnery and Fire-works; as alſo Places for preparing Salt-Petre and Brimſtone, of both which they have great Plenty in *Ruſſia*. They have alſo Rope-walks, where they make Rigging and Tackle for Ships, as in *England* and *Holland*; and a Foundery for great Guns, Mortars, and ſmall Arms; there being great Quantities of Iron Ore taken up at *Alonitz*, near *Ladoga Lake*, which, it is ſaid, may be brought to ſuch a Temper as to be near as durable as Braſs. There is now a Forge at *Peterſburg* where they make Anchors, and all Sorts of Iron-work for building Ships or Houſes. They have alſo of late begun to burn Bricks to build with, as we do in *England*.

There is alſo a Printing-Houſe, and News-Papers are now as regularly printed as in ſeveral other Cities in *Europe*; and ſeveral Books have been lately tranſlated out of the *High Dutch*, and printed here. For, according to the preſent Conſtitution of *Ruſſia*, they are allow'd to enquire into the State of the World abroad, though before the late Czar's Time, when affected Ignorance prevail'd, it was deem'd a Crime to be ſo inquiſitive. All foreign Artiſts and Mechanicks, as Architects, *&c.* are not only ſuffer'd, but encouraged, and even invited to ſettle here, and are allow'd ſeveral Privileges and Immunities, beyond what their own Subjects are allow'd. The late Czar took great Delight in Books, Medals, and all Sorts of Antiquities; as in Gardens, Green-Houſes, Aviaries, Grottoes, Fountains, Caſcades, and all Manner of Water-works. He alſo allow'd, for the Diverſion of the common People, Plays, Opera's, and Aſſemblies at the proper Seaſons, which has contributed very much to the Politeneſs of the Inhabitants, and makes them vaſtly exceed the Genius that the *Ruſſians* were Maſters of before the late Czar's Time.

The chief Grievance that they now labour under is, that they are obliged to build Houſes at their own Charge, and pay very dear for every Thing they have. But ſo arbitary is the Czar's Power, and ſo paſſive their Submiſſion and Obedience, that they readily conform to the Czar's Commands, upon whatever Terms are propoſed to them.

CHAP. IV.

Treats of the Provinces of Livonia, *or* Liefland; *as alſo of* Great Novogrod, Belozero, Wologda, Jeriſlaw, Tweer, *and* Smolensko.

LIVONIA is one of the Czar's late Conqueſts from the Crown of *Sweden*; it is bounded on the Eaſt by *Ingria* and *Great Novogrod*, on the South by the River *Dwina*, which ſeparates it from *Courland*, and other Provinces of *Poland*; on the Weſt by the *Baltick Sea*, and on the North by the Gulph of *Finland*. It is divided into *Eſtonia*, or *Eaſtland*, on the North; and *Letitia*, or *Lettenland*, on the South: The chief Towns are, 1. *Narva*, which ſtands upon the Weſt Banks of a River, which runs from the Lake *Pepus* into the Gulph of *Finland*, which River divides *Livonia* from *Ingria*; it is a ſtrong Place, and has a good Trade for Hemp and other Commodities, which that and the adjacent Countries afford.

In the laſt War between *Sweden* and *Moſcovy*, the Czar took *Narva* by Storm, making a terrible Slaughter of the Inhabitants; and thoſe of them who ſurviv'd the Conqueſt he tranſplanted to *Caſan* and *Aſtracan*, to prevent their rebelling againſt him, as being jealous that they were better affected to the *Swede* than to him; but when he had got ſure Footing in the Country, he recall'd them home that remain'd alive, but, having loſt moſt of their Effects by their being ſent abroad, they liv'd but a poor miſerable Life at their Return home.

Revel is a Port on the North-Eaſt Part of *Livonia*, open to the Gulph of *Finland*, above a hundred Miles to the Weſtward of *Narva*; it was much improv'd by the late Czar, and is made a commodious Port for Part of the *Ruſſian* Navy to lie up in during the Winter. It was taken by the *Moſcovite* in the laſt War. The Town ſtanding moſtly upon the Side of a Hill, with a Deſcent towards the Sea, the Cathedral, and the Houſes of the Nobility and others, that are lately built, afford a very handſom Proſpect to the Shipping, but the reſt of the Town is decay'd and ruinous. When they were apprehenſive that the Czar, with his brutiſh *Coſſacks* and *Tartars*, intended to attempt the taking of the Country, the Inhabitants fled to *Revel* for Refuge, by which Means the Town became ſo populous that a Plague enſued, which was computed to carry off not leſs than fifty thouſand People: The Czar allow'd them, after they were conquer'd, the free Exerciſe of their own Religion, which is after the *Lutheran* Way; but the *Ruſſians* have a Church of their own, and their Religion is after the Manner of the *Greek* Church.

Govern-ment. The Magiſtrates have the Civil Government of the City; the Nobility have the Government of the Country, and the *Ruſſian* Governor of *Revel* has the Command of the Military Power; Admiral *Apraxin* was lately Governor of *Revel* and all *Eſtonia*. They yet retain the Arms, Inſcriptions, and other Monuments or Remarks of Antiquity, belonging to *Denmark*, as may be ſeen by their Churches and other antient Buildings; this Town having been firſt built by ſome of the Kings of *Denmark*, and ſtill enjoying ſeveral Privleges granted them by that Crown.

Dorpt. The City of *Dorpt*, or *Dorpat*, ſtands upon the River *Embeck*, to the Southward of Lake *Pirbus*: It was taken

taken by the Czar in the Year 1704, and now continues annex'd to the Empire of *Moscovy*.

Parnow. *Parnow* is about fifty Miles to the Southward of *Revel*; it is situate upon a River of the same Name, which falls into the *Livonian Sea*.

Riga *Riga* is deem'd the Capital of *Livonia*, situate near the Mouth of the River *Dwina*, where it falls into the *Livonian Sea*: It is a Place of good Trade, and a good Harbour, where some of the *Russian* Men of War lie up during the Winter Season. The Town has suffer'd very much of late, and by the Enemies Bombs and the Plague it has been very much depopulated. *Livonia* has been severally in the Possession of the *Germans*, *Danes*, *Poles*, *Swedes*, and *Moscovites*, of all which Nations they are now compounded; but the *Germans* are the most numerous, and their Language prevails most in the Country.

The Soil is good, but the Country has been so ruin'd, and the Inhabitants so destroy'd by War and Plague, that the Advantage of the good Soil is lost for want of Inhabitants to cultivate it. The Sea, the Lakes, and navigable Rivers, contribute very much towards the maintaining a Communication in Trade between *Moscovy* and the rest of *Europe*.

Novogrod. The Province of *Novogrod* is bounded on the North by *Ingria* and *Belozero*, and towards the East by *Jereslaw*, or *Jereslaf*, by *Livonia* towards the West, and *Smolensko* towards the South. The chief Town is *Novogrod*, on the North Side of *Ilmen Lake*, and about two hundred Miles North-West from the City of *Moscow*. There is a Communication, by the River *Wolchoff*, between *Ilmen Lake* and *Ladoga Lake*; the River *Wolchoff* running through *Novogrod*, and being navigable from one Lake to the other; which has made *Novogrod* one of the most populous trading Places in that Part of the World. *Novogrod* was an independant Place till about the Year 1477; when the Great Duke of *Moscovy*, as he was then call'd, plunder'd the Place, (and when they were so poor they became an easy Conquest) and then he impos'd a Governor upon them: And in the Year 1569 the then Great Duke, *John Bazilowitz*, pretending that they had form'd a Conspiracy against him, massacred a great Number of the Inhabitants, and demolish'd great Part of the Town; and since that it has, between the *Swedes* and *Moscovites*, fallen much to decay, and its Trade and Inhabitants are inconsiderable to what they were formerly; but it is still a considerable Place, and an Archbishop's See. There are, in and about the City, a hundred and eighty Churches and Monasteries, all built of Stone, as is the Castle, on the opposite Side of the River; but the Houses are commonly mean wooden Buildings.

A Miracle But I must not forget the Monastery of St. *Anthony* in particular, which the Natives tell us took its Rise from hence: St. *Anthony* being at *Rome*, shipp'd himself aboard of a Millstone, upon which he sail'd, or swam, down the *Tiber*, and getting safe through the *Sneights of Gibraltar*, steer'd away to the Northward, and sail'd into the *Baltick*, and by the Gulph of *Finland* into *Ladoga Lake*, and from thence up the River *Wolchoff* to the Place where *Novogrod* now stands, where (they say) he perform'd many Miracles; and indeed if they could find a Way to draw me into a Belief of his Expedition, it would be a great Step towards creating a Belief of all the rest; but as for those who are so incredulous as to deny this Naval Expedition, they shew them the Millstone as a Proof of the Fact, *but I never heard of any that saw it swim.*

Product. The Province of *Novogrod*, and Country about it, abounds in Grain, Flax, Hemp, Honey, and Wax; and the best of *Russia* Leather is manufactur'd here.

Old Russia and *New Russia* are situate on the South Side of the Lake *Ilmen*. *Pleskow* is the Capital of the Dukedom so called: It is a large populous City; and was a free and independant City till about the Year 1509, when the Great Duke of *Moscovy* reduc'd it, and annex'd it to his own Dominions.

Belozero The Province of *Belozero* lies North-East from *Ingria*: The chief Town is *Belozoro*, on the South-West Coast of the *White Lake*. The Province of *Wologda* is South-East from *Belozero*: The chief *Wologda* Town is of the same Name, *Wologda*, in near fifty-nine Degrees of Latitude, upon a River of the same Name, which falls into the *Dwina*, and empties itself into the *White Sea*, below *Archangel*. The City is about two hundred Miles to the Northward of *Moscow*; it is a large City, encompass'd with a Stone Wall, which is not common in *Russia*; it is a Place of very good Trade, insomuch, that when the late Czar was intending to remove the Mechanicks and Handicraft Trades from *Wologda* to his new City of *Petersburg*, he was told that, by only three *German* Merchants, that were settled at *Wologda*, there were upwards of twenty-five thousand Persons employ'd in dressing of Hemp and Flax, that was yearly exported to foreign Countries, by the way of *Archangel*, to which Place they had the Conveniece of Water-Carriage, by the Rivers *Wologda* and *Dwina*; whereas, if they were carried to *Petersburg*, they must be obliged to carry them by Land, which would be a much greater Expence; for the greatest Part of the Goods exported from *Archangel* were of the Growth of the Province of *Wologda*. These Objections and substantial Reasons against their removing to *Petersburg*, cast a Damp upon the Czar's *Petersburg* Project for some Time, though the Consequence proved that none of those Difficulties could make him desist.

The River runs through the City of *Wologda*, which stands upon the Banks of the River, on each Side, for near four Miles together. The great Church has five Cupola's, cover'd with Tin, with large gilt Crosses on the Top of them; and besides it there are above twenty more Stone Churches in the City, with Cupola's cover'd with Tin and gilt Crosses, and above forty more built of Wood; there are also three Monasteries of Friars, and one of Nuns.

Jereslaw *Jereslaw*, or *Jereslaf*, lies to the Southward of *Wologda*: The chief Town is of the same Name with the Province; it is situate on the River *Wolga*, in the fifty-eighth Degree of Latitude; it is reckon'd one of the principal Cities in *Russia*, especially for the great Number of Churches that are built of Stone, because wooden Buildings are much more common in *Russia*. It is a very plentiful Country, and has a very good Trade, especially in Linnen and Leather.

Twer Between *Great Novogrod* and *Jereslaw* is the District of *Twer*: The chief Town is also *Twer*, upon the River *Wolga*; a Town containing about two thousand Houses, with seventy Churches and Monasteries; and a Castle in which the Governor resides. There are great Quantities of Wheat brought hither every Year from *Casan* and the Country about, and sent to *Petersburg*.

Smolensko The Province of *Smolensko* lies between the Province of *Lithuania*, in *Poland*, and the Province of *Moscowa*: The chief Town is *Smolensko*, situate on the River *Nieper*, or *Boristhenes*, near the Borders of *Lithuania*, of which it was once accounted a Part. The *Moscovites* and *Poles* have by Turns had this Province in Possession, till the Year 1686, when it was by Treaty confirm'd to the *Moscovites*, who have peaceably enjoy'd it ever since.

CHAP.

CHAP. V.

Of the Province of Moſcow, *or* Moſcowa; *with a Deſcription of the City of* Moſco, *the Capital of the Province; alſo of the Provinces of* Little Novogrod, Caſan, Bulgar, *&c. with the Territories of the* Don Coſſacks, *and the* Ruſſian Ukrain.

Moſcow.

THE Province of *Moſcow*, including the Diſtricts of *Raſtow*, *Periſlaw*, *Suſdal*, and *Wolodimir*, is bounded towards the North by the Province of *Tweer*, and towards the Eaſt by *Little Novogrod*, by the Province of *Rezan* towards the South, and by *Smolensko* on the Weſt. The chief Town of the Province is *Moſcow*, antiently the Capital of the Empire, till now *Peterſburg* has juſtled it out of the Imperial Dignity; notwithſtanding which, it is not diveſted of its antient Grandeur; its Situation, and Appearance, eſpecially at a ſmall Diſtance, being very agreeable: It ſtands on a large pleaſant Plain, on the Banks of the River *Moſcowa*, in near fifty-ſix Degrees of Latitude, and about thirty-eight Degrees of Longitude Eaſt from *London*; it extends about ſix Miles in Length, and four in Breadth. The multitude of Churches, with their gilded Cupola's and Spires, with the numerous Palaces of the Czar and the Nobility, which are ſurrounded with large Courts and Gardens, afford a very beautiful Proſpect as you approach the City, eſpecially on the Road from *Great Novogrod*, but I muſt own it looks beſt at a Diſtance, when only the fine Buildings appear, and hide the dirty Streets that lie between them, and the poor wooden Cottages that are interſpers'd among them; there are indeed two or three thouſand handſome Stone Houſes, which would of themſelves form a noble City, if they were contiguous, and diſpoſed in regular Streets, and the very ordinary Houſes not to be intermix'd with them, but rather to encompaſs them in the Nature of Suburbs; but there is no Care taken to diſpoſe even the beſt Buildings, much leſs the worſt, to any Advantage of Beauty or Order, which makes them (however they may ſhew themſelves at a Diſtance) be very little entertaining to a Traveller when among them; nor is their Pavement more entertaining, as being only Trees of Timber, cut a little plain on the upper Side, and laid in the Street, in the ſame Manner as before deſcribed at *Archangel*.

The City of *Moſcow* is divided into four Parts, each ſurrounded by a Wall: Within the firſt are the *Slabodaes*, or Suburbs, moſtly in Ruins by Fire and foreign Enemies; the ſecond Part, or Quarter, is call'd *Czar Gorod*, or, in *Engliſh*, the *Czar's City*; the Third is *Kitai*, or the *China Town*, for here the *Indian* and *China* Merchandizes are ſold; and in the Fourth ſtands the Royal Palace, and thirty or forty Churches and Chapels, with the Palace of the late Patriarch, and the principal Officers of State; and alſo ſeveral Monaſteries, and other Buildings, and ſo populous, that this Quarter alone might be accounted a conſiderable City. Before the Walls is a large Market-Place, the fineſt in the City of *Moſcow*.

In the *China* Market they expoſe the Pictures of their Saints, to be ſeen and ſold; but with this Difference, between them and Goods that are common, and leſs ſacred as they think them, that the Buyer muſt not chaffer or undervalue a Picture, by bidding leſs than the Seller asks, but devoutly either give him the Price, or go without it; indeed if the Seller is as conſcientious on the other hand as to ask no more than it is worth, the Bargain is the ſooner made, and both Parties as juſtly ſerv'd. They deal much in wooden Ware here, as at *Archangel* and *Petersburg*; but here, *viz.* in the Czar's Market, they expoſe to Sale not only Toys, as Hand-Bowls, Punch-Bowls, Spoons, *&c.* all of Wood, but alſo they have wooden Houſes, ready fram'd, of ſeveral Sizes; that if by Fire, or any other Means, a Houſe be demoliſh'd, they go to Market, and, having fix'd upon a Size, and agreed for the Price, the Workmen take it down, and convey the Timber to the Place appointed, and putting each in its proper Place, the Houſe is finiſh'd; ſo that the old Houſe may be burnt or pulled down, the new one bought at Market, carried home, and built, and all in a Day's Time, or two at moſt; which is a great Advantage to the Natives, on account of the frequent and dreadful Fires which happen, by reaſon not only the Houſes, but Pavements, too are made of Wood, that if they had not this ready way of rebuilding, when thoſe Fires happen, the Sufferers would be much longer deſtitute of Shelter. They have ſuffer'd ſo much by Fires in thoſe combuſtible Houſes, that they have begun to build Warehouſes, and make Vaults of Stone and Brick, for the better Security of their moſt valuable Goods, by which means their Sufferings by Fire have not of late been ſo ſevere as formerly.

It is ſaid there are not leſs than fifteen hundred Churches, Monaſteries, and other Religious Houſes, in *Moſcow*; and it is obſerv'd, that they are ſo plentifully furniſh'd with Bells, that their mix'd and confuſed Sound on the Holidays make them very troubleſome to the Inhabitants. They have ſome few Clocks in the City; but the moſt common Way is, as at *Archangel*, to give Notice of the Time of Day, by ſtriking every Hour upon a Board, or large Piece of caſt Iron, with a wooden Hammer. The Czar's Palace is built of Free-Stone, on the Side of the River; but, as it conſiſts of the Contrivance of ſeveral Princes of different Taſtes, the whole is, in itſelf, very irregular; the Circumference of the whole is about twice as much as that of the Tower of *London*. Since the removal of the Court to *Peterſburg*, the Czar's Palace at *Moſcow* lies not only unfurniſh'd and neglected, but going to Ruin for want of Repairs. For when the Czar became ſo intent upon the Improvement of *Peterſburg*, he, in Order to promote that Deſign, and even to oblige his Nobility to forſake *Moſcow*, publiſh'd an Order to prohibit the Rebuilding or Repairing any of the Palaces or Stone Buildings at *Moſcow*. The Cathedral is a large ſtrong antient Building; on the Right Side of the Altar is a Seat for the Czar, and on the Left for the Patriarch, while they had one; in the Middle of the Church hangs a Silver Branch, of a prodigious Size; the Picture of the *Virgin Mary*, and other Ornaments of the Altar, are adorn'd with Jewels to the Value of above fifty thouſand Crowns;

Crowns; they also shew another Picture of the *Virgin Mary*, which, they say, was drawn by St. *Luke*. At the Bottom of the Steeple lies the great Bell, so much talk'd of by Travellers, said to weigh 336000 *lb.* or one hundred and fifty Tun, and is thirteen Foot in Diameter. Before the Gate of the Castle stands the Church of the *Holy Sepulchre*, which, they say, is built exactly after the Model of that at *Jerusalem*. The late Czar founded three Colleges; one for the learned Languages, another for Mathematicks in general, and a Third for Navigation in particular. During the Carnival, when almost all the loose disorderly Persons are drunk, as it were by a Sort of Authority, there are so many Street Robberies and Murders committed, that dead Bodies are found in the Streets by fifty or sixty in a Week. But while *Moscow* was in its Grandeur, its Neighbourhood abounded with fine Country Seats, Walks, Groves, and Gardens, which afford Plenty of Fruits, Flowers, and Garden-Stuff, and all Necessaries of Life extremely cheap.

Great Bell at *Moscow*.

Rostow, or *Rostoff*, is about a hundred and twenty Miles North-East of *Moscow*. *Pereslof* is seventy Miles North-East from *Moscow*, in the Road to *Rostoff*. *Susdal* is about a hundred Miles North-East from *Moscow*, on the River *Kisma*. *Wolodimer* is about forty Miles East from *Susdal*, on the said River *Kisma*. These four are the Capitals of their respective little Provinces. *Troitza* is about forty Miles North of *Moscow*: It has sometimes been the Czar's Residence, he having a Palace here, and is yet famous for its Castle and Monastery. *Columnia* is situate at the meeting of the two Rivers *Moscowa* and *Oka*, about fifty Miles South-East from the City of *Moscow*.

Nice Novogrod

The Province of *Nice Novogrod*, or *Little Novogrod*, lies South-Eastward from the Province of *Moscow*: The chief Towns are, 1. *Nisna*, upon the River *Oka*, it is about two hundred Miles to the Eastward of *Moscow*; it is encompass'd with a strong Wall of Stone, and hath a Cittadel built upon a Rock; the Cathedral is also built of Stone, and cover'd with five Domes, painted green, and a gilt Cross on the Top of each; there are three other Churches built of Stone, as is the Archbishop's Palace, but the rest of the Houses, and other Buildings are all of Wood. 2. *Basilgorod* is a good Town on the River *Wolga*, about twenty Leagues East from *Nisna*.

Casan.

Casan Province lies North-Easterly from *Little Novogrod*: The chief Town, and Capital, of the Province, is *Casan*, situate at the Confluence of the River *Casan* into the *Wolga*, in the fifty-sixth Degree of Latitude. So large is the River *Wolga*, so high up as *Casan*, that the Czar's Men of War, intended for the *Caspian Sea*, are built there. Here are many fine Churches, built like those before described, with Domes and gilded Crosses; and a Castle also, surrounded by a Stone Wall; but the generality of the Houses here are mean wooden Buildings, like those describ'd in other Parts of *Moscovy*.

Bulgar.

The Province of *Bulgar* lies to the Southward of *Casan*. Chief Towns are, 1. *Bulgar*, or *Belaya*, near the River *Wolga*, and about a hundred and twenty Miles South-East from *Casan*. 2. *Samara*, about a hundred Miles further to the Southward, upon the River *Wolga*, but on the *Asian* Side.

Rezan.

The Province of *Rezan* is between the Provinces of *Moscow* and *Belgorod*. Chief Town is *Rezankoi*, on the River *Oka*, about seventy-five Miles South-East from *Moscow*: The River *Don*, or *Tanais*, rises in this Province. To the Southward of the Province of *Rezan* is that of *Belgorod*: Chief Town is *Veronese*, or *Weronitz*, situate near the Confluence of the Rivers *Don* and *Veronese*, in near fifty-two Degrees of North Latitude. Here the late Czar built some of his Men of War, which he intended for the *Black Sea*, some so large as to carry eighty Guns, though so high up the River; but when he was obliged to surrender *Asoph*, the Ships perish'd, because his Communication with that Sea was cut off, notwithstanding the Charge he was at to cut a Channel between the River *Don* and the River *Wolga*. 2. *Belgorod* about one hundred Leagues to the Southward of *Moscow*. 3. *Ostrogofskoi*, about sixty Miles to the Southward of *Veronese*.

Land of the Don Cossacks.

The Territories of the *Don Cossacks* lie partly on the East, but mostly on the West, Side of the River *Don*, or *Tanais*, extending six or seven hundred Miles. The chief Town is *Donetskoi*, on the East, or rather North-East, Side of the *Don*, in fifty Degrees odd Minutes of Latitude. This is a fruitful Soil, and a good Climate, being some of it in the same Latitude with the South Part of *England*; but the Country being so thinly peopled, this otherwise fruitful Country lies uncultivated for want of Inhabitants.

Seesk.

The Land of *Seesk* lies between *Belgorod* on the North, and *Smolensko* on the South, not far from the Borders of *Poland*: Chief Towns are *Novogrodesk* and *Zernigof*, both on the West Side of the River *Deesna*; but, being obscure Places, they do not afford much Matter for our Observation.

Ukrain

The *Russian Ukrain* is bounded on the East by *Belgorod* and *Don Cossacks*, and on the South by *Little Tartary*, by *Polish Ukrain* on the West, and by *Zernigof* on the North; it is divided from *Polish Ukrain* by the River *Nieper*, or *Boristhenes*. The chief Town is *Kiow*, or *Kiof*, situate on the West Bank of the *Boristhenes*, in Latitude fifty-one North, about four hundred Miles South-West from *Moscow*. This Country belong'd to *Poland*, till it was surrendred to the *Moscovites* in the Year 1686; it is mostly inhabited by the *Cossacks*. It is call'd *Ukrain*, which signifies a Frontier, it bordering upon *Little Tartary*, with whose Inhabitants they are seldom at Peace. The *Turk* claims the Dominion of *Little Tartary*, though they do not greatly care for him; but when a Truce subsists between them, the *Tartars* make Incursions into *Moscovy* and *Poland* to steal Slaves to sell to the Porte.

CHAP.

CHAP. VI.

Gives an Account of the Stature, Complexion, Shape, and Habit, of the Ruſſians; *their* Genius, Temper, *and the Vices to which they are moſt addicted: Of their Diet, Lodging, Baths, Exerciſes, Diverſions, Feſtivals, Salutations, and Ceremonies; alſo of their Poſts, Roads, Carriages, and way of Travelling.*

THE *Ruſſians* are of a good Stature; and though the Boors, or labouring People among them, if we compare their Working with their manner of Feeding, have no great Reaſon to expect to be fat, yet the better Sort, if inclined to be a little corpulent, value themſelves upon it. They are generally of a healthy Conſtitution, and very nimble. I do not know how far the late Czar might prevail upon them to ſhave, if he laid a heavy Tax upon their Beards, as it has been reported he did, but I have ſeen the common Sort of them with their long Beards, and when an *Engliſhman* has ſportingly brought out a Razor, and ſeem'd to offer to ſhave them, they have cover'd their Beards, or put them by, and expoſed their Throats, intimating, that they would rather ſuffer to have their Throats cut, than their Beards ſhav'd; and at the ſame time hold up their Hands, and look up with ſuch frightful and diſtorted Countenances, as if it was the greateſt Sin imaginable to have their Beards ſhav'd, or cut off with a Razor. But I have been told, that when the Czar, by his arbitrary Commands, has compell'd them to undergo the Operation, either to be ſhav'd, or, if obſtinate, to have the Beard and Skin with it pull'd off, they have endeavour'd to ſave as much as they could of the Hair to be buried with them, ſuch a Veneration they have for that Badge of Gravity.

THE Women have generally very good Features, but delight ſo much in a red Complexion, and are ſo confident that they cannot be handſome without it, that if Nature has not beſtow'd that Colour upon them, they ſupply that Defect by Art, and lay on Red in abundance. They formerly uſed Patches, cut in the Shape of Trees, Horſes, and the like; but ſince they have convers'd more with other *Europeans*, theſe Fancies are pretty much laid aſide. The young Women have many of them very handſome Hair, which they have plaited, and it hangs down in Treſſes on their Backs. They are well proportion'd, and fair complexion'd, but have generally brown, blackiſh Teeth, which they procure to be ſo by Means uſed for that Purpoſe, as thinking black Teeth more beautiful than white ones.

THE Men formerly wore Caps in Form of a Sugar-Loaf, turn'd up with Fur, a Shirt with a round Skirt like a Petticoat, not ſo low as their Knees, with a Saſh about their Middle, and the Shirt not put in their Breeches, but hanging down on the Outſide of them. This was their working Dreſs, but at other times they had a looſe Coat or Veſt over all the reſt, reaching down almoſt to their Heels. Their Shoes like ſhort Boots, up as high as the Small of the Leg. But when the Czar ſaw more of the *Engliſh* Dreſs, he thought it more commodious, and order'd his Subjects to conform to it; which ſome ſcrupling to comply with, he placed Guards at the Gates of the Cities, and other Places of Reſort, to cut their long Garments off by the Knees; and then inſtead of thoſe Caps, they wore Hats, and very much affected Gold-Lace, or ſomething in Imitation of it about the Edges of them.

Shammucks. THE *Samoieds*, or *Shammucks*, as they are there call'd, who live in their Huts, in the Northern Part of the Empire, are much more unpoliſh'd than the Inhabitants of the Cities of *Archangel*, *Petersburg*, &c. They wrap themſelves up in Skins of Rein Deer, clapping the two Fleſh Sides together, having then a hairy Side outwards, and another hairy Side inwards; next them the Coat and Cap is all of a Piece, and only a Hole is left forward to look out at.

Tempers. THE *Ruſſians* are, many of them, of late grown much more ingenious than formerly, eſpecially in making or turning little light Toys in Ivory or Wood; but it is difficult to bring them to any thing of ſolid Improvements, which ſome impute to their Pride and Slothfulneſs; and tho' that may be partly the Cauſe, yet there is a Reaſon ſeems to me to be more material; for the Government, or the Lords, whoſe Slaves they are, will employ their whole time, if they excel in any Art, and allow them nothing for all their Induſtry.

THE late Czar, after he had got himſelf a little more poliſh'd than the common *Ruſſians* were, by his Converſation with the *Engliſh*, and other *European* Nations, call'd them *a Herd of Brutes in the Shape of Men*, and almoſt deſpair'd of bringing them to any Degree of Docibility: And the young Nobility, which he ſent abroad, were not much the better for their Experience. But here we are not to be ty'd up to the Account given by ſome of our *Engliſh* Travellers, who report them in general to be Drunkards, &c. I own I have ſeen, and that very frequently, the Boors, or Labourers, drunk with their *Paw Brandy*, as they call it, and lying aſleep with their Faces againſt the Sun in hot Weather. But if this was to be a Precedent, or a Ground for the general Character of a Country, it might with much more Reaſon be affirm'd, that *England* is a drunken Nation, when Travellers ſee the Gin-Shops in *London* crowded every Day (Sabbath-Days not excepted) with Cuſtomers of the moſt deſpicable and contemptible Rank. But we ſhould think it very hard, if Foreigners ſhould carry home ſuch a Report of *England*, for no other Reaſon, but becauſe they ſee ſome of the moſt profligate of the Inhabitants guilty of thoſe Crimes, ſo odious to the better, or even to the middling Sort of People. For my Part, I apt to believe, that thoſe who bring home ſuch an ordinary Account of *Ruſſia*, or indeed of any other foreign Chriſtian Nation, have only, or at leaſt moſtly, convers'd with the meaneſt of the Inhabitants, amongſt whom, and them only, they could find People of ſuch a mean Character as they repreſent the whole Nation to be; and that if they had convers'd with the better Sort of People in the Country, they would have brought home a better Character of *Ruſſia*.

Food. They are more used to Fish than Flesh, especially Salt-Fish, which they will eat without boiling, or any other way of Dressing I have seen a Labourer aboard of a Ship, who, for his Provision, brought a Fish like a small Cod, and when the rest went to Dinner, he eat of his raw Fish; and what was left served the next Day, &c. till it was consumed. They like Flesh very well, but their Fasts taking up by far the greater half of the Year, and they at those Times being absolutely prohibited the Eating of Flesh, makes it not much used among them; nor will they, during those Fasts, eat either Milk or Eggs, or, as they call it, any thing that came of Flesh, or might have come to be Flesh. They use Melons, Cucumbers, and other Garden Stuff, in great abundance. They use Cavier so much, that it is brought in Pots or small Caggs from thence to *England*, as a Rarity, or as Presents to Merchants, or other Gentlemen. It is made of the Roes of Sturgeon, salted and dry'd. They have Plenty of Hams, many, if not most, of which are made of Bears; they taste well, and except by their Shape, are not easily distinguish'd from our *English* Hams.

Liquor. Their Liquor formerly was mostly Mead, or a Liquor called *Quaz*, being a small sort of Liquor made with Honey-Combs; but of late they have learn'd to brew and drink Malt Liquors; but those that brew it, must first take Licences of the Government for so doing.

Lodging. Their Lodgings are commonly in the same Room where they eat and drink; the Houses, as has been observed, consisting generally of but one Room, in which is a Stove, or large Oven, cover'd with Planks, which makes it appear like a large Table, or a Tomb-Stone, and a gentle Fire being kept in it, warms all the House; and in cold Weather so many of the better Sort of the Family lie upon it, as can conveniently stow themselves, and the rest upon the Floor, or upon broad Benches or Shelves fix'd round the Room, having Quilts or common Matts to lie upon, or cover them with; but of late, the better Sort have Beds, in imitation of the *English*. One material Piece of their Furniture, is, the Pictures of their Saints, which they commonly place on that Side of the Room opposite to the Door.

Salutation. Their manner of Salutation was, by Bowing or Inclining the Head, and the greater the Quality of the Person saluted, the lower and more profound the Reverence; to a Prince or Magistrate they bow the Head, or prostrate their Faces to the Ground, and never address in their own Name, but the Name of a third Person, and in some diminutive Terms, as, *Little Peter*, or *Poor John*, or *Your Slave*, &c. desires this or that Favour. The Women also bow, and do not kneel, or make a Courtesy, as they do in *England*.

When a Person pays a Visit at a Friend's House, he at his first Entrance looks for the Saint; and if the Paint be almost wore off, or if the House be dark, and the Candles not burning, or for other Reasons they cannot see it, he first asks, *Where is the God?* and having found it, makes a low Bow, or falls on his Face to the Ground before it, crossing himself, and saying, *Gospodi Pomoli*, which is in *English*, *Lord have Mercy upon me*. Then he pays his Respects in particular to the Family, and kisses the Mistress's Cheek; which done, the Mistress used to withdraw, and be no more seen at that Entertainment; but of late they are allow'd more Liberty, and converse more familiarly with the other Sex.

Bathing. Bathing is a universal Diversion, as well as a Remedy for all Distempers; the poor, or middling People have recourse to publick Bagnio's, but the Quality have them in their own Houses; but the Bagnio's, whether Publick or Private, pay a Tax to the Government. The publick Baths have one Apartment for Men, and another for Women, which might be look'd upon as a Piece of Modesty, if they did not after Bathing run promiscuously about the Field, and lay themselves down in the Snow, and the like, without any Notion of Shame, or avoiding a Stranger even of a contrary Sex, but will rather meet them, and sport with them when naked, without any regard to Modesty or Decency.

Their Exercise for Diversion is Hawking, or Diver Coursing with Greyhounds, and some of them are inclined to Musick, for which their chief Instruments were the Harp, the Bagpipe, the Hunting Horn, and Kettle-Drum; but the late Czar promoted better Musick, as also Plays, Opera's, and Assemblies, after the Manner of several other *European* Nations, but with Regulations and Restrictions drawn up by his own Hand, to prevent their Diversions degenerating into Debauchery; and it were to be wish'd, that other Nations, that pretend to a greater Degree of Reformation, and a higher Pitch of Christianity, would do the same.

The Persons of Quality used to keep Dwarfs or Jesters, seemingly foolish, though satirically witty; these were allow'd to make all Remarks, and speak all Truths that they thought fit, tho' such as might have been resented from any other Person. The Czar used to entertain his Friends with his Dwarfs and Jesters to a high Degree, insomuch, that immediately after the Marriage of the late Duke of *Courland* to the Czar's Niece, the Princess *Anne*, the Czar order'd a Marriage A *Ru* to be solemniz'd between two of his Dwarfs, with We as much Splendor and Magnificence as if it had been the Nuptials of a Prince; and to make the Appearance more uniform, all the Officers and People employ'd in performing the Procession, and the Ceremony, were of the same diminutive Race with the Bride and Bridegroom; and one of the least of that Species walk'd at the Head of the Procession, carrying a Marshal's Staff, as a Badge of the great Office of this little Officer; next came the Bride and Bridegroom richly dress'd; then the Czar himself, with his Ministers and Nobility; then follow'd threescore or fourscore Couple of Dwarfs of each Sex; and being come to the Church, the Czar himself held the Nuptial Garland over the Bride's Head, according to the Custom of the *Greek* Church: They afterwards din'd in the same Hall where the Czar had entertain'd the Duke and Duchess of *Courland* at their Wedding, and with the same Magnificence, having as many Tables as they, only with this Difference, that the Tables were low, and proportion'd to the Stature of the Guests. The Bride and Bridegroom were plac'd at separate Tables, each under a Canopy, and the rest at other Tables, according to their Rank and Dignity. The Company was attended by a Marshal and eight Deputies, with other Officers, all of the same Pigmy Stature, but generally crooked or deform'd, or some way disproportion'd in their Structure, which afforded more Diversion to the Spectators; for after Dinner and the usual Healths, these diminutive Actors began to dance; one advancing with a high Bunch upon his Back, and short Legs; another with a monstrous big Belly; another waddles along with a Pair of short crooked Legs, and a Head almost as big as his Body. In short, no Person was suppos'd qualified to be an Actor in this Farce, except he was some way deform'd, and of a contemptibly little Stature; and as for their Deformities, they were so far from concealing them, that they rather magnified them, as being the chief Badges or

Marks

Marks of their Qualifications for ſo great an Office as that of making themſelves ridiculous to the Company.

Feſtivals. THEIR chief Feſtivals are, firſt, on *New-Years-Day*, or the Firſt of *January*, which is the ſame with our Firſt of *January*, the *Ruſſians* reckoning by the *Old Stile* as we in *England* do. I ſhall give one Inſtance of their Manner of performing that Ceremony, as we have it from a Traveller who was preſent at it. He tells us, that the late Czar on that Day repair'd to the great Church at *Peterſburg*, at Four in the Morning, and officiated in reading Divine Service himſelf, inſtead of the Patriarch, he having ſuſpended that Office, as participating too much of Sovereign Power. When Divine Service was over, he return'd to his Palace under the Diſcharge of the great Guns; there he receiv'd the Compliments of the Nobility, and preſented to every one a Glaſs of Brandy, according to annual Cuſtom. Afterwards he, with ſome of the Nobility and Clergy, paid a formal Viſit to ſome of the higheſt Rank, where as they entered the Doors, they ſung *Te Deum* in the *Ruſſian* Language and Manner, and wiſh'd them a happy New Year; whereupon the Maſter of the Houſe, who was appriz'd of the Viſit, preſented the Czar (as Head of the Clergy or Patriarch, whoſe Office he had that Day perform'd) with a Purſe of Money. It is likely the Czar was very willing to perform the Prieſt's Office that Day, becauſe receiving the Money was one grand Part of it; for which very Reaſon it is to be ſuppoſed the Prieſt did not thank him for being ſo very officious. But what cannot arbitrary Power do, when that once prevails! After the Preſent made, the Perſon invited the Czar and his Company to an Entertainment; but they never ſtay'd at any Place above two Hours, becauſe of the many Viſits they had to make that and the ſucceeding Days, till *Twelfth-Day*, which is alſo another great Feſtival for the Ceremony of the Conſecration of the Waters, which is celebrated on that Day.

THE Ceremony of Conſecrating the Water was thus perform'd at *Peterſburg* (the Gentleman from whoſe Account we had this, being preſent at it in the Year 1719.) The Czar himſelf march'd at the Head of ſeven Battalions of his Guards to the River *Nieva*, which was then frozen ſufficiently ſtrong for the Ice to bear them. The Troops were form'd into a Square, in the Middle of which a Hole was cut in the Ice, and over the Hole a wooden Houſe ready fram'd for the Purpoſe was ſet; and when Divine Service was ended at Church, the Proceſſion of the Clergy began, the Bells in the Churches ringing at the ſame time. When the Clergy had advanc'd to the Houſe in the Square, the Conſecration Prayers were read; upon which the Artillery was diſcharg'd, and three Vollies of ſmall Shot fired: In the mean time the Prieſts drew up ſome of the conſecrated Water out of the Hole in the Ice, to give the People to drink. Some bring their Children to be baptiz'd in it, *&c.* and when all that Ceremony is over, in which the Prieſts are concern'd, the Populace flock in to carry ſome of the conſecrated Water home to their Families or Acquaintance, which is look'd upon as a valuable Preſent. Cripples alſo, and infirm People, crowd thither for Cure, as not only believing the Waters to be medicinal, but as ſuppoſing, that he that gets to it the firſt after its Conſecration, has the beſt Chance for a Cure.

THE Fourteenth of *September*, call'd by us *Holy Rood*, or the Exaltation of the Croſs, is a very ſolemn Day with them. They form a Proceſſion, having the Picture of our Saviour in his Agonies upon the Croſs, and the Virgin *Mary*, &c. weeping at the Foot of it. This Picture is elevated or exalted upon a Pole, and expoſed to View with ſo much Veneration and Ceremony, that although the labouring People are not ſuppreſs'd from working that Day, yet if either a Man, Horſe, or Sledge, ſhould be in the Street likely to meet it, they muſt go on the other Side, or, if the Street is not broad enough, they muſt go quite back, and not put the Clergy an Inch out of their Way that form the Proceſſion.

THEY have two other rejoycing Days: One is when the Snow is fallen, and the Water frozen, that they can travel with their Sledges over Land and Water with equal Eaſe and Safety, without regarding the winding of the Roads. The other is at the Spring of the Year, when the Froſt breaks, and the Rivers are open for Water Carriage; ſo that their Carriage in Summer is moſtly perform'd by Water, and in Winter by the Sledges.

Traveling and Carriage. THE Sledges being chiefly uſed in Winter, as above obſerv'd, they load their Goods and carry the Paſſengers upon them: Thoſe in *Lapland*, *Samoieda*, and other Northern Parts, are generally drawn by Rein-Deer; but in the Southern and more civiliz'd Parts of *Moſcovy*, they are commonly drawn by one Horſe. The Rein-Deer is much about the Height of our Fallow-Deer, but much thicker, and their Legs ſtrong in Proportion. It has an Advantage of the Horſe in travelling in the Winter, for it has a thin wide Hoof, and is naturally nimble, and treads light, that it can travel upon the Top of the frozen Snow without breaking in; whereas the Horſes have ſuch ſmall Hoofs, that they cannot travel but in the beaten Road, where the Snow, by continually treading upon, becomes hard and ſolid.

THE Travellers carry their Proviſions along with them, there being no Inns upon the Roads that are leſs frequented, but upon the great publick Roads, as between *Moſcow*, *Archangel*, and *Petersburg*, &c. the late Czar order'd Houſes of Entertainment to be erected at every fifteen or twenty Miles, with Mercuries to deſcribe the Way, and ſhew the Number of Miles from Place to Place; and upon ſome of the chief Roads, as between *Moſcow* and the City of *Veroneſe*, he has caus'd Trees to be planted for ſome hundred Miles together, alſo Poſt-Stages and Horſes for Conveniency of Travelling. They chuſe the Winter-time as we do the Summer for Travelling, as being the beſt Road; for thoſe Places there that are in Summer boggy and impaſſible, are in the Winter become practicable, by reaſon of the frozen Snow with which it is cover'd: That being the Weather they wait for for Travelling, and which puts Travellers in Motion, as ſoon as the Sledge-way is fix'd, many hundreds of Sledges may be ſeen every Day going in and out of *Peterſburg*, *Moſcow*, *Archangel*, &c. Some of the Quality uſe Coaches; but few, if any, travel Journeys in Stage-Coaches, as with us.

THE late Czar has very induſtriouſly improv'd his Dominions, by making Rivers navigable, and cutting Canals from Place to Place, particularly from the *Baltick* to the *Caſpian Sea*, by Way of the River *Wolga*, inſomuch, that great Quantities of Oak Timber is now convey'd from *Caſan* to *Peterſburg*, by the ſame River, though it is a thouſand Miles or more; which gives them an Opportunity of building much ſtronger Ships now than when they had only their own Fir Timber; and I may add, when they had not Carpenters and other Workmen, that underſtood the Buſineſs nearly like thoſe they have now; and thoſe Canals are not only uſeful for conveying Floats of Timber, but Proviſions, to *Peterſburg*, where it would be otherwiſe much wanted.

CHAP.

CHAP. VII.

Gives an Account of the Nature of the Soil of Ruſſia; *of their Husbandry and Gardening; alſo of their Plants, Animals, and Minerals: With ſome particular Remarks of Captain* Perry, *and others, concerning the Froſt, Snow, Air, Winds, Seaſons,* &c.

Soil. *RUSSIA*, being a plain flat Country, cannot miſs of being naturally moiſt and well-water'd, eſpecially if to this we add the Additions made by Art by the late Czar, who, not only to water the Country, but to maintain a Communication between one Part of the Empire and another, cut Canals in the low wet Grounds, and repair'd the old Roads, or made new ones in the higher, or dry, Grounds, that are capable of it; by which Means the barren Places are either made fruitful, or ſupply'd with Neceſſaries from other Places that are ſo. So that the Northern Parts, where the Seaſons are not capable of ripening the Grain, are ſupply'd by the Southern, and more fruitful, Provinces of the Country. But the *Samoieds* and *Laplanders*, who are ſo far to the Northward, that they neither have Seaſons for ripening Corn of their own, nor have any Communication with their Neighbours by Roads or Canals, whereby to be ſupply'd, live on the Fleſh of Wild Beaſts, ſuch as Deer or Bears; whoſe Hams they cure in their Faſhion, and ſell them at *Archangel*, where the *Engliſh* uſed to buy them, as Rarities, and bring them to *England*, for Preſents or Entertainment. They have alſo Plenty of Fiſh and Fowl; as alſo of Turnips, Cabbages, and the like, which ſerve them for Bread. Their Rein Deer feed upon Moſs; which, when the Snow hinders them from coming at the Ground, they find upon the Trees, and with this they grow fat in the Winter. The moſt fruitful Part of the Country is *Caſan*, and other Countries near the River *Wolga*. Their Seed-time and Harveſt is near the ſame Time as ours: But there is but little of Sowing or Reaping among them; becauſe, let who will plow and ſow, their Lords have the firſt Refuſal of ſo much of the Crop as they pleaſe; and therefore they rather chuſe grazing, or expending what the Earth naturally produces; which makes Beef cheap, and the other Products of the Earth, as Turnips, Cabbages, &c. ſupply the Place of Bread. And when the Summer comes, not only Graſs, but Tulips, Roſes, and the beſt of Aſparagus, ſpring up, as our Hemlocks and other Weeds, ſpontaneouſly, without any Culture.

The Woods and Foreſts of *Ruſſia*, eſpecially towards the Northern Parts of it, produce no Oak Timber, or ſcarce any other, but Fir and Birch, of which they have Plenty; but towards the Southern and Eaſtern Parts of *Moſcovy*, as about *Caſan*, they have Plenty of Oak, Elm, and other Timber, fit for all Manner of Uſes. They have improv'd their Fruit Trees, and, even ſo far North as *Peterſburg*, have brought their Gardens to great Perfection. They have great Plantations of Hemp and Flax, of which they export abundance yearly to all, or moſt, of the Nations in *Europe*. Their Fir, or Pine, being ſo plenty, furniſhes them with great Quantities of Tar, and conſequently of Pitch; which the late Czar conſidering, found he was able to build, rigg, and fit out, a Fleet of good Ships. But it is but of late that they have ſo much improv'd their Iron Manufactury; for, not much more than twenty Years ago, I have ſeen a Ship at *Archangel*, of about ninety Tuns, that had no Iron about her, all the Planks being faſtned together with wooden Trindles, and the Feather-Edges of them ſtitch'd together with Withes.

Animal. The Tame Animals are Horſes, Oxen, Buffaloes, Goats, Hogs, and Sheep; and the Rein Deer may alſo be reckon'd among that Species, being broke to drawing and other Uſes, as our Horſes are. Their Wild Beaſts are Bears, Foxes, Elks, Deer, Wolves, with Wild Sheep and Wild Horſes. Captain *Perry* tells us, that the Fleſh of their Wild Sheep, when dreſt, is tender, and much preferable to our *Engliſh* Mutton. The Wild Horſe-Skin is a thick, warm Furr, much uſed to line the Covers of their Sledges. There are alſo Martens, Sables, Ermins, and Hares; one Sort of which is white in the Winter, and in the Summer the common Colour of *Engliſh* Hares, or rather greyiſh. They have ſome Furs ſo valuable, that a late Traveller reports, that he ſaw a Gown made of Sables, of the deepeſt black, valued at above a thouſand Pounds, which the late Czar made a Preſent of to the Grand Seignior.

Wild Beaſts. The Bears, Wolves, and other Wild Beaſts, are not ſo ravenous as in moſt other Places where they abound; it being ſcarce ever heard in *Moſcovy* that any Man was attack'd and hurt by a Wild Beaſt, they always rather inclining to avoid a Man, as Hares and other Wild Beaſts do in *England*; or if thoſe more voracious Wild Beaſts, as Bears, &c. do fall upon a Man, it is commonly the Effect of exceſſive Hunger, or his approaching their young Cubs, or ſome ſuch Provocation.

Bees. They have vaſt Plenty of a Sort of Wild Bees in the Woods, which makes the Country abound with Honey and Wax; by which Means Mead, or Quaz, becomes a common Sort of a Liquor among them, and their Candles are commonly made of Wax; not but that, for all their Plenty of Wax, and Cheapneſs of Candles, the common People will commoly light one End of a long Fir Splinter, and putting the other End in their Mouth, carry their Light before them to execute any common Buſineſs of the Houſe; and ſo lighting one after another, as long as Occaſion requires.

There are but few Serpents, Scorpions, or other poiſonous Inſects in this Country; but Gnats, Muskettoes, and other troubleſome ſtinging Flies, abound, both in the Houſes and Roads, in the Summer-time. Here is abundance of excellent Fiſh; amongſt which is the *Bolluga*, a Fiſh about eight or ten Foot long, deem'd by ſome preferable to Sturgeon; and the Roes of it as good, or better, to make Cavier of. There is plenty of Salmon, red or white; alſo Carp, Perch, Tench, &c. Fiſh.

Fowl. They have great Plenty of Fowls; and Hawks, particularly Falcons, abound here. The Woods and Gardens about *Moſcow* abound with Singing Birds; which being very ſcarce in the Woods

about

about *Petersburg*, the Czar employ'd People about *Moſcow* to catch Numbers of them, to the Value of ſix or ſeven hundred Pounds; which being brought to *Petersburg* and let fly, they took Shelter in the Woods, and multiplied conſiderably; but ſtill retain that natural Inſtinct to fly more to the Southward in Winter-time; as do alſo the Wild Geeſe, Ducks, Snipes, Swans, and other Water Fowls; as alſo Fieldfares, Thruſhes, Woodcocks, and other Land Fowls; which, doubtleſs, is a natural Reaſon why theſe are ſo plenty with us in the Winter-time, without that abſurd Notion, advanced in ſome Books, where it is aſſerted that, becauſe it is too far for our Swallows, and other Summer Birds of Paſſage, to fly to between the Tropicks for the ſake of warmer Weather, they fly into the Moon. They muſt have dull Notions of Geography and Aſtronomy, who know no better than to think that the Diſtance of the Moon from the Earth, is leſs than one Eighth of the Earth's Circumference, as muſt be the Caſe, if the Paſſage into the Moon be eaſier than from *England* to within ſeven Degrees of the Equinoctial, which is not above two thouſand ſeven hundred Miles: And if that Diſtance be incredible, much more that of flying into the Moon, which, by the Computation of ſome Aſtronomers, is above two hundred thouſand Miles. But when People have Notions to advance, contrary to the Rules of Reaſon, Philoſophy, or Probability, we ſee what Abſurdities they will have recourſe to, to ſupport them, and impoſe upon Peoples Belief.

There are ſome Copper Mines in *Ruſſia*, eſpecially near *Caſan*. There are alſo Iron Mines and Works near *Moſcow* and *Veroneſe*, as alſo near *Onega Lake*; where they make both Guns and Mortars, and alſo all Manner of Small Arms. It is ſaid alſo that they have diſcover'd a Sort of a Gold Sand in ſome of the Rivers that run into the *Caſpian Sea*, and that they can refine it, and ſeparate the Ore from the Droſs. They have Brimſtone alſo, and Salt-Petre, and make moſt of the Gun-Powder they expend.

Captain *Perry* gives us the following Account of the Air and Seaſons in this Part of the World, and of his Opinion concerning them: He ſays, the Czar was of Opinion that his Country join'd to *America*, and was peopled from thence, when there was not ſuch Quantities of Ice, and the Cold more moderate than now. *Thus far Captain* Perry: But I muſt own I muſt ſuſpend my Belief of this Opinion, if we conſider that the Scene of the firſt Creation was in *Aſia*, and that therefore, by ſome Means or other, *America* muſt conſequently be peopled from thence at firſt; [*See Chap.* VI. *of the Hiſtory of* Japan, *Page* 56] and as *Moſcovy*, and all the Czar's Dominions, are upon the ſame Continent with that where the firſt Creation was, it is very reaſonable to think that, as the World grew more populous, the Inhabitants would gradually ſpread and diſperſe themſelves, almoſt all over the ſame continued Tract of Land, before they would, in thoſe infant Ages, attempt new Diſcoveries: And if we do admit of Communication by Land between *Moſcovy* and *America*, and conſider, as above, that the firſt Creation was in *Aſia*, it is much more probable that *America* was peopled by Way of *Moſcovy*, and from thence, than that *Moſcovy* could be peopled from *America*: For if we allow the Communication between *Aſia* and *America* by Land, the Probability of which is aſſerted in Chap. VI. of the Hiſtory of *Japan*, above-mention'd; and if we ſhould likewiſe allow, what is yet a Diſpute, that there is an uninterrupted Communication by Land between *North America* and *Moſcovy*, by which the Inhabitants might by degrees ſpread themſelves into *Moſcovy*; I ſay, if theſe two diſputable Points were granted, yet then the Inhabitants muſt at this rate have diſpers'd themſelves quite round the Globe, or through all the three hundred and ſixty Degrees of Longitude; whereas, if we allow the Creation to be near the Head of the *Perſian Gulph* [*See Chap.* IV. *of the Hiſtory of* Arabia, *Page* 227.] they had not above twenty or thirty Degrees of Latitude to ſpread, which is not above twelve or eighteen hundred Miles Northerly. And being all upon the ſolid Continent, it ſeems to me ſo very probable that *Moſcovy* was peopled this Way, that it is little leſs than abſurd to think otherwiſe, or to ſuppoſe them to have ſpread gradually twelve thouſand Miles through diſputable (though not improbable) Paſſages, as from *Aſia* to *America*, and from thence to *Moſcovy*, and all that by Land, when a Paſſage of only as many hundred Miles, upon one continued known Continent, will anſwer the Caſe with much more probability.

But to continue Captain *Perry*'s Opinion: He tells us, That when the extreme Northern Parts were firſt inhabited, thoſe Countries were more temperate, and not ſo cold as now; and that at the Beginning of the World there was no Ice upon the Surface of the Water; and that, even under the Pole, the Froſt occaſion'd by the Sun's Abſence for ſix Months the firſt Year could not produce Ice of any conſiderable thickneſs; but as the Froſt, during the Sun's Abſence in the ſix Winter Months, created more Ice than his Preſence in the ſix Summer Months could diſſolve, it will follow that there muſt be a conſtant yearly Increaſe of the Ice, by which it has amounted to what it is now, as being the Work of ſo many thouſand Years: And he thinks that as theſe Mountains of Ice increaſe the Cold reflected from it, ſo thoſe Northern Climates increaſes in Proportion; and that the Cold continues to be very perceptible a-ſhore, and ſo far from the Sea, as on the Road near *Moſcow*, as long as the Iſlands of Ice are floating about in the *White Sea*, though that happens in *June* or *July*, the beſt of Summer.

Again, in *September* or *October*, when the Winter is coming on, and the Surface of the Earth is juſt frozen, and the Snows fallen to the Southward of *Archangel*, but the Ice not gather'd in the *White Sea*, the Seaſons ſeem to be metamorphos'd, or tranſpos'd; the Southerly Winds being coldeſt, as coming from the Country where the Snow was fallen, and the Northerly Winds the warmeſt, as coming from the Sea before the Ice is contracted in it. The Truth of this is prov'd by our own Experience; *viz.* That the Wind blowing from the Sea where there is no Ice is generally more warm than Wind that comes off the Main Continent; witneſs, the Weſt and South-Weſt Winds, coming out the Sea to *England*, being warmer than the Eaſt and North-Eaſt Winds, which blow from the Main Continent of *Europe*; and the Froſts being earlier, later, and more ſevere, in *Holland* than in *England*, though in the ſame Latitude. And to mention no more, the Froſt, at the ſame Seaſon, is much more ſevere in ſome Parts of the *Baltick* than in thoſe Parts of *England* or *Scotland* in the ſame Latitude: The Reaſon of the difference is, becauſe the Iſland of *Great Britain* is ſurrounded by the Sea, (where no Ice is) and the *Baltick* is ſurrounded by the Main Continent, where the Snow falling, is continued by the Coldneſs of the Winter Air, and from thence proceeds the cold froſty Air which affects the *Baltick*.

CHAP. VIII.

Treats of the Trade, Shipping, Navigation, Manufacture, Coins, Weights, and Measures of Moscovy.

IN order to give a proper Account of the Trade and Navigation of *Moscovy*, it will be necessary first to give an Abstract of the History of the several Steps taken towards its Improvement: We are therefore first to observe, that *Russia* having formerly no Communication by Water but by the *White Sea* and the *Frozen Ocean*, then unfrequented, it had then but very little, if any, foreign Trade; and as for the Furs, and other Merchandize which their Country afforded, they were sent by Land to *Livonia*, and from thence shipp'd off at *Narva*, *Revel*, *Pernaw*, or *Riga*. But in the Year 1552 a Company of *English* Merchants were incorporated, by the Name of, *The Merchants Adventurers for the Discovery of Lands*, &c. *unknown*. They fitted out three Ships, *viz.* the *Bona Esperanza*, the Admiral, of a hundred and twenty Tuns, commanded by Sir *Hugh Willoughby*; the *Bon Adventura*, Captain *Richard Chancellor*, one hundred and sixty Tuns; and the *Bona Confidentia*, Captain *Duforth*, of ninety Tuns: They weigh'd from *Deptford May* 11, 1553; agreeing that, in Case of Separation, their Rendezvous should be at *Ward-huys*, on the Coast of *Lapland*, to the Eastward of the *North Cape*. And accordingly Captain *Chancellor*, losing the other two, made the best of his Way thither, and waited a Week in expectation of them; but they not appearing in that Time, he stood to the Eastward, and discover'd the Bay of *St. Nicholas*, as he call'd it, but now call'd the *White Sea*. This Country he found to be *Moscovy*, and that *John Basilowitz* was then Sovereign of it. The Governor, as well as the Inhabitants, receiv'd the Captain with great Humanity, furnish'd them with Provision, and express'd a Desire to trade with them; but the Governor would not propose any Terms upon this Subject till the Great Duke was acquainted with it; and therefore dispatch'd an Express to *Moscow*, with Intelligence that the *English* had found the *White Sea* and *Archangel*, and were willing to establish a Trade there. Whereupon the Great Duke (the same as Czar, or Emperor, is now) sent Post Sledges, and other Conveniences, to attend Captain *Chancellor* to *Moscow*; who, upon his Arrival there, presented the Great Duke with a general Letter from King *Edward* VI. directed, *To all Kings, Princes, Rulers, Judges, and Governors of the Earth*, Importing, *That whereas God had implanted in all Men a Desire of Friendship and Intercourse with one another, and that Justice and Humanity required us to treat those kindly, who, through great Dangers, brought their Merchandize from distant Countries, to supply what might be wanting in the Places they visited, and take off the Product of their Country in Return; concluding with an earnest Desire that a joint Correspondence, and reciprocal Favours, and common Humanity, might be establish'd and continued.* Dated, at *London*, *May* 14, in the Year of the Creation 5515, and in the seventh Year of the Reign of King *Edward* the Sixth.

THE Great Duke, upon Sight of this Letter, invited the Captain and his People to a magnificent Entertainment, and express'd his Desire of establishing a Trade and Intercourse between the two Nations, and dismiss'd Captain *Chancellor* with a Letter to King *Edward* VI. where, after having acquainted him what Kingdoms and Provinces he was Sovereign of, he informed him of Captain *Chancellor*'s Arrival in the twentieth Year of his Reign, &c. and to this Letter was affix'd a Translation of it into *High Dutch*.

CAPTAIN *Chancellor* return'd to *England* in the Year 1554, when he found King *Edward* dead, and Queen *Mary* upon the Throne. In the Year following the Company sent Captain *Chancellor*, in the *Bon Adventura*, again, with Agents and Factors to settle a Trade with *Russia*, and Letters from King *Philip* and Queen *Mary*, to empower them to treat with the *Russians* upon that Subject. The two Agents that were join'd in Commission with Captain *Chancellor* were *George Killingsworth* and *Richard Gray*. The Great Duke receiv'd them with all possible Marks of Respect. Here Mr. *Killingsworth* was inform'd, that the two other Ships, that came out with them on the first Voyage, under the Command of Sir *Hugh Willoughby*, were found near *Kegon*, upon the Coast of *Lapland*, by some Fishermen; but all the Men, which were seventy Persons, were dead: So he caus'd the Ships to be brought into the *White Sea*, and sav'd all their Effects that were good for any Thing. It appear'd by Journals found aboard, that they had beat about upon the Coast of *Greenland* and elsewhere, to the Northward, and arrived at this Place *September* 18, 1553; that they had sent Parties of Men into the Country to seek for Inhabitants but found none; and that most of the Company were alive in *January* following; and, lastly, that they perish'd with Cold rather than Hunger, because their Journals mention'd great Plenty of Deer, Bears, Foxes, and other Wild Beasts in that Country; and neither had they spent all the Provision that they had on Board, which proves they did not die for want of Food.

THE Great Duke's Commissaries, and our *English* Agents above-mention'd, coming to Terms about Trade, the Great Duke granted the *English* the following Privileges.

I. THAT the said Company, their Agents and Factors, with their Ships, Goods, and Merchandizes, might enter into any of the Cities or Territories of *Russia*, by Sea, Land, or fresh Water, to traffick or depart at their Pleasure, without any Restraint, Toll, Custom, or Acknowledgment whatsoever upon their Ships, Goods, or Effects, or Licence to enter or depart.

II. THAT the *English* Subjects should be solely under the Government of the *English* Agents, and such Discipline as they should agree to appoint among themselves, and the *Russians* not to intermeddle in that Affair, except to deliver up to the *English* such Delinquents as should fly from Justice, and attempt to take shelter among them.

WHEN Captain *Chancellor* return'd from *Russia* with this Grant of the Great Duke, the Company obtain'd a new Patent from their Majesties, King *Philip* and Queen *Mary*, whereby *Sebastian Cabot*, who was Governor of this new Company, was now confirm'd in that Office for Life, and the Lord Treasurer, the Lord Steward of the Houshold, and most of the great Officers of State, as well as Aldermen of *London*, were concern'd in it, as Members. They were incorporated by the Name

Name of, *The Governor, Conſuls, Aſſiſtants, Fellowſhip, and Commonalty of Merchants Adventurers, to Lands, Territories,* &c. *unknown and unfrequented.*

By the ſaid Letters-Patent full Power was given to the Company, and their Agents, to ſail to all Ports, Dominions, Territories, and Places unknown before their late Adventure, under the Royal Banner, Standard, Flags, and Enſigns; and to erect and fix them there, or on any Lands and Shores, Cities, Towns, or Iſlands of any infidel Princes; and to ſubdue and poſſeſs their Dominions, as well as all other Lands hereafter to be diſcovered, and to reduce them under the Power of the Crown of *England*; and all other People were thereby prohibited from reſorting to or trafficking with *Ruſſia*, or any other Place which the ſaid Company ſhould hereafter diſcover, without Licence from the ſaid Company.

In the Year 1556 the Company ſent out two Ships to *Ruſſia*, double mann'd, with Orders (beſides what they brought home with them in the Way of Trade) to bring home Sir *Hugh Willoughby*'s two Ships. Captain *Chancellor* having on board *Oſeph Napea*, who was coming in Quality of Ambaſſador from the Great Duke to the Court of *England*, they ſet ſail from *Archangel July* 20, 1556, in Company with the *Philip and Mary*, and Sir *Hugh Willoughby*'s two Ships; one of which, in their Paſſage home, founder'd upon the Coaſt of *Norway*, and the other, with ſeveral *Ruſſian* Merchants aboard, coming for *England*, was ſeparated from the reſt and never heard of more; the Loſs of both being ſuppoſed to be occaſion'd by their being decay'd, by lying ſo long like Wrecks upon the Coaſt of *Lapland*. Captain *Chancellor*, in the *Bon Adventua*, was alſo drove from his Anchors, upon the Coaſt of *Scotland*, the Ship ſplit upon the Rocks, and Captain *Chancellor*, with ſeveral Men, both *Engliſh* and *Ruſſians*, loſt; but the Ambaſſador, with ſome of the Company, were ſav'd, and getting a-ſhore in *Scotland*, were treated there but very indifferently. But the News thereof coming to Court, Queen *Mary* diſpatch'd a Meſſage to the Regent in *Scotland*, to order that the *Ruſſian* Ambaſſador ſhould be kindly uſed, and that what Effects of his were recover'd from the Wreck might be reſtor'd to him. Which being done, he came to *London*, and made a magnificent Publick Entry, and was met by above three hundred Horſe a little Way out of Town, and at *Smithfield-Bars* by my Lord Mayor and Aldermen, on Horſeback; and was conducted from thence in great State, riding between the Lord Mayor and Lord *Montague*, through the City, to his Apartment in *Fenchurch-Street*. Thus did the *Engliſh* find out and ſettle a Trade with *Moſcovy*, which they enjoy'd the ſole Benefit of for near thirty Years; which the *Dutch* perceiving, they, according to their wonted Induſtry in reaping the Fruit of other People's Labours, put in for a Share of the Benefit, when *England* had been at the Charge of making the Diſcovery, and eſtabliſhing the Trade; and now may be ſaid to reap as much Advantage by the *Ruſſia* Trade as any Nation in *Europe*.

Three Ships loſt and 3 home.

When *Oſeph Napea*, above-mention'd, had finiſh'd his Embaſſy in *England*, and was order'd home, Captain *Anthony Jenkinſon* carried him over, in the Year 1557; and was order'd to proceed to find a Way, if poſſible, from *Moſcovy* to the *Eaſt Indies*, and to open a Trade with *Perſia*. And to facilitate this Deſign, the *Engliſh* Company, to ingratiate themſelves with the *Ruſſian* Emperor, whoſe Permiſſion and Aſſiſtance too was neceſſary to carry on the Deſign, ſent ſeveral Mechanicks and Artiſts over with Captain *Jenkinſon*, to enter themſelves in the *Ruſſian* Emperor's Service; which were ſo very acceptable in his un-poliſh'd Country, that Captain *Jenkinſon* found it not difficult to obtain the Great Duke's recommendatory Letter to all Kings and Princes through whoſe Dominion he propos'd to paſs.

Captain *Jenkinſon* ſet ſail from *Moſcow*, *April* 23, 1558, and arriv'd at *Aſtracan*, which Kingdom and City *John Baſilowitz* had conquer'd about ſix Years before: Here they embark'd on the ſixth of *Auguſt*, and fell down the River *Wolga*, into the *Caſpian Sea*, ſteering Eaſterly along the Shore to the Mouth of the River *Jaick*, and ſo to *Manguſlave* and *Sellyzure* on the ſame Coaſt; and from thence, by the Caravan, to *Bochara*, on the River *Oxus*, one of the chief Cities of *Ubeck Tartary*, and a great Mart for the Merchants of *India*, *China*, and *Moſcovy*: But he met with little Encouragement, only ſelling a little Cloth, and to but ſmall Advantage, the *Perſians* having it at a better Hand by way of *Turkey*; and, as the Prince of *Samarcand*, or *Ubeck Tartary*, was about to lay Siege to *Bochara*, he was forced to quit the Place, and make the beſt of his Way back to *Moſcow*.

There were afterwards ſome other Attempts made to contrive a Trade with *Perſia*; but the Danger of being plunder'd by the *Coſſacks* in the *Caſpian Sea*, and, at laſt, the Eſtabliſhment of the *Engliſh Eaſt India* Company, who traded to *India* and *Perſia* by the *Cape of Good Hope*, quite deſtroy'd all Thoughts of our trading with *Perſia* by way of *Moſcovy*, till the Reign of the late Czar; and even then, although he attempted, for the Love of his new-projected *Petersburg*, to allow the *Engliſh Ruſſia* Company to tranſport their Goods that way, through *Moſcovy* into *Perſia*, yet, this not being conſiſtent with the Patent of the *Turkey*, and alſo of the *Eaſt India*, Company, and contrary to the Act of Navigation, which requires all foreign Commodities to be ſhipp'd at the uſual Ports, that Deſign was dropp'd alſo.

What Improvements the *Ruſſians* have made in their Shipping is moſtly in or ſince the Time of the late Czar. For when he open'd a Paſſage into the *Black Sea* by his taking of *Aſoph*, about the Year 1695, he began to form a Deſign of building a Royal Navy there, with which he might even force a Trade with *Turkey*, and penetrate at laſt, through *Boſphorus* and the *Helleſpont*, into the *Mediterranean*, in Caſe the Grand Seignior ſhould diſpute his Paſſage or his Trade there. And with this View he ſent to *Holland*, *Italy*, and *Venice*, for Workmen to build Ships and Galleys; compelling each Nobleman, whoſe Riches conſiſt in the Number of their Slaves as well as in their Lands, to build a Man of War at his own Charge; the inferior Gentlemen, Tradeſmen, and Clergy alſo, and even the Monaſteries too, contributing in Proportion to the building of this Navy, or Fleet; inſomuch, that in three Years Time he had built forty Men of War, ten Store-Ships and Bomb-Veſſels, twenty Galleys, and thirty half Galleys, and other Veſſels in proportion.

In the mean Time himſelf, with ſome of his Nobility, travell'd to get Experience in maritime and martial Affairs, but eſpecially in Ship-Building, which he apply'd himſelf very cloſely to at *Amſterdam*, being exited thereto by the Inſinuations of the *Dutch*, who would have made him believe that no Nation in the World was ſo expert in Ship-Building as they; but coming from thence to *England*, he ſoon found the Difference between the neat Models of the *Engliſh* built Ships, and the grouty Buttocks of the *Dutch* ones, and, repenting that he had loſt ſo much Time in *Holland*, apply'd himſelf in earneſt to Ship-Building when he came to *England*; and the better to promote his Deſign, he fix'd himſelf at Mr. *Evelyn*'s Houſe at *Deptford*, where the Back-Door open'd

into

into the King's Yard, where the Builders shew'd him their Bends of Moulds to form a Ship of any Rate or Burthen proposed.

But, besides the Ship Carpenters, he also visited the most ingenious Mechanicks, as Watch-makers, Smiths, Gun-smiths, &c. and when he went home, he took with him a Master-Builder, and several Carpenters, and other Tradesmen and Mechanicks, into his own Country.

When he return'd into *Moscovy*, he made a Draught of a Man of War, of fifty Guns, with his own Hands, and set her upon the Stocks at *Veronitz*, and caus'd himself to be declar'd Master-Builder. And at Sea he advanc'd gradually, from the inferior to the more exalted Stations; and, although it was in his Power to have assum'd what Place or Authority he pleas'd, yet he would not take upon him any particular Dignity or Command aboard of his own Men of War, but what he first duly qualified himself for, that his Subjects might not pretend to do otherwise.

Product. *Russia* produces Pitch, Tar, Hemp, Planks, and Fir-Timber for Masts; also Pot-ash, *Russia* Leather, Furs, Linnen, Iron, Copper, Seal-skins, Train-Oil, Rozin, Cavier, Tallow, Wax, and two Sorts of Ising-glass; one for Windows, which is transparent, and like our ordinary Glass, and will bend like a thin Lanthorn-Horn; the other is such as we use in fining down Liquors, and they also use it in making Glue.

Manufacture. They have also set up the Silk, Woollen, and Linnen Manufactures, which last turns to the best Account. Their Woollen they had mostly from *England*, but now from *Prussia*. They make and export vast Quantities of a coarse narrow Sort of plain Linnen and Diaper, and also of Linnen and Hempen Yarn, raw or unwrought, to most Parts of *Europe*.

But what is a great Discouragement to their Trade is, the Government monopolizes the principal Commodities of their own Growth; buying up the best, and not only putting an extravagant Value upon them, but prohibiting the Subjects from selling any of theirs, till the Czar's are dispos'd of; and when foreign Merchandizes arrive, no Subject must purchase any till the Czar has had the Refusal, or as much of them as he likes, by which Means the Czar in effect makes his own Price. If a Man has acquir'd any Substance by his Industry or Ingenuity, it is look'd upon as the Property of his Governors; and therefore let a Man's Circumstances be what they will, he must either be thought poor, or be plunder'd of what he is worth; which is a great Means to destroy Ingenuity and promote Sloth and Idleness; for even an industrious Man had rather be idle than suffer another Man to enjoy all the Fruits of his Labour.

Coins. Between twenty and thirty Years ago all the Silver Coin they had were Copeaks, Half-Copeaks, and Quarter-Copeaks; which might be reckon'd like our Pence, Halfpence, and Farthings, of full Weight and Fineness, in proportion to the purest Coins of other Countries. But the Czar being straitened for Money, in the Year 1700, called in and melted down the old Money; and, besides a deeper Allay of Copper than the former Standard, he made the Copeaks, &c. but about three Fifths of the Weight of the old ones; by which means he nearly, if not quite, doubled the Quantity of Money that was in the Empire before, as to its current Value; but the intrinsick Value of the Silver being thus diminish'd by the deeper Allay, those that could afford it kept up the old Coin, till the Czar fetch'd it out, by offering an Advantage in exchange to those who would return old Money for new.

He then coin'd large Money, as Grecvnaes, or ten Copeak Pieces; as also Rubles, which are ten Grecvnaes each, or a hundred Copeaks; as also five and three Copeak Pieces, and Copper Half-Copeaks. But now a Dollar, which was worth but fifty-five Copeaks, will, by increasing the Allay, and diminishing the Weight, make a Ruble, or a hundred Copeaks very near double, as observ'd above.

It may be observ'd of Rubles, Grecvnaes, and Copeaks, (which is the most common Way of reckoning and paying their Money, as by Pounds, Shillings, and Pence with us) that ten of the lower Denomination makes always one of the next higher, as, ten Copeaks is one Grecvna, and ten Grecvnaes one Ruble; or, according to the common Phrase, that, in adding any Sum together, they stop at every ten; whereas we stop at twelve in Pence, and twenty in Shillings. It will follow therefore, that to add any Number of Articles of Rubles, Grecvnaes, and Copeaks together, the whole Result taken as one Sum, without any regard to the different Denominations, shews the Number of Copeaks in the whole; but cutting off one Figure to the Right Hand will be odd Copeaks, and another cut off from the Right Hand of those that are left are odd Grecvnaes, and the rest, of how many Places soever it consists, is Rubles, as those that please to try will see. Thus if to 876 Rubles, 7 Grecvnaes, and 8 Copeaks we add 129 Rubles, 9 Grecvnaes, and 5 Copeaks, the first Number, taken all together, is 87678, and the Second is 12995; which added together, as if they were Numbers of one Denomination, amount to 100673 Copeaks; but the two last Figures being singly separated, as above directed, it will be 1006, 7, 3, or 1006 Rubles, 7 Grecvnaes, and 3 Copeaks. And if all our Denominations of Coins, Weights, and Measures, were thus decimally sub-divided, it would save an infinite Trouble in casting up large Sums or Quantities.

CHAP. IX.

Of the Arms of Russia, *the Imperial Stile, the Prerogative of the Prince, the Constitution of the Government, the Degrees of Nobility, and the Forces and Revenues of the Empire.*

Arms. THE Arms of *Russia* are *Or*, an Eagle display'd *Sable*, bearing on its Breast a Shield *Gules*, charged with a Cavalier *Argent*, St. *George* (or St. *Michael*) fighting with a Dragon; and over the Heads of the Eagle are three Crowns, *viz.* that of *Moscow*, *Casan*, and *Astracan*. The same spread Eagle, &c. is upon the large Money of *Russia*, as the Rubles, Half-

Half-Rubles, &c. as alſo in their Flags, or Enſigns.

THE Emperors of *Moſcovy* formerly aſſum'd to themſelves a Multiplicity of pompous Titles, inſomuch that there was ſcarce a Province in their Dominions but what they had ſome Title from, beſides that general one of Czar, Great Duke, or Emperor of *Moſcovy*; as, King of *Aſtracan*, Lord of *Pleskow*, Great Duke of *Smolensko*, &c. But whatever Titles they may have aſſum'd, the *Ruſſian* Sovereigns were never allow'd the Title of Emperor by the other Powers of *Europe*, till the late Czar procured it for himſelf and Succeſſors; and as for his other Titles, he grew ſo weary of the ſuperfluous Repetition of them all, that he order'd that, in Petitions, &c. it ſhould only be directed, *To his moſt highly gracious Majeſty*, &c. and that the Petitioner, inſtead of ſubſcribing himſelf *Slave*, as uſual, ſhould for the future only write *Subject*.

THE *Ruſſians* are ſuppoſed to be of the Extraction of the *Scythians*, or *Tartars*; for they were at firſt a wandring People like them, and rambled from Place to Place like the wild *Arabs*, where they could find Forage for their Flocks and Herds. The City of *Kiow* was the firſt Seat of the *Ruſſian Monarchy*; and continued ſo, till their Sovereign *Wolodimer* built a City, calling it by his own Name, and remov'd it thither, about the Year 1000. He civiliz'd the People of the Country and introduc'd Chriſtianity. Many of the *Tartars* Herds, about the ſame Time, leaving that rambling Life, join'd with the *Ruſſians*, and fix'd themſelves in that Country now call'd *Moſcovy*; being govern'd at that Time by their reſpective Princes, as the ſeven Kingdoms of *England* were during the *Saxon* Heptarchy; but the *Ruſſians* being the moſt powerful, ſubdu'd all the reſt, and, like *Egbert*, King of *Mercia*, brought all the reſt of theſe petty Powers under Subjection.

WHEN the *Tartars* about *Caſan* and *Aſtracan*, found the *Ruſſians* grew ſo powerful, they united and made Head againſt them, and, in the Year 1237, reduc'd the *Ruſſians*, and brought them under Tribute for near two hundred Years. And in the Reign of *Daniel Caletta* the Seat of the Monarchy was remov'd to *Moſcow*, and he firſt took upon him the Title of Great Duke. It is ſuppoſed by ſome that the *Moſchi*, a People among the *Scythian Nomades*, gave Name to this City and Province, though ſome think it takes its Name from the River *Moſcowa*, which runs through the Country, and upon which the City of *Moſcow* is built. Indeed I could incline to believe that the People above-mention'd, call'd the *Moſchi*, were the Original of the Name, and that from them it deſcended both to the Country, the River, and the City.

John Baſilowitz was the firſt who united the ſeveral Dominions and Territories of the *Ruſſians*; it is ſuppoſed he began his Reign about the Year 1450; he expell'd the *Tartar* Garriſon from the Caſtle at *Moſcow*, and added the Dukedoms of *Novogrod* and *Tuwer* to his Dommions; as his Son did thoſe of *Pleskow* and *Smolensko* afterwards. And he again was ſucceeded by *John*, or *Ivan Baſilowitz*, *Anno* 1540: He conquer'd the Kingdoms of *Caſan* and *Aſtracan*, and was the firſt *Ruſſian* Sovereign of the vaſt Country of *Siberia*, from whence chiefly the *Ruſſians* have their Furs. This is that *John Baſilowitz* with whom Captain *Chancellor* and Captain *Jenkinſon* treated about ſettling a Trade to *Ruſſia*, as mention'd in the foregoing Chapter. This *John Baſilowitz* reign'd forty-four Years, *viz.* from 1540 to 1584; in which Time he obtain'd the Name of Tyrant by Way of Diſtinction, for his bloody maſſacreing the tributary Sovereigns in his Neighbourhood, and annexing their Dominions to his own.

THE Succeſſion to the Crown of *Ruſſia* has been deem'd hereditary, and in the Male Line; but both have been diſpens'd with in the Caſe of the of the late Empreſs, ſhe being the firſt Female that ever ſate upon the Throne of *Moſcovy*. (Except the Princeſs *Sophia*, the late Czar's Siſter, might be ſaid to ſit upon the Throne when the Adminiſtration was in her Hands, during his Minority.) And though the Succeſſion is generally reckon'd hereditary, yet it is in the Power of the reigning Monarch to ſet aſide the next Succeſſor, and name a more remote Relation to ſucceed.

IN order to introduce an Account of the late Czar and Czarina of *Moſcovy*, and more eſpecially of him, who has made his Name ſo famous throughout all the Known World, it may not be amiſs to give a brief Abſtract of the Succeſſion of the Great Dukes, Czars, or Emperors of *Ruſſia*, as far as Hiſtory furniſhes us with an authentick Account of them, beginning with

Great Dukes of *Moſcovy*.

Wolodimer: he liv'd in the tenth Century, and died *Anno* 1015, and was ſucceeded by his Son,

Wolodimer II. who was alſo called *Jariſlaw*: He built a City and call'd it by his own Name. He was ſucceeded by his Son,

Wolodimer III. And after him reigned

Vitzevoldus; of whom little is recorded, only he was ſucceeded by

George, who was murther'd by *Battus*, a *Tartarian* Prince, in the Year 1237; and by that Means *Jariſlaw*, the Brother of *George*, was advanc'd to the Throne, on Condition that he would become tributary to the *Tartars*; and when he died he was ſucceeded by his Son,

Alexander, and he by

Daniel; who remov'd the Imperial Seat to *Moſcow*; and dying, he was ſucceeded by his Son,

Ivan, or *John*; this *John* was ſucceeded by his Son,

John; after whoſe Deceaſe

Demetrius Ivanowitz mounted the Throne; he obtain'd ſeveral Victories over the *Tartars*, but loſt his Life in a Battle with them; and after him reign'd

Baſil Demetriowitz: He drove the *Tartars* out of *Ruſſia*, and conquer'd *Bulgar*; but, by the Inſtigation of his Wife, ſet aſide his Son from the Succeſſion, and left the Crown to his Brother,

George; who at his Death left the Crown to his diſinherited Nephew, whoſe Name was

John Baſilowitz Golzden: He began his Reign about the Year 1450; he firſt took upon him the Title of Emperor, and united the tributary Dukedoms under one Head; but he diſ-inherited his eldeſt Son, and ſettled the Crown upon his Son by a ſecond Wife, whoſe Name was

Baſil Ivanowitz: He began to reign *Anno* 1492, but dying, was ſucceeded by his Son,

John Baſilowitz, ſirnamed the Tyrant: He began his Reign *Anno* 1540, and reign'd till the Year 1584, at which Time he was ſucceeded by his Son,

Fedor, or *Theodore*. He married the Siſter of his Brother-in-Law, *Boris Fedorwitz Gadinow*; but *Boris* murder'd both him and his Brother *Demetrius*, and uſurp'd the Throne. But he had but a ſhort Enjoyment of it, till a certain Monk, named *Griska Veropia*, perſonated *Demetrius*, tho' murder'd, and getting Intereſt and Aſſiſtance among the *Poles*, made himſelf Maſter of ſeveral Places of Note in *Moſcovy*. Whereupon the Uſurper, *Boris*, died with Grief; and, notwithſtanding that the Nobility proclaim'd *Fedor Boriſſowitz*, the Son of *Boris*, yet the Uſurper, *Griska*, perſiſted in his Reſolution, and enter'd *Moſcow* in Triumph, and, having ſtrangled young *Fedor* and his

his Mother was crown'd Emperor. But he having married the Daughter of a *Poliſh* Palatine, and promis'd to introduce the *Roman* Catholick Religion, and to prefer thoſe *Poles* who had been aſſiſting to his Advancement, gave ſuch a Diſguſt to the *Ruſſians*, that, not long after his Coronation, while he was ſolemnizing his Wedding with the *Poliſh* Princeſs, the *Ruſſians* fell upon his Guards, fought their Way to his Apartments in the Caſtle, and murder'd him; and then

Zuski, one in the Conſpiracy, and allied to the former Royal Family, aſcended the Throne; but in a ſhort Time, another counterfeit *Demetrius* aroſe and depoſed *Zuski*.

Demetrius, the better to eſtabliſh himſelf, ſhav'd *Zuski*'s Head and thruſt him into a Monaſtery. However, the Impoſtor, *Demetrius*, was ſoon diſcover'd and degraded, and the *Ruſſian* Nobility choſe

Uladiſlaus, Son of the King of *Poland*, who then mounted the Throne; but the *Ruſſians* enter'd into a Conſpiracy to drive the *Poles* out of *Moſcovy*, which the *Poliſh* General being apprized of, he ſet fire to the City of *Moſcow*, and fell upon the *Moſcovites* before they were ready to receive him, by which Advantage above two hundred thouſand of the *Moſcovites* periſh'd by the Flames and by the Sword, and almoſt all the whole City was reduc'd to Aſhes; and the General, having amaſs'd a prodigious Quantity of Treaſure, which he had plunder'd the *Ruſſians* of, march'd off to *Poland*, and left the *Ruſſians* to ſhift for themſelves.

Michael Federowitz, of the Race of *John Baſilowitz*, and Son of the then Patriarch, was then elected Sovereign by the *Ruſſians*, *Anno* 1613. From him the preſent Royal Family of *Ruſſia* deſcended.

Alexis Michaelowitz ſucceeded *Anno* 1645, and after him his Son,

Feodore, or *Theodore Alexowitz*, *Anno* 1675; but he dying without Iſſue in the Year 1682, left the Crown, as ſome ſay, to his two Brothers, *viz.* *John* and *Peter*, which latter was *Peter*, the late Czar of *Moſcovy*, who was but half Brother to *John*; but ſome ſay, that *Theodore*, being ſenſible of the Incapacity of *John* for Goverment, left it entirely to *Peter*. However, the Princeſs *Sophia*, being of the whole Blood to both *Theodore* and *John*, having form'd a private Deſign of mounting the Throne herſelf, procur'd *John* to be declared Joint-Emperor with *Peter*, perhaps that their ſeparate Ambition to rival and excel each other in Power might weaken them both, and render her Acceſs the eaſier; and, in order to accompliſh this Deſign, ſhe, by degrees, drew the *Ruſſian* Guards, conſiſting of twenty or thirty thouſand Men, to her Party, as alſo the Prime Miniſter, Prince *Gallitzin*, who was, by the Czar *Peter*, charg'd with being in the Plot. Whereupon *Peter* retired to the ſtrong Monaſtery, or Fortreſs, of *Troitza*, about a Day's Journey to the Northward of *Moſcow*: Hither he ſummon'd the Nobility and Guards, *Anno* 1689, declaring to them that he had narrowly eſcap'd the Hands of the Conſpirators; and his Report meeting with Credit among them, he try'd ſome of them by the moſt exquiſite Tortures, and brought them to confeſs that there was a Plot form'd to murder him, his Wife, his Mother, and all his near Relations, and that his Siſter, *Sophia*, and the Prime Miniſter, *Gallitzin*, were at the Bottom of it. Hereupon he ſhut up his Siſter, *Sophia*, in a Monaſtery, and baniſh'd *Gallitzin* and his Family into *Siberia*, and ſeveral of the Guards, that were charg'd with being in the Conſpiracy, he tortur'd and put to death. Their eaſy Submiſſion to their reſpective Puniſhments would ſeem, to an impartial Eye, to be a tacit Proof of their Guilt

And now being come as low as the late Czar, ſo famous in his Life-time, and ſince in Hiſtory, for his heroic Atchievements, by which he has made himſelf as great a Prince, in many Reſpects, as ever appear'd in the World, it would render this Hiſtory imperfect if we did not give a more particular Account of him than of the reſt, as to his Parentage, and the ſeveral reſolute and undaunted Steps which he took to raiſe himſelf to that Pitch of Grandeur at home, and make himſelf ſo formidable to his Enemies, when he thought fit to approach them abroad.

The late Czar, *Peter Alexowitz*, was the Son of the Czar *Alexis Michaelowitz*, who dy'd *February* 8, 1675-6, and of *Natalia Kiribowna Nariskin*, his ſecond Wife. He married the Lady *Ortokeſia Federowna*, the Daughter of *Boyer Fedor Abramowitz Lapuchin*; but was afterwards ſeparated from her, and cohabited with *Katharina Alexiowna*: Whenever he married her, it was not declar'd till *Anno* 1711. He had by the firſt Venter the Prince *Alexis Petrowitz*, born in 1690, but he dy'd in *Anno* 1718, under a Sentence pronounc'd by his Father, the late Czar, in a great Council; being charg'd with a Conſpiracy to depoſe his ſaid Father, and afterwards flying into foreign Countries to avoid the Puniſhment that he deſerv'd; but the Prince, though under Sentence, dy'd before it was put in execution; and ſome think that the Czar's deferring the Execution of the Sentence was the Effect of his Indulgence, and that he never intended that his Son ſhould die by it.

The Czarowiz, *Peter Alexowitz*, married the Princeſs *Charlotte Chriſtina Sophia*, Daughter of *Lewes Rodolphus*, Duke of *Brunſwick Wolfenbuttle*, and Siſter to the preſent Empreſs of *Germany*. She died *Anno* 1715, leaving Iſſue the Princeſs *Natalia*, born *July* 14, 1714; and Prince *Alexowitz*, the Czarowitz, born *October* 23, 1715. The late Czar had Iſſue by his laſt Wife Princeſs *Mary*, born *March* 20, 1713, and married to the Duke of *Holſtein Dec.* 5, 1724; the Princeſs *Anna Margaretta*, born *Sept.* 19, 1714; Prince *Peter*, born *Nov.* 8, 1715, who the Czar declar'd his Heir, but he dy'd *May* 6, 1719; Prince *Paul*, born *Jan.* 13, 1717, but he dy'd the ſame Day; he had alſo the Princeſs *Natalia*, born *Aug.* 31, 1718.

The late Czar reign'd jointly with his Brother *John* till the Year 1696, when *John* dy'd, and left Iſſue the Princeſs *Catharine*, married to *Charles Leopold*, Duke of *Mecklenburg Schwerin*, *April* 19, 1716; the Princeſs *Anne*, married to *Frederick William*, Duke of *Courland*, but he dy'd and left her a Widow the Year following; he had alſo the Princeſs *Prefovia*.

The late Czar, in the Year 1695, finding the *Turks* engag'd in a War with the *Germans*, *Poles*, and *Venetians*, he thought that a good Opportunity to attack the *Turk* on the other Side; and raiſing an Army of eighty or ninety thouſand Men, he laid Siege to *Aſoph*, upon the River *Don*, near the *Black Sea*, but he was repuls'd with Loſs, and forc'd to raiſe the Siege, after four Months lying before the Place. However, next Year he not only recruited his Army, but alſo prepared a Fleet of ſmall Veſſels and Galleys to cruiſe in the *Black Sea*, to prevent the *Turks* from conveying any Relief to the Town, which had hindred his Succeſs the Year before; and thus prepared, he made a ſecond Attack and carry'd the Town, in the Year 1696. And it is obſerv'd that his Naval Force being of ſuch Uſe to him now, he thought it might be ſo in his other intended Expeditions; which is ſuppoſed to be his chief Inducement to travel, and ſend his young Noblemen and Gentlemen abroad to improve in Ship-building, and other mechanical Performances, as above related

In his Return home from *Holland* and *England*, he went by the Way of *Vienna*; but, during his stay there, he receiv'd Advice that a Conspiracy was on Foot to declare his Throne vacant, by reason of his long Absence; but the Rebels were defeated at his Return, and all Things were quiet; and therefore he went to work to regulate his Revenues, reform the Civil Government, establish Trade, but chiefly to discipline his Army, and build Men of War, and all according to the Model he had seen in his Travels.

In the Year 1700 he made a Truce with the Grand Seignior for twenty-five Years; and then, finding all Things easy from that Quarter, he declar'd War against *Charles* XII. then King of *Sweden*; but made an unfortunate Beginning; for, at the Battle of *Narva*, he lost all his Artillery, and more than half of his Army; but in the Year 1702, he gain'd a Victory over the *Swedes* at *Stagnitz*, in *Livonia*, and took *Wolmer*, *Marienburg*, *Dorpt*, and *Nottebarg*. He took the City of *Narva* in the Year 1704; and in the Year 1705 he sent an Army into *Lithuania*, in favour of his Ally, *Augustus*, then King of *Poland*, but was defeated by the *Swedish* General. His Campaigns of 1706 and 1707 were all disadvantageous; but in 1709 he defeated the King of *Sweden* at *Pultowa*, and cut to pieces or made Prisoners most of the *Swedish* Troops, only the King, with a thousand or fifteen hundred Horse, escaped over the *Boristhenes*, to *Bender*, in the *Turkish* Dominions, of which see more in *Chap.* II. *of the History of* Turkey *in* Europe, *Page* 278. In 1710 the Czar made a triumphant Entry into *Moscow*, and took *Riga*, and almost all *Livonia*. In 1711 the *Turks* broke Truce with the *Russians*, whereupon the Czar march'd as far as the Banks of *Pruth*; but there finding himself destitute of Provisions, and having lost above half of his Army, by the Sword, Famine and other Hardships, they were attack'd by the *Turks*, and had probably suffer'd very much, if the Czarina had not made a large Present to the Grand Vizier, by which means he suffer'd the Czar's Army to march off undisturb'd; but with this Condition, that he should surrender *Asoph*, and all his other Acquisitions in the *Black Sea*, or near the Mouths of the Rivers *Don* or *Boristhenes*; which he being oblig'd to do, it spoil'd all his Projects on that Side.

Loss of Asoph

Having thus escap'd the *Turks*, his next Expedition was to *Swedish Pomerania*, which he made himself Master of in the Year 1713; and in 1714 his Fleet, under the Command of Admiral *Apraxin*, beat the *Swedes* in the Gulph of *Finland*. In the Year 1715 he establish'd the Marine Academy at *Petersburg*. And in 1716, the Patriarch of *Moscowy* dying, he assum'd the Place, and declar'd himself Head of the Church, seizing the Revenues of several of the Monasteries, and devoting them to his own Use, much like King *Henry* the Eighth of *England*; but, however, he deputed the Archbishop of *Rezan* to execute some Part of the Patriarchal Office. In the Year 1717 he visited *Paris*, and the Royal Academy of Sciences there. In the Year 1718 he was taken up with the Trial of the Czarowitz, his Son. And in 1719 he was preparing to make a Descent upon *Sweden*; but he then receiv'd Advice that *Charles* XII. King of *Sweden* was dead, and succeeded by his Sister, *Ulrica Eleonora*, with whom he soon commenc'd a War, burning several Cities, and destroying their Copper-works, &c. In the Year 1721 a Peace was concluded between *Russia* and *Sweden*, in which the Czar was declar'd Father of his Country, and Emperor of all the *Russia's*. In the Year 1722 and 1723 the Czar, taking the Avantage of the Civil Wars in *Persia* easily made himself Master of the Provinces of *Gilan*, *Mazanderan*, and some of the best Provinces in *Persia*, situate on the South-West Side of the *Caspian Sea*; and several Princes of *Georgia* and *Circassia* threw themselves also under his Protection.

In the Year 1724 he caused his Consort, the Empress *Catharina*, to be crown'd, and caused the States, both Civil and Ecclesiastical, to swear Allegiance to her; and, as if he had fore-seen his Death, he departed this Life the Eighth of *February* following, in the fifty-third Year of his Age, leaving his Consort, the then Empress, to succeed. The Czar dies.

Immediately after his Death she was not only proclaim'd, but the Senate and all the great Officers, Civil and Military, renew'd their Oath to her that they had taken when she was crown'd and declar'd Joint-Empress with her Husband; and although she was a Foreigner, and of an Extract much inferior to the Dignity of a Crown, yet they all submitted to her unanimously, nor have we heard of any Insurrection or Conspiracy form'd against her while she was sole Empress of *Russia*.

Her Behaviour in the Time of her Husband, the late Czar, did very much endear her to her Subjects. She was originally a Native of *Marienburg* in *Livonia*; her first Husband was a *Swedish* Lieutenant at best; (some say but a Serjeant or Corporal) but when the Czar took *Marienburg*, about the Year 1702, he (by what powerful Fancy or other Motive induced is uncertain) took her from her said Husband on their Wedding Day, and kept her for several Years before they were known to be married. She was agreeably tall and fat, with black Hair and Complexion. She attended the Czar both in the Fleet and in the Field, with vast Courage and Conduct, and was serviceable to him in several Enterprizes; but especially when he was surrounded by the *Turkish* Army on the Banks of the *Pruth*, where she artfully found out the weak Side of the Grand Vizier, and seeing him of a covetous Disposition, she softened him with Presents to that Degree, that he not only suffer'd the Czar and his Army to escape, but supply'd them with Provisions too.

When she dy'd, she was succeeded by Prince *Peter Alexowitz*, who was born *Oct.* 23. 1715. He was Grandson to the late Czar, as being the Son of Prince *Alexis Petrowitz*, who died when under Sentence of Death, as above.

When the Czar *Peter Alexowitz* died, he was succeeded by the present Czarina, or Empress of *Moscovy*, who at the writing hereof, is besieging and bombarding *Dantzick*, to prevent King *Stanislaus*'s Re-accession to the Throne of *Poland*, and in favour of *Augustus*, Elector of *Saxony*. But that Affair being yet depending, we shall give a further Account of her Life and Actions, as well as of the History of *Poland*, in some of our succeeding Numbers, when the Succession of the Crown of *Poland* is determin'd.

The Nobility of *Russia* are the Dukes, or Sovereigns, of their respective Principalities, or the Posterity of such; and when the Duke of *Moscowy* (which we now call the Czar) had united several of those Principalities or Dukedoms into one under himself, as Supreme, he call'd himself, by way of Distinction, the *Great Duke*; they had also Boyers, or antient Nobility, and Vayvodes, or Governors of Provinces; but these Honours are never conferr'd upon any of late, the Czar having created Princes, Counts, Margraves, &c. after the Manner of *Germany*; but the Honours, as well as the Estates, are equally distributed among their Male Posterity, which keeps them much upon a Level, the youngest being as rich and honourable as the eldest; and when even great Estates are equally divided in numerous Families, and these again sub-divided, &c. they dwindle away Nobility

away to little or nothing; and their Nobility may rather be said to proceed from Preferments at Court, than from Honours and Estates, descending from one Generation to another.

Senate. THERE are Boards, or Councils, for several Branches of Business; as the Navy, the Treasury, the Army, Trade, the Mines, &c. The Senate is compos'd of eight or ten of the principal Nobility; these preside over the Boards. And altho' the Legislative Authority is solely in the Sovereign, yet he calls the Nobility to advise with them upon any Affairs of Importance; as was the Case when the late Czarowitz was brought to his Trial, when the Field-Officers of the Army, and the Commanders of the Fleet, were called in to hear the Process.

Forces. WHEN the State hath Occasion to raise new Troops, or recruit the old, the Senate sends Orders to the Governors of their respective Provinces to levy a certain Number of Men, according to the Extent of their Jurisdictions, or as the Exigency may require; and by this Means they can raise above twenty thousand Men in a Year; and, when that is not sufficient, they draw every fourth or fifth Servant out of the Noblemens Families, to serve either in the Troops or by Sea.

WHEN any publick Work is to be done, as building Fortifications, digging Canals, making Rivers navigable, or the like, the Artificers and Labourers are summon'd in, in Numbers proportionable to the Undertaking, and, if they are summon'd, they must not dispute it. And being come together, they are employ'd, and furnish'd with Wages and Subsistence for six Months, and then they are dismiss'd, and their Places supply'd by others. The Government is at very little Charge in maintaining either the Army or Workmen; for every Farm in the Province where they quarter, sends in Corn, Oatmeal, and other Things, in proportion to the Numbers quarter'd upon them.

THE *Strelitzes*, or Guards, amounted to thirty or forty thousand Men: But the Czar had a Mind to have an Army of his own modelling and disciplining, and this he did gradually and unperceiv'd, as if it had been only for his Diversion; for he thought if his numerous Guards should apprehend that he was aiming at such an Alteration, it would create a Jealousy in them, and they would probably oppose it; he therefore began at first with a Company of only fifty Men, whom he cloath'd and exercised after the *German* Manner, by the Assistance of some foreign Officers he entertain'd in his Service; and, to draw others into his Measures, he acted in his little Army himself, first as a private Soldier, then a Drummer, then a Corporal, then a Serjeant, &c. till at last he prefer'd himself to be a Captain, and then he appear'd at their Head, and exercised them himself. The Guards, apprehending nothing but that he did it for his Diversion, were highly delighted with the Actions of this Mock-Army; which by degrees increas'd till it grew into a Batallion, and afterwards into several Regiments, and thence, gradually increasing, they became ten thousand strong, and were call'd the *Preobanski* Guards, and were so well disciplined, that they became a Match for the *Strelitzes*, though the latter were much superior in Number. Besides these, the *Moscovites* have now near a hundred thousand regular Troops, mostly commanded either by Officers invited into the late Czar's Service from abroad, or chose out of his Nursery of *Preobanski* Guards.

Artillery. BEFORE the late Czar's Time the *Russians* had little Notion of the Use of Artillery, or the carrying on a Siege. But the late Czar, in his Travels, improv'd himself in the Knowledge of that; and at his Return, he establish'd proper Officers, as Gunners and Engineers belonging to his Artillery.

Cossack. BESIDES the regular Troops, his Army is compos'd of *Cossacks*, *Calmucks*, and other *Tartars*. The *Cossacks* inhabit *Ukrain*, between the Rivers *Don* and *Boristhenes*; which was formerly subject to *Poland*, next to the *Turk*, and now to the *Moscovite*; but may be rather said to be protected than govern'd by the *Moscovite*, for their Surrender was voluntarily, with Conditions on both Sides, *viz.* That they should pay no Taxes; that they shall be govern'd by their own Laws and Magistrates; and also that they should be at Liberty to brew and make Brandy, Mead, &c. without paying any Excise; and that, in Lieu of those Privileges, they should bring sixty thousand Horse into the Field whenever the Czar required. So that they were rather a Reserve against an Emergency than a standing Army.

Calmuck. THE *Calmucks* are also obliged to furnish a certain Number of Troops for the Government, but they are commanded by their own Officers; they are stout and hardy, but want Discipline; but when it comes to their Turn to ravage and plunder, they make miserable Havock, and commit all Manner of Disorders; witness the dreadful Manner in which they treated *Livonia* in the late War.

THEIR Naval Force was inconsiderable, or rather nothing worth mentioning, till after the late Czar's Travels into *England*, *Holland*, &c. for till then they neither had Ships, nor Men that understood the working them; but finding how necessary a Fleet of Men of War was in his Wars with *Turkey* and *Sweden*, and that the Riches and Trade of other Nations bore generally some Proportion to their Number of Shipping, it was this that induc'd him both to travel himself, and to encourage Mathematicians and Artificers in his own Dominions, as has been hinted before; but none of his Country People could excel him in his Proficiency, so that he was really the Head Master-Builder, setting aside the *English* Workmen and Officers that he had in his Docks and Yards.

HAVING now brought the Czar to be a compleat Master-Builder, his first Undertaking of that Kind was to build forty or fifty Men of War, and a great Number of Galleys, which he did a *Veronitz*, upon the River *Don*. The Reason of his building them upon that River, was, because they were intended for an Expedition into the *Black Sea*, after the taking of *Asoph*; but the Reason of his building them so far up the River (for he built them six or seven hundred Miles above *Asoph*) might probably be for the Conveniency of being near his Oaken Timber, which is plenty in the Kingdom of *Casan*, and Places adjacent; however, this Project did not take, for when he was forc'd to surrender *Asoph*, there was no Way left for them to get out to Sea, and they all decay'd and rotted in the River.

Revenue. THE late Czar, in raising Fleets and Armies, building Fortifications, &c. never contracted any Debts, but, which Way soever it was done, always found fresh Supplies to support every Enterprize he went upon, which was done by taxing their Houses and Land, to pay to the War-Office, the Admiralty, &c. The Country People also are tax'd for their Bagnio's, Gardens, Bee-Hives, Ponds, Mills, Fisheries, and indeed all other Possessions, though in this Case, here as in some other Places, the Nobility bear (in proportion) the highest Burthen.

THE annual Income rais'd this Way is, 3111145 Rubles; which, allowing every Ruble to be worth six Shillings and eight Pence, (though they are generally worth more) the whole is one Million,

thirty

thirty-ſeven thouſand, and forty-eight Pounds Sterling, yearly; beſides ſome extraordinary and variable Impoſitions laid upon the Subject upon any extraordinary Emergency.

The Coinage is alſo a good Article in Favour of the Crown; it yields the Czar a Revenue of 200000 Rubles in a Year, which, by the former Computation, is near ſeventy thouſand pound Sterling.

The Revenue of ſtrong Liquors, of which great Plenty is drank in *Ruſſia*, is reckon'd at a Million of Rubles, or, by the former Eſtimate of ſix and eight pence each Ruble, is above three hundred thouſand Pound Sterling.

To this we may add, the Duty upon Potaſh, Iſinglaſs, and other Commodities of their own Product exported, and the Duty of Goods imported, which together is a conſiderable farther Addition to the Revenue.

CHAP. X.

Of the Laws and Puniſhments of the Ruſſians; *alſo of their Language, Learning, Chronology, Religion, Marriages, and Funerals*

Laws. THE Laws of *Moſcovy* are compos'd chiefly of their antient Cuſtoms, which indeed, according to the *Engliſh* Phraſe, *That Cuſtom becomes a Law*, ſeem now to be confirm'd in *Moſcovy*. For the late Czar collecting their Cuſtoms and Practices into a Body, form'd his Laws according to them; and what they could plead Preſcription for had the Law on its Side by Conſequence. But theſe Laws are of little Uſe, becauſe their reſpective Lords have an arbitrary Power to determine Controverſies, and to ſeize Eſtates and Effects, under Pretence of their being for the Government's Uſe.

Criminals. For Criminal Offences the Judge or Governor can inflict Corporal Puniſhment, or Death itſelf if he ſees fit, and there is no Appeal from his Sentence. When the Country is more than ordinarily infeſted with Robbers, the Governor commonly makes Examples of ſome, to deter others from the like Crimes. As to their other Methods of Puniſhment, one Sort is the *Bataog*: Here the Offender is laid flat upon his Face, with his Back bare, and one Perſon ſitting on his Feet, and the other at his Head, with ſmall Sticks, about as large as a Man's little Finger, they beat him till the Perſon who directs the Puniſhment bids them deſiſt; and the greateſt as well as the meaneſt undergo this Puniſhment, in a degree proportionable to their Crime, and ſometimes with ſo much Severity that they die under it; and ſometimes even the Magiſtrates undergo the ſame Puniſhment, if they are guilty of Crimes that deſerve it, and are afterwards continued in their Poſts.

Another Sort of Puniſhment is the *Knout*, which is for petty Offences: It is a thick hard Thong of Leather, faſtened to a Stick, in the form of a Whip, with which the Offender has a Number of Stripes on his bare Back in proportion to the Nature of the Offence.

The Pine is a Puniſhment inflicted for greater Offences: In this Caſe the Criminal's Hands are ty'd behind him, and a great Weight ty'd to his Feet, and in this Condition he is hoiſted up by his Hands, which, by reaſon of the great Weight at his Feet, diſplaces the Joints of his Shoulders, and brings his Arms quite over his Head from behind him; and in this Poſture he hangs till the Executioner gives him the Number of Laſhes determin'd, according to the Crime; and if he denies the Charge, the Strokes are commonly given very leiſurely, that hanging in Torment may extort a Confeſſion from him, as to the Circumſtances of his Fact, his Accomplices, *&c.* and if, after fifteen or twenty Days undergoing this Puniſhment, he is thought to be innocent, all the Satisfaction he has for all his Suffering, is only to have his Bones reduc'd, and himſelf diſcharg'd from all future Puniſhment for that Offence.

Sometimes, for the Murder of a Superior, or a Woman for the Murder of her Husband, they are ſet up to the Neck in the Ground till they die. Once, when I was at *Archangel*, a Gentleman ſhew'd me a Place by the River's Side, where he ſaid he had lately ſeen an old Man, at leaſt one that had a long Beard, that was mangled to death, if I may ſo call it; they firſt cutting off his Hands by the Wriſts, then his Feet by the Ankles, then his Arms by the Elbows, then his Legs by his Knees, then his Arms by his Shoulders, then his Thighs cloſe to his Body, and laſtly his Head, he being till then alive; whereupon a Man took hold of the Head by the Beard, and carried it away; but he that gave me the Relation being an *Engliſhman*, and not Maſter of the *Ruſſian* Language, could not learn what was the Crime he dy'd for.

Language. The *Ruſſian* Language is a Mixture of the *Poliſh* and *Sclavonian*, and is like the *Greek*, with ſome Alteration; they have thirty-eight Letters in all, including double Letters, Dipthongs, Gutterals, Aſpirates, *&c.* Their *Æra*, or the Time they reckon'd from, was the Creation of the World; which great Work they think was finiſh'd the Firſt of *September*, which they obſerve annually as a great Thankſgiving-Day (as ſuppoſing that God created the Earth, with Corn and Fruit and all Things ripe upon it, not conſidering that when it is Harveſt in the Northern Latitudes, it is the Spring of the Year in thoſe on the other Side of the Line) and, in Memory of the Creation, they formerly began their Year on that Day. But the late Czar order'd it to begin the firſt of *January*, and that their Year ſhould bear Date from our Saviour's Incarnation; but they affect the ſame Error as we in *England* do, in accounting by the *Old Stile*, though both they and we know the *New Stile*, or *Gregorian* Account, to be the trueſt, and ours differs eleven Days from it. I muſt own I cannot give any Reaſon why we, and the *Ruſſians*, ſhould perſiſt in an Account of Time which we both know to be ſo erroneous, except it is becauſe the new Account is call'd the *Roman* Account, and we are ſo prejudic'd againſt the Errors of *Rome*, that we do not care to imitate them in Matters wherein we know them to be in the Right.

Learning. Learning, as well as other Improvements, had made but a very inconſiderable Progreſs in *Ruſſia*, till the late Czar undertook his Travels, about the Year 1698, to *England*, *Holland*, &c. and when he went from hence he obtain'd leave of

King *William* to take ſome young Mathematicians out of Chriſt's Hoſpital, and other proper Perſons, to teach Mathematics, Languages, *&c.* in *Ruſſia*. He erected and endow'd a large School at *Moſco*, where Arithmetick, Navigation, and Aſtronomy were taught, and Eclipſes of the Luminaries, and Motions of the Planets calculated, *&c.* He alſo ordered Globes, Teleſcopes, and other mathematical Inſtruments to be carried over to *Ruſſia* from hence; and ſo much he promoted Learning, that he made an Edict, that whoever could not read and write, ſhould be diſqualify'd from enjoying his Father's Eſtate, if it exceeded five hundred Rubles a Year; and that no Man ſhould be a Prieſt till he firſt underſtood *Latin*: He alſo ſet up Printing-houſes, and had ſome of the moſt valuable Books tranſlated from other Languagues, and printed in *Moſcovy*. He had alſo Colleges, Libraries, Paintings, Statuary, Medals, Antiquities, and other Curioſities, at *Moſcow* and *Petersburgh*.

Religion. THE *Ruſſians* have a Tradition, that St. *Andrew* firſt preached the Goſpel in *Moſcovy*; but others ſay, that Chriſtianity was not introduc'd and profeſs'd there till the Reign of the Great Duke *Wolodimer*, who marying *Baſilius*, Daughter to the *Grecian* Emperor, was, by her means, converted to the Chriſtian Religion about the tenth Century. They had a Patriarch, after the manner of the *Greek* Church, till the late Czar's Reign, who was inveſted with the Power of Life and Death in Caſes Eccleſiaſtical, and might in ſome meaſure be ſaid to ſhare with the Czar in the Government; but whether the late Czar thought his Power too great for a Subject, or his Profits and Privileges too valuable, he, upon the Death of the laſt Patriarch, took the Office, and with it the Revenue, and annex'd it to himſelf, only ſubſtituting the Archbiſhop of *Rezan* to execute ſuch part of the Patriarchal Function as he himſelf could not attend upon by Reaſon of his Affairs in the Civil Government.

THEY have Monaſteries, and Convents of Monks and Nuns, and large Poſſeſſions annex'd to them; but the late Czar ſeiz'd their Lands and Riches to maintain his Army; and tho' he return'd ſome of them again, yet he annex'd a great Part of their Lands to his own Demeſnes, by which means he enrich'd himſelf, and ſuppreſs'd, or at leaſt diſcourag'd, the Monaſteries: And becauſe ſo many young People devoted to a Monaſtick Life hinder'd the Increaſe of his Subjects, he order'd that no Man, under fifty Years of Age, ſhould be admitted into a Religious Houſe.

THEY pay a great Veneration to the Pictures of their Saints, and lay ſuch a Streſs upon their Preſence, that if a Man, poſſeſs'd of one of thoſe Pictures, happens to thrive, or meet with good Succeſs, it is common for others to apply to him for that proſperous Saint, and rather than fail will advance a little Money for the uſe of it.

THEY are not ſo ſuperſtitious as formerly: They will admit Foreigners to their religious Worſhip, and ſuffer them to be buried in their Church-yards, which they never permitted till the time of the late Czar.

Marriages. THEIR Marriages and Funeral Rites are the ſame as in other *Greek* Churches, of which we have ſpoken before; only they do not now keep the Womem up as in other Places, nor do the Men make ſuch blind Bargains in chuſing their Wives, but have free Acceſs to viſit and converſe with them in Courtſhip, as in other parts of *Europe*.

Burials. AT their Burials they do not affect that immoderate howling and roaring as formerly, but content themſelves with that manner of Mourning which is the Effect of real Sorrow.

FORTY pound weight of *Ruſſia*, which is about thirty ſix Pound *Engliſh*, is call'd a *Pood*; the *Arſheen*, by which they meaſure Linen, *&c.* is twenty eight Inches.

THEIR Method of weighing Pieces of Butcher's Meat, or other Parcels, of eight, ten, fifteen Pound weight, or the like, is with a Beam like a Steel-yard, with a Pound, or ſome known ſmall Weight, fix'd at one End of it, and a Hook at the other to hang the thing upon that is to be weigh'd; only inſtead of removing the Weight backwards or forwards, as we do the Weight on our Steel-yard, theirs is ſo contriv'd, that the Axle-tree or Staple, upon which it plays, is mov'd backwards and forwards; the heavier the thing is that is to be weigh'd, the nearer to it the Axle-tree is remov'd, till they poiſe equally, and then the Place where the Axle-tree or Staple plays upon is the Weight of the thing, being diſtinguiſh'd by Figures for that Purpoſe.

Although Dantzick *is not in* Ruſſia, *or* Moſcovy, *yet, as the Czarina's Forces are now lying before that Place, and the Siege of it is a great Subject of Diſcourſe, as well as the Place is the Scene of Action, we preſume the following Deſcription of* Dantzick *will be a very proper Subject wherewith to conclude this Chapter.*

A Deſcription of the City of *Dantzick*. DANTZICK lies in the Territory of *Pomerellia*, or Palatinate of *Dantzick*, in that Part of *Pruſſia* which goes by the Name of *Royal*, Weſt of *Ducal Pruſſia*; which laſt was erected into a Kingdom *Anno* 1701, in the Perſon of *Frederick* Elector of *Brandenburg*. That Change, and the Continuance ſtill of their old Names make a ſort of a Paradox.

Dantzick is bounded on the Eaſt by the River *Weichſel*, or *Viſtula*; on the South with *Proper Poland*; on the North with the *Baltick Sea*, and on the Weſt with *Pomerania*.

Dantzick lies 24 Miles N. W. from *Marienburg*, 32 almoſt W. from *Elbing*, 76 N. of *Thorn*, 120 N. from *Gneſna*, 150 N. W. from *Warſaw*, 260 N. of *Cracow*, 200 almoſt W. from *Grodno*, 260 W. and by S. from *Wilna*, and 80 Miles W. and by S. from *Koningsberg*, 260 S. W. from *Riga*, 460 *ditto* from *Narva*, 540 *ditto* from *Petersburg*, 220 N. E. from *Breſlaw*, 280 *ditto* from *Dreſden*, 300 *ditto* from *Prague*, and 440 almoſt N. of *Vienna*. Latitude 54 Deg. 13 Min. Longitude 40 Deg. 42. Min.

THIS City, till the Year 1170, conſiſted only of ſome Fiſhermens Cottages, and was antiently a Part of *Pomerania*, till ſeparated from it by *Meſlevin* the ſecond Duke thereof, who dying without Male Iſſue, left it to *Primiſlaus* King of the *Poles*, who *Anno* 1295 erected it into a City, and annexed it to the Crown of *Poland*. It has ſuffer'd many Revolutions. About the 1100 the *Danes* poſſeſs'd it, afterwards the *Polanders* gained it: In 1305, the *Teutonick* Knights were Maſters of it: In 1454, *Caſimir* fourth King of *Poland* regained it, and granted great Privileges to the Citizens; who afterwards, in Defence of the *Augsbourg*, or *Lutheran*, Confeſſion, ſided with *Maximilian* of *Auſtria* againſt the *Poles*; which provoked King *Stephen Bathori* to beſiege them in 1577; but, by the Mediation of other Princes, they were reſtored to their Liberties in 1597. And in 1632, the City was made a Member of the State, and admitted to a Vote on the Election of a King.

IT is a free Republick, under the Protection of *Poland*, one of the chief old *Hans Towns*, and has a Juriſdiction of above forty Miles in Circumference. Of late it has often been moleſted by the neighbouring

bouring Powers, for exacting large Contributions; and though in 1706, the Queen of *England*, King of *Prussia*, and States of *Holland*, made a League to protect it, yet the Czar, *Peter* I. took it in his Head, without Provocation, to call on them twice for large Sums; a grievous Weight upon the Inhabitants, and what they durst not refuse; so that neither their *Polish* Protector, nor grand triple Alliance, did them any Service. And at this very Time, they are closely besieged by General *Leslie* and *Munich*, the Czarina's Generals, in Conjunction with the *Poles* and *Saxons* of the Party of King *Augustus* III. for their espousing the *French* Interest in the Person of *Stanislaus*, and harbouring of him; which 'tis believed they must abandon, and capitulate to the Confederates Proposals, or else undergo the Ruin of their City, which is so apparently threatned: So though it is called a free Republick, it is too weak for its own Support; and those whom it chuses for Protectors, are unwilling to defend it.

It is situated by the River *Wexel*, or *Weissell*, in Latin *Vistula*, which rises from the *Carpatian Mountains*, that separate *Poland* from *Hungary*, sixty Miles beyond *Cracow*, making a winding Course of about 440 Miles, watering in its Passage *Cracow*, *Warsaw*, and *Thorn*, and at last, passing by *Dantzick*, discharges itself into the Gulph or Bay of that Place, having first divided itself into several Branches, and made the Islands called the *Werder*; the larger Branch passes by *Marienburg*, a City about twenty-four Miles South-East, and falls into the great Lake called *Frisch Haff*: The Branch which goes to *Dantzick* is one of the least of them, which is the Occasion that great Ships have not Depth of Water to come loaded into the Harbour. Between the Mouth of the River and the Port, there is a Fort which is called the *Light House*, where there is a Light every Night, which is a Direction afar off to all Ships making to the Harbour.

The Harbour at the Town receives Ships of above fifty Lasts: Those of great Burthen deliver and receive their Cargoes at the *Weissell Munde*, or Entrance of the *Weissell*; and often, when the Weather is calm, in *Dantzick* Road, which is eight to fifteen Fathom deep.

Anno 1720, in the Middle of the *Weissell*, a new Wood Battery was built in the Water, fortified round with Cannon, opposite to an even Canal, cut an *English* Mile and a half, which, for quick Dispatch, leads to the *Munde* by *Tair Water*, a Village on the left Side: Here is a large cover'd Boat, the same as your *Holland Tracht Sluyts*, drawn by a single Horse, which plies to and fro all Day, that its coming and returning is almost constant to a Minute, which in fine Weather draws abundance of Company thither, as well for Pleasure as Business; having publick Houses prettily situated on the Sides for Accommodation and Diversions. This Canal on the East, and the Course of the River *Weissell* on the West, makes an Island which is called *Holm*.

The *Munde* is a little fortified Castle, commanding the whole Navigation of the Gulph and Entrance into the River and Harbour, where all Ships send a Person on Shore thither to make a Report. It is about three Miles distant from the Town, and six Leagues from the *Heel*, a small running Point of Land, which forms a Bay. The Sea all over the *Baltick* never flows nor ebbs. It is also watered by two small Brooks, the *Radaun* and *Moldau*, taking their Springs about sixteen Miles to the South; the *Radaun* is not above four or five Yards broad, has a constant clear Current, supplies the Town with fresh Water, and serves to fill up the Trenches; besides in its way driving several Mills upon it, one of which for Corn may vie with any in *Europe*, having eighteen Stones going at a Time, which brings the King of *Poland* every Hour throughout the Year a golden Ducat, besides the Profit to the Proprietors; so that the yearly Revenue of this single Mill to the King is worth above 4000 *l.* Sterling a Ducat being in Value eight *Polish* Guilders, or ten Shillings.

On the West and by South are a Range of high sandy Hills, whereon are built the Villages called *Hagelsburg*, *Bischoffburg*, and *Stoltzenburg*, which signify *Hail*, *Bishop*, and *Proud Hills*: But the latter, *Stoltzeburg*, is the Habitation of the most abandoned Whores in Nature; though it commands an entire View over the whole Town and Suburbs, with the Harbour, Ships, Road, and even to the Sea. And to the South is a delightful Prospect of the adjacent Country: Those Hills are look'd upon to be highly prejudicial for the Town's Defence in Case of an Attack by an Enemy; but *Bishop Hill*, and the Eminences opposite to the Town, are lately fortified with Redoubts, *&c.* and constant Watch kept upon them. And if they would build Fortresses upon them, to have a Communication one with another, the Town, in Case of a Siege, would be render'd thereby almost seemingly impregnable. Whether the Magistrates will be at the Charge of making such Improvements and Fortresses for their Security, Time will show.

The Town of *Dantzick*, within the Walls, is divided into three Cities, called, *Voorstadt*, *Reichstadt*, and *Alstadt*, which are the *Fore City*, *Emperor's City*, and *Old City*.

It was first wall'd round by the Knights of the *Teutonick* Order in 1343, whose Master, *Conrad Wallenrodt*, built that Part called the *Reichstadt*, *Anno* 1390; and they were improved after the Irruption which the *Swedes* made into *Poland* in 1655, which two Years after in 1657 obliged them to burn their Suburbs, to prevent their being taken.

In the present Condition they are vastly strong, and high, with many vaulted and cover'd Ways, which are well mounted with Ordnance of several Sizes of Cannon, and contain twenty Bastions, still defended by a broad and deep Trench of Water, handsomely faced with Free-stone at the Sides of the Scarps and Counterscarp.

On the Inside they are so large, that two Coaches can pass a-breast; in several Places beautified with regular Rows of Trees, from whence is a Prospect of the Town, and direct Vista's into the Length of some of the principal Streets.

These Walls inclose the three Cities, which have as many Gates out of them, with Draw-Bridges, and constant Centries, one at each End; that belonging to the *Old City* to the North-East, and the other to the *Fore City* South-East, with the great central Gate Westward, leading from the *Emperor's City*. Its Form is semicircular, and its Extent betwixt two and three Miles in Compass: But then add to this the large Space immediately out of the great Gate, to the Right Hand, as far as to the outer Gate West, the Road to the *Olive*, (which also has a Draw-Bridge and Centry) and to the End of the large Suburbs of *Schotland* Southward, with the Granaries, and that Part of the Suburbs beyond them to the East, called *New Gare*, which at their Entrances are all well guarded and defended with a lesser Rampart; all these included together will make the Circumference take up above eight *English* Miles.

The Granaries of *Dantzick*, for hoarding Corn, are not to be equall'd in all *Europe*; making an entire Town of lofty Buildings, divided into several Streets, and separated from the *Reichstadt* only by a large Draw-Bridge, to the East, called Granaries.

the

the *Green Bridge*. It is encompaſſed with Water, that Boats may load and unload at thoſe Granary Doors, which lie contiguous to them.

The Magazines differ in Bigneſs and Size, few lower than five Stories: The Chambers have for a more eaſy Conveyance, Funnels, or Pipes, to let down the Corn at their Pleaſure from one Chamber into another. It is open all the Day-time for Trade, and the Ground-Rooms are generally large Warehouſes, well ſtocked with all Sorts of valuable Merchandize for Wholeſale. There are two Granaries built by Sir *William Brown*, exceeding the reſt for Magnitude, ſo large as to contain each 2000 Laſts; 60 Scheffels, or Buſhels, making one Laſt. At Evening the Bridges are drawn up, and not a ſingle Perſon is permitted to lodge there; and for the better Security they keep a Breed of Maſtiffs cloſe confin'd all Day, which the Keepers let looſe for a Guard to range about in the Night; which, it is ſaid, are ſo furious in their Natures, as inevitably to fall foul on and deſtroy any Perſon they ſhould meet with, and yet will diſtinguiſh, and be as paſſive to their Feeders as Spaniels. Their beſt Dogs are from our *Engliſh* Breed.

Trade. Its Trade is very conſiderable, receiving the Product of *Poland*, chiefly by the River *Weiſſell*, conſiſting of Corn, Linnen, Pot-aſh, Plank, *&c.* In Return for which, the *Poles* receive what they want of foreign Growth and Manufacture, *viz.* Cloth, Silks, Stuffs, Leather, Sugar, Oils, Lead, Herrings, and all the Spices, which they uſe in very great Quantities to ſeaſon their Fiſh and other Meat. The Wines, Salt, and Brandy, which come from *France* in great abundance, the *Poliſh* Nation conſumes little of, but ſupplies part of *Pruſſia* therewith; for Wine they prefer that of *Hungary*, being well ſupply'd, though at a dear Rate. Brandy they make ſufficient for their own Uſes, and from all kinds of Corn; and the Goodneſs and Variety of ſtrong Waters diſtill'd at *Dantzick*, are not to be equall'd any where; and as to Salt, their Country abounds ſufficiently with it; but the vaſt Quantities of Grain they receive from *Poland*, which abounds therein, being a fertile Plain and champion Country, makes it the greateſt Mart for the Exportation of that Commodity of any Place in *Europe*. Vaſt Fleets of *Holland* Ships come yearly to fetch almoſt all the Corn us'd in *Holland* and *Zealand*. The Medium of their Exports in Corn of all Sorts, annually, is betwixt thirty and forty thouſand Laſts. From the *Weiſſell*, out of a Branch which runs into the *Friſch-Haff*, a great Lake ſixty Miles long, and in ſome eight Miles broad, it has an inland Communication thereby, with *Elbing*, *Pilau*, and *Koningsberg*. Its Nearneſs to the Sea bids a welcome Acceſs to all Foreigners, beſides its conſtant Traffick of ſending and receiving Goods ſeveral hundred Miles up the Country, even as far as *Hamburgh*; ſo that many Neceſſities being ſupplied from hence by their Trade, 'tis not in the leaſt to be admired how the Town is beoome ſo populous, rich and conſiderable, as at preſent it appears; the Inhabitants being computed two hundred thouſand in Number.

The whole Town, as has been obſerv'd, is encompaſſed with the ſame ſtrong Ramparts and Wall, but is divided into three Cities by their reſpective Gates. *Reichſtadt* and *Voorſtadt* lie much upon the ſame Line, but the *Altſtadt*, in its whole Extent, lies beyond the *Reichſtadt* to the North-Weſt; ſo that the utmoſt Length of the City is to be taken from the *Altſtadt Gate* in the Rampart, to the *Green Bridge* which joins the Granaries, and is above an *Engliſh* Mile and a half, though it is not direct, but a little oblique; and the entire Breadth takes up both *Reichſtadt* and *Voorſtadt*, to the Extremities of which are above two Miles.

But the Beauty and Admiration of all, for Magnificence, Regularity, and Trade, belongs to the *Reichſtadt*, which is the opulent City. What is the moſt curious and worthy of Obſervation in it, the Particulars which follow are a faithful and exact Account of:

The whole Length of the *Reichſtadt*, from Weſt to Eaſt, from the handſome inner Gate at the Beginning of the *Lang Gaſs*, to the Granary of the *Green Bridge*, is not half a Mile. Its Breadth, from South to North, contiguous to the *Voorſtadt*, and ſo leading to the Road which goes to the Harbour, is above a Mile: From thence to the Canal, which goes to the Road and the *Munde*, is about another Mile; a Walk exceeding pleaſant, all by the Side of the River, commonly full of Ships of various Nations, to which at the Entrance you muſt ferry over a narrow Paſs upon a little flat Boat or Bottom, without any Sides; and after that, at ſome Diſtance, you go over a floating Bridge, whoſe Water by the Preſſure of the Paſſenger, if you walk heavily and ſlowly, comes over its Surface.

The Houſes are built of Brick and Stone, commonly five, ſix, or more Stories high, with handſome embelliſhed Outſides, having in the Middle an Aſcent of Steps, conducting to the Entrance, with Galleries on each Side, the Fronts are variouſly beautified with Plaiſter, Marble, and Painting, and moſt with Images or Statues on the Top, according to their reſpective Fancies, which is vaſtly ornamental. Their Architecture within, for Contrivance, is none of the beſt, having at firſt Entrance a huge gigantick diſproportionable Room, called the *Salle*, which takes up, to a needleſs Purpoſe, the beſt Part of the Houſe, to the ſpoiling the Proportion of the other Rooms; beſides their Taſte runs not on making handſome Stair-Caſes, or light ſpatious Kitchins, which ſeldom have any Windows in them, ſtruck directly from the Light, but what they receive is only a Reflection from the adjoining, or ſome remoter Room; that moſt of them, beſides their Littleneſs, are forced to burn Candles at Noon-day to dreſs their Victuals; ſo that though their Buildings exceed ours in a very different Manner for external Beauty and Ornament, yet ours for Contrivance, Method, and Conveniency, far out-do theirs. No one is permitted to build the Foundation of his Houſe with the leaſt Incroachment on his Neighbour's, or make any Outſhot in the upper Stories, which contributes to form a delightful Viſta in a charming Evenneſs, and Regularity. On both Sides of the Way are planted Walnut-Trees, which grow not high, but bear plentifully; each Street is ſupply'd with ſeveral publick Wells, prettily covered and painted, with Images on the Top, which afford good Water; there are likewiſe in ſome perpetual running Conduits.

Exchan The Great Court is the daily Exchange of Merchants, held in the open Air. It begins at Eleven, and holds till One; where are a Reſort of many Foreigners, chiefly *Engliſh*, *Scotch*, and *Hollanders*: They are at a Loſs for Room on all Days but *Saturdays*. Here the Butchery or Fleſh Market is kept, and is a very noble and well-provided one; but reduces the Merchants into ſo narrow a Compaſs, as if they were metamorphos'd into ſo many Graziers.

Govern *Dantzick* is divided into three Cities; each has its peculiar *Burgho-Maſter*, or Mayor, a limited *ment.* Number of *Rath-hern*, or Aldermen, with their reſpective *Guildhalls* for Conſultation and Diſpatch of Buſineſs: Theſe with the *Centum-Viri*, or Common-Council of a hundred Burghers, or Citizens, promiſcuouſly elected out of all three,

unake

make together but one Senate and Government. The Common-Council presents the Town's Grievances, maintain their Privileges, and inspect the Conduct of the upper Senators. To these the King of *Poland* nominates a Burgrave to personate him in the Senate, and sign all Sentences of Death, to whom they allow half the Revenue from the Customs, which has been continued ever since the Reign of King *Sigismund Augustus*, the last of the Male Issue of *Jagello*, who begun his Reign in 1548; who for the *Dantzickers* Presumption, in proposing some provoking Conditions to him, before they would suffer his Deputies to enter their City, impos'd and oblig'd them to grant him that Tribute. The Magistrates continue for Life, and determine all criminal Causes without Appeal, and even condemn to Death the Gentlemen of *Poland* themselves, if they commit any Crime within their Jurisdiction deserving capital Punishment; as likewise all Civil Causes, not exceeding a thousand Guilders; which if any Appeal from, to the Tribunal of *Poland*, they are obliged to deposite a hundred Gilders in the Town-House for that Liberty, to prevent the Frequency of them. They, with the Concurrence of the *Centum-viri*, lay all Taxes upon the Inhabitants, coin their Money from a Mint of their own, without Leave or Permission from the Republick of *Poland*; the King's Effigy on one Side, and their Arms, which are three Crowns, on the Reverse. They chuse their own Ministers, for supplying their Churches, which is a general Custom among the *Lutherans*; and are much better serv'd, than where a Right of imposing them by Patrons prevails. Tho' the People of *Dantzick* may, from those Instances, be reckoned a Republick, and a particular Sovereign State, yet to shew their Dependency on *Poland*, they are oblig'd to send to the Diets two Deputies, who never fail to speak in the Name of the Senate of *Dantzick*, and who always are interrupted by the Chancellor, enjoining their Silence, and forbiding them to take that Quality upon them, which nevertheless they are sure to take afterwards in the following Diets, and have their Suffrage therein; they also maintain a Secretary constantly at Court.

Punishments. The capital Executions of the unfortunate Transgressors of their Laws, are Beheading, Breaking on the Wheel, and Hanging; Beheading is the most frequent. To those that are broke on the Wheel they give *Opium*, to bereave them of their Senses, and make them insensible of Pain. The Bodies of those that are sentenced to be hang'd are never cut down, unless beg'd and granted for Anatomizing; and it is a nauseous miserable Spectacle, to behold Corps so suspended, in various Degrees of Putrefaction and Consumption, by the Elements, and Birds of Prey continually gorging upon them. All Persons under Denunciation of Death are allow'd at the Publick Expence, Victuals and Drink of the very best they have a mind to make choice of; but in those Circumstances they are seldom luxurious: And about half way to the Gallows, there is a little Booth built on Purpose, with an Inscription on it, where the Prisoners stop, and have as much Wine given them as they will drink. This Custom is supported in Imitation of the Eastern Practice of giving Wine to alleviate the Sense of an inevitable approaching Destiny; and some have drunk so largely, as to be heartily intoxicated before they were turn'd off.

Its Force. They maintain no more Soldiers in Peace than are sufficient to relieve the Guard-houses, where there is one at every Gate, and a Watch upon the Ramparts; for which no more than about three hundred Men are required. They can easily upon occasion raise upwards of ten thousand, and have had an Army of sixty thousand. In 1655, this City strenuously adher'd to the Interest of *John Casimir*, King of *Poland*, formerly a Jesuit and Cardinal, whom *Charles Gustavus* King of *Sweden* fell upon, and took *Mussovia*, with all *Poland*, properly so called, and all *Royal Prussia*, except *Dantzick*, which shut up its Gates upon him, and stood by *Casimir* beyond Expectation, when all the World besides had deserted him; so that the Faithfulness of this City, put a Barrier to the *Swedish* Victories, sav'd the Kingdom, and occasion'd five Years after an honourable Conclusion of the War, by the Peace agreed upon at the Monastery of *Oliva*, *Anno* 1660. This King voluntarily resign'd his Kingdom in 1668, after a Reign of twenty Years, and died in 1672 at *Neveres*, a Monastery in *France*.

One of the Burgher Masters, or his immediate Deputy in Person, are oblig'd to go every Night about the Walls in his Coach, attended with a Guard, to see that all the Sentinels are upon Duty, and other Things kept in right Order.

When the King of *Poland* enters any City in his Dominions, the Magistrates always bring him the Keys; and he has Power to make his own Regiment of Guards keep Watch at the Gates. But the Citizens of *Dantzick* alone have the Privilege of guarding their Gates; nay they have a Right to hinder any Forces entring along with the King, and to go the Rounds all Night in the Streets, as long as he stays within their Walls. There are Persons that go about the Streets all the Year round as Night Watches, and constantly give a Signal of the Hour, which resembles the Noise of a Child's Rattle.

Its Religion and Churches. *DANTZICK* was the first Town in *Poland* that shook off the Fetters of Popery in a tumultuous Manner, as tho' they had been seiz'd with a sudden Conviction, superior to a long Course of Reasoning. They begun with deposing the old Common-council Men, who were Papists, created new ones of their own, prophaned the Churches, robbed them of their Ornaments, abolished the Mass, abus'd the Priests and religious Persons, and alter'd all things at their Pleasure. This was about the Year 1525, in the Reign of *Sigismund* I. who subdued *Prussia*, at which time they embraced the *Lutheran* Persuasion.

SIGISMUND durst not oppose this Reformation, because he was afraid of engaging in a War with the *Teutonick* Knights, the Peace which he had made with them being nigh expired; and *Sigismund Augustus* his Successor, having afterwards received the Homage and Oath of Fidelity to himself and the Republick, from *Albert* I. Duke of *Prussia*, confirm'd the People of *Prussia* in their antient Rights and Priveleges, and gave them leave also to make open Profession of *Luther*'s Doctrine, according to the *Augsburgh* Confession. This same *Albert* founded the University of *Konimberg*, *Anno* 1544.

DANTZICK is an University, and has a College in the *Forestadt*, with Professors in all Faculties, and a fine publick Library.

A DESCRIPTION OF THE Kingdom of *SWEDEN.*

CHAP. I.

Of the Situation, Extent, Air, and Climate of the Kingdom of Sweden; *and of their Mountains, Rivers, Lakes, and Seas; alſo of their reſpective Provinces, and of their chief Towns, Palaces, Publick Buildings,* &c.

Bounds. WHAT is now called *Sweden*, is a part of the antient *Scandinavia*, bounded on the Eaſt by *Moſcovy*; on the South by the *Baltick*; on the Weſt by *Denmark* and *Norway*; and on the North by the *Norwegian Lapland*. It extends from about 56 to 69 Degrees of North Latitude, and from 10 to about 30 Degrees of Longitude Eaſt from *London*; but here we include *Finland*; which tho' belonging to *Sweden* has been conquered by the *Moſcovite*, and has therefore been already deſcrib'd in our Account of the Czar's Dominions in *Moſcovy*, where we refer the Reader to a Deſcription, as being divided into ſeven Parts, of which the Czar has reſtor'd five to the Crown of *Sweden*, reſerving only *Kexholm* and *Carelia*: But if we obſerve that the Czar has alſo the Provinces of *Ingria*, *Eſtonia*, and *Livonia*, Southward of the Gulf of *Finland*, we ſhall find that *Sweden* is now almoſt reduc'd to its antient Bounds.

Mountains. THE moſt remarkable Mountains in *Sweden* are the *Dolfrine* Hills, being a long Train of Hills, which ſeparate *Sweden* from *Norway*, and are almoſt continually cover'd with Snow. There are other ſtony barren Mountains all over the Country, but they add nothing to the Agreeableneſs of the Proſpect, or the Fruitfulneſs of the Country; for the Rivers that run in the Valleys between them, fall with ſuch Rapidity from the Rocks and Precipices, that the Rivers are ſeldom navigable, and therefore not remarkable till they come near the Sea: But as the Rocks frequently obſtruct the Paſſage of thoſe Rivers, they thereby form great Lakes, the chief of which are the *Wenet* and the *Weter*, each of them near an hundred Miles in Length; and to them we may add the *Meller*, on which *Stockholm* ſtands.

THE Seas of *Sweden* are, 1. The *Sound*, which divides *Gothland* and *Schonen* from *Denmark*. 2. The *Baltick*, which divides *Sweden*, *Livonia* and *Germany*. 3. The *Bothnick* Gulf, which ſeparates *Sweden* from *Finland*; and the Gulf of *Finland*, which lies between *Finland* and *Livonia*; but as the preſent Czarina is now poſſeſs'd of *Wyburg*, *Petersburgh*, *Revel* and *Narva*, all that part of the World begins to dwindle into the Name of *Moſcovy*. Monſieur *Mortray* obſerves, that the Water in the *Baltick* is not ſo ſalt as that of the main Ocean, which he imputes to the many freſh Water Rivers that fall into it. One would think the ſame Obſervation might be made, and the ſame Reaſon given with Reſpect to the Mediterranean Sea, when we conſider that the great Rivers the *Don*, the *Danube*, the *Boriſthenes*, &c. which fall into the *Black Sea*, fall from thence into the Mediterranean, together with all the Rivers in *Greece*, *Italy*, &c. and on the other ſide the *Nile*, ſo famous for its annually overflowing its Banks, and conſequently ſending ſuch a Confluence of freſh Water into the Mediterranean, and yet I do not find, but that the Water in that Sea is as ſalt as that in the main Ocean.

Divi- *SWEDEN* contains ſix Parts or Diviſions, 1. *Gothland*, the Southermoſt part adjoining to the *Sound*. 2. *Old Sweden*, adjoining to the North part of *Gothland*. 3. *Swediſh Lapland*, the Northermoſt part of *Sweden*. 4. *Finland*, on the Eaſt ſide of the *Bothnick* Gulf, and North of the Gulf of *Finland*. 5. The *Swediſh* Dominions in *Germany*, of which little now remains except *Stralſund*. 6. The Iſlands of *Sweden*, as *Gothland*, *Oeland*, *Aland*, *Uſedom*, *Rugen* and *Huena*; for the Iſlands of *Oeſel* and *Dago* were reſign'd to *Ruſſia*, with *Livonia* and its Iſlands. The principal Towns of *Gothland* are as follows, 1. *Lunden*, the Metropolis of *Schonen*, in the Latitude of fifty ſix, and about thirty Miles to the Eaſtward of *Copenhagen*: It is an Epiſcopal See, and an Univerſity, but is upon the Decline. 2. *Malmo*, about twelve Miles to the Southward of *Lunden*. 3. *Landſcroon*, about ſixteen Miles North-Weſt from *Lunden*; it is a ſtrong Place, and a good Harbour. 4. *Helſenburg*, or *Elſenburg*, almoſt over againſt *Elſinore*; and on the Eaſt ſide of the *Sound*. 5. *Chriſtianople*, the Capital of *Bleking*, North-Eaſt from *Lunden*. 6. *Carelſcroon*, where the Royal Navy is laid up: It is upon an Iſland, on the Eaſt Coaſt of *Gothland*, and join'd to the Continent by a long Bridge. 7. *Calmar*, a Town of pretty good Trade, to the Northward of *Carelſcroon*, and behind the Iſland of *Oeland*. 8 *Weſterwick*,

Weſterwick, a Sea Port, about fifty Miles to the Northward of *Calmar*. 9. *Halmſtat*, the Capital of *Halland*, a Port about ſixty Miles to the Northward of *Lunden*. 10. *Gottenburg*, the Capital of *Weſt Gothland*, a trading Town, a good Harbour, and well fortify'd; and, being to the Northward of the *Sound*, is open to the *German* Ocean, without paſſing the *Sound*, or paying to the King of *Denmark*. There are ſeveral other Places Capitals of ſmall Provinces, but being of little Note for Trade, or any thing remarkable, I ſhall paſs them by in Silence.

Old Swe-den. *OLD Sweden*, which ſome call *Sweden Proper*, is divided into eleven parts, *viz.* 1. *Upland*. 2. *Sudermania*. 3. *Weſtmania*. 4. *Nericia*. 5. *Geſtricia*. 6. *Helſingia*. 7. *Dolecarlia*. 8. *Medelpadia*. 9. *Jemptia*. 10. *Angermania*. 11. *Weſt Bothnia*.

Stockholm. THE Capital of *Upland* in particular, and *Sweden* in general, is *Stockholm*, in Latitude about fifty nine Degrees North. It ſtands on the Lake *Meller* near the *Baltick* Sea: It is not wall'd or otherwiſe fortified, nor is there much occaſion; for it has a Parcel of troubleſome Iſlands and dangerous Channels on one ſide, which make the Accels to it by Sea very difficult; and to approach it by Land is equally troubleſome, by reaſon of the Lake *Meller*, which ſecures it on the Land Side, and makes it almoſt an Iſland, and where it is not encompaſs'd by Water, the Land is ſo mountainous and rocky, that it is inacceſſible, except by ſome ſmall Paſſes, ſo that a ſmall Force may defend it againſt a numerous Army; but as to the Harbour, it is as ſpacious and ſecure as moſt in *Europe*, and the largeſt Ships may ride cloſe to the Keys; but as there is no regular Tide, and ſo many Winds are required to carry a Ship in or out, and adding to this that it is cloſed up with Ice four or five Months in the Year, an Enemy might deſtroy the whole Coaſt before their Navy could put to Sea, if they were to lie up at *Stockholm*; and this indeed was the Reaſon why *Charles* XI. laid up his Fleet at *Carleſcroon*, which has been the Practice of the *Swedes* ever ſince.

THE Iſland, upon which *Stockholm* ſtands, is about a Mile and a half in Circumference, and the City extends all over the Iſland; and beſides this there are five other adjacent Iſlands, having a Communication with *Stockholm* by Bridges. They are alſo built upon, and reckoned as Parts of *Stockholm*, or rather the Suburbs of it. The Iſland, where the main Body of the City ſtands, is call'd *Stockholm*: Here was the Citadel and the Royal Palace (long ſince burnt down) alſo the Chapel, the Senate Houſe, Chancery, *&c.* In *Riddersholm*, one of the adjacent Iſlands, is a Church call'd the Cloyſter Church, and ſeveral fine Gardens. The Iſland of *Hogslandholm* is moſtly inhabited by Mechanicks. In *Schipsholm* is the Court of Admiralty, the Arſenal, and Magazine for naval Stores. *Ladulugges-ſland* is full of Gardens, Pleaſure-houſes, and Menageries; and here alſo is the King's Park. The South Suburb is on the Continent, and is join'd to the City by a Bridge. Here is the Exchange and Merchants Houſes. The North Suburb is alſo join'd to the City by two Bridges. This is in the Province of *Upland*, as alſo is part of the City; but the reſt of the City, and the South Suburb, is in *Sudermania*, the Bounds, or Parting of the Provinces being diſtinguiſhed by a Stone Pillar, with the Arms of each Province deſcribed upon it; and in the ſame manner are the Bounds of the other Provinces mark'd out.

Churches. THERE are nine Churches in *Stockholm*, of which St. *Nicholas* is the largeſt. Over the Altar of this Church there is a Cabinet of exquiſite Workmanſhip. It is ſet open on *Sundays* and other great Feſtivals: There is in it a Table with five Partitions or Shelves in maſſy Silver, whereon are the following Hiſtories in *Baſſo Relievo*. On the firſt, the Nativity of Chriſt. On the ſecond, his laſt Supper. On the third, his Crucifixion. On the fourth, his Burial; and on the fifth his Reſurrection. And above all is a little Statue, of Silver alſo, about two foot high, which repreſents the Aſcenſion. There are alſo other little Statues of the ſame Height; as *Moſes* with the two Tables, *John Baptiſt*, the four Evangeliſts, all in maſſy Silver and exceeding fine Workmanſhip, with other curious Figures, excellent Paintings, and Plenty of rich Plate, eſpecially one Chalice of beaten Gold, ſo richly embelliſh'd with Jewels, that it is valued at forty thouſand Crowns.

Their Churches and publick Buildings are generally cover'd with Copper, and have very high Spires; and inſtead of Bells they have Chimes, which are ſet to play upon Feſtivals and other Occaſions of rejoicing. The Houſes in the City are chiefly built of Brick, but in the Suburbs generally of Wood, and conſequently ſubject to Fire. *Stockholm* was at firſt but a barren Iſland, inhabited only by a few Fiſhermen; but afterwards a Caſtle was built upon it: Since which, between three and four hundred Years ago, the City was begun to be built, and by degrees it was ſo improv'd, that the Court thought fit to remove thither from *Upſal*, and it is now the Capital, and beſt trading Place of *Sweden*.

Upſal. THE City of *Upſal* is in the middle of a large Plain, and ſituate upon the River *Sala*, in ſixty Degrees North Latitude. It is about forty Miles to the Northward of *Stockholm*, and was once the Capital of *Sweden*. *Upſal* is ſtill an Univerſity, and an Archbiſhop's See, being the only one in any *Lutheran* Country. Some of the beſt Buildings are Brick, and the reſt of Wood. The Cathedral is ſeven hundred and forty foot long, one hundred and forty foot broad, and two hundred and thirty foot high, and cover'd with Copper. There are Marble Tombs of their antient Kings and Queens in ſixteen antient Chapels. The Library was plunder'd from ſome of the beſt Libraries in *Germany*, and was preſented to them by King *Guſtavus*.

SWEDISH Lapland lies to the Northward of *Proper Sweden*, and is divided into five Parts, each Part having the Name *Lapmark* affix'd to it, as *Torne Lapmark*, *Kimi Lapmark*, *Lula Lapmark*, *Pitha Lapmark*, and *Uma Lapmark*; the firſt Name being given them from certain Rivers ſo call'd, which riſe in, or run through, each Province, and fall into the *Bothnick* Gulf. It is remarkable that there is a Town at the Mouth of each River, which bears the Name of the Province, and the River upon which it ſtands.

Uma. *UMA* ſtands on the North Side of the River *Uma*, and is the Reſidence of the Governor of *Weſt Bothnia*. It was twice burnt by the *Muſcovites*, which was eaſily effected, as being moſtly built of Wood, and having no Fortification to defend it againſt an Enemy.

Torne. *TORNE* is a decay'd ruinous Place, as are moſt of the Towns on the Coaſt of the *Bothnick* Gulf, having been deſtroy'd by the *Muſcovites* purely for the ſake of Ruin and Deſtruction, the Country being ſo barren, that it is not worth plundering, or ſcarce worth poſſeſſing. Their Trade is ſalted Salmon, or other Fiſh dry'd without Salt upon the Rocks in *Lapland*. They alſo deal in Skins of Rein Deer and other Animals, which they carry to *Stockholm* for a Market. The Town of *Torne* ſtands upon an Iſland in a River of the ſame Name, about ſix Miles from the Sea. This River affords abundance of Fiſh; for which

Reaſon

Reaſon there are here and there Fiſhermens Houſes upon the Banks of the River for near an hundred Miles from the Town. For Fiſhing is their Trade and chief Suſtenance, the Soil affording little Grain. Indeed they cultivate but ſome ſmall Patches of Land near the River Side, and thoſe not being ſufficient to ſupply them, the greateſt part of their Bread is made of the white inward Bark of the Fir Tree, which they dry and grind, and uſe as we do Flower. But they have likewiſe a ſort of wild Oats, that grow in the Woods, which they uſe as Corn.

The River *Torne* has ſo many Cataracts, and is ſo rapid, that the Watermen, their Boats being built light for that Purpoſe, are oblig'd to hale up along the Shore, when they have theſe Currents or Cataracts in their Way.

CHAP. II.

Of the Mines in Lapland, *and of the Habit and Employment of the* Laplanders: *Alſo of their Magick; with a Deſcription of* Pomerania, Stralſund, *and the Iſlands of* Sweden.

Mines. THERE have been ſeveral Mines of Iron and Copper found in *Lapland*, eſpecially near the River *Torne*, upon which there were Forges and Conveniences for working and melting the Metal; but they are moſtly deſtroy'd by the *Moſcovites*, and the Miners and Managers forced to turn Fiſhermen; a Trade that never fails to thoſe who can put up with that way of living, as theſe *Laplanders* are forc'd to do, when they can do no better. The moſt conſiderable Iron and Copper Mines are in the Mountains of *Suapawara*, about two hundred Miles to the Norward of the Town of *Torne*. The Huts. Tents or Hutts of the Inhabitants of this part of *Lapland* are made of a great Number of long Poles, ſet in a circular Form upon the Ground, and all meeting at the Top in the Form of a Sugar-loaf, and cover'd with thick coarſe Stuff, to keep out the Weather, only a Hole left at the Top to let out the Smoke that proceeds from the Fire, which is in the middle of the Hutt, and the People ſit round it.

Habit. Both Men and Women have their upper Garments made of Skins with the Hair on, girt to them with a Belt or Girdle; their Breeches, or rather Trowſers, reach down to their Heels; their Caps are ſhap'd exactly like their Heads, and almoſt as cloſe as the Skin; their Shoes are alſo made of Skins, with picked turn'd-up Toes, but without any Heels, and tied with Thongs of Skins of Rein Deer, or the like.

Women. The Women who think themſelves to be of the better ſort, make themſelves fine with a Sort of Pewter Wire, or Tinſel, with which they work and embroider their Girdles, the Breaſts of their Coats, and the Edges of their Caps. They have no Linen, but make Waſtcoats of Fawns Skins, which they wear next to them. It is hard to diſtinguiſh the different Sexes by their Dreſs, only the Womens Garments are longer than the Mens; but otherwiſe they are equip'd much alike, each having a Purſe at their Girdle, in which they put Money, Rings, and Toys, a Knife, and a Leather Bag, in which they carry Thread, made of the Nerves of Beaſts. They dry the Fleſh of Rein Deer and Fiſh, in order to preſerve it, but without Salt. Both Men and Women chew Tobacco, yet few ſmoke any. Their Beds and Coverings are Skins of Rein Deer, between which they lie ſtark naked. Their Arms are Bows and Arrows, which they uſe with great Dexterity. Their chief Riches conſiſt in Flocks of Rein Deer, and he that has about two hundred or more is accounted a rich Man; but they are a tender Creature, and apt to die by the Heat in ſultry Weather, or, if they eſcape that, there is an Inſect, of the Nature of a Louſe, or Tick, very pernicious to them; which getting among the Hair, multiplies apace, and great Numbers of them eating Holes in the Skin ſpoil their thriving; ſo that when once a Deer is infected with theſe Vermin it is good for little, they having no Method to deſtroy them.

Traveling. When the *Laplanders* decamp, they carry their Children and Baggage upon their Rein Deer, driving the loaden ones before them, the reſt of the Flock following naturally after. And as they have Wool plenty enough to build new Huts, they never regard the Carcaſe or Shell of the old one, when they have got the Furniture out.

Employment. Their chief Employment is feeding and tending their Flocks of Rein Deer; beſides which they exerciſe themſelves in Fiſhing, Hunting, and Shooting with their Bows and Arrows, to furniſh themſelves with Proviſions, and Skins of Ermine and other Animals, not only for their own Wearing or Uſe, but to exchange with the neighbouring People for Neceſſaries which they cannot otherwiſe procure.

Religion. The *Swediſh Laplanders* are generally reputed Chriſtians, but ſeem very ignorant. Mr. *Moray* ſays he ask'd one of the moſt ſociable of them if ever he frequented any Church; to which he anſwered, that he did while his Friend, the Curate of *Jukaerwa*, was alive, but he was now encamp'd too far from any Church to frequent them. Being ask'd what the Sacrament was? he anſwer'd, that it was a little round Piece of Bread, as thin as Paper, and a Spoonful of Wine; and that the Body of Chriſt was in the Bread, but could not be diſcern'd. Being ask'd, if he did not believe that the Body of Chriſt was riſen, and now alive? he anſwer'd, *God knows*. Another of them owning the Father, Son, and Holy Ghoſt, was ask'd, if there were not three Gods? and anſwered, they were a Triangle; by which Anſwer it is ſuppoſed the Prieſts had endeavour'd by that Simile, to illuſtrate the Myſtery of the Trinity. He farther added, that they paid their Curate, or Miniſter, a certain Quantity of dry'd Fiſh, Furr, Skins, and Cheeſes, in proportion to their Stock, beſides paying the Fees for Chriſtenings, Marriages, and Buryings.

Magick of the *Laplanders*. Our Traveller, willing to know whether the Report which he had heard of the Magick and Witchcraft of the *Laplanders* was true, ask'd ſome diſtant Queſtions relating to that Subject, and was anſwer'd, that thoſe Profeſſors of the Black Art were moſtly in *Kimi Lapland*, and *Finland*, and told him, that they convers'd with the Devil,

Devil, and knew every thing, and that they could inflict Diseases on any Man, his Family, or Cattle, if hir'd or provok'd to it, and could kill or strike blind at Pleasure by their Sorcery; and that, on the other hand, they could cure any Man or Beast that themselves or others had struck with any Disease, and had often done it without any Gratuity, except a small Present; and the poor ignorant Part of the *Laplanders* are so fix'd in a Belief of this, that they dread the Anger, and court the Favour, of those reputed Conjurers.

Mr. *Mortraye* relates, that he being willing to satisfy his Curiosity, by seeing their Method of Exorcising, hir'd a Gulde to conduct him to the Tent of one of those Conjurers, in the most Northerly Part of *Lapland*. But when he found the old Wizard, he observ'd him to be very cautious of trusting him, because the Laws of *Sweden* are very severe against Witchcraft: However, by repeated Promises that he would not betray or discover him, he prevail'd upon the Conjurer, bid him follow him to the Top of a high Mountain, where being come, the Conjurer desir'd him to stay till he fetch'd his Drum and other things, which he did, and soon return'd, for it was hid hard by among the Shrubs and Rubbish, for fear of a Discovery.

The Drum was of an oval Form, having but one Head, made of transparent Parchment, miserably painted with celestial Signs: There was fastened to it a Chain, with several Brass Rings, *&c.* And all things being now ready for the Operation, the Conjurer ask'd him if he had any Brandy; and half a Pint being given him, he drank about two thirds of it; and then putting the Chain and Rings into the Drum, he beat upon it with a forked Piece of a Deer's Horn for a few Minutes, the Chain and Rings, in the mean time, jumping and jingling within the Drum; then he laid himself flat upon his Back, setting the Head of the Drum upon his bare Breast, and lay in this Posture like a dead Man; at last, fetching a deep Sigh, he opened his Eyes, and lifting the Drum gently up, he could see through the transparent Head in what Position the Chain and Rings lay, and how situate with Respect to the Celestial Signs; and then looking earnestly at the Enquirer, who was as earnestly waiting for his Answer, told him that he would run a great Hazard, as he return'd in his Sledge, and again in going down the Cataracts, or Water-falls, in his Boat; and that he would escape a great Danger by Fire, that he should have two Fits of Sickness within two Years, and having escap'd them, his Life should be long and healthy; for all which great things he foretold, he gave the Conjurer half a Crown, with which he seem'd extreamly satisfy'd.

The Conjurer, in point of Gratitude to the Guide, or Interpreter, that brought him so good a Customer, told him what Days in *July* and *August* would be lucky, and that if he went a fishing on those Days, he should come home loaden with Fish; he also told him what Days in *September*, *October*, and *November*, would be lucky for him to hunt. When all this was over, our Querist ask'd him, if he could tell whether he was a Batchelor, and what Countries he had travell'd? But he made him no Answer to any thing he ask'd him concerning things past; probably for fear of betraying his Ignorance, and consequently his Inability to tell things to come.

Mr. *Mortraye*, advancing on his Journey, came at last so far to the Northward, that he could see the Main Ocean to the Northward of him; and it being near the longest Day, he observ'd the Sun, when at lowest under the Pole, to be about as far above the Horizon, as it is with us in *England* near three Quarters of an Hour before Sun-set.

The *Laplanders* are very busy in the Winter-time in bringing their Copper and Iron Ore down the Rivers to *Torne*, and other Places on or near the *Bothnick* Coast; it being the best time for that Carriage, because the Rivers are so throughly frozen, that the loaden Sledges can safely travel upon the Ice; and for that Reason there are Fairs held in *January* upon the *Bothnick* Coast, which draw the People out of the Country, to bring down their Ore, Furs, *&c.* to sell, as well as to buy Goods of the *Swedes*, or to exchange one Commodity for another. This likewise is the only Time the *Laplanders* have to frequent Churches, or converse with Priests. It is likewise the Time they get themselves married, have their Children baptiz'd, receive the Sacrament, pay their Dues to the Government and to the Priest; and one great Article is, to lay in a Stock of Tobacco to serve till near that Time Twelvemonth.

The *Swedish* Dominions in *Germany* are now confin'd to some Part of *Upper Pomerania*, and is bounded on the North Side by the *Baltick*, on the East by *Lower Pomerania*, on the South by the Marquisate of *Brandenburg*, and on the West by *Mechlenburg*. Of this *Stralsund* is the chief Town, now possess'd by the *Swedes*, *Stetin* having been yielded to the King of *Prussia*.

Stralsund is a strong Place on the South Shore of the *Baltick* Sea, over against *Rugen*, in about fifty four Degrees of North Latitude, about eighty Miles North-West from *Stetin*. This Place held out above five Months against the united Forces of the *Danes*, *Prussians*, *Poles*, and *Muscovites*, in the Year 1715. King *Charles* XII. being there in Person, and retir'd but a Day or two before the Town surrendred, which was done upon honourable Terms.

The *Swedish* Islands are all in the *Baltick*, and are, 1. *Aland*, with a Number of small Islands about it, in the Mouth of the *Bothnick* Gulf, between *Stockholm* in *Sweden* and *Abo* in *Finland*. There are no great Towns or considerable Villages, the *Russians* having harrass'd their Coast, burnt their Towns and Villages, and destroy'd their Mines, till they were oblig'd to confirm to the Czar the Conquests he had made of *Carelia*, *Ingria*, *Esthonia* and *Livonia*, the most desirable Part of all the *Swedish* Dominions.

2. The Island of *Gothland* lies between *Gothland* and *Livonia*, in the Latitude of fifty seven or fifty eight; it is about thirty Leagues long, and twelve broad; the chief Town is *Wisbuy*, or *Visburg*. Here is a large Harbour, but now almost choak'd up with Sand. There were formerly in the Town thirteen Churches, and six Monasteries, now all in Ruins, except the Church of St. *Mary*, and that has lost its rich Plate and antient Revenues. In the City are yet several Fountains, Cisterns, and Canals to be seen; some intire, but others in Ruins. This Island is supposed to be the first Colony of the *Goths*, so famous afterwards in History, for spreading farther to the Southward in such Multitudes, and dispersing themselves over the finest Countries in *Europe* and *Asia*. It is worth observing, that three of the Villages do still retain the Names of three of their Pagan Gods, *Wodin*, *Thor*, and *Friga*, from whence we Christians do, to this Day, give Names to three Days of the Week, *viz.* *Wednesday*, *Thursday* and *Friday*, as we do to three other Days of the Week, *Saturday*, *Sunday*, and *Monday*, from *Saturn*, the Sun, and the Moon. There are several good Ports in the Island; it affords Plenty of Arable, Meadow, and Pasture Land; their Fields are well stor'd with Cattle, their Seas with Fish, and their Rocks with Free-stone

and Marble; but, notwithstanding the Plenty of all these, the Island has been in a declining Condition upwards of two hundred Years.

3. *Oeland*, a little to the Eastward of the Continent of *Gothland*, and South-West from the Island of *Gothland*. It is about twenty five Leagues in Length, and four in Breadth. The principal Town is *Borkholm*, on the West Side of the Island, over against *Calmer*. The Island is chiefly Pasture Ground, and produces Plenty of Oxen, Horses, and Fallow Deer.

4. *Huena* is a small Island in the *Sound*. The chief Town is *Uraniburg*, built by (or rather for the use of) *Tycho Brahe*, the ingenious Astronomer. This, as well as *Gothland* and *Oeland*, was subject to *Denmark* three or fourscore Years ago.

5. The Island of *Rugen*, North of *Stralsund*, in the Entrance into the *Baltick*, and not far from *Bornholm*. It is almost of a circular Form, except for the Bays and Inlets, and about thirty Miles over; but so indented with Creeks and Bays, that scarce any Part of it is above a League distant from some Branch or other of the Sea. It is separrted from the main Continent, near *Stralsund*, by a narrow Streight, not a League over. There is not a walled Town upon the Island, but some Forts and Villages, the chief of which is *Bergen*, consisting of about four hundred Houses. It abounds with Grain and Cattle. The *Danes* and Confederates, in the late Northern War, made themselves Masters of it, but by the Peace, in the Year 1720, it was restor'd to the *Swedes*.

6, The Islands of *Usedom* and *Wallin* lie South-East from *Rugen*, on the same Coast of *Pomerania*, in the Mouth of the River *Oder*. There is nothing remarkable in them for Trade or Buildings, only they command the Navigation of the *Oder*. The narrow Passage between them is called the *Swin-Sound*. I might add the *Dago* and the *Osel*, in the Mouth of the *Livonian* Sea, or Gulf of *Riga*; but as these have been surrendered to the Czar of *Moscovy*, and are now a Part of his Dominions, they come not under our Cognizance, in this Description of the Continent or Islands of *Sweden*.

CHAP. III.

Of the Persons and Habits of the Swedes; *their Genius, Temper, Diet, Exercises, Roads, and Method of Travelling: With the Nature of their Soil, and of their Plants and Animals.*

THE *Swedes* are generally of a hardy robust Constitution, and able to endure Hardships, of which their late King *Charles* XII. was a lively Instance. Their Hair is commonly inclin'd to the yellow. The common Peasants oblige their Females to undergo the greatest Part of their laborious Employments, as Ploughing, Thrashing, Rowing their Boats, serving the Bricklayers, carrying Burthens, *&c.* The Cloathing of the better Sort, in the Winter-time, is Furs, instead of which the poor People use Sheep-skins, dress'd with the Wool on. But where Cloathing is scarce, and the Weather severe, they sometimes lose Limbs, and sometimes Lives by the Cold; but if a Limb is so frozen and the Blood so stagnated by the Cold, that they are in Danger of losing the Use of it, the common Cure, or Preventive, is to rub it with Snow, to put the Blood in Motion and make it circulate; for if they hold such a frozen Limb to the Fire, or come within the Influence of their Stoves, which are as common here as in *Russia*, they endanger the Loss of their Limb. The better Sort, especially in Summer-time, wear Cloth or Stuff, as the Season and their Circumstances will admit of.

The *Swedes* have little Inclination to Mechanicks, which makes them poor Manufacturers; but the *Finlanders* are a rustick laborious People, and good Soldiers when disciplin'd; they are generally used to coarse Fare and hard Lodging, and consequently can scarce find any harder Fare than what they have been used to, and are therefore better qualified for Labour and Hardship than for Art and Curiosity: And the Nobility, whose Preferment is commonly in the Military Service, are more famous for downright Courage and Resolution than for Conduct or Contrivance. In Learning they chuse rather to transcribe other Peoples Works than digest or communicate their own Thoughts. In Trade they had rather do the Drudgery than dive into the Mystery of Commerce or Manufactures; in short, in all their Performances they chuse rather to be slavish than nice, and where Ingenuity is wanting (as it generally is) a rugged Strength supplies its Place.

They that reckon themselves indeed Gentry, do not aim at Employments in the Church, Law, or Physick, nor do they engage in Trade. Their Clergy are but moderately learn'd, and, to hide their Ignorance, they forbid all Disputes about controverted Points in Religion. The Peasants live in a wretched poor Way, every one making his own Shoes, Hats, Cloaths, and Instruments of Husbandry; which are miserably perform'd; but they are forc'd to put up with it, as not having Money to purchase them of proper Workmen and Dealers. They are very religious, zealous to their Church, and loyal to their Monarch. There are seldom any Houses broke, or Robberies on the Highway, or such Violences committed, but little pilfering over-reaching Tricks, which they think may be done so secretly as not to clash with their Pretences to Religion, or expose their Villany and Hypocrisy to the View of others, these they do not stick to commit when they find Oportunity.

Exercise

The Exercises which they use for their Diversion, are running Races on Sledges, and sailing in Yachts on the Ice; which they manage with such Dexterity, that they will turn to Windward, and sail swifter than the Vessels upon the Water, and with much less Danger of oversetting.

Roads

Their Roads are kept in good Repair, and Travelling as good as can be expected, considering the Rocks and rugged Mountains in the Country: The Roads are repair'd by the Peasants, who receive Orders from the Governors of their respective Provinces for that Purpose, and strictly obey them. It is cheap travelling, for Horses are hired for a Penny a Mile; but there is but poor Accommodation upon the Road, either

ther for Lodging or Diet. The best Travelling is in Winter, upon the Sledges, the Country abounding with Lakes and Rivers, which have a Communication with one another, and when froze afford an Opportunity for travelling upon the Ice, which is the most expeditious, as well as the most safe, Way of travelling.

A GREAT Part of *Sweden* consists of Woods, Lakes, and Pools, and in some Places prodigious high Rocks, especially about *Stockholm*, and by the Sea Side; but further up in the Country it is more agreeable, for there are a great many fertile Plains; and their Woods serve both for Shelter and Fuel. The Lakes, besides being well stor'd with Fish, serve for Carriage and Passage, in the Summer by Boats upon the Water, and in the Winter by Sledges upon the Ice.

IT is here as in the Northern Parts of *Moscovy*, no sooner the Winter is over, and the Snow gone, but the Grass and other Vegetables cover the Face of the Earth immediately, that it may almost be said that the Year is divided into only two Seasons, *viz.* Winter and Summer; for upon the first Appearance of Summer, the Fields are stor'd with Variety of Flowers, and Strawberries and Rasberries grow upon every Rock. Their Gardens bring Melons to Perfection in dry Years; but Peaches, Apples, Pears, *&c.* are scarce, and those they have not good; but they have tolerable Cherries of several Sorts. Their Nurseries and Green-houses produce Orange, Fig, and Myrtle, with other Plants and Trees of the most tender Nature. Their Woods afford Fir, Pines, Beach, Birch, Alder, Juniper, and in the Province of *Bleking* the Trees grow so rank, that it is difficult to get through among them, and they are generally strait and tall. Fuel is very plenty except near the Mines, where it has been destroy'd much faster than it grew, and they are now supply'd, by Sledge or Water Carriage, from other Places.

Fruits.

THEIR Horses are small, but hardy. Their Sheeps Wool is coarse. Their Wild-Beasts are Bears, Wolves, Elks, Deer, Foxes, Hares, and Squirrels. The Way of catching Wild-Beasts can scarce be call'd Hunting, but rather murdering the Game, for they surround them, and shoot them directly, without giving any Law; there is very little Riding, or what we call Sport, either in this Country or *Germany*. Cattle.

FOWLS, both Tame and Wild, are plenty and good. The Reder, a Fowl about as big as a Turkey, is reckon'd fine Eating, as is the Orras, about as big as a Hen: Here are plenty of Partriges, and a Bird call'd a Yerper, something like a Partridge; there are great Numbers of Thrushes and Blackbirds; and a beautiful Bird about the Bigness of a Fieldfare, whose Feathers are tipp'd with Scarlet. They have but few Pigeons, which is imputed to the great Numbers of Eagles, Hawks, and other Birds of Prey. Fowls.

THEY have Plenty of Fish, particularly Salmon, Perch, Trout, Tench, Pikes, and the Streamling, a Fish less than a Pilchard; these they salt and barrel up to send abroad, and to supply themselves in the Winter, when the Rivers and Lakes are frozen that no Fish can be caught; also, besides Fish for Eating, they have Seals and other Fish in the *Bothnick Gulf*, of which they make great Quantities of Train-Oil. Fish.

CHAP. IV.

Of their Mines, Manufactures, Trade, and Commerce.

Mines.

THEIR Mines and Manufactures are rank'd under the same Head, because the principal Part of their Manufacture consists in what they make of their Copper and Iron, and what the Mines afford. There is in *Sweden* a Mine of Silver, the first Landing-place whereof is a hundred and five Fathom deep; the Roof of it is as high as a Church, and is supported by vast Pillars or Arches of Ore; from thence there is a Descent, by Ladders or Baskets, to the lowest Mine, being above forty Fathom more, where they now work. Their Records give no Account of the first Discovery either of this or their great Copper Mine, which seems to have been the Work of many Ages. The Ore of their Silver Mine, seldom yields above four *per Cent*, and requires great Pains to refine it. They make use of Water-Engines both to draw up the Ore and drain the Mines. The greatest Copper Mine is eighty Fathom deep, and of Breadth in proportion, and yields the Value of two hundred thousand Pounds Sterling yearly, of which the King hath a fourth Part in Kind, and a Duty upon the rest of twenty-five *per Cent*, when it is exported unwrought. They have also a great Number of Iron Mines and Forges, which are generally work'd by Water, where there is a sufficient Quantity to answer the Purpose; and from these they export annually to the Value of three hundred thousand Pounds in Iron to foreign Countries.

MR. *Mortraye*, giving an Account of his Travels in *Sweden*, says, that at a Town call'd *Arboga*, in *Westmania*, he saw several Forges, with what he calls *large Hammers and vast Bellows, put in Motion by such Wheels as are used in Water Mills*; but as the Bellows at the Furnaces, and the Bellows and the Hammers at the Forges in *Wales*, are work'd in the same Manner, I shall forbear a further Description of them till I come to give a Description of that Country, and only observe that the two Forges at *Arboga*, in *Sweden*, work near five hundred and forty Ton of Iron in a Year, and the three Hammers at *Axberghammer* work about half that Quantity. There is a Fair held every Year, in *January*, at *Orebro*, whither the Citizens of *Gottenburg* and *Stockholm* resort, to buy the Iron of the Masters of the Iron Works, in order to sell it to Foreigners, who are not allow'd to buy any up till the other have first bought it, in order to sell it to them at second Hand. They have also lesser Hammers and Bellows, wherewith to forge Bayonets, Hammers and other Instruments.

MR. *Mortraye* went next to the Silver Mines at *Salsberg*: The Mines now at work are call'd the New Mines; they at first produc'd twenty thousand Pound Weight of neat Silver every Year, for fourscore Years together successively; but of late they have not produced above ten or twelve hundred Weight every Year. Mr. *Mortraye*, desirous to see the Mine, procured him- Silver Mines.

himself to be let down in one of their Buckets to the first Floor, which is ninety Fathom deep, and afterwards to the Second, which is twenty Fathom more, and from thence he descended by Ladders thirty-five Fathom more, which is in all one hundred and forty-five Fathom: Here they shew'd him the Method of softning the Rocks, to break the Ore, and their Manner of working it; and when he had satisfied his Curiosity, he came up by the same Way and Means that he went down, and being come up, they shew'd him some Pieces of Maiden Silver, which came pure out of the Mine without refining, and a Kind of Cotton which they call *Asbestos*, which they say is the incombustible Matter which the Antients used to spin and weave into a Sort of a Stuff like Linnen; and, because the Fire could have no Effect upon it, they wrapp'd up the dead Bodies of their deceas'd Friends in it to be burnt; for tho' the Cloth could not preserve the dead Bodies from being consum'd by the Fire, yet as the Cloth remain'd unconsum'd, it preserv'd the Ashes of the Body entire, and prevented its being mix'd and lost among the Ashes of the Funeral Pile.

Asbestos.

But to pursue Mr. *Mortraye*'s Description of *Sweden*: The Copper Mines lie near the City of *Fulun*, in the Province *Delecarlia*, where, before he came to the Mine, he found several Furnaces for melting the Ore; the Mine has seventeen Openings, the Mountain in which it is, is like Mount *Vesuvius*, the Smoke that ascends from it not being less offensive, it being so sulphurous, that it causes sneezing, or otherwise very much disturbs the Breath of those who are not used to it. The largest Opening is two hundred and sixty Fathom in Circumference, and seventy deep to the first Landing, and the same Depth from thence to the Second; some of those Openings are fill'd up by the falling in of the Earth, and others kept open at work. He had the Curiosity to go down into one that was at work, but came out almost suffocated with the Smell, and as black as Soot; but he was the more desirous to see it, because it is said to be the most considerable Mine in all *Europe*, and some say there was Copper transported from this Mine before the Birth of our Saviour, and they produce Manuscripts which prove its flourishing State five hundred Years ago and upwards, and their Brass Utensils and Arms, as Mattocks, Hatchets, Sabres, Poinards, Knives, &c. are still preserv'd in the College of Antiquities. This Mine yields above nine hundred Ton of Copper every Year, and formerly much more, but some of the Works have been ruin'd by the Earth falling in, and besides, the Government has not only deny'd them the Privileges they had, but laid new Imposts upon them, by which Means they are disabled from carrying on the Work, or what they do it with a Vigour and Activity far short of what is was before they were so oppress.

Notwithstanding the Plenty of Iron Ore in *Sweden*, there was formerly little Iron made there, but the Ore was transported to *Dantzick* and other Parts there-abouts, and at *Dantzick* especially such large Quantities were forg'd, that generally all the Iron that comes out of the *Baltick* is call'd *Dantzick* Iron; but when the Duke *D'Alva* drove a great many ingenious Mechanicks out of the *Low Countries*, they sheltered here, being depriv'd of the Exercise of their Religion at Home, and set up Forges and other Conveniences for making Iron Guns, Wire, &c. and their Descendants are the chief Manufacturers of those Sort of Goods to this Day.

Manufacture.

Besides Iron and Copper, as above, there are great Quantities of Pitch, Tar, Masts, Deals, Timber, (or Raft) and wooden Ware, comes from *Sweden*; and they have made some Progress in the Woollen Manufacture, and with some Success too. Their Imports exceed their Exports, and consist mostly of Cloth, Silk, Stuffs, Wine, Brandy, Sugar, Spices, Tobacco, Paper, Linnen, and other Merchandizes. Their Trade with *England* is the most advantageous Branch they follow, because it takes off their own Manufactures and in some respect brings them in ready Money. Their Payments in Merchandizing are commonly made by drawing upon the Bank of *Stockholm*, which is much easier done than carrying their heavy Copper Money from Place to Place, where a small Sum requires a Cart or a Wheel-barrow to remove it.

The very Management of their Manufactures depend mostly upon Credit; for, as to their Iron Work for Instance, they contract with the *English* and other Foreigners at the Beginning of Winter, and they advancing the Sums contracted for, receive their Iron the next Summer. And indeed this Poverty and Necessity of the *Swedes* is an Advantage to Foreigners, against whose Persons and Interest the *Swedes* are so prejudic'd, that they would not allow any to live, or at least thrive, amongst them, if their Trade and Interest was not almost entirely supported by them.

The *English* formerly exported great Quantities of Cloth to *Sweden*; but their Government having of late encouraged that Manufacture, they have procur'd Workmen from *Germany*, *Scotland*, and even *England* too, which is the Occasion that there is a much less Call for *English* Cloth than formerly.

CHAP. V.

Of the Forces of Sweden; *the Strength of its Situation, and Frontier-Towns; and of the Publick Revenues; with the antient and present Constitution of the Government, and the Revolutions which it hath undergone.*

The Nobility and Gentry formerly held their Lands of the Crown by Knights Service, which is to maintain and bring into the Field a Body of Horse, in proportion to the Land so held; and therefore when they fought it was in Defence of themselves and their Lands and Estates, as well as of their Sovereigns, and the King was at this rate supply'd with Forces without any other Charge to the Government; and indeed this was a proper Way to secure new acquired Territories; but this degenerated into an Inconveniency at last, for the Descendants of these

theſe petty Governors, who were afterwards call'd Barons, growing ſtrong and numerous, and in ſome reſpect independant, neglected their Obligation to the Crown, and in a Confederacy againſt it ſet up a Government of their own, and at their own Pleaſure depoſed the King, and rendered the Crown elective, or at their own Pleaſure put Reſtrictions and Limitations upon the Sovereign, or ſhar'd the Regal Authority with him, which they made him ſubmit to when they proſper'd in their Attempts.

Militia. THE Militia of *Sweden* ſeems to be yet upon the ſame Foot as formerly, or but with ſome few neceſſary Alterations. Formerly no Levies of Foot could be made in *Sweden* without the Conſent of the Commons, or Fourth Eſtate; till the Time of King *Charles* the Eleventh, and then it was with Difficulty; upon this there were Commiſſioners appointed by that King to allot each Province their Proportion of Soldiers, according to the Number of Farms it contain'd: Every Farm of ſixty or ſeventy Pounds a Year, being charg'd with one Foot Soldier; the Farmer being obliged to furniſh him with Diet, Lodging, and ordinary Cloaths, and about twenty Shillings a Year; or if he be a married Man, the Farmer builds him a little Wooden Houſe, and allows him Hay and Paſturage to keep a Cow, and a little Land to plow, to ſupply himſelf with Bread; and when they have once enter'd into this Pay it is Death by Martial Law to deſert it.

IT was not in the Power of any Farmers to impreſs, or any Way compel, any Man, poor or rich, into this Military Service, but they muſt agree upon fair Terms, and if the Farmer by Agreement paid ten or twenty Pounds in Hand to a Perſon to ſerve as a Soldier, together with the above-mention'd Perquiſites, yet if he dies or is diſabled the Farmer is oblig'd to repeat the Charge, and procure another in his Room, at his own Expence; and thus both the Entring, and Recruiting, the common Foot Soldiers is entirely at the Country's Charge.

THE Officers, both of Horſe and Foot, are maintain'd out of the Lands lately reſum'd and united to the Crown. Every Officer hath a Houſe and a Parcel of Land aſſign'd him in that Part of the Country where his Regiment is quarter'd, and for his Pay he has the Rent of ſome other Farm or Farms, equivolent to it; and this Way they are better pleas'd with than to take it at the Treaſury, becauſe the Farmers Pay is more punctual, and better to be depended upon in point of Time than the Pay at the Treaſury, which they ſometimes wait a long Time for.

THE Pay of a Colonel of Foot is about three hundred a Year, and the other Officers in proportion. The Pay of all the Officers in one Regiment amounts to two thouſand five Pounds a Year, and there were lately twenty-eight Regiments of Foot upon this Eſtabliſhment; beſides fifteen Regiments of Horſe, whoſe Officers were alſo paid out of the Crown Lands. And that the Houſes may not fall out of Repair, or the Lands be work'd out of Heart, as the Farmers phraſe it, there are Commiſſioners appointed to inſpect them as there is Occaſion; and if an Officer is advanc'd to a ſuperior Command, and conſequently remov'd to a greater Eſtate, he is oblig'd to leave the Eſtate and Houſe that he is going from in as good a Condition as he found them. They never wear the King's Cloaths but when they exerciſe, they being at all other Times lock'd up in the Churches.

BUT the Forces of *Pomerania* are not upon this Foot, but are paid out of the Treaſury. Before the Loſs of *Livonia* and *Bremen* the Militia of *Sweden* was computed as follows:

	Men.	
Fifteen Regiments of Horſe, containing	17000	
Twenty-eight Regiments of Foot	35000	
One Regiment of Foot Guards	2000	*Swediſh* Forces.
The Forces of *Pomerania*, *Bremen*, and *Verden*	6000	
In all	60000	

BUT the late *Charles* the Twelfth, when attack'd by *Denmark*, *Poland*, and *Moſcovy* all at once, aſſum'd an arbitrary Power, and rais'd above twice that Number, and Money in proportion, and went on with great Succeſs againſt his Enemies the firſt twelve Years, but afterwards loſt *Livonia*, and a great Part of his *German* Dominions, and ſo impoveriſh'd the reſt of his Dominions, that they are now far ſhort of what they were when he came to the Crown. However, the *Swedes* have ſo far recover'd their Liberty, that the Sovereign has not Power to raiſe Forces or to levy Money without the Conſent of the States in Diet aſſembled.

IN the Reign of *Charles* the Eleventh there was, beſides the Rents above-mention'd, about twenty Farms aſſign'd to anſwer any extraordinary Expence, or to ſupply a Subſiſtance for ſuperannuated or diſabled Officers; but for common Soldiers there is one general Hoſpital, well endow'd, for their Relief upon Occaſion; to which, beſides the ſettled Endowment, ever Officer, upon his Promotion, contributes a certain Sum, in proportion to the Dignity of the Place he is advanc'd to. Their principal Magazines were *Stockholm* and *Jenkopping*, at the latter of which their Train of Artillery uſually ſtands.

THEIR rocky Precipices are a better Defence than Walls, for if they do but ſecure their Paſſes the reſt is impenetrable and inacceſſible; but they have alſo ſome Places of Strength, as the Caſtle of *Bahus*, near *Gottenburg*; alſo *Elſinburg*, *Halmſtat*, *Landſcroon*, and *Malmo*, all over-againſt *Denmark*; likewiſe *Carelſcroon*, where the Royal Navy lies up, and *Calmar* on the Eaſt Coaſt, and two ſmall Forts at the going into *Stockholm* Harbour.

Navy. THE Royal Navy of *Sweden* is not ſo ſtrong as that of *Denmark*, or that of *Moſcovy*; but it was not the powerful Fleet of Men of War belonging to the *Moſcovites* that gave them the Advantage over the *Swedes* in the laſt Wars, but it was their Galleys, which could row up to the very North End, or Bottom, of the *Bothnick Gulph*, where the *Swediſh* Men of War could not come, for fear of Shoals and Dangers; ſo that the *Moſcovites*, by the Help of their Galleys, ravaged the Country at pleaſure, deſtroy'd their Copper Works, and burnt their Towns before them; nor are the *Swedes*, and all their Allies, yet a Match for the *Moſcovites* in thoſe Seas, the latter having not leſs than three or four hundred Galleys, but the *Swedes* have none, nor are they in a Capacity to build any, nor are their Men of War of any Service to them, to defend the Coaſt of the *Bothnick Gulph*, they being too large to go above *Stockholm*.

Revenues. THE Revenues of *Sweden* are rais'd from the Demeſne Lands of the Crown, the Cuſtoms, Copper and Silver Mines, or the Coin, alſo the Tithes, which before the Reformation belong'd to Biſhopricks and Monaſteries, but were then ſeiz'd by the Crown. There is likewiſe Poll-Money, Fines, Stamps upon Paper, and Duties payable on Proceedings at Law; all which Revenues amount, by Computation, to a Million of Pounds Sterling, whereof the Cuſtoms produce a Fourth, and the Demeſne Lands a Third. The Poll was levy'd upon the common People, each, between ſixteen and ſixty, paying twelve Pence a Year: But other Exactions were alſo laid on by

the late King in his Diſtreſs in the late Wars; inſomuch that Baron *Gortz*, the Prime Miniſter, form'd a Scheme to extort from the People (beſides all other Duties) the ſixth Penny of all their Effects, Houſhold Furniture not excepted, and to make them declare upon Oath the Value of all their Subſtance, and in caſe of a Concealment to forfeit the Whole.

And, which was worſe, King *Charles* XII. cauſed the Subjects to bring in all their Silver and Braſs Money, in Exchange for which he gave them Muntetekins, a ſmall Copper Coin, of little Weight or Worth, which the King put what Value upon he pleaſed; and thus a Piece of Copper, of the intrinſick Value of not above a Halfpenny, paſs'd for half a Crown or more, and other Pieces in proportion, and Foreigners as well as Natives were oblig'd to ſubmit to it. Then another Invention was propos'd in favour of the Crown, by impoſing Notes upon the Trading People inſtead of Money, although no Fund was aſſign'd for the Diſcharge of them. In ſhort, the Subjects were at laſt depriv'd in a manner of all Property by the Projects of Baron *Gortz*, who was then Prime Miniſter of *Sweden*, and look'd upon to be the Author of theſe deſtructive Councils, of which he found the fatal Conſequence when his Maſter *Charles* XII. who protected him, was dead, and the Subjects Reſentments ran ſo high, that the whole terminated in his Ruin.

Government. The antient Government of the *Swedes* was monarchical and abſolute, as may be obſerv'd both from Hiſtory and the Conſtitution of the Governments which they ſettled where they conquer'd. Their Conqueſts may be ſaid to be divided into three Parts: 1. They appropriated Lands to themſelves ſufficient to ſupport themſelves and Families, which they call'd their Demeſne Lands. 2. They reſerv'd certain Rents and Services for the Uſe of the Crown, or to anſwer the Exigences of the State 3. They parcell'd out the reſt amongſt their Followers. And thus in ſhort the Benefit of the Conqueſts contributed to the enriching of the Subjects, eſpecially the Officers and Commanders, who by this Means became able to join in Confederacy, and even diſpute the Power of their Sovereign, and ſometimes compel him to ſubmit to Limitations by them propos'd, and even to ſuffer them to ſhare the Adminiſtration with him; and when the Roman Catholick Clergy, the Emiſſaries of *Rome*, once got footing, they were ſo far from loſing ground afterwards, that they aſſum'd a Power of controuling the Civil Magiſtrate, and by degrees crept in to be a powerful Party in the Legiſlature, and now, and for ſeveral hundred Years paſt, there are four Eſtates eſtabliſh'd in *Sweden*.

These four Eſtates are, 1. The Nobility, 2. The Clergy, 3. The Burgeſſes, and 4. The Common People; but beſides theſe there was a Senate, or Council, whoſe Authority was ſuch as not only to adviſe but contradict the King, inſomuch that he could not act in ſome Caſes of Importance without the Concurrence of them, or at leaſt of the Majority of them. They fix'd themſelve to continue Senators for Life, and any Attempt againſt their Perſons or Reputations was made Treaſon.

The four Eſtates, above-mention'd, uſually met at *Stockholm* once in three Years, or oftner if the Affairs of State required it: Upon which Occaſion, his Majeſty being ſeated on the Throne, and the Senators and Eſtates in their proper Places, at ſome Diſtance, the Preſident of the Chancery compliments them in the King's Name; then a Secretary acquaints them with the State of Affairs during their Recels, and the Occaſion of their being call'd together; which Compliment is ſeverally return'd by the Marſhal for the Nobility, by the Archbiſhop for the Clergy, by the firſt Burgo-maſter of *Stockholm* for the Burghers, and by one of the Peaſants deputed by them in the Name of the reſt; which done the four Eſtates retire to four ſeparate Chambers, and chuſe one Committee, compoſed of all the four Eſtates; this Committee receives all the Particulars that are neceſſary to be laid before them, and communicates them to their reſpective Bodies, or Eſtates; and in every Chamber the Majority of Votes determines the Affair in that Chamber; but all the Eſtates, or Chambers, muſt concur before any Matter propoſed can paſs into an Act: But the executive Power was almoſt entirely lodg'd in the Senate; which was generally compos'd of twelve Lords, of whom the Archbiſhop of *Upſal*, Primate of *Sweden*, was one, and the reſt were principal Officers of State, or Governors of Provinces; and thoſe ſeparately maintain'd their own Ground, and fortify'd their own Seats, ſo that they ſeem'd rather like independant Princes than like Subjects; and if aggriev'd they never appeal'd to the King's Court for Redreſs, but every one thought himſelf able to avenge himſelf of the Aggreſſor when he found himſelf injur'd; and under this confus'd Conſtitution of Government *Sweden* labour'd for ſome Time.

Guſtavus Eriction. But when *Guſtavus Erickſon*, who was a *Swediſh* Nobleman, was elected to the Crown, about the Year 1523, he reſcued *Sweden* from the Oppreſſion of the *Danes*, by which Means he ſo far ingratiated himſelf into the Favour of his Subjects, the *Swedes*, that he advanc'd the Regal Authority to a very high Pitch. For the Eſtates, thinking that they could never expreſs a ſufficiently grateful Senſe of their Deliverance, made a ſolemn Decree, or Act, whereby they oblig'd themſelves to approve whatever *Guſtavus* ſhould think fit to do for the Preſervation of his Dignity, and that it ſhould be in his Power to make War or Peace, and that his Enemies ſhould be imputed the Enemies of the Nation; and this Power they the rather choſe to give him for his Defence and their Safety, becauſe there was then a Pretender put up againſt him.

This happen'd about the Time of the Promulgation of *Luther*'s Doctrine, and when the Reformation began to prevail in *Sweden*; and there being now an inveterate Enmity between *Guſtavus* and the *Romiſh* Clergy, who were then in Poſſeſſion of half the Lands and Revenues of the Kingdom, and of many of the Royal Caſtles and Demeſnes, he thought if he ſhould fall in with *Luther*'s Doctrine, in Oppoſition to Popery, it would give him a good Pretence of ſeizing all thoſe Caſtles, Lands, &c. into his own Hand, which had been alienated from the Crown and engroſs'd by the Clergy; and as this Project was entirely to his own Advantage, and the not much leſs than abſolute Power now depoſited in his Hands enabled him to put it in execution, he procured an Act to be paſs'd in the Year 1527, by which it was order'd, 'That the Biſhops ſhould immediately 'ſurrender their Caſtles to the King, and diſband 'their Troops; that their pretended Right to 'Fines and forfeited Eſtates, which originally 'belong'd to the Crown, ſhould be entirely abro-'gated, that all the ſuperfluous Plate and Bells 'in the Churches ſhould be ſold to pay the pub-'lick Debts; that all Grants of Eſtates to 'the Clergy, ſince the Edict of King *Canutſon*, 'who began his Reign in the Year 1445, ſhould 'be annull'd, and the Lands re-united to the 'Crown; that the two Thirds of the Tythes, 'hitherto poſſeſs'd by the Biſhops and Abbots, 'ſhould be apply'd towards the maintaining of 'the Army in Times of War, and erecting and 'endow-

'endowing publick Schools and Hospitals in 'Times of Peace; and, in short, that all the 'Privileges of the Clergy should be entirely at 'his Majesty's Disposal.' This Act they presented to the King by the Chancellor, and Doctor *Olaus Petri*, the great Preacher and Promoter of *Lutheranism* in *Sweden*, with a Promise from the States that he should never find the least Opposition to his Pleasure in that Assembly.

When the King had thus made himself Master both of the Religion and Revenues of the Church, he did not rest here, but went in Person, at the Head of a Body of Horse, to see the Act put in execution, being attended by *Olaus Petri*, and other *Lutheran* Doctors, whom he order'd actually to preach before him in the principal Churches; then call'd in the Titles and Grants by which the Clergy held their Lands, and re-united the said Lands to the Crown; and, in short, saw every Thing put in execution according to the Tenor of the Act above-mention'd.

The Clergy being thus humbled, and their insatiable Demands suppress'd, he form'd another Project for the increasing of his Revenues: For most of the *Swedish* Provinces did formerly abound with Forests, which former Kings had caus'd to be demolish'd, and given the Lands to the Nobility and Gentry, reserving only a Crown Rent to the King; but the Circumstances of the Crown being low, the Lords acted according to the Old Proverb, *when a Man is down keep him down*, for they so disregarded the King's Authority, that they neglected to pay even those Crown Rents, and that for so long a Time, that they seem'd to be abolish'd by Prescription; but this King, whose almost arbitrary Power enabled him to make almost what Claims and Demands he pleased, demanded of the Lords and Gentry to resign their Lands and Fiefs to him, at which they were so much startled, that they were glad to compound with him to pay a certain yearly Sum for the Fiefs, or Manors, which they held of the Crown.

The Crown made hereditary.

Having secured this Privilege also for himself, his next Step was to secure his Succession; in order to which he proposed to them to abrogate the Custom of electing their Princes, and to have the Crown made hereditary, alledging in Favour of what he advanced, that the Divisions and Contests attending Elections were commonly attended with fatal Consequences; (*a fatal Instance of which we have, at the writing hereof, in the Affair of* Poland;) but these Arguments were needless where arbitrary Power prevail'd, for all the four Houses consented directly to what he proposed, and settled the Crown upon his eldest Son, Prince *Eric*, and the other Princes his Children, successively, according to their Seniority, and again upon their respective Heirs and Successors, &c. This Act was pass'd in the Year 1542, and pursuant to it the Crown has ever since been in his Line; though the Right of this Succession has in some Measure been dispens'd with in Favour of *Ulrica Eleonora*, the present Queen of *Sweden*, as we may have Occasion to observe by and by.

But all this did not satisfy *Gustavus*, for in his Life-time he allotted several Provinces to his several Sons; as to his second Son *John*, *Finland*, to his third Son *Magnus*, *West Gothland*, and to his youngest Son *Charles*, *Sudermania*, *Nericia*, and *Wermeland*; but all to hold of their eldest Brother *Eric*, as Fees of the Crown, every one to furnish a Number of Troops in proportion to their Dignity, and the Necessity or Circumstances of the State.

King *Eric* began *Anno* 1559, and reign'd but nine Years, during which his Reign, his Brothers, envying his Greatness, charged him with Male-Administration, and under that Pretence deposed him, and he was succeeded by his second Brother, *John*, in the Year 1568, who, to make way for himself, poison'd his Brother *Eric*, and succeeded to the Crown. *John*, 1568.

John had a Son, named *Sigismund*, who having resided mostly in *Poland*, was elected King there; but endeavouring to restore the *Roman* Catholick Religion in *Sweden* now, when the *Lutheran* was so well establish'd, he lost the Affections of the *Swedish* Nobility, and although he did by the establish'd Law of Hereditary Right succeed his Father *John* in the Crown and Kingdom of *Sweden*, when he was King of *Poland* at the same Time, yet *Sigismund* was deposed, and *Charles* the Ninth advanc'd to the Throne of *Sweden*, in the Year 1604. *Charles* IX. 1604.

Sigismund's close Adherence to the *Roman* Catholick Principles prevail'd so far with him, that he would not suffer his Son *Uladislaus* to be educated in *Lutheran* Principles; whereupon an Act was pass'd to exclude *Uladislaus* from the Crown, and to settle it upon *Gustavus Adolphus*, the Son of King *Charles*, (after his Father's Decease) and upon his Heirs Male; whereupon *Gustavus Adolphus* succeeded his Father, and came to the Crown in the Year 1611.

Gustavus Adolphus had such Success against the *Muscovites* and *Poles*, that he brought them to a Peace upon those advantageous Terms, that they should surrender and confirm to him *Livonia* and *Ingermanland*; he afterwards made considerable Conquests in *Germany*; but being kill'd at the Battle of *Lutzen*, left his Crown and Kingdom to his Daughter *Christiana* in the Year 1633, which although this was contrary to the Act of Settlement, yet her Father prevail'd with the States to alter that Act in her Favour, and to dispense with that Article of confining the Succession to the Male Line only. *Gustavus Adolphus*, 1611. *Christiana*, 1633.

But whether the Load of Government was too heavy for female Shoulders, or whatever else was the Case, *Christiana*, with the Consent of the Estates, resign'd the Crown to her Nephew, *Charles Gustavus*, fourth Son of *Casimir*, Count Palatine of the *Rhine*, and *Catharine*, Sister of *Gustavus Adolphus*, and Queen *Christiana* retired to *Rome*, having embrac'd the *Roman* Catholick Religion. *Charles Gustavus*, 1654.

Charles Gustavus in his War with the *Danes*, had such Success, that he brought them to his own Terms; which were, that *Denmark* should confirm to *Sweden* the Provinces of *Schonen*, *Halland*, and *Bleking*, with *Lysler*, *Huseen*, *Bornholm*, and *Drontheim* in *Norway*, and that the *Swedes* should have free Passage through them, and that the *Danes* should exact no Duty of them for such Passage.

When *Charles Gustavus* died, his Son, *Charles* the Eleventh, who was then but five Years of Age, succeeded him, in the Year 1660; but the Administration was entrusted in the Hands of the Queen and Five great Officers of the Crown, till he was seventeen Years of Age; at which Time, being in the Year 1672, he took the Government upon him, and found the Nation involv'd in an expensive and unprofitable War, which was by some charged upon the Ministers who were at the Helm during his Minority; whereupon he chose a Committee out of the several Bodies of the States to enquire into their Administration, and it was concluded that the Power which the Senators had assum'd to themselves was the Cause of the Misfortune; whereupon he absolv'd the Senate, only keeping some of them that he could most confide in about him, which he call'd the King's Counsellors. *Charles* XI. 1660.

King *Charles* the Eleventh dy'd *April* 17, 1697, in the two and fortieth Year of his Age, and the thirty-

Charles XII. 1697. thirty-seventh of his Reign, and was succeeded by the (afterwards) famous *Charles* the Twelfth, not yet quite fifteen Years of Age; but during his Minority the Kingdom was govern'd by a Regency, consisting of the Queen, his Mother, and Five great Officers of State; however the States declared the King Major in *November* following. And, in the Year 1700, the *Poles*, *Danes*, and *Moscovites* fell upon him, without Provocation, or any Declaration of War; but the united Fleet of the *English* and *Dutch* appearing in his Behalf made the *Danes* retire to Shelter, and he being clear of all Enemies from that Quarter, he march'd against his old Enemies, the *Poles* and *Moscovites*, defeating them in almost every Engagement, with Numbers far inferior to theirs, though he had old experienc'd *Saxon* Troops to deal with, as well as *Poles* and *Moscovites*. In this War he dethron'd the King of *Poland*, and put the Czar of *Moscovy* to his last Shift; but being so elevated with his Success, his Presumption and Want of Caution precipitated him into un-foreseen Dangers; for, being surrounded by the Czar's Forces, his Army was entirely cut off, or made Prisoners, at *Pultowa*, except three or four hundred Horse, with which he escap'd to *Bender*; of which you have a particular Account in the Description of *Turkey* in *Europe*, Chap. II. Page 273, &c. of this Book, to which I refer the Reader. Some few Years after his Return into *Sweden* he was kill'd at the Siege of *Fredericksball*, after a Reign of about twenty-one Years.

Charles XII. dying without Issue, the Crown devolv'd, according to legal Succession, upon *Charles Frederick*, Duke of *Holstein*; but *Ulrica Eleonora*, the youngest Daughter of *Charles* XI. being married to the Hereditary Prince of *Hess Cassel*, who was then in the *Swedish* Army, and the Princess, his Consort, promising to restore the States to their antient Power and Privileges, and promising for herself and her Posterity to renounce all arbitrary Power, and that if ever she should attempt to restore it she should forfeit the Crown, or if any Peson should propose, either to her or her Successors, the restoring of arbitrary Power, that Person should be punish'd as a Traitor, also that she would not admit any Person into any Employment in the Government who was not a *Lutheran*, and a Native of *Sweden*, &c. upon these, and many other like Obligations that she had laid herself under, they settled the Crown upon her Majesty, and her Issue Male, in Case she had any should survive.

The States being assembled at *Stockholm*, in *February* 1720, the Queen proposed to have her Consort, the Prince of *Hess*, King, jointly with her, he at the same Time offering to conform to all the Conditions and Limitations sign'd by the Queen; but the States did not immediately come into the Proposal of having them both to reign jointly; whereupon her Majesty offer'd to resign wholly to her Consort, and quit all Pretensions to the Government, only provided that she might resume the Government again in Case she should survive him; which, with some further Restrictions, being agreed to, he was proclaim'd King of *Sweden*, and the Ceremony of his Coronation was perform'd the third of *May* 1721, in the great Church at *Stockholm*.

Prince of *Hess* elected King.

CHAP. VI.

Of the several Courts, or Colleges, of Sweden, *for the Administration of Publick Justice; and of their Courts of Judicature, Ecclesiastical and Civil; also of their Laws and Civil Government.*

The Senate

SINCE the last Act of Settlement the King cannot determine any Affair without the Consent of the Senate, who are now reduc'd to fourteen in Number, of whom the House of Peasants, by them sometimes call'd the House of Commons, have no Share in the Election, they being chose by the Nobility, Clergy, and Burgesses, and invested with such extensive Authority, that when the King is sick, or absent, the Administration is wholly deposited in their Hands, and all Affairs of Consequence determin'd by a Majority of Voices.

Court of Justice

There is also a Senator presides in every superior Court of Justice, and under him is substituted a Vice President and four Assistants. The War-Office hath also a Senator for President, and two others for Assistants. The Land Forces, Artillery, and Fortifications, are under their Direction. The Court of Admiralty hath one of the Senators (who is also an Admiral) for its President, and he has other proper Admirals and Sea-Officers for his Assistants. The Chancery hath a Senator for President, and he hath two other Senators, the Chancellor, and three Secretaries of of State, for his Associates. It is here that all Acts of the Diet, Charters, Patents, and Treaties of Peace, are drawn up and recorded.

Treasury

The Treasury hath also a Senator for President, assisted with another Senator, and Counsellors of the Chamber: To them all those that are concern'd in the publick Revenues are accountable, and the publick Chest is committed to their Care. Another Office is the College of Mines; here is a Senator President and four Assistants: Their Business is to see the Machines and Engines belonging to the Mines repair'd and improv'd to the best Advantage. There is also the College of Commerce, for the Regulation of Trade and Manufactures. And the first Marshal of the Court, who is also a Senator, is Comptroler of the Royal Tables, Palaces, and Stables. The Kingdom is also divided into twenty-five Precincts, or Governments, over each of which is a *Landshofding*, who takes Care to see all the Government's Lands, in his Territories, cultivated, and all judicial Sentences executed; the Collection of the publick Revenues, and the Keeping of the Royal Forests, Parks, and other Crown Lands in his Dominions, are all committed to his Care.

Court of Revision

The supreme, and finally decisive, Court in *Sweden*, to which an Appeal may be made from any Civil Court, provided the Matter in Dispute amounts to seventy Pounds or upwards, is call'd the Court of Revision: Here, besides the President of the Chancery and other Senators, the King sits in Person, when he pleases. But before any Cause, or Appeal, is suffer'd to come before this Court, it is laid before an under Court of Revision, where the Chancellor is President; if

in

in this Court they find a Cauſe worth laying before the ſuperior Court, they repreſent it as ſuch. There are alſo ſeveral inferior Courts, where Affairs are determined by Juries: But Capital Crimes are tranſmitted to the National Courts; of which there are three; one held at *Stockholm*, for *Sweden*; one at *Jencoping*, for *Gothland*; one for *Finland*, held at *Abo*: In each of theſe alſo a Senator is Preſident; and the Appeal lies from the inferior Courts in the Country to theſe, where the Matter in Debate does not exceed the Value of twenty Pounds; and as thoſe Courts generally ſit, Cauſes are generally ſoon determined, except ſome Golden Demurrs obſtruct the Proceedings, for they love Gold in *Sweden* almoſt as well as in other Parts of the World.

Laws of *Wisby*.

THERE are Laws yet in Memory, call'd the Laws of *Wisby*, (the Capital of the Iſland of *Gothland*) they were formerly as much regarded as the Laws of *Oleron*, and by them all Facts committed at Sea are determined.

MARRIAGE Contracts, Baſtardy, *&c.* are try'd by the Conſiſtory, of which the Biſhop is Preſident; but, whatever may be their Opinion as to the Merit or Demerit of the Cauſe, they cannot inflict Corporal Puniſhment, or give Sentence of Excommunication, *&c.* that being the Prerogative of the Governors of Provinces, and ſometimes the King reſerves that Power entirely in his own Hands. Their Law Suits, concerning Titles to Eſtates and Matters of ſuch Conſequence, are neither ſo tedious nor expenſive as in *England*; what adds moſt to the Charge of going to Law, is the extravagant Price of the Stamps upon the Paper upon which their Proceſſes and Law Proceedings are writ; this Paper is from two Pence to ſeven Shillings a Sheet, proportion'd to the Value of the Thing in Diſpute; but other Charges are not great, every Man being permitted to plead his own Cauſe, and not obliged to depend upon a Perſon to ſpeak for him, who knows nothing of the Matter but what he is told; however if they deſire the Aſſiſtance of thoſe learned in the Law, they are not deny'd them; and probably the firſt Deſign of the Inſtitution of Lawyers was only to aſſiſt and adviſe thoſe who did not care to truſt to their own Judgments in ſpeaking for themſelves. And in *Sweden*, to this Day, they admit of no Council, or Advocates, in Civil or Criminal Cauſes; and the Practice of the Law is held in ſuch Contempt, that no Gentleman will undertake it.

Theft.

THEFT is puniſh'd with perpetual Slavery, the Criminal being condemn'd during Life to the Service of the Crown, and that in the moſt ſervile Labour, as carrying Wood and Stone to repair the Fortifications, and the like Drudgery. He wears a Collar of Iron, Night and Day, about his Neck, to which there is a little Bell fix'd, which rings upon the leaſt Motion, and expoſes him wherever he goes. If two Perſons fight a Duel, and one of them be kill'd, the Surviver is always puniſh'd with Death; but if neither of them be kill'd, they are both impriſon'd for two Years, being allow'd nothing but Bread and Water, and before they are diſcharg'd pay a Fine of a thouſand Crowns beſides.

THE National Court, call'd by ſome the Court of Honour, orders, That where an Affront is given the Offender do make a Recantation, and publickly beg Pardon. But for Capital Crimes, as Murder, double Adultery, Burning of Houſes, Witchcraft, *&c.* if the Criminal be a Man, he is hang'd, if a Woman, ſhe is beheaded, or, where the Fact is aggravated by Circumſtances, the Criminal is burnt, quarter'd, or hang'd in Chains, or the like; and when a Nobleman commits a Capital Crime, he is ſhot to Death.

CHAP. VII.

Of the Religion and Learning of the Swedes; *alſo of their Marriages, their Children, and what Share they have in the Eſtates of their Parents; and ſome Account of their Manner of burying their Dead.*

THE *Swediſh* Hiſtories relate, that near *Upſal*, to the Northward of *Stockholm*, was the famous Temple of the *Trium-Deat*, or three Pagan Gods, *Woden*, *Thor*, and *Friga*, formerly as much reſorted to as the Temple of *Jeruſalem* by the Chriſtians, or that at *Mecca* by the Mahometans. And whether we in *England* deriv'd our Pagan Superſtition from the *Swedes* and *Goths* is uncertain, but the *Goths* and *Engliſh* did certainly once worſhip the ſame Heathen Deities; and, as if the Generality of the *Engliſh* continued to pay ſome Reſpect to the original Paganiſm of the Nation, they ſtill retain the Names of thoſe venerable Deities, and, to perpetuate their Memory, have attributed to every one of the three above-mention'd one Day of the Week; as, to the Pagan God *Woden* they give the fourth Day of the Week, and call it *Wedneſday*; to *Thor* the Fifth, or *Thurſday*; and to *Friga* the Sixth, and call it *Friday*; and if to them we add what the Aſtrologers have done, who alledge that *Saturn* governs *Saturday*, the Sun *Sunday*, and the Moon *Monday*, and therefore call them after the Names of their reſpective Planets or Governors, not to ſay Gods, we ſhall find that the Pagans and Aſtrologers have, between them, furniſh'd the *Engliſh* with Names for every Day in the Week, *Sunday* itſelf not excepted. It is not ſo ſurprizing that theſe Pagan Names ſhould be embrac'd here before Chriſtianity was known amongſt us, as it is that thoſe Terms of Heatheniſm have not been extirpated ſince.

THE *Swediſh* Hiſtorians themſelves relate, that Chriſtianity was firſt planted in that Country by *Engliſh* Miſſionaries, the chief of whom was *Sigifred* Archbiſhop of *York*, who quitted that See to become the Apoſtle of the *Goths*, and ſuffer'd Martyrdom, with three or four of his Nephews under their Pagan Government, as *Eskil*, and other *Engliſh* Miſſionaries, did under the *Swedes*.

The Reformation.

THE Reformation was begun in the Sixteenth Century, in the Reign of *Guſtavus Ericſon*, of whoſe Life ſee more in Chap. V. The prevailing Religion here is *Lutheraniſm*, and it may even be ſaid to be the eſtabliſh'd Religion, for they will not ſuffer any other Denomination of Chriſtians, whether Natives or Foreigners, to exerciſe their Religion in *Sweden*; and ſo ſtrictly are they bent

againſt thoſe of any other Perſuaſion, that when the Lord *Carteret* was Ambaſſador at the Court of *Sweden*, a Chaplain of his dying, they would neither allow him Chriſtian Burial in their own Way, nor ſuffer the *Engliſh* to read their Funeral Service at the Grave; and this Denial was by the direct Order of the Archbiſhop of *Upſal*, who would not ſuffer the *Swediſh* Clergy ſo much as to aſſiſt at his Funeral; and, which was a greater Proof of their Ingratitude than of their Strictneſs in Religion, the *Engliſh* Fleet was there at the ſame Time, to defend the *Swedes* from the Ravages of the *Moſcovites*.

THE Archbiſhop of *Upſal* is Primate of *Sweden*, and is the only Archbiſhop of the *Lutheran* Perſwaſion, having eight or ten Suffragans under him. The Revenues of the Clergy are but mean; the Archbiſhop hath not above four hundred Pounds a Year, and the other Biſhops in Proportion. The Number of Churches, both in *Sweden* and *Finland* together, amount to above two thouſand. The Clergy have but one Third of the Tythe, and a ſmall Portion of the Glebe, the reſt having been ſeiz'd for the Crown at the Reformation.

BEFORE the late Regulation, the King had moſt of the Eccleſiaſtical Preferments in his own diſpoſing, and was little leſs than Arbitrary both in Church and State, but now he has not the diſpoſing of one ſingle Biſhoprick without the Conſent of the Senate; and for private Churches and Livings they are now in a great Meaſure at the Diſpoſal of the Pariſhioners.

THE *Swedes* are ſo tenacious of their Religion, which is the *Lutheran*, as above obſerv'd, that if any Perſon forſake it, and turn to any other Religion, he muſt be baniſh'd, and forfeit his Right of Inheritance, both for himſelf and his Poſterity; but the Execution of the Eccleſiaſtical Laws are not ſolely in the Hands of the Clergy, but jointly in the Eccleſiaſtical and Civil Power, inſomuch that they cannot pronounce a Sentence of Excommunication without the Conſent of th King and Senate.

Their Learning.

IN bringing up, or educating, their Youth, they generally prefer Arms before Arts, for which Reaſon their Academies are not much frequented; for few apply to the Univerſities to be qualify'd for Holy Orders, but thoſe who have ſcarce any other Way to procure themſelves Bread. The Law they hold to be a contemptible uſeleſs Profeſſion; every one being allow'd to plead his own Cauſe, and all the Proceſs being in their own Language, that thoſe who are Maſters of Juſtice and Reaſon have no farther need of having the Law explain'd to them, nor do they want any to plead for them, as ſuppoſing that the aggriev'd Perſon, who knows beſt the Circumſtances of his own Caſe, is the moſt proper to plead his own Cauſe, eſpecially as there is no need of School Learning or the original Languages to expreſs their Sentiments by.

Univerſities.

THEIR Univerſities are but of a late ſtanding, eſpecially that at *Upſal* has not been eſtabliſh'd much above three hundred Years. The Chancellor is always one of the Prime Miniſters of State, and whoever is Archbiſhop of *Upſal* is always Vice Chancellor; there are about twenty Profeſſors, at a hundred and fifty Pounds a Year each, and the Rector is always one choſe out of that Number; there are about ſeven or eight hundred Students, fifty of whom are maintain'd by the Crown; the reſt, except thoſe maintain'd by Perſons of Quality, ſubſiſt upon Charity, which is given them in Corn, dry'd Fleſh or Fiſh, or Butter, *&c.* they live in private Houſes, and are not diſtinguiſh'd by any Dreſs. The Univerſity of *Finland* is after the ſame Model, but not ſo numerous: There is alſo another at *Landen* in *Schonen*. There is a Free-School in every Diocels to qualify Boys for the Univerſity.

Antiquities.

THERE are not many Monuments of Antiquity, and amongſt thoſe few there are ſome Funeral Inſcriptions roughly cut in Stone, in a *Runick* Character, and in the old *Gothick* Language, but without any Date. What is moſt valuable among them is a Manuſcript Copy of a Tranſlation of the Goſpel, according to all the four Evangeliſts, into the *Gothick* Language, done twelve or thirteen hundred Years ago, by the Biſhop of the *Goths* in *Thrace*. *Guſtavus Adolphus* was a great Patron of Learning, which was further encouraged by his Daughter, Queen *Chriſtiana*, by whoſe Means ſeveral ingenious Foreigners were encouraged to ſettle there, to the great Advantage and Improvement of the *Swediſh* Nation.

Language.

THE common Language of *Sweden* is a Dialect of the antient *Teutonick*, ſomething like that of the *Germans* or *Danes*, but rougher; but the Language uſed by the better Sort, in writing, is generally *French* or *High Dutch*.

Marriages.

IN *Sweden* there is ſuch Proviſion made againſt ſtolen or clandeſtine Marriages, that no Perſon, of what Rank ſoever, can marry without firſt having the Banes lawfully publiſh'd in the Pariſh Church, nor can any Diſpenſation from the Biſhop ſupply its Place. The Men look upon their Wives here as ſo much their Inferiors, that they are kept at the Diſtance of Slaves rather than as Boſom Friends, or Bedfellows.

BY the Laws of *Sweden* the Father's Eſtate is divided among his Children, every Son, without any regard to Seniority, has twice as much as a Daughter, only as to an acquired Eſtate the Father may give the one Tenth of it to whom he pleaſes.

Funerals.

THEY ſo much affect pompous Funerals, that if at a Perſon's Deceaſe the ſurviving Relations are not able at preſent to furniſh out ſuch a Funeral as they deſire, they depoſite the Corps in a Vault a Month or two, *&c.* under Pretence of making Preparation for the Interment; but it ſometimes lies there for Years, and the People's Expectations being tired out, the Burial is forgot, and inſtead of a pompous Funeral there is none at all.

A DESCRIPTION OF THE KINGDOMS OF *Denmark* and *Norway*.

CHAP. I.

Of the Situation, Extent, and Boundaries, of Denmark *and* Norway; *alſo of their Seas, Lakes, and Rivers; with the Provinces into which they are divided, and the chief Towns therein contain'd.*

ALTHOUGH *Denmark* and *Norway* were formerly diſtinct Kingdoms, yet being now both under the Dominion of one Prince, it is thought moſt proper to treat of them both under the ſame Head, but with a due Regard to their reſpective Situation and Diviſions, *&c.*

South-Lat. *Denmark*, including the Dutchy of *Holſtein*, is bounded on the North by the Sea, called *Schagerrack*, or, by the *Engliſh*, *Cattegate*; it is the Entrance into the *Baltick*, between the *Scaw*, or North Part of *Jutland*, and the *Naze* of *Norway*; and on the Eaſt it is bounded by the *Baltick Sea*; it is bounded on the South-Weſt by the River *Elbe*, which goes up to *Hamburgh*, and divides *Holſtein* from the Dutchy of *Bremen*; and on the South-Eaſt it is bounded by the Dutchy of *Saxlawenburgh*. The Counties of *Oldenburg* and *Delmenhorſt*, in *Germany*, belong alſo to *Denmark*, tho' ſeparated from it by the Dutchy of *Bremen*.

Norway is alſo ſeparated from *Denmark* by the *Cattegate*, which bounds *Norway* on the South; it is bounded by the Main Ocean on the North and Weſt, and on the Eaſt by *Sweden* and *Swediſh Lapland*, from which it is ſeparated by the *Dolſrine Hills*; it is about eight hundred Miles in Length, and one hundred in Breadth. The Northermoſt Part of *Norway* is exceſſive cold, eſpecially within the Polar Circle, but the Southern Part of it is more temperate, being in a leſs ſevere Latitude.

The Seas bordering upon the *Daniſh* Dominions are, 1. the *German Ocean*, between *Denmark* and *Norway* on the Eaſt, and *Great Britain* on the Weſt; 2. the *Northern Ocean*; 3. the *Baltick*, the *Sound* and the *Cattegate*. The *Sound* flows between the Continent of *Schonen* and the Iſland of *Zeland*. In the narroweſt Part, or Entrance, of the *Sound* is the Town and Fort of *Elſinore*, and over-againſt it, on the Eaſt or *Swediſh* Side, is *Elſinburg*, or *Helſinburg*; between theſe Two the Ships ſail into the *Sound* for the *Baltick*.

The *Swedes*, being in Poſſeſſion of the Eaſtern Shore of the *Sound*, as the *Danes* are of the Weſtern, were exempted from paying any Duty to the *Danes* for paſſing the *Sound*, till the Peace in the Year 1721, when they agreed to pay to *Denmark* for paſſing the *Sound* as other Nations did; but as to the Grand Fleets of the *Engliſh* and *Dutch* they ask no Leave, nor pay any Acknowledgment to the *Danes* for paſſing the *Sound*, the *Danes* not being able to diſpute the Paſſage with them, nor does it appear reaſonable that any Acknowledgment ſhould be paid to the *Dane* more than to the *Swede* for paſſing of the *Sound*, the *Dane* having but one Side, and the *Swede* the other.

There are many fine Lakes in *Denmark*, in which are plenty of Fiſh. Remarkable Rivers are, 1. The *Elbe*, which is properly a River of *Germany*, but is the Boundary of *Denmark*; 2. The *Eyder*, which riſes in the Dutchy of *Holſtein*, and running Weſtward, meets with the River *Iron*, which riſes in the Dutchy of *Sleſwick*, after which the united Rivers fall into the Sea, near *Tonningben*; 3. The River *Trave* riſes in the Dutchy of *Holſtein*, and running Eaſt by *Lubeck*, falls into the *Baltick* at *Travemund*. The chief Ports in *Norway*, upon the *German*, or *Weſtern Ocean*, are *Bergen*, in ſixty Degrees odd Minutes, and *Drontheim*, in ſixty-four Degrees of North Latitude. *Copenhagen* is in the Iſland of *Zeland*, and is the Capital of *Denmark*, and for Strength and Commodiouſneſs is eſteem'd one of the fineſt Harbours in *Europe*.

The grand Diviſion of *Denmark* may be reckon'd under theſe ſix Heads, *viz.* 1. *Denmark Proper*; 2. The Dutchy of *Sleſwick*, or *South Jutland*; Diviſion of *Denmark*.

3. The

3. The Dutchy of *Holstein*; 4. The *German* Provinces of *Oldenburgh* and *Delminhurst*; 5. The Kingdom of *Norway*; 6. The Island of *Iceland*, and other Islands scatter'd up and down in the *North Sea*, and belonging to *Denmark*.

DENMARK.

I. What is properly call'd *Denmark*? The Island of *Zeland* is the principal Part of it; of which, and of the whole Kingdom, *Copenhagen* is the Capital. The Island of *Zeland* is about sixty Miles in Length; it is bounded on the East by the *Sound*, which separates it from *Schonen*; on the West by the *Great Belt*, which divides it from the Island *Funen*; it has the Islands of *Laland*, *Falster*, and *Mona* on the South; and the Sea call'd *Cattegate* on the North.

Copenhagen. 1. *Copenhagen* the Capital of *Denmark*; it is situate in the Island of *Zeland*, in between fifty-five and fifty-six Degrees of North Latitude, and near thirteen Degrees of Longitude East from *London*; it is near the Eastern Shore of the Island of *Zeland*; it is computed to be about the Bigness of *Bristol*; it is a strong Place, standing in the Middle of a Marshy Ground, and fortified after the modern Way. The Harbour is surrounded by Fortifications, and the Entrance is so narrow that it will not suffer above one Ship at a Time to sail in; and a Citadel on one Side, and a Blockhouse on the other, commands the Harbour; there is a wooden Gallery round the whole Harbour, close to which the Ships lie; and the Port will contain near five hundred Sail, and secure them from Storms and Enemies, if not too powerful; for, notwithstanding their Security against a weak Opposer, yet when the *English* and *Dutch* Fleets threatned them with a Bombardment in the Beginning of the late War, when the the *Danes*, together with the *Moscovites* and *Poles*, jointly fell upon *Charles* XII. (the then young) King of *Sweden*; I say, when the *English* undertook to decide the Quarrel, by threatning their Capital and Harbour with a Bombardment, as above, they obliged them to desist from their intended Enterprize.

These Seas are sometimes so hard frozen, that the *Swedes* have march'd an Army over the *Sound* by the Help of the Ice, and actually besieged *Copenhagen*; and as it is a Morass, cut through with Dikes, it is probably of easier Access in Winter than in Summer for that Reason.

Buildings. The Buildings are generally mean; the King's Palace is one of the meanest and worst contriv'd of any in *Europe*, but he has a Pleasure-House and Gardens at some Distance which are very much admired. Of all the Publick Buildings the Citadel, the Exchange, the Arsenal, but especially the Observatory, is most taken Notice of; in this last is the Celestial Globe, of six Foot Diameter, made by the Directions and for the Use of *Tycho Brahe*, the famous Astronomer. The Market-Place is spacious, and the Streets broad. There are nine or ten Churches, besides the Cathedral, which is dedicated to St. *Mary*; in this their Kings are usually crown'd; it has a lofty Spire, cover'd with Copper. Here is also an University, and an Academy for Martial Exercises, Modern Languages, and Mathematicks, but not plenty of remarkable Antiquities. The first Castle that was built upon the Island was built in the Year 1168, for a Defence against Pyrates, who then abounded in those Seas; and the People resorting thither, it soon grew into a populous Town, and was formerly an Archbishoprick, but is now reduced.

Finak. The little Island of *Finak*, or *Amak*, is so near *Zeland*, that it is join'd to *Copenhagen* by a Bridge; it affords abundance of Fowls, Venison, Corn, Milch-Cattle, Garden-Stuff, &c. which supply *Copenhagen* Market with those Sort of Provisions. This little Island was some time ago given to a Colony of *North Hollanders*; who for their great Skill in that sort of Business, were sent for and settled there, to make Butter and Cheese for the Court; and their Posterity yet remain there, and in a great Measure retain the Habit, Language, and Customs of their Ancestors, and value themselves so much upon their Cleanliness and Industry, that they think it beneath them to inter-marry or mix with the *Danes*, having Privileges conferr'd upon them on Account of their being useful at Court.

Elsinore. 2. To the Northward of *Copenhagen*, about fifteen Miles from it, is *Elsinore*, or *Helsingor*, over-against *Helsingburgh*, on the North Entrance and narrowest Part of the *Sound*; and about a Quarter of a Mile from *Elsinore*, is the strong, and by some call'd impregnable, Castle of *Cronenburgh*; but, strong as it is, it was taken by *Charles Gustavus*, King of *Sweden*, in the Year 1658, but by Treaty restor'd to the *Danes* in the Year 1660. *Cronenburgh.*

Fredericksburgh. 3. *Fredericksburgh* is situate twelve Miles South-Westward from *Elsinore*: Here the King of *Denmark* has a Palace and a Castle, remarkable for its Situation in the Middle of a Lake. 4. *Roschild*, formerly the Metropolis of *Denmark*, twenty Miles West from *Copenhagen*, at the Bottom of a Gulph of the Sea; there is nothing now remarkable in it, except the Ruins of an old Cathedral, in which are several, and some very magnificent, Tombs of the antient *Danish* Kings. 5. *Holbech*, at the Bottom of another Gulph, eighteen Miles to the Westward of *Roschild*. 6. *Kallenburgh*, a Place of pretty good Trade, near the Sea, on the North-West Part of the Island of *Zeland*. There are other Towns of less Note, and a great many Villages, but those already mention'd are the chief.

Funen. The Island *Funen* is the next considerable Island in *Denmark*; it lies on the West Side of *Zeland*, being separated from it by the *Great Belt*, a Streight of about twenty Miles over; it is bounded on the West by the *Lesser Belt*; it hath the Island of *Samsoe* on the North, and the *Baltick Sea* on the South. The chief Town is *Odensee*, situate about the Middle of the Island; it was once a flourishing, but is now a declining, Place. 2. *Newburgh*, a good Harbour, on the East Side of the Island; it is yet a fortified Town, and was once the Residence of the *Danish* Kings. 3. *Swinbergh*, a pretty good Harbour, on the South-East Part of the Island; here the *Swedes* pass'd over the Ice in the Year 1658, when they went to besiege *Copenhagen*. 4. *Middlefar*, on the West Side of the Island; here is the common Passage to *Kolding* in *Jutland*; here the King of *Sweden*'s Army march'd over the Ice in the Year 1658, when he invaded this Island. Besides those Towns there are between two and three hundred Villages in the Island of *Funen*.

Langland. The Island of *Langland* lies in the South Part of the *Great Belt*; it is about thirty Miles long, and eight broad. The chief Town is *Rudkoping*, on the West Side of the Island, and towards the South End of it; besides which there is no Place of any considerable Note, only about sixteen Villages.

Laland. The Island of *Laland* is on the South Side of *Zeland*, having *Langland* on the West, and the *Baltick Sea* on the East and South; it is about thirty Miles long, and twenty broad. The chief Town is *Nankow*, situate at the Bottom of a Gulph, or Inlet, which is on the West Side of the Island.

Falster. The Island of *Falster* is also on the South Side of *Zeland*, and on the East Side of *Laland*, being separated from the latter only by a small Streight, like a River, and has *Mona* on the North-East of it; it is about twenty Miles long, and sixteen broad. Chief Towns are *Nykopping* on the West Side

Side, and *Stubkopping* on the North Side, which last is the common Place of Passage between this Island and *Zeland*.

Mona is an Island on the South-East Side of *Zeland*, having *Falster* on the South-West of it, and the *Sound* and *Falsterborn* on the North-East. *Mona.*

Arroe is a small Island on the South Side of *Funen*; whose chief Place is *Koping*, on the South Part of the Island. *Arroe.*

Bornholm is the Eastermost Island of any the *Danes* have in Possession; it lies in the *Baltick Sea*, between the Shores of *Schonen*, on the North-West, and *Pomerania* on the South-East of it; it is about twenty Miles long, and twelve broad. Chief Towns are *Sandwick*, on the North Coast, and *Rottum* and *Nexia*, on the South. *Bornholm.*

Anbout and *Lessou* are noted Islands in the *Cattegate*, between the *Scaw* and the *Sound*. These are the most remarkable Islands; but besides these there are abundance of other Islands, so small, that if they have any Names, they are not all known to the *English* Geographers; but it is said that to *Funen* only, exclusive of all the rest, there belong no less than ninety habitable Islands. But now we shall leave the Islands, and pass over to the Main Continent of *Jutland*. *Anbout and Lessou.*

II. *North Jutland*, the Country of the antient *Jutes*, or *Juts*. *North Jutland* is bounded by the *German Ocean* on the North and West, by the Dutchy of *Sleswick* on the South, and on the East it is bounded by the *Cattegate* and the *Little Belt*. These People the *Romans* call'd *Cimbri*, and this Country, taking in also *Sleswick* and *Holstein*, they called *Cimbrica Chersonesus*, or the Peninsula of the *Cimbri*. *North Jutland* is divided into four Governments, or *Stift-Amts*, *viz.* those of 1. *Alburg*, 2. *Wiburg*, 3. *Arhusen*, and 4. *Ripen*. *North Jutland.*

1. *Alburg* is the extreme North Part of *Jutland*, bounded on the East and West by the Sea, and on the South by the Districts of *Wiburg* and *Ripen*, from which it is separated by the Gulph of *Limford*, which flows from the *Baltick*, or *Cattegate*, almost quite through to the *German Ocean*, whereby the District of *Alburg* is made a Peninsula. The Length of this Province, from North-East to South-West, is about a hundred and thirty Miles. The chief Towns of this Province are, 1. *Alburg*, on the Gulph of *Limford*, about fifteen Miles from the Eastern, or *Baltick* Shore. 2. *Nykoping*, on the Island of *Mors*, which is an Island in the North-West Part of the Gulph of *Limford*. 3. *Tysted*, on the Main Land, near the South-West Side of *Mors Island*. 4. *Seeby*, a Sea-Port, on the East Coast, between the *Scaw* and *Limford-Bay*. 5. *Schagen*, or *Scaw*, the Northermost Point of *Jutland*, and known to Mariners by the Name of the *Scaw*, or *Scaw-Point*; it is Town of good Trade, Shipping often touch here in their *Baltick* Voyages. In this Province are an hundred and sixty Parishes. *Alburg.*

2. *Wiburg*, on the South Side of the Gulph of *Limford*, between *Arhusen* on the East, and *Ripen* on the South and West. In this District is a Lake, called *Otho's Sound*, suppos'd so call'd from *Otho* the Emperor, who making an Excursion this Way, threw his Javelin into it, and thereupon call'd it by his own Name. Chief Towns are, 1. *Wiburg*, about the Middle of the Province; it was formerly a Bishop's See, and now holds a Court of Justice, and receives and determines Appeals from inferior Courts. 2. *Harkier*, about twenty-five Miles to the Northward of *Wiburg*. 3. *Nybye*, about ten Miles North-East of *Wiburg*. These Places are remarkable for great Fairs of fine Horses. In this Province are sixteen Bailiwicks, and upwards of two hundred Parishes. *Wiburg.*

3. *Arhusen* is bounded by *Wiburg* on the North, the *Baltick* on the East and South-East, and by *Ripen* on the West; it is about sixty Miles long, and thirty broad. Chief Towns are, 1. *Aarhus*, on the Coast of the *Baltick*, and North from the Island *Funen*; it was a Bishop's See; and the Cathedral, which is yet standing, is a fine Piece of Architecture, and in it are several fine Tombs of Bishops and Noblemen. 2. *Randers*, about fifteen Miles to the Northward of *Aarhus*, upon the River *Gudden*, and near the *Baltick*: it is a Town of good Trade. There are upwards of three hundred Villages in this Province. *Arhusen.*

4. *Ripen* has *Wiburg* on the North, *Arhusen* on the East, the Dutchy of *Sleswick* on the South, and the *German Ocean* on the West. Chief Towns are, 1. *Ripen*, upon the River *Nipsick*, or *Nipsau*, which falls into the *German Ocean*, and forms a very good Harbour; it was formerly a Bishop's See, and an University, and is now a Place of some Trade. The Cathedral is a magnificent Building, all of hewn Stone, with an extraordinary high Steeple, which serves as a Sea Mark to Mariners. 2. *Kolding*, situate upon a Creek of the *Little Belt*, or *Baltick*, over-against *Funen*: It is a Place of good Trade; a great many Horses, Cattle, and other Merchandizes, being exported there for *Holstein* and other Parts of the *Baltick*; it is defended by a strong Castle, call'd *Arnsburg*. 3. *Frederickshodde*, a small Port, about twenty Miles to the Eastward of *Kolding*, on the West Side of the *Little Belt*. Here the King of *Sweden* pass'd over the Ice with his Army, in the Year 1658, when he invaded *Funen* and *Zeland*, and laid Siege to *Copenhagen*. 4. *Weil*, about fifteen Miles to the Northward of *Kolding*; a compact trading City, and a very good Harbour. 5. *Warde*, about twenty Miles to the Northward of *Ripen*, upon a River which falls into the *German Ocean*. 6. *Ringkoping*, about thirty Miles to the Northward of *Warde*, a tolerable Harbour. *Ripen.*

II. The Dutchy of *Sleswick*, or *South Jutland*, has *North Jutland* on the North, the *Baltick Sea* on the East, *Holstein* on the South, and the *German Ocean* on the West; it is about sixty Miles long, and forty-five broad. This is under the joint Sovereignty of the King of *Denmark* and the Duke of *Holstein*, only some of the Bailiages are under their distinct respective Sovereigns. Chief Towns are, 1. *Sleswick*, on the River *Sley*, which falls into the *Baltick*, about twenty Miles North-West from *Kiel*; formerly a Bishop's See, and now a Place of great Resort by foreign Merchants. A little to the Southward of this Town are the Ruins of the Wall, which went quite cross the Country, from the *Baltick Sea* to the *German Ocean*, to prevent the Incursions of the *Saxons*. 2. *Gottorp*, the Residence, or Palace, of the Duke of *Holstein*; it stands in the Middle of a Lake, about fifteen Miles West of *Sleswick*. This is accounted one of the finest Palaces in the North, having the Advantage of fine Gardens, Cascades, Fountains, &c. here is also a noble Library, and a fine Collection of Rarities, particularly a Globe of Copper, of ten Foot and a half Diameter, with a Sphere, wherein the Sun moves in the Ecliptick, and all the Planets are carried about by Wheels, turn'd by a Stream which falls from an adjacent Mountain. But this Palace was much defac'd by the *Danes*, in the Year 1688, who unjustly seiz'd it and the Duke's Person but the *English* and other Powers engaging in the Quarrel, compell'd the *Danes* to desist, and to make Restitution in the Year 1689. 3. *Ekrenford*, at the Bottom of a small Gulph in the *Baltick*, between *Sleswick* and *Kiel*; a good Harbour, and a Place of some Trade. 4. *Frederickstadt*, on the River *Eyder*, about thirty Miles West of *Ekrenford*. Here it was that the Duke of *Holstein* attempted to fix a Trade for *Indian* and *Persian* Silks, and sent a Dutchy of *Slesw.*

famous Embaſſy to *Perſia* for that Purpoſe. 5. *Tonningen*, ſituate on the ſame River *Eyder*, between *Frederickſtadt* and the Sea; this is one of the ſtrongeſt Fortreſſes belonging to the Duke of *Holſtein*. 6. *Huſum*, upon a Bay in the *German Ocean*, to the Northward of *Tonningen*. 7. *Flensburgh*, upon a Gulph in the *Baltick*, about fifteen Miles to the Northward of *Sleſwick*, and twenty Miles North-Eaſt from *Huſum*; it is a large City, and ſo convenient a Harbour, that, as it conſiſts of but one Street, the Merchants can load and unload at their own Doors. The ſmall Tract of the Country between *Sleſwick* and *Flensburgh* is extremely pleaſant, and is remarkable for being the Seat of the antient *Angles*, who invaded *Britain*, and gave it their own Name *Anglia*, which Name it yet bears, though now commonly call'd *England*. 8. *Luxburg*, or *Gluxburg*, a little Town and Caſtle, from whence the Dukes of *Holſtein Gluxburg* take their Title. 9. *Haderſleben*, a Sea-Port in a ſmall Gulph of the *Baltick*, thirty Miles to the Northward of *Flensburg*, a well-built Town. 10. *Tunderen*, a Port on the *German Ocean*, twenty-five Miles North of *Huſum*. 11. *Lohem Cloſter*, ten Miles North of *Tunderen*. 12. *Sunderburg*, on the South Part of the Iſland of *Alſen*, in the *Baltick Sea*, a ſtrong Town, and the uſual Reſidence of the Dukes of *Holſtein*. 13. *Nordburg*, on the North Part of that Iſland which gives Title to the Dukes of *Holſtein Nordburg*. There are alſo ſeveral Iſlands, both upon the Eaſt and Weſt Coaſts of *Jutland*, but they are of little Note.

Dutchy of *Holſtein*.

III. The Dutchy of *Holſtein* is a Fief of the Empire; and hence not only the Duke of *Holſtein* is deem'd a Prince of the Empire, but the King of *Denmark* is alſo accounted ſo, as being a Competitor with the Duke of *Holſtein* in that Government. The Dutchy of *Holſtein* is bounded on the North by the Dutchy of *Sleſwick*, on the Eaſt by the *Baltick*, on the South by the *Elbe*, and on the Weſt by the *German Ocean*; it is about a hundred Miles from Eaſt to Weſt, and fifty from North to South, if we include *Ditmarſh*, *Wagerland*, and *Stormar*. I ſhall firſt treat of *Holſtein Proper*, and then of the other three diſtinctly.

Holſtein Proper.

Holſtein Proper, as excluſive of the other three, contains the inland Parts of the Country between *Stormar* and *Jutland*. Chief Towns are, 1. *Kiel*, ſituate in a Gulph in the *Baltick*, between *Lubeck* and *Sleſwick*, fifty Miles to the Northward of *Hamburgh*, and about forty North-Weſt from *Lubeck*; it is a good Harbour, a populous trading Town, and defended by a ſtrong Caſtle; it is an Univerſity, founded in the Year 1669; and here is held the annual Aſſembly of the States of *Holſtein*. 2. *Rensburg*, upon, and almoſt ſurrounded by, the River *Eyder*, twenty Miles to the Weſtward of *Kiel*: it is one of the ſtrongeſt Forts in *Holſtein*. 3. *Wilſter*, ſituate on a River which falls into the *Stoor*, about thirty Miles South-Eaſt from *Rensburg*. 4. *Itzehoa*, a little to the Eaſtward of *Wilſter*, ſituate on the River *Stoor*. 5. *Newmunſter*, near the Mouth of the River *Stoor*.

Ditmarſh.

The Province of *Ditmarſh* has *Holſtein Proper* on the North-Eaſt, the *German Ocean* on the Weſt, and the River *Elbe* to the Southward. Chief Towns are, 1. *Meldorp*, a Town of good Trade, ſituate on the *German Ocean*, about thirty Miles South-Weſtward from *Rensburg*. 2. *Lunden*, near the Mouth of the River *Eyder*, fifteen Miles North-Weſt from *Meldorp*.

Stormar.

The Province of *Stormar* is a low marſhy Country, bounded and divided from *Holſtein* by the River *Stoor* on the North, and by the River *Elbe* and *Lunenburg* on the South; it abounds with Dykes and Banks to keep out the Sea and drain the Land, and yet it is frequently overflow'd. Chief Towns are, 1. *Altona*, about a Mile from *Hamburgh*; it was formerly a pretty Town; it hath been very much improv'd and encouraged by the *Danes*, in hopes it might in Time riſe to the Dignity and Trade of *Hamburgh*; which probably the *Hamburghers* were apprehenſive of, for in the laſt War it was burnt down to the Ground by the *Swedes*, and it was conjectured it was done at the Inſtigation of the *Hamburghers*, to prevent its rivalling them in Trade and Riches, to their Detriment: However, *Altena* is now rebuilt more beautiful than ever. 2. *Gluckſtadt*, a ſmall City upon the *Elbe*, about thirty Miles North-Weſt of *Hamburgh*; it is a ſtrong Place, and here the *Dane* had form'd a Project to lay an Impoſt upon all Ships ſailing to and from *Hamburgh*, but there were ſo many Powers concern'd in that Trade, that the Oppoſition he met with prov'd too many for him: He has formerly forced the *Hamburghers* to raiſe him conſiderable Sums of Money, he claiming a Right to the Dominion of that City; it was indeed in the Dutchy of *Holſtein*, but is now a free Imperial City. 3. *Cremp*, about ſix Miles to the Northward of *Gluckſtadt*. 4. *Pennyburgh*, about ten Miles to the Northward of *Hamburgh*, remarkable for nothing but giving Name to the Diſtrict about it.

Wagerland.

The Province of *Wagerland* is bounded by *Holſtein* on the Weſt, and by the *Baltick* and the *land Trave* on the other three Sides; it is about fifty Miles in Length from North to South, and thirty in Breadth from Eaſt to Weſt. Chief Towns are, 1. *Segeburgh*, on the *Trave*, twelve Miles Weſt of *Lubeck*. 2. *Oldenſloe*, on the River *Trave*, about Midway between *Lubeck* and *Segeburgh*. 3. *Bloen*, ſituate on a Lake which almoſt ſurrounds it; it is about twenty Miles to the Northward of *Segeburgh*; it gives Title to the Dukes of *Holſtein Bloen*. 4. *Oldenburgh*, near the *Baltick*, on the North-Eaſt Part of this Country, formerly a Place of good Trade, but the Harbour is now chok'd up.

Delmenhurſt and Oldenburgh.

The Counties of *Delmonhurſt* and *Oldenburgh* are Part of the *Daniſh* Territories in *Germany*, on the South Side of the *Elbe*, and ſeparated from the reſt of the Continent of *Denmark* by the Dutchy of *Bremen*; they are bounded towards the North by a Bay of the *German Ocean*, on the Eaſt by the River *Weſer*, by the Biſhoprick of *Munſter* towards the South, and by the County of *Embden* on the Weſt; being about ſixty Miles long, and thirty broad. The chief Town of the firſt is *Delmonhurſt*, on the River *Delm*, about ten Miles Weſtward from *Bremen*; and the chief Town in the County of *Oldenburgh* is alſo of the ſame Name, *Oldenburgh*, on the River *Hund*, not far above where it falls into the *Weſer*. The *Hund* is navigable up to *Oldenburgh*, which creates ſome Trade to the Town. Theſe two Provinces lie in that Part of the Weſt of *Germany*, call'd *Weſtphalia*.

Norway.

NORWAY is ſeparated from *Denmark* by the *Cattegate*; it is divided into the four Governments of, 1. *Wardhuys*, or *Finmark*, 2. *Drontheim*, 3. *Aggerhuys*, and 4. *Bergen*.

Wardhuys.

1. *Wardhuys*, for by ſome, *Norwegian Lapland*, is bounded on the North and Weſt by the Sea, on the South by *Swediſh*, and on the Eaſt by *Moſcovite Lapland*; in this Province is the *North Cape*, the Northermoſt Part of all *Europe*. The chief Town is *Wardhuys*, on an Iſland, about fifteen Miles in Circumference, on the North-Eaſt Coaſt of the Main Continent of *Wardhuys*; here is an old Caſtle, the Reſidence of the Governor, and a few Cottages, call'd the Town of *Norwegian Lapland*: There can ſcarce be ſaid to be any Villages, being ſeldom more than two or three Cottages together; only upon the Iſland of *Maggeroe*, (the Northermoſt Point whereof makes the *North Cape*, ſo well known to the Mariners

trading

trading to *Ruſſia*,) and upon ſome other adjacent Iſlands, there are Churches built by the *Danes*, but moſt of the vulgar Natives continue to be ignorant Pagans.

2. The Government of *Drontheim* lies alſo next the Sea, having the great *Northern Ocean* on the Weſt, *Wardhuys* on the North, *Sweden* and *Swediſh Lapland* on the Eaſt, and the Province of *Bergen* on the South; it is about five hundred Miles long, and one hundred broad. This Country was deliver'd up to the *Swedes* by the Treaty of *Roſchild*, in the Year 1651, but reſtor'd to the *Danes*, by the Treaty of *Copenhagen*, 1660. Chief Towns are, 1 *Drontheim*, at the Mouth of the River *Nyder*, which falls into a large Bay in the *Northern Ocean*, call'd therefore *Drontheim Bay*; it lies in ſixty-four Degrees odd Minutes of North Latitude, and between ten and eleven Degrees of Longitude Eaſt from *London*: It was formerly an Archbiſhop's See, and the Seat of the Kings of *Norway*, but it has declined very much from its former Grandeur; however, there is a Caſtle ſtill remaining, where the Governor reſides; it has ſtill a Trade for a coarſe Sort of Tar, but far inferior for Goodneſs to the *Swediſh* Tar, exported from *Stockholm*. 2. *Opdale*, at the Bottom of a narrow Bay, about thirty Miles Eaſt from the *Ocean*, and one hundred Miles South from *Drontheim*. 3. *Romſdale*, about thirty Miles to the Southward of *Opdale*. 4. *Solendale*, on another Bay, about thirty Miles to the Southward, or rather South-Weſt, of *Romſdale*.

Aggerhuys. 3. The Government of *Aggerhuys*, the Southermoſt Province of *Norway*, extending as far South as the *Naze*, and conſequently bounded on the South by the *Cattegate*, on the Weſt by the Province of *Bergen*, on the North by *Drontheim*, and on the Eaſt by *Sweden*; it is about two hundred Miles from North to South, and between forty and fifty from Eaſt to Weſt. Chief Towns are, 1. *Obſlo*, or *Auſlo*, now generally call'd *Chriſtiana*, ſituate at the Bottom of a Bay, or, as they call it, *Fuer*, between the *Naze* and *Gottenburg*, in between fifty-nine and ſixty Degrees of Latitude; it was anciently a Biſhop's See, and here are yet held the Courts of Juſtice for the Kingdom of *Norway*. Here King *James* the Sixth of *Scotland*, afterwards *James* the Firſt of *England*, ſolemniz'd his Nuptials with *Anne*, Daughter of *Frederick* King of *Denmark*, *Feb.* 23, 1589. She was, before her Marriage, upon a Voyage to *Scotland* to be married there, but, being put back by contrary Winds, King *James* went over and married her, as above. 2. *Aggerhuys*, which gives Name to the Province, is ſituate on the ſame Bay, or *Fuer*, as *Chriſtiana*, but a little to the Weſtward of it; it is a ſtrong Fortreſs, and held out a long Siege againſt the *Swedes* in the Year 1567. 3. *Frederickſtadt*, at the Mouth of the River *Glammen*, which falls into the *Baltick* about ſixty Miles South-Eaſt of *Chriſtiana*. 4. *Frederickſhall*, a ſtrong Fortreſs on the Borders of *Sweden*, a little to the Eaſtward of *Frederickſtadt*. It was at the Siege of this Place that *Charles* XII. King of *Sweden*, that Hero of the Age, loſt his Life, in the Year 1718. 5. *Saltsburg*, on the River *Drammon*, about twenty Miles North-Weſt from *Chriſtiana*; the Copper and Iron Mines of this Place make it a Town of good Trade. 6. *Tonsburg*, on the ſame Bay of *Onſlo*, to the Weſtward of *Chriſtiana*. 7. *Holien*, on the Lake of *Nordſee*, fifteen Miles North-Weſt of *Tonsburg*; remarkable for a Church not built, but hewn out of a Rock. 8. *Hammer*, eighty Miles to the Northward of *Chriſtiana*, formerly a Biſhop's See.

Bergen. 4. The Province of *Bergen*, which is the South-Weſt Part of *Norway*, has *Drontheim* on the North, *Aggerhuys* on the Eaſt, the Entrance of the *Baltick* on the South, and the great *Northern Ocean* on the Weſt; the *Naze* is the Southermoſt Point of it, from whence it extends to Latitude ſixty-three North. Chief Towns are, 1. *Bergen*, an antient Sea-Port, and a commodious Harbour, on the *German*, or *Northern Ocean*, about one hundred and forty Miles to the Northward of the *Naze of Norway*; it is almoſt ſurrounded with Mountains, but is eſteem'd one of the moſt populous, as well as beſt trading, Towns of *Norway*, and is the Reſidence of a Viceroy. 2. *Eyde*, fifteeen Miles to the Eaſtward of *Bergen*. 3. *Staffanger*, ſituate on a *Peninſula*, on the Ocean, ninety Miles to the Southward of *Bergen*; it is a ſmall City, and was once a Biſhop's See; it hath yet a tolerable Harbour, defended by a Caſtle.

Iſlands. Islands belonging to *Norway* are, 1. *Iceland*, about a hundred and fifty Leagues Weſt of *Norway*; the Artick Circle paſſes over the North Part of that Iſland, and the Eaſt End lies in about ten Degrees of Longitude Weſt from *London*; its Length from Eaſt to Weſt is about three hundred Miles, and its Breadth from North to South about one hundred and fifty Miles; it is divided into four Provinces, which take their Names, of Eaſt, Weſt, North, and South Provinces, according to their Situation. Their Mountains are always cover'd with Snow, and three of them are Volcano's, which continually throw out Fire, as other Volcano's do; the chief of which is Mount *Hecla*, which is near the South Coaſt, and about the Middle between the Eaſt and the Weſt End of that Coaſt. Chief Towns are, 1. *Skalholt*, North-Eaſt from Mount *Hecla*. 2. *Hola*, on the North Coaſt. 3. *Beredit*, to the South-Eaſt. The Viceroy reſides at the Caſtle of *Beſted*, towards the South-Weſt Part of the Iſland. Their Houſes are built of Wood, and cover'd with Skins of Beaſts, Bark of Trees, or Turf; and ſome of them have no ſettled Habitation, but wander from Place to Place, like the antient *Arabians*, or the preſent *Laplanders*.

CHAP.

CHAP. II.

Treats of the Persons and Habits of the Danes; *their* Genius, Temper, Learning, Diet, *and* Diversions; *also the Nature of the Soil, and Product of the Country: With an Account of their Plants, Animals, and Minerals; as also of their Trade, Manufactures,* &c.

Persons. THE *Danes* are generally strong-limb'd and well made, but inclining to a gross Shape like the *Dutch*; their Hair, for the most Part, flaxen, yellow, or red; which they take great Pains to curl, few of them wearing Perukes; and as red Hair is so common, they rather take a Pride in it, than are any way asham'd of it. The Motion of the Women is very sluggish and heavy, which may in some Measure be imputed to the Grossness of their Shape. As for their Dress, both Ladies and Gentlemen affect the *French* Fashions, only the Coldness of the Climate, in the Winter, obliges them to wrap themselves in Furs at that Season, like other Northern People; they commonly affect wearing neat clean Linnen, and had rather change often than wear it dirty.

Genius. *Denmark*, it is said, seldom produces any bright Genius; but yet to this general Rule any Person may find an Exception, if they do but consider, that the ingenious, as well as noble, *Tycho Brahe*, Lord *Knudstrop*, the famous Astronomer, who was first Author, or Inventor, of the *Tychonean* System, and made the Globe of six Foot Diameter, now at *Copenhagen*, mention'd Chap. I. was a *Dane* by Birth. But, however, they are generally as dull in their Genius as in their Motion, and neither quick to invent what they have not, or to imitate what they have seen, either in Learning or Mechanicks. Mr. *Molesworth* observes, that they are more upon a Level than most other People or Nations; for as the Country is not at present remarkable for any People of extraordinary Parts or Qualifications, or excellent for Persons in any particular Study or Art, (says he) we do not find any Enthusiasts, Mad-men, natural Fools, or whimsical People, but a certain Equality of Understanding reigns amongst them; every one plods on in the ordinary beaten Tract of common Sense, without deviating to the Right or the Left; the common People, however, generally write and read, and their Clergy usually talk *Latin*, —but not in the greatest Purity. —— Thus far Mr. *Molesworth*.

Without enquiring whether Mr. Molesworth *was a proper Judge of Mathematical Learning and Improvements, we will endeavour to give the Reader an Idea of* Tycho Brahe's *System. This Gentleman, willing to reconcile the* Ptolomaic *and the* Copernican *Systems, form'd an Hypothesis compos'd of both, allowing that the Earth stands still, and the Sun, as it appears, moves: But Experimental Observation proving the apparent Motions of the Planets to be sometimes Direct, sometimes Retrograde, and sometimes Stationary, or without any Motion at all, to make the Earth the Center of Planetary Motion, he allows the Sun to be the Center of the Planets Orbs, and that with himself, as a Center, he carries all those Orbs along with him. Tho' this System has been since proved to be false, yet it was such an ingenious Step towards a true Hypothesis, that we must either allow the* Danes *to have a common Share of Genius, or that* Tycho Brahe *was an unprecedented Instance of Ingenuity amongst them. But a Traveller commonly forms his Description of a Country from the Company that he converses with in it.*

Vices. THE Vices that the Gentry, or what may in other Words be call'd the better Sort of People, are most addicted to, are Gluttony and Drunkenness; if they are in Debt, it is not to their Bellies, for they will eat and drink for whole Days and Nights together. They who invite a Friend commonly treat him, at his first Entrance into the House, with a Dram of Brandy; at Dinner every Body has a Glass of Brandy set by their Plate, and when a Health is proposed, they do not stay to pledge one another, but when one begins they all begin, and make short Work of it, by drinking all their Glasses off at the same Moment. When Dinner is over, the Women soon retire, but the Men will sit to Intoxication, or, in Mr. *Molesworth*'s Character of them, they will *sit it out till they have lost that little Sense that comes to their Share.* Liquo The Liquors drunk by the better Sort, that can afford it, are *Rhenish* Wine, and all Sorts of *French* Wine, and Cherry-Brandy; but the poor People make themselves merry with a poor Sort of Beer, or Spirits extracted from Malt or Barley. And in *Norway* they, according to their different Abilities, regale themselves in much the same Manner; the Value of their Treats being commonly proportion'd to the Intemperance and Extravagancy used in them.

Eatin Nor to observe that they, as well as those in other Nations, are obliged to adapt their Eating to their Ability, the People of Fashion love a great Variety of Dishes: But the Country does not afford the best of Flesh-meat. Tame Fowls, or Wild Ducks. They have no Fallow Deer, Woodcocks, Pheasants, or Rabbits; and Red Deer are not to be purchas'd, being the King's Game. Their Hares, Bacon, and fresh Water Fish, are very good, but Sea Fish is scarce and ill-tasted. The common People live upon coarse Rye-bread, lean Salt-Fish, Stock-Fish, or Roots, and very bad Cheese, seldom tasting either Flesh or Fish fresh.

Tem The above quoted Mr. *Molesworth* says, that the *Danes* are mean-spirited, &c. and thus they have degenerated very much from the warlike Temper of their Ancestors; but these Accounts of them seem to be compos'd of a great Allay of Prejudice, incorporated with Matter of Fact, which, if so, spoils the Relish of the whole. The *Norwegians* undergo all Kind of Hardships, and encounter Difficulties with much more Courage and Vigour than the *Danes*; but the same Author adds, that ever since the *Danes* had *Norway*, they have depress'd the *Norwegians* and deprived them of all Opportunities of exerting their Vigour, and by Degrees reduc'd them so low, that there are now very few of the antient Nobility left in *Norway*.

THEIR Way of Travelling is either in Waggons or Sledges, or else on Horseback. There is a settled Price for Carriage, and an Officer to regulate it, and punish those who are exorbitant

in their Demands. If any Gentleman, going to undertake a Journey, can procure a Warrant from the Court for that Purpoſe, the Peaſants, or Farmers, are obliged to furniſh him with Horſes and Carriages in every Country through which he paſſes, without any Charge, in the ſame Manner as they do for the King and Court when they travel. They take their Diverſion in Sledges upon the Ice in the Winter-time.

They have plenty of Feather-beds, and it is cuſtomary for thoſe who have them, to lay one under another over them in the Winter-time. But they are very jealous of Strangers, who are Travellers, not allowing a Traveller a Room to himſelf, except he be a Nobleman, or very well known, or otherwiſe he muſt eat, drink, and ſleep, in common with the Family.

Product. The Iſland of *Zeland*, where the Capital of *Copenhagen* ſtands, produces no Bread Corn, except Rye, of which moſt of their Bread is made; and of this they have but juſt enough for their own Uſe, and none for Exportation; nor have they much Meadow or Paſture Ground, but the Graſs they have is ſweet, though but ſhort and ſcarce. It is computed that one Fourth of the Country is Foreſt, and reſerv'd for the King's Game, ſuch as Stags, Wild Boars, *&c.* and ſo ſtrictly are they protected, that no Subject dare meddle with them, tho' he finds whole Herds of them devouring his Corn, by which means the Farmers are generally great Sufferers by them. Their Cattle are ſmall, and in the Winter they are lean, being kept within Doors ſeven or eight Months, and fed, or rather juſt kept alive, with Roots, Weeds, and whatever the Owners can procure, to keep them from ſtarving; but in the Spring, or Summer, when the Graſs grows, they put them into it, ſo that what has been ſaid of *Ruſſia*, is the ſame here, (*viz.*) though they be old Cattle, the Beef is young, as being but of that Summer's Growth; but is far ſhort of *Engliſh* Beef for Service, in Salt the Fat falling away to a skinny Matter of little Subſtance. Near *Copenhagen* the Sea produces but a Scarcity of Fiſh, which ſome impute to the Water's not being ſo ſalt as in the Main Ocean, ſuppos'd to be occaſion'd by the great Number of freſh Water Rivers, which running into the *Cattegate*, the *Sound*, the *Belt*, and the *Baltick*, and mixing with the Waters of thoſe Seas, very much allays the Saltneſs of them.

Funen The Iſland *Funen* produces Corn, Wood, and Cattle, ſufficient for the Natives, but none for Exportation, except a few Horſes. *Laland* produces plenty of all Sorts of Corn, eſpecially Wheat, with which they ſupply *Copenhagen*, and ſome other Parts of *Denmark*, where that ſort of Grain is very ſcarce. *Arroe* and *Alſen* produce Anniſeeds, which they uſe to mix in their Bread, and to ſeaſon their Meat.

Jutland *Jutland* produces Corn ſufficient for its own Natives, and abounds in Cattle; their Horſes and Hogs are very good. The *Dutch* buy lean black Cattle here, and after they have fed them, ſell them to a great Advantage.

Sleſwick The Country of *Sleſwick* hath Corn, Cattle, and Horſes, ſufficient to ſupply themſelves and aſſiſt their Neighbours.

Holſtein *Holſtein* is ſaid, in ſome Meaſure, to reſemble *England*, for its Variety and Fruitfulneſs, being interſpers'd with Hills, Woods, Rivers, Meadows, and Corn Fields. *Stormar* and *Ditmarſh* are low, and are compar'd with *Holland* for Situation, Fruitfulneſs, and Richneſs of the Soil, but ſometimes the adjacent Ocean breaks through its Bounds, and does conſiderable Damage. *Oldenburgh* is alſo, by its low Situation, ſubject to the ſame Fate, yet it abounds in Cattle, and is noted for its producing plenty of a Sort of Cream-colour'd Horſes, but they are tender-footed, and not for much Service.

Norway *Norway* is a more barren Country than any that are yet mention'd, not producing either Corn or Cattle ſufficient to ſupply its own Inhabitants with neceſſary Subſiſtence. There is a long Ridge of Mountains, extending from North to South, call'd the *Dolfrine Hills*, which divides *Norway* from *Sweden*; and beſides theſe, the Country is full of Hills and Mountains, which are almoſt all cover'd with Snow, and produce ſcarce any Food, either for Man or Beaſt. And as to the *Norwegian Lapland*, it differs little, if at all, from *Moſcovite* and *Swediſh Lapland*, already deſcribed.

But notwithſtanding the Barrenneſs of *Norway*, hitherto mention'd, it produces what is valuable, both under Ground and above; as to the former, *viz.* their Mines, they are of great Value; for, beſides their Iron Mines, which are the moſt plenty, they have one of Copper, and another of Silver; but the Copper is not ſo good as that of *Sweden*; and beſides *Norway* produces plenty of Maſts, Plank, and Timber for Shipping, and other Uſes; and they export great Quantities of Pitch and Tar from that Country. Nor is the Sea deficient, but produces plenty of all Manner of Fiſh; of which one Sort is Stock-Fiſh, which they dry, without Salt, upon the Rocks; great Quantities of which are purchas'd for Victualling our Fleets, as being deem'd more wholſome than altogether ſalt Meat, which is very much attended with the Scurvy.

Iceland. The Iſlands of *Iceland*, *Fero*, and *Shetland* are almoſt as barren as *Norway*, eſpecially as to Corn, which will ſcarce grow in any one of them. They have ſome Cattle, but they are ſo ſcarce, that the poor or common Sort of People live upon the Fleſh of Bears, Wolves, and Foxes, and Bread made of dry'd Fiſh, ground to Powder. They trade with their Stock-Fiſh, Tallow, and Sulphur, and therewith purchaſe other Things which their Country does not afford. In the Iſlands of *Iceland*, or *Fero*, there is no Timber; they have Willows, Birch, and Juniper Shrubs, and the like; but their chief Support, as to Proviſion, is Roots and other Garden-Stuff, which, with their Fiſh, is their chief Dependance.

One *Jacob Debez*, Provoſt of the Churches in the Iſlands of *Fero*, gives us the following Account of them: 'He ſays, they have Barley in 'thoſe Iſlands that will yield twenty or thirty-'fold Increaſe, but no other Grain will grow 'there; they have good Paſtures, and a tolerable 'Breed of black Cattle, ſmall-ſiz'd Horſes, and 'ſome Flocks of Sheep, and almoſt all manner of 'Roots and Herbs that grow in our Kitchen 'Gardens; they are pretty well ſtock'd with 'Fiſh and Fowl; but the Cold is very ſevere in 'thoſe Iſlands, and the Winters dark.'—By the Winters being dark, we are not to underſtand of thoſe beyond or within the Artick Circle, where the Sun is abſent for ſeveral Days or Weeks, or under the Pole, for near half a Year together, for none of thoſe Iſlands, except the North Part of *Iceland*, are within the Artick Circle; but for the Iſland of *Fero*, of which the above-mention'd Deſcription is given, the Northermoſt of them lies not in quite ſixty-three Degrees of North Latitude, and conſequently the Sun, on the ſhorteſt Day, will be between three and four Degrees above their Horizon at Noon; however, the Nights are dark, and both Day and Night in Winter is exceſſive cold.

The Manufactures of *Denmark* and *Norway* are inconſiderable; as for Exports from *Norway*, there are great Quantities of Fir Timber exported, for Maſts, Yards, and Planks; alſo Pitch, Tar, Stock-Fiſh, Oil, and Iron; for which, what they

ſell to the *Engliſh*, they trade moſtly for ready Money, or ſometimes for a coarſe Sort of Cloth; but with the *French* they barter moſtly for Wine, Brandy, Alamodes, *&c.* The *Danes* have ſome ſmall Factories on the Coaſt of *Guinea*, and the *Weſt Indies*; and in the *Eaſt Indies* they have a conſiderable City and Fort, call'd *Tranquebar*, from whence they have ſome Years two or three Ships arrive richly laden. The Natives rebell'd againſt the *Danes*, ſome time ago, by the Inſtigation of the honeſt *Dutch*, who thought by that means to procure one Party to weaken the other, ſo much, that the Place might at laſt become an eaſy Prey to their voracious Appetites; but Mr. *Pitt*, the then Governor of *Fort St. George*, ſent a Detachment of *Engliſh* Troops, who aſſiſted the *Danes* in ſuppreſſing the Rebellion, and re-eſtabliſh'd them in the Poſſeſſion of it, to the great Diſappointment of the cunning *Dutch*, who thought to run away with the Bone that the other two had been fighting about.

CHAP. III.

Of the King of Denmark's *Forces by Sea and Land; and of his Revenues.*

THE *Danes* have generally been reckon'd ſtronger by Sea than the *Swedes*, not only in Number of Shipping, but in Strength of Men; for *Norway* furniſhes Sailors, who, being uſed to fiſh in thoſe boiſterous Seas, are ſo inured to Hardſhips, that they prove better Sailors than thoſe who are brought up in more Indolence. The cunning *Dutch* value them for their Hardineſs, and therefore employ great Numbers of them. The *Norwegians* think they live better in the *Dutch* Service than upon their own barren Coaſt, and the *Dutch* think they are ſupply'd with more hardy Sailors from *Norway* than from their own Breed: Thus the *Norwegians* apply themſelves more to the Sea Service than any of the Subjects of *Denmark*, their Neceſſities calling them, and their Reception by the *Dutch* encouraging them; and of theſe *Norwegians* thus bred, great Numbers are employ'd in Manning the Royal Navy of *Denmark*, and contribute much to the King of *Denmark*'s Strength by Sea.

A learned Author gives his Opinion of the Affairs of *Denmark* in the following Words: 'It is certain, ſays he, that the levying Taxes 'on the Subject here, is not more grievous 'to them than the Reaſon for which they are 'levy'd, namely, *the Maintenance of a great ſtanding Army*; the People are made Contributors to 'their own Miſery, and their Purſes drain'd in 'order to their Slavery." But he does not here quote the Fable, in *Æſop*, of the Willow-Tree and the Ax; where the latter deſired the former to ſpare him only one Branch, and the Willow-Tree perceiving that there was one Branch growing out of it that might, without much Damage, be ſpared, agreed to ſuffer the Ax to cut it off; which when the Ax had done, it fell to work to make Wedges of that Branch to ſplit to Pieces that very Tree from whence it was, by Importunity, obtain'd, and the Tree, in the old *Engliſh* Verſion of that Fable, is brought in making (when too late) the following Reflection:

> *What grieves me moſt is, that out of my Side*
> *Wedges are made my Body to divide.*

But our Author proceeds in theſe Words, *viz.* 'That the Princes and States of *Europe* have been 'taught by the *French* King, that pernicious Se-'cret of making one Part of the People both the 'Bridle and Scourge of the other, which in Time 'muſt needs end in a general Deſolation. The 'King of *Denmark* hath been too apt a Pupil to 'ſuch a Maſter, and hath endeavour'd to exceed 'his Original, raiſing more Men than his Coun-'try can maintain. And at preſent the Northern 'and *German* Princes eſtimate their Wealth, not 'by the Fertility or Extent of their Territories, 'or by the Trade or Induſtry of their People, 'but by the Numbers of Horſe and Foot in their 'Service; for the Subſiſtence of which, after 'they have eaten up their own Subjects, they 'make uſe of a Hundred cruel and unjuſt 'Pretences to ruin and encroach upon their 'Neighbours; and, when they cannot accompliſh 'ſuch deſtructive Projects, foment Quarrels a-'mong other Princes, that they may have an 'Opportunity of letting out their Troops to cut 'Throats for Hire, which they are not able 'otherwiſe to maintain, and have found the Art 'of receiving Pay without intereſting themſelves 'in the Quarrel, which hath been the conſtant 'Practice of the *Danes*, and ſome neighbouring 'Princes, for many Years paſt.'

But by Way of Reflection upon this Conduct, the Author obſerves, that theſe Practices have been very pernicious to *Denmark*; nor, at the Time when thoſe Remarks were made, had the *Dane* ſucceeded in any of his Attempts, either againſt the City of *Hamburgh*, the Duke of *Holſtein*, or the *Swedes*. Indeed in the laſt War the *Dane* took Advantage of the Neceſſity the *Swedes* were reduc'd to, and by a potent Confederacy, made themſelves Maſters of *Bremen* and *Verden*, which he afterwards convey'd to be annex'd to the Sovereignty of *Hanover*. The *Dane* alſo ſeiz'd the Duke of *Holſtein*'s Territories in his Minority, and ſtill detains them in his own Poſſeſſion.

The Strength of the Forces.

But to proceed; as to the Forces of the *Dane* in general, including *Holſtein* and *Oldenburgh*, they maintain 5450 Horſe, 1500 Dragoons, and 17000 Foot; and *Norway* maintains 1256 Horſe, and Dragoons, and 14300 Foot, which amounts in all to near forty thouſand Men.

Their Pay.

As to the ſuperior Officers, a Colonel has, beſides his Captain's Pay, thirty-ſix Rix-dollars a Month, which amounts to eight Pounds two Shillings a Month; a Lieutenant-Colonel hath twenty, or four Pounds Ten; and a Major hath ten Rix-Dollars, or two Pounds five Shillings a Month; and the reſt as below.

The Pay of a Captain of Foot is twenty Rix-dollars a Month, and every Rix-dollar being about four Shillings and Sixpence, the Monthly Pay amounts to four Pounds ten Shillings a Month Sterling, and the other as below.

A

	l.	*s.*	*d.*
A Lieutenant, 11 Rix-dollars a Month, or - -	2	9	6
An Enſign 16 Rix-dollars a Month, or	2	5	0
A Serjeant 6 Rix-dollars a Month, or	1	7	0
A Corporal 4 Rix-dollars a Month, or	0	18	0
A Drummer hath by the Month 3 Rix-dollars and 8 Pence	0	14	0
A Common Soldier 2 Rix-dollars and 32 Stivers a Month, amounting, in Sterling Money, to	0	11	8

But the Common Soldiers receive of their Pay in Specie, but ſeven Stivers a Week, the reſt being allow'd for Bread, Cloaths, *&c.* and in Times of Peace the Officers of the Horſe receive no more Pay than thoſe of the Foot. The Horſe are uſually Natives, and maintain'd by their reſpective Peaſants, or Farmers, who are obliged to find them Meat for Man and Horſe, and ſix Shillings a Month in Money; and even of that it is as in many other Caſes and Places, the Officer runs away with one half of it, which he reckons a Perquiſite to himſelf, towards the Mounting, as they call it. There is but little Money expended in *Norway* in paying the Forces, becauſe the private Soldiers are quarter'd on the Boors, and ſubſiſted by them.

Mariners. There are three thouſand Mariners conſtantly maintain'd at *Copenhagen*, both in Peace and War; they have a Weekly Allowance of Meal, Grout, Stock-Fiſh, Salt-Fiſh, *&c.* for themſelves and their Families, and about eight Rix-dollars, or one Pound ſixteen Shillings a Year in Money; they have Streets of little Houſes, or Barracks, appropriated to their Uſe only, and for Habitations for their Families while the Men are abſent at Sea. In Times of Peace they are employ'd in the King's Docks and Yards, as Labourers to aſſiſt in fitting and repairing the Shipping; and once a Year they generally equip a ſmall Squadron to keep the Sailors in Exerciſe. The Officers of the Fleet are always kept in pay, whether in Times of War or Peace, that they may be the more ready upon Occaſion; and it is ſaid that by this Means, upon a very ſhort Warning, they can fit out a Fleet of between thirty and forty Sail of Men of War.

Revenue. The Revenue of the King of *Denmark* proceeds from three different Branches, *viz.* 1. from the Duty paid by his own Subjects, or, 2. from Cuſtoms paid by Foreigners, or, 3. by Crown-Land Fines, or Confiſcations. Of thoſe paid by the Subject, there are Duties of Import and Export, and the Exciſe laid upon the Conſumption, that is, upon every Thing that is eaten and drank in the Kingdom; there are alſo Duties paid for Marriages, Licences, and the ſtampt Paper upon which Inſtruments, Bargains, Contracts, Grants, Proceedings at Law, *&c.* are written, ſome of which Duties amount to ſeveral Rix-dollars *per* Sheet. There are alſo Duties upon Brewing and Grinding, whether Malt or Corn, in the Mills; theſe are generally the ſame from Year to Year, and ſeldom liable to any conſiderable Alterations.

But there are other Duties, which are alter'd as Occaſion requires; as, 1. The Land-Tax, which rites or falls with the annual Value of the Farm. 2. Poll-Money, which is always proportion'd to the perſonal Eſtate, and ſometimes levy'd twice a Year. 3. When the Fortifications want Repairs, there is a Tax laid on to anſwer the Charge. 4. When a Daughter of the King of *Denmark* is to be married, there is a Tax laid to raiſe her a Portion, which is commonly a hundred thouſand Crowns. 5. Every Tradeſman not only has Soldiers quarter'd upon him, but is tax'd according to the Advantage he is ſuppos'd to make of his Trade. 6. Every Houſe is tax'd according to the Rent it fetches, or Ability of the Poſſeſſor. And as for the Lands in *Holſtein*, they are tax'd according to the Number of Plows employ'd in cultivating them; and this is paid every Month.

There was, not long ago, an Eſtimate made of all the Houſes in the King of *Denmark*'s Dominions, and all the Lands were meaſur'd, that their Value might be the better known; which when done, the Ground-Tax in the City was laid at four *per Cent* of the whole Value of the Ground; as, if a Houſe was valued at a thouſand Dollars, it paid yearly forty Dollars Ground-Tax; and the ſame Proportion was uſed in taxing Houſes and Poſſeſſions, according to what they did or were computed to bring in.

Poll-Tax. The Poll-Tax was levy'd according to the Ability of the Family; as, if a Citizen was worth eight or ten thouſand Rix-dollars, he paid four Rix-dollars for himſelf, and as many for his Wife, and for each Child two; alſo one for each Servant, and one for each Horſe; but an Ale-houſe Keeper pays for himſelf and his Wife but one Rix-dollar each, twenty-four Stivers for each Child, and ſixteen for each Servant. When there is Occaſion for a Fortification-Tax it lies high; a Merchant worth ſix or eight thouſand Rix-dollars, ſometimes pays ſixty-eight Dollars, and others in Proportion.

The Revenues in *Norway* ariſe from the Tythes of Timber, Tar, Fiſh, Oil, *&c.* and the Mines alſo produce an Income to the Crown, but other Duties are the ſame as in *Denmark*.

Crown-Lands. The Branch of the Revenue ariſing from Crown-Lands and confiſcated Eſtates brings but a very inconſiderable Advantage to the Crown, if any at all; for though they are annex'd to the Crown, the King is often rather the poorer for them; for falling into his Poſſeſſion, they are not afterwards cultivated, but turn'd into Foreſt, and ſerve the King for Pleaſure and Diverſion rather than Profit; or, if they are of any Value, they are commonly beſtow'd upon ſome Courtier, or Favourite, who makes little Advantage of them to himſelf or the Crown.

A late Writer has given us the following Eſtimate of the Revenues of *Denmark*.

	Rix-dollars a Year.
The Toll of the *Sound* — — —	65000
The reſt of the Toll of *Denmark* —	165000
The Conſumption, or Exciſe of *Copenhagen*	140000
The Conſumption of the reſt of *Denmark*	140000
The ſmaller Taxes of *Denmark* —	100000
The Poll-Tax, Fortification-Tax, Ground-Rents, and Land-Tax	100010
The whole Revenue of *Norway* — —	700000
The Crown-Lands, Confiſcations, *&c.*	200000
The Revenue of *Iceland* — —	27000
——— of *Oldenburg* and *Delmenhorſt*	8000
The Toll upon the *Weſer* — —	5000
Rix-dollars a Year in all -	1650000

When, at four Shillings and Sixpence the Rix-dollar, makes the Yearly Revenue of *Denmark* amount to three hundred ſeventy-one Thouſand two hundred and fifty Pounds Sterling, only with ſome Abatement, becauſe the Poll-Tax and Fortification-Tax are never levied the ſame Year: However, conſidering the Cheapneſs of Labour and Proviſions in *Norway*, where any Sum will go near three Times as far as the ſame Sum with us, this may juſtly be accounted a plentiful Revenue.

But ſome compute that there is not a hundredth Part the Value of ready Caſh in *Denmark* as in *England*; for the Trading People there are Men of ſmall Subſtance, and deal much upon

Credit with *Holland* and *Hamburgh*, and no ſooner receive Money but pay it away to keep up their Credit. The Nation labours alſo under another Diſadvantage; for the Officers of the Army being moſtly Foreigners, and they engroſſing a great Quantity of the Specie to themſelves, convert it to the Trade or Bank, each of his reſpective Country. The Over-ballance of Trade alſo carries off a great deal of their running Caſh; for ſince their Imports of foreign Commodities exceed their Exports of their own Product, the Ballance draws away their Caſh, which makes it ſo ſcarce among them, that they are forc'd to make current Coin of their own Product, *viz.* Copper; which being ſuch a baſe Metal, when compar'd with Gold and Silver, that they are forc'd to account for the Meanneſs of Quality with the Greatneſs of Quantity, the Conſequence of it is, that if a Man has an ordinary Sum to receive, he is obliged to have a Wheel-barrow or two to bring it home; and hence indeed there is an Advantage accrues to the Hackney Wheel-barrows, their Hire being determin'd by the Government, according to the Diſtance they go, as with our Hackney Coaches in *London*, and doubtleſs with ſome regard to the Weight they carry from Place to Place.

As for their Coins, a Roſe-noble is eighteen Shillings Sterling; a Ducat is half a Roſe-noble, or nine Shillings; a Rix-dollar is half a Ducat, or, as has been obſerv'd before, four Shillings and Sixpence; a Slet-dollar is three Shillings; a Rix-mark about eleven Pence; a Slet-mark nine Pence; and a Stiver a Penny; and beſides theſe there are great Variety of Copper Coins, of ſmall Value; but this muſt be ſubjoin'd, that thoſe Coins alter with reſpect to their Value, compar'd with Sterling Money, and ſometimes a Rix-dollar is in Value little ſhort of an *Engliſh* Crown, and Stivers in Proportion. Coins.

Their Weights are the great and ſmall hundred; the former a hundred and twenty, and the latter a hundred and twelve Pounds; but we are to obſerve that the *Daniſh* Pounds are larger than the *Engliſh*, a hundred of our Pounds not making above ninety-two of theirs. A *Daniſh* Ell is about one Third leſs than the *Engliſh*. Weights.

CHAP. IV.

Of the Laws of the Danes, *and their Manner of Adminiſtering of Juſtice; with the various Puniſhments inflicted upon various Crimes and Miſdemeanours.*

IT is obſerved, that Juſtice is not to be had cheaper, or with more Expedition than in *Denmark*; their Laws are not compoſed of a Collection of Ambiguities, to be wreſted into different Interpretations, according to the different Drift or Intereſt of the Perſon pleading them; for the whole Body of their Law is compriz'd in one moderate Quarto Volume, and written in their own proper Language, in ſuch plain intelligible Terms, that it requires no Comment upon it in order to its being underſtood.

Three Courts. THERE are three Courts of Judicature, from the Loweſt of which Appeals may be made gradually to the Higheſt: The moſt Inferior of them is call'd the *Heredſougds Court*, which is like our *Court-Leet* or *Hundred-Court*. The next Superior to this, and to which an Appeal may be made from the *Heredſougds-Court* is the *Landſtag-Court* or General Court of the Province. The next Court, which is the Supreme, and from which there can be no Appeal, is call'd the *Highright*; it is held in *Copenhagen*, and compos'd of the Prime Nobility, the King ſometimes preſiding in Perſon. But there are other Petty Courts in ſome of the Cities and Boroughs, which are call'd *Biſoghts* Courts here the Burghers are Judges, but an Appeal may be made from their Determination, to the Court at *Copenhagen*, not the *Highright* or Superior Court abovementioned, but a Court compoſed of the Burgo-Maſters and Common-Council of that City, to which the Appeal may be brought without paſſing through the Provincial Court; and if the Sentence there is not approv'd by both Parties, they may ſtill remove to the *Highright*, or Higheſt Court abovemention'd, and there, in Caſe there be no Clauſe in the Law that directly hits the Circumſtances of the Caſe, the Court hath a full Power to give an abſolute Determination, and no other Remove or Appeal is allow'd of, and the whole Time for ſuch a Proceſs is not above thirteen Months, or the Charge above ten or twelve Pounds Sterling.

No Inns of Court. THEY have no Inns of Court or other Societies of Lawyers, as would doubtleſs be the Caſe in other Places, if the exorbitant Fees did not induce Men, and ſome of very indifferent Capacities too, to ſet up for Lawyers, Sollicitors, *&c.* But in *Denmark* the Laws are ſo plain, that every Man of but a common Capacity may underſtand them; and as every Man is allow'd to plead his own Cauſe, there is very little Need of, and conſequently little Encouragement for, any but the Judges themſelves and the Perſons concern'd to have any Hand in the Diſpute.

THE greateſt Expence that attends the Law redounds moſtly to the King, as proceeding from the Stamps upon the Paper that the Proceedings are writ upon; and yet to prevent Impoſition, they are alſo under a Regulation; for the Clerks and Regiſters are limited to a certain Number of Sheets, wherein to comprize both the Allegations, the Proofs, and the Sentence it ſelf, all which are committed to Writing; and where any belonging to thoſe Inferior Courts are guilty of Impoſition, they are puniſh'd; inſomuch, that if the Judges themſelves are detected of Miſdemeanours, they are not only puniſh'd, but oblig'd to make Satisfaction to the Party they have injur'd by an unjuſt Sentence.

THERE are but few Criminals, as Traytors, Houſe-breakers, or Robbers, which is generally imputed to the Severity of the Puniſhment inflicted upon ſuch Offenders when detected; nay, ſometimes the leaſt Intimation or Suggeſtion, attended with any tolerable Circumſtances, is deem'd ſufficient to convict a Man, eſpecially of Treaſon or Diſaffection; and Capital Crimes, of which Treaſon is one of the Chief, are immediately puniſh'd with ſevering the Head from the Body with one

one Stroke of a Sword, which Severity makes People avoid diſaffected Words, much more Treaſonable Actions.

Polity-Maſter.

THERE is a Sort of a general Officer in *Copenhagen*, call'd the *Polity-Maſter*, whoſe Buſineſs it is to compoſe trifling Differences among Merchants or Others; he alſo takes Care of the Orders of the Market and the Town, examines Merchandize, to ſee that it be good and ſaleable, and that they do not interfere with, or foreſtal one another; he looks after the Cleaning and Repairing of the Streets, Bridges, and Canals, and that all Nuſances and Obſtructions be remov'd; he ſeizes prohibited Goods, and has the Command of the Fire-men, if I may ſo call them; for when a Fire happens, they do not ſuffer a tumultuous Mob to run in Confuſion to the Place, but have ſelect Companies of Men, provided with Inſtruments and Materials proper for the Purpoſe, whoſe Buſineſs alone it is to quench Fires, and none but them are allow'd to approach within a certain Diſtance of the Place; and, becauſe their Buildings are moſt of them compos'd of Fir Timber, they allow no Flambeaux, or Torches, to be carried lighted in the Streets, but inſtead of them uſe Lanthorns fix'd upon Staves. The *Polity-Maſter* is alſo general Game-Keeper, and is impower'd to ſeize Guns, Nets, or the Veniſon unlawfully taken with them; he alſo apprehends Night-walkers, ſuppreſſes Riots and Tumults, and allows no Perſon to walk the Streets after the Tattoo has beat.

THERE is great Care taken that People be not impos'd upon by the Apothecaries Drugs, to prevent which the Number of Apothecaries is limitted, none being admitted to that Profeſſion but thoſe appointed by the College of Phyſicians, and confirm'd by the King; and for thoſe that practiſe under theſe Qualifications, their Drugs are examin'd by the Magiſtrate two or three Times a Year, and the bad taken away, and a Price fix'd upon the good, above which they dare not take or demand. The reſt of the *Daniſh* Laws may be, as briefly as the thing will admit of, compriz'd in the following Articles:

Summary of the *Daniſh* Laws.

THE King is ſupreme Judge and Preſident in the High-Court of Juſtice, and occupies the Place when he pleaſes; but when the Place is ſupply'd by another, the Advocates always addreſs themſelves to the King.

THE Princes of the Blood, the Nobility, and Gentry, are the only Perſons that can be try'd by this High-Court, except the Superintendants and Biſhops, who have the ſame Privilege when they are charg'd with Hereſy, or any notorious Crime, but otherwiſe not.

WHEN a Perſon aſperſes the Government, or the Adminiſtration, he is declared Infamous, and his Goods confiſcated; but if his Diſcourſe tends to Sedition, he is puniſh'd with ſuch Severity as ſometimes not to ſurvive it. They that defame a Magiſtrate, either Civil or Eccleſiaſtical, or a Perſon of Honour, pay eighty Rix-dollars to the Perſon aggriev'd, and three Marks to the Crown, or, in Default of Payment, they are condemn'd to the Pillory, or to carry Stones for the Repair of the Fortifications, and publick Buildings.

IF an Invaſion or Inſurrection happens, he that refuſeth to ſerve the Government, either by Sea or Land, when ſummon'd to it, forfeits his Eſtate, and is declar'd Infamous. Theft is not only puniſh'd with reſtoring double the Value to the Owner, but being whipp'd, and laſtly ſentenc'd to hard Labour in the publick Works. Coining is puniſh'd with the entire Loſs of Life, Honour, and Eſtate, and removing antient Land-Marks with the ſame.

COUNTERFEITING a Hand, or Forgery, is puniſh'd with having the Perſon's Hand cut off, his Goods confiſcated, and himſelf declar'd Infamous. They ſeldom uſe Torture, except in Caſes of High Treaſon, and then only upon the Perſon convicted, to make him diſcover his Accomplices; and in this Caſe the Convict is admitted Evidence, contrary to the Laws of *England*, which will not admit a convicted Criminal to be an Evidence, nor is it fit they ſhould, for it is natural to ſuppoſe, that he that would not ſtick at ſuch Capital Crimes, as High Treaſon againſt a Government, whereby a whole Nation is affected, would not ſcruple to ſwear away the Life of a ſingle Perſon, tho' wrongfully, to ſave his own.

PUBLICK Challenges to Duelling, and much more Duelling itſelf, is puniſh'd with Loſs of Life and Alienation of Eſtate; and if Seconds are choſe, and approve of it, not taking Care to prevent it, their Puniſhment is the ſame; and he who is kill'd in a Duel is not ſuffer'd to be buried in conſecrated Ground; and whoever reflects upon another as a Coward for refuſing a Challenge, is puniſhable, and declar'd Infamous; and ſo Offences of a leſs heinous Nature are puniſh'd according to the Nature of the Crime, or Demerit of the Offender.

IN Caſes of Shipwreck the *Daniſh* Laws oblige the Subjects to give all poſſible Aſſiſtance to ſave the Goods for the Owner's Uſe, and the Ships which guard the Coaſt are obliged to ſave what they can for the Owner, and are limitted to a very moderate Reward for ſo doing; and in this Caſe the Owners are permitted to ſell in the Country what they ſave, or ſhip them aboard of other Veſſels, as their Inclination or Opportunity may direct them. If a Ship or Goods be drove upon the Coaſt, and no body claims them, the King's Officers, or Lord of the Manor, lay up what they can ſave, or, if they are periſhable Goods, they ſell them, and if any Perſon claims them in a Year and a Day they are reſtor'd to them, or the Money for them; but if no body claims them in that Time, they become the free Property of thoſe who took them up.

IF the Maſter of a Ship finds Goods floating on the Sea, he is to take them up, and deliver them to the next Magiſtrate, who is obliged to keep them a Year and a Day; and if claim'd in that time he muſt deliver them, but if not they fall to the King. If any one embezzle ſuch Goods, or Wrecks, he is puniſh'd as a Felon when convicted. Or if a Perſon finds Goods or Cattle upon the Road, he is obliged to publiſh it in the Court of the Diſtrict, or, in Caſe of Concealment, it is deem'd Felony; but ſo publiſh'd, if they are not claim'd in a Year and a Day, they become his own Property.

Travelling.

AS for Travelling, they have a Number of Waggons in every City, and a Waggon-Maſter preſiding over them, whereby they are kept under a Regulation, as our Hackney Coachmen and Watermen are in *London*. So that when a Perſon has occaſion to travel, he need but go to the Waggon-Maſter, and he is furniſh'd with a Waggon immediately; nor need he treat about the Price, that being fix'd by the Government; or if the Waggoner extort more than his limited Price, or refuſe to go for that, the Magiſtrate cauſes him to be ſeverely puniſh'd; or if the Waggon-Maſter hinders a Traveller, by refuſing to furniſh him with a Waggon and Horſes, the Traveller is immediately redreſs'd upon applying to the Magiſtrate. The Watermen and Ferrymen are under the ſame Regulations.

THERE is a Divinity Reader reſides in every Cathedral to expound the Scriptures; and they, as well as the Maſters of Colleges, are examin'd

by the Professors of the Royal Academy at *Copenhagen*, before they are allow'd to officiate. There are no private Grammar Schools allow'd, but they have publick ones in the Cities and great Towns, establish'd by Authority, and no others; nor are any Masters allow'd to teach in them, but such as have at least taken the Degree of Master of Arts. The lesser Schools, where only Writing and Accounts are taught, are appointed by the Magistrate, and the Master is examin'd by the Priest before he is allow'd to teach.

If a young Gentleman has a Mind to travel, and his Father would appoint a Tutor to accompany him, that Tutor is not allow'd to travel with him, till he is first examin'd by the Superintendant of the Diocess, and found to be Orthodox in the Religion of the Country; and the same is the Case in taking a Tutor into the House; and it is commonly required that the Tutor be a Student of the University of *Copenhagen*.

And as in Teaching so in Books, none are allow'd to be read but what are allow'd by Authority, and hence the Importation of Books, especially those that treat of Religion, is prohibited. They will not suffer any Calendars or Almanacks to be publish'd but what are allow'd, or licensed, by the Government. They are great Bigots to Predictions of War, Famine, and other Calamities.

The Clergy is in three Ranks, or Dignities. 1. Superintendants; each of them is obliged to visit his Diocess every Year once, and he with his Servants and four Horses is entertain'd at the Parson's House *gratis*. This Superintendant is nominated by the King, and consecrated by the Bishop of *Zeland*, with five or six Priests to assist in the Ceremony. The Tythes are divided into three Parts, one to the King, another to the Bishop, and a Third to the Parish Priest; but Grass, or whatsoever grows spontaneously, pays no Tythes. The Priests there, as well as in other Places, have Perquisites for Burials, Marriages, Confessions, &c. 2. There are also Intendants, like our Archdeacons; and, 3. Curates, or Parish Priests. They look upon all as Ecclesiasticks that have any Service appointed in the Church, if they be but Clerks, Sextons, or Singing-men; and consequently these are chosen from among the Students, and have their Dependance entirely upon the Priest, or Curate, of the Parish.

If any Person is convicted of turning Papist, his Lands are forfeited to the next Heir, except he dispose of them before his Apostasy is discover'd; and besides, he himself is banish'd the *Danish* Dominions. A Person educated by any of the Jesuits, is disqualified from holding any Employment in Church or State. And so strict are the *Danes* against Popery, that Popish Priests are forbid to enter the *Danish* Territories upon Pain of Death; and as severe are they against what they denominate Hereticks. *Jews* are not admitted to come into the *Danish* Dominions without the Royal Licence; and whoever finds a *Jew* in that Country without that Legal Admission, is intitled to a Reward of fifty Crowns. The Laws against Gypsies and Fortune-tellers are, for the first Offence Banishment, for the Second Capital.

Punishment

Blasphemers have first their Tongues cut out, and then their Heads cut off. And whatever Crime a Priest is guilty of, as to what may be call'd Petty Crimes, his Punishment is double to that of a Layman guilty of the same Crime.

In Marriage their Law requires the Consent of the Parents and Guardians, as well as of the Women; or if she marries without the Consent of her Guardian, he has the Benefit of her Fortune during his Life; but if the Guardian, perhaps in Hopes to enjoy the Benefit of her Fortune, keeps her unmarried till she is above eighteen Years of Age, she may be reliev'd by applying to the Magistrate.

A Divorce may be obtain'd in *Denmark*, Div.
1. For Adultery; but this requires good Proof, for even the Confession of the Party is not sufficient, because some People, desirous to obtain a Separation, would charge themselves falsly to obtain it; when they are separated for Adultery, the innocent Person may marry immediately, but the Guilty cannot be married till three Years after the Divorce; nor even then, if she is guilty of any lewd Action of that kind in the mean Time; and if the Husband cohabits with his Wife after he has prov'd her guilty of Adultery, he cannot obtain a Divorce, except she transgress again.

Secondly, a Divorce may be obtain'd for a malicious Elopement; or when one Party leaves the other for three Years or above; in this Case the deserted Party may obtain a Divorce, provided they have not cohabited with one another in the mean Time, but if the deserting Party is prov'd to cohabit with another, during the Time of Separation, the deserted Party may, upon such Proof, marry as soon as he or she pleases.

If a Man's Business, as Trade, War, or the like, calls a Man away, his Wife may marry after seven Years Absence is expir'd, but not before; and if after that Time he returns home, and finds his Wife married, he may renew his Claim to her nevertheless, provided no Proofs are brought against him of having cohabited with any other Woman during his Absence.

Thirdly, A Divorce may be obtain'd in Case of Impotency; but then the Woman is obliged to wait three Years, to give the Man an Opportunity to apply for Remedy; and if in that time the Man finds no Hopes of a Cure, a Divorce is granted, and the Marriage is annull'd.

A Man cannot sell his Lands before he is five and twenty Years of Age, without the Consent of his nearest Relations, or the next Successor. And a Woman, whether Maid or Widow, cannot dispose of her Lands at all, but is obliged to leave them to the next Successor, according to Law.

An uninterupted Possession of an Estate for twenty Years gives a compleat Title to it; so that when the Right is to be disputed by Law, they are not allow'd to go any further back: All Obligations and Personal Debts are also void if not renew'd in that time. No Person is obliged to pay any Money lost at Gaming.

Villainage

The Tenure of Villainage yet holds good in many Parts of *Denmark*, and they who hold by this Tenure, descend with the Land, like the Deer in a Park, to the next Heir or Possessor: The Tenant cannot go from that Land to any other, without losing his Title to that he was first in Possession of for it, and all their Goods upon it will be seiz'd by the Lord of the Soil as soon as they quit Possession; nor can he be receiv'd in any Town or Parish, unless they produce a Licence from their Lord, and a Certificate from the Minister of the Parish where he last inhabited; and if one of those Sort of Tenants conceals himself, his Lord has Power over him, as over an Apprentice, and may seize him wherever he finds him, and put him in Prison, or fix him in another Farm by way of Punishment.

Every Freeholder may hunt and fish in his own Ground; and the Nobility may hunt in the Common, or waste Ground, within ten Miles of their own Seat, and may fish in Lakes or Ponds; but it is to be understood that those Lakes or Parks belonging to the King are exempted from this common Liberty; for if any Lord hunt,

shoot,

shoot, or fish in any Place set apart for the King, he forfeits for every Stag he kills a thousand Rix-dollars, for a Fallow Deer eight hundred, for a Hare four hundred, and for every Swan or other Fowl two hundred; and he that hunts in another Man's Land, without Leave, forfeits for every Offence a hundred Ounces of Silver.

If any Person be known to send his Money out of the Kingdom, to lodge it in foreign Banks, the King claims a sixth of it, and the Magistrates of the Town, or Lord of the Soil, a Tenth; and the foreign Merchants themselves are sometimes forced to submit to these Exactions.

CHAP. V.

Of the Religion, Universities, Marriages, and Funerals of the Danes.

THE Religion of *Denmark* was formerly the same with the *Swedes*; and *Woden*, *Thor*, and *Friga*, were their Deities when Paganism prevail'd among them, of which I have spoke before in the Description of *Sweden*. The first Part of this Country that received the Christian Religion was *Holstein*, by St. *Augarius*, about the Year 826, but Christianity was not planted in *Norway* till the eleventh or twelfth Century. The *Lutheran* Doctrine was first propagated here about the Year 1537, and that being now the establish'd Religion, no other Denomination of Christians are tolerated; nor are the common People allow'd so much as to discourse about any controverted Points of Religion, nor to absent themselves from the Church upon any Pretence whatsoever.

THE Clergy do not interfere in State Affairs, or Politicks; that is reckon'd no Branch of their Business; nay, so far are they set aside for Ecclesiastical Service, and from Civil Affairs, that they are not kept as Chaplains to the King or Noblemen, but some Page says grace in those Families. They are allow'd to reprove even Persons of Quality publickly for their Vices, nor is it deem'd any Crime to speak home to them, provided they do not meddle with State Affairs or Politicks; and this Freedom procures them large Benevolences from the common People, who love to hear the Nobility reprehended publickly by the Clergy, when they dare not reprove them themselves. Another Thing that keeps up the Dignity of the Clergy is Confession, for no Man is admitted to the Sacrament without first confessing to a Priest.

THEY have ten Superintendants in *Denmark*, *viz.* one in *Zeland*, one in *Funen*, four in *Jutland*, and four in *Norway*; they hold no Ecclesiastical Courts; they have no Temporalities, nor any Cathedrals, with Deans and Chapters, in the Manner of Bishops, but their Business chiefly is to inspect into the Doctrine and Lives of the inferior Clergy. The Superintendant of *Copenhagen* has two thousand Rix-dollars, or four hundred and fifty Pounds Sterling a Year; all the rest of the Superintendants of *Denmark* have fifteen hundred, and those of *Norway* a thousand Rix-dollars yearly each. Their Habit is like that of other Clergymen. They are very strict in the Observation of their Holidays; and so retir'd in their Devotion, that in Time of Divine Service the Gates of *Copenhagen* are always shut, and the People strictly attend Divine Service. The *Danes* are great Admirers of Organs, and some, well skill'd in the use of them, will sometimes entertain them half an Hour before and after Divine Service.

THERE is now but one University in *Denmark*, and that is *Copenhagen*, the Capital of the Kingdom; but there was another at *Sora*, till the Crown seiz'd its Revenues, and now it is deserted, and a Grammar School erected in its Place.

Marriages. THE Form of Marriage in the *Lutheran* Church differs not much from ours, only the Parties are often not only contracted, but as free with each other as Man and Wife for Months, and sometimes Years, before the Marriage is solemniz'd; nor is the Lawfulness of it disputed if the Nuptials be solemniz'd before the Woman be brought to Bed, the Child being born of a Woman married lawfully to a Husband being always thought sufficient to prove its Legitimacy.

Funerals. THEY are profusely magnificent in celebrating their Funerals, and some of them chuse rather to suffer a Corpse to lie without Interment for Months, and sometimes Years, than abate the least Article of their usual Funeral Grandeur but here, as in other Places, the Poor are forc'd to be content with less, but even they are attended to their Graves by a Set of Mourners, appointed for that Purpose.

CHAP. VI.

Of the antient Constitution, and original Inhabitants of the Kingdom of Denmark; *with the present State of that Kingdom.*

IT is the Opinion of the most authentick Authors, and further confirm'd by Sacred History, that Patriarchal Government was the first instituted in every Nation under Heaven, or, as a modern Historian expresses it, that Children and Subjects are synonimous Terms; and that when People multiply'd, they found themselves under a Necessity of dividing themselves into Colonies; some of which fix'd in fruitful Countries, while others, with their Substance, their Flocks and Herds, travell'd from Place to Place to find Subsistence for their Cattle and themselves, as was the Case with *Abraham* and *Lot*, *Gen.* xiii. In this Case the Senior of the Family was Governor; and though the rest were his Descendants in Point of Succession, yet, as a Supreme, they became his Subjects

Subjects in Point of Sovereignty. And some in *Arabia* and *Tartary* follow that way of Living to this Day, knowing no other Bounds to their Estates, than that of claiming all the Land they graze their Cattle upon, and needing no Title but Possession to make the Land their own.

Some of these Rovers, or unsettled Colonies, descended from the Western *Scythians*, were the Ancestors of the present Inhabitants of *Scandinavia*, which includes not only the Country of the *Danes* and *Norwegians*, I am now describing, but of the *Goths* and *Swedes* too; it is uncertain in what Year, or how long ago, they fix'd here; but it is evident, that when they became so numerous, that their present Possessions could not subsist them, they spread themselves to the Southward, finding that a more plentiful Country and a richer Soil, and here by Degrees they fix'd themselves, not in Tents only, but in settled Habitations, and more substantial Buildings.

When they had thus planted themselves, they, to prevent Confusion, allotted to every Tribe, or Family, certain Bounds, the Senior, or Leader, still retaining his Paternal, or Patriarchal Authority (which began to amount to a Sort of a Sovereignty) over them, and he began to be look'd upon as a Prince over his Subjects, as well as a Father to his People; and as they increas'd in Number and Strength, these little Principalities, by Inter-marriages, or Compacts for mutual Defence, grew up into little Kingdoms. As was the Case in *England*, no longer ago than the Time of the *Saxon* Heptarchy; and indeed to pursue that Parallel yet further, some of those petty Kings, being more powerful than their Neighbours, invaded the Weaker, and reduced several of these little Monarchies into one; as in the *Saxon* Heptarchy, above-mention'd, *Egbert* King of *Mercia*, one of the seven Kingdoms of this Island, reduced all these seven Kingdoms into one, and call'd it *England*, of which himself was the first sole King under that Name. But of this at large when we come to treat of the Dominions of *Great Britain*.

This probably was the Case with the several Parts of *Scandinavia*, as *Sweden*, *Denmark*, &c. for, to come lower, we find that sometimes *Denmark*, *Norway*, and *Sweden*, have been under one Sovereign, and at other Times under three distinct Princes; and, even then, those three were sometimes arbitrary, and at other Times so restrain'd by their Nobility and Clergy, that they had little of a King left but the Name; for every Bishop or Nobleman began to have his Castle, or fortify'd Place, as if he aim'd at a Sort of an Independency, and the common People were their Vassals, to be tax'd and pillag'd even as they pleas'd. The executive Power was lodg'd in the Senate or Privy Council, of which the King seem'd to be only President in Times of Peace, and General of the Army in Time of War, but had not a Power to make Peace or War, or to raise Men or Money, without the Consent of the Senate and the Chief of his Subjects.

In this State *Denmark* continued till the Year 1660, when the People, not able longer to subsist under the grievous Taxes and Oppressions of their Superiors, the Nobility and Gentry, occasion'd by a long War, they concluded they had better be under one arbitrary Prince than be under such a Number of Tyrants; and the rather, as hoping that their falling entirely in with the King might enable him to suppress the Exorbitance of the rest of their voracious Superiors; and the Clergy, who constitute another of the States, came into the Sentiments of the Commonalty, to bring about the intended Revolution. The History of which take as follows, according to the Account given by Mr. *Mortaye*.

'When Money was to be rais'd, in the Year '1660, for paying and disbanding of the Army, 'and other Exigences of the Government, and 'the States of the Kingdom were assembled for 'that Purpose, the Commons propos'd, that since 'the Nobility and Gentry enjoy'd the greatest 'Profit from the Land, of which themselves were 'but the Occupiers, or Farmers, they ought to 'bear a Share of the publick Taxes. To which 'the Nobility answer'd, that the Commons nei-'ther understood nor consider'd the Privileges of 'the Nobility, who had at all Times been ex-'empted from Taxes; nor did they consider their 'own Condition, who were no better than Slaves; 'that they had best keep within their own 'Bounds, and acquiesce in such Measures as an-'tient Practice warranted, for the Lords would 'maintain their Authority.

'The President of *Copenhagen*, Speaker of the 'Commons, answer'd, that they were no Slaves, 'nor would they be treated as such by the No-'bility for the future,—and thereupon he with-'drew from the Assembly, the Commons and 'Clergy following him out of the House.

'The Commons afterwards assembled in a 'Body, and, with their Speaker and the Super-'intendant of *Copenhagen* at their Head, form'd a 'Procession to a proper Hall in the City; and 'here they resolv'd immediately to attend the 'King, and offer their Assistance to make him an 'absolute Monarch, and to make the Succession of 'the Crown hereditary; by which they ima-'gin'd they should lay such an Obligation on his 'Majesty, that he would free them from that 'slavish Dependance upon their Superiors that 'they had so long groan'd under; nor were they 'much concern'd about the Resentment of their 'Lords, because the Army was composed of the 'Commons, and devoted to them; and besides, 'they knew that, let the Consequence be what it 'would, they could not serve worse Masters 'than those who not only made Slaves of them, 'but call'd them so to their Faces; and if Sla-'very was to be their Fate, they would rather 'be Slaves to their King, than to every assuming 'Gentleman, who was but a Fellow-Subject.

'With these and the like Considerations, they 'corroborated their Resolution of revenging them-'selves upon those who had so long insulted them. 'They had also seen their King, more than once, 'defend their Capital City against a formidable 'Enemy, and how firmly he was attach'd to their 'Interest, when the *Swede* had almost made him-'self Master of all his Dominions; this animated 'them to venture their Lives and Fortunes in his 'Hands, rather than remain at the Courtesy of 'their mercenary Nobility.

'The Clergy had the same View as the Com-'mons; for having shar'd the same Fate with 'them, in the Tyranny of the Nobility, they 'were in hopes, if they could bring about the in-'tended Revolution, that they should then have 'but one common Master, the King; and as they 'engaged to influence the People in his Favour, 'by preaching up unlimited Obedience to him, 'they hop'd for his Majesty's Protection, and 'some Increase of Power.

'The Court at the same Time was not on-'ly privy to, but at the Bottom of, this Design, 'and the Prime Minister push'd the Superin-'tendant, or Bishop, of *Copenhagen*, and the 'Commons, to forward the Undertaking, while 'the Nobility, rejecting the Commons with the 'usual Contempt, were not apprehensive of any 'Danger from them. But the Nobility assem-'bling next Day, received Information that the 'Commons intended shortly to visit them, and so 'it proved, for they soon after, with the Bishop of

'*Copen-*

'*Copenhagen* and their Speaker at their Head, 'gave the Lords to underſtand, that having con-'ſider'd the Diſorders with which the Kingdom 'was diſtracted, they apprehended the only Re-'medy for them would be to enlarge the King's 'Prerogative, and make the Crown hereditary; 'and that they had come to a Reſolution ac-'cordingly, and if the Nobility thought fit to 'concur with them, they would accompany them 'to his Majeſty; but if not, they would attend the 'King themſelves, and the Matter would be done 'without them.

'THIS peremptory Reſolution of the Com-'mons put the Nobility into great Confuſion, they 'eaſily perceiving that the Commons, whom they 'had juſt now deſpiſed, would certainly meet 'with Encouragement from the King, eſpecially 'in a Deſign ſo much in his Favour; and beſides, 'all theſe Meetings and Affairs were tranſacted 'in *Copenhagen*, a fortify'd Town; and all the 'Gates being ſhut, by the King's particular Or-'der, they could not retire to their own Country 'Seats, where they lived and commanded like 'ſo many petty Kings: In this Difficulty they 'thought it was their wiſeſt Courſe to ſeem 'to ſubmit to what they could not prevent, 'and therefore told the Commons that they 'were not againſt what they propoſed, but that 'it was not proper to ruſh upon an Affair of 'ſuch Importance without mature Deliberation, 'and therefore deſired the Commons to defer 'putting their Deſign in Execution, till they 'could deliberate how to do it for their mutual 'Advantage.

'BUT the Speaker of the Commons anſwer'd 'the Lords in plain Terms, telling them that 'theſe were only Evaſions to gain Time, in or-'der not to comply with, but to fruſtrate, the 'Intentions of the Commons; and that they came 'not thither to triſle away Time about Delibera-'tion, but to act; and in ſhort, they told the 'Lords, that if they would not immediately 'come into their Meaſures, they would wait up-'on his Majeſty without them, and thereupon 'abruptly left them by themſelves, to deliberate 'upon what might be the Conſequence if they 'refus'd.

'AND as the Commons ſuſpected ſo it prov'd; 'for while the Nobility trifled with the Commons 'to gain Time, and keep them back from put-'ting their Deſign in execution, they them-'ſelves ſent a private Deputation to the King, '(without the Knowledge of the Commons) of-'fering to make the Crown hereditary in his 'Majeſty's Male Line; but the King being very 'ſenſible how hearty the Commons were in his 'Intereſt, and looking upon an Offer made by 'the Nobility without the Commons to be of 'little Conſequence, he rejected their Favour, tel-'ling them he would not accept it under thoſe Li-'mitations, but would have the Females included.

'THE Commons, reſolved to proſecute their 'Deſign of addreſſing the King, without triſling 'any more Time away in conſulting the Lords, 'proceeded to Court: Where being met by the 'Prime Miniſter, and conducted into the Hall 'of Audience, his Majeſty ſoon appear'd, and 'the Biſhop, in the Name of himſelf, the Com-'mons, and the Clergy, (excluſive of the Nobili-'ty) addreſs'd himſelf to the King, with an Of-'fer to make the Crown hereditary. The King 'return'd them thanks, but told them the Con-'currence of the Nobility was neceſſary; but 'encourag'd them ſo far, as to deſire them to 'continue their Seſſion till this important Affair 'might be determin'd.

'THE Nobility were in the utmoſt Confuſion 'when they heard that their Propoſal of making 'the Crown hereditary, but limiting it to the 'Male Line, was rejected, and in the mean time, 'that their Offer was look'd upon to proceed 'from no other Motive, but that of the Commons 'being reſolv'd to offer it firſt, and therefore they 'made it becauſe they could not avoid it; and '(which ſtartled them more) the City Gates being 'ſhut, they began to apprehend that the King 'had ſome Deſign againſt their Perſons: In this 'Diſtreſs they diſpatch'd Deputies both to the 'Court and Commons, to ſignify their Willingneſs 'to comply with what the Commons had propoſed. 'Whereupon the King order'd the City Gates to 'be kept ſhut, till they had ſworn Fealty to him, 'before the People and the Army, and relin-'quiſh'd all Right and Power to create any 'Diſturbance.

'IN order to this grand Ceremony, the King, 'Queen, and Royal Family, appear'd upon a Thea-'tre, in Chairs of State, under Velvet Canopies, 'and received the Homage of all the Senators, 'Nobility, Clergy, and Commons, kneeling, 'in Sight of the Army and Burghers, who 'were drawn up under Arms; the Subſtance of 'their Oath, was to be *True and faithful to his 'Majeſty and his HEIRS*, &c. Thus the King-'dom of *Denmark* was chang'd, in a few Days 'Time, from an Ariſtocracy to a compleat Mo-'narchy; and the Commons, without any View 'of Advantage to themſelves, had the Satisfaction 'of ſeeing the tyranical Power of their Adver-'ſaries, the Nobility, ſuppreſs'd, and they made 'as miſerable as themſelves; the Clergy, if any, 'being Gainers by this Revolution, becauſe they 'were greater Favourites at Court, on account 'of their preaching up paſſive Obedience to a 'Prince, who is by that Means become arbitrary.'

CHAP. VII.

A brief Account of the Succeſſion of the Daniſh *Princes; with the modern Hiſtory of* Denmark, *and more particularly of the principal Occurences of the two laſt Reigns.*

IT is uncertain in what Time the Kingdom of *Denmark* was eſtabliſh'd as ſuch; for, as before obſerv'd, the Patriarchal Government advanc'd by inſenſible Degrees, or Steps, into Kingdoms; but *Dan* was the firſt taken Notice of, as King of *Denmark*; he reign'd a little before the Birth of our Saviour, and was Governor of *Sweden*, *Denmark*, and *Norway*, he conquer'd the *Vandals*, who then poſſeſs'd *Pomerania* and *Mecklenburg*, and was the firſt that took upon him the Title of King of the *Vandals*.

THE *Daniſh* Hiſtory (of which we look upon Mr. *Puffendorf*'s Account to be the moſt authentick) does not furniſh us with any Genealogy of the Kings of *Denmark*, but takes their *Æra* from *Erick*, the firſt Chriſtian King of *Denmark*, who reign'd about the Year 846. In the Year 931 reigned *Gormo*, who endeavour'd to expel Chriſtianity from *Denmark*, but it was defended by the Emperor *Henry*, ſir-named the *Bird-catcher*. The next that ſucceeded *Gormo* was his Son *Harold* VI. and he dying left the Crown to his Son *Swain*, about the Year 980; he, after he had conquer'd a Part of *England*, died in the Year 1012.

Erick

Gormo

Harold VI.

THE next was *Canute the Great*, the Son of *Swain*, King of *Norway*, *Denmark*, and *England*; and after him his Son *Harold*; who dying without Iſſue, *Hardy Canute*, the third Son of *Canute*, was the next in the Line, as King of *England* and *Norway*. The next after him was *Magnus* King of *Norway*; but *Sueno*, of the Royal Family of *Denmark*, recover'd that Kingdom again; and dying in the Year 1074, was ſucceeded by *Harold* VII. and he again by his Brother *Canute* IV. in the Year 1087. This King granted the Tenth of the Revenues of his Kingdom to the Clergy, and gave great Authority to the Biſhops and Eccleſiaſticks; for which Liberality to the Clergy, the *Jutes* were ſo exaſperated, that they aſſaſſinated him; however, the Clergy, in their ſuperſtitious Way, made him amends, for they canoniz'd him among their Saints, and annually celebrated his Memory at their Feaſts in full Bumpers: *Such Honour have their Saints.*

Canute I.

Hardy Canute.

Magnus.

Harold VII

Canute VI.

Canute IV. was ſucceeded by his Brother *Olaus*; but he dying in 1095, his Brother *Erick* IV. aſcended the Throne; at whoſe Deceaſe there were three Competitors for the Kingdom, *viz.* *Sueno*, *Canute*, and *Waldemar*; who, to compromiſe the Matter, agreed to divide the Kingdom between them; but *Canute* being aſſaſſinated, and *Sueno* kill'd in Battle, *Waldemar* ſucceeded as ſole Monarch of *Denmark*: He laid the Foundation of the City of *Dantzick*; and in his Reign the City of *Copenhagen* was begun to be built by *Abſalom* Biſhop of *Roſchild.*

Olaus

Erick IV.

Waldemar I

Canute VI. *Waldemar* was ſucceeded by *Canute* VI. who having ſubdu'd the *Vandals*, ſtiled himſelf King of the *Vandals*, or (according to his Senſe of the Word) Slaves; he took the City of *Hamburgh*, and ſeveral other Places, from *Adolph*, Earl of *Holſtein*; he conquer'd *Eſtonia* and *Livonia*, and eſtabliſh'd the Chriſtian Faith in thoſe Countries. His Brother *Waldemar* II. ſucceeded in the Year 1202, as King of *Denmark*, *Eſtonia*, *Livonia*, *Courland*, *Pruſſia*, *Pomerania*, *Rugen*, *Mecklenburgh*, *Holſtein*, *Stormar*, *Ditmarſh*, and *Wageren*, with the Cities of *Lubeck* and *Lawenburgh*; but the Cities of *Dantzick* and *Lubeck*, with the Provinces of *Mecklenburg* and *Pomerania*, revolted from him. *Adolph* Earl of *Lawenburgh*, diſpoſſeſs'd him of *Holſtein* and *Stormar*; and the Knights of the *Croſs* took from him the Provinces of *Livonia* and *Eſtonia.*

Waldemar II.

Erick V. *Erick* V. ſucceeded in the Year 1241, but his Father had given Portions out of the Kingdom to his other three Sons, *viz.* to *Abel*, *Sleſwick*; to *Canute*, *Bleking*; and to *Chriſtopher*, *Laland* and *Falſter*; every one of which ſet up for Sovereignty in their reſpective Dominions; but (as it is commonly the Caſe when a Kingdom is divided into ſo many petty Governments) *Erick* attempting to reduce them all to one Kingdom, and reign Monarch himſelf, was murder'd by his Brother *Abel*, who then took the Government upon himſelf; but *Abel* had not reign'd above two Years before he was ſlain by the *Frieſlanders* and *Ditmarſians*; and then the third Brother, *viz.* *Chriſtopher*, ſucceeded in the Kingdom, in the Year [illegible].

Abel

Chriſtopher engaging in ſome Diſputes with the Clergy, was poiſon'd by them, with the conſecrated Hoſt. (What Sort of a Clergy a Perſon is a Member of who durſt repeat the Words of Conſecration, over ſuch a Meſs of known and intended Poiſon, the World may judge.) *Erick* VI. his Son, was the next Succeſſor, in the Year 1286: But in the Wars with *Sweden*, *Norway*, and *Holſtein*, the Duke of *Holſtein* took him Priſoner, and the Grandees afterwards murder'd him, leaving his Crown to his Son *Erick* VII. This was alſo in the Year 1286, ſo ſhort was the Reign of *Eric* VI. Of the Son nothing is remarkable, only that he engag'd in a War with the King of *Norway* for protecting his Father's Murderer, and had ſome Difference with the neighbouring States, *&c.*

Chriſtopher II. Son of *Erick* VII. ſucceeded to the Throne; who, to ſecure the Succeſſion in his own Line, cauſed his Son to be crowned in his Lifetime. The Subjects expell'd him as an Oppreſſor, and elected *Waldemar*, Duke of *Sleſwick*, in his Room; but the *Danes*, ſoon weary of their new Choice, recall'd *Chriſtopher* again: In his Reign the *Holſteiners* conquer'd *Schonen*, and ſurrender'd it to *Magnus* King of *Sweden*; other Parts of the Kingdom were alſo torn from it, and made tributary to other Princes, King *Chriſtopher* remaining Sovereign of but a ſmall Part of it while he liv'd, and after he dy'd there was an Inter-regnum of ſeven Years; during which Time the Duke of *Holſtein* aſſum'd the Government of *Denmark*; but the *Danes* call'd in *Waldemar*, the Son of *Chriſtopher* II. who was now in the Emperor's Court: He in ſome Meaſure reſtor'd the declining State of the Kingdom; but ſold *Eſtonia* and *Revel* to the Knights of the *Croſs* for twenty-eight thouſand Marks, and ſpent moſt of the Money in a Voyage to the *Holy Land*; however, he procured *Schonen* to be reſtor'd to *Denmark* again, and had *Gothland* ſurrendered to him by *Albert* King of *Sweden.*

Erick VII.

Chriſtopher II.

Waldemar II.

THE next was *Olaus* VI. who was Grandſon to *Waldemar*; he came to the Crown in the Year 1375, he being the Son of *Haquin*, King of *Norway*; and *Margaret*, the Daughter of *Waldemar*, ſucceeded to the Crown of *Norway* at his Father's Death; and, as his Father was the Son of *Magnus Smech*, Sovereign of that Kingdom, he laid Claim to *Sweden* alſo; but he dying young, the *Danes* and *Norwegians* received *Margaret* his Mother for their Queen; and ſhe engaging in a War with *Albert*, King of *Sweden*, his Subjects deſerted him, and ſhe became Sovereign of *Sweden*, *Denmark*, and *Norway*; and probably finding this Weight of Government too heavy for her Shoulders, ſhe cauſed *Erick* of *Pomerania* to be aſſociated with her; and next Year the Eſtates of all the three Kingdoms being aſſembled at *Calmar*, *Erick* was declared King; and it was then determin'd that all the three States, of *Sweden*, *Denmark*, and *Norway*, ſhould for the future be ſubject to one and the ſame Sovereign; and *Margaret* dying in the Year 1412, *Erick* remain'd ſole Monarch of the three States, or Kingdoms, of *Sweden*, *Denmark*, and *Norway.*

Olaus VI.

Margaret.

Sweden, Denmark, and Norway united.

Erick VII.

BUT the *Danes*, not ſatisfied with his Adminiſtration, depoſed him, and elected his Siſter's Son *Chriſtopher*, Duke of *Bavaria*, to be their Sovereign; and he dying, the *Danes* offer'd the Crown of *Denmark* to *Adolph*, Duke of *Sleſwick* and Earl of *Holſtein*, but he declined it, being too far advanc'd in Years to engage in the Fatigues of Government, and therefore recommended *Chriſtian*, Earl of *Oldenburgh*, in the Year 1448, who accepted the Offer, and reign'd King of *Denmark* and *Norway*; and drove *Charles*, King of *Sweden*, out of his own Kingdom; but he ſoon after recover'd his Crown

Chriſtopher III

Chriſtian

Crown again. From this *Chriſtian*, Earl of *Oldenburgh*, the preſent Royal Family of *Denmark* deſcended.

But the Emperor *Frederick* added *Ditmarſh* and *Holſtein* to his Dominions, in the Year 1471. About which Time he married his Daughter *Margaret* to *James* III. King of *Scotland*, and gave her the Iſlands of *Orkney* and *Shetland* (which till then belong'd to the Crown of *Denmark*) for a Dowry.

Chriſtian II.

After *Chriſtian* his Son *John* ſucceeded, in the Year 1481: He divided the Dukedom of *Holſtein* with his Brother *Frederick*; he enter'd into a War with *Steen Sture*, Governor or Protector of *Sweden*, and ſuppreſſing him, he caus'd himſelf to be crown'd King of *Sweden*; but the *Lubeckers* joining *Steen Sture*, drove *John* out of *Sweden*, who was ſucceeded by his Son *Chriſtian* II. who being order'd by the Pope to put a Decree in Execution againſt the Kindom of *Sweden*, he defeated *Steen Sture*, who was kill'd in the Battle, and caus'd himſelf to be proclaim'd and crown'd King of *Sweden*; but he having exaſperated that People, by maſſacreing many of their Nobility, he was driven out of the Kingdom by *Guſtavus Ericſon*; ever ſince which Time the *Swedes* would never ſubmit to the *Daniſh* Yoke. The *Danes* themſelves alſo hated him, becauſe he was govern'd by his Concubine, and the old *Dutch* Woman her Mother; and at laſt he was depos'd by them, and forc'd to retire into the *Netherlands*; and afterwards attempting to recover the Crown of *Denmark*, he was, in that Attempt, taken Priſoner, and continued in that State all the remaining Part of his Life.

Frederick I.

Frederick, Duke of *Holſtein*, then obtained the Crown of *Poland* in the Year 1532, but dying in the Year 1533, his Son *Chriſtian* III. ſucceeded to the Crown of *Denmark*; but his own Biſhops oppoſing him, and he having a more noble Spirit than to be Prieſt-ridden, by ſuch a Clergy as thoſe Times and Places afforded, he ſeiz'd the Revenues of the Church, mortified the Clergy, and begun and eſtabliſh'd a Reformation of Religion about this Time.

Chriſtian III.

Frederick II.

Frederick II. was the next Succeſſor to the Crown, *Anno* 1560; who, after a long War with *Sweden*, dy'd in Peace in the Year 1588, and was ſucceeded by his Son *Chriſtian* IV. who alſo engaged in a War with *Sweden*, and afterwards with *Germany*, but was defeated, and the Imperialiſts took *Jutland* and *Holſtein*, which was afterwards reſtor'd by a Treaty. The *Swedes* took from him *Gothland*, *Oſel*, *Jemperland*, and *Halland*. He dy'd in the Year 1648.

Chriſtian IV.

Frederick III.

Frederick III. ſucceeded; he was the Son of *Chriſtian* IV. but being defeated in attacking the *Swedes*, his whole Country was over-run by them, and himſelf beſieged in his Capital of *Copenhagen*, where he was obliged to yield up to the *Swedes Bahus*, with the Provinces of *Bleking*, *Schonen*, and *Halland*; and yet this was the King that was firſt declar'd abſolute Monarch of *Denmark*, as in Chap VI. preceding; he dy'd in the Year 1670.

Chriſtian V.

Chriſtian V. Son of *Frederick* III. ſucceeded to the Crown of *Denmark*; and finding the King of *Sweden* engaged at War with the Emperor, reſolv'd to take this Opportunity to recover thoſe Provinces, above-mention'd, loſt in the laſt Reign; but the Duke of *Holſtein*, being ally'd to *Sweden*, endeavour'd at any rate to ſecure his own Territories; and there being then ſome Difference between him and the King of *Denmark*, concerning the Succeſſion to the Counties of *Oldenburgh* and *Delmonhoſt*, and alſo about the Revenues of *Sleſwick* and *Holſtein* (the King of *Denmark* claiming the greateſt Share, becauſe the greateſt Part of the Forces, maintain'd for the Defence of the Country were his) the Duke inſiſted upon an equal Share, alledging, that what Forces the King kept up more than was neceſſary, and without the Duke's Conſent, was an Impoſition rather than a Favour, and therefore ought not to be any Cauſe of diminiſhing his Revenues. But thoſe Diſputes did not riſe high, but rather ſeem'd to come near to an Accommodation; and the King, under a Profeſſion of all the Friendſhip that could be imagin'd, propos'd to take a Review of his Troops in *Holſtein*, writing very familiar Letters to the Duke; intimating that he hop'd the Duke would not take any Umbrage at his Journey, or Tour, to viſit the Places and Troops belonging to him. The Duke not only excluded all Thoughts of Jealouſy, but he, accompany'd by his Brother, the Biſhop of *Lubeck*, and ſeveral of his Nobility, met the King upon the Road, and gave him a ſplendid Entertainment, at a Seat near his Palace *Gottorp*; which the King ſeem'd to accept of very graciouſly, and, by Way of Return, invited the Duke to ſee him at *Rensburg*, and there all ſeeming Diſputes ſhould be accommodated; which Invitation the Duke promiſed to accept of, and to wait upon his Majeſty according to Appointment, entirely relying upon the King's Profeſſion of Friendſhip, and hoping it would eſtabliſh a good Underſtanding between them.

The Duke, according to his Promiſe, waited upon the King at *Rensburg*, which is a fortified Place in *Denmark*, near the Frontiers of *Holſtein*; and having his Prime Miniſter, and ſeveral of his Nobility with him, on the Twenty-fifth of *June*, 1675, he was welcom'd with the Diſcharge of the Cannon on the Ramparts, and other Demonſtrations of Reſpect. But the next Day the King of *Denmark* cauſed the Duke's Guards to be diſarm'd, and the Duke himſelf impriſon'd; and ſent out Detachments of his Troops to ſeize on all the Places in *Holſtein* and *Sleſwick* which belong'd to him. The Duke pleaded the Injuſtice of thus violating the Laws of Blood, Friendſhip, and Hoſpitality, but all in vain. The King charg'd him with being in the Intereſt of *Sweden*, and that he would not truſt him; and told him furthermore, that unleſs he would renounce all Right to the Lands or Matters in diſpute, he would put Garriſons in all his Towns, and take Poſſeſſion of his whole Country; and that he would detain him Priſoner till he ſent an Order to *Tonningben*, to command the Governor of that Fortreſs to ſurrender it to the King of *Denmark*. The Duke conſented to this laſt, as fearing there was a Deſign againſt his Life; and accordingly that Fort, with all its Artillery and Stores, was deliver'd up to the *Danes*.

When this was done, the King permitted the Duke to live at his Palace at *Gottorp*; but ſtill as a Priſoner; the Guards being placed at all the Avenues to prevent his Eſcape, and hard Propoſals ſent to him almoſt every Day, to be ſign'd in order to his Diſcharge. One grand Article propoſed to him was the Renunciation of his ſupreme and independant Power and Right over the Dutchy of *Sleſwick*. His Dutcheſs was all this while at *Copenhagen*; and being the King of *Denmark*'s Siſter, it was ſuppoſed ſhe was not very uneaſy at all the Indignities her Husband underwent; but the Duke, weary of his preſent unhappy Circumſtances, contriv'd his Eſcape, and arriv'd ſafe at *Hamburgh*, where one of the firſt Things he did was to proteſt againſt the Validity of any Act or Inſtrument that under his Confinement he was compell'd to ſign. The King, being nettled that the Duke was got out of his Power, meditated Revenge, and as an Effect thereof, he cauſed the Fortreſs of *Tonningben* to be demoliſh'd, and ſequeſter'd the Dutchy of *Sleſwick*, cauſing both

Mag-

Magiſtracy and Commonalty to ſwear Allegiance to him, declaring them abſolutely clear'd from all Allegiance to the Duke. He alſo cauſed all the Duke's Revenues to be brought into his Treaſury, and continued Garriſons in his Towns, and even in his Palace at *Gottorp*; and leſt the Duke, by the Help of ſome Alliance with other Princes, ſhould be powerful enough to oblige him to reſtore what he had ſo unjuſtly ſeiz'd, he extorted Contributions, or rather perfectly plunder'd the poor Subjects, to the Value of ſeveral Millions, ruining a flouriſhing Province to fill his own Coffers, and with this farther View or Conſideration, that the poorer he made the Subjects of *Holſtein*, the leſs able they would be to aſſiſt the Duke, in caſe he ſhould require it.

The Duke, who ſtill reſided at *Hamburgh*, ſent his Son to implore Help from the Princes of the Empire; but little was done till the Year 1689, when *Charles* XI. of *Sweden* undertook his Quarrel, and was about to ſend an Army into *Germany* to reſtore the Duke to his Right; but the *Engliſh*, *Dutch*, and *Germans*, being then in a Confederacy againſt *France*, and not willing to encumber that Affair with that of the King of *Denmark* and the Duke of *Holſtein*, they ſoon put an End to that Diſpute, by compelling the King of *Denmark* to reſtore all the Duke of *Holſtein*'s Poſſeſſions; but no Care was taken to oblige him to make any Repairs of the Ruins and Devaſtations that he had committed, nor to account for the Arrears for the thirteen Years that he had unjuſtly had the Duke of *Holſtein*'s Dominions in his Poſſeſſion, nor had he any Satisfaction made for either the Expence they put him to, or for the Indignities offer'd to his Perſon.

The Differences between the King of *Denmark* and the Duke of *Holſtein* being thus compos'd, Matters continued in a tolerably peaceable Situation till the Death of *Chriſtian* V. who died *September* 4. 1699. and was ſucceeded by his ſecond Son *Frederick* IV. when the old Grudge between *Sweden* and *Holſtein* on one Part, and the *Dane* on the other, not being quite forgot, the *Dane* was reſolutely determin'd to make War upon the other two Powers, but took care firſt to enter into a Confederacy with *Ruſſia* and *Poland* for that Purpoſe; and for a Beginning, he order'd his General the Duke of *Wirtemberg* to demoliſh *Frederickſtadt*, *Huſum*, and other Places belonging to the Duke of *Holſtein*; which he ſoon did, and then inveſted *Tonningben*, in which was a Garriſon of five thouſand Men; notwithſtanding which the *Dane* laid Siege to the Town; whereupon the *Germans*, *Dutch*, and *Swedes*, join'd their Forces to reduce the Exorbitance of the *Dane*, but marching with their joint Forces towards *Tonningben*, the *Daniſh* General was forced to ſubmit, to the Mortification of raiſing the Siege, as not daring to ſtand a Battle.

This Check being given to the Inſolence of the *Dane*, they were not allow'd to reſt thus; for the *Engliſh* and *Dutch* ſent each of them a Squadron into the *Baltick*, where the *Swediſh* Fleet join'd them, and than the *Daniſh* Fleet was glad to retire into the Harbour of *Copenhagen*; and beſides this, the young King of *Sweden*, who was afterwards the reſolute *Charles* XII. but at that Time not above ſeventeen Years of Age, raiſed an Army of fifteen thouſand Horſe and Foot, and landed them upon the Iſland of *Zeland*, about three Miles to the Southward of *Elſinore*, in order to inveſt *Copenhagen*. When the King of *Denmark* found what Diſtreſs he had plung'd himſelf into, he was glad to accept of ſuch Terms of Accommodation as the Powers that he had provok'd to correct him were pleas'd to preſcribe; and a Treaty was accordingly concluded at *Travendale*, the 18th of *Auguſt*, 1700. in which, amongſt other Particulars, it was agreed, that the King of *Denmark* ſhould pay to the Duke of *Holſtein* two hundred and ſixty thouſand Dollars for the Damage done to his Forts, and otherwiſe in his Territories; and by a ſeparate Article the King of *Denmark* was obliged to abandon the King of *Poland* as a Confederate, ſo far as not to aſſiſt him againſt *Sweden*.

But notwithſtanding the moſt ſolemn Treaties, the King of *Denmark* wanted nothing but an Opportunity to break through all, according to the inflexible incorrigible Tempers of ſome People, who, when their Hands are ty'd behind them, will attempt the intended Miſchief with their Teeth; for the King of *Sweden* no ſooner loſt the Battle of *Pultowa*, and was obliged to retire to *Turkey* for Refuge, but the King of *Denmark* took the firſt Opportunity of falling upon his dejected Kingdom in that Diſtreſs; and not only ſo, but although, as in the foregoing Paragraph, he obliged himſelf *to abandon the King of* Poland *as a Confederate, ſo far as not to aſſiſt him againſt* Sweden, yet, when he thought himſelf out of Danger from the united Force of the *Engliſh*, *Dutch*, and *Swedes*, he united his Force with that of the *Muſcovites* and *Poles*, to drive the *Swedes* out of their *German* Dominions; which he not only effected, but, to pick a plauſible Quarrel with the young Duke of *Holſtein*, he charg'd him with favouring the *Swedes*, and under that Pretence ſeiz'd the Territories of *Holſtein* again, and continued in Poſſeſſion of them; and when the King of *Denmark* had done this, he and his Allies commenc'd a War againſt *Sweden*; of the Hiſtory of the Occaſion and Succeſs of which take the following Abſtract:

The Defeat of *Charles* XII. King of *Sweden* at *Pultowa*, happen'd *June* 30. 1709. the News of which no ſooner reach'd the King of *Denmark*'s Ears, but he began to ſtudy ſome Pretence for renewing the War with *Sweden*; in order to which he immediately recall'd the *Daniſh* Regiments which were in the Emperor's Service in *Hungary*, and quarter'd them in *Holſtein*. He tranſported ten thouſand Men from *Norway* to *Denmark*, levy'd new Troops at *Hamburgh*, and fitted out a ſtrong Squadron of Men of War; and having aſſembled an Army of eighteen or twenty thouſand Men, and having made all thoſe Preparations, and qualified himſelf for a War, his next Buſineſs was to find out ſomething to allege that might juſtify him in falling upon the *Swedes* in the Abſence of their King, which to effect, he publiſh'd a Manifeſto in 1709. to juſtify his intended Enterprize, charging the King of *Sweden* with ſuch ambitious Deſigns as had cauſed great Devaſtations in the North, and that he entertained great Animoſities againſt him and his Subjects; that the *Swediſh* Miniſters had oppoſed the *Daniſh* Intereſts in Foreign Courts, with ſeveral other Articles with which he charged the King of *Sweden*, and concluded that it was high Time for him to prevent impending Danger. All theſe Reaſons ſumm'd up againſt the King of *Sweden*, when he was not preſent to defend himſelf againſt the Charge, the King of *Denmark*, without Oppoſition, gave the Verdict in favour of his own intended Enterprize, and directly declar'd War againſt all the *Swediſh* Territories, except thoſe in *Germany*, and with ſix thouſand Horſe and Dragoons, and twelve thouſand Foot, he made a Deſcent upon *Schonen*, the Southermoſt Point of *Sweden*, on the Eaſt Side of the *Sound*, and landed his Forces at *Elſinburg*, over-againſt *Elſinore*, *Nov.* 12. 1709. and quarter'd in the Country Towns till *January*, when, by the Favour of a hard Froſt, he advanc'd towards *Chriſtianſtadt*, where

where the *Saxon* Garriſon immediately ſurrendred the Town, and went over to the King of *Denmark*. They afterwards took *Carelſhaven*, a Sea-Port, on the Eaſt Coaſt of *Schonen*, between *Bornholm* and *Oeland*; he alſo ſent a ſtrong Detachment to the Province of *Halland*, on the Weſt Coaſt of *Schonen*, who receiv'd ſuch Enforcements, by the *Swedes* coming over to them, that their Army became very formidable.

The *Swediſh* General, Count *Steinbock*, with eighteen or twenty thouſand Men, march'd towards *Helſinburg*, as if he would intercept their Paſſage to that Place; whereupon they abandon'd all their new Conqueſts of *Chriſtianſtadt*, *Carelſhaven*, &c. and made towards *Helſinburg*; where the *Swediſh* Army entirely defeated them; only about ſix or ſeven thouſand of the *Danes* were tranſported to *Denmark* in the Night, going home with Shame and Loſs, as a juſt Reward for that and others of his inglorious and unjuſt Exploits.

But the *Dane*, not willing to ſit quietly by this Loſs, the next Year join'd the Forces of the Czar and the King of *Poland*, who all jointly fell upon *Swediſh Pomerania*, and the *Swediſh* Forces, too weak for them, retir'd for Security to *Stralſund* and other Places. While the *Moſcovites* and *Saxons* block'd up *Stralſund*, the King of *Denmark* paſs'd the *Elbe* and entred *Bremen*, took the Town of *Staden*, and with it the whole Country. The *Dane*, in his Return to meet his Allies, the *Moſcovites* and *Saxons*, threatned to bombard *Hamburgh*, if they did not advance him two hundred and thirty thouſand Rix-dollars, to which they comply'd to ſave the Town.

The *Swediſh* General in the mean Time, knowing that the King of *Denmark* was ſeparated from the other two Armies, of *Moſcovy* and *Poland*, watch'd an Opportunity to engage the *Dane* ſingly, which he accordingly did, on the Twenty-ſecond of *December*, 1712, near *Wiſmar*; and having defeated and put them to flight, he purſu'd them to *Holſtein*, ſeiz'd the *Danes* Magazines there, and put *Daniſh Holſtein* under Contribution; from thence he march'd to *Pinenburg*, near *Hamburgh*, with a Deſign to burn the City of *Altena*, and make other Reprifals for the *Danes* Barbarity.

But in the mean Time the *Danes* made the beſt of their Way to join the *Moſcovite* and *Pruſſian* Armies; and accordingly, being all join'd, to the Number of fifty thouſand Men, they march'd to meet the *Swediſh* General, whoſe Army did not conſiſt of above fifteen thouſand Men, and conſequently not able to ſtand, or give them a Meeting, he retired to *Holſtein*, whither they purſu'd him, whereupon he threw himſelf into *Tonningben*, and for that Time eſcap'd their Fury; but the Confederates, *Moſcovy*, *Denmark*, and *Poland*, block'd up *Tonningben* till *May* following, but the *Swedes* not being able to ſend their General any Supplies or Reinforcements, he was forc'd to ſurrender himſelf, and his nine thouſand Men (all the Army he had left) Priſoners of War, without any Condition, but that of keeping their Cloaths and Baggage undiſpos'd of, to be exchang'd or redeem'd the firſt Opportunity.

This ſeem'd at leaſt for a little while to put an End to the Wars in *Pomerania*; but the Czar the next Year inveſting *Stetin*, it was agreed between the Czar and the *Swediſh* Governor, by the Mediation of the King of *Pruſſia*, that *Stetin* ſhould be ſequeſtred into the Hands of the King of *Pruſſia*, and be garriſon'd by an equal Force of *Pruſſians* and *Holſteiners* till the War ſhould be brought to a Concluſion, and that it ſhould then be reſtor'd to the King of *Sweden*.

The King of *Sweden* arriv'd at *Stralſund* in *November* 1714; when he found that *Pruſſia*, *Denmark*, *Poland*, and the Elector of *Hanover*, then King of *England*, had form'd a League to preſerve the Peace of *Germany*, by ſecuring the Sequeſtration of *Stetin* to the King of *Pruſſia*; and *Bremen* and *Verden*, and whatever the *Dane* had ſeiz'd in *Germany*, belonging to the *Swede*, ſhould be ſecured to the *Dane*, or his Aſſignees; but the King of *Sweden* inſiſted upon a Liberty to recover thoſe Territories which had been unjuſtly taken from him in his Abſence; but the Kings of *England* and *Pruſſia*, thinking this would embroil the North of *Germany* in a War, came into a Confederacy againſt the King of *Sweden*, tho' at the ſame Time *Moſcovy*, *Poland*, and *Denmark* were engag'd againſt him.

On the Twenty-eighth of *April*, 1715, the King of *Pruſſia* formally proclaim'd War againſt the diſtreſs'd King of *Sweden*; he diſarm'd the Regiment of *Holſtein* then in *Stetin*, and enter'd upon that City as a Specimen of his *Swediſh* Conqueſts. The *Danes* and *Pruſſians*, with their joint Forces, to the Number of ſixty-thouſand Men, appear'd before *Stralſund*; and the King of *Sweden*'s Army not amounting to above one Fourth the Number of his Enemies, he was forc'd to retire for Shelter under the Walls of *Stralſund*. In *July*, this ſame Year, a Treaty was propoſed between the King of *Denmark* and the Court of *Hanover*, by which the King of *Denmark* propoſed to deliver up *Bremen* and *Verden* (which he had taken from the King of *Sweden*) to the Elector of *Hanover*, (then *George* I. King of *England*) upon Condition that the Elector would enter into a War againſt *Sweden*, and advance a Sum of Money to the King of *Denmark*.

The *Danes* and *Pruſſians* being join'd by twenty-four thouſand *Ruſſians*, and a Number of *Saxons*, attack'd *Stralſund*; but that Place being continually ſupply'd with Men, Proviſion, and other Supplies, from the Iſland of *Rugen*, the Confederates thought it neceſſary firſt to cut off the Communication between *Stralſund* and *Rugen*, and conſequently the Supply that had been ſent from the latter to the former; in order to which they landed a great Body of Forces on the Iſland, and, after a ſharp Engagement, ſoon made themſelves Maſters of it, tho' the King of *Sweden* was in Perſon in the Action. This happen'd on the Seventeenth of *November*, 1715.

But, notwithſtanding this Defeat, the undaunted King of *Sweden* reſolved to defend *Stralſund* to the laſt Extremity; and, it being a terrible Winter's Siege, the Centinels were actually frozen to death at their Poſts, the Attacks were deſperate, and great Numbers of the Confederates were ſlain; but the *Swedes* were over-power'd by the numerous increaſing Forces of the Confederates; the King of *Sweden* retir'd home in a light Frigat, giving Orders to the Governor of *Stralſund* to capitulate, which he did the latter End of *December*, and agreed that *Stralſund* and the Iſland of *Rugen* ſhould be deliver'd up to the King of *Denmark*; and that all the Inhabitants of *Swediſh Pomerania* ſhould take an Oath of Allegiance to him, except thoſe of the City and Diſtrict of *Stetin*, with the Iſlands of *Uſedom* and *Wollin*, and the Lands between *Oder* and the River *Peene*, of which the King of *Pruſſia* was left in Poſſeſſion.

Stralſund taken by the *Danes*, &c.

The next Spring the united Forces of the *Danes* and Confederates, *viz.* the *Pruſſians*, *Hanoverians*, and *Moſcovites*, inveſted the Town of *Wiſmar*, the Metropolis of *Mecklenburg*, the only Town which the *Swedes* had left in *Germany*; this Town they alſo obliged to ſurrender, and the Confederates left it in the Poſſeſſion of the King of *Denmark*; and thus this Expedition was over, and the Wars in *Germany* at an End.

Wismar taken.

THE next Year, *viz.* 1716, the *Danes* and *Moscovites*, jointly, made Preparation to make a Descent upon the King of *Sweden*'s Dominions in *Schonen*; the Czar of *Moscovy* himself going in Person to *Copenhagen*, whither his Generals led an Army of thirty thousand Men, Horse and Foot, the King of *Denmark* at the same Time assembling between twenty and thirty thousand Men to join the *Moscovites*, and had also prepared seven or eight hundred Vessels to transport them; but the *Danes* at the same Time, being apprehensive of a Visit from *Sweden*, sent the greatest Part of their Fleet into *Norway*, where it was employ'd most of the Summer; the other great Preparations for the intended Enterprize against *Sweden* came to nothing, the *Dane* being apprehensive that he would have enough to do to defend himself.

THE Czar of *Moscovy* resented the *Dane*'s Remissness in his Preparations, and upbraided him that his Fleet was not ready in Time; the *Dane*, at the same Time, reproaching the Czar for his Conduct, in denying to make the Descent in the latter End of the Year; which the Czar, and not without good Reason, thought impracticable at that Season, as knowing that there was then no Forage to be found, and the King of *Sweden* having forty thousand good Veteran Troops, at the Head of whom he was resolv'd to receive his Enemies, if they attempted any thing against him; for these Reasons the Czar thought it prudent to desist from the Enterprize till a fitter Season, at which Delay the *Dane* was so disgusted, that he began to look very cool upon the Czar, and the Czar return'd the Compliment in as luke-warm a Manner as he had receiv'd it; whereupon the *Dane* drew up his Forces underneath the Cannon of *Copenhagen*, as if he was apprehensive of some Danger from his old Ally the *Moscovite*; whereupon the Czar return'd with his Troops to *Germany*. And indeed if this Expedition had not been broke off in time, it might have been of ill Consequence; for probably had the Czar, by the Help of the *Dane*, or by what means soever, made himself Master of *Sweden*, he might have deserted the *Dane*, and have been a troublesome Neighbour to him, and his neighbouring Princes in *Germany*.

THIS Indifferency between the Czar and the King of *Denmark* continuing, or rather increasing, the mutual Alliance between them seem'd to be in a great Measure dissolv'd; which the King of *Sweden* observing, and that the *Dane*, in any Exigency, could not depend upon the Czar for any Assistance, he threatned to invade the Island of *Zeland*; but, while the King of *Sweden* was making Preparation for his intended Expedition, the Elector of *Hanover*, (*George* the First, King of *England*) apprehending that the Design of the *Swede* might be upon some of his *German* Dominions, sent a Squadron of *English* Men of War into the *Baltick*, under the Command of Admiral *Byng*, which quite put a Stop to the King of *Sweden*'s Design upon *Denmark*.

IN the Year 1718 the King of *Sweden* march'd two Armies into *Norway*, one of them to the Northward to *Drontheim*, and the other to *Christiana*, the King himself being at the Head of the latter; and the *Danes* not having Force enough to oppose them, they laid all the whole Country under Contribution; but the King of *Sweden* laying Siege to *Frederickshall*, was shot in the Trenches before it, which in a great Measure put an End to the Wars between *Sweden* and *Denmark*, tho' the Treaty of Peace was not actually sign'd between them till the Year 1720, nor perhaps would it have been then, but that the *Dane* on one Side, and the *Moscovite* on the other, distress'd the *Swede* at such a Rate, that he found himself obliged to comply with such Terms as the Kings of *Great Britain* and *France*, the Guarantees of the Peace, prescribed to him.

The Swede invades Norway.

THE Substance of this Treaty was, That, by the fifth Article, the King of *Denmark* oblig'd himself not to assist his Czarish Majesty against *Sweden*, or to suffer the *Russian* Men of War to enter his Ports. By the sixth Article, the *Swede* obliged himself to conform to such Measures as the Mediators should take in Behalf of the King of *Denmark*, as concerning the Dominions of the Duke of *Holstein*. By the seventh, the King of *Denmark* obliges himself to deliver up to *Sweden* the City of *Stralsund*, and that Part of *Pomerania*, as far as the River *Pene*; that he should evacuate the Fortress of *Marstrand*, the Town of *Wismar*, the Capital of *Mecklenburgh*, and also the Island of *Rugen*, and other Islands which the *Danes* took in the late War. And in the ninth Article it was stipulated in Favour of the *Dane*, that the *Swede* should pay Contribution, or Toll, for passing the *Sound*, as the *English* and *Dutch* did. And by the tenth Article, the King of *Sweden* engages himself to pay to the King of *Denmark* six hundred thousand Crowns, before the above-mention'd Places be deliver'd up. There was also a separate Article, in which it was agreed, that the Fortifications of *Wismar*, which had been demolish'd in the late War, should never be repair'd, *Bremen* and *Verden* having been before confirm'd to King *George*, as Elector of *Hanover*, by the *Swede* some time ago, as has been mention'd in the former Part of this History.

Treaty of Peace.

CHAP.

CHAP. VIII.

Of the Arms and Titles of the Kings of Denmark: *Of their Nobility, and Orders of Knighthood; and of the Intereſt of* Denmark *in Relation to other Powers.*

THE King of *Denmark* bears the Arms of 1. *Denmark*, 2. *Norway*, 3. *Gothland*, 4. *Schonen*, 5. *Sweden*, 6. *Jutland*, 7. *Sleſwick*, 8. *Iceland*, 9. *Holſtein*, 10. *Stormar*, 11. *Delmonburſt*, and 12. *Oldenburgh*; the Particulars of which are as follow:

Arms. FIRST Party of three, and Coupe of two, which makes twelve Quarters. In the Firſt, *Or*, Seme of Hearts, *Gules*, three Lions paſſant guardant, *Azure*, crown'd, languid, and arm'd of the Firſt, for *Denmark*. 2. *Gules*, a Lion rampant, *Or*, crown'd and arm'd of the Firſt, in his Paws a Battle-Ax, *Argent*, hilted of the Second, for *Norway*. 3. *Gules*, a Lion paſſant guardant, *Or*, on nine Hearts of the ſame, in Feſſe, for *Gothland*. 4. *Gules*, a Dragon crown'd, *Or*, for *Schonen*. 5. *Azure*, three Crowns, *Or*, for *Sweden*. 6. *Gules*, a Paſchal Lamb, *Argent*, ſupporting a Flag of the ſame, mark'd with a Croſs, *Gules*, for *Jutland*. 7. *Or*, two Lions paſſant guardant, *Azure*, for *Sleſwick*. 8. *Gules*, a Fiſh crown'd, *Argent*, for *Iceland*. Over theſe eight Quarters a great Croſs, *Argent*, (the antient Device of the Kingdom) on the Center of which is, *Gules*, a Cavalier arm'd, *Argent*, for *Ditmarſh*. 9. *Gules*, a Nettle Leaf open, and charg'd in the Middle with an Eſcutcheon, the whole *Argent*, for *Holſtein*. 10. *Gules*, a Cygnet, *Argent*, with a Crown, *Or*, for *Stormar*. 11. *Gules*, two Feſſes, *Or*, for *Delmonburſt*. 12. *Gules*, a Croſs, Pattree, Fitchtree, *Argent*, for *Oldenburgh*. The Shield ſurrounded with the Collar of the Order of the Elephant. The Creſt is a Crown, *Or*, flower'd, rais'd with eight Diadems, terminating in a Monde of the ſame. The Motto *Pietas & Juſtitia coronant*.

Title. THE Stile or Title of this Prince is, King of *Denmark* and *Norway*, of the *Goths* and *Vandals*, Duke of *Sleſwick*, *Holſtein*, *Stormar*, and *Ditmarſh*, Earl of *Oldenburgh* and *Delmonburſt*.

THE King of *Denmark* being abſolute, his Prerogative, within his own Dominions, is unlimited, but he acts by Laws and Rules made by his Anceſtors, with what Alterations or Reſtrictions he thinks fit to make. None can ſell or diſpoſe of their Eſtates without his Conſent, he being entitled to one Third of the Purchaſe Money upon every Sale of Lands or Eſtates.

NOBILITY and Gentry were formerly ſynonimous Terms with them, but of late they have introduc'd the Title of Baron, or Count, and commonly thoſe who acquire theſe Titles either are, or are intended to be, the Creatures of the Court. Theſe have the Privilege of diſpoſing of their Eſtates by Will, the Succeſſion of all other Eſtates being determin'd by Law, upon the Deceaſe of the Anceſtor.

IT is more common here to prefer Foreigners, or Natives of mean Extraction, than the Deſcendants of Noblemen or good Families, becauſe they are the fitteſt Tools to execute the Commands of an arbitrary Prince; and if they oppreſs the common People to enrich themſelves, the Prince, by his abſolute Power, can more eaſily ſeize their ill-gotten Eſtates, which, when he does it, is not with a Deſign to make Reſtitution to the injur'd Sufferers, but to enrich himſelf, and he can eaſier handle thoſe obſcure Perſons than he could the Nobility, if they were guilty of the like Extortions; and it may be added, that as the Nobility cannot but envy the Promotion of thoſe Dunghil Miniſters, there will a proportionable Satisfaction accrue from their ſeeing them degraded.

Knights. THERE are two Orders of Knighthood, the moſt honourable of which is that of the Order of the Elephant: This is never conferr'd upon any but Perſons of extraordinary Quality or Merit; it is an Inſtitution of above three hundred Years ſtanding; the firſt Knight of that Order that ever was created, having that Dignity conferr'd upon him at the Wedding of *Chriſtian* the Firſt's Son. Their Badge is an Elephant with a Caſtle upon its Back, ſet with Diamonds, and hung by a water'd Sky-colour'd Ribbon, and wore in the ſame Manner as the Knights of the Garter in *England* wear their *George*. The other Degree of Knighthood is of an inferior Nature to the other, and is only conferr'd upon Gentlemen or Noblemen of a lower Rank; the Badge by which they are diſtinguiſh'd is a white Ribbon with red Edges, and worn on the contrary Shoulder to that of the Order of the Elephant; it hath a ſmall Croſs of Diamonds hung to it, and an Embroidery like a Star on the Breaſt of their Coats, in which is the Motto, *Pietate & Juſtitia*.

MR. *Moleſworth* obſerves, that in the Court of *Denmark* no Enſigns of Majeſty appear but what are of a Military Nature, ſuch as belong to the Horſe and Foot Guards, or to the *Trabants*, who are ſomething like our Yeomen of the Guard in the *Engliſh* Court, and conſequently Trumpets, Kettle-Drums, and other Military Muſick, are uſed in the Court as well as in the Camp; but here are no Swords of State, Maces, or the like, even upon the moſt ſolemn Occaſions. At Dinner the Queen, and the King's Children and Relations, with the Miniſters and General Officers, dine with his Majeſty; Grace is ſaid by one of the Pages, there being none of the Clergy kept in the King's Houſe as Chaplains; one or two Gentlemen only wait at the Table, and the reſt of the Attendants are Livery Servants. The Officers of the Houſhold are, the Marſhal, who takes Care of the Table, to have the Victuals ready in its proper Seaſon, and to give Notice when it is ready; the Comptroller of the Kitchen, who places the Diſhes in their proper Order upon the Table; the Maſter of the Horſe, who looks after the King's Stables, Horſes, and Studs of Mares, of which the King has ſome excellent good ones; among which he has one particular Breed of light Iron Greys, with black Heads, Tails, and Manes.

OF the three Northern Powers, *Moſcovy*, *Sweden*, and *Denmark*, the laſt ſeems at preſent to be much the weakeſt; and *Moſcovy*, once a contemptible Place for its being weak and undiſciplin'd, is now ſo improv'd in Military Knowledge, by Means of their long and continual War with *Sweden*, that it is now the moſt formidable of all the Three, and is become the Terror of their Neighbours; and beſides their Strength, they have alſo increas'd very much in Trade, and conſequently

ſequently in Riches, by reaſon of the vaſt Continent they enjoy, and the many Ports they have made themſelves Maſters of in the *Baltick Sea*, which hath open'd a Trade for them with moſt Nations in *Europe*, and given them great a Opportunity to encreaſe their Number of Shipping, which makes them now very formidable both by Sea and Land; which puts the *Engliſh* ſometimes under a Neceſſity to ſend a Squadron into the *Baltick*, to protect the Balance of Trade, the united Fleets of *Sweden* and *Denmark* not being now able to ſuppreſs the inſulting Power of the *Moſcovite* without the Interpoſition of *England*, or *Holland*, or ſome neighbouring Power. And it may be obſerv'd, that the Power of *Moſcovy*, and the Danger that *Sweden* and *Denmark* would be in if the Czar ſhould make any Attempt upon either of them, has been a great Means of uniting thoſe two late contending Powers for their mutual Security; and the rather, becauſe the *Swedes* are apprehenſive that the *Ruſſians* have ſtill a View of placing the Duke of *Holſtein* upon the Throne of *Sweden*, and if that ſhould be brought to paſs, *Denmark* would be an eaſy Prey to the united Powers of *Moſcovy* and *Sweden*.

And, which might ſtill be of worſe Conſequence, ſhould that come to paſs, is, that probably the Czar would attempt the Reſtoration of the Duke of *Holſtein* to thoſe Dominions of his own which the King of *Denmark* unjuſtly took from him, which might in all probability bring *Denmark* itſelf to be the Seat of War; to prevent which the *Dane* keeps up his Alliance with the *German* Powers, alledging, that it is for their Intereſt as well as his, to keep the Czar's Army out of *Holſtein*, becauſe if the Czar ſhould penetrate into thoſe Dominions of the Duke of *Holſtein*, the Territories in the North Part of *Germany* would be in as much Danger as *Denmark*. And this makes it become the joint Intereſt of all thoſe Northern Powers to unite againſt the *Moſcovites* ſwelling to an exorbitant Power; and if that be done, the *Dane* has nothing to fear from the *Swede*, who is ſo much impoveriſh'd by loſing ſo great a Part of his beſt Territories in the late War, and who dare not act offenſively, leſt the *Moſcovite* ſhould take that Advantage to fall upon his Dominions.

A DESCRIPTION OF GREENLAND,

As to the firſt Diſcovery of it, and the Eſtabliſhment of the Whale-Fiſhery there, &c.

CHAP. I.

Of the Situation of Weſt Greenland; *with an Account of the Inhabitants, Animals, and Produce of the Country.*

AMONGST Geographers it is not certainly known whether *Eaſt* and *Weſt Greenland* be upon the ſame Continent; ſome lay down the North-Eaſt Part, commonly call'd *Eaſt Greenland*, as an Iſland, which to me ſeems the moſt probable; but whether that be ſo or not, they were not both diſcover'd at the ſame Time, or if it be all one Continent, the Knowledge of it was the Effect of more Diſcoveries than one; indeed I am inclined to think, that the North-Eaſt Part of it, known by the Name of *Greenland*, or *Eaſt Greenland*, (in oppoſition to the Weſtern Part of it, call'd *Greenland*, or *Weſt Greenland,*) is an Iſland, becauſe there are Roads, Iſlands, and Sounds or Bays, on the Weſt Side of it, eſpecially *Bell Sound*, where the *Engliſh* winter'd in the Year 1630; but if it was a Part of the Continent, whoſe Coaſt ſtretches North-Eaſt and South-Weſt, it is no Iſland, and conſequently there could be no ſuch Harbours or Coves on the Weſt Side of it, as both the *Engliſh* and *Dutch Greenland* Men, that uſe that Fiſhery, know there are.

As for the Diſtinction, or Difference, between the Names, *Greenland* and *Groenland*, I look upon it as having no Share in the Argument on either Side, but rather impute the Difference between theſe two Words, or Names, to be owing either to the corrupt Way of the *Dutch* pronouncing the *Engliſh* Language, or, *vice verſa*, the *Engliſh* pronouncing the *Dutch*; and this I am rather inclin'd to think, becauſe the South-Weſt Part of it was the firſt diſcover'd, and call'd by the Name of *Greenland*, before the North-Eaſt Part was known, at leaſt to any in theſe Parts of *Europe*; but when the North-Eaſt Part was diſcover'd, and probably then ſuppos'd to be a Part of the ſame Continent, it was alſo call'd *Greenland*; and hence it became neceſſary to diſtinguiſh one from the other, which was naturally done by their Situation, as *Eaſt Greenland* and *Weſt Greenland*, under which Denominations I ſhall give the following Deſcription of them, only obſerving that the *Dutch* call *Eaſt Greenland Spitsbergen*, from the Craggy Rocks which appear upon the Coaſt, *Spits* in *Dutch* ſignifying Craggy or Pointed, and *Berg* a Hill or Eminency, or a Precipice higher than the common Land about it.

Weſt Greenland is a large Tract of Land, of which now the King of *Denmark* claims the Sovereignty, as he did alſo of *New*, or *Eaſt Greenland* when it was firſt diſcover'd, as ſuppoſing it to be be on the ſame Continent with *Old* or *Weſt Greenland*; and under this Pretence of a Claim he endeavour'd to exclude the *Engliſh* from fiſhing for Whales there, and had he had Power to his Good-Will, he would doubtleſs have accompliſh'd his Deſign; but as there were no Inhabitants to be his Subjects, and keep Poſſeſſion for him, his Right to Sovereignty was but little look'd upon, but the *Engliſh* and *Dutch* went upon the Whale-Fiſhery there as they thought fit.

Greenland (including both *Eaſt* and *Weſt Greenland*) is a long Tract of Land, lying four or five Days Sail Northward and Weſtward from *Iceland*; it extends from Cape *Farewel*, which lies between ſixty and ſixty-one North, and extends North-Eaſt into Latitude eighty or more, being in Length near ſix hundred Leagues. We have ſome uncertain Accounts of this Land being firſt diſcover'd by the *Norwegians*, about the Year 982, and that they built ſeveral Towns, and converted the Inhabitants to Chriſtianity, &c. But be this Fact or Fiction, if we may believe our Countryman Captain *Forbiſher*, who was upon this Coaſt in the Year 1577, endeavouring to find out a North-Weſt Paſſage to *India*, and whoſe Account I look upon to be more Authentick; he tells us, that when he was upon that Coaſt, the People were perfectly barbarous, and that there was no Reaſon to believe that any of their Progenitors had ever been otherwiſe, there not being ſo much as the Ruins of any Town to be ſeen; and with him agree *Hudſon*, *Davis*, *Baffin*, and *James*, and

indeed all that went upon any of thoſe Northern, or North-Weſt Diſcoveries; nay the *Danes*, who pretend to ſome Sort of a Property there, yet in a Voyage in the Year 1605, could not ſo much as bring the Natives to converſe with them, ſo that whatever Inhabitants there are, it is evident that they never were the Subjects of the Crown of *Denmark*, and ſo far were they from paying any Homage or Reſpect to them, that they were always upon their Guard, and ready to fall upon them as Enemies, and Invaders of their Country, and tho' they took ſome of them by Force, and brought them to *Denmark*, yet they were always indocible, and could never be brought to converſe, ſo as either to underſtand, or to be underſtood.

Face of the Country.

THE Country is rocky and mountainous, the Hills cover'd with Snow, and the Harbours, or Creeks along the Shore, frozen up moſt part of the Year, there are ſeveral Bays and Inlets on the North-Weſt Part of *Greenland*, eſpecially *Davis's Streights*, which lead up into *Baffins's Bay*, where the Adventurers ſail'd as high as Latitude eighty Degrees, but not being able to find any Paſſage to the Southward or Weſtward, they were obliged to return by the Way they went in; and hence they found Reaſon to conclude that *Greenland* is contiguous to the Main Continent of *America*, which Opinion they think is confirm'd by the following Reaſons:

FIRST, It is obſerv'd that the Ice to the Weſtward is unmoveable as if it was fixt to the Land, whereas in the Ocean the vaſt Iſlands and Mountains of Ice are always in Motion; and if there were a Communication by Sea between that great Northern Ocean, which is between *Europe* and *North America*, and the Ocean that is to the Weſtward of *North America*, theſe Mountains of Ice in that Place would alſo be continually in Motion, according as they are affected by the Wind, or Tides, or both.

ANOTHER Reaſon againſt this Paſſage, is, that the natural Courſe of the Tide is from Eaſt to Weſt, if not oppoſed or reſtrain'd, but theſe Tides flow one Way and ebb the other, which is a plain Proof that they meet with ſome Obſtruction, which puts a Stop to their Courſe, and makes them ebb back again by the ſame Way they flow'd in, but upon a contrary Direction, which as Experience proves the Fact, ſo that being Fact amounts to no leſs than a Proof that there is no ſuch Paſſage between *Greenland* and *America*.

THE many ſmall Iſlands upon the Coaſt of *Greenland* form ſeveral good Bays and Harbours; there are alſo many large navigable Rivers, which riſe in *Greenland* and fall into thoſe Seas; up which the Diſcoverers have ſail'd ten or twelve Leagues into the Country; ſome of thoſe Rivers afford plenty of Fiſh, and ſome of the Plains and Valleys are very fruitful. The Air is cold, and the Fogs very troubleſome. Here the *Aurora Borealis*, or Northern Light, appears, with much more Splendour than in *England*, and is more ſo in the Spring of the Year, and near the New Moon, when it ſometimes darts forth Streams of Light from the Horizon almoſt to the Zenith, and that as quick as Lightning, and for a long Time together, without Intermiſſion, but diſappears about Break of Day; but probably it does not actually ceaſe, but continue as much by Day as by Night, only it diſappears becauſe the Sun, the much more reſplendent Light, renders it imperceptible. There was the ſame Sort of *Phenomena* ſeen in *England*, on the Sixth of *March*, 1716, which People put different Conſtructions upon, and were apt to think it ominous; but it has appear'd in *England*, more or leſs, very often ſince, but it is much more frequent and ſplendid in higher North Latitudes than in *England*. It was very common for us in the great Northern Ocean, between the North Cape and *Greenland*, to write, or ſet down, any ſmall Memorandum or Obſervation on the (otherwiſe) darkeſt Nights, having no other Light but the *Aurora Borealis*.

Perſons.

AS to the Perſons of the Natives, they are ſhort and ſtrong, their Hair black, their Complexion dark Tawny, their Faces flat and broad, like the *Tartars*, and their Lips thick like the *Negroes*. They are very ſhy with Foreigners, and indeed no Wonder, if we conſider that our Ships have forcibly carry'd off ſeveral of the Natives, and kill'd and wounded others, for no other Crime but defending themſelves from our unnatural Plunder, in carrying them off, as if they were our Property, or were not of the Human Species; what can we expect when we go a Shaving, as it is call'd, for *Negroes*, and do not ſcruple to ſteal the very Children from their Mothers to make a little Money of, and call it *Trading*, when at the ſame Time our Principles, as Chriſtians, teach us that it is an odious and ſhameful Sin to ſteal a Calf or a Sheep: Does not this give them juſt Reaſon to think us as barbarous and inhuman as we eſteem them; in this we condemn ourſelves out of our own Mouths, in as much as we think ourſelves to know more of Reaſon and Chriſtianity than we think they do, doubtleſs when they have been ſo ill uſed by the *Engliſh*, or other Chriſtians, they do not bewray ſo much of a ſavage Temper, in defending themſelves from us, as we do in invading their Properties, and making Merchandize of their Perſons, to carry to Chriſtian Markets; and this Liberty we take, becauſe we think that we are more civiliz'd than they, but it is well if the Practice do not prove us quite contrary in that Particular.

Temper.

THE Men are hardy and reſolute, and ſometimes, with more Courage than Conduct, have engag'd the *Engliſh* with Slings and Bows and Arrows, when we have fired both great and ſmall Shot at them; but, tho' this may be ſaid of the *Greenlanders*, it is not ſo with the *Laplanders*, tho' otherwiſe their Habit and Way of Living is much the ſame; for the *Greenlanders* cloath themſelves with Skins of Rein-Deer, of Fowls, or ſometimes of Fiſhes, and are drawn by Rein-Deer, Dogs, or other Animals. They have no ſettled Habitations, but wander from Place to Place; living in Tents in the Summer, and in Huts, or Caves, made under the Hills for Shelter, in the Winter, contrived with ſubterraneous Paſſages from one Hut to another in the time of the deepeſt Snows. Their Employments, and indeed a great Part of their Subſiſtence too, is Fiſhing and Hunting. Their Women make long blue Streaks on their Foreheads, Lips, and Chins, with a coarſe Sort of Paint; they plait their Hair, and generally have ſome ſort of Pendants in their Ears.

Language.

THE *Greenlanders* ſpeak very thick, and pretty much in their Throats; they pronounce the Letter *G* rough, like the *Tartars*; they uſe no *R*, but put *L* inſtead of it, as, inſtead of *Right* they ſay *Light*; they have ſome *Daniſh* Words in their Language, but are ſo great Strangers to it in general, that the Natives who were brought over to *Denmark*, could never be brought to learn it. They do not know the Value of Gold or Silver, but very much value Toys in Iron and Steel, ſuch as Knives, Sciſſors, Needles, *&c.* And, either for the Sake of the Value, or the Metal it is compos'd of, they ſometimes attempt to ſteal the Anchors from Ships, and yet they ſeem to have no Art in forging Iron, for if they had, they would ſcarce head or dart their Arrows with Fiſhes Bones, as is now their Way of doing it. Whatever might be their Method of ordering their Fleſh-meat, they have now got the Way of boil-

ing, broiling, or roasting it; it is commonly the Flesh of Rein-Deer, Foxes, or Dogs, as also dry'd Fish: but our latest Discoverers have not found any Bread-Corn grow in the Country; nor can it well be expected, the Climate consider'd.

Religion and Government.

Among such a wild uncivilia'd People there cannot be any great Account expected of their Religion or Government; for as for the latter, they seem to be govern'd by Power rather than Law, and the weakest are obliged to submit to the strongest; and as to their Religion, some People report them to be Idolaters, but the only Reason they assign for that Opinion is, because they have found some monstrous and deform'd Images on the Shore, which they therefore suppose are worshipp'd by them as Gods, but the Presence of the Images, or the Report of those Travellers, are no Proofs of the Fact. Our modern Discoverers tell us, that when the Natives relate any thing with Gestures and Asseverations, proper to exite Belief, it is common with them to point at the Sun, and clap their Hand upon their Breast, as if they thought that great Light was able to penetrate into their most private Thoughts, and as if they appeal'd to it for the Truth of what they assert; and this I can readily believe to be the Truth, because I have seen them, when I was in *Moscovy*, pay this Sort of Veneration, or Worship, to the Sun, and especially in the Morning at its first Appearance, but there they commonly added the Ceremony of Crossing themselves, which, by what I can find, is not used in *Greenland*.

Animals.

The Beasts which are most common or plenty in *Greenland*, are Rein-Deer, Bears, Foxes, Dogs, and Sea-Horses, or Morses, but these last being at present more plenty about *Cherry Island* than upon the Coast of *Greenland*, I shall speak of them, and the Manner of using them, when I come to treat of *Cherry Island*, in Chap. III. following. The Sword-Fish is stil'd the Sea-Unicorn, and the Teeth of some of the largest of them have been brought from *Greenland*, and call'd Unicorn's Horns; they have plenty of Salmon, and other good Fish, with Red Geese, Water-Fowls, and White Partridges, as in *Lapland*.

Produce.

Timber is very scarce in *Greenland*, especially near the Coast. Some think the Soil sufficiently fertile to bear Corn, but if we consider the Shortness of the Summer, and Coldness of the Winter, it will be easy to conclude that there is no Season for the Sowing, Growing, and Ripening of Corn, especially Wheat or Rye, which requires so many Months to bring it to Perfection in such a temperate Climate as *England*. Their Mountains are continually cover'd with Snow, and consequently can yield but little Herbage; but as to what may be further up in the Country, our Sailors, who only trade upon the Coast, have not had any great Opportunity to give us any Account of.

Boats.

Our Mariners mightily admire the Manner of their building their Boats, which are of two Sorts, one is a small one just to carry one Man, the other is thirty or forty Foot long, with ten or twelve Seats for the Rowers to sit upon; the Ribs, or Timbers, are made of Whale-bone, tack'd together with the Sinews of Animals, and cover'd with Seal-Skins. The small Boats, or Canoes, are managed with one Oar, or Paddle, both Ends of which are broad, or feather'd alike, as the feather'd End of an Oar, and with this they can paddle on each Side alternately, without turning the Oar, or having two, and they will, with one Man only, paddle along with incredible Swiftness.

CHAP. II.

Of the Situation and Extent of East, *or* New Greenland, *and of the first Discovery of it; and of some further Probabilities of its joining to* Asia *as well as* America; *with an Account of some Attempts that have been made to discover a Passage to* China *this Way.*

Situation and Extent.

Some Part of *New*, or *East Greenland* is under the same Meridian, or Longitude, with the North Cape of *Norway*, or Northermost Point of *Europe*; the most Southerly Part of it is in about Latitude seventy-six Degrees, but the Extent of it to the Northward is unknown, or whether it may not extend as far as the Pole, or further, or whether the North Pole may not be in the Zenith of some Part of *Greenland*, is uncertain, Navigation so far as under the Pole being hitherto thought impracticable; and as to its Extent East and West, some think it is contiguous to *Asia* on the East, as well as, by the foregoing Conjectures, we have concluded the Probability of its being contiguous to *America* on the West.

The first Northern Discoveries of which we have any authentick Account, or in which the Crown of *England* was interested, were in the Reign of King *Edward* VI. at the Charge of a Society of *English* Merchants, incorporated under the Stile or Title of, *The Merchant Adventurers for Discovering of Lands unknown*, &c. but, altho' they acted under this general Title, their more particular Design was to find a North-East Passage to *India* and *China*, that they might participate with the *Portuguese* in that profitable Trade, by a nearer Way than by the *Cape of good Hope*, which the *Portuguese* having discover'd before the *English* knew any thing of that Way to *India*, [*See the History of the* Oriental Islands, *Chap.* I. *in Page* 93.] the *English* thought it would be ungenerous in them to take the Advantage of a Way to the *Indies* which the *Portuguese* had been the Discoverers of: But whatever tender Consciences the *English* might be govern'd by, yet the *Dutch* were not actuated by such a Principle, when they not only robb'd us of our Property, but massacreed our Fellow-Subjects, the *English*, at *Amboyna*, and others of the Spice Islands, and that when we had not only found out the Way to them, but had them in Possession too; [*See Chap.* XV. *of the* Oriental Islands, *Page* 117.] nor had they that regard for Honour or Principle, when they knowing that we were in the *Russia* Trade and the Whale-Fishery, before ever they attempted those Trades, yet now not only have their full Share, but rather drive the Trade as if they endeavour'd to engross it all to themselves. But we may assign as another Reason of this Attempt for a North-East Passage, *viz.* that if such a Passage could not be found, yet they might in the Attempt discover

some

ſome Place where they might eſtabliſh a Trade as advantageous, or at leaſt might be an Equivalent for the Charge. But to proceed,

This Engliſh *Company for diſcovering unknown Lands* fitted out three Ships, under the Conduct of Sir *Hugh Willoughby*, as Admiral; but he, with another of them, being ſeparated from the Third, theſe two doubled the North Cape, and ſteering North and North-Eaſt for ſome Weeks diſcover'd Land, which the *Engliſh* think was *Greenland*, but the *Dutch* would have it to be *Nova Zembla*; and, for any thing we have yet diſcover'd to the contrary, they may be both one and the ſame Continent, for they both went by the Name of *Nova Zembla* at the firſt Diſcovery of them, and the boldeſt Diſcoverers have not yet found out any Paſſage betwen them; but Sir *Hugh Willoughby*, without ſatisfying himſelf what Land it was that he had diſcover'd, ſteer'd South and South-Weſt, and fell in with the Coaſt of *Moſcovite Lapland* in *September* following. [*See more of this in Chap.* VIII. *of the Deſcription of* Moſcovy, *Page* 390]

But here I muſt deviate from the frightful Account which ſome of our Hiſtorians give of that Coaſt: They tell us, that Sir *Hugh Willoughby* was there embay'd with Ice, and that he and all his Company dy'd, as it was firſt ſuppos'd, by Extremity of Cold, or by the Scurvy, having nothing but ſalt Victuals aboard. *Thus far a very late Author.* But I beg leave to ſubjoin, that however ignorant we might be of thoſe Seas and Coaſts at that Time, and how much ſoever further Diſcoveries might make the Voyage more natural to us, yet the Climate was always the ſame; and tho' I have been in and coming out of the *White Sea* in *October*, and ſail'd then upon the Coaſt of *Lapland*, and coming about the North Cape, in a Latitude ſome Degrees to the Northward of it, yet I have never ſeen any ſuch frightful Shoals of Ice at that Time of the Year; I own I have been ſailing into the *White Sea* the latter End of *June*, and have met Iſlands of Ice coming out of that Sea, but that was the Product of the Froſt of the preceding Winter; the Ice in the River breaking up that Year the Third of *May*, and the Ice from that Time to the latter End of *June* was doubtleſs floating about in the *White Sea*, as the Wind and Tide gave them Motion, till the Heat of Summer had a ſufficient Power and Time to diſſolve them. However, Sir *Hugh Willoughby* periſh'd in this Attempt, but the *Edward Bonadventure*, Captain *Chancellor* Commander, which had been ſeparated from him, doubled the North Cape, and diſcover'd the Bay of *Archangel*, now call'd the *White Sea*, and ſettled a Trade with *Ruſſia*; which being already treated of in Chap. VIII. Page 300, of *Ruſſia*, I ſhall not repeat it here.

But the *Engliſh* Diſcoverers, not yet diſcourag'd from their Attempt to find a North-Eaſt Paſſage, fitted out a Ship, in the Year 1556, under the Command of Captain *Stephen Burroughs*: He ſail'd beyond the *White Sea*, or Bay of *Archangel*, as it was then call'd, and diſcover'd the Streights of *Waygats*, which divides *Nova Zembla* from the Main Continent of *Ruſſia*, and then return'd home.

But the unweary'd Adventurers, when they found this Enterprize miſcarry, of finding a North-Eaſt Paſſage to the *Chineſe* Seas, they then aim'd at a North-Weſt Paſſage; and in this Sir *Martin Forbiſher* was employ'd, in the Years 1576, 1577, and 1578; but after three Years ſpent to no Purpoſe, he was forc'd to deſiſt, the Land or Ice intercepting any further Paſſage.

This indefatigable Company, not willing yet to quit their Undertaking, ſent out two Ships more, in the Year 1580, under the Command of Captain *Arthur Pett* and Captain *Charles Jackman*, upon another Attempt to find out a North-Eaſt Paſſage to *China*; and they paſſing the Streights of *Waygats*, ſail'd as far Eaſt as they could for Ice, and then agreed to return back by the ſame Way they went; but it was ſuppos'd that Captain *Pett* was loſt in his Paſſage home, being never heard of more.

Hitherto the *Engliſh* only had attempted thoſe Seas, but now the *Dutch*, whoſe Induſtry conſiſts moſt in taking the Advantage of the Trade and Diſcoveries that other People have been at the Charge of, they follow'd the Steps of the *Engliſh*, and came to *Kola* in *Lapland*, and from thence into the *White Sea*, or Bay of *Archangel*. And in the Year 1596 they fitted out four Ships, under the Conduct of *William Barents*; he paſs'd the Streights of *Waygats*, and ſail'd Eaſt till the Ice oblig'd him to retreat. But not thus ſatisfied, they gave him the Command of ſeven Ships the next Year, that no Opportunity might be loſt to find this ſuppos'd North-Eaſt Paſſage, but ſtill in vain; for tho' they did not meet with Land to intercept their Paſſage, yet the Ice was ſo ſtrong as to render that Sea unpaſſable; but upon a Conſideration, that, as they found Sea for a Paſſage, and no Land to interpoſe, there might, ſome Time of the Year or other, be a Paſſage found; whereupon they ſent the ſaid *William Barents* with two other Ships, and with them he ſtood more to the Northward, and came to an Iſland, in about Latitude ſeventy-four, which the *Engliſh* had diſcoverd before, and call'd it *Cherry Iſland*, but when they found it, they, willing to be thought the firſt Diſcoverers, call'd it *Bear Iſland*; from hence they ſail'd to the Northward, into Latitude eighty, and diſcover'd the Land, call'd by them *Spitsbergen*, but the *Engliſh*, who had diſcover'd it likewiſe before the *Dutch* did, had call'd it *Eaſt Greenland*, or *New Greenland*; here they went aſhore, but give no Account of the Nature of the Country, or whether they found any Inhabitants, and made the beſt of their Way back to *Cherry Iſland*.

From thence they ſail'd to the North-Eaſt of *Nova Zembla*, into Latitude ſeventy-ſix, and came to an Anchor in a Bay or Creek, which, by Reaſon of the Severity of the Froſt, they call'd *Ice-Haven*; here they were ſo block'd up with Ice in *September*, that notwithſtanding their Attempts to get out, they found it impracticable; whereupon they went aſhore, thinking to build them an Houſe, and, which is very remarkable, although there was no Wood grew upon the Land, yet they found great Plenty of Timber Trees floating along the Shore, which anſwer'd their Purpoſe; but by the End of *September* the Froſt was grown ſo ſevere, that Nails or any Thing of Iron they handled ſtuck to their Fingers. One Author, writing upon this Voyage, ſays, the Sun left them about the fourth of *November*; but in Latitude ſeventy-ſix the Sun would leave them as ſoon as his Declination amounted to fourteen Degrees South, which would be about the Twentieth of *October*, except ſo much as the Refraction amounted to, and therefore it is rather to be ſupoſed that Day-light grew very dim at that Time; for on the Fourth of *November* the Sun was between four and five Degrees below the Horizon when neareſt it, but during the Sun's Abſence, the Moon, when at Full, was continually above the Horizon, which, with the Snow, afforded them a tolerable Light; by the Twenty-fourth of *January* they could ſee the upper Edge of the Sun in the South, and on the Twenty-ſeventh they could ſee his whole Body; on the Twenty-ninth of *April* the Sun firſt appear'd to them in the Northern Horizon, and from that Time continued above the Earth all the twenty-four Hours, as long as they ſtay'd, which was till the Fourteenth of *June* following.

But an Objection may eaſily be made againſt the Truth of this Journal, from that known Aſtronomical Truth, that at any Latitude propoſed, the Sun ſhould have juſt the ſame Declination South, when he is firſt ſeen in the Southern Horizon, as he has North, when firſt ſeen in the Northern Horizon, under the Pole; (which in this Caſe muſt always be in a Latitude above ſixty-ſix Degrees thirty Minutes.) But the Sun's Declination South on the Twenty-fifth or Twenty-ſixth of *January*, when the Center of the Sun could firſt be ſeen in the South, differ'd from his Declination North *April* the Twenty-ninth, when he firſt appear'd in the North under the Pole; but this may be charitably accounted for in Obſervations taken by Men under ſuch difficult Circumſtances; and not only ſo, but probably they might not have a true Horizon on both Sides of them; for if they had the Sea and a true Horizon to the Northward of them, and nothing but ſnowy Mountains to the Southward, they might do the beſt they could in both Caſes, but it could not be expected that under theſe Inconveniences their Obſervations could be capable of being reconcil'd to Mathematical Demonſtration.

Here they ſtay'd till the fourteenth of *June*, in which Time they buried one Man at *Nova Zembla*; another had his Great Toe frozen off; and *Barents*, the Pilot, and another of their Company, being dangerouſly ill, this further weakned and diſcourag'd them; but finding no Hopes of an Opportunity of getting the Ship out of the Ice, they ventur'd to Sea in two open Boats, by which, with great Difficulty, they made their way through the Ice, ſometimes rowing between the Shoals of Ice, and ſometimes, when there was no Channel, nor open Place to row in, they hawl'd their Boats over the Ice till they found ſome Water not frozen; and this happen'd ſometimes for four or five hundred Yards or more, which made this mix'd Expedition very tedious.

On the twentieth of *April* their Pilot, *William Barents*, died, as did alſo their other ſick Man the ſame Day, and on the fifth of *July* another of their Men dy'd; in this deſperate Caſe they kept the Sea in their two open Boats. They croſs'd the Mouth of the *White Sea* to the Coaſt of *Ruſſia Lapland*, and arrived at the River *Kola*; on the ſecond of *September* they met with Captain *Corneilſon*, and ſeveral other *Dutch* Veſſels; and as Captain *Corneilſon* came out with them the Year before, they went aboard of him, to get their Paſſage home to *Holland*, where they arriv'd the firſt of *November* following. Note, from *Ice Harbour*, where they left the Ship, to the River *Kola*, is not much leſs than a thouſand Miles, which, notwithſtanding the boiſterous Seas and Mountains of Ice, they perform'd in their open Boats.

Hudſon's Voyage.

But, notwithſtanding all thoſe Miſcarriages of the *Dutch*, the *Engliſh* fitted out one Ship more, in the Year 1607, under the Command of *Henry Hudſon*. He ſail'd from *England* the firſt of *May*, and on the twentieth of *June* following arrived on the Coaſt of *Greenland*, in Latitude about ſeventy-eight; but ſailing to the Nortward, or rather North-Eaſt, they, on the twelfth of *July*, found themſelves in Latitude eighty, *Greenland* then bearing South South-Weſt about twelve Leagues. Here they met with ſuch Floats of Ice as made Sailing very dangerous: Here *Hudſon* made for the Land, and, willing to know what the Country produc'd, ſent ſome of his Men aſhore, to bring him a Specimen of what they could ſee. They at that Time found it very hot Weather upon the Land; and finding a Stream of clear cool freſh Water by the Sea Side, they enjoy'd and refreſh'd themſelves to their great Satisfaction, and then pick'd up Morſes Teeth, Whalebone, and Deer's Horns, or any Thing worth their Notice, to ſhow what the Land or Shore produc'd.

When here, Mr. *Hudſon* obſerv'd the high Land to extend, as he thought, as far as Latitude eighty-two, and not knowing but that it might be an Iſland, attempted to ſail round it, but found it impracticable, by reaſon of the vaſt Quantities of Ice to the Northward, which, between the Latitudes of ſeventy-eight Degrees thirty Minutes and eighty-two Degrees, abound ſo in thoſe Seas as to render Navigation there impracticable.

In the Year 1608, on the twenty-ſecond of *April*, Captain *Hudſon* ſet out from the River *Thames*, with ſixteen Men aboard, and on the twenty-ninth of *May* was in Latitude ſeventy-three and upwards, having then the Opportunity of ſeeing the Sun in the Meridian under the Pole; on the third of *June* the North Cape bore South-Weſt eight Leagues; and ſteering from thence North-Eaſt, they met with the Ice in Latitude ſeventy-five and a half; but they continued their Courſe, notwithſtanding the Ice, for four or five Leagues; but as they went further the Ice grew ſo thick and ſo ſtrong, that they were forced to deſiſt, and were glad to get out of the Ice the ſame Way they went in, and ſail'd ſo far to the Southward as to get themſelves diſcharg'd from the Ice.

They then directed their Courſe Eaſterly, till they made *Swart's Cliff* in *Nova Zembla*; where ſending ſome of the Men aſhore, they found Graſs, Moſs, and Flowers growing; they alſo found a Croſs ſtanding up by the Sea Side, and a great Quantity of Timber driven aſhore, and ſaw Places where Fires had been made; they found the Prints of the Feet of Bears, Deer, and Foxes, and found Whale Fins and Horns of Deer, ſome of which they brought aboard; and a Day or two after they ſaw a Herd of white Deer, and kill'd a great many Fowls; but, as to the Diſcovery, what they thought moſt worth their Obſervation was, that they obſerv'd a ſtrong Current which carried the Ice and every thing elſe along with it that was in it, which gave gave them ſome Reaſon to hope that there was a Communication between that Sea and the Eaſtern Ocean, and ſo to *China*; but ſailing ſix or ſeven Leagues in that Current, they found, by their Soundings, that if there was a Paſſage, yet it was too ſhallow for Ships of any Burthen, whereupon they again deſiſted and return'd home.

Captain *Hudſon* tells us, that the Land in *Nova Zembla* affords a pleaſant Proſpect, eſpecially in the Summer-time, and that he ſaw ſome of the high Lands that had no Snow upon them, but that it appear'd green, and Herds of Deer feeding upon it; but it is difficult to know where thoſe Deer retire for Paſture and Shelter when the Ground is cover'd with Snow in the Winter-time.

Capt. Wood's Attempt.

The laſt Attempt that was made towards a North-Eaſt Paſſage, was by Captain *John Wood*, who was ſitted out in the Reign of King *Charles* the Second, at the Charge of *James* then Duke of *York*, and afterward King *James* the Second. He ſaild from the *Thames* on the twenty-eighth of *May*, 1676, in the *Speedwell*, having for a Companion the *Proſperous Pink*. He ſeems to have added little or nothing to the Diſcoveries made before (if they could be call'd Diſcoveries,) for he follow *William Barent*'s Tract, ſteering North-Eaſt from the North Cape of *Norway*, thinking to fall in between *Greenland* and *Nova Zembla*, but he found there was no Paſſage; all that he could infer from what he obſerv'd, was, that *Greenland* and *Nova Zembla* he thought to be all one

Continent; and, as he obſerv'd, that the Tides, which ebb and flow about eight Foot, always flow'd one Way and ebb'd the contrary Way, he concluded that either *Greenland*, *Nova Zembla*, and *Tartary* too were all upon the ſame Continent, or if there was any Paſſage between them, it was ſo narrow and choak'd up with Ice, that Navigation therein was impracticable.

CHAP. III.

Of the firſt Eſtabliſhment of the Greenland *Fiſhery, and of the ſeveral Steps taken towards it, by the* Engliſh *and* Dutch *diſputing the Right of it. Of the* Engliſh South Sea *Company's undertaking it, and afterwards declining it, for Reaſons beſt known to themſelves.*

First Diſcovery.

THE *Engliſh* firſt diſcovering, in their Northern Voyages, great Numbers of Morſes and Whales in the Seas about and near *Greenland*, ſome of the Ships belonging to the *Engliſh Ruſſia* Company attempted the taking of Morſes and Whales on the Ice, on the Northern Coaſt of *Moſcovy*, making Oil of their Fat, or Blubber. The Morſes have alſo two Tuſks, or great Teeth, which were then eſteem'd equal to Ivory; but whether the Morſes contracted a Shyneſs, from their being continually hunted by our Mariners, or for whatever other Reaſon, however, they have in a great Meaſure forſaken the *Moſcovite* Coaſts, and were afterwards much more plenty about *Cherry Iſland*. Their Haunt there was firſt diſcover'd by Captain *Stephen Bennet*, who was fitted out at the Charge of Sir *Francis Cherry*, in the Year 1603; and ſailing to the Northward from *Kola* in *Lapland*, he ſaw Land, in between ſeventy-four and ſeventy-five of Latitude, where going aſhore, he found it to be an Iſland; and in Compliment to his Owner, at whoſe Charge he was fitted out, he gave it his Name, and call'd it *Cherry Iſland*. Being aſhore he found plenty of Morſes Teeth, but the Seaſon for taking Morſes being paſt, he ſatisfy'd himſelf with the Diſcovery he had made, and ſo return'd to *England*.

Captain *Bennet's* Expedition.

THE next Year, *viz.* 1604, Captain *Bennet* ſail'd to *Cherry Iſland* again, and found above a thouſand Morſes on the Shore, killing many of them. And finding ſuch Encouragement for a Trade of that kind, he went again, *Anno* 1605, taking with him what Utenſils were neceſſary, for making Oil of the Morſes Fat, or Blubber, and bringing it home, as Coppers, Casks, *&c.* and made eleven Tun of Oil, which he brought home, as alſo ſeveral of the Morſes Teeth. The *Engliſh* alone continued to follow theſe Voyages till the Year 1610, increaſing every Year in their Succeſs and Quantity of Oil.

The *Ruſſia* Company finding this Encouragement, fitted out a Ship, in the Year 1610, of ſeventy Tuns, *Jonas Poole* Maſter: He was deſign'd for *Cherry Iſland*, and to make further Diſcoveries towards the North Pole; he ſail'd beyond *Cherry Iſland*, into Latitude ſeventy-ſix, and made the Land now call'd *New Greenland*; he ſail'd afterwards into Latitude ſeventy-nine, and came to an Anchor in a good Road, and ſending his Boat aſhore, the Men found ſome Whales Fins, and a great Number of Morſes: He erected a Croſs on the Side of a Hill, as a Teſtimony of his having taken Poſſeſſion of this Country for the *Engliſh Ruſſia* Company, and call'd the Road, in which he was at Anchor, *Croſs-Road*; and continuing till the latter End of *July*, killing Morſes, and making Oil, and in the mean Time ſeeing great Numbers of Whales, he return'd home with his Cargo, and an Account of what he had ſeen, as a further Encouragement to purſue the *Greenland* Trade.

The *Ruſſia* Company ſet on foot.

IN the Year following, which was 1611, the *Ruſſia* Company fitted out two Ships for *Greenland*, *viz.* the *Elizabeth* and the *Mary Margaret*, under the Command of *Jonas Poole* and *Stephen Bennet*, both intended to kill Whales and Morſes in *Greenland*. They ſail'd from the *Thames* the eleventh of *April*; they were very much perplex'd with Ice in their Paſſage to *Greenland*, eſpecially one Bank to the Eaſtward of them, about forty Leagues in Length, which ſeem'd without any Motion, as if it was fix'd to the Land; but, however, they arriv'd ſafe in *Croſs-Road* in *Greenland* on the twenty-ninth of *May*.

THE *Elizabeth*, Captain *Poole*, being order'd to try if it was poſſible to paſs from *Greenland* to the Pole itſelf, he ſet ſail accordingly, and ſail'd as far North as Latitude eighty; but there he found the Ice ſo firmly fix'd, that there was no paſſing through it; he therefore ſteer'd South-Weſt along the Shore, having the Ice and Land on the North-Weſt, or Starboard Side of him, till he came near that Part of the Coaſt of *Old Greenland*, call'd *Hudſon's Hold with Hope*, and then run forty Leagues further Weſtward, where he ſaw abundance of Whales by the Edge of the Ice; and finding this continued Tract of Ice from North-Eaſt to South-Weſt, and no Hopes of a Paſſage to the North-Weſt, he ſail'd back to *Cherry Iſland*; (not knowing till now what was become of the *Mary Margaret*, which he left in *Croſs-Road*;) but when he came at *Cherry Iſland* he found ſome of the *Mary Margaret's* Men aſhore there, having loſt their Ship, and left a great Quantity of Oil aſhore in *Greenland*; upon this News Captain *Poole* ſteer'd away again for *Greenland* to fetch their Effects; but when they came there, and were preparing to take in the Oil and Fins, the *Elizabeth*, by ſome Accident, overſet, and a *Hull* Ship took up the Men, and what Goods they had ſav'd, which was twenty two Tuns of Oil, ten Tuns of Whale Fins, and five Hogſheads of Morſes Teeth, with which they arriv'd in *England* the eighth Day of *September*.

The *Ruſſia* Company engroſs.

THE *Ruſſia* Company now thinking themſelves entirely Maſters of the *Greenland* Fiſhery, fitted out two Ships for *Greenland*, *viz.* the *Whale* and the *Sea Horſe*, under the Command of *Jonas Poole* and *Thomas Edge*; they ſail'd from the *Thames* the ſeventh of *April*, 1612, and on the third of *May* arriv'd at *Cherry Iſland*; where they found a *Dutch* Ship, who ſail'd with them towards *Greenland*; but the *Engliſh* Captains thinking that, by their prior Diſcoveries, the *Greenland* Seas and Fiſhery

were become their Property, they order'd the *Dutch* to quit thoſe Seas, which they did accordingly.

The two *Engliſh* Ships, the *Whale* and the *Sea Horſe*, arrived at *Greenland* the firſt of *June*, and found an *Engliſh* Ship there, who at firſt appear'd as a Stranger, but upon a cloſer Enquiry, they found it to be the Ship and Commander that took up Captain *Poole* and his Men, and ſaved them and their Cargo but the Year before; but, whatever Returns of Gratitude might have been expected from Captain *Poole*, he forgot former Favours, and being inveſted with the *Ruſſia* Company's Authority, look'd upon Captain *Marmaduke* as an Interloper, and would not allow him the Privilege of fiſhing in thoſe Seas.

Captain *Poole* and *Edge* kill'd ſeventeen Whales that Year, beſides Morſes, of which they made one hundred and eight Tuns of Oil, with which and their Whalebone they return'd to *England*. The *Ruſſia* Company's Power was then ſo great, that the *Spaniards*, willing to come in for a Share of the *Greenland* Fiſhery, ſent a Ship thither; but the Pilot being an *Engliſhman*, the *Engliſh* impriſon'd him for ſixteen Months, and ſo overturn'd his *Greenland* Voyage for that Year.

Seven or eight Ships fitted out.

In the Year 1613 the *Ruſſia* Company fitted out ſeven or eight Ships, under the Command of *Benjamin Joſeph*, Admiral, and *Thomas Edge*, Vice-Admiral; they ſail'd from the *Thames* the thirteenth of *May*, and, after a Paſſage of only ſeventeen Days, arriv'd at *Greenland* the thirtieth Day. Here they found fifteen Ships, *viz.* two *Dutch*, nine *French* or *Spaniards*, and four *Engliſh*, all which thoſe that came under the *Ruſſia* Company's Commiſſion, began to look upon as Interlopers; no Wonder if the Intereſt and Succeſs of the *Engliſh* began now to fail, when a Monopoly of this Company, in hopes of engroſſing all to themſelves, without any regard to the publick Good, weakned and deſtroy'd the Intereſt of their Fellow-Subjects; as it was in this Caſe; for the *Engliſh* Admiral, who bore the King's Commiſſion, not only prohibited Foreigners the Trade, as not being Subjects of the Crown of *England* but prohibited his own Fellow-Subjects too, that were not of the *Ruſſia* Company, and, what has been no uncommon Thing in *England* ſince that Time, the *Engliſh* had no more Privilege than Foreigners. The Admiral, to ſecure his Title, ſet up a Croſs of Wood, upon a low Point of Land, call'd *Low Neſs*, to which he fix'd the King of *Great Britain*'s Arms. (One would think he ſhould have fix'd the *Ruſſia* Company's Arms, ſince no other of the *Britiſh* Subjects were allow'd the Advantage of his Expedition.) They made ſeveral hundred Tuns of Oil of the Whales they took, and with it return'd to *England*.

The *Dutch*, who ever ſince they were able, have always been willing to take Advantages, and ſeeing the *Engliſh* (who were not of the *Ruſſia* Company) ſuppreſs'd as well as themſelves, and knowing well how eaſy a Matter it was to deal with a divided People, they ſent out eighteen large Ships (four of which were Men of War) to *Greenland*, in the Year 1614; and tho' the *Engliſh Ruſſia* Company ſent out thirteen Ships and two Pinaces, commanded by the ſame Admiral and Vice Admiral as in the preceeding Year, yet the *Dutch* finding themſelves too ſtrong for the *Engliſh*, ſtaid and fiſh'd by Force, and the *Engliſh* Ships, being thus ſupplanted of their Game, were forced to be contented to return half loaden.

The next Year (1615) the *Dutch* ſerv'd the *Engliſh* in the ſame Manner, and the *Engliſh* made but a poor Voyage. But the Year 1616 made amends, for the *Engliſh* ſent out eight ſtout Ships to *Greenland*, under the Command of Captain *Thomas Edge*; they brought home thirteen hundred Tuns of Oil, and a great Quantity of Whalebone, with the Teeth of a thouſand Sea-Horſes, which they kill'd upon an Iſland, which they call'd *Edge's Iſland*, from the Name of their Captain; the *Dutch* had but four Ships in *Greenland* this Year, and they made but a very indifferent Voyage.

In the Year 1617 the *Engliſh* fitted out fourteen Ships, under the Command of Admiral *Edge*; he ſet ſail from the *Thames April* the twenty-fourth, and arriv'd in *Greenland May* the twenty eighth: And now they began to aſſert their Property; for finding ſome *Dutch* Ships there, they not only put them off from fiſhing, but took from them the Blubber they already had aboard, and the *Engliſh* with that Blubber and their own, brought home that Year nineteen hundred Tuns of Oil.

The Year following, *viz.* 1618, the *Engliſh East India* and *Ruſſia* Companies join'd and ſent out thirteen Ships to *Greenland*, upon the Whale Fiſhery, beſides two Pinaces, under the Command of the above-mention'd Admiral *Edge*; but the *Dutch*, reſenting the Affront the Year before, fitted out a ſtrong Squadron, and fell upon one of the *Engliſh* Ships, killing a great Number of their Men; and not only plunder'd the Ship of her Artillery and Effects, but burn'd what Goods of the *Engliſh* they found aſhore; and hindering the reſt from Fiſhing, all the *Engliſh* Ships were forc'd that Year to return home empty. *Note*, If we compare thoſe Tranſactions with the Chronicles of that Time, we ſhall find that the *Dutch* uſurping this Authority was about the Time of, or within a Year or two after, King *James* the Firſt's delivering the Cautionary Towns, of *Flaſhing*, the *Brill*, and *Ramekins*, to the *Dutch*; tho' his Predeceſſor, Queen *Elizabeth*, wiſely conſidering what a Check they were upon the voracious *Dutch*, took care to keep them in her own Hand; but ſhe was no ſooner gone, and King *James* had deliver'd them up, but the *Dutch* ſoon began to encroach upon our Trade, and to inſult the *Engliſh* in all Parts of the World. (But of this ſee more at large in Chap. XV. of the Deſcription of the *Oriental Iſlands*, Page 117, to 124.) It was in this peaceable Reign that the *Dutch* made Articles with the *Engliſh*, and broke them at their Pleaſure; now it was that they not only ſeiz'd the Properties of the *Engliſh*, but maſſacred their Perſons; and this with Impunity, and without Reprizals made by that peaceful Monarch, who could ſee his Subjects ſuffer, and his Territories invaded, rather than ſhew any Reſentment to his mercenary plundering Enemies.

The inſatiable *Dutch* ſeeming now to have got Footing in *Greenland*, went again next Year, *viz.* 1619, as did alſo ſome of our *Engliſh* Ships; but the *Dutch*, now aſſuming the Property of thoſe Seas to themſelves, would not ſuffer the *Engliſh* to fiſh, but what they could do by ſtealth; and, to render their Voyage the more ineffectual, the *Dutch* ſold their Oil at ſo low a Price, to bring down the Market, that what the *Engliſh* had taken'd to little Account.

The *East India* and *Ruſſia* Companies, ſeeing the Court ſo eaſily put up with all thoſe Indignities, and ſeeming rather content to loſe all than make any Reprizals, and being diſmay'd at all Hopes of Redreſs, or of any Succeſs in the Fiſhery, when the *Dutch* were ſuffer'd thus to abuſe them, they tranſfer'd their Right to that Fiſhery over to Captain *Edge*, Mr. *Ralph Freeman*, and others; and thus it was continued with Variety of Succeſs, and a continual Struggle with the *Dutch*, till about the Year 1726, when the *South-Sea* Company undertook it, and fitted out twenty-four Sail the firſt Year, and ſo for ſome Years; and then, for Reaſons beſt known to themſelves,

ſelves, they alſo dropp'd it, and offer'd their Ships and Tackle to Sale; ſome of them were bought by private Owners, in Partnerſhip, and employ'd in the ſame Trade again; and, one would think, if ever that Trade could turn to Account it muſt be now, when every Owner has his juſt Proportion of the Benefit, according to the Share he ventures, and no Governor, Sub-Governor, or Directors, &c. to carry off ſo great a Share of the Profit.

CHAP. IV.

Gives an Account of eight Engliſhmen *who were left aſhore in* Greenland *all the Winter; of the Hardſhips they endured, with other Remarks and Obſervations upon the Place, and their Arrival at* London *at laſt.*

IN the Year 1630 three Ships were fitted out for *Greenland*, one of whoſe Names was the *Salutation*; they ſet ſail from the River *Thames* the firſt of *May*, and on the eleventh of *June* arriv'd in *Greenland*, where they ſeparated, and diſpers'd themſelves to ſeveral Harbours for Conveniency of fiſhing: But the *Salutation* (ſome of whoſe Men are the Subject of this Diſcourſe) being ſtraitned for Proviſion, and Winter approaching, they ſet eight Men aſhore to kill Veniſon, at a Place which they knew to be frequented with Rein-Deer; they left them a Boat, and order'd them, when they ſhould leave that Place, to ſteer to *Green-Harbour*, which lies to the Southward from where they went aſhore; and that Day killing fourteen Deer, they lay that Night aſhore, thinking to go aboard next Day; but a great Quantity of Ice driving towards the Shore, the Captain was obliged to ſtand off to Sea, to prevent its hemming the Ship in between it and the Shore; and they rowing along the Shore to *Green-Harbour*, by that Time they came there the Ship had ſtood ſo far into the Offing, that ſhe was quite out of their Sight.

HOWEVER, as all the three Ships had appointed their Rendezvous at *Bell-Sound*, further to the Southward, and the Time of the Rendezvous now to be within three Days, they began to be in pain leſt they ſhould be gone from *Bell-Sound* before they got there with their Boat and their Veniſon; ſo they lighted the Boat by flinging their Veniſon over-board, and made the beſt of their Way to *Bell Sound*, which was about ſixteen Leagues from *Green-Harbour*; but they, not knowing the Coaſt nor the Place, row'd paſt it eight or ten Leagues, and then diſcovering their Error, the Majority of them agreed to row back to the Northward; but ſtill not finding *Bell-Sound*, one of them over-perſwaded the reſt into a Belief that *Bell-Sound* was to the Southward of them when they turn'd back; whereupon they row'd to the Southward again, till at laſt, convinc'd of their Miſtake, they row'd again to the Northward, and at laſt they arriv'd at *Bell-Sound*, where, when they came, they found, to their great Surprize, that the Ships were gone for *England*.

THIS threw them into the utmoſt Conſternation, the Winter approaching, and they neither having Food, Firing, Clothes, or Habitation, ſuitable to their preſent and approaching Neceſſities; but in this Diſtreſs it was no Time to diſpute, but determine to do ſomething, while the Weather was favourable; and having two Dogs with them, which they had carried aſhore with them at *Green-Harbour*, they reſolv'd to row thither again to hunt for Veniſon, which they did on the fifth of *Auguſt*; and making themſelves a Tent, with their Oars and Boat-Sails, they refreſh'd themſelves with Sleep that Night; and next Morning betimes went a hunting, and kill'd that Day ſeven or eight Deer and four Bears; and the next Day they kill'd twelve Deer more; and with this Proviſion, and ſome Greaves of Whales, (which are the Pieces that remain in the Copper after the Oil is drawn from them) they loaded both their own Boat and another, which ſome of the Company had left there, and return'd to *Bell-Sound*.

AND now they began to think of ſettling themſelves in the World, if this could be called a Settlement; and, as a Beginning, they found a large Booth, about eighty Foot long, and fifty broad, cover'd with *Dutch* Tiles, and the Sides well boarded; it had been built for the Coopers to work in, in the fiſhing Seaſon; and near this Booth ſtood a leſſer, built of the ſame Sort of Materials, which they reſolv'd to pull down, and with the Timber and Boards of it to build a ſmall one within the great one, that they might be the better ſecured from the Injuries of the Weather: They found alſo three Furnaces, which had been uſed for boiling of Oil; theſe they pull'd down, and got out of them about a thouſand Bricks, they alſo found four Hogſheads of Lime, which they mix'd with the Sand on the Sea Shore, which made excellent Mortar. And having got all thoſe Materials, they thought to begin to build, only another Difficulty attended them, for their Mortar froze, but this was ſoon remedy'd, by making two Fires, and placing the Mortar between them; and now they proceeded in their Building, raiſing a Wall, a Brick thick, againſt one of the Sides of the innermoſt Booth; but their Bricks being all gone, they nail'd Boards on each Side the Timbers, and fill'd up the Space between with Sand, by which means they made it very tight. This leſſer Booth was twenty Foot long, ſixteen Foot broad, and ten Foot high, cover'd over with Deal-Boards, five or ſix Thicknеſſes, their Edges reaching over one another like Tiles, that no Air or Water could penetrate; their Door was ſtrong, and lined with an old Bed they found there, to prevent the Air getting in between the Door and the Poſt; their Bedding was the Skins of Rein-Deer; their Firing was old Casks and old Boats, which were left behind.

ON the twelfth of *September* they ſaw a Piece of Ice, driving towards the Shore, with two Sea-Horſes aſleep upon it, both of which they kill'd, and about a Week afterwards another; this help'd to make their Food hold out the longer; however, looking in Time, they found that all the Proviſion they had would not ſubſiſt them half the Winter, and therefore they faſted on *Wedneſdays* and *Fridays*, or, if they allow'd themſelves any thing, it was but the ſtinking Fritters, or

Greaves of Whales before-mention'd, and eat but one Meal a Day the reſt of the Week. By the Tenth of *October* the Sun began to withdraw and diſappear, any thing like Day that they had, till the Sun's Return from the Southern Tropick, being only a ſort of Twilight; the Weather grew exceſſive cold, the Sea froze over, their hunting Seaſon was gone, their Proviſions grew ſhort, the whole Seaſon dark, no Sun-ſhine, or ſcarce Day-light, or any thing but what was diſmal preſented itſelf.

They took another Survey of their Proviſion, and found it ſo reduc'd that it would not afford them above five Meals a Week; but, to make their Victuals hold out the longer, they agreed to live upon the mouldy Fritters four Days in the Week, and the other three to feaſt (as they call'd it) upon Bear and Veniſon: And leſt Firing ſhould fail, they (inſtead of dreſſing Victuals every Day, only for that Day, and waſting the reſt of the Fire,) roaſted every Day half a Deer, and ſtow'd it in a Cask to eat cold, and with this they fill'd three Hogſheads and a half, forecaſting, however, to ſave ſo much raw, as to have for every Sunday a Quarter, and a Quarter for *Chriſtmas-Day*.

It being now the Middle of *October*, the Sun was quite withdrawn, and they ſaw it no more till the Beginning of *February*; but they had the Moon both Day and Night, all the time *, but very much obſcured by Clouds and foul Weather. There was a Glimmering of Day-light for a while before and after Twelve at Noon, which ſhortned every Day till the Firſt of *December*, and then quite diſappear'd, till about the Twentieth of the ſame Month. As long as any Day-light appear'd in the South, once in twenty-four Hours, they reckon'd their Days by it; and when that diſappear'd, they reckon'd their Time by the Revolutions of the Moon. As for Light within Doors, they made three Lamps of Sheet Lead, which they took off from one of the Coolers; and they found Oil enough for their Purpoſe in the Cooper's Tent, and for Wicks they made uſe of Rope Yarn; and thus they kept their Lights in all the Winter, till the welcome Appearance of Day-light.

* *Theſe Words of* the Moon being to be ſeen, both Day and Night, all the Time, *are to be underſtood of the Moon when in or near the Northern Tropick, which, about that Time of the Year, will be when the Moon is at or near the full, and conſequently more conſpicuous; but when ſhe is near the Southern Tropick ſhe does not appear above the Horizon, in thoſe Northern Latitudes, any more than the Sun when there.*

When the Sun was paſt the Southern Tropick, and began to approach them again, ſtill the Cold increas'd with that Severity, that about *New-Year's-Day*, and ſome time afterwards, their Fleſh was bliſter'd as if it was burnt, and any thing of cold Iron that they handled ſtuck to their Fingers; and now Scarcity was likely to accompany the Cold, for, notwithſtanding their frugal Rate of living, their Proviſion would not laſt above ſix Weeks longer; but to alleviate their Diſtreſs, in the Beginning of *February* the welcome Rays of the Sun appear'd upon the Tops of the Mountains, which, being white with Snow, appear'd with ſuch an inconceivable Luſtre, that it afforded a delightful Scene to them who had been ſo long deprived of the Benefit of it; and upon this Return of the Light they could ſee the Bears again, which put them beyond the dreadful Apprehenſions of ſtarving.

But they had another Difficulty to encounter with; for the Bears having undergone a cold ſharp Winter, were as ready to devour the Men, as the Men were to devour them, and they had a reciprocal Inclination to each other; and if the Men had not been well-fortify'd they had been in Danger, for they came up to the very Door; one of them ventur'd ſo near with her Cub to pay them a Viſit, that they laid her dead upon the Spot, and the young one was glad to eſcape; and the Weather being cold, and probably other Bears ranging about, they dragg'd her into the Houſe, to ſlay her and cut her up. This was a Bit of freſh Proviſion, and would help to ſpin out their ſtale Veniſon, for it could not be call'd ſalt Meat; but in this Climate it is ſo exceſſive cold, that no Fleſh or Carcaſs will putrify in the Winter-time.

By that time they had eat up this Bear others came about their Booth, and they killed them as they had Occaſion for them; and, among the reſt, they kill'd one of above ſix Foot high. They roaſted their Fleſh upon wooden Spits, having no other Kitchen Furniture, but a Frying Pan, which they found in one of the Boths: And now being well ſupply'd with Proviſion, they began to eat heartily two or three Times a Day, or as often as Nature required, and thereby they found their Strength to encreaſe apace; and no Misfortunes attended them, except the Loſs of one of their Dogs, which rambled from their Houſe, one Morning, in the Middle of *March*, and whether he loſt himſelf, or was over-power'd and eat up by the Bears, is uncertain, but they never ſaw him any more.

The Middle of *March* was now come, and the Days about twelve Hours long, between Sun and Sun; the Fowls, which in the Depth of Winter retir'd to the Southward, began now to return to the Northward again; the Foxes alſo, which had kept up all the Winter, began now to appear, and prey upon the Fowls; which our Countrymen perceiving, and having catch'd ſome Fowls, baited their Traps with their Skins, and by that means catch'd fifteen Foxes, which they dreſs'd, and found to be very good Victuals, eſpecially to them who had ſo long liv'd moſtly upon dry'd Bears Fleſh; and thus they liv'd upon Fowls and Foxes till the Beginning of *May*, meeting with no remarkable Occurrence all that Time.

About the Eleventh or Twelfth of *April* they began to ſee the Sun at Midnight, it never being out of their Sight all the twenty-four Hours, except Clouds interpoſed. And in *May*, by the Continuance of the Sun, the Weather grew warm; and they wanting a Change of Diet, and having nothing elſe to do, rambled about, and found Eggs of Willocks, a Fowl about the Bigneſs of a Duck, which were very good Eating. Now they begun to look out for the Arrival of ſome Shipping, the Seaſon of the Year approaching, and went up every Day almoſt to the Top of a Mountain; but they could diſcern no Water in the Sea, it being all cover'd with Ice, till the Twenty-fourth of *May*; when a Storm ariſing, and blowing right on to the Shore, broke the Ice in the Sea and in the Bay, it being thaw'd and weaken'd with the Approach of the warm Sun, and the Wind coming about, Eaſterly, carried the Ice out of the Bay into the Sea; but ſtill there was ſo much Ice along the Shore, that the Water could not come near their Habitation.

On the Day following, *viz.* the Twenty-fifth, they kept cloſe Quarters, not looking out as uſual, having ſet that Day apart for Prayers, when, to their great Surpriſe, they heard a Man hale the Houſe, in the ſame Words as a Sailor hales a Ship, and they looking out to anſwer,

found it was a Boats Crew, that belong'd to an *Engliſh* Ship, juſt arriv'd from *England*, and we need not, nor can we expreſs, the Tranſports of Joy which poſſeſs'd our Sufferers upon this Occaſion. But there was one Mortification more, for one of the Ships that was arriv'd, was commanded by the ſame Captain that left them, and would not ſtay ſo much as one Day for them the Year before, and was ſo far from pitying them, that, to juſtify his own Barbarity in leaving them behind, he call'd them Rogues, Run-aways, and the like; and ſuch Barbarity had been no new Thing with him, for he had left ſeven or eight Men in *Greenland* the Year before, who were never heard of afterwards.

But, notwithſtanding his Barbarity to them, the Commander of the other Ship took care of them, and the Officers uſed them civilly during their being aboard; and, when the Seaſon was over for fiſhing for Whales, they were brought home when the Ships return'd, and tenderly provided for, as well as generouſly taken care of, by the *Ruſſia* Company upon their Arrival at *London*: Their Names were, *William Fakely*, Gunner; *Edward Pelham*, (who writ the Narrative of their Tranſactions in *Greenland*,) Gunner's Mate; *John Wiſe* and *Robert Godfellow*, common Seamen; *Thomas Ayers*, Whale-cutter; *Henry Bett*, Cooper; *John Daws* and *Richard Kellet*, Landmen.

CHAP. V.

An Account of ſeven Dutch *Sailors who were, by their own Conſent, left aſhore in* Greenland, *to make Obſervations on the Country; and alſo ſeven others, who made a ſecond Experiment of the ſame Nature, none of which fourteen ever return'd alive.*

THE *Dutch Greenland* Company, in the Year 1633, ſending a Fleet to *Greenland* upon the Whale-Fiſhery, order'd them that when the fiſhing Seaſon was over, they ſhould propoſe to their Sailors, that if any ſeven of them would ſtay and Winter in the Country, to make Aſtronomical Obſervations, and to make what Remarks they could upon the Country, the Air, and Climate, during the Winter Seaſon, and till the Return of the Ships the next Year, they ſhould be furniſh'd with all Neceſſaries, and handſomely rewarded; whereupon ſeven bold able Sailors offer'd to undertake the Enterprize, and accordingly the *Dutch* Fleet left them in the Iſland of *St. Maurice* in *Greenland*, *Auguſt* the twenty-ſixth, 1633.

One great Article that they were to take care of, was, to keep a Diary, or Journal, of the Weather, and of the different Meridian Altitudes of the Sun, according to his Receſs or Approach, or any Thing elſe that they could obſerve, that was neceſſary to be known. The Weather was ſo warm, on the Ninth of *September*, that they play'd on the Side of a Hill, in the Sun-ſhine, without their Shirts, and they had no Occaſion to keep any Fire, except to dreſs Victuals and ſo extinguiſh it again, till the Ninth of *October*, and then the Cold increas'd apace, and in ſeven or eight Days it grew very ſevere, and ſome of them found a Dizzineſs in their Heads, and a great Alteration in their Bodies; but probably the ſudden Increaſe of the Cold, and their ſhifting themſelves up in a cloſe Room with a Fire to ſhelter themſelves from it, might occaſion theſe Diſorders; for the *Dutch*, under theſe Circumſtances, at *Nova Zembla*, found themſelves under the like Difficulties, which were ſoon remedy'd by opening the Door of the Hut to give themſelves Air.

On the Fifteenth of *October* they ſaw two Whales caſt aſhore; the Men attempted to take them, but upon their Approach, and by the Help of a Flood Tide, they both eſcap'd them. By the Tenth of *Octobr* the Sea was froze beyond the utmoſt Bounds of their Sight of its Surface; and by the Eight of *November*, the Spring, which had till then ſupply'd them, was froze up, and they were forc'd to melt Snow to uſe inſtead of Spring-Water. In *November* they ſaw a great many Bears, but kill'd only two of them. By the Nineteenth of *November* the Sun quite left them; but it was not immediately ſo dark at Noon, but that they could ſee to read and write without Doors. And in the latter End of *November* (perhaps occaſion'd by the Southerly Winds) the Froſt abated, and the Ice broke and began to move, and the Weather was very moderate all the remaining Part of *November* and Beginning of *December*. They obſerved, thro' all the Courſe of the Winter, that the Southerly Winds were warmeſt, and the Froſts with them the leaſt ſevere.

On the Twenty-third of *January* they went up a Hill, on the South Side of the Iſland, to ſee the Sun; which, according to the Time it left them in *November*, muſt be about five Degrees above the Horizon at Noon; nor do I find that they had any proper Inſtrument for taking an Obſervation by Land, for the Thirtieth was a clear froſty Day, and they went to the Top of the ſame Hill, but all the Account they give us of the Sun's Meridian Altitude, was, that *it was about an Hour and a half high.* In the Middle of *February* they ſaw a great many Geeſe and Faulcons, and alſo ſet Traps for Foxes, but in vain, for they could catch nothing; and now they began to be over-run with the Scurvy, which was imputed to their Want of freſh Proviſions. About the latter End of *March* they ſaw vaſt Numbers of Whales, but of no uſe to them, they being in no Capacity to make any Advantage of them.

The Scurvy and Indiſpoſition increas'd upon them, and they grew ſo ſickly, that on the Third of *April* there were but two of them in any tolerable Health, all the reſt being crippled with the Scurvy; and on the Sixteenth the Clerk died, and all the reſt were ſick; the Nineteenth they grew worſe, and having no freſh Proviſion, they were paſt all Hopes of Recovery; the Twenty-third there was but one able to help himſelf, and he continued the Journal after the Clerk's Death; he help'd the Commander out of his Cabin the ſame Day, with the Pangs of Death upon him; the Twenty-ſeventh he kill'd their Dog, for want of other freſh Proviſion. This Journal was continued till the laſt of *April*, when it is very obſervable, that to the laſt, his Intellects remain'd perfect,

perfect, tho' his Bodily Strength was exhausted, for in that Day's Journal he writ *Clear and Sunshiny*, and underneath that the last Word in the Journal, and probably the last he ever writ, was *Die*.

The fe-ven Men dead.

The *Dutch* Fleet arriv'd at *Greenland* the Fourth of *June* this Year, and impatient to hear of the Fate of the Men they had left, came to make Enquiry, and found them every one dead in his Hut; one of them (which was supposed to be the first that dy'd, while the rest were able to help him,) was in a Coffin, but the rest were then suppos'd to be so weak that they were not able to bury him. One of them had some Bisket and Cheese standing by him; another had a Box of Ointment by him, which, in all likelihood, was to rub his Teeth and Joints, for the Scurvy was their Mortal Distemper, and it prevail'd upon them, and made them uncapable of Exercise, or any way of providing for themselves; for it appear'd by the Journal, that they had gone almost every Day to the Top of a Hill, till the last Month or two, when by the Prevalency of the Scurvy, they were render'd quite uncapable of Exercise, and that with the Cold doubtless hastned their End. Being sensible of their approaching Exit, they betook themselves to their Devotions, as appear'd most probably, this last having a Prayer-Book lying by him.

The reason why they were left.

It being the Year 1634 when the unfortunate Men were found dead, as above, and it being impossible that the *Greenland* Company should know of their Fate till their Fleet arriv'd at the Place, and supposing them to be alive at least, but likewise supposing them to have undergone so much Hardship, that it was not proper for them to stay another Winter, they sent seven other Men that Voyage to relieve them, and bring them home; and, notwithstanding that the seven fresh Men saw the Fate of their Predecessors, yet they resolv'd to stay at all Adventures; and, having Meat, Drink, Physick, and every Thing provided for them, that could be thought necessary for their Subsistance, they settled themselves ashore.

The Fleet left them in the Country the Eleventh of *September* 1634, as above, and their first Business was to go in Search of Bears and Foxes, and such Herbs as the Country afforded, but they found none. On the Twentieth of *October*, the Journal tells us, the Sun left them, from whence it might be suppos'd they were further to the Northward than the last, who had seen the Sun till the Nineteenth of *November*: For if the First had the Sun till the Nineteenth of *November*, and if it just then ceas'd from appearing above the Horizon at Noon, its Declination then being about nineteen Degrees and a half, the Latitude they were in must be but about seventy Degrees; and this is further confirm'd by their Observation of the Sun's Approach to them again, its first Appearance to them, according to their Journal, being on the Twenty-third of *January*, the Sun's Declination then being the same as on the aforesaid Nineteenth of *November*, *viz.* about nineteen Degrees and a half South; but these latter, who lost the Sun the Twentieth of *October*, and first saw it again on the Twenty-fourth of *February*, at both which Times the Sun had about ten Degrees Declination South, must consequently be in Latitude was about eighty North. But, notwithstanding that they were left ashore to make Discoveries of Things most necessary, yet we do not find any thing in all their Journal, but of taking Bears, and Men dying, &c. they never give us an Account of any Observation they had to ascertain the Latitude of the Place they were in, which would have been one of the most material and useful Observations they could have gone about, and would doubtless have been done had they been capable.

Note, *The Days of the Month and the Sun's Declination, mention'd in the above-mention'd Observations, referr'd to the* Gregorian, *or New Account, by which the* Dutch, *and most other Places beyond Sea, reckon their Time, and was (at the Time of these Expeditions, and till the Year* 1700) *ten Days before the* English *Account; which being consider'd, will account for the Latitudes above-mention'd, to as sufficient an Exactness as can be expected from the Observations of Men under such difficult Circumstances.*

But to proceed, They not being able to get any fresh Provisions, began to be over-run with the Scurvy; and on the fourteenth of *January* one of their Company dy'd, the next Day another, and on the Seventeenth a Third dy'd, and the other four were so weak, they could scarce make Coffins for the deceas'd Three; on the Seventh of *February* they took a Fox, and, as the Sun drew nearer and the Day approach'd, there came such Plenty of Bears about them, that had they been able to move, they need not have wanted fresh Provisions; but it was now too late, for they were not now able to master those Animals, nor could they scarce bite a Bisket; they had racking Pains in their Bellies and Loins, which increas'd with the Cold. The Twenty-sixth was the last Day mention'd in the Journal, and it concludes thus, *Four of us are still alive, and lie flat upon the Ground in our Huts; we believe we could eat if there was one amongst us who could stir out of his Hut to get our Meat ready, but our Pains prevent us; we spend our Time in constant Prayers, imploring God, in his Mercy, to deliver us out of this Misery, being ready whenever he pleases to call us; we are certainly not able to live without Food or Fire till the Shipping arrives; we cannot assist one another, but every one bears his own Burthen.* These were the last Words in the Journal.

The other seven found dead.

When the Fleet arriv'd from *Holland*, to see the Event of their Adventure, which was in the Year 1635, they found them all lying dead, close shut up in their House, which doubtless was to secure themselves from the Bears and other Beasts of Prey, when they were not otherwise able to defend themselves against them. They found three of them in Coffins, two others each in his own Cabin, and the other Two on a Piece of Sail-Cloth on the Floor. And thus concluded the last of these two Tragical Experiments, and these were the last, that ever I heard of, that presum'd to winter in *Greenland*.

CHAP.

CHAP. VI.

Treats of the Plants in New Greenland; *with the Animals, whether upon the Land or in the Water, that* Greenland *affords.*

MOST of the Herbs and Moſs in *Greenland* ſprout out of the Rocks, eſpecially where the Water trickles down; and thoſe Rocks are moſt productive that are on the South or Weſt Side of the Mountains, as being beſt ſhelter'd from the North and Eaſt Winds, and moſt expos'd to the South Sun; and the Fowls, for the ſame Reaſon, reſorting thither, their Dung contributes to the Propagation of thoſe Vegetables, of which there are few growing in this Country but ſuch as will come to maturity in a ſmall Time, their Spring being of ſo ſhort a Continuance; for about *June* is the firſt Time of any thing beginning to appear green, and in *July* they are moſtly in Flower, and ſome of the Seeds half ripe, in *Auguſt* they decline, and in *September* the Froſt comes on, and they diſappear till the next Seaſon.

Herbs. THE Plants, or Herbs, that the Country produces are, 1. A Plant with a thick prickly dark Leaf, like the *Aloe*. 2. A Plant with indented Leaves, like ſmall Houſe-leek. 3. Crowfoot, of which there are four Kinds, diſtinguiſh'd only by their Leaves. 4. Scurvy-Graſs, which produces ſeveral Leaves from one Root, ſpreading upon the Ground, the Stalk riſing in the Middle of them, with a few Leaves underneath the Sprouts; the Flowers have four white Leaves, and many grow upon a Stalk, one above another, and as one fades another ſucceeds, which makes it endure green the longer; while the Seaſon continues, the Seed comes forth in a longiſh Book; this grows in great Quantities on the Rocks, it ſeeds in *July*, and the Leaves are ſo palatable, that the Sailors eat it for Sallad. 5. There is a Snakeweed, but it is not very common. 6. There is a Plant, with Leaves like a Periwinkle; it creeps on the Ground. 7. There is a Plant like a Strawberry, both in the Leaf and Flower. 8. The Rock-Plant, or Fucus; the Root grows in a Rock, from whence it hath its Name. 9. In the *Engliſh Harbour* there is a Plant like Sea-Graſs, and grows like it under the Water, ſome eight Foot long, with yellowiſh Leaves, three Fingers broad, and tranſparent. There are alſo Plants like Horſe-Tail; alſo a ſort of a White Poppy, and a Red Sorrel. Some ſay, that as the Scurvy is the moſt prevailing Diſtemper over People that come from leſs Northerly Latitudes to *Greenland*, ſo Nature had ſo ordain'd that all thoſe Plants are good againſt that Diſtemper; but if that had been known to be ſo, and thoſe People who were left there had known where to have found thoſe Herbs, probably the Scurvy might not have been ſo fatal to them. If ſuch another Expedition ſhould ever be attempted, as to leave Men to winter in *Greenland*, it would be adviſeable to leave them where thoſe Simples grow, that they might gather them when green, and preſerve them till dry againſt Winter, to cure or prevent that fatal Diſtemper, the Scurvy.

Fowl. THE Fowls which *Greenland* produces are, 1. The Snipe, or Strand-runner, about the Bigneſs of a Lark, and much the ſame Colour; they live on Worms and Shrimps, but have not a fiſhy Taſte. 2. The Snow-Bird, about the Bigneſs of a Linnet, with a long bended Spur, and three divided Claws; their Back and Wings are grey, but the Throat and Breaſt, and all under the Belly to the Tail, is as white as Snow; they are ſo tame that they will ſometimes light on a Ship, and may be taken with the Hand; they are chiefly ſeen upon the Ice and Snow, and hence call'd Snow-Birds. 3. The Ice-Bird, about the Size of a ſmall Pidgeon; her Feathers ſhine like Gold.

THE Water-Fowls, or thoſe that have their Toes join'd by Webs or Skins, are ſome of them Birds of Prey, others not: The Birds of Prey are, 1. The Burgher-Maſter, ſo call'd from the Largeneſs of its Size, being almoſt as big as a Stork; they build in the Clefts of the higheſt Rocks, but will come down to feed on the Carcaſs of a Whale or other Carrion, and ſo eagerly that they are eaſily ſhot; they ſometimes light upon the Water to reſt themſelves, or to eſcape an Enemy, but they never dive.

2. THE Ratſher, or Alderman; the latter Name the *Engliſh* gave him, from his ſtately Way of ſtrutting along; he is ſomething leſs than the Burgher-Maſter, his Feathers, if poſſible, whiter than Snow itſelf, and his Tail long and broad; it feeds upon Morſes Dung, but likes Fiſh much better when it can catch them; they are ſo tame that one may come within a Stick's length of them and knock them down. 3. The Strumjager, or Dung-hunter; the Webs, or Skins, that join their Toes or Claws, are black, and it is about the Bigneſs of a Sea-Mew. 4. The Kutyeghef is another kind of Sea-Mew, with grey Back and Wings, and white Belly; he feeds chiefly on Fleſh of Whales, for which reaſon they bait their Hooks with it to catch him. 5. The Mallemuke, the under Part of whoſe Bill is compos'd of four Pieces; he is ſo tame that he will ſuffer himſelf to be taken. Moſt of thoſe Birds of Prey are Carrion, and not fit to be eat, unleſs they be hung up to dry the Train-Oil out of them.

THERE are other Birds, as the Pidgeon-Diver, the Lumb, the Diving-Parrot, the Mountain-Duck, and the Kirmew, but theſe are but of little Note.

Beaſts. THE Land Animals are the Bear, which in this Country is white, only his Noſe and Mouth is black, in Shape more like a Dog than a Bear, but large and ſwift; he hath long ſoft Hair; he will ſwim from one Mountain of Ice to another, and will abide a conſiderable Time under Water, diving after Fiſh, but will alſo eat Fowls and Eggs and Carcaſs of a Whale; he will dig up a human Corps if it be not buried deep, or otherwiſe well ſecured.

Deer. THE *Greenland* Deer is much like ours, with Horns and cloven Feet, and the Fleſh well-taſted, only he is of a greyiſh Colour. Their Foxes are like ours in Shape, but differ in Colour, having white Bodies and black Heads.

Seale. THE Seale is an amphibious Animal; he has five Claws on each Foot, join'd together with a thick Skin, or Web, like a Water-Fowl, but the Head is like that of a Dog, only ſcarce any Ears appear, and from thence he is ſometimes call'd a Sea-Dog, or by ſome a Sea-Calf; the Skin is cover'd with ſhort ſtiff Hair, they crawl upon the Iſlands of Ice, where they ſleep and bask them-

ſleep and bask themſelves in the Sun; they are from five to eight Foot long, their Fleſh black, but it affords better Train-Oil than that of any Fiſh. There is an Animal, call'd the Whale-Louſe, which ſticks ſo faſt to the Whale's Skin, that there is no pulling her off, or making her quit her Hold, without cutting out the Piece. The Sword-Fiſh hath a ſharp Bone at the End of his Snout, indented like a Saw, with which it is ſaid he pricks the Whale under his Belly, and is very troubleſome to him.

Morſe. THE Morſe, or Sea-Horſe, is about the Size of an Ox; he hath five Claws on each Foot, his Skin is very thick, eſpecially about his Neck; their Hair is grey, or Mouſe-colour'd; they have two Tusks in the Upper Jaw, ſometimes two Foot or more in Length. Great Quantities of Oil have been made out of the Morſes, but they have been little regarded ſince they have found the Way of extracting ſuch Quantities of Oil out of the Whale. The Morſe feeds both upon Herbs and Fiſh; they ſleep upon the Ice or upon the Surface of the Water; they ſometimes make a dreadful roaring, and when attack'd by Men in a Boat, they do not immediately make off, but endeavour to overſet the Boat, or make Holes in her with their Teeth, except overpower'd by Force, or ſtruck with ſome proper Weapon. Thoſe that go about to kill them, take them when aſhore or upon the Ice, where, for want of Water to float in, they cannot exert their Strength, any thing like what they could do in their proper Element; but when they take them at this Diſadvantage they are eaſily kill'd with Spears and Clubs, which they uſe for that Purpoſe, and yet they have that Foreſight, that, ſenſible of their Unwieldineſs when out of the Water, they will, when they ſee a Boat rowing towards them, jump off the Ice-hills into the Sea, to be in a better Poſture of Defence. When a Morſe is ſtruck with a Harpoon they veer out the Line to let him run till he is weary, that they may the more eaſily hawl him in; and when they get him to the Boat's Side, the firſt Thing they do is to cut off his Head, his Teeth having formerly been moſt valu'd, but now they are not much eſteem'd.

Whale. IN the *Greenland Seas* there are both black and white Whales, and of different Sizes. Of the black Sort ſome have one and ſome two Holes in their Heads, out of which they ſpout Water, as high or higher than a Ship's Maſt, which may be heard and ſeen at a great Diſtance. There is a Sort, call'd *The grand Bay Whale*, that is the moſt valu'd on Account of his Bulk, and the vaſt Quantity of Fat, or Blubber, that he affords for Train-Oil; his Head is half as much as all his Body, but his Eyes not much bigger than thoſe of an Ox; inſtead of Ears he has only a Hole on each Side of his Head, ſo ſmall as ſcarce to be diſcern'd, but within the Fleſh there is a Cavity in the Form of an Ear; he is obſerv'd to be very quick of Hearing; the two Holes where he diſcharges the Water ſerve alſo to receive the Air, for the Waters expell'd out of theſe Holes are drawn in at his Mouth; his Tongue is about eighteen Foot long, encloſed with long Pieces of Whalebone, like ſo many Palliſadoes; the Whalebone is cover'd with a hairy Kind of a Subſtance. There have been ſeen on each Side of the Tongue of a Whale two hundred and fifty Pieces of this Whalebone, and ſome ſay they have every one the ſame Number, beſides the ſmall Whalebone, which lies under the Root of the Tongue, which, with the reſt, is ſaid to amount to eight hundred Pieces of Whalebone in one Whale; but he has no Teeth in his Mouth; he is very thick from the Middle forward, but tapering from the Middle to the Tail, ſomewhat like a Shoemakers Laſt; his Tail is not like that other Fiſh, but lies flat, or Horizontal, when he ſwims, like the Tail of a Kite when ſhe flies; they are from ſixty or eighty Foot, to twice that Length; their Skin is as ſlippery as an Eel, but the Fleſh being ſo ſoft, that the Weight of a Man makes a conſiderable Impreſſion in it, it is not difficult to ſtand upon them to cut them to Pieces; the Penis, or Pizzle, of the Whale, is a ſtrong Sinew, ſix or eight Foot long or more, according to the Bigneſs of the Whale, and is ſeen on the outſide of his Body. The Female hath Breaſts, with Teats, like thoſe of a Cow, and has never more than two young ones at a Time; the Bones in her Body are like thoſe of a Beaſt, but more porous; the Lean is coarſe, hard, and full of Sinews; the Fat is eight or ten Inches thick upon the Back and Belly, and two Foot thick on the under Lip; the Fat is intermix'd with ſmall Nerves; his Tail ſerves him for a Rudder, as his Fins do for Oars, with which he cuts the Water, and ſwims with ſuch Swiftneſs, that he make a Wake in the Sea like that of a great Ship, which is ſeen at ſome Diſtance behind him, and by it they can follow him.

Taking the Whales. WHEN they go to catch Whales, and come ſo near one that they can hear him, or ſee the Water ſpout up from him, the Word is *Fall Fall*; upon which the Men immediately drop into their reſpective Boats, of which they have four or five to attend the Ship, and ſix or eight Men to each Boat; the Harponier ſits in the Head of the Boat, and when they come conveniently near the Whale he ſtrikes him to the beſt Advantage he can; and when the Whale finds himſelf wounded he immediately makes for the Bottom, with ſo much Swiftneſs, that if they did not veer out Line quick enough, and enough of it, he would either pull the Boat down after him, or they muſt cut the Line, or quit both that and the Whale. That Part of the Rope to which the Harpoon is faſtned is but about an Inch thick, and ſix or ſeven Fathom long, is ſoft laid, and is call'd the Fore-runner; but the reſt of the Line is thicker and ſtronger, made of the beſt Hemp, and tarr'd, as the Ropes are that belong to the Ship's Rigging; they have ſeveral hundred Fathoms of Line in the Boat, quoil'd up carefully and clear, that it may not be entangled when they have Occaſion to veer it out ſo quick; for the leaſt Stop, with that quick Motion, would overſet the Boat; and as the Rope runs out with ſuch Violence, the Edge of the Boat, over which it runs, would take Fire, if they did not keep it continually wet with a Mop, which they carry for that, and other ſuch like Purpoſes.

THE Man that ſteers the Boat obſerves the Motion of the Whale, which may be known by ſeeing which Way the Rope grows, (as the Sailors term it,) for by ſteering directly after her the Line need not be veer'd out, or is not hawl'd away with quite ſo much Violence.

THE Head, or Iron, of the Harpoon is like a barbed, or wither'd Arrow, and very broad, to take the better Hold; and if it keeps it's Hold, the Whale, after having run out ſome hundred Fathoms of Line, is fore'd at laſt to come up for Air, and when he appears he ſpours and makes a terrible Noiſe, and then the Boats follow him, every Harponier endeavouring to ſtrike him again; he continues to plunge till he wearies himſelf, and at laſt coming up, they can approach him with Spears and other Weapons, endeavouring to ſtrike him near the Fins, which they find is the moſt ſenſible Part; and when he is near expiring, he beats the Sea with his Fins and Tail till it is all in a Foam; when he is dy-

ing he falls on one Side, and when quite dead his Belly turns upwards; whereupon they drag him to Shore if they are near it, or if not, they hawl him along the Side of the Ship, in Order to cut him up.

IMMEDIATELY after he is dead, his Belly, which is then the upper Part of him, is almoſt even with the Surface of the Water, or but very little above it, but in a Day's Time he riſes ſix or ſeven Foot, and in another Day he riſes ſtill more. Every Ship has a Whale-cutter aboard, whoſe Buſineſs it is to cut him up; when he rips his Belly open it cauſes a roaring Noiſe, and an intolerable Stench. The Tail of the Whale ſerves for a Chopping-Block as well as a Piece of Wood, it being ſo nervous and hard. The Blubber (for ſo they call it) being barrell'd up, they bring it home to extract the Oil, of which a Whale will yield from ſixty to a hundred Barrels, according to the Bigneſs of the Fiſh, every Barrel computed at the Value of three or four Pounds, more or leſs, according to the Plenty or Scarcity of Oil, or the Number of the Whales that are caught that Seaſon.

A

A DESCRIPTION OF THE KINGDOM OF *HUNGARY*.

CHAP. I.

Of the Name of the Kingdom of Hungary; *with its Situation, and Extent; and of the Air; as alſo the Lakes, Rivers, and Mountains therein.*

HAVING continued our Deſcription as far to the Northward as any Diſcoveries could be made, or as far as Geography is practicable, I ſhall now return to where I left off, when I had finiſh'd the Deſcription of *Poland*, and proceeded to the Northward; and after a Deſcription of *Hungary*, I ſhall travel to the Weſtward, to *Germany*, *Italy*, *France*, *Spain*, &c. to our Native Country *England*.

Hungary (which is a Part of the antient *Panonia*) has its Name from the *Huns*, a *Scythian* Nation, who ſettled here about the third Century; but the preſent *Hungary* does not include all the antient *Panonia*, for that comprehended (beſides the modern *Hungary*) the Provinces of *Servia*, *Boſnia*, *Sclavonia*, Part of *Auſtria*, *Stiria*, *Carinthia*, *Croatia*, and *Carniola*.

But the preſent *Hungary* is bounded by the *Carpathian Mountains* on the North, and by them ſeparated from *Poland*; on the Eaſt it is bounded by *Tranſilvania* and *Walachia*; on the South by the River *Drave*, by which it is ſeparated from *Sclavonia*; and on the Weſt by *Stiria*, *Auſtria*, and *Moravia*. It extends from the forty-ſixth to the forty-ninth Degree of North Latitude, and from the ſixteenth to the twenty-ſecond Degree of Longitude Eaſt from *London*.

The Air is ſo unhealthy, that it is call'd by ſome the Church-Yard, or Burying-Place of *Germany*; but it is not ſo unhealthy in the Northern Part as it is in the Southern Part, and near the *Danube*. There are plenty of Lakes and Rivers in this Country, as, 1. The Lake call'd *Balaton*, or *Platſee*, in the Weſt Part of *Hungary*, between the *Drave* and the *Danube*; it is about forty Miles in Length. 2. The *New Fidelſee*, a little to the Southward of the Iſland of *Schut*; it is about twenty-eight Miles in Length.

Lakes.

The principal Rivers of *Hungary* are, 1. The *Danube*, which runs South-Eaſtward through *Hungary* to *Belgrade*. 2. The *Tibiſcus*, or *Teyſſe*, which comes from the *Carpathian Mountains*, and paſſing by *Tockay*, falls into the *Danube*, over-againſt *Salankemen*. 3. The *Drave*, which comes in at the Weſt Part of *Hungary*, and falls into the *Danube*, near *Eſſeck*. 4. The *Raab*, riſes in *Stiria*, and falls into the *Danube*, near *Komora*, at the Eaſt End of *Schuts Iſland*. 5. The River *Gran* riſes in the *Carpathian Mountains*, and falls into the *Danube*, at *Gran*, between *Buda* and *Schuts Iſland*. *Laſtly*, The *Waag* riſes in the North Part of *Hungary*, and falls into the *Danube*, over-againſt *Schuts Iſland*.

Rivers.

All theſe Rivers produce plenty of Fiſh, in ſo much that a thouſand Carps have been bought here for the Value of a Crown Sterling; and in ſome Places Fiſh are ſo plenty that they feed their Hogs with them. There are Waters in *Hungary* of ſurprizing Qualities; amongſt which is a Spring of ſuch ſtrong Vitriol Water, near *Schmolnitz*, that in a ſhort Time 'twill make Plates of Iron look like perfect Copper, and ſome affirm that it actually tranſmutes it into real Copper. There are alſo Waters of ſuch a poiſonous Quality, that if any Animal drink of them they die immediately.

Mountains.

The moſt conſiderable Mountains in this Country are the *Crapack*, or *Carpathian Mountains*, which include all the long Ridge of Mountains that ſeparates *Hungary* from *Poland*, *Moravia*, *Sileſia*, &c. but near the *Danube*, eſpecially from *Presburg* to *Belgrade*, is all one continued Plain, of between two and three hundred Miles in Length; and indeed very little of the Heart of *Hungary* is taken up either with Mountains or Woods, but is, in the General, a fine Champain Country.

CHAP.

CHAP. II.

Of the Provinces and chief Towns of Hungary; *as also of their Mines, Baths,* &c.

THE antient Division of *Hungary* was into Counties, but these Divisions, with their Boundaries, are now lost; for this Country having been the Seat of War, between the Christians and the *Turks*, for so many Years, each Party made bold with what they could get, without any Regard to Boundaries or Divisions, except the Extent of their own Power or Success; and now there is only one general Division of it into two Parts, into which it is divided by the *Danube*; that Part on the North, or North-East Side of which being the greatest, and call'd *Upper Hungary*; and the lesser Part, on the South, or South-West, of the *Danube*, is call'd *Lower*, or *Lesser Hungary*; and they again are severally subdivided into Governments, *viz. Upper Hungary* into these four, *Presburg*, *Bergstat*, *New Hawsel*, and *Caschaw*; and *Lesser Hungary* is divided into the Governments of *Buda*, *Raab*, and *Canisa*.

IN *Upper Hungary* the chief Towns are, 1. *Presburg*, the Capital of the Kingdom; it is situate on the North Side of the *Danube*, over-against the West End of *Schuts Island*, and betweent forty and fifty Miles to the Eastward of *Vienna*, in a pleasant fruitful Country; it is the Place where the States assemble, but is not of any great Strength. The Castle stands upon an adjacent Hill, and is fortify'd with round Towers; in one of which the Crown of *Hungary* is kept, which Crown, according to their Tradition, was presented by an Angel to St. *Stephen*, their first Christian King. 2. *New Hawsel*, on the River *Nitra*, which falls into the *Danube*, almost over-against *Comora* in *Schuts Island*, from which Place it is about twelve Miles North; it is a strong Place, but a small one, considering it is the Capital of a Province. 3. *Leopoldstat*, upon the River *Vagus*; it is a regular Fortification, about forty Miles to the Northward of *New Hawsel*. 4. *Chremnitz*, the chief of the Mine Towns, is about fifty Miles North-East of *New Hawsel*; the Castle is famous for standing upon the highest Ground in *Hungary*, and the Town more famous for its Gold Mine, which has been wrought this thousand Years or above, and not yet exhausted, tho' they have wrought the Vein to above ten Miles in Length; it is seventy Fathom deep, and so rich, that there have been found in it Pieces of pure Virgin Gold, being so without any refining, some of which Pieces are to be seen amongst the Emperor's Curiosities at *Vienna*. Near *Chremnitz* is a Mine of Vitriol, Fourscore Fathom deep; and to the Eastward and Southward of it are Silver Mines of great Value, amongst which one is at, 5. *Schemnitz*, about twenty Miles to the Southward of *Chremnitz*; it is the most considerable of all the seven Mine Towns; it stands upon a Rock; the Houses are well built in themselves, but the Streets are uneven and irregular. The Air of this Part of the Country is unhealthful, and the Soil barren, but the Mines make amends, and cause it to be much resorted to. The Ore is rich, and mostly contains some Gold, which they extract by first melting the Silver, and afterwards grinding it, and dissolving it in Aqua Fortis, made of the Vitriol, which comes from the Mines near *Chremnitz*; in this Aqua Fortis the Gold, after this Operation, subsides. The Mines at *Schemnitz* also afford Christals and Amethysts; and also Vitriol, which, without any Operation, is naturally christalliz'd.

BUT, 7. there is *Nesol*, or *Bestricia*, ten Miles North-East from *Chremnitz*; it stands at the Foot of a Hill on the River *Gran*; this Place is chiefly remarkable for its Copper Mines, being the best in *Hungary*, and out of which Ore some Silver is extracted. 8. *Hern Grunt*, about seven Miles from *Newsol*; here are Copper Mines so rich, that in a hundred Weight of Ore they extract from twenty to sixty Pound of Copper. In these Mines there is found Vitriol, white, green, blue, and red; as also a sort of a green Earth, used in Painting. In this Place there are two Springs of such a Quality, that in fourteen Days they will turn Iron into Copper, which some Naturalists impute to their being impregnated with Copper. 9. *Esperies*, upon the River *Tarkal*, near the Frontiers of *Poland*; it is about a hundred and fifty Miles to the Eastward of *Presburg*; it is chiefly remarkable for its Salt Mines, in one of which the Veins are so large, that they dig out Pieces of a thousand Pound Weight of pure Salt. There are also near this Place two poisonous Fountains, of such a pernicious Quality, that they kill any Animal that takes them, for which Reason they are wall'd up. 10. *Caschaw*, on the River *Tarkal*, about twenty Miles South of *Esperies*; it is a Royal Free Town, and the Residence of a Deputy, who is Governor under the Emperor, and is one of the best built Towns in the Country; the Air here is unhealthful, and the Wine bad, but it is observed that in its Carriage to *Poland*, and other adjacent Countries, that noxious Quality is evaporated. 11. *Agria*, or *Erlaw*, on the River *Agria*, about sixty Miles North-East of *Buda*; it is a strong Town, and a Bishop's See; it has a very strong Castle, but has been several times taken and retaken, alternately, both by the *Turks* and Christians. 12. *Pest*, a large Town, on the the River *Danube*, over-against *Buda*, with which it has a Communication by a Bridge over the *Danube*, about half a Mile long; it is a handsome Town, and affords a beautiful Prospect; the *Turks* surrendred it and *Buda* to the Imperialists in the Year 1686. 13. *Segedin*, on the River *Teys*, about eighty Miles to the Northward of *Belgrade*; it was taken from the *Turks*, by the Imperialists, the same Year that *Buda* was retaken by them. 14. *Temeswaer*, forty or fifty Miles to the North-Eastward from *Belgrade*; it is a strong Place, situate on the River *Temes*, taken and retaken several Times by the *Turks* and Christians from one another, but now, and ever since the Year 1718, the Imperialists have had it in Possession. 15. *Zolnock*, a strong Town on the River *Teys*, about sixty Miles to the Northward of *Segedin*, taken from the *Turks* by the Imperialists in the Year 1685. 16. *Montgatz*, about fifty Miles South-East of *Esperies*; it was a strong Place, but taken by the Emperor in the Year 1688. 17. *Ungwar*, on the River *Ungh*, at the Foot of the *Carpathian Mountains*, near the Borders of *Poland*, about forty Miles East-Southerly from *Esperies*. 18. *Tockay*, about forty Miles to the Southward of *Esperies*, and thirty Miles East from *Agria*; it

is

is chiefly famous for the excellent Wine it affords, of which they furnish great Quantities to *Poland*, and other adjacent Countries.

In lower *Hungary*, are, 1. *Buda*, once the Capital of the Kingdom; for although *Buda* and *Pest* might almost be said to be both one Place, having nothing but the River *Danube* between them, over which is a Bridge, which maintains a Communication between them, as is the Case between *London* and *Southwark* (only this Bridge at *Buda* is supported by Boats) yet as upper and lower *Hungary* are separated by the *Danube*, all the South Side of it is reckon'd lower *Hungary*. *Buda* is about 90 Miles South East of *Presburgh*, it stands on the Side of a Hill, upon the Top of which is the Castle, which is one of the strongest in *Hungary*; the Town is large and populous, and well traded. The *Imperialists* took it in the Year 1686. after a Siege of ten Weeks, commanded by the Duke of *Lorrain*; in which, many noble Volunteers from most Kingdoms in *Europe* assisted.

Their Baths, as Dr. *Brown* informs us, are the noblest in *Europe*, both for their large hot Springs, and the Magnificence of their Buildings: He gives us the following particular Account of two of the principal of them, *Viz.* 1. The Bath of the *Green Pillars*; the Water whereof is hot, and is impregnated with a petrifying Juice, which sticks to the Sides of the Bath, and on the Spout, and other Places; and in Process of Time, becomes a Grey Stone. The Vapours exhal'd from the Bath, to the Inside of the Cupola, trickle down; and as they seem to be ready to drop they congeal, and form long Stones like Candles or Icicles, which hang down from the Capitals of the Pillars, or any other Place where the Vapours fix.

The Bath is round, and about the Edges it is encompass'd with Pillars, which support the above-mention'd Cupola; in which there are Holes to let out the Heat and Steam of the Bath, and let some Air into the Room, which notwithstanding is as hot as a Stove or a Bagnio.

2. The Bath of *Velibey*, the finest in *Buda*; it hath a sulphureous Smell, and a petrifying Juice; and is so very hot, that it cannot be drank till it be mix'd with cold Water. The Bathing-room hath five Cupolas; the largest is the middle, over the great round Bath, and the other four are dispos'd one at each Corner, and less than the middle one; in them are private Bathing-rooms. The great Cupola is supported by twelve Pillars, between some of which are Fountains of hot Water, and between others are Places for the Barbers, and other Attendants upon the Bath to sit down; and in each of those Places, there are small Cisterns of Free-stone, to mix hot Water and cold in, according as every body likes it.

We are to observe here, that when Dr. *Brown* was there, these Baths were in the hands of the *Turks*; but as the *Christians* much more regard the Improvement of their Houses than their Baths, it is not to be supposed that the Baths at *Buda*, or any where else in that Country, appear with that Splendor and Magnificence now as they did then: But so much for the Description of *Buda* and the Baths there.

2. *Gran*, antiently *Strigonium*, on the South-side of the *Danube*, Sixty Miles South East of *Presburgh*, and about Thirty North West from *Buda*; it is an Arch-Bishop's See, and to him is annex'd the Dignity of Primate of *Hungary*. The most noted Buildings in it, are the Castle, the Arch-Bishop's Palace, and the Cathedral; it is in the Possession of the *Imperialists*, as now most of the considerable Towns in *Hungary* are.

3. *Komora*, at the East End of *Schutz Islands* about forty Miles South East from *Presburgh*.

4. *Raab*, a strong City, but not large; it is on the South Side of *Schutz Island*, upon a River of the same Name.

5. *Alba Regalis*, or *Stull Weissemberg*, at the North East End of the *Platten* Sea; this was the Burial Place, as well as the Coronation Place of the *Hungarian* Kings, till it was taken by the *Turks* in the Year 1543; but it was retaken by the *Imperialists* in the Year 1688, and has been in their Possession ever since.

CHAP. III.

Of the Genius, Temper, Persons, and Habits of the Hungarians; *and also of their Manner of travelling, noble Bridges,* &c. *with the Nature and Produce of the Soil, their Husbandry, Cattle, and other Animals; and of their Manufactures.*

It is very common at the first time of conversing with People of any strange Nation, to give them the Title of Barbarous, or some such Epithet at least, till we become acquainted with them; and thus the Nations who receiv'd Christianity before the *Huns*, from whence *Hungary* takes its Name, do report them to be a Savage People, entirely Strangers, not only to Commerce, but to Conversation too; that they were bred up so hardy, that they needed no Fire, either to warm themselves or to dress Victuals, they eating their Meat raw; and that they liv'd wild in the Woods, having no House, nor so much as a Hut to shelter them from the Weather. That their Cloathing was Skins of Wild-beasts; that they never cultivated their Ground, but only stay'd as long as they could live in one Place, and then rambled to another; that they had no Sense of Morality, or of Good and Evil. This and the like Character is given of the antient *Huns* or *Hungarians*, before they embrac'd Christianity.

But the Modern, or Christian *Hungarians*, bear a much more noble Character, and are esteem'd a brave warlike People; have stood as a Barrier between the *Turks* and *Christians*, and bravely defended the latter, for above two hundred Years; all that while bravely defending, as well as asserting the Christian Faith; but still amongst other Christian Kings and States, charged with Unfaithfulness and Breach of Leagues, when they have any View of Advantage by it; and our Author Dr. *Brown* adds, that they are idle and slothful, which is imputed to the Fruitfulness of their Country, *&c.* In short, the Description of the *Hungarians* which this Author gives, is compos'd of such a Medley, as gives reason to suppose, that he has form'd a general Description of the Tempers of the People from the Opinions that he has

conceiv'd of particular Persons with whom he has convers'd; and from those particular Favours or Prejudices, has form'd his miscellaneous Account of the whole: and as different Constructions are put upon their frequent Insurrectoins, one while calling them downright Rebellion, and another time esteeming them noble Struggles in Defence of their Liberties.

Persons and Habits.

The *Hungarians* are well proportion'd, and of a good Stature and Complection; as to their Habits, they wear Fur Caps upon their Heads, close-body'd Coats ty'd to them with a Sash; and over all, a Cloak or Mantle only down to the Hips, and so contriv'd, as to be buckl'd under one Arm, that they may always have the right Hand at Liberty. They affect, gaudy Colours, as Red, Blue, Green, and the like, for their Cloaths; and the young Sparks retain that Piece of *Turkish* Pride of wearing Feathers in their Caps; but People of the best Fashion, both Men and Women, affect the *French* Dress, but still retain the *Hungarian* short Mantle. The Women veil themselves when they go abroad. The Men shave their Beards, only leave Whiskers on the upper Lip. They wear broad Swords, and some of them have an Iron Mace with a round Head furrow'd with a Balla, which is made in the form of a Hatchel.

Travelling.

They travel pretty much by Water, for which the Plenty of Rivers gives them a great Opportunity; but where they are oblig'd to travel by Land, the common Carriage is an open Chariot drawn by two, three, or four Horses; which, whatever Number there are, all go abreast. They have very swift Horses, and take a Pride in having them with long Tails, which they look upon as a great Ornament. It is dangerous travelling in *Hungary*; for their Hussars or Troopers having but small Pay, endeavour to make themselves amends by plundering Travellers if they can do it privatly and safely. Another dangerous Nusance, is the Numbers of sturdy Gyplies that infest the Country; who under Pretence of being some Handicraft Trade, get themselves introduc'd into the great Towns, and are very mischievous; and to those Da gers, we may add the Wolves that abound in *Hungary*, and make it very dangerous travelling, especially through the Woods; and in them more particularly in the Night Time. The Inhabitants of the great Towns keep abundance of Dogs, which they turn loose in the Night Time, and are ready to devour a Passenger as soon as they see him. It is said, they keep Dogs up all Day, and turn them loose at Night to alarm the Garison, and prevent a Surprize in the Night.

Bridges.

But as good Bridges are an essential Part of a Road, for conveying Goods and Travellers from Place to Place, it may not be amiss, to take notice of the noble Bridges that are or have been to be met with in this Country: As First, the Bridge of *Essek*, over the River *Drave*, near its Confluence into the *Danube*: This Bridge is built not only over the aforesaid River, but over the adjacent marshy Grounds to the Northward of it, which extend for above five Miles; it is rail'd in all the way, and has a Tower at every Quarter of a Mile. There is also a Bridge between *Buda* and *Pest*, over the *Danube*; it is about half a Mile long, but it is only supported by Boats, as before observed. There is also another remarkable Bridge over the *Danube*, between *Gran* and *Barcan*; but the most remarkable, is a Bridge built over the *Danube*, about twenty *Italian* Miles from *Belgrade*, the Ruins of which are still to be seen: It was supported by Twenty Piles of square Stone, an Hundred Feet in Height; each Sixty Feet square, and distant One Hundred and Seventy Feet from one another, all joyn'd to one another by Arches; which made one continued Bridge of Four Thousand Seven Hundred and Seventy Feet, or One Thousand Five Hundred and Ninety Yards, which is near an *English* Mile. Upon the Side of the Arches is this Inscription: PROVIDENTIA AUG. PONTIFICIS VIRTUS ROMANA QUID NON DOMAT? SUB JUGUM ECCE! RAPITURET DANUBIUS; and also to perpetuate the Memory of this Bridge, several Silver Medals were struck with this Inscription: DANUBIUS.

There are in the River *Danube* abundance of large well peopl'd Islands; one of the chief of which is a little below *Buda*, about Forty Miles long, on which are many populous Villages; but the chief of all is the Island *Schutz*, extending from *Presburgh* to *Comora*, above Thirty Miles; and for Strength, Populousness, and Fruitfulness, the most considerable Island on the *Danube*.

Hungary is an exceeding fruitful Soil, except where it is mountainous and woody, of which there is not much. Their Bread-Corn is very good, and yet vastly cheaper than with us. Their Grapes are large and rich, and their Wines, especially the *Tokay* Wines, are reckon'd preferable to any in *Europe*. They improve their arable Ground by burning it; and in Times of War, instead of building Barns, they dig Caves to secure their Corn in from the Weather and the Soldiers. There need be no other Proofs of the Fruitfulness of the Soil, than that of subsisting such vast Armies for so many Years together, as it did in the late *Turkish* Wars.

The Country abounds with Cattle, of which, especially Oxen, they send incredible Numbers to *Germany* every Year; and also into other neighbouring Countries. Deer, Game, and wild Fowls, are so plenty in their Fields and Forests, that none are restrain'd from taking them; but the Poor have them for taking them, and use them as ordinary Food. The best Fresh-water Fish is so plenty, that some (by how modest a Computation I cannot determine) think that the Fish that are in the Lakes and Rivers, contain half as much Space as all the Waters in which they live. Their Horses are swift but not large, which makes them fitter for riding than drawing; but that Defect is suply'd by a good Breed of Buffaloes, which serve them for plowing, and Husbandry, and also for drawing heavy Carriages and the like.

Most of their Manufacture consists in Copper and other hard Wares. They have but little Foreign Trade, as being an Inland Country. Their Exportation consists mostly of Wine, Cattle, and Corn; with which (as they can have no Communication with the *Black Sea*, or the *Mediterranean*, by way of the *Danube*, because they must then come through the *Turks* Dominions) they can have little Trade, except by supplying their Neighbours on each Side of them upon the main Continent.

CHAP.

CHAP. IV.

An Abstract of the Succession of the Hungarian *Princes, and of their antient and modern History; also of the Constitution of their Government, and of the Forces and Revenues of the Kingdom.*

WHAT has been said of *Denmark* (Chap. VI. of the Description of that Country, Page 427) may not only be said of *Hungary*, but of most Kingdoms and Governments in the World, as arising from patriarchal before they amounted to regal Government; for the first Account we have of *Hungary*, tells us, that it was at first divided into several little independant Principalities, or, it may be said, divided and differently interested Members of that one Body; till at last seeing the Vanity of destroying one another, they united under one of the most powerful, as a common Head for their mutual Defence against foreign Enemies, the Person whom they chose as Supreme being entitled Duke of *Hungary*; of whom fourteen reign'd successively before the *Hungarians* embrac'd the Christian Religion, who all exercis'd sovereign Jurisdiction over the People, and were short of Kings in nothing except the Title.

THE last of these Dukes (but the first that embrac'd Christianity) was named *Geysa*; he was converted to Christianity about the Year 1000 after the Birth of our Saviour, and baptiz'd at *Prague*; but being old and weak, he, with the Consent of his People, resign'd the Government to his Son *Stephen*, the first who assum'd the Title of King of *Hungary*, and who, with his Successors, form the following List:

1. *Stephen*, the Son of *Geysa*, came to the Crown about the Year 1000, his Father resigning immediately upon his embracing Christianity.

2. *Peter*, who was *Stephen*'s Sister's Son, succeeded in the Year 1038; but he reign'd but four Years, and then he was deposed, and succeeded by,

3. *Alban*, or *Ovan*, in the Year 1042; but the People not liking him, assassinated him, and he was succeeded by,

4. *Andrew*, the Brother of *Stephen*, in the Year 1066; but tho' in his Life-time he procur'd his Son *Solomon* to be proclaim'd his Successor, yet he was first murder'd, and then succeeded by his Brother,

5. *Bela*, in the Year 1071.

6. *Solomon*, the Son of *Andrew*, above-mention'd, succeeded upon his Uncle *Bela*'s Death, in the Year 1073; but *Geysa* and *Ladislaus*, the Sons of *Bela*, thinking they had a more immediate Right than his Nephew, asserted each his Right; and although they were for a while contented to be independant Princes in their respective Provinces, yet they soon jointly made War against *Solomon*, and he being slain,

7. *Geysa*, the elder Brother, mounted the Throne, in the Year 1074; but dying, he was succeeded by his younger Brother,

8. *Ladislaus*, in the Year 1077: He had two Nephews, the Sons of his Brother *Geysa*, their Names were *Bela* and *Coloman*, and *Ladislaus* perceiving that *Coloman* was no Favourer of the Christians, settled the Crown by Will upon *Bela*, but he relign'd to his Brother,

9. *Coloman*, who began in the Year 1095, and being now in Power, ungratefully put out his Brother *Bela*'s Eyes, and threw him into Prison; and he was succeeded by his Son,

10. *Stephen* II. who ascended the Throne in the Year 1114; but after eighteen Years he retired into a Monastery, and left the Government to,

11. *Bela the Blind*, who came to the Crown 1132; this *Bela* was succeeded by his Son,

12. *Geysa* II. in the Year 1141; and at his Death his third Son,

13. *Stephen* III. mounted the Throne, *Anno* 1161; and was succeeded by,

14. *Ladislaus* II. the second Son of *Bela the Blind*, in the Year 1172, and after him succeeded,

15. *Stephen* IV. the fourth Son of *Bela*, who came to the Crown 1172; but did not reign above five Months till he was depos'd, and,

16. *Bela* III. the second Son of *Geysa*, commenc'd King 1173.

17. *Emeric*, Son of *Bela*, succeeded in the Year 1195; and he again was succeeded by,

18. *Ladislaus* III. his only Son, who began in the Year 1204, and was succeeded by,

19. *Andrew* II. the Brother of *Emeric*, in the Year 1205; and he, after a Reign of thirty Years, was succeeded by,

20. *Bela* IV. *Andrew*'s second Son; he began in the Year 1235, and after him succeeded,

21. *Stephen* V. 1260, who was succeeded by his Son,

22. *Ladislaus* IV. who began his Reign *Anno* 1272, but he being murder'd was succeeded by,

23. *Andrew* III. the Son of *Stephen*, in the Year 1290; and after him came,

24. *Wenceslaus*, the King of *Bohemia*'s Son, in the Year 1299; but he had not reign'd above six Years before his Father recall'd him from *Hungary*, as finding them a rebellious People; and continually exciting Insurrections against him; whereupon,

25. *Otho*, King of *Bavaria*, was crown'd also King of *Hungary*, *Anno* 1305; but this being done only by a factious Party, and attended with a great deal of Difficulty, was but of short Duration, for after a Reign of but about four Years he was expell'd the Throne, and succeeded by,

26. *Charles Robert*, the Grandson of King *Stephen* V. who began to reign in the Year 1310: He was a successful Prince, and enlarged his Dominions; and having subdu'd *Bulgaria*, *Croatia*, *Servia*, and *Dalmatia*, and several other Principalities, he dy'd, and was succeeded by his Son,

27. *Ludowick*, or *Lewis*, in the Year 1342; he reign'd King of *Hungary* and *Poland* till the Year 1382, and was then succeeded by his Daughter,

28. *Mary*; but she being very young, the Administration was mostly entrusted in the Hands of her Mother, who being not much more fit to govern than her Daughter, the People elected,

29. *Charles*, King of *Naples*, Brother to the late *Ludowick*, or *Lewis*; he began in the Year 1383; but *Ludowick*'s Wife, the late Queen Mother, relenting the Loss of her late Authority, hir'd an Assassin to murder him; after which he was succeeded by,

30. *Sigismund*, who was afterwards Emperor of *Germany*, and had married the late depos'd Queen *Mary*,

Mary; he was advanc'd to the Throne of *Hungary* in the Year 1387; and after a long Reign of above Fifty Years he dy'd; and,

31. *Albert*, Archduke of *Auſtria*, having married the only Daughter of *Sigiſmund*, ſucceeded his Father-in-law, both in the Empire of *Germany*, and in the Kingdoms of *Hungary* and *Bohemia*, in the Year 1438; and dying without Iſſue, only leaving his Empreſs big with Child, he was ſucceeded in the Kingdom of *Hungary* by,

32. *Uladiſlaus*, Brother to the King of *Poland*; who ſucceeded to, or rather uſurp'd the Throne of *Hungary*, *Anno* 1440; but he dying, was ſucceeded by,

33. *Ladiſlaus* V. the Poſthumous Son of *Albert*, who came to the Crown at Five Years of Age; in the Year 1444; but during his Minority, the Adminiſtration was entruſted in the Hands of *John Hunniades*, who behaved ſo well againſt the *Turks*, that when *Ladiſlaus* died, his Son,

34. *Matthias Corvinus*, was elected King, in the Year 1458. This Prince built the famous Library at *Buda*; he dy'd in a Fit of Anger, and was ſucceeded by,

35. *Uladiſlaus*, King of *Bohemia*; he obtain'd the Crown by the means of the late Queen, *Anno* 1460; and dying, was ſucceeded by,

36. *Lodowick* II. his Son; he was King of both *Hungary* and *Bohemia*, and began his Reign in the Year 1516; he was a brave warlike Prince, but too boldly engaging *Solyman*, Emperor of the *Turks*, with an inferior Number, he was entirely defeated; and in his Retreat, his Horſe fell into a Morafs with him; and being loaded with Armour, he periſh'd, and his Body was not found till ſome Weeks after the Battle.

37. *John*, *Vayvode* of *Tranſilvania*, was then crown'd King of *Hungary*, in the Year 1526, but expell'd the Throne by *Ferdinand*, Brother to *Charles* V. Emperor of *Germany*, who had married *Anne*, Siſter of the late *Ludowick*; and tho' he was reſtor'd by *Solyman* Emperor of the *Turks*, yet his Enemy *Charles* V. abovemention'd let him have no Reſt, till by his Means,

38. *Ferdinand*, Arch-duke of *Auſtria*, was crown'd King of *Hungary*, *Anno* 1527; but he was afterwards elected Emperor of *Germany*, and his eldeſt Son,

39. *Maximilian*, was crown'd King of the *Romans*, *Hungary*, and *Bohemia*, *Anno* 1564, while the Emperor *Ferdinand* his Brother was living; but when he dy'd, *Maximilian* ſucceeded to the Empire, and,

40. *Rodolph*, the Son of *Maximilian*, was elected King of *Hungary*, *Anno* 1576; but being either frightned, or over-perſuaded out of his Kingdom, his Brother,

41. *Matthias*, mounted the Throne of *Hungary*, *Anno* 1613, and was afterwards elected Emperor of *Germany*: He perſecuted the Proteſtants with ſo much Severity, as cauſed an Inſurrection; of which, ſee more hereafter in the Hiſtory of that Prince's Life, in the Deſcription of *Bohemia*.

42. *Ferdinand* II. ſucceeded next to the Crown of *Hungary*, and to the reſt of *Matthias*'s Dominions, *Anno* 1618. was Grandſon to *Ferdinand* I. and dying, was ſucceeded by his Son,

43. *Ferdinand* III. who was both King of *Hungary*, and Emperor of *Germany*; he began *Anno* 1625; and after his Death, his Son,

44. *Ferdinand* IV. came to the Crown, *Anno* 1647; after whom, his Son,

45. *Leopold* came to the Crown, *Anno* 1658; and after him ſucceeded,

46. *Joſeph*, the Son of *Leopold*, who was crown'd King of *Hungary* in the Year 1688, his Father being alive; and the Crown was entail'd by the States upon the next Heirs.

47. *Charles*, Emperor of *Germany*, and King of *Hungary*, ſucceeded to thoſe Dominions on the Eleventh of *April*, in the Year 1711.

In order to the electing of a King, the Nobility and Repreſentatives of the People, uſed formerly to aſſemble upon a Plain call'd *Rackes*, near *Peſt*, over againſt *Buda*; where in a formal Manner, having expreſs'd their Liking and Approbation of the new propoſed King, he was conducted to *Stullwieſſenburgh*, or *Alba Regalis*, where the Palatine preſented him to the People; who having three times expreſs'd their Conſent that he ſhould reign over them, he delivers a naked Sword into the King's Hand, which he brandiſheth Eaſt, Weſt, North and South; after which he is attended to the Great Church, where the Archbiſhop of *Gran*, holding the Royal Robes in his Hand, demands again of the People, if they are ſatisfied with the King Elect, *&c.* and being anſwer'd in the Affirmative, he proceeds to the Ceremony of Coronation; after which, the Nobility and Clergy carry the Arms and other Relicks of King *Stephen*, their firſt King, in a magnificent Proceſſion to the Palace.

The Crown of King *Stephen* is carefully preſerv'd at *Presburgh*, with ſo great Veneration, that all their Kings are crown'd with it; and indeed it is not allow'd to be a due Coronation that is perform'd without it. The *Hungarians* think, that the Succeſs of their King and Nation depends upon the Preſervation of this Crown; which the *Turks* knowing, has made them the more eagerly attempt the taking it from them; aſſuring themſelves, that as they value the Crown more than the Perſon that wears it, they would readily pay Obedience and Allegiance even to the *Grand Seignior* himſelf, if once he had St. *Stephen*'s Crown upon his Head.

The Reaſon of this profound Veneration, not to ſay Adoration, being paid to the Crown of their King and Saint *Stephen* I. is not only becauſe it was the Crown of their firſt King, but for the following more particular Reaſon, *viz.* King *Stephen* having begun to encourage and propogate the Chriſtian Religion in his Dominions, ſent *Aſtricus*, Biſhop of *Colocza*, to Pope *Benedict* VII. deſiring his Holineſs to confirm him in his Kingdom, and to ſend him a Crown and other Regalia; but *Myſca*, King of *Poland*, having at the ſame time ſent to the Pope upon the ſame Errand, the Pope had provided a Crown and Regalia for him; but it was not yet ſent to him; for an Angel appear'd to the Pope the Day before it was to be ſent away, and directed the Pope to ſend the Crown, *&c.* to *Stephen* King of *Hungary*, which was intended for *Poland*; and it was ſent him accordingly, and valu'd as ſent by an Angel; and to this Day they believe this Tradition, as if it was an Article of their Faith, and have a firm Belief, that in whoſe Poſſeſſion ſoever this Crown is, he has an indiſputable Right to be King of *Hungary*, be he Turk or Chriſtian.

The next Perſon in Authority to the King, is the Palatine or Guardian of the Kingdom; he is Guardian to the Infant Princes of the Blood; he has the firſt Voice in the Election of a King, and acts as a Deputy King in an Inter-regnum; aſſembling the States, hearing Petitions, conferring with Ambaſſadors and foreign Miniſters, and taking the Adminiſtration of the Government into his Hand while the Throne is vacant,, as if he was King himſelf.

The next Great Officer, is the Archbiſhop of *Gran*; who is always Primate, Pope's Legate, and Chancellor of the Kingdom; and in the Aſſembly of the States, which is compos'd of the Nobility, Biſhops, and Repreſentatives of the Royal Cities, *&c.* he always ſits as Preſident.

The

THE common People here, as in ſeveral other Places before treated of, are a ſort of Slaves or Vaſſals to the Lords upon whoſe Lands they live; and although thoſe Tenants are much the greater part of the Inhabitants, yet they have no Share in electing of their Princes or Governors: So that when any Difference happen'd between the King and the Nobility, it was all one to them which prevail'd, for they could but be Slaves, either to their Landlords, or to the ſuperior Power; and this they were ſure to be, be it how it would; for they have no Properties, or what they can juſtly call their own: All they have, or even what they acquire by their Induſtry, being at the Diſpoſal of their reſpective Lords.

Forces and Revenues.

THE Forces of *Hungary* were very conſiderable, while they were govern'd by their own native Princes, and while the Forces were commanded by their own Fellow Subjects; of which there is a remarkable Inſtance, when *Ladiſlaus* the poſthumous Son of the Emperor *Sigiſmund* was King of *Hungary*, and *John Huniades* his General perform'd ſuch memorable Actions againſt the *Turks*. The Emperor at preſent, raiſes what Forces he pleaſes (ſo far as they are to be had) but the Revenue is computed at no more than an Hundred and Twenty Thouſand Pounds; moſt of which is levy'd upon the Mines and the Cattle; and perhaps the beſt half of it laid out in paying the Governors and Officers of the Towns and Provinces, in repairing Fortifications, and maintaining the Gariſons in the frontier Towns; ſo that the Revenues of *Hungary* alone, are far ſhort of being ſufficient to maintain a Force that may be able to defend them from the Inſults of the *Turks*, without the Aſſiſtance of the Empire and the Hereditary Countries.

OF the *Hungarian* Forces, their Horſe are called Huſſars, and their Foot Heydukes: Several Regiments of Huſſars ſerv'd in *Flanders* in the late Wars, and do alſo in the preſent Wars in the Emperor's Service, againſt the united Forces of *France*, *Spain*, and *Sardinia*. Their Horſes are ſwift and well manag'd, but are but of a ſmall Size for Troopers. The Huſſars ride ſhort, to give themſelves the better Opportunity of raiſing themſelves, and reaching forwards, when they give a Stroke with their Scymeters; but by reaſon of the Lightneſs and Smalneſs of their Horſes, they are far ſhort of being equal to the *Engliſh* Cavalry.

THE Heydukes may be ſaid to be a kind of an undiſciplin'd Militia, and taken under that Denomination. Few Nations it is believ'd, can produce better. Their general Exerciſe, or rather Diverſion, to keep up their Spirits in a warlike Poſture, is an antient Pyrrhical Dance with naked Swords in their Hands, brandiſhing them, and putting themſelves in abundance of terrible Poſtures, with all the Motions of advancing, retreating, turning, and winding, with the greateſt Activity; all the while forming a ſort of a vocal Tune, keeping Time with their other rough Meaſures.

CHAP. V.

Of the Language, Learning, and Religion of the Hungarians; *as alſo of their Antiquities, Arms*, &c.

Lan-guage.

THE *Hungarian* Language, as to the way of writing it, is the moſt like the *Hebrew* of any Language now in uſe; it being govern'd, like that, by Points and Accents; the leaſt Variation of an Accent or Vowel, altering the whole Senſe of the Word; but its having ſo little Dependency upon, and Similitude to other Languages, makes it the more difficult to be learn'd by Strangers. And as few but themſelves underſtand it, the Natives, for the ſake of Commerce and Correſpondence with their Neighbours, eſpecially thoſe of *Poland*, are bred up to ſome tolerable Underſtanding of the Latin Tongue; which is ſo common an acquir'd Language among them, that almoſt every Peaſant is able to maintain Converſation therein.

Learning.

HISTORY does not furniſh us with any Account of Perſons very eminent for Learning in this Country; or at leaſt of any that acquir'd any diſtinguiſhing Degree of Learning. It is true that St. *Jerome*, and St. *Martin*, were Natives of *Hungary*; but they had their Learning elſwhere, as has been the Caſe with all the *Hungarian* Natives, who have apply'd themſelves to Letters, and acquired any conſiderable Degree of Learning; they having generally reſorted to the Univerſities of *Vienna*, *Prague*, or *Breſlaw* for their Education; for it is not a Want of natural Parts or Capacities, that occaſions this Defect, but becauſe *Hungary* has been almoſt a perpetual Scene of War, and their Thoughts have been ſo much turn'd upon military Exerciſes, that they have had neither Inclination nor Opportunity to bend their Thoughts to polite Literature; and hence, Schools and Univerſities have been ſo little encouraged here, that thoſe who were inclin'd to learn, were forc'd to go to other Places to improve themſelves, becauſe they had no Opportunities at Home.

Religion.

THIS Country was formerly ſo embarraſs'd by their Enemies, and the Inhabitants being originally Heathens, they never troubled themſelves much about Religion; the beſt Soldier was deem'd the moſt religious, and the Sword was the Standard by which they determin'd all Diſputes, and maintain'd their Rights, till about the Year 1000; about which time, *Geyſa*, Duke of *Hungary* (for there was then no King there) was converted and baptiz'd; and having given thoſe Proofs of his Profeſſion of Chriſtianity, reſign'd the Crown to his Son *Stephen* about that time; who being acted by his Father's Principles, and profeſſing his Religion, may be ſaid to be the firſt Chriſtian King of *Hungary*.

IN the fifteenth Century, the Followers of *John Huſs*, call'd therefore Huſſites of *Bohemia*, propogated their Opinion; and in the ſixteenth *Martin Luther* follow'd with his; and each of theſe again branch'd out into different Sects of Parties; but all of them ſeem'd to be united under the general Name of Proteſtants, and as ſuch oppoſed the Roman Catholicks; and as profeſs'd Enemies to them, join'd even the *Turks* themſelves againſt them, and took part with the Male-contents and the *Turks*, againſt the Emperor of *Germany*; and that Confederacy maintain'd a War againſt him many Years. In the late Wars between the *French* and the Confederates, the Emperor finding his Affairs pretty much embarraſs'd by Prince *Ra-*

gotski and *Berizini*, was obliged to withdraw Part of his Troops from the Confederate Army, to make head againſt them: But although *Ragotski* had ſo long pretended to be the Defender of the Proteſtant Intereſt in *Hungary*, yet he was perverted to Popery by the Jeſuits, or Popiſh Emiſſaries, during the Time of his Reſidence in *Turky*; and by the laſt Treaty of Peace between the Emperor and the Grand Seignior, nothing was ſtipulated in Favour of the Proteſtants; but on the contrary, the *Turks* engag'd that neither *Ragotski*, *Berizini*, Count *Forgats*, or any of their Leaders, ſhould be permitted to approach the Frontiers of *Hungary*: So that now the poor Proteſtants of *Hungary* are left entirely to the Emperor's Mercy.

HOWEVER, Chriſtianity is now the only Religion profeſs'd in *Hungary*; and had probably been ſo ſooner, had not the Roman Catholick Emperors Severity againſt the Proteſtants, been greater than that of a *Turkiſh* Grand Seignior.

Hungary, was a long time under the Dominion of the *Romans*; and hence it is, that Roman Coins, Medals, and other Antiquities, are frequently found here. The Emperors *Aurelius*, *Probus*, and *Gratian*, were born in *Panonia*; and great Numbers of Latin Inſcriptions of them, and other Emperors, are yet to be ſeen there: Inſomuch that *Cuſpinian* obſerves, that from the *Hungarian* Medals and Inſcriptions, there may be collected a better Account of Eight Emperors or Kings than has yet been given us by the beſt Hiſtory; and if we may give Credit to *Zamoſius*, he tells us, there are Coins to be ſeen here, that give us the true Portraitures of *Lyſimachus*, *Darius*, *Philip* of *Macedon*, and *Alexander* the Great, and other ancient Heroes. And another Author, *Natalis Comes*, tells us, That the Peaſants found a great Quantity of thoſe ancient gold Medals near the Town of *Deva*: They were diſcover'd by a ſudden Torrent, each of them, to the Number of many Thouſands, weighing two or three Crowns a-piece; having on one Side the Image of *Lyſimachus*, and on the reverſe VICTORIA; and that with theſe Medals was found a Golden Serpent; it being a Cuſtom with them to bury a Golden Serpent with their Treaſure, as a Token of a faithful Keeper. The Arms of the Kingdom of *Hungary*, are Barreniſe of Eight Pieces, Gules and Argent.

A DESCRIPTION OF TRANSILVANIA.

CHAP. I.

Of the Name, Situation, and Extent of Tranſilvania; *its Air, Springs, Rivers, and Mountains; alſo of its Diviſion into Provinces, and of the chief Towns therein contain'd.*

TRANSILVANIA is a Part of the antient *Dacia*; it is call'd by the *Germans* *Sieben Bergen*, alluding to ſeven Fortreſſes, or ſtrong Places, built by the *Panonians* to keep the Inhabitants in Subjection; it is call'd by the Natives *Erdely*, or *Ardeli*, which ſignifies a Wood or Foreſt, and to that its preſent Name, *Tranſilvania*, refers, it having that Name, *Trans-Silvania*, now contracted to *Tranſilvania*, from its Situation with reſpect to the *Romans*, as being *beyond the Woods* and Foreſts, which ſeparate it from *Hungary* and *Walachia*.

It is bounded on the North by the *Crapack*, or *Carpathian Mountains*, which ſeparate it from *Poland*; on the Eaſt it is ſeparated from *Moldavia* by a Ridge of Mountains: It is bounded on the South by *Walachia* and a great Part of *Hungary*, and wholly by *Hungary* on the Weſt. The Middle of it lies in about forty-ſeven Degrees of North Latitude, and in about twenty-three Degrees of Longitude Eaſt from *London*. Its Dimenſions are about forty Leagues from North to South, and about twenty from Eaſt to Weſt.

In Summer the Air is exceſſive hot, not only by the natural Heat of the Sun in that Climate, but as it is increas'd by the Reflection of the circumjacent Woods and Mountains. Their Springs are unwholſome, by reaſon of the ſulphureous Soil from whence they proceed.

Their principal Rivers are, 1. *Alt*, or *Atlanta*; it riſes in the *Carpathian Mountains*, and falls into the *Danube*; it was, by the laſt Peace, made the Boundary between the *Turks* and *Germans*, on the North Side of the *Danube*. 2. The *Meriſſo*, which alſo riſes in the *Carpathian Mountains*, and falls into the *Teyſſe*. 3. The River *Samos*, which riſes near *Clauſenburg*, and paſſing near *Tockay*, falls into the *Teyſſe*.

This Country is inhabited by four ſeveral Sorts of People, different in their Original, their Language, Laws, and Cuſtoms, and diſtinguiſh'd under the four following Heads:

1. *Saxons*, ſuppoſed to be a Colony of the antient *Tranſiloanians*; they are poſſeſs'd of *Seben Bergen*, or the ſeven Towns, before-mention'd, which command, by far, the greater half of the Country.

2. The *Siculi*, who poſſeſs the North-Eaſt, near the *Crapack Mountains*; they are the Offspring of the *Huns*.

3. The *Hungarians*, (properly ſo call'd) who reſide near the Borders of *Hungary* and *Walachia*.

4. The *Congers*, or *Gipſies*, a ſtroling Crew, who pitch their Tents in every Part of the Country, and plunder with as much Freedom as if they were licens'd Thieves and Pick-pockets; they aſſume the Privilege of living at this rate, under a Pretence of having formerly done ſome Service to a *Tranſilvanian* Prince. But tho' they chuſe this idle Way of Living, as telling Fortunes, pilfering, and thieving, yet when all theſe idle Practices fail'd, they would work hard rather than ſtarve.

The *Saxons* inhabit five Counties, *viz.* *Altland*, 2. *Landvordenwald*, 3. *Bruckland*, 4 *Veinland*, and 5. *Noſnerland*. The chief Cities, or Towns, are, 1. *Hermanſtat*, the Capital of *Tranſilvania*; it ſtands on the little River *Cibin*, about Fourſcore Miles North-Eaſterly from *Temeſwar*; it is now the Seat of the Governor of the Province; it is a Biſhop's See; it is a ſtrong Place, well-built, the Streets broad, and generally Canals in the Middle of them, ſupply'd by the River. The *Saxons* Court of Judicature is held here. They have a good Trade for Cloth and Mead. The Gout reigns very much amongſt them, which they impute to a particular ſort of Wine made hereabouts.

2. *Cronſtat*, or *Corona*, about fifty Miles North from *Hermanſtat*; it is pleaſantly ſituated, among Vineyards that furround it, and pretty well fortify'd; the Inhabitants are all *Saxons*, having no Mixture of either *Hungarians*, or any other Nations, ſo that the *Saxon* Language is ſpoke here in its greateſt Purity. 3. *Fogaras*, a ſmall City on the River *Atlanta*, twenty-five Miles to the Weſtward of *Cronſtat*. 4. *Segeſwar*, or *Schesberg*, on the River *Cockle*, about thirty Miles to the Northward of *Hermanſtat*. 5. *Megies*, on the ſame River, about ſeventeen Miles to the Southward of *Segeſwar*; it is ſo full of Vineyards, that ſome call the Country hereabout by the Name of *Vineland*. 6. *Noſenſtat*, or *Biſtricia*, near the *Crapack Mountains*, about fourteen Miles to the Northward of *Hermanſtat*. The Gold Mines of *Rudna*

are within four Miles of this Place. 7. *Clauſenberg*, antiently *Claudiopolis*, on the River *Samos*, about fifty Miles North-Weſt of *Hermanſtat*; it is a populous Place, and was formerly the meeting Place of the States of *Tranſilvania*.

The *Hungarians* alſo inhabit five Counties, *viz.* 1. *Alba Julia*, 2. *Huniad*, 3. *Thorda*, 4. *Kohoka*, and 5. *Zatmar*. The chief Towns are, 1. *Alba Julia*, or *Weiſſenburg*, on the River *Lompay*, about twenty-five Miles to the Weſtward of *Hermanſtat*; it had its Name from *Julia Auguſta*, Mother of *Marcus Aurelius*; it was once the Capital of the Kings of *Dacia*, and was then twenty Miles in Circumference. 2. *Deva*, about twenty-eight Miles to the Southward of *Weiſſenburg*; it is remarkable for excellent Wines, as alſo for the Paſs near it, through the *Iron-Gate Mountains*, of great Importance, till the Imperial Dominions were extended beyond it by the laſt Peace with the *Turk*.

The Country of *Siculi* is on the North-Eaſt Part of *Tranſilvania*, and contains ſeven Counties, *viz.* 1. *Markozeck*, 2. *Girgio*, 3. *Utvarthel*, 4. *Chick*, 5. *Kiſdi*, 6. *Orbay*, and 7. *Schepſi*. Their capital Towns are of the ſame Names with their reſpective Provinces; but both are ſo inconſiderable that neither the Provinces nor their Capitals are worth any particular Deſcription.

CHAP. II.

Of the Nature of the Soil of Tranſilvania; *and alſo of the Product of the Country, as to Corn, Fruit, Minerals, and Cattle; alſo of their Trade, Manufactures, Habits, and Cuſtoms; with an Abſtract of their antient and modern Hiſtory, and the preſent State of Religion there.*

Soil. TRANSILVANIA is an exceeding fruitful Soil. Their Wheat is eſteem'd the beſt in *Europe*, and generally ſo plenty, that the pooreſt People eat no other Bread. Their Soil is ſo rich, that it does not agree ſo well with Barley, and hence they brew but little Beer; but that Defect is well ſupply'd with Plenty of good Wine, ſcarce exceeded by any, except the *Tokay*, (of which before.) The Country produces ſuch an Abundance of large Oxen, that one of the beſt Sort may be purchas'd in the Country for the Value of twenty Shillings Sterling, tho' when driven to Market, in *Auſtria*, one of the ſame Size will fetch fourteen or fifteen Pounds. They have alſo a very good Breed of Horſes, much eſteem'd by Foreigners. Their Woods afford great Plenty of a ſort of wild Bees, which produce great Quantities of Honey, of which they make Mead, by mixing the Honey with ſeveral pleaſant Ingredients. Their Foreſts afford abundance of Veniſon, Deer, Wild-Boars, Hares, and the like; their Hares are very large, and their Skins make a valuable Fur. They have wild Horſes, incredibly ſwift; their Manes hang almoſt down to the Ground. In ſome Parts of the Country they are much infeſted with Wolves and Bears, which, in the Winter-time, come near the Houſes, and do great Damage to their domeſtick Cattle. However, their Rivers, Fields, Woods, Hills, and Plains, abound plentifully with what they reſpectively produce.

Mines. There are Mines of Gold and other Metals in *Tranſilvania*, but not ſo plenty as in *Hungary*; their chief Mines are either at *Sculatti*, or *Rimli Dominardiz*, in which laſt Place they ſometimes find Lumps of pure virgin Gold, which will take the Impreſſion without refining. Their beſt Silver Mines are near *Offera* and *Radna*, where there are ſeveral Copper Mines, in which are alſo found Veins of Gold. There is plenty of Steel at *Cyck*, and of Iron at *Thoroſch* and *Huniad*; and they commonly find Brimſtone and Iſing-glaſs in their Copper Mines. They have alſo plenty of Rock-Salt in the County of *Maromarus*, which they ſend abroad.

They manufacture ſome Quantities of Cloth, but ſend little abroad. Their Exports conſiſt chiefly in fat Cattle, Wine, Mead, Rock-Salt, Copper and Iron Wares. They are ſo plentifully ſupply'd with the Product of their own Country, that it makes them more remiſs in looking after a Trade abroad.

Habit. The *Saxons* in *Tranſilvania* wear a ſhort looſe Coat, lin'd with Fur, and a Waiſtcoat under it; their Breeches are fitted as tight to the Thigh as the Stocking to the Leg, and are all of a Piece; their Caps are lin'd with Fur, and their Shoe-Heels ſtrengthen'd with Iron. They are ſuch exquiſite Artiſts at Drinking, that when at a publick Bout they have Muſick amongſt them, they keep Time with it by knocking their Cups and Glaſſes one againſt another, ſo exactly, as to ſupply the Place of Dancing.

Funerals. At their Funerals the Women, in a howling diſmal Tone, recite the memorable Actions of the Deceas'd, and take their final Leave of them with the utmoſt Expreſſions of Sorrow and Deſpair.

Hiſtorical Deſcription. I SHALL conclude this Chapter with an Abſtract of the antient and modern Hiſtory of *Tranſilvania*; which, as has been obſerv'd, is the Weſtern Part of the antient *Dacia*, which comprehended *Moldavia* and *Walachia*, before deſcrib'd in *Turkey*. The firſt that ſubdu'd this People was *Lyſimachus*, one of *Alexander*'s Generals; and they afterwards making frequent Incurſions into the *Roman* Territories, *Julius Cæſar* repuls'd and ſubdu'd them, and kept them under Tribute during the Time of his Adminiſtration; but in the Reign of *Auguſtus* they began to renew their Incurſions, but he ſent his General, *Lentulus*, againſt them, who at once, to prevent their Inroads for the future, fortify'd the South Banks of the *Danube*. Their laſt King, *Decebalus*, was vanquiſh'd by the Emperor *Trajan*, and he, for the Grief of his Defeat, fell on his own Sword, when no King immediately ſucceeding, his Country was reduc'd to a Province.

After this the *Dacians* making frequent Inſurrections, the Emperor *Aurelius* tranſlated the *Roman* Colonies, and the more civiliz'd Part of the Natives, to the South Side of the *Danube*, about *Servia* and *Bulgaria*, and hence thoſe Countries came by the Name of *New Dacia*; when *Old Dacia*, of which *Tranſilvania* was a Part, was thus in a Manner abandon'd by the *Romans*, the beſt Part of the Natives were ſoon ſubdu'd by the *Goths*; who kept it till they again were driven over the

Danube

Danube by the *Huns*, who likewiſe ſubdu'd *Hungary* and *Tranſilvania* much about the ſame Time.

Stephen, the firſt King of *Hungary*, came to the Crown about the Year 1000, and firſt introduc'd Chriſtianity there, as he did alſo in *Tranſilvania*, which was made a Province of *Hungary*, and govern'd by a Viceroy, or Vaivode; and this Conſtitution continu'd from the Year 1000 to the Year 1526; and then *Lewis* King of *Hungary* dying without Iſſue Male, the Faction elected *John*, Vaivode of *Tranſilvania*, to be King of *Hungary*, in Oppoſition to the Pretenſions of *Ferdinand*, Brother to the Emperor *Charles* V. who ſoon drove *John* out of his new Kingdom.

When the Vaivode found that he was not a Match for the Emperor and his Brother *Ferdinand*, he retir'd to *Poland*, from whence *Solyman*, Emperor of the *Turks*, invited him to *Tranſilvania*, with a Promiſe of ſupporting his Intereſt; which *John* accepting of, took upon him the Title of abſolute Prince of *Tranſilvania*, independant of *Hungary*, agreeing at the ſame Time to pay a ſmall Tribute to the *Turk* for his Protection.

When this Prince *John* of *Tranſilvania* dy'd, his Son *John* not only ſucceeded him in the Principality of *Tranſilvania*, but was elected and crown'd King of *Hungary* too; which the Emperor not agreeing to, commence'd a bloody War with the *Turk*; but a Truce was agreed upon, in which *Hungary* was yielded to the Emperor, and *Tranſilvania* confirm'd to Prince *John*; and he dying without Iſſue, *Stephen Bathori* ſucceeded to the Principality of *Tranſilvania*; but he being afterwards elected King of *Poland*, his Brother *Chriſtopher Bathori* was Prince of *Tranſilvania*; and when he dy'd his Son *Sigiſmund* ſucceeded to *Tranſilvania*, who immediately threw off all Subjection to the *Turks*, and enter'd into an Alliance with the Emperor *Rodolph*; and by this Means he was entitled to a Vote at the Diet of *Ratisbon*, and was declar'd a Prince of the Empire, on Condition that, on failure of Iſſue, *Tranſilvania* ſhould be re-annex'd to the Crown of *Hungary*; but this Alliance held but a ſhort Time, and *Sigiſmund* quarrelling with the Emperor, was by him diſpoſſeſs'd of his Principality.

Sigiſmund Ragotski then took upon him the Title of Prince of *Tranſilvania*; but finding himſelf too weak for the Emperor, he ſoon reſign'd, and *Gabriel Bathori* aſſum'd the Government; who the better to ſecure himſelf, put himſelf under the Protection of the *Turk*. After him came *Bethlem Gabor*, who being ſupported by *Achmet*, the *Turkiſh* Emperor, he engaged in a War with the Emperor *Ferdinand* the Second, in the Intereſt of *Frederick* Count Palatine of the *Rhine*, (elected King of *Bohemia*) and made himſelf Maſter of a good Part of *Hungary* and *Moravia*; and dying in the Year 1629, the States offer'd the Government of the Principality to his Widow; but ſhe, conſcious of her own Inability for that great Charge, reſign'd to Prince *George Ragotski*, who, under the Protection of the *Turk*, engaged in a War with the Emperor. *George Ragotski* II. ſucceeded his Father; but the *Turks*, not ſatisfy'd with the Succeſſion, proclaim'd *Achatius Bartchay* Prince of *Tranſilvania*, while *George Ragotski* II. was yet alive; but they afterwards beheading *Achatius*, the States elected *John Kimen*; but the *Turks* refuſing to confirm his Election, their Faction cut him to Pieces, and *Michael Abaffi* ſucceeded in the Year 1661; but he, with the Conſent of the States of *Tranſilvania*, reſigning that Principality to the Emperor, as King of *Hungary*, for ever, the Emperor immediately took Poſſeſſion, and put Garriſons into all the fortify'd Towns.

When *Abaffi* dy'd, the Emperor appointed the Prince his Son Vaivode, or Viceroy of the Country, in Oppoſition to Count *Tekeli* and the *Ottoman Porte*; and to this Day the Principality of *Tranſilvania* is incorporate with the Crown of *Hungary*, under the Protection of the Emperor; and this Principality was confirm'd to the Emperor by the *Turks* at the Treaty of *Carlowitz* and *Paſſerowitz*.

Religion. The *Roman* Catholick is the eſtabliſh'd Religion in *Tranſilvania*, as well as in others of the Emperor's Hereditary Dominions; here are indeed great Numbers of *Lutherans*, *Calviniſts*, and other Denominations of Proteſtants, but they are ſo far from being tolerated, that they are perſecuted with great Severity, which has occaſion'd many Inſurrections both here and in *Hungary*.

A DESCRIPTION OF THE FRONTIER PROVINCES OF THE EMPIRE, VIZ. SERVIA, CROATIA, and SCLAVONIA.

CHAP. I.

Of the Province of Servia.

Extent. SERVIA, aniently *Mæsia Superior*, is bounded on the North by the *Danube* and the *Save*; the latter of which separates *Servia* from *Sclavonia*. On the East, by *Bulgaria*, or *Mæsia Inferior*. It is bounded on the South, by *Albania*, and Part of *Macedon*; and on the West, by *Bosnia* and *Dalmatia*. It extends about two hundred and fifty Miles from East to West, and an hundred and twenty from North to South. It has a temperate Air and a fruitful Soil; and was therefore stil'd by the *Romans*, their Granary for Corn. It is well water'd, and would produce good Wines; but labouring under the Misfortune of most other frontier Provinces, the Hazard of being plunder'd by the contending Parties on each Side of it, *viz.* the *Turks* and the *Imperialists*, their Land lies uncultivated, except just sowing or planting, so much as is necessary for the Support of their own Families; they not being entirely free from the Depredations of those voracious Neighbours even in Times of Peace.

Belgrade; The chief Towns of *Servia* are, 1. *Belgrade*, or *Greek Weissenburgh*, situate on a rising Ground, on the Bank of the *Danube*, where the River *Save* falls into it. It lies in about forty five Degrees of Latitude North; and in Longitude, twenty one East from *London*. It is a large Town, well situate for Trade, and one of the strongest Fortresses in *Europe*. It was taken from the *Christians* by *Solyman* Emperor of the *Turks*, in the Year 1521, and retaken by the Emperor in 1686, under the Conduct of the Duke of *Bavaria*. The *Turks* besieg'd it again in 1688; and one of the Enemies Bombs blowing up the Magazine and Part of the Wall, the *Turks* enter'd Sword in Hand, putting all the Garison (which consisted of Six Thousand Men) to the Sword, except the Governor and three hundred Men, who escap'd out of one of the Gates, while the *Turkish* Forces were busy in plundering the Town.

In the Year 1717, about the Middle of *June*, the Emperor sent an Army under the Command of Prince *Eugene*, to invest *Belgrade*; but it being a Place of the greatest Importance to the *Turks*, they were resolv'd to defend it at all Hazards. The Siege was attempted on the Sixteenth of *August* the same Year; when both Parties, knowing the Place to be of great Consequence, either were equally obstinate; whereupon a pitch'd Battle ensu'd, in which the *Imperialists*, under Prince *Eugene*, gain'd a compleat Victory.

In this Engagement, the *Imperialists* took from the *Turks*, above an hundred and fifty Pieces of Cannon, thirty or forty Mortars with Amunition in Proportion, and in short their whole Camp: And if we would give an Estimate of the Largeness and Importance of the Place, by what was contain'd in it, when it surrender'd, the following Account will assist in the Computation: For there were above sixty thousand *Turks* left in the Place, whereof twenty thousand were Soldiers. There were four hundred and fifty six Brass Cannon, two hundred and nine of Iron, and an hundred and three Brass Mortars; which with Ammunition in Proportion, was Proof sufficient of the Strength of the Place.

2. The next City of Note is *Semendria*, upon the *Danube*, about twenty Miles to the Eastward of *Belgrade*; it was formerly the Capital of *Servia*, but now declin'd.

3. *Widin* on the *Danube*, about an hundred and fifty Miles below *Belgrade*, and near the River *Timock*.

4. *Nissa*, about an hundred and twenty Miles South East of *Belgrade*, situate on the River *Morava*, now a Place of no great Importantance.

5. *Scopia*, on the same River *Morava*, and about sixty Miles to the Southward of *Nissa*; it is a large trading Town, and situate in a pleasant fruitful Country on the Borders of *Macedon*: Here are several fine Mosques, Caravanseras, and other Ornaments to the Place.

The Country of *Servia*, and *Bulgaria*, or the Lower *Mæsia*, were subdu'd by the *Romans*, and made

made a Province of that Empire in the Reign of *Auguſtus Cæſar*, and continu'd ſo till the Fall of the Eaſtern Empire, and was then ſeiz'd by the *Sorabi*, a *Sclavonian* People; but the Word being contracted to *Sorbi*, and from thence to *Servi*, gives the preſent Name of *Servia* to the Province.

When the *Turk* began to make a conſiderable Progreſs in *Europe*, the *Servians*, willing to make Head againſt them, put themſelves under the Protection of the Kings of *Hungary*, paying a ſmall Tribute to that Crown for their Dependancy; and hence it is that the Houſe of *Auſtria*, as Kings of *Hungary*, claims this Province of *Servia*; and indeed it was little more than a Claim, for in plain Truth, the *Turks* made an entire Conqueſt of it, and the Princes of *Servia* became tributary to the *Turk* in the Year 1460; at which Time they modell'd it into the ſame Form of Government with one of their own Provinces, and made it ſubject to the Viceroy of *Romania*; ſo that the Emperor paid dear for the little Title (and only a bare Title) that he had to *Servia*, till the Battle of *Belgrade*, under Prince *Eugene*, in the Year 1717, by which, and the Peace that enſu'd upon it, a great Part of the Province was again transferr'd to the Emperor.

But as I am now treating of thoſe Places which are the Frontiers of the *German* and *Ottoman* Empires, it may not be amiſs, before I conclude this Chapter, to give an exact Deſcription of the Extent of each of their Dominions, and where they are ſeparated.

And firſt, on the North Side of the *Danube*, all Places and Countries to the Weſtward of the River *Atlanta* and *Temeſwaer*, are by Name confirm'd to the Emperor; and all on the Eaſt Side of that River belongs to the *Porte*, or *Turkiſh Empire*; and this Diviſion holds good from where it flows out of *Tranſilvania* to where it falls into the *Danube*; and on the South Side of the *Danube*, the Boundary is where the little River *Timock* falls into the *Danube*, and up along the ſame for ten Leagues; and the ſaid Limits are continued through the Mountains towards *Parakin*, &c. as far as the River *Drin*; ſo that *Belgrade*, *Parakin*, *Iſtolaz*, *Schabak*, *Bedka*, and *Belina*, with their antient Territories, are ſurrender'd to the Emperor, and *Zokol* and *Razna* remain to the *Turk*; and the Subjects of both Empires are equally to enjoy the Navigation of the River *Timock*, which ſeparates the Empires, as paſſing between them. Again, from the *Drin* to the River *Una*, the River *Save*, with all the Places, whether wall'd or open, upon both its Banks, hitherto in the Emperor's Poſſeſſion, ſhall be continu'd to him, as ſhall alſo that Space from where the *Una* and the *Save* join, to the Territories of the antient *Novi*; the Territories of *New Novi*, on the Weſt Side of the *Una*, which at the Treaty of *Carlowitz* was granted to the *Turk*, ſhould be reſtor'd to the Emperor, with all their Dependencies; the Limits of *Croatia* to remain as before on the Treaty of *Carlowitz*, the River *Una* ſeparating the two Empires in this Province.

CHAP. II.

A Deſcription of the Provinces of Croatia *and* Sclavonia.

Limits.

THE Province of *Boſnia* lies between *Servia* and *Croatia*; but that does not fall under our Conſideration at preſent, it being a Province of the *Turkiſh Empire*, and ſpoke of under that Head.

Croatia, which is Part of the antient *Illyricum*, is bounded on the North by the River *Save* and the *Danube*, the former of which ſeparates it from *Sclavonia*; (of which in the next Chapter;) it is bounded by *Boſnia* on the Eaſt, on the South by *Morlachia*, and on the Weſt by *Carniola*. Chief Towns are, 1. *Carlſtat*, on the River [illegible] about twenty Miles to the Southward of the *Save*: it is the Capital of the Imperial *Croatia*, and being a frontier Town it is tolerably well fortify'd. 2. *Siſeg*, upon the *Save*, about thirty-five Miles to the Eaſtward of *Carlſtat*. 3. *Caſtanowitz*, near the River *Una*, about thirty Miles to the Weſtward of *Gradiſca*. Theſe are ſubject to the Emperor.

Chief Towns.

There are two material Places ſubject to the *Turk*, *viz.* 1. *Dubiez*, on the Eaſt Side of the River *Una*, and therefore in the *Turkiſh* Dominions, that River being the Boundary. 2. *Whitz*, on the ſame River *Una*, about fifty Miles to the Southward of *Carlſtat*, and forty from *Dubiez*.

Croatia produces plenty of good Wine and Oil where it is cultivated, but labours under the melancholy Fate of moſt of the other frontier Provinces againſt the *Turks*, they not being willing to propagate the Growth of any more than what is abſolutely neceſſary for their own Subſiſtence, leſt the Overplus ſhould ſerve for Plunder, and redound to the Advantage of their Enemies.

Stature.

The Natives are of a good Stature, and hardy Soldiers; for which they are ſo much noted, that the *German* Princes commonly have their Guards compos'd of *Croatians*, call'd by them *Croatz*, or *Krabatz*.

Morlachia, which is a long narrow Province, lying between *Croatia* and the Gulph of *Venice*, was and is ſtill by ſome, look'd upon as a Part of *Croatia*; but as they not only bear two diſtinct Names, but are alſo ſubject to different Maſters, the *Turks* and the *Venetians*, one being Heathens and the other Chriſtians, I find no Opportunity to unite the two Places under one Name, but ſhall rather defer ſpeaking of *Morlachia* till I come to ſpeak of the *Venetian* Territories.

Of SCLAVONIA.

THE antient *Sclavonia* contain'd many large Countries, extending from the Gulph of *Venice* almoſt to the *Black Sea*; and its Language ſo extenſive, not to ſay univerſal, that it is ſtill ſpoke in many Kingdoms in *Europe*.

But the modern *Sclavonia*, of which we are now to ſpeak, is bounded by the River *Drave* on the North, and *Danube* on the Eaſt, by both which it is ſeparated from *Hungary*; the River *Save* ſeparates it from *Servia* and *Boſnia* on the South, and *Stiria* is its Weſtern Boundary; it is about two hundred Miles in Length, and fifty or ſixty broad.

It is a level Country, and has a fine Air; it is exceedingly well water'd, eſpecially by the above-mention'd

mention'd Rivers with which it is almoſt encompas'd; namely the *Drave*, the *Danube*, and the *Save*, with many other Streams of leſs Note; which might be ſuppos'd to contribute very much to the Fruitfulneſs of the Country, if its Contiguity to an Enemy's Country did not diſcourage the Improvement of the Soil.

Chief Towns.

THEIR chief Towns (which are now under the Emperor's Dominions) are, 1. *Poſega*, the Capital of the Province; it ſtands upon the River *Oriana*, fifteen Miles North of the *Save*, and about an hundred and twenty Miles to the Weſtward of *Belgrade*: It contains about a thouſand Houſes, is a Place of good Trade, and has about four hundred Villages under its Juriſdiction. 2. *Walpo*, on the River *Walpo*, thirty five Miles North East of *Poſega*. 3. *Eſſeck*, chiefly famous for its Bridge, ſpoke of before in the Deſcription of *Hungary*. 4. *Walcowar*, about twenty Miles to the Southward of *Eſſeck*. 5. *Ilock*, ten Miles South East from *Walcowar*. 6. *Peterwaradin*, upon the South Bank of the *Danube*, between forty and fifty Miles below *Eſſeck*; it is a ſtrong Town, and was the Frontier of the *Turks*, after the taking of *Buda*; but now that, and the whole Province, is ſubject to the Emperor. 7. *Salankamen*, fifteen Miles to the Eaſtward of *Peterwaradin*, remarkable only for the Victory obtain'd by Prince *Lewis* of *Baden* over the *Turks*, *Anno* 1691. 8. *Carlowitz*, a little to the Northward of *Peterwaradin*, remarkable for the Treaty of *Carlowitz*; in which the Peace was concluded in the Year 1699, between the Emperor and the *Turks*. 9. *Semlin*, about the Middle, between *Salankamen* and *Belgrade*. 10. *Alt-Sirmium*, the Capital of a County of that Name; it was a Biſhop's See, but now reduc'd to a Village: It is about ſixty Miles to the Weſtward of *Belgrade*. 11. *Agram*, near the River *Save*, about an hundred Miles to the Weſtward; it is a Biſhop's See, and Capital of a County. Laſtly, *Gradiſka*, a ſtrong Town near the *Save*, about fifteen Miles to the Weſtward of *Poſega*.

Perſons. Husbandry.

THE *Sclavonians* are ſtrong, hale Perſons, and fit for Labour: The Soil is good, the navigable Rivers are fit for Trade; but the fatal Diſadvantages that it participates of in common with the other Frontier Towns, between the *Turks* and *Chriſtians*, make them very ſparing of the Labour of Cultivation; leſt the Enemy ſhould not only plunder them of the Fruits of their Labour, but fight them with their own Weapons into the Bargain.

THE Roman Catholick is the eſtabliſh'd Religion here, it being a Province under the Dominion of the Emperor; there were formerly, and not long ſince, abundance of *Greeks*, as well as *Roman* or Popiſh Chriſtians; but the *Romans* now having the Aſcendant, compel the other Chriſtians to come into their Communion; though indeed, ſome of them not willing to proſtitute their Conſciences to thoſe Superſtitions, fly for Refuge, and are diſpers'd, ſome of them into *Turky* itſelf, where they find better Quarters, and more tender Uſage than they did among their own Popiſh Brethren from whom they fled.

ALL the *Mahometans* have abandon'd this Country except ſome few, who embrac'd Chriſtianity for temporal Intereſt; for no *Mahometan*, while he remains ſuch, is allow'd to reſide in a Chriſtian Country; but moſt of the *Grand Seignior's* Subjects in *Europe* are *Greek* Chriſtians, and they are tolerated in the free Exerciſe of their Religion.

A DESCRIPTION OF BOHEMIA,

Including

Silesia and *Moravia*.

CHAP. I.

Of the Situation and Extent of Bohemia; *also of the Air, Mountains, and Rivers; as also of its Provinces, chief Towns, &c.*

AS the Provinces of *Silesia* and *Moravia* are incorporated with *Bohemia*, and do not contain a vast Space of Ground, and their Government, Religion, Language, &c. being much the same, I shall include them all in the following Description; but as for *Lusatia*, tho' it was formerly reckon'd a Part of *Bohemia*, yet having been transferr'd, by the Emperor *Ferdinand* II. to the Elector of *Saxony*, it shall be treated of as a Part of the Emperor's Dominions.

THE Name of *Bohemia* is deriv'd from *Bemi*, or *Boiemi*, the Name of the antient Inhabitants; who, as *Tacitus* affirms, defcended from the *Boii*, a *Gallick* Nation, that retir'd into the *Hycanian* Forest, which runs through this Country, to avoid the *Roman* Slavery.

Bohemia, according to its prefent Situation and Extent, is bounded on the North by *Saxony* and *Lusatia*, on the East by *Hungary* and *Poland*, by *Austria* and *Bavaria* on the South, and on the West by the Electorate of *Saxony* and Palatinate of *Bavaria*. It extends from about forty-eight to fifty-two Degrees North Latitude, and about Longitude fifteen Degrees East from *London*.

THE Air of this Country is generally colder than nearer the Sea Coast, and yet not very healthy, by reason of the Woods and Mountains which abound here and check the Wind in its Course; and to that we may add, that the Waters are very bad and corrupt, and contribute very much to the Healthiness of the Climate. The Country is most mountainous in the South and East Parts thereof; there are large Mountains in *Bohemia* and *Moravia*, but the North and West Parts are more plain and champaign Ground.

THE Rivers *Elbe* and *Muldaw* rise in *Bohemia Proper*, and running Northwards meet near *Prague*, and then the united Stream is call'd the *Elbe*, which continuing its Course through *Saxony*, washes the Walls of *Hamburgh*, and falls into the *German Ocean*, a little below *Gluckstadt*. The *Oder* rises in the Mountains in the South Part of the Province of *Silesia*, and running along by *Poland*, *Brandenburgh*, and *Pomerania*, it falls into the *Baltick*, to the Eastward of the Island of *Rugen*. The *Weisel*, or *Vistula*, rises in the same Mountains, and runs first to the Eastward, passing by *Cracow* in *Poland*, and from thence to *Warsaw* and *Thorn*, and falls into the *Baltick Sea*, at *Dantzick*. The River *Moraw* rises in the Mountains which separate *Silesia* from *Moravia*, and running to the Southward, quite through the Province of *Moravia*, falls into the *Danube* near *Presburg*. The *Teya*, or *Tey*, runs East through the South Part of *Moravia*, and falls into the *Moraw*. There are divers other small Rivers in this Province, but not being of any Note, they are not worth a Description.

Bohemia is divided into 1. *Bohemia Proper*, 2. *Silesia*, and 3. *Moravia*.

Bohemia Proper is bounded on the North by *Lusatia*, by *Silesia* and *Moravia* on the East, on the South by *Austria*, and on the West by *Misnia* and *Bavaria*; it was formerly reckon'd a Part of the *Hycanian Forest*, it being a mountainous and (then) woody Country; but now the Woods disappear, as having been converted into Towns and Villages, of which the Number is so great, that not so much as the Remains of a Forest is to be seen.

Prague.

The Capital of the Province, and indeed of the whole Kingdom, is *Prague*, which stands upon the River *Muldaw*, about a hundred and forty Miles North-West of *Vienna*, and seventy South of *Dresden*. It is an Archbishoprick, and is said to have been one of the greatest Universities in *Europe*. It is reported that, in the Time of *John Huss*, who attempted a Reformation from the Errors of the Church of *Rome*, not much less than a hundred Years before *Martin Luther* appear'd in publick, the University of *Prague* had forty thousand Students. The Number seems incredible, if we did not likewise consider that the City is one of

the largeſt in this Part of the World. It is compos'd of three Towns, *viz. Old Prague*, *New Prague*, and the leſſer *Prague*: *Old Prague* ſtands on the Eaſt Side of the River *Muldaw*; it is the Univerſity, and the moſt populous Town of the three. In this Town are alſo ſeveral Monaſteries, and a College of Jeſuits. The New Town encompaſſes the former, and is ſeparated from it only by a Moat; it is fortify'd, and has a Citadel; but ſo large that it would require a whole Army for a Gariſon; and without that, it would be the weaker, by being ſo large. The leſſer Town, is on the Weſt Side of the River *Muldaw*, over which there is a pleaſant Stone-Bridge for Communication, between the leſſer Town and the other two. Here is a magnificent Caſtle and Palace, formerly the Reſidence of the *Bohemian* Kings: As alſo here ſtands Saint *Veit*'s Cathedral, and the Houſes of the Nobility; among which is that of Count *Wallſtein*, afterwards Duke of *Friedland*, and General to the Emperor *Ferdinand* II, which is moſt admired. It is a very magnificent Building, erected upon the Ruins of above an hundred Houſes, which were pull'd down to make room for it, and to furniſh Materials to help in the building of it. There is a fine Aviary, Gardens, and Stables, with a Marble Pillar between each Horſe; and to every Stall is a Marble Manger and a Steel Rack; and over it, the Name of the Horſe that ſtands in it, with a Picture as large as the Life. There is a Suburb call'd the *Jews* Town, where great Numbers of that Sort of People inhabit; and as in other Parts of the World live by trucking and chaffering, dealing in Jewels and precious Stones; as Topazes, and Stones dug out of the *Bohemian* Mines, or other Things in which the Ignorant may be moſt eaſily impos'd upon.

Dr. *Brown* tells us, that *Prague* is much larger than *Florence*; the Streets larger, the Windows of fine Glaſs, which makes a better Appearance than the ragged Paper-windows of *Florence*: It ſtands alſo upon a nobler River than the *Arno*, upon which *Florence* ſtands; and the one Bridge at *Prague* exceeds all the four Bridges over the *Arno*. Nor does *Florence* exceed *Prague* in any Thing remarkable, except the Cathedral, built of black and white Marble, the Chapel of St. *Laurence*, and the Great Duke's Gallery and the Rarities therein.

Prague is alſo memorable for the famous Battle fought upon the *White Hill* near it, in the Year 1620, between the Emperor's Forces, under the Command of the Duke of *Bavaria*, and the Elector *Palatine*'s Troops, the Head of the Proteſtant League; but the Elector's Army being defeated, the Proteſtant Intereſt in *Germany* ſuffer'd with it, and the Elector loſt both the Kingdom of *Bohemia* and the Palatinate.

But 2dly, another great Town is *Egra*, about fourſcore Miles to the Weſtward of *Prague*; it ſtands on the River *Eger*. There is a brackiſh Fountain near it, which cures Diſtempers of the Eyes and Ears by purging. 3. *Koningratz*, on the *Elbe*, fifty Miles to the Eaſtward of *Prague*; it is a Biſhop's See in the Archbiſhoprick of *Prague*. 4. *Glatz*, the Capital of a very rich Diſtrict; it is ſituate on the Foot of the Hills which divide *Bohemia* from *Sileſia*; it is about a hundred Miles Eaſt from *Prague*.

The Province of *Sileſia* is bounded on the North by *Brandenburgh*, on the Eaſt by *Poland*, on the South by the Mountains of *Reſſenbergen*, which ſeparate it from *Moravia*, and on the Weſt by *Bohemia*. Chief Towns are, 1. *Breſlaw*, the Capital of the Dutchy of *Breſlaw*, and of all *Sileſia*; it is ſituate on the River *Oder*, about a hundred and twenty Miles North-Eaſt of *Prague*; it is a handſome ſtrong City, a Biſhop's See, and an Univerſity, and govern'd by its own Magiſtrates. 2. *Croſſen*, the Capital of a Dutchy, on the *Oder* near *Brandenburg*; it was mortgag'd ſeveral Times to the Elector of *Brandenburg*, and at laſt, not being redeem'd, was wholly confirm'd to him, and he now remains Sovereign of it. 3. *Glogaw*, the Capital of the Dutchy of *Glogaw*, ſituate upon the *Oder*, forty Miles South-Eaſt of *Croſſen*. 4. *Liguitz*, Capital of a Dutchy of the ſame Name, about thirty-ſix Miles to the Weſtward of *Breſlaw*. 5. *Jagendorf*, on the River *Oppa*, near *Moravia*, and Capital of the Dutchy of *Jagendorf*.

Proviſ. of Sileſia.

Moravia is a Marquiſate, and bounded on the North and Eaſt by *Sileſia*; on the South by *Auſtria*, and on the Weſt by *Bohemia*. Chief Towns are, 1. *Olmutz*, Capital of the Province; it ſtands on the River *Moravia*; it is the only Biſhop's See in the Province, and a Town of good Trade. 2. *Brin*, a ſtrong Town at the Confluence of two ſmall Rivers, about ſixty Miles to the Northward of *Vienna*. 3. *Iglaw*, on a River of the ſame Name, about forty Miles to the Weſtward of *Brin*, near the Mountains which ſeparate *Moravia* from *Sileſia*; it is a large ſtrong Town, and lies on the Road from *Hungary* to *Bohemia*.

Provinces of Moravia.

CHAP. II.

Treats of the Perſons and Habits of the Bohemians; *as alſo of their Genius and Temper; their Buildings, Way of Travelling, and the Nature of the Soil; with the Plants, Animals, and Minerals the Country produces; and the Trade and Manufactures carried on there.*

Perſons.

THE *Bohemians*, like their neighbouring *Germans*, are generally both tall and corpulent, which with a hale ſtrong Conſtitution and Complexion muſt needs contribute to make a ſtrong Man.

Habit.

As to their Habit, they are fond of every new foreign Faſhion, but chiefly the *French*. This Country is the Firſt that voluntarily quitted the Eaſtern *Aſiatick* Habits, of Veſts and long Gowns, and cloath'd themſelves in ſhort Coats, Breeches, and Stockings, as with us; the Women alſo have left off their Drawers and Breeches, the Faſhion of the Eaſtern Ladies, and conform to the *French* Dreſs, except thoſe who live near the Confines of *Poland*, and wear the ſame Sort of Habit. The *Ruſſians* did indeed conform to our Dreſs, but neither ſo ſoon as the *Bohemians*, nor *voluntarily*, but when the late Czar compell'd them to it.

As to the Genius and Temper of the *Bohemians*, the Quality are naturally brave, more inclin'd to

Genius and Temper.

Arms per

Arms than Arts, and of an open generous Converſation; but obſerve this was ſpoke of the *Quality*, who have had Education, and convers'd with the better Part of Mankind; for the Boors, or vulgar People, who aſpire to no higher Converſation than that of one of themſelves with another, are a very brutiſh People, addicted to thieving and pilfering; and if we conſult all Authors, of whatſoever Sentiments in other Reſpects, we ſhall find they all charge this whole Nation with Exceſs and Intemperance, both in Eating and Drinking; and a ſuperſtitious Credulity reigns every where amonſt them; for let one tell a Story of Witches, Dæmons. Spectres, Apparitions, *&c.* they are all ſure to believe it; and eſpecially with reſpect to the Mines, thoſe darkſome Cells and fit Habitations for infernal Beings, there not being one of them (if you will believe the vulgar Inhabitants) but what is a Rendezvous for that infernal Society, or ſome ſelect Members of that Fraternity.

Buildings. THE Palaces of the Noblemen are generally modell'd after the *Italian* Manner, the Materials for them and their Churches, and other publick Buildings, being generally of Stone; but as for the Peaſants Houſes they are for the moſt Part built of Wood, and make but a mean Appearance. Their Way of Travelling differs not much from ours, either uſing Coaches, or Horſes, or walking on Foot; but their Roads are not very agreeable, the Mountains being incommodious for travelling, eſpecially with Wheel-Carriages, and the low Grounds are all under Water in the Winter-time; but in this they more reſemble *Holland* than *England*, for in the Winter they uſe Sledges or Skates upon the Ice, either for Buſineſs or Diverſion.

Soil. THE Hills and Mountains, which take up the greateſt Part of the Country, are generally rocky and barren, but the Vallies produce Corn and Wine, but not enough to ſupply themſelves, much leſs for Exportation, for they are forc'd to have additional Supplies from *Hungary*. What Wine *Bohemia* affords is tollerably good for preſent ſpending, but it will ſoon turn ſour. However, to make amends, the Soil produces good Barley and Hops, that they make great Quantities of good ſtrong Beer, both for their own Uſe and for Exportation. Their Soil is proper for Flax, and their Sheep afford a coarſe Sort of Wool; that they can make their own Cloaths, both Linen and Woolen, and export ſome Flax and Wool unwrought to other Places. There is a good Sort of Saffron grows here; and their Foreſts abound with good Timber, as their Gardens do with Fruit-Trees of ſeveral Sorts, and Herbs, Roots, *&c.*

Mines. THEIR Mines are what is moſt valuable to them, wherein they dig up Silver, Copper, Tin, Iron, and Lead; and in ſome of their Mountains are found precious Stones, as Topazes, Carbuncles, Amethyſts, Jaſper, Saphires, *&c.* which are bought up by the *Jews*, to ſend abroad. There are at *Guttemburgh*, about twelve Miles from *Prague*, thirty Mines, accounting Silver and Copper together, which have been wrought this ſeven or eight hundred Years; but ſo poor, that a hundred Weight of Silver Ore does not produce above an Ounce of Silver; and a hundred Weight of Copper Ore does not produce above eight or nine Ounces of Copper. Their Tin Mines are of the beſt Advantage to them; this Commodity though ſo uſeful, yet is ſcarce to be met with any where but in *England*, and the Mines in *Bohemia* were firſt diſcover'd by an *Engliſhman*. They have Sulpher and Saltpetre; but ſo little common Salt of their own Product that they are forc'd to import it.

Cattle. THEY have good Meadow and Paſture Ground, and accordingly abound in Oxen, Sheep, and other Cattle, eſpecially in large Horſes. As for tame and wild Animals they are much the ſame as in *England*.

Manufactures. THE Country affords both Linen and Woolen, as was obſerv'd before, but theſe Manufactures do not ſeem to arrive at any great Perfection. They make very good Glaſs; and their Manufactures of Copper, Iron, and Tin, are not amiſs, but worth exporting; as they do alſo precious Stones and ſtrong Beer, but it is in ſuch ſmall Quantities, that their foreign Trade is very inconſiderable.

CHAP. III.

An Abſtract of the antient and modern Hiſtory of Bohemia, *the Succeſſion of their Princes, and the Conſtitution of their Government.*

ALTHOUGH *Bohemia* is look'd upon as a Part of *Germany*, yet as it is one of the Emperor's Hereditary Countries, and excluded from the Privileges which other Circles and Electorates enjoy, (except that the being King of *Bohemia* entitles the Emperor to a Voice in the Election of the King of the *Romans*,) it is proper to treat of it (with *Sileſia* and *Moravia*) as a diſtinct Province from *Germany* in Point of Government; and the rather, becauſe neither the Laws of the Empire are of any Force here, nor are the *Bohemians* obliged to raiſe Forces, or pay Taxes for the Defence of the Empire, as the other Circles are, but are only ſubject to the Emperor as their own Prince, the Prince of *Auſtria*, and not as Emperor of *Germany*.

THE *Sorbians* are commonly ſaid to have been the firſt that ever inhabited *Bohemia*, tho' as before obſerv'd, the *Boemi*, or *Boii*, a *Gallick* Nation, coming after them, gave Name to it. It was firſt divided into ſeveral Principalities, govern'd by their reſpective Dukes, or Heads, till *Zechus* obtain'd a Sort of a Sovereignty over the whole. This *Zechus* was Brother to *Lechus* the firſt King of *Poland*, as that Hiſtory furniſheth with an Account of. [*See the Deſcription of* Poland, *Chap.* IV. *Page* 357;] *Lechus* began to reign in *Poland* about the Year 550. This *Zechus*, tho' Chief of all the reſt, was ſtill but ſtil'd Great Duke of *Bohemia*, all the reſt governing their own Provinces, but acknowledging *Zechus* for their Chief, or Captain General; for the Natives being generally Shepherds and Graſiers before that Time, and *Zechus* teaching them Husbandry, and ſo much of Architecture as to be able to build themſelves little Houſes, which they liked much better than the Tents they formerly uſed, and he being Brother to the King of *Poland*, theſe Inducements prevail'd upon them to elect him their Sovereign.

THE

THE next *Bohemian* Sovereign was *Cracus*, suppos'd to be the same that was King of *Poland*, [*See the Chapter and Page before quoted,*] and this is the more probable, because *Cracus* King of *Bohemia* began his Reign in the Year 700, as did also *Cracus* King of *Poland*; but how the Time was fill'd from the Time of *Lechus* of *Poland*, and *Zechus* of *Bohemia*, (who began *Anno* 550,) till the Year 700, *viz.* 150 Years, History does not mention; but it must be in Contests, Inter-regnums, *&c.* for these two Dukes could not reign so many Years, nor have we so much as the Name of any of their Successors, till *Cracus* above-mention'd; and after his Death succeeded,

Libussa, the youngest Daughter of *Cracus*; but the People, not satisfied with a female Ruler, were about to depose her; but she not willing to quit the Government, pretended to them that Heaven directed her to cause a Horse to be turn'd loose, and at whose Door soever he should stop first, the Man of that House should marry her, and be Partner with her in the Government; which being agreed to, and done, the Horse stopp'd at the Door of one *Primislaus*, a poor Man, who was accordingly married to her, and succeeded her solely in the Government after her Death, and was reckon'd the fourth Ducal Sovereign, reckoning, as above, 1. *Zechus*, 2. *Cracus*, 3. *Libussa*, and 4. *Primislaus*; and I may proceed to 5. *Nimislaus*, the Son of *Primislaus*, 6. *Mnatha*, his Son, and 7. *Vogenius*, or *Vortius*, 8. *Wenceslaus*, 9. *Czecoslaus*, Brother of *Wenceslaus*, 10. *Belam*, Son of *Czecoslaus*. These Ten have little remark'd of them in History, but their Names; but after them succeeded,

11. *Borsivoius*, the first Christian Prince of *Bohemia*; he was the Son of *Belam*, and being advanc'd to the Government *Anno* 856, and continuing in his Heathen Principles thirty-eight Years, he was converted in the Year 894, which occasion'd an (almost) fatal Insurrection in his Dominions; but he bravely withstood and subdu'd his rebellious Subjects, reducing all in general to Obedience, and so many to Christianity, that he liv'd to see that the prevailing Religion in most of his *Bohemian* Provinces.

12. *Spitigneus*, the Son of *Borsivoius*, succeeded *Anno* 904, and after him,

13. *Uladislaus*, Son of *Spitigneus*, *Anno* 906; but he was murder'd, and succeeded by his Brother,

14. *Boleslaus*, in the Year 938; he persecuted his own Christian Subjects, and endeavor'd to restore Paganism; whereupon the Emperor *Otho the Great* invaded his Dominions, and after a War of fourteen Years, brought him to be tributary to him, oblig'd him to do publick Penance for his Apostacy, and to restore Christianity to his own Dominions of *Bohemia*; he was succeeded by,

15. *Boleslaus* II. *Anno* 967, and he by his Son,

16 *Boleslaus* III. *Anno* 999, and he by his Son,

17. *Jaromir*, in the Year 1012.

18. *Ulrick*, the Brother of *Boleslaus*, and Uncle of *Jaromir*, rais'd a Rebellion against his Nephew, and overcoming him, he put out his Eyes, and ascended the Throne himself *Anno* 1035.

19. *Bretislaus*, the Son of *Ulrick*, succeeded in the Year 1037.

20. *Spitigneus* II. succeeded in the Year 1055; he was the last Duke of *Bohemia*; he was succeeded by *Uladislaus* II. but he being created King of *Bohemia* at *Mentz*, by the Emperor *Henry* IV. I shall put him at the Head of the Race of the *Bohemian* Kings.

Kings of BOHEMIA.

1. *Uladislaus* II. began *Anno* 1061, but he only succeeded as Duke, and was not created King; till the Year 1086, and was succeeded by,

2. *Conrade*, the Brother of *Uladislaus*, who came to the Crown in the Year 1092, and was succeeded by

3. *Brezetislaus*, Son of *Uladislaus* II. *Anno* 1099. and after him

4. *Borzivoius*, Brother of of *Brezetislaus*, *Anno* 1100, but he was imposed upon them by the Emperor, against their Consent; and they twice dethron'd him and drove him into *Germany*, and

5. *Sulapulcus*, the Nephew of *Borzivoius*, usurp'd the Throne, *Anno* 1107; and being assisted with Money by the *Bohemian* Dukes, he purchased to himself the Confirmation or Investiture of the Emperor.

6. *Otho* came next to the Throne, but was deposed by Reason of his Incapacity to govern.

7. *Uladislaus* III. (if we include *Uladislaus* Duke of *Bohemia*, but the second King of *Bohemia* of that Name) he was Brother to *Borzivoius*, and succeeded *Otho* in the Year 1111.

8. *Sobislaus*, the Brother of *Uladislaus*, came to the Crown *Anno* 1125.

9. *Uladislaus* III. succeeded about the Year 1153. The Emperor appointed him King of *Bohemia*, and also made him Vice-gerent of the Empire during his Absence in *Italy*, and gave him the Command of the Armies.

10. *Sobieslaus* II. Son of *Sobislaus* I. succeeded in the Year 1174; and after him

11. *Frederick*, the Son of *Uladislaus*, was appointed by the Emperor to reign over *Bohemia*, *Anno* 1178; and after him

12. *Conrade* II. succeeded in the Year 1190. he was Cousin to *Frederick*, and assumed the Throne by the Emperor's Appointment; as did

13. *Wenceslaus*, the Brother of *Conrade*, and Son of *Sobieslaus*, *Anno* 1192. but he reign'd but one Year; and after him came

14. *Bretislaus*, or *Henry*, Bishop of *Prague*, *Anno* 1193. he was succeeded by

15. *Uladislaus* IV. Son of *Uladislaus* III, *Anno* 1196. but before he had reign'd a Year he resign'd to his Brother

16. *Primislaus*, in the same Year 1196. He was succeeded by

17. *Ottocarus*, who usurp'd the Throne, which was the Right of his Brother *Wenceslaus*, *Anno* 1231. but he was kill'd in a Battle with the Emperor *Rodolphus*; and then

18. *Wenceslaus* II. came to his Right in the same Year 1231; and after him

19. *Ottocarus* II. the Son of *Wenceslaus*, sometimes call'd *Primislaus* III. he began *Anno* 1253, he maintain'd a continual War with the Emperor *Rodolph*, and with such Success, that he made himself Master of all the Countries between the *Adriatick* Sea, or Gulph of *Venice*, and the *Baltick*, but was at last kill'd near *Marchfelt*, in a Battle with the Emperor.

20. *Wenceslaus* III. then succeeded, *Anno* 1278. but being afterward elected King of *Poland*, his Brother-in-Law,

21. *Henry* Duke of *Carinthia*, was elected King by the Barons of *Bohemia*; but the Emperor deposed him and set up his Son

22. *Rodolph*, *Anno* 1306. and he dying, the Emperor appointed his Son

23. *John* of *Luxemburgh* to be King of *Bohemia*, in the Year 1307.

24. *Charles*, the Son of the above-named *John*, and Emperor of *Germany*, succeeded to the Throne of *Bohemia*, *Anno* 1364; he was succeeded by his Son

25. *Wenceslaus* IV. *Anno* 1378. who was afterwards elected Emperor.

26. *Sigismond* was next King of *Bohemia*, *Anno* 1418. *John Huss*, and *Jerome* of *Prague*, were in his

his Time, of which more when we come to treat of their Religion.

27. *Albert*, Duke of *Auſtria*, was next King of *Bohemia*, and afterwards elected Emperor of *Germany* and King of *Hungary*; he began *Anno* 1436; he was oppoſed by the *Huſſites* and the *Bohemian* Nobility; but he not only reduced them, but depriv'd them of the Privilege of chuſing their own Kings, though indeed the Emperor of *Germany* had in a great Meaſure claim'd that Power before.

28. *Uladiſlaus* V. was the next King of *Bohemia An.* 1439. though an Infant of but five Years of Age.

29. *George Podebrach* was next King of *Bohemia Anno* 1471. but being a *Huſſite*, a Party was form'd againſt him, and created him a troubleſome Reign; at the End of which

30. *Uladiſlaus* VI. mounted the Throne *Anno* 1471. and after him his Son

31. *Liwes* 1516. was elected by the Influence of the Emperor *Maximilian*; he was alſo elected King of *Hungary* (See No. 36. of the Kings of *Hungary*, where he is called *Lodowick.*) he was killed in a Battle with the *Turks.*

32. *Ferdinand*, Archduke of *Auſtria*, and Brother to *Charles* V. Emperor of *Germany*, was next elected King of *Bohemia Anno* 1526, and Emperor of *Germany Anno* 1556, when *Charles* V. reſigned; and then

33, *Maximilian*, King of the *Romans*, was elected King of *Bohemia* and *Hungary*, *Anno* 1562. and Emperor of *Germany Anno* 1564. he tolerated the Proteſtants, and was therefore call'd the *Lutheran* Emperor.

34. *Rodolph* II. King of the *Romans* and *Hungary*, was elected King of *Bohemia*, *Anno* 1575. and afterwards Emperor of *Germany*, *Anno* 1609. In his Reign the Proteſtants of *Germany* form'd a Confederacy, call'd the *Union*, or the *Evangelical League*, of which they choſe *Frederick*, Elector *Palatine*, for their Head. The Proteſtants of *Bohemia* alſo join'd them, pretending they were oppreſs'd by the Emperor, and call'd in his Brother *Matthias* to their Party, and prevail'd ſo far as to oblige the Emperor to reſign the Crown of *Bohemia* to his ſaid Brother *Matthias*, and he was crowned King of *Bohemia Anno* 1611. and elected Emperor upon the Death of *Rodolph*, *Anno* 1612. when *Matthias* was Emperor, *viz.* in the Year 1616. he declar'd

35. *Ferdinand*, his Couſin, King of *Bohemia*, and caus'd him to be crown'd, but with this Reſtriction that he ſhould not execute any regal Act, during the Emperor's Life-time, without his Conſent.

The Emperor *Matthias* kept his Court at *Vienna*, and *Ferdinand* kept his Court at *Gratz* in *Stiria*: The Government of *Bohemia* being moſtly entruſted with the Privy Council, who being generally *Roman* Catholicks, they, at the Inſtigation of the Archbiſhop of *Prague*, gave the Proteſtants in *Bohemia* great Uneaſineſs; whereupon the Proteſtant Nobility aſſembled at *Prague*, to ſeek Redreſs for their Grievances; and at the ſame Time levying Forces in their own Defence. The Government, apprehenſive of an Inſurrection, deputed ſome of the Imperial Miniſters to the Proteſtant Nobility, to endeavour to pacify them; but it was ſo far from that, that hot Words aroſe on both Sides, and the Proteſtants threw the Emperor's Chief Juſtice out at the Window two Story high; and after him one of the Council of State, and a Secretary of the Emperor's: And though they afterwards reflected upon this raſh Action with ſome Regret, yet they continued to levy Horſe and Foot in their own Defence; and as one Step to the propos'd Quietneſs, they endeavour'd to expell all the Jeſuits out of the City of *Prague*; at which the Emperor (being a *Roman* Catholick) was further exaſperated, and both Sides took to the Field, and great Hoſtilities were acted between the Imperial Forces on one Side, and the Proteſtants on the other; but in theſe tumultuous Times the Emperor *Matthias* died: And he was ſucceeded by

Ferdinand II. as King of *Bohemia*, who was afterwards elected Emperor of *Germany*.

But the *Bohemian* Barons ſent privately to offer the Crown of *Bohemia* to *Frederick* V. Elector *Palatine*, the Head of the Proteſtant Union abovementioned, notwithanding that they had acknowledged *Ferdinand* in the Emperor *Matthias*'s Life-time. This *Frederick* V. had married *Elizabeth*, Daughter of *James* I. King of *England*, and was crowned King of *Bohemia*, *Nov.* 4. 1619. unknown to his Father-in-Law King *James* I. But immediately he ſent a Compliment to King *James* to excuſe his acceping of the Crown of *Bohemia*, and to deſire his Aſſiſtance; and acquainted him that his Caſe would not admit of Deliberation: But King *James* reſented the Liberty that the *Bohemian* Subjects had taken, in dethroning one King and ſetting up another at their Pleaſure, and did not at all encourage his Son-in-Law in that Practice,

On the other Hand, the Emperor, at the ſame Time, to terrify the *Palatine* and his Adherents, publiſh'd a Preſcription againſt them, declaring, *That* Frederick, *Count* Palatine *of the Rhine, having made himſelf the Head of a perfidious Crew in the Kingdom of* Bohemia, *was guilty of High-Treaſon, and therefore requires all People to forſake him, diſcharges his Subjects and Vaſſals in the* Palatinate *from their Allegiance to him; and commanding them that they give neither Aid nor Aſſiſtance to him, under the moſt ſevere Penalties.*

In the mean Time the Emperor's Forces fell upon the *Palatinate*, ravaging the Country in a moſt dreadful Manner, while the Evangelical League, under *Frederick* V. endeavour'd to defend it; in order to which, King *James* ſent a Regiment of *Engliſh* Gentlemen Volunteers to join them, but too late; for on the 8th of *Nov.* 1620. the Emperor's Forces entirely defeated them, and drove the new elected King *Frederick* and his Queen *Elizabeth* out of *Bohemia*, who fled to *Sileſia*, and thence to *Holland*, by which Means he loſt to the Kingdom of *Bohemia* and his own whole *Palatinate*; and the Emperor, as a Reward for *Maximilian*'s Services in this War, made him Elector *Palatine* of the Rhine, in the Room of *Frederick* V. And to that he alſo added the *Upper Palatinate*, which when the Emperor had done, and executed great Numbers of the Male-Contents of *Bohemia*, he reſtor'd the Government of that Kingdom again, and the Imperial Family have ever ſince deny'd the *Bohemian* Nobility any Share in the Election of their own Princes, claiming *Bohemia* as one of their Hereditary Dominions.—But to continue the Succeſſion,

Ferdinand III. ſucceeded his Father *Ferdinand* II. in the Kingdom of *Bohemia*, and in the Empire of *Germany*, in both which he was ſucceeded by

Leopold, the Son of *Ferdinand* III. *Anno* 1656. and after him

Joſeph, Son of *Leopold*, ſucceeded to the Crown of *Bohemia*, and to the Empire, *Anno* 1705. and next after him was,

Lastly, *Charles*, the preſent Emperor of *Germany*, and King of *Bohemia*, who began his Reign in the Year 1711.

These laſt Princes, who were Emperors of *Germany*, as well as Kings of *Bohemia*, will fall more particularly under our Conſideration, when we come to treat of *Germany*, what has been ſaid relating to them as Kings of *Bohemia* only.

Sileſia. *Sileſia* has been ſubject to the Empire and *Poland* alternately, the ſtrongeſt Party always carrying it; but it was at length confirm'd by Treaty to the Houſe of *Auſtria*, and is, as before obſerv'd, accounted a Part of the Kingdom of *Bohemia*.

Moravia. *Moravia* was one of the moſt Potent Kingdoms in Europe; *Poland*, *Bohemia*, and *Sileſia*, being all ſubject to it; but their King *Zuantapoc*, about the Year 700. refuſing to pay Tribute to the *Roman* Empire, was ſubdu'd, and *Bohemia*, *Sileſia*, and *Moravia*, were made Provinces of the Empire, and are now ſubject to the Crown of *Bohemia*, except ſome Principalities in *Moravia*, which yet belong to the Crown of *Poland*.

CHAP. IV.

Of the Language and Religion of the Bohemians.

Language. THE *Bohemian* Language is (like that of the *Poles*) a Dialect of the antient *Sclavonian*, a ſmooth copious Language, and ſo ſweet, that their antient Laws required the true Pronunciation and Orthography of it to be ſtrictly obſerv'd, which was very difficult, becauſe they had no other Letters but the Runick Characters, which made a very imperfect Alphabet; but when *Germany* and *Bohemia* became in ſome Meaſure incorporated, the *Roman* Letters were introduc'd, and the Language more refin'd among the common People; but the Nobility, to diſtinguiſh themſelves, and affecting Novelty and foreign Faſhions, (perhaps becauſe the Poor cannot come ſo well at them) affect to ſpeak a ſort of a broken Gibberiſh, compos'd of *High Dutch* and other Foreign Languages, probably becauſe the common People ſhould not underſtand them, or at leaſt not be able to converſe with them but when they pleaſe.

Religion. THE antient *Pagan* Inhabitants of this Country ador'd their God *Pron*; the ſame with *Thor* among the *Saxons*, or *Jupiter* among the *Greek*; but they afterwards found out another Idol, namely, *Swanto Wit*; his chief Temple was at *Wollin* in *Pomerania*, then one of the largeſt Cities in *Europe*.

CHRISTIANITY was brought into *Bohemia* by *Methodius*, a *Greek* Prelate, about the Year 890, in the Reign of *Borſivoius*. (*See* Borſivoius *among the Dukes of* Bohemia) His being of the *Greek* Communion, was the Reaſon that the Pope's Supremacy was not acknowledg'd here till ſome conſiderable Time afterwards.

KING *Richard* II's Queen was a *Bohemian*, and ſome Scholars that attended her from thence to *England*, and convers'd with the Followers of Dr. *Wickliff*, imbib'd his Doctrine, and returning to *Bohemia*, communicated *Wickliff*'s Doctrine and Works to *John Huſs*, a Doctor of *Prague*: And this Doctrine further corroborated his Antipathy againſt the Church of *Rome*, and he, with *Jerome*, (a Doctor of the Univerſity of *Prague*, thence call'd *Jerome of Prague*) began to attempt a Reformation, and brought a great deal of the *Bohemian* Nation over to their Opinion: *John Huſs* and *Jerome* were hereupon ſummon'd by the Pope to the Council of *Conſtance*, in the Year 1414, but they refuſed to go except the Emperor would grant them his Paſsport for their Security; which being done, they endeavour'd to juſtify their Doctrine; but their Defence not being thought ſatisfactory, they were condemn'd as Hereticks, and Teachers of Heretical Seditions or ſcandalous Doctrine, compriz'd in thirty Articles. Their Sentence was to be firſt degraded, and then deliver'd to the ſecular Power to be burnt: They hearing the Sentence, *John Huſs* firſt appeal'd to God, and then reproach'd the Emperor with Breach of Faith, to which he gave little Anſwer; for though himſelf did not approve of the Sentence, yet being Prieſt-ridden by his Clergy, he thought himſelf even oblig'd to humour them. Being under Sentence of Death, *Jerome* retracted his Opinion to ſave his Life; but recanting his Recantation, he was afterwards condem'd, and then burnt at the ſame Stake where his Fellow Sufferer *John Huſs* had dy'd before him.

John Huſs and Jerome of Prague.

Their Sentence.

THIS diſhonourable Action of the Emperor in ſuffering theſe two Men to be executed, at the Inſtigation of the Popiſh Clergy, when he had upon Honour promiſed them his Protection, ſo exaſperated the reforming and reformed Part, that it ſoon cauſed an Inſurrection among the *Bohemians*; which *Wenceſlaus*, then King of *Bohemia*, thought to put an end to, by publiſhing a Proclamation, forbidding the *Huſſites* to aſſemble for Divine Service; but this only aggravated inſtead of redreſſing the Grievance, for the People roſe at *Prague*, and having forc'd the Town-Houſe, threw the Burgo-Maſters out at the Windows, with all who aſſiſted at the Proclamation, while the Multitude without receiv'd them upon Pikes and Halberts. They afterwards demoliſh'd many Churches and Monaſteries, which were as plenty in *Bohemia* as in any other Nation of its Bigneſs; and King *Wenceſlaus*, not being able to remedy it, he ſent to his Brother the Emperor *Sigiſmond* for Aſſiſtance; but the Emperor being then at War with the *Turks*, *Wenceſlaus* was glad to find an Aſylum any where elſe, and retired to a neighbouring Caſtle for his own Security.

KING *Wenceſlaus* dy'd in the Year 1419. and the Emperor *Sigiſmund* ſucceeded to the Crown of *Bohemia*; but the War with the *Turks* continuing, he was forc'd to ſubſtitute a Deputy King of *Bohemia*, which the *Bohemians* being incens'd at, the Party of the *Huſſites* gain'd Ground, and became more formidable than ever. *Ziſca*, their Leader, was a *Bohemian* Nobleman; he aſſembled an Army of Forty thouſand Men, took the City and Caſtle of *Prague*, and many ſtrong Fortreſſes; the Emperor, unable to make much Oppoſition, was glad to make it up with them, by accepting of a Ceſſation of Arms. The *Huſſites*, who had not yet forgot the Severity and diſhonourable Uſage that their two Patrons had met with by the Inſtigation of the Clergy, began now to return the Compliment in their own Coin, plundering them moſt unmercifully, and making the Churches and Altars ſuffer for the late Severity of the Clergy.

WHEN the Emperor ſaw the *Huſſites* thus abandon'd to Rapine and Plunder, he ſummon'd moſt of the Princes of the Empire to his Aſſiſtance, who ſupply'd him with a formidable Army, at the Head of which he march'd into *Bohemia* to ſuppreſs *Ziſca* and the *Huſſites*, of whom he was Head; but all in vain, for *Ziſca* repuls'd and expell'd him out of *Bohemia*, the Country ſtill remaining entirely at *Ziſca*'s Devotion.

It is observable that *Ziska* was so call'd, as having but one Eye, and having lost the other in an Engagement with the Imperialists, yet blind as he was, he afterwards defeated the Imperialists in many considerable Battles; but, though doubtless his Conduct was brave and great, yet where actually seeing was necessary, he saw with other Peoples Eyes, and form'd his Schemes according to the Advices given him by his other superior Officers; and in the Main, his Conduct blind as he was, was such, that the Emperor propos'd a Treaty with him, and offer'd him honourable Terms of Accommodation, which *Ziska* was willing to accept of, and was going to the Imperial Court to confirm it, but died of the Plague upon the Road in the Year 1427.

The Emperor finding his formidable Enemy *Ziska* dead, he renew'd the War against the *Bohemian Hussites*, but still in vain; for the *Hussites*, as long as they continu'd one Party, maintain'd their Ground: But being secure under their being so victorious, they began to crumble into a great many Sects and Parties; and by thus weakening themselves by their Divisions, they effected that which all the Imperial Forces could not do against them while united, *viz.* to make themselves an easy Prey to the Power of their Enemies.

But the fatal Consequence of those Divisions did not terminate here, for the next Dispute was between the Nobility and Commonalty, as to which of them should govern; and this Debate arose to a pitch'd Battle, in which the Nobility gain'd the Victory, and then sent to the Emperor to accept the Kingdom of *Bohemia*; which when the Emperor had done, he prevail'd upon the Barons to be reconciled to the Church of *Rome*; which being likewise settled, the Consequence was, that the common People of the *Hussites* were oblig'd either to quit their Religion or their Country, so that the Divisions of those once prevailing Protestants contributed not only to the introducing, but establishing of Popery, and that upon as firm a Foundation as ever; 'tis true, some of them, rather than conform to the Church of *Rome*, retir'd to the Woods and Mountains for Safety; but those who stood truest to the Reformation, were so divided among themselves, into *Hussites*, *Picards*, *Anabaptists*, *Arrians*, *Flaccians*, *Trinitarians*, *Photinians*, *Lutherans*, *Calvinists*, *Dulcians*, *Lungentians*, &c. each asserting Doctrines and Tenets contrary to the rest, that there were sometimes no less than fourteen different Perswasions in one City, every one of which differ'd so much from the rest, that one would have no Communion in Church Ordinances with the other thirteen, of which Divisions the Restablishment of Popery could not be expected to be any less than the necessary Consequence.

A DESCRIPTION OF THE EMPIRE OF *GERMANY*.

CHAP. I.

Of the Name, Situation, Extent, and Climate of Germany, *with an Account of the Rivers rising therein, and the Seas thereunto belonging.*

Name. THE *Germans* have been known by several Names, as 1ſt *Teutones*, call'd by the *High Dutch Teutſhen*, and thence *Deutſchen*, and at laſt by the *Engliſh* contracted to the Word *Dutch*, moſt probably originally deriv'd from *Teut*, the Name of one of the antient *Celtick* Deities, whoſe Deſcendants the *Germans* call themſelves. 2d. They are alſo call'd *Germans* from *Wehr* and *Man*, which ſignifies a bold fighting Man; and the *German* W being turn'd into G in the *Latin*, makes the Word *German*. They were alſo call'd by the *French*, *Almains*, as alſo *Celts* or *Celticks*; but the Etymology of thoſe Words are given ſo differently, that the Original of them is difficult to be found.

Extent *Germany*, in its antient Situation, included *Scandinavia* in the North Part of it, and extended to the *Danube* on the South, and the *Rhine* on the Weſt; but the preſent Bounds of *Germany* (including *Bohemia* and *Sileſia*,) are the *German* Ocean, *Denmark*, and the *Baltick* Sea on the North; *Poland* and *Hungary* on the Eaſt: The Gulph of *Venice*, and the Alps, which divide it from *Italy*, on the South; and *France*, and the *Low Countries*, on the Weſt. It extends from forty ſix to fifty four of North Latitude, and from about ſix to nineteen Degrees of Longitude Eaſt from *London*.

Air. THE Air is more temperate and healthful in the Southern than in the Northern Provinces of *Germany*, and the Soil there is alſo extremely fruitful; but in the Northern Parts the Cold is very ſevere in Winter, and the Land produces neither Wine nor Oil, and but very ordinary Crops of Grain.

Rivers. WHAT Rivers of *Germany* have been juſt touch'd upon, ſhall have a further Deſcription here, and 1ſt. The *Danube* may claim the Preference of any River in *Europe*. I ſhall not trouble the Reader with the jarring Opinion of Authors about the Etymology of the Name, but rather begin with the Original of the River; it riſes near a ſmall Village in *Suabia*, ſituate in the *Hyrcanian* Foreſt, now call'd the Black Foreſt, at the Foot of a low inconſiderable Hill, but has not run many Furlongs till it is augmented by the *Brygen* and *Pregen* falling into it; and they each of them larger than itſelf: And the Addition of them makes it look ſomething like a River.

BUT it is further increas'd by the Addition of ſeveral navigable Rivers, the Chief of which are, 1ſt, The *Iſer*, which falls into the *Danube* near *Ulm*, the Capital of the Country. 2d. The *Lech*, which paſſes by *Lamberg* and *Auſberg*, and falls into the *Danube* between *Newberg* and *Donawert*. 3d. *Regen*; it falls into the *Danube* near *Ratisbon*. 4th. The *Iſar* falls into the *Danube* near *Pfetling*. 5th. The *Inn*, the fineſt River in *Bavaria*; it gives Name to the City of *Inſpruch*, and falls into the *Danube* at *Paſſaw*. 6th. The *Ens*, which gives Name to the Town of *Ens*, where it falls into the *Danube*. 7th. The *Rab*, or *Arabon*, which falls into the *Danube* near the Fortreſs of *Rab* or *Raab*, over-againſt *Schutt* Iſland. 8th. The *Drave*, a large navigable River; it ſeparates *Hungary* from *Sclavonia*, and falls into the *Danube* at *Eſſeck*. 9th. The *Save*; it is a large River, and parts *Sclavonia* from *Boſnia*, and falls into the *Danube* at *Belgrade*. 10th. The *Teyſe*; it riſes in the *Carpathian* Mountains, and running to the Southward, through *Hungary*, falls into the *Danube*, over-againſt *Salankamen*. And thus we have trac'd the *Danube* and the Rivers that fall into it through *Germany* and *Hungary*, into the *Turkiſh* Dominions, in which Tract, *viz.* in the Territories of *Turky*, a great many Rivers fall alſo into the *Danube*, and make it a mighty Stream before it falls into the *Black Sea*.

THE

The great Confluence of Rivers into the *Danube* makes the Water of it of a whitiſh Colour, and muſt conſequently be a vaſt Addition to its Stream; and theſe Rivers, in the Winter-time, very often over-flowing their Banks, it is natural to think that ſuch a Confluence of Waters into the *Danube* ſhould make it over-flow in Proportion, whereas it is obſerv'd never to riſe higher than uſual; and ſome aſſign, as a natural Reaſon for ſo little Difference in the River's Height, that the vaſt Breadth and Depth of the *Danube* will make a ſmall Matter of Rain have the leſs Effect upon it; for it is ſo large, that both the *Turks* and *Germans* have had their Fleets of Men of War upon it both at the ſame Time, and many ſmart Engagements have they had with one another upon it, eſpecially at the Siege of *Belgrade*, and other ſtrong Places upon the Banks of the *Danube*, the Succeſs of which Attempts have frequently depended much upon a maritime Power.

But I rather think the Reaſon of this River's Height being nearly equal, is, that the exhal'd Vapours that diſcharge themſelves in Rain in the Winter-time in the Valleys and low Grounds, and cauſe the Rivers which fall into the *Danube* to overflow, that Part of the ſame Vapours which falls upon the Mountains falls in Snow, and there lies till Summer approaches, and then melts; ſo that it is computed that the Waters produced in Summer, by the melting of the Snow upon the Mountains, is equal to that immediately produc'd by the falling of the Rains in Winter, and has the ſame Effect upon the River, or at leaſt they are ſo near alike, that the Difference is imperceptible.

The whole Length of the *Danube*, from its Head, above-mention'd, to where it falls into the *Black Sea*, is about fifteen hundred *Engliſh* Miles. There are three Cataracts in that Part of it which is in the Chriſtians Dominions; the firſt is call'd *Der Saw Ruſſel*, or *Swines-Snout*, becauſe it runs over and falls from a craggy Rock of that Shape, near *Lintz* in *Auſtria*, the Violence of which Fall creates a dangerous Whirlpool underneath. 2. *Der Strudel*, near *Greinon*, in *Auſtria*. 3. *Der Wurbel*, or the Whirlpool, about a Furlong below *Strudel*; but this laſt, however terrible it is repreſented, does not ſeem to be really ſo, becauſe the Watermen frequently paſs it without any great Apprehenſions of Danger. Thus far as to the Cataracts in the *Danube* in the Chriſtian Territories. There are ſeveral others lower down the River, to the Eaſtward, in the *Turkiſh* Dominions, which the Watermen there report to be impaſſible; and this ſome Authors impute to the Unskilfulneſs of the *Turkiſh* Watermen; but I would rather impute it to the greater Force and more rapid Stream of thoſe *Turkiſh* Cataracts; which being lower down the River, where it has receiv'd a greater Confluence of Streams, theſe muſt needs contribute to make the Cataracts more rapid, and conſequently more dangerous, which ſtill increaſing as it receives additional Streams, muſt needs at laſt render the paſſing of thoſe Cataracts more dangerous, as they are lower down the River, till by degrees it becomes impracticable.

The *Rhine*, for Note and Magnitude, may be eſteem'd the next River: It riſes from two Springs in the *Alps*, about forty Miles aſunder, but meet about eight Miles from the City of *Coir*, and about a Mile below this Meeting, the River falls into the Lake of *Conſtance*. There are ſeveral (ſome ſay Nine) Cataracts in the *Rhine*, of which two are very dangerous; one of them is a little below *Schaffhuyſen*, in *Switzerland*, where the whole River falls over a Precipice of a Rock, ſeventy Foot high. The other is at *Lauffenburg*, in *Switzerland*.

Rhine. The *Rhine* runs to the Northward, between *Suabia* and *Alſace*, into the *Palatinate*, in which Paſſage it receives the *Necker* at *Manheim*, and the *Mayn* at *Mentz* or *Mayence*; and proceeding to *Coblentz*, it is there join'd by the *Moſelle*; from whence it paſſes by *Cologn*, and through the Dutchy of *Cleves*, meeting in its Way with the Rivers *Roer* and *Lippe*, and other ſmall Rivers, and enters at *Scheuchenſchaus*, where I leave it till I come to the Deſcription of that Country.

Elbe. The next remarkable River is the *Elbe*; it riſes near *Hirchburg* in *Sileſia*, from eleven ſeveral Heads, which united, run to the Northward, between *Miſnia* and *Luſatia*, into *Saxony*, where it is join'd by the *Muldau*, *Eyra*, and other Rivers, and paſſes by *Madgeburgh*, *Lawenburgh*, and *Hamburgh*, to *Gluckſtadt*; and after that divides it ſelf into two, and then diſcharges itſelf into the *German* Ocean: It is as famous a navigable River as moſt in *Europe*, and as high as *Hamburgh*, which is ſeventy Miles from the Sea, it is no uncommon Thing to ſee Veſſels of three or four hundred Tun.

The *Weſer* riſes in the Mountains of *Thuringia*; and after having paſſed through *Heſſen* and *Weſtphalia*, falls into the *German* Ocean a little below *Bremen*.

Seas. The Seas that belong to *Germany*, if we were to allow the Whole of every Sea where the Emperor claims a Share, might be ſaid to be the Eaſtern Sea, (with Reſpect to us) commonly call'd the *German* Ocean, and alſo the *Baltick*, as ſome Authors tells us: But in this laſt, we muſt firſt allow the *Swedes*, the *Muſcovites*, &c. their proper Share, and then allow the reſt to whom it is due: Some alſo allow the Gulph of *Venice* to belong to the Emperor, becauſe he has the Port of *Trieſte* near the Head of the Gulph, and ſome other Towns where he has attempted to eſtabliſh a Trade; but a Trade, within ſuch a Gulph as the *Adriatick* Sea, cannot be call'd a free or foreign Trade, except the Crown, which is the Proprietor of that Trade, can command a Paſſage in and out. In ſhort, though *Germany* gives Name to our Eaſtern Ocean, yet, in Reality, the Ocean waſhes but a very inconſiderable Part of the *German* Shores at preſent; and although the ſeventeen Provinces of the *Low Countries* were made Part of the Empire by *Charles* V. by the Name of the *Circle* of *Burgundy*, which might then be ſaid to have made them a pretty large Sea Coaſt, yet even that is reduced, ſince theſe Provinces are now eſteem'd no Part of the Empire.

CHAP. II.

Of the Perſons, Genius, and Temper of the Germans; *as alſo of their Vices and Virtues, with their Diet, Lodging, and Diverſion.*

THE *Germans* both antient and modern are of the largeſt Size, eſpecially if compared with the *French*. The *Germans* and *Gauls* are ſaid to reſemble one another both in their Perſons and Manners; but this is to be underſtood of thoſe ancient *Gauls* that lived near the *Rhine*, whoſe Country is now accounted a Part of *Germany*. Some are of Opinion, that any Country always produces People of the ſame Bulk, Features, Complexions, *&c.* as it did ſome thouſands of Years ago; as *Germany*, large ſtrong Men; *Scythia* and *Tartary*, People of a ſhort ſquare Make, flat Noſe, thick Lips, and little hollow Eyes, *&c.* yet the Naturaliſts conclude, that were ſome of thoſe to be tranſplanted into *Germany*, their Offspring in proceſs of Time, would be ſuch ſtrong robuſt Perſons as *Germany* now produces; and it is indeed proved by Experience; for great Numbers of thoſe *Scythians* and *Tartars* were formerly tranſplanted to *Germany*, and doubtleſs were partly the Progenitors of the preſent *Germans*. If any thing is to be imputed to the Country as to this Increaſe of Stature, it muſt be attributed to the Air or Soil, or both, but not to the Climate; for if ſo, a great Part of *France*, *Poland*, and the Southern Part of *Moſcovy*, muſt produce People of the ſame Stature, as being in the ſame Latitude with ſome Part of *Germany*; But yet common Experience proves the contrary. If therefore the Climate or Latitude is not the ſole Cauſe of this Difference of Statures, we muſt look for it ſome other way; and if we ſhould allow the Air or Soil a Share, yet I am apt to think it is chiefly owing to the antient *Gauls*, the original Inhabitants; who although intermarrying with *Scythian Tartars* of a different Bulk, and leſs than themſelves, yet the *Gauls*, the chief Inhabitants again, marrying into that mixt Progeny, and not being now ſo liable to a Mixture with thoſe diminutive Species they have recover'd, and do now prolong their Succeſſion in a great Meaſure in the original *Gaul* or *German* Race, as if that Succeſſion had never been interrupted; and the like may be ſaid of the *Scythians* or *Tartars*, when invaded by, and for a Time intermarrying, co-habiting, and producing a Succeſſion with the *Germans*, or other Nations.

But as it is obſerved, that the greateſt Head has not always the moſt Wit, ſo Men of the greateſt Stature are not always the moſt polite; and ſome neighbouring Nations do not leſs than charge the *Germans* with downright Stupidity; if Experience prove it, there is no denying it; but the Reaſon given ſeems very deficient, *viz. That it is not poſſible for the Soul to animate ſo vaſt a Bulk to the ſame Advantage it does one of an inferior Size.* The *French* think themſelves more active, and inſinuate that the leaden Temper of the *Germans*, wants to be mended with a little *French* Quick-ſilver. But not to inſiſt too much upon the Soil, Air, or Climate, affecting the Tempers of of Men, we ſhall forbear to ſpeak of *French* Levity, or *Spaniſh* Gravity, till we come to the Deſcription of thoſe Countries; and for the Genius of the *Germans*, it will be better diſplay'd hereafter under the Head of Learning, Arts, and Sciences.

AMONG the Vices of the *Germans*, Drunkenneſs is not the leaſt, if not the greateſt taken Notice of. We have a Reverend Author tells us, That they have drinking Societies for contracting Intimacy and Acquaintance; which as the ſame Author ſays, is done by *being drunk together*: How far this may differ from ſome of our Clubs, they only are proper Judges who are acquainted with both; but I ſuppoſe, if the *Germans* were preſent at ſome of our Clubs, *alias* drinking Societies, they would reflect as much upon us, as ſome of us do upon them: Thoſe Exceſſes were as much cenſur'd in *England* within the laſt Century, as we can cenſure the *Germans* for them now. Vices.

IT is indeed a ſevere Compliment that the *Germans* oblige Strangers to undergo, in compelling them to take off a large Bowl at firſt Entrance as a Welcome; and the *French* and *Germans* are ſo remarkably oppoſite in their Tempers, the former for Sobriety, and the latter for Intemperance, that it was obſerv'd, the *French* King was at a Loſs, to find a Miniſter among his ſober Subjects, that might be capable both to negotiate his Affairs, and at the ſame Time to withſtand *German* Senſuality. However it is obſerved alſo, that they proportion their Eating to their Drinking; and that from Noon till Five to ſit at Dinner, and from Seven at Night till Two or Three in the Morning to ſit at Supper, is reckon'd moderate Meal-times; and even then, if we conſider the Time ſpent by many in *England*, if we include both eating at the Meal, and drinking, ſmoaking, *&c.* after the Cloth is taken away, we need not go ſo far as *Germany* for an Inſtance of ſuch a profuſe Expence of Time, in thoſe otherwiſe comfortable and neceſſary Enjoyments.

THEIR ordinary Food is much as with us, *viz.* Beef, Mutton, Fowls, *&c.* but they have one Diſh, new-faſhion'd once to them, and that is Snails; but it is no great matter what the Diſh is, for as it is a foreign Faſhion, it is now become common among the Gentry in *England*, moſt of them where there is a fine Garden having alſo a Snail-houſe; and the Quadrupeds them in the Winter Seaſon are a great Rarity. Their Drink is generally Beer and Wine, as with us; but they have Wine much cheaper than we, having Rhenith and other Wines of their own Growth, and *Hungary*, *France*, and *Italy* lying ſo near them, in which Places they can furniſh themſelves with the beſt Wines. Food.

THE *Germans* are great Travellers, and are to be found in moſt Courts in *Europe*; ſo that if we ſhould allow their natural Parts to be ſomewhat Inferior to their Neighbours, or if it ſhould be allow'd *impoſſible for the Soul to animate ſo vaſt a Bulk*, yet their acquired Parts ſupply the Defect of natural ones, and their Experience gain'd by travelling, more than counterballances the bright natural Parts of thoſe who never make uſe of them. But this Excellency amounts to a Fault in them; for they appear with ſuch coſtly Equipages at Foreign Courts, that they carry out more Money annually by travelling, than all the Silver Mines of the Country can produce. Travel-ling.

THE

Virtues. THE *Germans* are generally said to be honeſt and fair in their Dealings, even to a Proverb, for the *French* themſelves own, That *a* German's *Word is as good as another Man's Bond*; and they are not only juſt, but hoſpitable too, not only ſupplying, but protecting thoſe that come under their Roof, and thinking it a Piece of Religion ſo to do; nor, by the Report of Travellers, do the preſent *Germans* degenerate from that publick ſpirited Diſpoſition, ſo that travelling in *Germany* is both cheap and ſafe; but there is an Inconveniency attends travelling by the Poſt-Waggon, for it travels Day and Night; or if they ſtop two or three Hours in a Winter's Night, there is no Lodgings upon the Road but clean Straw, where all the Paſſengers pig in promiſcuouſly, Noblemen and Beggars, without any Regard to Age, Sex, or Quality.

Courage. THE *Germans*, both antient and modern, were always allow'd to be brave and couragious: Some Authors indeed ſeem to envy them the Credit of ſo excellent a Qualification, and tells us, that it is their being ſenſible of their own large Bulk and Strength that makes them look upon the reſt of Mankind with a ſort of Contempt, and that this is what they call Courage; and indeed, if the Senſe of their own ſuperior Strength, and a moral Certainty of over-coming, are the chief Motives of their engaging in any Affair otherwiſe hazardous, a Reſolution ſo grounded cannot be ſaid to amount to Courage, any more than that where Numbers and Advantages ſeem near an Equality, and yet the Party, though provok'd, declines to engage. If there is any thing to be ſaid in favour of ſuch a Caſe, it may be included under the Name of Conduct indeed, whether any Reaſons are aſſign'd for ſuch Conduct or not.

Sports and Diverſions. THE Sport moſt uſed by the Quality in *Germany*, is hunting the Deer or the Wild-Boar; but their Way of catching the Game, is by ſurrounding him by a large Company as ſoon as they have found him, and they, with their Guns, Launces, Spears, and Dogs, diſpatch the Creature as ſoon as they can, without the Pleaſure of ſeeing him run for his Life: Indeed the Wild-Boar is ſometimes ſo reſolute that he breaks through Man and Horſe, and does one or the other a Miſchief into the Bargain.

ONE Winters Diverſion they uſe, is riding thro' the Streets on the Snow in Sledges, with Horſes richly harneſs'd and adorn'd with Bells and Feathers. There is ſeldom any Fire to be ſeen in their Houſes, except in the Kitchen; but the Rooms they ſit in are heated with Stoves to what Degree they pleaſe; and as for their Lodgings, they commonly lie with a Feather-bed under them as we do in *England*, and in the Winter, another over them for a Covering to keep them warm.

CHAP. III.

Of the Language of the Germans; *as alſo of their Univerſities, Arts, and Sciences.*

Language. THE *High Dutch* is the Language generally uſed in *Germany*, and is a Language much admir'd by thoſe who underſtand it, or have it naturally, but is very difficult to be learn'd by the *French*, *Italians*, or other Strangers, by reaſon of the many Conſonants uſed in it. Some, that underſtand this Language, ſay there are above a Thouſand Words in it which can never be pronounc'd by one that has been uſed to a ſoft Language; but the Antiquity of the *High Dutch* (like the Language of *China*) appears in the Monoſyllables in which it abounds, becauſe theſe muſt be Primitives, and cannot be ſuppos'd to be deriv'd from any other Language. *Simon Stevin*, a *Dutchman*, has been very curious upon this Subject, and has made a Collection of above Two thouſand primitive Monoſyllables in this Language, whereas he could not find above a Hundred and ſixty three in *Latin*, and Two hundred and ſixty five in the *Greek*. It is obſerv'd, that in the *Engliſh* Tongue a whole Sentence or Speech might be compos'd of Monoſyllables; which were all originally *High Dutch*: And it is further obſerv'd, That in the *German* Tongue there are twenty three principal Terminations, which tho' they ſignify nothing in themſelves, yet added to another Word, give it quite another Meaning, and makes it ſignify a different Thing; and many of theſe we uſe in the *Engliſh* Tongue, as Er, in Buyer, Seller, &c. for to buy, ſignifies the Action of Buying, but with Er to it to make it Buyer, it ſignifies the Perſon buying; and ſo in the Termination Dom, as in Kingdom, Dukedom, &c. The Word King ſignifies the Perſon governing, but with Dom annexed to it, it is Kingdom, and ſignifies the Place govern'd; and ſo in many others. And theſe Alterations in the *German* Language, ſo different in themſelves, and yet ſo eaſily made, make the *German* Language exceeding copious. It is alſo ſaid to be the richeſt in its Compounds; for in it there are not only Words compounded of Adjectives and Subſtantives, and Verbs and Participles, with Prepoſitions, which is common in all Languages; but alſo many Words which are compos'd of two Adjectives or two Subſtantives; which Elegancy of compounding Subſtantives we alſo retain in the *Engliſh* Tongue, as Houſe-Wife, Snow-Ball, &c. But this Author obſerves another and greater Excellency in this Compoſition, *viz.* In not only compounding the Subſtantives to make the Word, but in tranſpoſing them to alter the Senſe, as Horſe-Mill and Mill-Horſe; but there are much more Examples of this in the *High Dutch* than in the *Engliſh* Tongue, only theſe were inſerted as Inſtances.

BUT there have of late abundance of *Italian*, *French*, and *Latin* Words, crept into the Language, by giving thoſe Words a *German* Termination; there are alſo ſeveral Dialects of the *High Dutch* in *Germany*, and ſome of them ſo different from others, that one Province can ſcarce underſtand another's Language; as for inſtance, a *Brandenburgher* can ſcarce underſtand a *Miſnian* or a *Saxon*, either of them; and which is ſtill more, there are ſeveral Dialects ſpoke within the Walls of *Leipſick*. Alſo the old *Britiſh*, *Engliſh*, *Daniſh*, *Swediſh*, *Norwegian*, and *Flemiſh* Languages, do all participate of the *High Dutch*. We may add to this, that upon the Frontiers of *Germany*, (as in other Places) they uſe a Dialect of the adjacent Provinces; thus in *Lorrain* they ſpeak *French*, in upper *Tyrol Italian*, and in *Bohemia* the *Sclavonian*, &c. but *Latin* and *French* are the beſt travelling Languages in *Germany*; the meaneſt Servants in the Inns

Inns being able to ſpeak thoſe Languages intelligibly, though not correctly.

Learning. THE Learning of the *Germans* is ſaid to bear Date with their firſt Acquaintance with the *Romans*, for before that Time the Principles of their Religion were deliver'd in Fables and Riddles, and the Actions of their great Men rehears'd in *Doggerel* Rhime, but neither of them committed to Writing. In the Reign of the Emperor *Adrian*, ſeveral Schools were erected in *Germany*, in that Part next the *Rhine*, where the young Nobility were taught *Latin*; but ſtill thoſe in the Northern Parts of *Germany* had not the Opportunity of Education till the *French* got footing in *Germany*, and their Princes, eſpecially *Dagobert* and *Charles* the Great, founded Schools among them; but ſtill the *High Dutch* had never been brought under any Rules of Writing; and this continued ſuch an inſuperable Difficulty, that they were forc'd to draw up all their Law Proceedings in *Latin* for many Years; but when the *Germans* had regulated their Language, and made it capable of being communicated in Writing, they began to ſtudy the liberal Arts and Sciences, and, in a ſhort Time, erected ſeveral Univerſities, yea, more in *Germany* than were in all *Europe* beſides, as *Juſtus Lipſius* tell us; and now Learning is ſo much the Glory of a *German*, that there are above thirty Univerſities, whoſe Grandeur the *German* Princes are very ambitious to keep up, being of nothing ſo proud as of having a great Number of Scholars in their Dominions, nor are the Scholars ſo ambitious of any Thing as of excelling one another.

Universities.

Mechanicks. THEIR Handicraftſmen and Mechanicks are equally induſtrious, and their Correſpondence is enlarg'd by the various Languages they acquire: *Hebrew* is no where more generally learn'd and better underſtood than in *Germany*; but the trading Language, even among the *Jews* themſelves, is *High Dutch*.

Printing. PRINTING is ſo much encourag'd, that almoſt every Man of Letters is an Author, which makes Books multiply without Number, whether the Matter be new or not, and very often about religious Suppoſitions and Diſputations, which abound ſo as even to over-ſtock the Fairs of *Leipſick* and *Frankfort*; and no Wonder that they are ſo ambitious to commence Authors, for no Man can be a Graduate in their Univerſities, till he has publiſh'd one Diſputation or more.

The Invention of Gunpowder and Guns. THE *Germans* are not only excellent Mechanicks, but Chymiſts alſo. The Invention of Printing is generally aſcrib'd to them, though diſputed with them; but Gunpowder was invented by one *Barthold Swartz*, a *Franciſcan* Friar of *Germany*, though the Invention may more juſtly be imputed to Accident than Ingenuity; for he having made a great Proficiency in Chymiſtry, and happening to mix Sulphur and Salt-Petre with ſome other Ingredidients in an earthen Crucible, and ſetting them on a hot Fire to try ſome Experiment, the Veſſel was ſhatter'd all to Pieces with a violent Exploſion and Noiſe: This at firſt affrighted him, but upon Recollection, thinking ſome further Improvement might be made, he cauſed a long iron Pipe to be made, not unlike the Barrel of a ſmall Gun, and making it cloſe at one End, and driling a Touch-hole, he ramm'd in a Quantity of the cumbuſtible Ingredients above-mention'd, and after them ſome ſmall Pebble-Stones; ſetting Fire to the Combuſtibles at the Touch-hole, the Stones were thrown out with incredible Force: And this was the Original of Guns, which, with the Improvements made ſince, are the Guns now uſed of different Sizes, and may now be ſaid to be the moſt fatal and mortal Invention that ever the World produc'd: The Force of the Powder was indeed diſcover'd by Accident, but the Application of it, and the Invention of Guns to direct its Force, was purely owing to his own Genius. This happened about the Year 1330. but it was concealed and not made publick till ſome Time afterwards.

THE *Venetians* were the Firſt that we read of after the *Germans*, that made uſe of Guns: When they were beſieg'd by the *Genoeſe*, they by the Help of Guns took the Cities of *Padua*, *Verona*, and other Places, from the *Germans*; ſo that when others got the Invention, the *Germans* loſt more than they got by it. The *German Jews*, in order to ſubvert Chriſtianity, taught the *Turks* the Way of making this murdering Compoſition. The *Venetians* were the firſt that made uſe of Guns at Sea: How ſoon the *Engliſh* firſt made uſe of them is uncertain, but they took *Calais* by the Help of Guns in the Year 1347. and thereby taught the *French* the Uſe of them, and this not above ſeventeen Years after the firſt Invention of them. The *Spaniards* about the ſame Time found out the Uſe of them, and employ'd them againſt the *Moors* with Succeſs; and they, though to their Sorrow, found the Advantage of them; and thus, in about fifty or threeſcore Years Time, thoſe thundering murdering Engines were known and made Uſe of by all the Nations in *Europe*.

BUT the Inhabitants of *America* were entirely ignorant of thoſe Improvements, as appears by their Surprize at the *Spaniards* making Uſe of Guns; for they thought the *Spaniards* were Gods, when they no ſooner ſaw a Flaſh of Lightning, and heard their Thunder among them, but immediately they found ſome of their own Countrymen lying dead about them; and therefore they were ſo far from reſiſting them, that they began in their Way to offer Sacrifice to them; but the *Spaniſh* Cruelty to them ſoon made them alter their Sentiments as to the *Spaniards* being Gods, and therefore they had Senſe enough in the next Place to try by the firſt Opportunity whether they were mortal or no, which they effected by taking a *Spaniard* that had ſtroll'd from his Company, and holding him under Water to try if he would drown; and they were hereby ſoon convinc'd of his Mortality, and that whatever they had behav'd themſelves like beſide, they were ſure they were no Gods.

BEFORE I cloſe this Digreſſion (if it may be ſo call'd) about Gun-powder, I ſhall juſt add, that ſeveral Nations aſſume to themſelves the Honour of knowing the exploſive Nature of a Compoſition of Nitre, Sulphur, *&c.* as ſeems to appear by a Letter of our Countryman *Friar Bacon*, who therein ſays, *That out of Salt Petre, Sulphur, and Coal-Duſt, he could make Fire, which ſhould burn at what Diſtance he pleaſed, and that with the ſame Matter he could cauſe Thunder and Lightning in the Air, more terrible than that which is naturally produc'd: That a City or an Army might be deſtroy'd by this Fire, and that it burſt forth with incredible Noiſe.* This intimates that *Friar Bacon* underſtood the Nature of this Compoſition, though he did not apply it to that murdering Purpoſe; nay, probably he underſtood it better than *Barthold Swartz*, though he liv'd three or fourſcore Years before him, for he could give ſome Account of what it would do from the Nature of it, without his own Experience; but *Swartz* hit upon it by mere Accident, and no Thanks to his Ingenuity.

ANOTHER Branch of Ingenuity which the *Germans* challenge the Invention of, is Printing; but as the *Dutch* ſeem to have a better Claim to it than the *Germans*, I ſhall defer ſpeaking of it till I come to treat of *Holland*, and ſhall only obſerve, that though the *Chineſe* had the Art of Printing long before it was known in *Europe*, [*See Chap.* VI.

Printing

of

of China, *Page* 35.] yet it has been much more improv'd in *Europe* than by them, for they know nothing of compoſing and diſtributing Letter, whereby with the ſame Letters to print innumerable Books upon different Subjects, but they ſtill retain their old Way of having their Prints cut in Wood, as is already deſcrib'd in the Chapter above-mentioned.

Clock-work. SOME aſcribe the Invention of Clock-work to the *Germans*, but however that be, it is certain they have brought that Art to very great Perfection, inſomuch, that it is ſaid, that the Emperor *Charles* V. who was co-temporary with *Henry* VIII. King of *England*, and reign'd above Two hundred Years ago, had a Watch in the Jewel of a Ring, and that King *James* I. of *England* had ſuch another, and both made in *Germany*. They are alſo very extraordinary Painters, Engravers, Engineers; but perhaps ſome of our Hiſtorians are not ſatisfy'd without launching out a little too much in their Praiſe; for it is ſaid of *Regiomontanus*, that he made a wooden Eagle which flew a quarter of a Mile out of Town to meet the Emperor *Maximilian* when he came to *Noremburg*, and return'd back with him thither. Alſo that the ſame Artiſt made an iron Fly, which he threw off his Hand, and after it had flown round the Room, return'd to him again: But as for thoſe two laſt miraculous Pieces of Mechaniſm, let every one believe as much of them as he pleaſes; if they were true they were excellent Performances in the Artificers; if not, they are not worth futher Notice. However, we may obſerve that how much ſoever the *Germans* might formerly excel in Watch-work, the *Engliſh* now excel them as much more; their Movements, whether Clocks or Watches, being now in the higheſt Reputation, and to be ſeen in moſt Courts in *Europe*.

CHAP. IV.

An Abſtract of the Hiſtory of Germany, *and the Succeſſion of its Government, from the Time of its firſt being known to the* Romans, *to its firſt being form'd into an Empire under* Charles the Great; *and from thence to the Time of the Emperor* Leopold, *and to the Death of the late King* William *of* England.

NOT to dwell upon improbable Conjectures, as to the original Inhabitants of *Germany*, or by whom it was firſt peopled, we find the moſt authentick Account on which we can moſt ſafely depend, is from the *Romans*, who tell us, that the Inhabitants of *Germany* having paſs'd the *Rhine*, fell upon the *Gauls*, who were then under the Protection of the *Romans*; but *Julius Cæſar* attack'd a Body of them commanded by *Arioviſtus*, one of their Kings, and drove them back over the *Rhine* again, and alſo gain'd further Victories over them: But of all the *Roman* Generals, *Druſus*, the adopted Son of *Auguſtus*, had the greateſt Succeſs in *Germany*, and was thence call'd *Germanicus*, for he reduc'd the whole Country as far as the Ocean, and brought it into the Form of a *Roman* Province; but *Quintilius Varus*, his Succeſſor, loſt all that his Predeceſſors had won, and with it three *Roman* Legions, which *Auguſtus* regretted very much; upon which he made the *Rhine* and the *Danube* the Bounds of his Empire on that Side, placing twelve Legions upon the Banks of thoſe Rivers to prevent the Incurſions of the *Germans*.

BY this Means the *Romans* found an Opportunity to get themſelves acquainted with the *Germans*, and that though they were divided into Nations and Principalities, yet they ſpoke all one Language; that they were under various Forms of Government, but that many of thoſe States or Kingdoms, frequently united under one Head or General, both in their offenſive and defenſive Wars: But by what can be gather'd from their Oeconomy, patriarchal Government ſeems to have been the firſt that has taken Place here, as obſerv'd with Relation to *Denmark*, and ſome other Places, [*See Chap.* VI. *of the Deſcription of* Denmark, *Page* 427.] but whatever their original Form of Government may have been, moſt of the Princes of *Germany* are at preſent as abſolute in their reſpective Dominions, as the Emperor himſelf is in his Hereditary Countries; and we find but few Monarchies or States at this Day, but the Sovereigns of them are abſolute, or at leaſt gain ſo much Power as to refuſe to be limited, which amounts to the ſame; witneſs the *Venetians*, the States of *Holland*, or any other Republick or Commonwealth in *Europe*.

SOME Hiſtorians add, that when *Germany* was erected into a Kingdom, the Multitude had an abſolute Power to elect or depoſe Kings as they pleaſed; and would further add, that as we are ſuppoſed to be of *German* Extraction, it ought alſo to be a part of our Conſtitution; and ſuppoſe it were, what would be the Conſequence? Well then, every deſigning Man that had got more Eloquence than Honeſty, would be animating a giddy-headed Mob, and, by his Rhetorick, be deluding them into his own Meaſures, not only to the depoſing the crown'd Head upon the Throne, but perhaps, at laſt, to the Subverſion of the Government and Conſtitution it ſelf, both in Church and State.

Cuſtoms of the ancient *Germans*. *Cæſar*, *Tacitus*, and other *Roman* Hiſtorians, tell us that it was the antient Cuſtom in *Germany* for the common People to go naked till they grew old, and then to hang the Skin of ſome wild Beaſt about their Shoulders, faſten'd with a Thong; and Men of the beſt Quality wore only a woolen Mantle, or a Coat without Sleeves; that the Poor had no Beds but the Ground, or a little Straw, the better Sort lay only upon the Skins of Wolves and Bears: That they put their new-born Infants in cold Water, or threw them into a River, to determine their Legitimacy by their ſinking or ſwimming. Their Food was Bread, Fleſh, Butter, and Fruit, and their Drink Water, Milk, and Beer, as now, only they had not found out the Uſe of Wine, which they now uſe in great Plenty: They had ſeldom more than one Knife in a Family, with which they carv'd, but every one pull'd his own Victuals to pieces with his Fingers; but to make that Work the eaſier, it is commonly ſo over-boil'd, that it is ready to drop to pieces of it ſelf, and is more eaſily pull'd than cut to pieces.

When they have an Entertainment, they usually make the best of it, being very merry; the Guests sit in form of a Semi-Circle, of which the Master possesses the Center, but no Women are admitted to those Entertainments, nor a Son under twenty Years of Age. The *Germans* had Liberty formerly of marrying or cohabiting with as many Women as they pleased; but even in the Time of that licentious Liberty, that plurality of Wives dwindled into one; for as for what the Laws did not restrain, their own Circumstances did, when they found, that let them cohabit with as many as they would, yet one was as many as they were well able to keep. The eldest Son always succeeded in the Inheritance or Estate of his Father; and if it was a Principality, the eldest succeeded to it, and the youngest had some Villages, Lordships, or other Properties allow'd them for a Maintenance.

It is said of the primitive Germans, that they exceeded most other *Pagan* Nations in living up to the strict Rules of Morality, and an uncommon Regard for divine Worship: They chose their Priests out of the Nobility, as supposing them to have the greatest Advantages of Education, and for that Reason they were call'd to their Council of State. The Doctrine of Transmigration prevail'd among them; they believ'd that departed Souls animated other Creatures, and were deputed into such either more honourable or more contemptible ones, as would make them happy or miserable, as a Reward or Punishment for their manner of living while in this Life.

Religion of the ancient *Germans.*

They worship'd the Sun with so much Devotion, that *Cluverius* thinks they own'd it for the true God; they dedicated the first Day of the Week to it, as they did the second to the Moon; they also worshiped the God *Woden*, and call'd the fourth Day of the Week after his Name *Wodensday* or *Wednesday*: To their God *Thor*, or the *Thunderer*, they attributed the fifth Day of the Week, *Thorsday*, or by us *Thursday*: To their Goddess *Freiga* or *Venus*, they gave the sixth Day of the Week, and call'd it *Friday*: To the God *Ties* or *Mars*, they gave the third Day, and call'd it *Tuesday*; and to *Saturn* they gave the sixth Day, and call'd it by his Name *Saturnday* or *Saturday*; and thus they had at least as many Gods and Goddesses as Days in the Week: And no Wonder that in the Times of that Ignorance People were so deluded as to have a Notion of so many Deities, when we, in a Christian Nation, who pretend to hold *Paganism* in Contempt, yet to this Day distinguish our Days of the Week, as *Wednesday*, *Thursday*, &c. by the Names of those pretended Deities, which ourselves despise: Perhaps indeed our Astrologers and Fortune-tellers, which some therefore call wise Men or cunning Men, may contribute to the Support of this Superstition, not to say Idolatry, for they tell us to this Day, that the Sun is Lord of *Sunday*, and the first Hour of that Day, and that the Moon has *Munday*, and its first Hour, &c. Surely when those call'd wise Men among the Christians, condescend so much to those *Pagan* Superstitions, what can we expect, but that instead of bringing them over to Christianity, they will be confirm'd in their Obstinacy and Ignorance, and produce our Example for their Practice.

They perform'd their religious Exercises and offer'd their Sacrifices in Groves, the Oak being commonly chose for an Altar; and instead of a Temple, they had a Booth cover'd with Boughs of Oak and Beech; both the Priest and the Sacrifice were crown'd with Garlands of Oak, or some Tree which they deem'd sacred. The Roman Authors tell us, they sacrific'd not only Beasts but Men; only in common Cases, their Human Sacrifices were some of their Malefactors, or at least some of their own Slaves; but in extraordinary Cases, they did not stick to sacrifice their own Children: But they did not sacrifice them alive, for the Beasts were shot to Death with Arrows, but the Men, were sometimes crucify'd. They had, like some of the Eastern Nations, a way of foretelling good or ill Success in their Wars or other Undertakings, by inspecting into the Entrails of the sacrific'd Animals; and when the Ceremony was ended, they eat the Sacrifices, (whether Men or Beasts) the Priests entertaining them with the utmost Merriment of Musick and Dancing.

Their Belief of the Doctrine of Transmigration of Souls, or of their Souls animating other Bodies after this Life, made them fearless of Danger, especially those of them who were in unfortunate Circumstances. Their ready Cure was dispatching themselves, as supposing in that miserable Case, let the Soul be transplanted into what Body it would, it could scarce alter for the worse.

At their Funerals, they burnt the dead Body with the funeral Pile; and gathering up the Bones and the Ashes of the Pile, they bury'd all together; and sometimes the most zealous of them, would have their Wives, Slaves, Dogs, Horses, and even their Armour thrown into the Fire with them, which if the Deceas'd had order'd it, was comply'd with; and if it was at the Funeral of a great Man, there were Tiltings and Tournaments, and Songs in memory of his Heroick Actions.

What has hitherto been said of *Germany*, refers to the Time of its Primitive Ignorance in common with other Pagan Countries; but I shall now proceed to shew the Steps by which it was brought under the Imperial Government by *Charles* the Great, the first Emperor of *Germany* in the Year 800, with the Succession of the Emperors, and the most material Transactions in the Empire to the present Time.

When the *Romans* had been contented to make the *Danube* and the *Rhine* the Bounds of their Empire, as before observed, and thought themselves secure; yet within less than an Hundred Years after *Constantine* the Great, the *Franks*, *Burgundians*, *Almains*, and other Powers of *Germany*, broke through those Boundaries, pass'd the *Rhine*, and beat the *Romans* quite out of *Gaul*, *Rhætia*, and *Noricum*, which they at first quietly shar'd among them; but the *Franks* finding themselves the most powerful, prevail'd over their Fellow-Conquerors, and establish'd their Empire over *France*, *Italy*, and Modern *Germany*, under the Conduct and Government of *Charles* the Great, the first Emperor of *Germany*.

Charles the Great was the Son of *Pepin*, King of *France*; he was born, *Jan.* 28. in the Year 747, and *Pepin* dying in the Year 768, *Charles* shar'd the Government with his Brother, who dying, *Charles* assum'd the whole; and his Brother leaving a Son behind him, his Mother fled for Protection with him to *Desiderius*, King of *Lombardy*; but *Charles* pursu'd her thither, defeated *Desiderius*, and conquer'd *Rome*, and a great Part of *Italy*. The Pope and Clergy of *Rome*, having been reduc'd to Obedience by *Desiderius*, look'd upon *Charles* as their Deliverer, and swore Allegiance to him on St. *Peter*'s Tomb. Pope *Adrian* also by a Decree of his, order'd him to be declared Patrician of *Rome*, a Title not much inferior to that of Emperor: By this Authority he confirm'd the Election of Popes, and gave the *Italian* Bishops the Investiture of their Sees; and *Charles* as a

grateful

grateful Return to the Pope, gave him a Power to conſtitute Lieutenants over the Provinces of *Ancona*, *Bologna*, *Mantua*, *Modena*, *Parma*, *Ferrara*, &c. and thus by the reciprocal Power conferr'd upon one another, they had all both Civil and Eccleſiaſtical Authority in their Hands.

After this, *Charles* conquer'd *Spain*, and reduc'd the *Saxons* in *Germany* to Obedience, and planted the Chriſtian Religion wherever his Arms prevail'd, and founded Schools and Univerſities throughout the whole Empire; but Pope *Adrian* dying *Anno* 795, *Leo* III. was elected to ſucceed, and was confirm'd by *Charles* the Great as he was now call'd; but an Inſurrection being raiſed againſt this Pope by the Nephews of Pope *Adrian* his Predeceſſor, he fled into *Germany* to *Charles* the Great for Protection, who thereupon march'd an Army into *Italy*, ſubdu'd the Rebels, and condemn'd the chief Offenders to Death; but *Leo*, to ſhew his Clemency to the Rebels, interceded with *Charles* the Great to have their Sentences chang'd to Baniſhment, to which he agreed.

Charles's deſign.

These Heroick Actions of *Charles* the Great, ſo engag'd the Hearts of the People to him, that on *Chriſtmas Day* in the Year 800, the Pope with the Senate and People of *Rome*, unanimouſly agreed to confer the Title of Roman Emperor upon *Charles* the Great; and to ſhew the Voluntarineſs of the Action, they plac'd the Imperial Crown upon his Head while he was at his Devotions in St. *Peter's* Church: The Pope anointed him with the Holy Oil as ſupreme Sovereign; and the People with loud Acclamations, ſaluted him *Emperor of the Romans*.

When the Ceremony was over, and the Emperor being inclined to reſide in *Germany*, left *Italy* to the Care of the Pope, who notwithſtanding his Affection to him, knew better how to make an Advantage of his Abſence than of his Company, which had been the Caſe with his Predeceſſors, when they remov'd the *Imperial* Seat from *Rome* to *Conſtantinople* ſome Time before.

When *Charles* the Great had reign'd Emperor fourteen Years, he died in the Year 814; and having founded a Church at *Aix la Chapelle*, with a Deſign to make that the Capital of his Empire, and the Reſidence of his Succeſſors, he was buried therein himſelf with this Epitaph upon his Tomb: *Magni Caroli Regis Chriſtianiſſimi, Romanorum Imperatoris, Corpus hoc Sepulchro conditum jacet.*

The next Succeſſor to the Empire, was *Ludowic*, or *Lewis*, King of *Aquitain*; he was the Son of *Charles* the Great, and was crown'd Emperor by Pope *Stephen* IV. at *Rheims* in *France*, *Anno* 814. This Prince was ſo zealous in the Cauſe of Chriſtianity, that he cauſed the Bible to be tranſlated into the *Saxon* Tongue, and to be given away to the common People. He was ſucceeded by,

Lotharius his eldeſt Son, *Anno* 840; but he retiring into a Monaſtery, was ſucceeded by,

Lewis II. *Anno* 855. It was in his Time that the Court of *Rome* aſſum'd the Power of electing a Pope with the Concurrence of their Sovereign; and *Adrian* I. was the firſt that was choſen upon this Footing.

Charles the Bald ſucceeded, *Anno* 875; and after him,

Lewis III. *Anno* 878; but he reſign'd to his Brother,

Charles the Groſs, *Anno* 879. He was the firſt that annex'd the Year of our Lord to his Grants in Acts of State, they being till now dated only by the Year of the Reign of the (then) reigning Emperor; but at laſt not pleaſing his Nobility, he was by them depos'd, and dy'd in an obſcure Village in *Suabia*, and was ſucceeded by,

Arnolph, natural Son of the King of *Bavaria*, who was advanc'd to the Throne by the ſame Faction that depos'd his Predeceſſor *Charles*, *Anno* 888. He took *Rome* by Storm, and was afterwards poiſon'd, but was ſucceeded by his Son,

Lewis IV. He was at continual War with the *Hungarians*, and had but very ill Succeſs againſt them; and the Pope alſo ſet up another of the ſame Name againſt him in *Italy*, which caus'd great Diſturbance.

When *Lewis* IV. dy'd, the *German* Nobility offer'd the Crown to *Otto* Duke of *Saxony*; but he being old declin'd it, and recommended

Conrade Duke of *Franconia*; but even thoſe who choſe him, endeavour'd to dethrone him, as not approving of his Conduct; but he ſecured his Poſſeſſion during his Life, by obliging them with appointing *Henry* the Son of the abovemention'd *Otto* Duke of *Saxony* to ſucceed him.

Henry ſucceeded to the Throne *Anno* 919. the Pope offer'd to conſecrate and anoint him Emperor, but he bravely told him, that he did not want his Conſecration to confirm him in the Empire. He was a brave Prince, he reſiſted Enemies abroad, and compos'd Factions at home. He fortify'd the great Towns in *Germany*, and after a proſperous Reign of about ſeven or eight Years, he dy'd of an Apoplexy, and was immediately ſucceeded by his Son,

Otho, who began *Anno* 936. He was for his Piety and Conduct call'd *Otho* the Great; he obliged *Harold* King of *Denmark* to acknowledge his Dependance upon the Empire, and to introduce Chriſtianity into his Dominions; he alſo ſubdu'd *Boleſlaus* King of *Bohemia*, and planted Chriſtianity there. He depos'd Pope *John* XII. and put *Leo* VIII. in his room, and decreed that for the future, the Pope ſhould be appointed only by the Emperor. The baptizing of Bells was firſt introduc'd in his Reign.

Otho II. ſucceeded his Father *Anno* 973. and after a proſperous Reign, was ſucceeded by,

Otho III. of ten Years of Age, but prov'd a wiſe Prince. He was the firſt who order'd the Emperor to be choſe by a Majority of ſeven Electors. He reign'd eighteen Years, and was at laſt poiſon'd in *Italy* by his Concubine with a Pair of Gloves, becauſe he did not marry her according to his Promiſe.

Henry II. ſucceeded; he was Duke of *Bavaria*, and was crown'd by the Archbiſhop of *Mentz* *Anno* 1002. he was ſucceſsful in his Wars againſt the *Saracens* in *Italy*, and drove them out of *Apulia* and *Calabria*.

Conrade II. a Deſcendant from *Charles* the Great, ſucceeded *Anno* 1024. he was belov'd by his Subjects, and enacted, That no Prince ſhould make War on any Province of the Empire on Pain of Death. He reign'd fifteen Years, and was ſucceeded by his Son,

Henry III. *Anno* 1039. he ſubdu'd the *Bohemians* and *Hungarians*; and in the Year 1046. went to ſettle the Peace of *Italy*, which was then diſturb'd by three Popes, ſet up by contrary Factions; but to put an End to their Differences, he ſet up a fourth, *viz. Clement* II. and reviv'd and further confirm'd the Decree of *Otho* I. that the Pope ſhould be always appointed by the Emperor.

Henry IV. ſucceeded his Father *Anno* 1056. he was but ſix Years of Age. Pope *Hildebrand* deny'd this Emperor's Authority, and inſtead of having the Pope choſe by the Emperor, would have the Emperor choſe by the Pope; and ſo choſe *Rodolph* Duke of *Suabia*, and ſet him up againſt him; and though *Rodolph* was kill'd in Battle, yet the Pope did not reſt here, but procur'd *Henry* to be depos'd when he had reign'd fifty Years, and fought ſixty two general Battles. They elected his Son in his room, and he himſelf was

reduc'd

reduc'd to ſuch Straits, that he begg'd a Prebendary in the Church of *Spire* which he had founded, and was deny'd it by the Biſhop, which himſelf had created and prefer'd.

Henry V. Son of *Henry* IV. ſucceeded *Anno* 1106, but he was oblig'd to acknowledge the Pope's Supremacy, and to renounce the Privilege his Anceſtors had claim'd as to the Inveſtiture of Biſhopricks. He dying without Iſſue, was ſucceeded by,

Lotharius Duke of *Saxony*, *Anno* 1125, and he by,

Conrade Duke of *Suabia*, who was *Lotharius*'s Siſter's Son, *Anno* 1138.

Frederick Duke of *Suabia* ſucceeded *Conrade*, *Anno* 1152, he was crown'd by Pope *Adrian*; but in the Papacy of *Alexander* III. he was excommunicated, and ſo humbled, that he was obliged to throw himſelf at the Pope's Feet, and ſuffer him to tread upon his Neck. He was drown'd in a River, when he and *Richard* I. of *England*, and *Philip* II. of *France*, were upon an Expedition to the *Holy Land Anno* 1187, and bury'd at *Tyre*, and ſucceeded by his Son,

Henry, *Anno* 1190; but he by the Pope's Inſtigation, was prevail'd upon to undertake a Journey to the *Holy Land*, and dy'd in the Journey, leaving,

Philip his Brother to ſucceed him *Anno* 1198; but he renouncing the Pope's Supremacy, was excommunicated, and *Otho* Duke of *Brunſwick* was put up againſt him. The eſpouſing the Cauſe of theſe two Competitors by different Parties, engag'd the Empire in a bloody War; but *Philip* being aſſaſſinated in his Bed,

Otho the ſurviving Competitor ſucceeded in the Whole Empire *Anno* 1208. but the Pope and Electors ſoon depos'd him; and he being deſerted, dy'd at *Brunſwick*, and they ſet up,

Frederick II. *Anno* 1218. He was five Times excommunicated by three Popes; but at laſt got Pope *Gregory* IX. depos'd from the Papal Chair: And theſe Conteſts between the Popes and the Emperors, gave Riſe to thoſe Heads of the two Factions, the *Guelphs* and the *Gibellines*; the firſt for the Papal See, the latter in the Intereſt of the Emperors.

Frederick dy'd, or as ſome ſay was poiſon'd in *Italy*, and then for Want of a Succeſſor to be unanimouſly fix'd upon, the Empire was in Confuſion for above twenty Years; in which Time there were no leſs than ſix Competitors for the Empire: As, 1. *Henry*, Landgrave of *Heſſe*; but he was kill'd at the Siege of *Ulm*. 2. *Conrade*, *Frederick*'s ſecond Son. 3. *Manfred*. 4. *William*, Earl of *Holland*, declared King of the *Romans* by the Pope in oppoſition to *Frederick* II. 5. *Alphonſus*, King of *Caſtile*; and, 6. *Richard* Earl of *Cornwal*, Brother to *Henry* III of *England*; but after all this Struggle,

Rodolph Earl of *Hapsburgh*, was unanimouſly choſe by the Electors *Anno* 1273. He created his Son *Albert* Archduke of *Auſtria*, who was afterwards Emperor, and firſt Promoter of the *Auſtrian* Family.

Adolph was declar'd Emperor when *Rodolph* dy'd, *Anno* 1292; but he ſerving with his Troops in the Army of King *Edward* I. againſt *France*, ſo diſguſted the Electors, that they choſe *Albert* abovemention'd; who immediately defeated *Adolph* in a pitch'd Battle, and ſlew him with his own Hands.

Albert was crown'd Emperor, *Anno* 1298. He made his Son *Rodolph* King of *Bohemia*; but was murder'd by his Nephew and three other Aſſaſſins: And,

Henry Earl of *Luxemburgh* ſucceeded *Anno* 1308. but being ſo devout that he receiv'd the Sacrment every Day, a Franciſcan Monk poiſon'd him with the Conſecrated Elements. (See the murdering Devotion of ſuch a Clergy,) The Emperor perceiving himſelf poiſon'd, inſtead of ordering the Fryar to be ſeiz'd, order'd him to get out of the Way; but Juſtice could not ſleep, for the vile Miſcreant not haſtening to abſcond, was taken and flea'd alive. After this, there was a ſmall Inter-regnum, but it was not long before,

Ludowick Duke of *Bavaria*, was choſen Emperor, *viz.* *Anno* 1318; but *Frederick* Duke of *Auſtria*, Son of the late Emperor *Albert*, was ſet up by a contrary Faction; but *Ludowick* defeating *Frederick*'s Forces, remain'd ſole Emperor, and bravely oppos'd Papal Encroachments. He depos'd Pope *John*, XXII, and ſet up *Nicholas* V. in his room, and held in Contempt the Popiſh Excommunications which were daily thundred out againſt him.

Charles IV. Son of *John*, King of *Bohemia*, was elected Emperor when *Ludowick* dy'd *Anno* 1346. He was a learned prudent Prince, he contriv'd the *Aurea Bulla*, or Regiſter of the Ceremonies to be obſerv'd at the Election of an Emperor.

Wenceſlaus, the fourth Son of *Charles*, ſucceeded by his Father's Order *Anno* 1378; but being a cruel diſſolute Prince, they depos'd him, and elected,

Frederick Duke of *Brunſwick*, *Anno* 1400; but he was aſſaſſinated by *Henry* Count *Waldeck* as he came from the Place of Election, and,

Rupert Elector Palatine of the *Rhine* was immediately choſen *Anno* 1400; and he dying in Peace, they elected,

Jodocus Barbatus Marqueſs of *Moravia*, and Nephew to the late Emperor *Charles* IV. *Anno* 1410. but he reign'd not quite a Year, and was ſucceeded by,

Sigiſmund King of *Hungary* and *Bohemia*, and Brother to the Emperor *Wenceſlaus*. He was reckon'd a Man of uncommon Piety as ſome call him, and indeed it was uncommon Piety in him to ſuffer *John Huſs*, and *Jerome* of *Prague*, to be condemn'd and burnt as Hereticks. *See* Chap. IV. of *Bohemia*, &c.

Frederick IV. Duke of *Auſtria*, and Son-in-law to *Sigiſmund*, was choſen Emperor when his Father dy'd, and was crown'd at *Rome*; he married *Leonora* Daughter to *Alphonſus* King of *Portugal*, and by that Means united the Houſes of *Spain* and *Auſtria*. He fill'd the Imperial Throne fifty three Years, and was ſucceeded by,

Maximilian Anno 1493; but had been elected King of the *Romans* ſeven Years before. He married *Mary* Daughter and Heireſs of *Charles* Duke of *Burgundy*; and by that Means all that Duke's Territories were transferr'd to the Houſe of *Auſtria*.

Charles V. by ſome call'd *Charles* the Great, ſucceeded him. He was the Son of *Philip* King of *Spain*. He was alſo Grandſon of *Maximilian*, and Archduke of *Auſtria*. He was elected Emperor *Anno* 1519; but *Francis* King of *France* being his Competitor for the Crown, tamper'd with the Electors in hopes to deſtroy the Election by preventing his Coronation; and ſo far prevail'd that *Charles* was not crown'd till *Auguſt* 1520. *Martin Luther* liv'd about this Time, whoſe Doctrine *Charles* condemn'd, but did not perſecute his Perſon; and ſo zealous were his Followers in Proſecution of the Reformation from Popery, that they proteſted againſt a Decree of the Imperial Diet, which was made in Favour of the Roman Catholicks; and from thence it was, that thoſe who thus diſtinguiſh'd themſelves againſt the Roman Catholicks, were call'd Proteſtants, as they are at this Day. He was a victorious Prince; he had the Pope and the King of *France* Priſoners, both

at

at the ſame Time. He conquer'd the Kingdom of *Tunis* in *Africa*; he took the Elector of *Saxony* and the Prince of *Heſſe* Priſoners, and drove the *Turk* from the Siege of *Vienna*; and in a Reign of thirty eight Years, ſatisfy'd with his Succeſſes and Victories, he retir'd into a Convent in *Spain*, where he ſpent the Remainder of his Time, which was about two Years, in a religious Life, having at his quitting the Empire, ſurrendred it to his Brother,

Ferdinand, who was accepted and confirm'd by the Electors *Anno* 1558; but Pope *Pius* IV. refuſed to confirm him in the Empire, becauſe he was not conſulted either in the Reſignation of *Charles*, nor in the Election of *Ferdinand*; however he reign'd ſix Years, a Lover of his Subjects, and Favourer of the Proteſtants. He was ſucceeded by his Son,

Maximilian II. who was alſo King of *Bohemia*, and afterwards of *Hungary*. He was ſo tender to the Proteſtants, that he was call'd by ſome, the *Lutheran* Emperor.

Rodolph, the Son of *Maximilian*, ſucceeded his Father *Anno* 1576. He was a great Student in Arts and Sciences, eſpecially Mathematicks. *Tycho Brahe* liv'd in his Time, and was entertain'd by him at his Court. It is ſaid he was ſo intent upon his Studies, that he neglected the Affairs of Government.

Matthias Brother of *Rodolph*, King of *Hungary* and *Bohemia*, ſucceeded *Anno* 1612. He was a Perſecutor of the Proteſtants. [*See the Reign of* Rodolph *King of* Bohemia.] He dy'd without Iſſue, and was ſucceeded by,

Ferdinand of *Gratz*, Archduke of *Auſtria*, and Grandſon to *Ferdinand* I. *Anno* 1619; but the *Bohemians* apprehending that as he was likewiſe King of *Bohemia*, he would follow the Steps of his Predeceſſor in his Severity to the Proteſtants, offer'd the Crown of *Bohemia* to *Frederick* V. Count Palatine of the *Rhine*. This ſo incens'd *Ferdinand*, that nothing leſs than the Deſtruction of the Proteſtants could ſatisfy his Revenge; whereupon a bloody War commenc'd in *Germany*, which laſted near thirty Years; but the Wars were ended by the Treaty of *Weſtphalia*, and the Proteſtants reſtor'd to their Civil and Religious Rights in the Reign of,

Ferdinand III. He was elected King of the *Romans Anno* 1636. and ſucceeded to the Empire *Anno* 1637. He maintain'd a War againſt the Proteſtants: but being deſerted by moſt of the Princes of the Empire, which humbled him a little, he procur'd his eldeſt Son *Ferdinand* to be elected and crown'd King of the *Romans Anno* 1653; but he dying within a Year afterwards, his Father the Emperor ſucceeded him as King of the *Romans*, as well as continuing Emperor of *Germany*, in which he was ſucceeded by,

The *German Pa* Convent.

Leopold, the only ſurviving Son of *Ferdinand* III. He was elected and crown'd Emperor *Anno* 1658. At his Coronation he oblig'd himſelf to protect *Chriſtendom*, the See of *Rome*, and the Pope, and to promote Peace and Juſtice in the Empire according to the Laws; and alſo to protect the Electors of *Saxony*, *Brandenburgh*, and *Palatine*, and all their Proteſtant Subjects, according to the Treaty of *Oſnaburgh*; to obſerve the Imperial Conſtitution, and Acts of the Diet, and not to ſuffer any thing to be publiſh'd againſt the Peace of Religion, as concluded in the Treaty abovemention'd: That he will protect the Electors, Princes, and States of the Empire, in the Enjoyment of their Rights and Priviledges; and that the Ambaſſadors of the Electors ſhall take the Place of thoſe ſent from any Republick. That he will make no Alliance with Foreign States, or engage in any War without the Conſent of the Electors, Princes, and Sates of the Empire, or alienate any thing belonging to the Empire without the Conſent of the Electors. That he will not pretend to any Hereditary Right of Succeſſion to the Imperial Dignity, but will maintain the Electors full Power to elect a King of the *Romans*, without any Regard to his Conſent; and that none ſhall be admitted into his Councils or Offices but Natives of the Empire. And laſtly, the moſt remarkable Article of this *Pacta Conventa*, is, That he will not furniſh *Spain* with any Aſſiſtance againſt *France*.

When *Leopold* came to the Crown of *Germany*, *Charles Guſtavus* King of *Sweden* was become a very formidable Enemy to the *Germans*; for he having conquer'd a great Part of *Poland*, penetrated into the North Parts of *Germany*; but the Emperor *Leopold*, in a Confederacy with *Denmark*, *Brandenburgh*, and *Poland*, withſtood him till the Peace of *Oliva* put an End to that War *Anno* 1660. and three Years after that, he engag'd in a War with the *Turks*, wherein though he loſt the City of *Newhauſel*, yet he afterwards frequently defeated the *Turks*; and *Anno* 1664. a Truce was concluded between the two Empires for twenty Years.

But although the Emperor was at reſt on that Side, yet the *Hungarians* continu'd to form Conſpiracies againſt him, and offer'd their Country to the *Grand Seignior*, in order to obtain Protection from him againſt the Emperor; but their Deſign did not ſucceed, for the *Turks* being engag'd in the Siege of *Candia*, rejected the Propoſal, and the *Hungarians* were by that Means left to defend themſelves againſt their Prince the Emperor, whom they had ſo exaſperated.

The Emperor took this Advantage of their Diſtreſs to reduce them, and ſent a ſtrong Army commanded by the Duke of *Lorrain* againſt them *Anno* 1671, who recover'd many of the revolted Cities to Obedience, and made the Leaders of the Male-contents Priſoners, and afterwards beheaded them; and flush'd with this Succeſs, and hoping totally to extirpate the Proteſtant Religion, plac'd the moſt biggotted Roman Catholick Judges and Governours over them, who exercis'd all manner of Barbarities upon them, which made them fly from thoſe pretended Chriſtians, whoſe tender Mercies are ſuch barbarous Cruelty, to find Shelter and better Uſage among the *Turks* themſelves. But the Emperor finding his Subjects deſert at that Rate, and ſenſible how unable he would be to oppoſe the *Turk* if his Subjects ſhould abandon him, order'd his Miniſters to treat them with better Uſage.

While the Emperor was thus embarras'd, and conſequently weakned by the *Turks* firſt, and afterwards by the *Hungarians*, the *French* in the Years 1672. and 1673. over-run a good Part of *Holland* and *Flanders*, and committed great Ravages in the *Palatinate* and on the Frontiers of *Germany*. To put a Stop to which, the Emperor enter'd into an Alliance with *Spain* and *Holland* againſt them, and ſent an Army of forty thouſand Men to aſſiſt the *Dutch* againſt *France*, who ſtrugg'l'd with different Succeſs till the Year 1678; when the Peace of *Nimeguen* put an End to the Difference of the contending Parties of *France* and *Germany*.

But the Affairs of *Hungary* were ſtill embroil'd, for four thouſand *French* had join'd Count *Teckley* in Favour of the *Hungarians* againſt the Emperor. This brought the Emperor to Terms, which was to confirm all the civil and religious Rights of the *Hungarians* to them, if they would return to their Allegiance; and ſome other Acts were paſs'd in Favour of the Proteſtants; but Count *Teckley* would come to no Terms with the Emperor upon any Account, becauſe the *Turk* had promis'd to make him Sovereign of *Hungary*.

THE *French* King being well appriz'd of the *Grand Seignior*'s Design to quarrel with the Emperor, he surpriz'd *Strasburgh*, a *German* Frontier towards *France*, *Anno* 1680; and Count *Teckley* having married the Princess *Ragotski*, and thereby got Possession of what Places belong'd to that Family, rais'd an Army of thirty or forty thousand Men and join'd the *Turk*; who then found himself so strong, that *Anno* 1683, he declared War against the Emperor.

WHEN the Emperor saw this Storm a brewing, he sent Embassies to the Princes of *Christendom*, to desire their Assistance; most of whom, especially Pope *Innocent* XI. and *James Sobieski*, then King of *Poland*, who vigorously withstood the *Turks*, [*See his Life in the History of* Poland.] stood by the Emperor.

IN the mean time Count *Teckley* by Conquest and Plunder, made himself Master of several Towns in *Hungary*, and began to think himself Sovereign of that Kingdom, and coin'd Money in his own Name; which the Emperor not being willing to put up with, sent the Duke of *Lorrain* with a powerful Army against him; but while the Imperial Forces were endeavouring to reduce the revolted Towns of *Hungary* to Subjection, the *Grand Vizier* and Count *Teckley* besieg'd *Vienna* in *July* 1683. the Emperor and his Court having but just Time to retire before it was invested.

Vienna besieg'd.

THE Siege was carried on with such Fury, that in two Months Time the Garison despair'd of maintaining their Ground, till the Elector of *Saxony*, and the King of *Poland*, join'd the Duke of *Lorrain* (the Emperors General) and gave the Besiegers Battle; and Count *Teckley* and his Forces being absent upon some other Expedition, the *Imperialists* drove the *Turks* from the Siege; their Horse fled, and their Foot was left to the Mercy of the conquering Christians. The Siege was rais'd the twelfth of *September* 1683; but the Christians not content to leave off thus, pursu'd the *Turks*, drove them out of the Island *Schutz*, and retook the Fortress of *Gran*, below *Schutz* Island, and other Places of Consequence, from the *Turks*.

IN the Years 1684 and 1685, the *Imperialists* had Success against both the *Turks* and *Hungarians*; they defeated Count *Teckley*, and took several Towns; and *Anno* 1686. the Christians form'd the memorable Siege of *Buda*, and took it by Storm; and in 1687. the Emperor reduced the greatest Part of *Hungary*, and caused his eldest Son *Joseph* to be crown'd at *Presburgh*; and procured the Consent of the States, that the Kingdom of *Hungary* should be no more elective but hereditary. In the Year 1688. the Duke of *Bavaria* with an Army of *Imperialists* took *Belgrade* from the *Turks*, which very much startled them, there being no Place of any Strength between that and *Constantinople*.

WHILE the Emperor was thus busied, the *French* continued to ravage in the *Palatinate*, plundering, and then burning, the Towns between *Heidelburgh* and *Frankfort*; whereupon the Emperor prevail'd upon *England*, *Holland*, *Spain*, *Savoy*, and several of the *German* Princes, to enter into a Confederacy: The Substance of which was as follows, *viz.*

THAT *they would never make Peace with* Lewis XIV. *of* France, *until he had made Reparation to the Holy See for all Damages done to it, and till he had made void all his infamous Proceedings against the Holy Father Pope* Innocent XI. *nor till he had restor'd to each Party, all that he had taken from them since the Peace of* Munster; *and to the Protestants of* France, *all their Possessions and Goods and Liberty of Conscience*; *and to the States of the Kingdom of* France, *their antient Liberties and Priviledges.*

UPON the Conclusion of this Alliance, a War broke out, and was vigorously carried on both on the *Rhine* and in *Flanders*; and while the Duke of *Lorrain* was sent against the *French* upon the *Rhine*, Prince *Lewis* of *Baden* commanded on the Frontiers of *Turky*, and defeated the *Turks* in a general Battle near *Patochin*, and afterwards took *Nissa* and *Widin*; and *Anno* 1690. the Emperor procur'd his eldest Son *Joseph* (already King of *Hungary*) to be chosen King of the *Romans*.

BUT *Anno* 1690. the Emperor lost both *Widin* and *Nissa*; and not only so, but *Belgrade* was also taken by Storm, or rather by the blowing up of a Magazine, which threw down a great Part of the Wall, and made an Entrance for the *Turks* to take Possession. Count *Teckley* was then made Prince of *Transilvania* by the *Grand Seignior*, routed the *Imperialists*, and took Possession of that Country; but he did not hold it quite a Year, for Prince *Lewis* of *Baden* defeated the *Turks* the following Year in a general Battle near *Salankamen*, wherein the *Grand Vizier* was kill'd. They also took *Peterwaradin*; but laying Siege to *Belgrade* *Anno* 1693, the *Turks* defended it with so much Resolution, that they were forc'd to raise the Siege.

IN the Year 1695, the *Turks* again invaded *Transilvania*, and the Imperial General *Veterani* was defeated, taken Prisoner, and beheaded. The *Turks* and *Germans* had also an Engagement near *Temeswaer*; but the Loss was so equal, that both claim'd the Victory. But the last considerable Battle that was fought between the *Turks* and *Christians* in that War, was near *Zenta* in *Hungary*, *Anno* 1697. in which Prince *Eugene* commanded the *Christians*, and gain'd a compleat Victory over the *Turks*; who had thirty thousand Men kill'd of whom, the *Grand Vizier* was one. The *Imperialists* took their Camp, Cannon, and an incredible Quantity of Ammunition and Provision. This Year, *Augustus*, the Elector of *Saxony*, who had commanded the *Imperial* Army at the Battle of *Temeswaer*, was made King of *Poland*, to the great Mortification of the *French*, who put up the Prince of *Conti* against him. [*See this at Large in the History of* Poland, *Chap.* IV. Page 359.] Perhaps this might have some Influence upon the *French*, and might bring them to better Terms at the Treaty of *Reswick*, which was about this Time sign'd, between the Confederates and *France*, and a Peace concluded; but upon Articles quite different from the abovemention'd Confederacy between *England*, *Holland*, *Spain*, &c. for in that Confederacy, there was to be *no Peace with* France, *till the* French *Protestants were restor'd to their Civil and Religious Rights*: But in this Peace, those Protestants are not so much as mention'd, but Popery is establish'd in the *Palatinate*, and the abandon'd Protestants left to the tender Mercies of their Enemies.

THE Substance of the other Articles of the Treaty of *Reswick* was, That *France* should restore to *Spain*, the Towns that had been taken by the *French*; as *Barcelona*, *Roses*, *Giroims*, *Luxemburgh*, *Mons*, *Charleroy*, and all other Towns that had been taken by the *French* in the *Low Countries* or in *America*. *Lorrain* was to be restor'd to its Duke, and several other Restitutions were to be made; and these Transactions fill'd up the Year 1697.

IN the following Year 1698, a Treaty was propos'd between the two Empires of *Turky* and *Germany*, in which the *English* and *Dutch* were chose Mediators; and the Result was, That a Truce was agreed upon between the two Empires for twenty five Years. *Transilvania* was confirm'd to the Emperor, and the Province of *Temeswaer* to the *Grand Seignior*. That the Roman Catholicks in the *Turks* Dominions, were to have the free Exercise

Treaty of Carlowitz

ercise of their Religion; and for the rest, that every Party should keep what he was possess'd of. This was call'd the Treaty of *Carlowitz*.

Treaty of Partition.

In the Year 1699. the *English*, *French*, and *Dutch*, enter'd into a Treaty for the Partition of the *Spanish* Dominions, between the Arch-duke *Charles*, and the *Dauphin* of *France*, in Case K. *Charles* II. of *Spain* should die; and although the *Austrian* Family pretended to an undoubted Right to the whole *Spanish* Monarchy, yet the united Powers abovemention'd, did all this without so much as consulting the *Austrian* Family or the Emperor; which he so resented, that when he was afterwards desired to come into the Treaty, he was so far from embracing the Proposal, that he rejected it with high Indignation.

King of Spain dies.

This Treaty of Partition had been but a small Time ratify'd before *Charles* King of *Spain* dy'd, *viz. November* 1. 1700; upon which the King of *France* gave out, that the King of *Spain* had by his Will, appointed the Duke of *Anjou*, second Son to the *Dauphin* of *France*, to succeed him in all his Dominions; and Old *Lewis* XIV. accordingly, without any Regard to the *Treaty of Partition*, took Possession of the *Spanish* Territories in *Spain* and *Italy*, and the *Low Countries*, for his Grandson the Duke of *Anjou*; and declar'd him King of *Spain*, and all its Territories and Appendages: And *England* and *Holland* not only acknowledg'd his Title, but K. *William* and the *States General* sent him Letters of Congratulation upon his Accession; and he was crown'd at *Madrid*, *Apr.* 14. 1701.

The Emperor not approving of those Proceedings, sent Prince *Eugene*, with an Army of forty thousand Men, into *Italy* that Summer, to maintain the Emperor's Right to the *Spanish* Territories there; and while this was in Dispute, *James* II. the abdicated K. of *England* dy'd, *Sept.* 6. 1701. whereupon, the King of *France* caused *James*, the supposed Son of King *James* II. but now known in *England* by the Name of the *Pretender*, to be proclaim'd King of *England*, by the Name of *James* III.

But King *William* being at that Time happily fix'd upon the Throne of *England*, he enter'd into an Alliance with the Emperor and the *Dutch* against the Designs of *France*; in which these three Powers agreed to stand by each other to see the Emperor have Satisfaction for his Pretensions upon *Spain*; and also, that *England* and *Holland* should be secured in their Dominions and Commerce; and they came into this Agreement with this Resolution: That, *If this could not be obtain'd in a peaceable Way, and within two Months of the Date of the Treaty,* (*which was* Sept. 7. 1701.) *That then they should assist each other with their Forces to accomplish it.*

The Method they propos'd, was to endeavour to conquer the *Spanish* Netherlands for a Barrier for the *Dutch*; and *Milan*, *Naples*, *Sicily*, and the *Spanish* Places on the Coast of *Tuscany*, for the Emperor; and that the *English* and *Dutch* should possess such Places as they should take from the *Spaniards* in the *Indies*. It was also agreed, That no one of the three Parties, should make Peace without the Consent of the other two; and besides the Articles abovemention'd, that they should never agree that the Crowns of *France* and *Spain* should ever be united under the same Prince, or that the *French* should ever have Liberty to trade in the *West-Indies*.

Pursuant to this Resolution, the *Imperial* Army under Prince *Eugene*, made a considerable Progress in *Italy*; and by a subterraneous Passage, they got into *Cremona*, and surpriz'd the Marshal *Villeroy* in his Bed. But while the *English* and *Dutch* were preparing to assist the Emperor in the compleat Recovery of his Pretensions to the *Spanish* Dominions in *Italy*, King *William* dy'd *March* 8. 1701-2. to the great Mortification of the Emperor and the *Dutch*, who were in Confederacy with him.

King William dies.

CHAP. V.

An Abstract of the Modern History of Germany, *from the Death of King* William, *in the Reign of the Emperor* Leopold, *to the present Time; being the Reign of the present Emperor* Charles VI.

Upon the Decease of King *William*, Queen *ANNE* immediately succeeded to the Crown of *England*; and she declaring, that she would carry on, and continue the Preparations against *France*, and support the Allies, their Hopes reviv'd, and matters run in the same Channel as formerly. Queen *ANNE* did not fall short of her Promise; for King *William* had not been dead two Months before she declar'd War against *France*, which was done on *May* 4. 1702. and made the Earl of *Marlborough* General of her Forces in the *Low Countries*; and the *Dutch* lik'd her Choice so well, that they also gave him the Command of their Troops; and in his first Campaign, he drove the *French* out of the *Spanish Gelderland*. The *English* Fleet also sail'd for *Spain* with ten thousand Land Forces on Board, under the Command of the Duke of *Ormond*, and attempted a Descent upon *Cadiz*, in Favour of the House of *Austria*, but with little Success; only in their Return home, they met with the *Spanish* Galleons at *Vigo*, which, to those that got the Money, made some considerable Amends for losing their Labour at *Cadiz*.

This same Summer, *Aug.* 4. the *French* and the *Imperialists* had a close Battle, and a doubtful Victory, at *Luzara* in *Italy*; the Slaughter was great, but near equal on both Sides. But this Campaign the *Imperialists* took *Landau* in *Germany*, and the victorious *Marlborough* took *Venlow*, *Ruremond*, and *Stevenswaert* at the same Time. Marshal *Boufflers* abandon'd the City of *Leige* upon the Approach of the Confederates, and the Earl of *Marlborough* took Possession of both it and the Citadel, *Octob.* 23. which put an end to the Campaign of the Year 1702. only it is worth observing, that as the Earl of *Marlborough* was returning by Water from the confederate Army to *Holland*, he was taken Prisoner by a Party of the *French*; but none of them knowing him, and he producing a *French* Pass, they only plunder'd his Boat, and let him proceed on his Passage.

The Allies take *Landau*.

When he return'd to *England*, he was created Duke of *Marlborough*, and the Parliament resolv'd to increase the Number of Forces under his Command in *Flanders*, to fifty thousand Men. In the mean time the Duke of *Bavaria* having declar'd for *France*, they join'd him with a Body of Troops con-

Duke of *Marlborough* created.

manded by the Marſhal *Villars*, and took the City of *Ratisbon*, where the Diet of the Empire were aſſembled. The Elector afterwards invaded *Tyrol*, thinking thereby to open a Communication with the *French* in *Italy*; but the *Imperialiſts* diverted him from that Attempt, by attacking *Bavaria*, thereby making him Work enough to defend his own County; which when he had ſecur'd, he attack'd *Ausburgh*, and took it; while on the other Side, the Confederates in the *Low Countries* took *Bonn*, *Huy*, *Limburgh*, and *Gelder*. The Duke of *Burgundy*, with a Body of *French*, took *Old Briſac*, and Marſhal *Tallard* inveſted *Landau*; and although the Prince of *Heſſe* was detach'd from the *Netherlands* to relieve it, yet *Tallard* defeated him, and the Place was oblig'd to ſurrender.

Towns taken this Campaign. *French* take *Landau*.

On *June* 19. *Boufflers* ſurpriz'd the Confederate Forces under the Command of General *Opdam* near *Eckeren* in *Flanders*, and *Opdam* being ſeparated from his Army fled to *Breda*; but the other Generals maintaining their Ground, a bloody Battle enſued, and the Confederates beat the *French* out of the Field.

The ſame Year the King of *Portugal* came into the Grand Alliance; the Emperor and the King of the *Romans* both reſign'd their Right to the *Spaniſh* Dominions to the Arch-Duke *Charles*, who was thereupon declar'd King of *Spain*, by the Name of *Charles* III. The Duke of *Savoy* came alſo the ſame Year into the Grand Alliance; but the Duke of *Vendoſme*, the *French* General in *Italy*, getting early Notice of the Deſign, made ſix thouſand of his Troops Priſoners; and the Duke by way of Repriſal, confin'd the *French* Ambaſſador, and all the *French* Subjects that he found in his Dominions. About the ſame time the Marqueſs *Viſconti* and General *Starenburgh* join'd the Duke of *Savoy* with between ſeventeen and eighteen thouſand Men, who maintain'd continual Skirmiſhes with the *French*, though inferior in Number; however by thus keeping the *French* employ'd, they in all Probability prevented their over-running moſt of *Italy*; and as it was, the Empire ſuffer'd ſeverely.

Queen *Anne* being inform'd to what Diſtreſs the Empire was reduced by the *French* and *Bavarians*, to which we may add, that there was at the ſame Time a freſh Inſurrection of the Male-Contents in *Hungary* againſt the Emperor, order'd the Duke of *Marlborough* to be detatch'd with a formidable Army from the *Netherlands*, to aſſiſt the *Imperialiſts* on the *Danube*, whither he began his March in the middle of *May* 1704; and being join'd by Prince *Lewis* of *Baden*, they attack'd the *Bavarian* Intrenchments near *Donawert*, not far from *Ausburgh*, *July* 2. and took *Donawert*; and entering the Duke of *Bavaria*'s Country, he retired under the Cannon of *Ausburgh*; where Forms of Accommodation between him and the Allies were propos'd, and hearken'd to on both Sides; but the Elector getting Intelligence that Count *Tallard* with a powerful Body of *French* Troops were ready to join him, he abruptly broke off from the Treaty, as thinking himſelf now a Match for the Confederates; which ſo provok'd the Duke of *Marlborough*, that he detach'd thirty Squadrons of Horſe to burn and deſtroy the Country of *Bavaria*, even to the Walls of the Capital City of *Munich*.

Battle of *Hochſtet*

On *Aug.* 3. the Duke of *Marlborough* and Prince *Eugene* engag'd the *French* and *Bavarians* at *Hochſtet*; the Particulars of which Battle, you have in the following Letter, ſent by his Grace the Duke of *Marlborough*, to the Right Honourable Mr. Secretary *Harley*, dated the Morning after the Battle, as follows.

From the Camp at Hochſtet, *Thurſday Morning*, Aug. 4. 1704.

SIR,

I GAVE you an Account on *Sunday* of the Situation we were in, and that we expected to hear the Enemy would paſs the *Danube* at *Lawingen*, in order to attack Prince *Eugene*; at eleven that Night, we had an Expreſs from him, that the Enemy were come over, and deſiring he might be reinforc'd as ſoon as poſſible: Whereupon I order'd my Brother *Churchill* to advance, at one o' Clock in the Morning, with his twenty Battalions; and by three the whole Army was in Motion. For the greater Expedition, I order'd Part of the Troops to paſs over the *Danube*, and follow the March of the twenty Battalions; and with moſt of the Horſe and Foot of the firſt Line I paſſed the *Lech* at *Rain*, and came over the *Danube* at *Donawert*; ſo that we all join'd the Prince that Night, intending to advance, and take this Camp of *Hockſtet*. In order whereto we went on *Tueſday* early in the Morning, with forty Squadrons to view the Ground, but found the Enemy had already poſſeſs'd themſelves of it; whereupon we reſolved to attack them, and accordingly we marched between three and four yeſterday Morning from the Camp at *Munſter*, leaving all our Tents ſtanding. About ſix we came in View of the Enemy, who we found did not expect ſo early a Viſit. The Cannon began to play about half an Hour after eight; they formed themſelves in two Bodies, the Elector with Monſieur *Marſin* and their Troops on our Right, and Monſieur *de Tallard* with all his on our Left, which laſt fell to my Share. They had two little Rivulets, beſides a Moraſs before them, which we were obliged to paſs over in their View; and Prince *Eugene* was forced to take a great Compaſs to come at the Enemy; ſo that it was One o' Clock before the Battle began: It laſted with great Vigour till Sunſet, when the Enemy were obliged to retire, and by the Bleſſing of God we obtain'd a compleat Victory. We have cut off great Numbers of them, as well in the Action as the Retreat, beſides upwards of thirty Squadrons of *French*, which I puſh'd into the *Danube*, where we ſaw the greateſt Part of them periſh; Monſieur *de Tallard*, with ſeveral of his General Officers, being taken Priſoners at the ſame time; and in the Village of *Blenheim*, which the Enemy had intrenched and fortified, and where they made the greateſt Oppoſition, I obliged twenty ſix entire Battalions and twelve Squadrons of Dragoons to ſurrender themſelves Priſoners at Diſcretion. We took likewiſe all their Tents ſtanding, with their Cannon and Ammunition, as alſo a great Number of Standards, Kettle-Drums, and Colours in the Action; ſo that I reckon, the greateſt Part of Monſieur *Tallard*'s Army is taken and deſtroy'd. The Bravery of all our Troops on this Occaſion cannot be expreſs'd, the Generals as well as the Officers and Soldiers behaving themſelves with the greateſt Courage and Reſolution; the Horſe and Dragoons having been obliged four or five ſeveral Times to charge. The Elector and Monſieur *de Marſin* were ſo advantageouſly poſted, that Prince *Eugene* could make no Impreſſion on them till the third Attack at near ſeven at Night, when he made a great Slaughter of them; but being near a Wood Side, a good Body of *Bavarians* retired into it, and the reſt of that Army retreated towards *Lawingen*, it being too late, and the Troops too much tired, to purſue them far. I cannot ſay

too

too much in Praiſe of the Prince's good Conduct, and the Bravery of his Troops on this Occaſion. You will pleaſe to lay this before Her Majeſty, and his Royal Highneſs, to whom I ſend my Lord *Tunbridge* with the good News. I pray you will likewiſe inform yourſelf, and let me know Her Majeſty's Pleaſure, as well relating to Monſieur *de Tallard*, and the other General Officers, as for the Diſpoſal of near twelve hundred other Officers, and between eight and nine thouſand common Soldiers; who being all made Priſoners by Her Majeſty's Troops, are entirely at Her Diſpoſal: But as the Charge of ſubſiſting theſe Officers and Men muſt be very great, I preſume Her Majeſty will be enclined that they be exchanged for any other Priſoners that offer.

I SHOULD likewiſe be glad to receive Her Majeſty's Directions for the Diſpoſal of the Standards and Colours, whereof I have not yet the Number, but gueſs there cannot be leſs than an hundred, which is more than has been taken in any Battle theſe many Years.

SIR,

Your moſt Obedient

Humble Servant,

MARLBOROUGH.

HERE the Confederates had a compleat Victory, for which the Emperor made the Duke of *Marlborough* a Prince of the Empire. The City of *Ausburgh* ſent to deſire the Duke of *Marlborough's* Protection, and the City of *Ulm* ſurrender'd to the *Imperial* Forces *Sept.* 11. After this, Prince *Lewis* of *Baden* took *Laudau*, and the Electorate of *Bavaria* was yielded up to the Emperor.

IN the Year 1704. Admiral *Rook* ſail'd to *Barcelona*, with a Body of Land Forces aboard, commanded by the Prince of *Heſſe*; who landed two thouſand five hundred of them near the Town, and ſent the Governor a Summons to ſurrender; but he refuſed, whereupon the Troops re-embark'd, and the Fleet ſail'd for *Gibraltar*, and attack'd the Place *July* 21. and it ſurrender'd *Aug.* 24. following; and Sir *George Rook* leaving a large Quantity of Ammunition there to ſecure the Place, ſail'd away to engage the *French* Fleet; but by Reaſon of his ſpending and leaving behind him ſo much Ammunition at *Gibraltar*, he had not the expected Succeſs; however he ſo ſhatter'd the *French* Fleet, that they neither next Day, nor during the whole War, durſt ever diſpute with the *Engliſh*, the Right to the Dominion of thoſe Seas.

Gibraltar taken by the Engliſh.

IN this Campaign, the *French* took *Verceil* and *Suza*, which the Confederates were not able to prevent; but the *Hungarian* Male-contents were however prevail'd upon, to accept the Mediation of *England* and *Holland*, which was ſure when it was in their Hands to turn in Favour of the Emperor.

IN *April* 1705. *Verue* and *Piedmont*, and ſoon after, *Nice* and *Villa Franca* ſurrendred, to the *French*; and *Auguſt* 16. a doubtful Battle was fought between the *French* and the *Imperialiſts* near *Caſſano* in *Italy*: Great Numbers were kill'd on both Sides; but the Loſs was ſo equal, that both Parties ſung *Te Deum* for the Victory, when they had much more Reaſon equally to bewail their Loſs.

THE Duke of *Marlborough* commanded on the *Moſelle* this Campaign. The *French* took *Huy* and *Liege*; but upon the Approach of the Confederate Army in *Flanders*, the *French* were forc'd to relinquiſh thoſe Places again. The Duke afterwards enter'd the *French* Lines near *Tirlemont*, and defeated a Body of their Troops; but being about to attack the Grand Army at *Overyſch*, the Deputies of the *States* oppos'd it, and would not ſuffer the *Dutch* Troops to engage; but that was neither the firſt nor laſt Time, that our Dear Allies the *Dutch*, have been the leaſt forward to purſue a War, when there has been moſt Occaſion for it.

IN the Time of this Campaign, *viz. April* 24. 1705. the Emperor *Leopold* dy'd; he was born *June* 9. 1640, crown'd King of *Hungary June* 27. 1655, and of *Bohemia Sept.* 14. 1656. He was elected Emperor *July* 18. 1658. He was ſucceeded by his eldeſt Son *Joſeph*, upon whom *Leopold* laid his dying Commands to aſſiſt his younger Brother *Charles* in the Recovery of the *Spaniſh* Monarchy. His Heart was depoſited behind the high Altar in the Chapel of *Loretta*, his Bowels in the Cathedral Church of St. *Stephen*, and his Body in the *Capuchins* Church at *Vienna*. *Leopold dies.*

THE Grand *Britiſh* Fleet, under the Command of Sir *Cloudeſley Shovel*, ſet ſail from *England*, *May* 24. 1705, having a Body of Land Forces aboard, commanded by the Earl of *Peterborough*; and touching at *Lisbon*, King *Charles* III. came aboard of them. From thence they ſail'd to *Barcelona*, where they arriv'd *Aug.* 11. The Confederate Forces had made a Deſcent, and attack'd Fort *Montjoy*; and though the Prince of *Heſſe* was kill'd in the firſt Attack, yet they carry'd the Fort *Sept.* 6. The City of *Barcelona* alſo ſurrendred *Sep.* 23; and immediately after, the whole Province of *Catalonia*, except *Roſes*, declar'd for *Charles* III. as King of *Spain*.

THE next Winter, the Earl of *Peterborough* took the City of *Valencia*, and oblig'd the whole Province to declare for the Houſe of *Auſtria*. The *Portugueſe* alſo took ſome Towns on the Frontiers of *Spain*. The *French* and *Spaniards* thus apprehenſive of a Revolt in *Spain*, if not the Loſs of the whole Kingdom, if the Confederates were left in quiet Poſſeſſion of *Catalonia* and *Valencia*, they laid Siege to the City of *Barcelona* on *March* 23. where King *Charles* III. commanded in Perſon, while King *Philip* himſelf commanded the *French* and *Spaniſh* Troops which form'd the Siege; for it was thought at that Time, that the Fate of the *Spaniſh* Monarchy depended upon, and would be govern'd by, the Succeſs of this Place only. The Confederates had not above ſeven or eight hundred regular Troops in *Barcelona*, till the Earl of *Peterborough* found Means to throw in three or four thouſand more, who defended the Place till *April* 27. at which Time the Confederate Fleet of fifty Men of War arriv'd in *Barcelona* Road, under the Command of Sir *John Leake*, with Land Forces aboard, commanded by the Earl of *Peterborough*; which ſo ſtartled the *French*, that they immediately rais'd the Siege *May* 1. leaving their Artillery, Ammunition, and Proviſion. And to add to the Value of the Plunder, they left their ſick and wounded Men too, and under the Command of King *Philip*, they march'd directly for *France*. This Siege was rais'd *May* 12. 1706. *N. S.* on that remarkable Day that the Sun appear'd totally eclips'd at *Barcelona*; as alſo at *Cadiz*, *Marſeilles*, *Geneva*, *Bern*, *Zurick*, &c. Whether their raiſing the Siege was the Effect of their Surprize, occaſion'd by the total Darkneſs, or whether they took the Opportunity of this Darkneſs to pack off, and ſet forward for *France*, is uncertain; but ſeveral Perſons there preſent, have affirm'd that the Eclipſe came unexpected to both Armies: However the Learned Aſtronomers were at no Loſs to know of its Approach and Quantity, while the Aſtrological Conjurers did not fail to make the beſt of it in predicting from ſo ſurpri-

The Sun eclips'd. The ſiege of Barcelona raiſed.

zing a *Phænomenon*, no leſs than the Downfal of the *French* and *Spaniſh* Monarchies.

As ſoon as the Siege of *Barcelona* was rais'd, the *Engliſh* and *Portugueſe* Generals advanc'd to *Madrid*; whereupon the Queen and the Court of *Spain* retir'd to the Confines of *France*, and the Confederates took Poſſeſſion of the City *June* 13. 1706; and on the 27th caus'd King *Charles* III. to be proclaim'd; and *Toledo*, and ſeveral great Towns made their Submiſſion: Whereupon the Allies ſent repeated Expreſſes to *Charles* III. to haſten his March to *Madrid*, to take Poſſeſſion of that Capital as King of *Spain*; but before he ſet forward for *Madrid*, the Kingdom of *Arragon* declar'd for him; and fluſh'd with this repeated Succeſs, he march'd to *Saragoſſa*, where he was ſo carreſs'd by his new Subjects, that he ſtay'd feaſting there, till King *Philip* of *Spain* had drawn an Army together too ſtrong for the Allies to reſiſt; whereupon they were oblig'd to quit *Madrid*, and *Toledo*, and other Capital Places, which had put themſelves under the Protection of the Allies, and declar'd again for King *Philip*, and deſerted their new Monarch *Charles* III.

When this was done, King *Charles* III. when too late, join'd the *Portugueſe* at *Guadalaxara* with a few Regiments; but the Confederate Forces not being able to ſubſiſt in *Catalonia* for Want of Proviſions, decamp'd in *September*, and march'd into *Valencia*; againſt which Time, ten thouſand Men had been embark'd from *England* to meet and join them at *Alicant*; but their Number was much impair'd, if not reduc'd one half, before they arriv'd at that Place to enter upon Action. On *Decemb.* 11. this Year, *Don Pedro* King of *Portugal* dy'd, and was ſucceeded by *Don Juan* IV. his eldeſt Son.

At this Time Matters were pretty quiet upon the *Rhine*; and alſo there was in *Hungary* a Suſpenſion of Arms between the *Imperialiſts* and the Male-contents, but it was otherwiſe in *Flanders*; for on *May* 12. 1706. was fought the Memorable Battle of *Ramielles*, between the Confederates under the Duke of *Marlborough*, and the *French* and *Bavarians*, under the Command of the Duke of *Bavaria* and the Marſhal *Villeroy*. The Confederates took all the Enemies Artillery and Baggage; and in ſhort, gain'd a compleat Victory over the *French* and *Bavarians* with very little Loſs on their own Side.

Battle of Ramielles.

Upon this Signal Victory, the Cities of *Louvain*, *Bruſſels*, *Mechlin*, *Ghent*, *Oudenard*, *Bruges*, *Antwerp*, and ſeveral other conſiderable Places in *Flanders* and *Brabant*, declar'd for King *Charles* III. In this Campaign, the Duke of *Marlborough* beſieg'd and took *Oſtend*, *Menin*, *Dendermond*, and *Aeth*.

In *Italy* the Confederates had but ſlender Succeſs at the Beginning of this Campaign; for on *April* 19. the Duke of *Vendoſme* defeated the *Imperialiſts* at *Calcinato*, and on *May* 23. the *French* inveſted *Turin*; and although Prince *Eugene* march'd to its Relief, yet the *French* took the Counterſcarp of the Citadel, and were in a likely way to have taken both the Town and Caſtle; but the Duke of *Savoy* joining Prince *Eugene*, gave a ſudden Turn to the Affair; for they attack'd the *French* in their Intrenchments *Aug.* 27. and totally defeating them, they entred the City in Triumph. The City of *Milan* alſo, and the greateſt Part of that Dutchy, ſubmitted to the *Imperialiſts*; and about the Beginning of *March* following, a Treaty was concluded between Prince *Eugene* for the *Imperialiſts*, and Prince *Vaudemont* for the *French*; in which it was agreed, That the *French* ſhould evacuate all their Acquiſitions in *Italy*, only they ſhould be permitted to march home with all the uſual Marks of Honour.

Milan declares for the Emperor.

A Treaty

And thus ended this Glorious Campaign, which according to the Charge and Expence it coſt, and the proportionable Succeſs that attended it, might have been ſuppos'd to have turn'd out to a vaſt Advantage to *England*; but whether by the Miſunderſtanding of the Officers, or their Contentions for Precedency and Superiority and the like, we ſee what thoſe great Advantages we then gain'd are come to, and how well the *Spaniards* reſpect us at this Day.

In the next Campaign, *viz.* in the Year 1707, the firſt conſiderable Action was the Battle of *Almanza*, between the *French*, commanded by the Duke of *Berwick*, and the Confederates, under the Command of the Earl of *Galway* and the Marqueſs *das Minas*, where the latter were entirely defeated; and the Horſe with their two Generals abovementioned, retreated to *Catalonia*, leaving the Kingdoms of *Valencia* and *Arragon* (who had but juſt before, declar'd for *Charles* III.) to the Mercy of their exaſperated King *Philip*, who made them pay dear for revolting from him. And this ill Succeſs of the Allies, occaſion'd *Saragoſſa*, and ſeveral other Places, to ſubmit again to King *Philip*'s Forces.

This ill Succeſs of the Confederates, was imputed to the Forces being diverted by an Enterprize leſs material; for there were near thirty thouſand Forces ſent from *England* for the Service of the Allies in *Spain* and *Portugal*; but not quite nine thouſand of them were at the Battle of *Almanza*; for the Duke of *Savoy* in an Attempt to take *Toulon*, employ'd the Grand Fleet of *England*, and upwards of forty thouſand Men by Land, and yet the Project came to nothing; whereas in all Probability, had they been all or moſt of them ſent to *Spain* at that Battle of *Almanza*, where their Aſſiſtance was ſo neceſſary, they would ſoon have put an End to the War in *Spain*, and have fix'd *Charles* III. upon the Throne of that Monarchy, beyond Contradiction and Diſpute.

In the mean time, fifteen thouſand *Imperialiſts* under the Command of Count *Thaun*, enter'd the Kingdom of *Naples*, and the Capital City of *Naples* ſubmitted to own King *Charles* III. without ſtriking one Stroke. He took *Gaita* by Storm, and in it the Duke *de Eſcolona*, who was then Viceroy of *Naples* under King *Philip*; ſo that now, all the Kingdom of *Naples* was reduc'd to the Obedience of King *Charles* III.

We do not find that the Confederate Army did much Execution this Year; but the Reaſon of that we ſhall not undertake to meddle with: However the *French* under Marſhal *Villars* were not idle; for he forc'd the Lines of *Buhl*, took *Raſtal*, and laid under Contribution, to the Circles of *Suabia* and *Franconia*, the Electorate of *Mentz*, the Landgravate of *Darmſtat*, the Palatinate of the *Rhine*, and ſeveral other *German* Principalities. And as if this Year had not been compleatly fatal, it was drawn towards a Concluſion with the Loſs of the *Aſſociation* Man of War, and in her Sir *Cloudeſley Shovel*, and all his Ship's Company, which was near a thouſand Men, upon the Rocks of *Scilly*; two or three Men of War of the ſame Fleet undergoing the ſame Fate; and to this we may add, that about the ſame time, four *Engliſh* Men of War and a rich Fleet of Merchant Ships were taken even at our own Doors, *viz.* off of the *Lizard*, by a *French* Squadron from *Breſt*, which was the Tragical Concluſion of that Year's Tranſactions.

In the next Year, *viz.* 1708. General *Staremberg* was ſent to command the *German* Forces in *Spain*, and Major General *Stanhope* was ſent to *Barcelona*, to command the *Engliſh*. Sir *John Leake* at the ſame Time convoying ſix or eight thouſand Men from *Italy* to *Spain*, to re-inforce King

Charles

Charles III. and bringing with him to *Barcelona*, the Princeſs of *Wolfembuttle*, who had been contracted to King *Charles*; and now the Marriage was conſummated at this Place; and, whether out of Conſcience to the *Jewiſh* Cuſtom of refraining from the Wars the firſt Year after his Eſpouſals, or for the Love of his young Queen, is uncertain, but there was very little done in *Catalonia* this Seaſon. Indeed when Admiral *Leake* had ſet the Queen of *Spain* aſhore, he ſail'd to *Sardinia*; and with little or no Reſiſtance, both the City of *Cagliary*, and the whole Iſland of *Sardinia* unanimouſly declar'd for King *Charles* III. The Confederate Fleet alſo reduc'd to his Obedience, Port *Mahon* and the Iſland of *Minorca*. The young King of *Portugal* was alſo this Year married to *Mary Anne*, Archdutcheſs of *Auſtria*. So that by the Kings of *Spain* and *Portugal* this Campaign, if it may be ſo call'd, was more taken up with marrying than fighting; very little elſe being done on the Side of *Spain* and *Portugal*.

Cagliary and Minorca reduc'd.

In *June* 1708. the Elector of *Hanover* was admitted to ſit and vote in the Electoral College, though it had been oppos'd for ſixteen Years; whereupon he took upon him the Command of the *Imperial* Forces upon the *Rhine*; but it was a Campaign of but little Action in that Quarter; but in *Flanders*, the *French* this Summer ſurpriz'd *Ghent* and *Bruges*, and inveſted *Oudenard*, the Dukes of *Burgundy* and *Berry*, and the Chevalier *de St. George*, being in the *French* Army; but the Duke of *Marlborough* and Prince *Eugene*, attack'd them, made them raiſe the Siege, and they were glad to retire to *Ghent*: Whereupon the Duke of *Marlborough* put *Artois* and *Picardy* under Contribution; and the *French* by way of Reprizal, did the ſame by *Dutch Flanders*.

Prince *Eugene* laid Siege to *Liſle*, *Auguſt* 13. while the Duke of *Marlborough* with the Grand Army cover'd the Siege. *Liſle* is ſaid to be one of the ſtrongeſt Fortreſſes in the World, and was defended by twenty one Battalions of Foot, commanded by the Marſhal *Buſſlers*. In this Siege, Prince *Eugene* was wounded by a Musket Ball; and being thereby confin'd to his Tent, the Duke of *Marlborough* carried on the Siege. The *French*, the more to diſtreſs the Beſiegers, cut off their Communication with all their Gariſons except *Oſtend*; which General *Webb* obſerving to be open, march'd from thence with a great Convoy of Proviſions for the Beſiegers at *Liſle*; and although he was attack'd by General *de la Mothe*, with twenty four thouſand *French* under his Command, the *French* were defeated, and the Convoy and Proviſions arriv'd ſafe at *Liſle*. This Engagement was *September* 28, and *Liſle* ſurrender'd to the Allies in leſs than a Month afterwards, *viz.* on *Octob.* 23; but the Caſtle did not ſurrender till the ninth of *December* following.

Liſle beſieg'd.

Liſle ta-

While the Allies were beſieging *Liſle*, the Duke of *Bavaria* attack'd *Bruſſels*; but the Duke of *Marlborough* ſoon rais'd that Siege, and on the 18th of *December*, inveſted *Ghent*, which ſurrender'd on the thirtieth; and the next Day, the *French* quitted *Bruges*, and all the Towns they had taken in *Spaniſh Flanders*. And thus the brave Duke of *Marlborough*, who did not confine his Campaigns to the Summer Seaſon only, made an End of this in the Winter, and brought it to a Concluſion not only in the Month, but upon the very Day that the Year came to its Period.

Ghent ta-

1709. In the Year 1709. the *French* form'd Preliminaries for a Pacification, in which they offer'd to acknowledge *Charles* III. for King of *Spain*, and to yield up all their *Spaniſh* Dominions to the Houſe of *Auſtria*; and to reſign *Strasburgh*, *Briſac*, &c. to the Emperor; alſo to acknowledge the Queen of *Great Britain*; alſo to demoliſh *Dunkirk*, and relinquiſh *Liſle*, and all other Places that the Allies had taken in the *Netherlands*. But when all theſe Particulars were agreed upon in their Negociations, the *French* Plenipotentiaries refuſed to ſign the Articles; whereupon the Treaty broke off abruptly, and both Parties prepar'd to renew the War.

Propoſals for a Peace.

On *June* 27. the Allies inveſted *Tournay*, and took it *July* 30. but the Citadel did not ſurrender till *Septemb.* 3. following; and on the eleventh of the ſame Month, was fought the Battle of *Malplaquet* near *Mons*, between the Allies commanded by the Duke of *Marlborough* and Prince *Eugene* on one Party, and the *French*, commanded by the Marſhal *Villars* and *Boufflers* on the other Party; each Army conſiſting of an hundred thouſand Men or upwards. The *French* were very advantageouſly poſted, and were in ſome Places cover'd by triple Intrenchments, and the Intervals were planted with Artillery, which made the Acceſs of the Allies to the Enemy more difficult; but the Allies forc'd their Intrenchments, and all the Satisfaction the *French* had, if it could be call'd a Satisfaction, was to retire in good Order, and the Confederates made no vigorous Purſuit after them.

Tournay taken.

Battle of Malplaquet.

The following Winter, the *French* embarraſs'd with the Arms of the Confederates, and diſtreſs'd by Famine, and all other Hardſhips, made freſh Overtures of Peace, in which the *French* King agreed to all the former Articles, only that of aſſiſting to dethrone his Grandſon with his own Troops; but even in Lieu of that, he offer'd to advance a Sum of Money if requir'd; but thoſe Propoſals were rejected; and in the next Treaty, which was at *Gertrudenburg*, we found ſo much Reaſon to put Confidence in our Dear Allies the *Dutch*, that they were wholly entruſted with the Affair of treating with the *French* Plenipotentiaries, nor were the Miniſters of any of the reſt of the Allies admitted into the Treaty; and whoſe Intereſt ſoever their High Mightineſſes had in View, is not material: However this Treaty alſo came to nothing.

The chief Actions that happen'd in *Spain* this Year were, That the Forces of *Philip* King of *Spain*, obtain'd a Victory over the Allies on the Banks of the River *Caga*; and the Allies by way of Repriſal, made themſelves Maſters of *Balaguer* in *Catalonia*.

The Pope refuſing to acknowledge *Charles* III. for King of *Spain*, or to grant him the Inveſtiture of *Naples*, the *Imperial* Generals fell upon the See of *Rome*, taking *Camachio*, and ſeveral other Places in that See; which ſo ſtartled his Holineſs, that he conſented to own *Charles* III. as Sovereign of the *Spaniſh* Dominions.

1710. In 1710. the Allies took ſeveral Towns in *Flanders* from the *French*, as *Mortaign*, *Douay*, *Bethune*, *Aire*, and St. *Venant*; and afterwards made a great Progreſs in *Spain*, but were forc'd to relinquiſh their Conqueſts there for Want of timely Support; but this did not diſpirit them: For on *July* 27. they attack'd King *Philip*'s Army, which himſelf in Perſon commanded, near *Almanaca* in *Catalonia*, and routed his Cavalry; but being late in the Evening, his Foot retired under the Cannon of *Lerida*, and King *Philip* retreated from thence to *Saragoſſa*, to eſcape the Allies, then in purſuit of him.

On *Aug.* 20. the two Rival Kings of *Spain*, *Philip* and *Charles* III. came to a General Battle, in which *Philip* was entirely defeated, and retired to *France* by way of *Navarre*; whereupon the Gates of *Saragoſſa* were thrown open to King *Charles* III. who made a Triumphant Entry into the Town the ſame Night. And about a Week afterwards, he marched to *Madrid*, and took Poſ-

ſeſſion

ſeſſion of it *Sept.* 21; but the Grandees, not willing to be brought under any Obligation to declare for either Party againſt the other, were retir'd from thence upon his Approach; whereupon King *Charles* importun'd the Army of the Allies on the Side of *Portugal* to join him, but he ſucceeded not; and as King *Philip* had aſſembled an Army at *Madrid*, too powerful for King *Charles* to engage with, he return'd to *Catalonia* with a thouſand Horſe, and left the Remainder of his Army to follow him at their Leiſure.

AT the ſame Time the Armies of the Allies, either by ſome Difference between their Generals, or for the better ſubſiſting of their Armies, march'd in two Bodies, and by different Roads; the *Germans* and *Portugueſe* under Count *Staremberg*, took one Road, and the *Engliſh* under General *Stanhope* took the other; but General *Stanhope* with his Forces, halting at *Brihuega*, King *Philip* with his Army ſurrounded the Place *Dec.* 9. where they defended themſelves that Night, but in the Morning were oblig'd to ſurrender Priſoners of War; which, when Count *Staremberg* heard, he march'd to their Relief, but by the way King *Philip* met him, and gave him Battle at *Villa Viciosa* near *Brihuega*; whereupon he march'd towards *Arragon*, drew the Confederate Forces out of the Garriſon Towns in that Kingdom, and march'd to join King *Charles* in *Catalonia*; notwithſtanding which, the *French* ended this Year's Campaign with taking *Girone* this Winter.

1711 Emperor of *Germany* dies.

ON *April* 20. 1711. *Joſeph*, Emperor of *Germany* dy'd; upon which, the Allies uſed their utmoſt Efforts to have *Charles* III. King of *Spain*, and next younger Brother to the deceas'd Emperor, elected to ſucceed him in Order; to which Purpoſe Prince *Eugene* ſent a ſtrong Detachment from the Grand Army in *Flanders* to reinforce the *Imperialiſts* upon the *Rhine*, and prevent the *French* from penetrating into *Germany*, as they were intending, in order to influence the Electors to the Detriment of King *Charles* III. and to fruſtrate his Advancement as intended by the Allies, to the *Imperial* Throne of *Germany*.

THE Confederate Fleet convoy'd *Charles* III. to *Vado* in *Italy*, where he arriv'd *Octob.* 7, and went from thence to *Milan*, and reſided there till he was choſen Emperor, which was the twelfth of the ſame Month *October*; and that was no ſooner done, but *France* offer'd Propoſals of Peace to the Allies: The new Emperor withſtood it, and endeavour'd to diſſwade the Princes of the Empire and the *Dutch*, from entring into any Treaty with *France* without further Conceſſions. But Queen *ANNE* on the other hand, agreed to a Treaty, and pitch'd upon *Utrecht* for the Place, and that the Conferences ſhould begin there on *Jan.* 1. *Old Style*; and accordingly invited the Confederates to ſend their Miniſters thither. The Emperor hearing this, diſpatch'd Prince *Eugene* himſelf to *England*, to diſſwade Queen *ANNE* from treating with *France*; but her Miniſtry prevail'd with her to carry on the Treaty, alledging as one Reaſon, what *England* has found too true, *viz.* That the *States General* were deficient two Thirds of the Shipping they had ſtipulated to provide, by which Means the *Engliſh* Navy was forc'd to perform the Services which belong'd by Contract to our *Faithful Allies* the *Dutch*; and thereby the *Engliſh* Merchant Ships ſuffer'd for Want of Convoy, as well as the Navy ſuffer'd for Want of the Aſſiſtance agreed upon. And to this we may add, that the *Dutch* were deficient upwards of twenty thouſand Men in their *Quota* of Troops which they had agreed to ſend into the *Netherlands*; whereby the Burthen and Charge of the War in *Spain* and *Portugal*, was moſtly thrown upon the *Engliſh*. The Emperor at the ſame time, who was moſt nearly concern'd in the Event of that War, had no Troops at all in his Pay, except in the laſt Year of it, and then he furniſh'd but one ſingle Regiment; whereas *Britain* maintain'd ſixty thouſand Land-men, beſides the vaſt Charge of Shipping; and all this to make new Conqueſts for the Allies, and enlarge their Dominions, while they at the ſame time abated their Share of the Expence; and not only ſo, but while we were ſtrengthening the Allies, we were weakening our ſelves; for the Revenues of the conquer'd Countries were otherwiſe confounded, and were not apply'd to the carrying on of the War; and though *Britain* had the greateſt Share of Charge in the War, ſhe was to reap no Advantage by it; and on the other Side, putting our Conqueſts into the Hands of the *Dutch*, was giving them a Power to fight us with our own Weapons; or in plain *Engliſh*, deſtroying our Trade to put it into their Hands, as is evident; becauſe the putting of *Newport*, and other Places in *Flanders* into their Hands, render'd our Trade to thoſe Places precarious; and thoſe Places which *Britain* had made ſtrong, might by that Means be made *Britain*'s moſt powerful Enemies. In ſhort, however this Piece of Conduct might be cenſur'd, it is evident by the abovemention'd Circumſtances, that we were brought under a Neceſſity either to do the Work for the *Dutch* and ourſelves too, or ſubmit to hearken to a Treaty of Peace, if not ſubmit to it even upon any Terms. *Who would want ſuch* DEAR ALLIES!

ON *Jan.* 29. *Anno* 1711-12. *New Stile*, was held the firſt general Conference on the Subject of Peace, between the Plenipotentiaries of *Great Britain*, *France* and *Holland*; and Prince *Eugene* on the Emperor's Part advanc'd ſome Promiſes, that the Empire would for the future, contribute more to the Expences of the War than they had done, but *the burnt Child dreads the Fire*; and thoſe Promiſes had ſo little Effect, that Prince *Eugene* had his Audience of Leave of Her Majeſty with Reſpect to his Embaſſy, though to expreſs the Value ſhe had for his perſonal Merit, ſhe made him a Preſent of a Sword ſo enrich'd with Diamonds, that it was valued at above five thouſand Pounds.

QUEEN *ANNE*, in the Middle of thoſe Propoſals of Peace, kept up her Preparations for War; and on *July* 25. the Duke of *Marlborough* paſſing the *French* Lines at *Arleux*, inveſted the Town of *Bouchain Aug.* 1. and it ſurrender'd to the Allies *Sept.* 2. following.

IN the Year 1712. the Duke of *Ormond* had the Command of the *Engliſh* Forces in *Flanders*; and he ſoon declar'd to the Allies, that Queen *ANNE* had given him Orders, that he ſhould not act offenſively; but the Allies however, perſwaded her to conſent to the beſieging of *Queſnoy*, which ſurrender'd on the fourth of *July*, and on the ſeventh *Dunkirk* was ſurrender'd to the *Engliſh*; and about the ſame Time the Duke of *Ormond*, and the *Britiſh* Plenipotentiaries propos'd to the Allies a Ceſſation of Arms, but they rejected it; and Prince *Eugene* with the *Dutch* and *German* Troops ſeparated from the Duke of *Ormond*, and they became as two Parties; and Prince *Eugene* about the Middle of *July*, laid Siege to *Landrecy*; but the Duke of *Ormond* on the Part of the *Engliſh*, and Marſhal *Villars* for the *French*, mutually proclaim'd a Ceſſation of Arms in their reſpective Camps. On *July* 12. he took Poſſeſſion of *Ghent* and *Bruges*, and detach'd from thence ſix Battalions to reinforce the Garriſon of *Dunkirk*.

ON *July* 13. the Allies under Prince *Eugene* found the fatal Conſequence of ſeparating from the *Britiſh* Forces; for the Earl of *Albemarle* being encamp'd at *Denain* to ſecure the Communication between Prince *Eugene*'s Army (before

Lan-

Landrecy) and *Marchiennes*; the Grand Magazine of the Confederates; he was attack'd, defeated, and himſelf taken Priſoner by the Marſhal *de Villars*; many other Officers kill'd and wounded, and vaſt Quantities of Ammunition and Proviſion, with twelve Pieces of Cannon taken by the *French*, and the Town itſelf, with all the vaſt Stores therein contain'd, ſurrender'd in about a Week afterwards, which oblig'd Prince *Eugene* to raiſe the Siege of *Landrecy*, which he did *July* 22. following.

The *French* thus gaining Ground, begun to act upon the offenſive, and inveſted *Douay Aug.* 3. which ſurrender'd the 28th of the ſame Month, the Gariſon being made Priſoners of War; and the *French* flush'd with this Succeſs, inveſted *Queſnoy* the ſame Day, which was ſurrender'd to them *Sept.* 23. The *Dutch* ſtill refuſing to come into the Ceſſation of Arms, Marſhal *Villars* inveſted *Bouchain* in *October*, and carried it in ten Days Time.

In the mean time, there was a Suſpenſion of Arms agreed upon, between *France*, *Spain*, and *Portugal*, for four Months, ſign'd *Octob.* 25; and upon the Ceſſation of Arms between *England* and *France*, the *Engliſh* Forces in *Catalonia* embark'd for *Port Mahon*, where the Duke of *Argyle* commanded; who upon their Arrival, caus'd the Emperor's Colours to be taken down, and the *Engliſh* Colours to be hoiſted on all the Caſtles and Forts in *Minorca*; and the Emperor's Governor in the Iſland refuſing to take the Oaths to Queen *Anne*, was compell'd to retire, and ſo went to *Barcelona*.

1713. About the Beginning of the Year 1713. the *Dutch* agreed to come into the Plan of Peace propoſed to be ſign'd jointly with the *Britiſh* Miniſters, but before the Concluſion of this Peace, a Treaty was propoſed for ſecuring the Proteſtant Succeſſion in *Great Britain*; and the Barrier of the *States General* was ſign'd on *Jan.* 19; in which it was agreed, That the *Dutch* ſhould put Gariſons into the Towns and Citadels of *Tournay*, *Mons*, *Charleroy*, *Namure*, *Ghent*, and ſeveral other Fortreſſes; but here the *Dutch* acted with their uſual Caution; for all theſe Fortifications and Gariſons were to be maintain'd out of the Revenues ariſing from the Country about them; whereby the *Dutch* warily evaded all the Expence which muſt otherwiſe have neceſſarily attended ſo great a Charge. And it was further agreed, That if the *Dutch* ſhould require it, *England* ſhould ſend ten thouſand Foot and twenty Men of War to their Aſſiſtance; and that in Lieu thereof, the *Dutch* ſhould ſend twenty Men of War and ſix thouſand Foot to ſupport the Proteſtant Succeſſion to the *Britiſh* Crown: And finally, That each Party ſhould aſſiſt the other with their whole Force in caſe of any extraordinary Danger.

In the Year 1713, on the laſt Day of *March*, the reſpective Treaties of Peace between *England*, *Pruſſia*, *Portugal*, *Holland*, and *Savoy* on one Part, and *France* on the other Part, were executed at *Utrecht*; but the *Imperial* Miniſter proteſted againſt it for Reaſons he there aſſign'd, and affirm'd, that the *Imperial* Forces were reſolv'd to carry on the War themſelves alone againſt the *French*, till they could bring them to better Terms.

In the Treaty of Peace between *England* and *France*, it was agreed, 1. That the Acts made by the *Engliſh* Parliament for ſecuring the Proteſtant Succeſſion, ſhould be thereby confirm'd and enforc'd. 2. That the Crowns of *France* and *Spain* ſhould never unite. 3. That *Dunkirk* ſhould be demoliſh'd. And, 4. That the *Britiſh* Plantations in *America* in Poſſeſſion of the *French*, ſhould be reſtor'd, and Satisfaction made to all the Allies.

In the Treaty between the *French* and *Dutch*, the *French* were entirely to reſign up the Town and Dutchy of *Luxemburgh*, the Towns of *Namure*, *Charleroy*, *Menin*, *Tournay*, *Furnes*, Fort *Knock*, *Loo*, *Dixmude*, *Ypres*, and ſome other Places, for a Barrier to the *States*; and the *Dutch* on the other Hand were to yield up *Liſle*, *Aire*, *Bethune*, and St. *Venant*.

But the *French* ſtill carrying on the War againſt the Emperor, they took *Landau* about the middle of *Auguſt*, after a Siege of little more than two Months; and after it, the Town and Caſtle of *Friburgh*. This brought the Emperor to a Treaty with *France*, which was manag'd at the Caſtle of *Raſtadt*, by Prince *Eugene* for the Emperor, and Marſhal *Villars* for the *French*; and on *Feb.* 23. 1713-14. the Peace between them was concluded, and it was therein agreed, That the *French* ſhould reſtore to the Emperor, the Towns and Fortreſſes of *Old Briſac* and *Friburgh*, the Forts of St. *Peter*, and of the *Star*, and all other Forts in the *Black Foreſt*; and *Briſgau* with Fort *Kehl*, and Fort *Pile*, and others erected on the Iſlands of the *Rhine* near *Strasburgh*, were to be demoliſh'd, and the Navigation of the *Rhine* to be free to the Inhabitants on both Sides of it. The *French* alſo agreed, That the Emperor ſhould enjoy the *Spaniſh Netherlands*, except the Barrier Towns there already granted to the *Dutch*. And, Laſtly, That the King of *Pruſſia* ſhould be confirm'd in his Poſſeſſions in the upper Part of *Gelderland*, and particularly the Town of *Gelder*, in Lieu of his Pretenſions to the Principality of *Orange* in *France*.

In the Year 1714. died *Sophia*, Electreſs and Dutcheſs Dowager of *Hanover*, who, in Caſe ſhe had ſurviv'd Queen *ANNE*, was to have ſucceeded to the Throne of *Great Britain*. She dy'd in the eighty fourth Year of her Age, on *June* 8. *New Stile*; which according to *Engliſh* Computation, was *May* 28. the Anniverſary of the Birth-Day of her next Succeſſor to the Crown of *England* in Caſe of the Demiſe of Queen *ANNE*, which happen'd not long after; for Queen *ANNE* dy'd *Aug.* 1. the ſame Year 1714. and was ſucceeded by King *GEORGE* I. Elector of *Brunſwick Luneburgh*, who arriv'd at *London Sept.* 20. and was crown'd *Octob.* 20. following. Queen *Anne* dies, and King *George* I. ſucceeds

The *French* and *Spaniſh* Troops under the Command of the Duke of *Berwick*, laid Siege to *Barcelona July* 12. this Year; and although they made a brave Defenſe till *Sept.* 12. and then ſurrender'd, yet it was upon Condition, That their Lives ſhould be ſpar'd, and that the City ſhould not be plunder'd. They defended themſelves ſo long at the Inſtigation of the Emperor, upon his promiſing to ſend them Reinforcements; but he was ſo far from that, that he did not ſo much as take Notice of them in his Treaty with *France*, which was concluded at *Baden Aug.* 27. 1714.

On the 26th of *November* this Year, the *Turks* declar'd War againſt the Republick of *Venice*; and in the Year 1715. they conquer'd the *Morea*, 1715. whereupon the Emperor and the *Venetians* enter'd into a Confederacy for their mutual Defenſe.

The *Turks* and *Germans* being now at Wars, Prince *Eugene* in *Aug.* 1716. attack'd the *Turks* near *Carlowitz*; and having ſlaughter'd them in a dreadful Manner, took their Cannon, Tents, Baggage and Ammunition; alſo their Military Cheſt, with five Millions of Florins coin'd, and the *Grand Vizier*'s Pavilion, with Jewels and Treaſure, to the Value of three hundred thouſand Florins more, with two hundred of his beautiful Women, all between the Age of fourteen and twenty ſix. Prince *Eugene* alſo took *Temeſwar* in *October* following, after the *Turks* had had it in Poſſeſſion an hundred and ſixty four Years. *Temeſwar* taken.

In *June* 1717. the *Imperialiſts* inveſted *Belgrade*, 1717. and in *Auguſt*, Prince *Eugene* gain'd a compleat Victory over the *Turks* that came to aſſiſt the Be-

Belgrade taken. ſieg'd, and the Town ſurrender'd in two Days Time to the *Imperialiſts*: But here Prince *Eugene* was oblig'd to put a Stop to his Conqueſts on that Side, becauſe *Philip* King of *Spain* this Summer augmented his Forces, with a Deſign to reduce *Sardinia*, *Sicily*, and *Naples*, and other *Spaniſh* Dominions in and about *Italy*, to his Obedience; in which Expedition, the Marqueſs *de Lede* was employ'd as General of the *Spaniſh* Forces.

1718 In *July* 1718. the Marqueſs *de Lede* landed in *Sicily* with ſixteen or ſeventeen thouſand Men, and moſt of the Towns in the Iſland readily receiv'd him, and ſubmitted to King *Philip*; whereupon the Emperor and the Kings of *Great Britain* and *Sicily* enter'd into a Confederacy againſt *Spain*; and the *Dutch* after their uſual Caution, came in at laſt alſo; and then it was call'd the *Quadruple Alliance*: The Deſign of which was, to confirm the Partition of the *Spaniſh* Monarchy; and in order thereto, Admiral *Byng* was ſent into the Mediterranean, with a Squadron of *Engliſh* Men of War, who coming up with the *Spaniſh* Fleet off of *Syracuſe* on the Eaſt-Coaſt of *Sicily* on *July* 31. 1718. he engag'd them, and that Day and the next, took twelve of their Line of Battle Ships, and burnt three. He alſo took one Ship laden with Arms, and three laden with Proviſions, beſides burning two Fire-Ships, two Bomb-Veſſels, and one Sattee. After the Engagement was over, the *Engliſh* Fleet with all their *Spaniſh* Prizes retir'd to *Syracuſe* Bay, the Place before appointed for their Rendezvouz.

1719 In the Beginning of the Year 1719, the *French* invaded *Spain* by Land; and on the 13th of *April* they took *Port-Paſſage*, and burnt ſix *Spaniſh* Men of War which were on the Stocks almoſt finiſh'd. They took *Fontarabia* and St. *Sebaſtian*, whereupon the whole Province of *Guipuſcoa* ſubmitted to the Crown of *France*. In the mean time the Emperor by the Help of the *Britiſh* Fleet, tranſported an Army into *Sicily*, and took the Town and Citadel of *Meſſina*. This brought King *Philip* to Terms; 1720. and *April* 25. 1720. a Convention was held for a Suſpenſion of Arms, and for the Evacuation of *Sicily* by the *Spaniards*, and ſign'd by the *Imperial* and *Spaniſh* Generals: And on the next Day a Convention was held for their Evacuation of *Sardinia*; 1721. and in the next Year 1721. *Sicily* was ſurrender'd to the Emperor, and the Duke of *Savoy* as King of *Sardinia* took Poſſeſſion of that Iſland.

The Emperor, having no Iſſue-male, ſummon'd a General Diet of the States of the Kingdom of 1722 *Hungary* in *June* 1722. wherein he procur'd the Crown of *Hungary* to be ſettled on the female Line of the Houſe of *Auſtria* on Failure of Male-iſſue.

In this Year 1722. the Emperor erected a Company of Merchants at *Oſtend*, to trade to the Eaſt and Weſt *Indies* and the Coaſt of *Africa*; but the *Dutch* preſented Memorials to him, intimating, that it was contrary to the Treaty of *Munſter*; and that it was very unkind and ungrateful in him to encroach upon their Trade, when they had done him ſo many ſignal Services at the Expence of their Blood and Treaſure.

On the 25th of *Auguſt* this Year, the Emperor was crown'd King of *Bohemia*; and on the 28th, his Empreſs was crown'd Queen; it not being cuſtomary here to have thoſe two Grand Ceremonies of crowning a King and his Queen both perform'd in one Day.

The Congreſs of *Cambray* was open'd in *Jan.* 1723-4. and the firſt Things determin'd were, that the Emperor ſhould grant the Inveſtiture of the Dutchies of *Tuſcany*, *Parma*, and *Placentia* to *Don Carlos Infante* of *Spain*; and that the Artillery which the *Spaniards* took away upon their evacuating *Sardinia*, ſhould be reſtor'd again to the King of *Sardinia*. But beſides this, nothing of any great Conſequence was tranſacted at the Congreſs of *Cambray* this Year.

In the Year 1724. little was done at the Congreſs; but in *Germany*, the Emperor having de- 1724
termin'd to give the Government of the *Auſtrian* Netherlands to the Arch-dutcheſs his eldeſt Siſter, Prince *Eugene*, who had that Poſt, was in Lieu thereof made Vicar General of the *Auſtrian* Dominions in *Italy*, the higheſt Poſt the Emperor could advance him to: For the Viceroys of *Naples* and *Sicily*, the Governor of the *Milaneze*, and all other Imperial Officers and Generals, receive their Orders from him, and pay as entire Obedience to them as to thoſe of the Emperor himſelf.

The Congreſs of *Cambray* continu'd in 1725, 1725
but little was done there; but that Year the Emperor and *Spain* entered into a ſeparate Treaty concluded at *Vienna* in *Auguſt*; wherein the Emperor confirms to King *Philip* of *Spain*, all the *Spaniſh* Dominions in his Poſſeſſion: To the Duke of *Savoy*, the Kingdom of *Sardinia*; and to *Don Carlos*, the Dutchies of *Tuſcany*, *Parma*, and *Placentia*, at the Demiſe of the preſent Duke of *Tuſcany*; and King *Philip*, renounces all Pretenſions to *Italy*, *Sicily*, *Flanders*, or any other Place in Poſſeſſion of the Emperor; but that both ſhould be ſtil'd King of *Spain*: And upon this private Tranſaction between the Emperor and the King of *Spain*, the Congreſs of *Cambray* broke up.

The Emperor this Year alſo, enter'd into an Alliance offenſive and defenſive with *Ruſſia* and *Poland*; and on the other hand, *Great Britain*, *France*, and *Pruſſia*, concluded a Treaty in *Auguſt* 1725. mutually to defend all their reſpective Dominions in all their Trade and Privileges, even by Hoſtilities, if it could otherwiſe be done.

In the Year 1726. the Emperor prohibited the 1726
Importation of *Engliſh* Manufactures into his Dominions; and likewiſe the Importation of any *Eaſt India* Goods, except by the *Oſtend* Company.

In the Year 1726-7. in *February*, the *Spaniards* began their laſt coſtly, as well as unſucceſsful, Siege of *Gibraltar*; which turning to no Account in their Intereſt, they were glad to decline, and have not been much heard of ſince (except for their Buccaniering Trade upon the *Engliſh* in the *Weſt Indies*) till their Alliance with *France* and the King of *Sardinia*, in Favour of *Staniſlaus*, in order to ſet him upon the Throne of *Poland*; which Affair being now in Suſpenſe between him and *Auguſtus*, Elector of *Saxony*, we muſt poſtpone any further Account of it at preſent; and as *Germany* is deeply concern'd in that Affair, we ſhall (if it is determin'd before this our *Hiſtory of the World* is finiſh'd) add the further Circumſtances of it, as a Supplement to the Hiſtory of *Germany*, as well as to that of *Poland*; which we promiſed in the Concluſion of *Chap.* VII. *of the Hiſtory of* Poland, *page* 367.

By a ſlender Review of this Chapter, the curious Reader may make an Eſtimate of what the preſent Emperor of *Germany* has coſt *England*; or elſe find that the Charge is beyond Calculation, if we look back to the Times; firſt, before he was King of *Spain*, and afterwards, before he was Emperor of *Germany*. If ever he would let us know what Retaliation he makes for the Expence of ſo much Blood and Treaſure, that ſhall be as faithfully commuicated as the Battles, Sieges, and Treaties in his Favour have been related; but I do not find that he has as yet given us any Opportunity to enter upon that Subject.

CHAP.

CHAP. VI.

Of the Power of the Emperor of Germany; *also of his Election, and Coronation of the King of the* Romans, *and of the General Diet.*

The Emperor's Power.

IN speaking of the Emperor's Power, it is not meant that it has been, and is always the same; for *Charles* the Great, the first Emperor of *Germany*, who was made Emperor in the Year 800. (*See Chap.* IV.) and was the first that was invested with the Imperial Dignity, his Power extended in an absolute Manner over *Hungary*, *France*, and *Italy*, as well as a great Part of *Germany*; and he could determine in his Life time, who should be his Successor after his Death; which Power, several of the succeeding Emperors retain'd and exercis'd. But the Encroachments of the See of *Rome*, very much embarras'd and lessen'd the Power of the Emperor, as pretending not only to be independant in itself, but to assume an absolute Authority over the Emperor and all Princes of the Earth, to advance or depose at the Holy Father's Pleasure.

THE Power of the Emperor also dwindled very much away by exorbitant Grants, made by some of the Emperors to the Governors of several Provinces, in making their Power not only sovereign, but hereditary, and consequently independant of the Emperor; but on the other hand, the Emperor has recover'd some of his lost Power, since the See of *Rome* has lost much of its former usurp'd Authority, the Emperors being at present neither crown'd nor confirm'd in the *Imperial* Dignity by the Pope. And some of the Emperors have still further thrown off the *Romish* Yoke, and made bold to seize the Church Lands in *Italy*; and in their Turns, taken Possession of *Milan*, *Naples*, and *Sicily*; by which Means, the Emperor's Possessions almost surround the Territories of the Church.

THE Emperor not only creates Dukes, Marquesses, Counts, *&c*, but sometimes takes upon him to create Kings too; but he cannot make Peace or War, or levy Taxes, without the Consent of the Electors or Princes of the Empire; nor can he either make or suspend Laws, without the Diet or Assembly of Estates: But nevertheless, what of that Kind the Emperor proposes, is most commonly comply'd with. And since the Emperor's Acquisitions in *Italy*, the *Low Countries*, and *Hungary*, he has been able to cope with any Power (though perhaps not strong enough to withstand any three Powers) in *Europe*, but this is meant by Land.

The King of the Romans.

THE next in Power is the King of the *Romans*, but he is not independant; he derives his Authority from the Emperor, and acts as his Deputy in his Absence; and after the Emperor's Death, he always succeeds to the Empire without further Election. The first Election of a King of the *Romans*, was occasion'd by a Project which one of the Emperors had form'd to secure the *Imperial* Crown in his own Family; in order to which he procur'd his Son, Brother, or near Relation, to be chosen King of the *Romans*, which was much easier done, than to procure him the Succession to the *Imperial* Dignity. And yet that Election was thought so proper a Step towards the *Imperial* Crown, that it became customary to elect the King of the *Romans* to that Dignity; which is now so frequently done, that he that is once King of the *Romans*, if he survives the Emperor, is also almost as sure to succeed him in the Empire, as if the Crown was entail'd upon the Males of the *Austrian* Family; and to chuse a Person King of the *Romans*, is in effect making him Emperor elect.

Electors.

THE next principal Members, are the nine Electors, three of which are Ecclesiastical, *viz.* the Electors of *Mentz*, *Triers*, and *Cologn*, (and they are also Arch-chancellors of the Empire.) The other six are, the King of *Bohemia*, the Dukes of *Bavaria*, *Saxony*, and *Brunswick*, the Marquis of *Brandenburgh*, and the Prince *Palatine* of the *Rhine*. The Right of Election is continu'd in the Male Line of the Electors, as the Electoral Principalities and Estates are; and every Elector is Sovereign in his own Dominions, and has a Power to make Laws, coin Money, but not to the Prejudice of the Empire, or contrary to their Fealty to the Empire; or if they do, the States of the Empire may proceed against them, and divest them of their Inheritances and the Privilege of Election.

NEVERTHELESS it sometimes happens, that the Emperor dies when there is no King of the *Romans*; and in this Case, the Elector of *Mentz*, as High Chancellor of the Empire, and Dean of the Electoral College, gives Notice to the other Electors to appear at *Frankfort* in a Month's Time, to elect a new Emperor; but the Person is generally agreed upon before they come to the Place of Election. In the Morning, they come to the Town-House, where they put on their Electoral Habits. The three Ecclesiastical Electors have Scarlet Robes, and Caps lin'd with Ermin; the rest have Crimson Velvet Robes lin'd with Ermin: And in this Dress, they proceed to St. *Bartholomew*'s Church; and alighting at the Gate, go in to their respective Seats, follow'd by the Princes and Counts of the Empire. In the time of Divine Service, the Protestant Electors withdraw till Mass is over; and then returning, all the Electors take the following Oath, *viz. That without any Regard to Solicitations, Promises, or Rewards, they will elect such a Person for Emperor, as they believe in their Consciences is fit to govern the World.*

THE Qualifications required in the Emperor, are, That he be a Christian Prince, of *German* Extraction, not under twenty Years of Age, and capable of sustaining the Character of *Imperial* Majesty. He is chosen by a majority of Voices, of which his own may be one; which done, they place him upon the Altar, and the Archbishop of *Mentz* delivers him his Charge in Writing, with the Capitulations or Conditions upon which he is to reign, which he signs, and is thereupon proclaim'd Emperor.

Coronation.

AT the Coronation, the Electors or their Ambassadors attend the Emperor from his Palace to the Church in their Robes. The Elector *Palatine* with the Crown, the Elector of *Bavaria* with the Globe, and the Elector of *Brandenburgh* with the Scepter all a-breast, lead the Procession. Then the Elector of *Saxony* carries the Sword, and the Elector of *Hanover* the Standard. When they come to the Altar, the Archbishop officiates, anoints his Head, his Neck, Breast, right Arm, and between his Shoulders; and then he is brought to another

another Altar, and cloath'd with the antient *Imperial* Robes and crown'd, and then conducted to the Throne, where the Archbishop bids him *Receive and keep the Charge design'd for him by Providence.* Then, *Te Deum* is sung, and Trumpets with other Musick conclude the Ceremony.

Diet. When a General Diet is to be held, the Emperor summons the Princes and Members of the Diet, appointing the Time and Place of their Sitting, and they are obliged to appear punctually, either in Person or by Proxy. But the greater Part is most commonly the latter, and that makes their Debates and Proceedings commonly very tedious, before they bring them to a Determination, when the Proxies Instructions are not perfect, and they are forc'd to send Expresses to their Masters. Sometimes the Emperor summons them to come in Person, when Affairs of Importance are in Debate; and in this Case, the Electors themselves must either appear in Person, or make their Ambassadors Plenipotentiaries, and give them as full Power to act and vote as if it was themselves. The Diet has been held at *Mentz*, *Ausburgh*, &c. but is commonly held at *Ratisbon*; but the Emperor is not limited to any Place to hold it in, any otherwise than that he is obliged to hold it within the Limits of the Empire.

No Member of the Diet is allow'd to propose any thing in it, but only to debate and give their Opinions of what is laid before them by the Emperor, who can at his Pleasure adjourn any Debate from time to time, if the Majority do not fall in with his Sentiments.

The Elector of *Mentz* sits as Umpire or President, and on each Side of him those of *Cologn* and *Triers*, who equally and alternately take his right Hand; next to them are the Dukes of *Saxony*, *Bavaria*, and *Hanover* on the Left, and the King of *Bohemia* with the Electors of *Palatine* and *Brandenburgh* on the Right; and below them the rest in their Order. The Courts of *Suabia*, *Wetteraw*, *Franconia*, and *Westphalia*, have Votes in the general Diet.

The Representatives of the *Imperial* Cities, are divided into two Benches, that of the *Rhine*, and that of *Suabia*. The Business debated at the Diet is generally about Peace or War, the making or reviving of Laws, the raising Taxes, regulating the Coin, &c.

CHAP. VII.

Of the Laws and Courts of Justice in Germany, *with their Modern Religion and Ecclesiastical Government.*

NOT to go further back than the Time of the Emperor *Maximilian* I. who began his Reign in the Year 1493. we find he settled a Court of Judicature at *Worms*, which was afterwards remov'd to *Frankfort*, and last to *Spire*. There is also another High Court of Justice in the Emperor's Palace where-ever he resides, suppos'd to be the same with that call'd the *Aulick Council*; in this the Emperor is supreme Judge, but his Place is usually supply'd by a President. This and the Court of *Spire* have so near an Equality of Power, that there is no Appeal from one to the other. The inferior Courts held in their respective Provinces, shall be spoke of in the Description of the Provinces in which they are held.

Civil Law. The Civil Law is generally observ'd through all the Empire, and with this we may observe the *Golden Bull*, a Parchment-Book of about thirty Chapters, publish'd by *Charles* IV. with the Approbation of all the States of the Empire: It contains all the fundamental Laws relating to the Time, Place, and Persons requisite to the due Election of the Emperor, and the appointing Vicars in Case of an Interregnum; and the Seal of this being Gold, it was thence call'd the *Golden Bull*; and what was done by the Authority of it, was deem'd to be irrevocable.

Another Sort of a Law is the *Capitulatio Cæsarea*, being forty or fifty Articles between the Emperor and the Electors at his Coronation; by which he promises to maintain the Privileges of the Electors, Princes, and other Subjects of the Empire; and that all Places at Court shall be enjoy'd by free-born *Germans*, with other Particulars. They have also Acts of the general Diet, something like our Acts of Parliament. And lastly, the *Pragmatic Sanction*, in which it is decreed, That if any Prince or other Member of the Empire, shall endeavour by open Hostility, to disturb the Peace of the whole Body, he shall be cut off from the Community and deem'd an Out-law.

Pragmatic Sanction.

Religion. Authors differ about the Time of the Conversion of the *Germans* to Christianity; but it is agreed by all, that in the eighth Century, which was before *Germany* was erected into an Empire, that Part of the Country between the *Rhine* and the *Weser*, was converted by the Preaching of Missionaries sent from *England*; and afterwards *Charles* the Great conquer'd the Pagan *Saxons*, and establish'd the Christian Religion among them. But the *Bohemians* and *Moravians* were not converted till some time afterwards.

Reform. The Reformation, of which *Martin Luther* was the chief Instrument, was begun in the Year 1517. occasion'd under Divine Providence, by the Covetousness of the Pope, and the Zeal of *Martin Luther* against unwarrantable Impositions in Religion; for the Archbishop of *Mentz* not being able to pay the Sums the Pope exacted of him, the Pope rather than lose the Money, gave the Archbishop Leave to sell Pardons and Indulgences for any Time, past, present, and to come; Friar *Tekel* hawking those precious Goods about for him in all the great Towns of *Germany* to any that would purchase them.

Luther. *Luther* hearing of their thus making a Market of Indulgences and Pardons, which were not in their Power to sell, and were not their Property to dispose of, he protested against their usurp'd Authority; and both at *Wittenburg* and *Leipsick*, disputed openly against all such Impositions and mercenary Methods of raising Money by deluding the People; for which he was threatned with being excommunicated, and being condemn'd as an Heretick. But the Elector of *Saxony*, the Dukes of *Brunswick* and *Lunenburgh*, *Wittenburgh*, *Mecklenburgh*, and *Pomerania*, with the Marquels of *Brandenburgh*, and Landgrave of *Hesse*, encourag'd him, and became his Disciples, and jointly drew up a Protestation against those Points of Doctrine and Practice in the Church of *Rome*, from which they dissented, and presented it to the Church at *Spire*,

Spire, *Anno* 1529. and were thence call'd Proteſtants. (*See the Reign of* Charles V. *Chap.* IV.) And after a hard Struggle for their religious Liberties with various Succeſs, they had a Toleration granted in the Year 1552. at *Paſſau*, which was confirm'd at *Ausburgh* in the Year 1555.

Zuinglius. About the Year 1519. *Zuinglius* oppoſed the Church of *Rome*, and declar'd againſt the Maſs, Images, Invocation of Saints, *&c.* by which Means, the Maſs was aboliſh'd at *Zurich Anno* 1526, and at *Bern* in the Year 1528. After this, *Calvin.* *Calvin* ſucceeded *Zuinglius* at *Zurich*, adding the Doctrines and Opinions of Predeſtination, Free-will, and final Perſeverance: This made the *Lutherans* and *Calviniſts* become not only two Parties, but irreconcileable too. *Calvin*'s Doctrine was embrac'd in *France*, *Scotland*, the *Netherlands*, and ſome Part of *Germany*. The reſt of *Germany*, with *Denmark* and *Sweden*, adher'd to *Luther*'s Doctrine; and the Difference became ſo great, that they us'd reproachful Actions and Expreſſions to each other. The Court of *Pruſſia* is zealouſly affected to *Calviniſm*, as are the *States General*, though they tolerate all Religions.

The Roman Catholick Biſhops in *Germany*, exerciſe a greater Authority than any other Prelates in *Europe*, being temporal Princes; and beſides the three Eccleſiaſtical Electors, *viz.* the Archbiſhops of *Mentz*, *Triers*, and *Cologn*, there were formerly five Archbiſhops, and thirty Biſhops, who had Votes in the Diet; but ſince the Reformation, the Archbiſhopricks of *Magdeburgh*, *Bremen*, and *Riga*, with the Biſhopricks of *Halberſtadt*, *Minden*, and *Verden*, have been turn'd into ſecular Principalities. Thoſe of *Metz*, *Toul*, *Verdun*, *Beſancon*, and *Strasburgh*, have been cut off from the Empire, and united to *France* or *Lorrain*; and thoſe of *Valeſia*, *Loſanna*, and *Coire* have been aboliſh'd; ſo that beſides the Eccleſiaſtical Electors, there is no Archbiſhop but that of *Saltsburgh* in the College of the Princes of the Empire, and ſeventeen or eighteen Biſhops who have Votes.

The Biſhoprick of *Lubeck*, tho' in the Hands of the *Lutherans*, is an Eccleſiaſtical Preferment, and is in the Gift of the Dukes of *Holſtein* and *Sleſwick*. The Archbiſhop of *Saltsburgh* is the firſt *German* Prelate, and gives place to none but the Electors in the Diet. The other voting Roman Biſhops, are thoſe of *Bambergh*, *Wirtzberg*, *Wormes*, *Spire*, *Eichſtedt*, *Ausburgh*, *Conſtance*, *Hildeſheim*, *Paderborn*, *Munſter*, *Oſnaburgh*, *Paſſau*, *Friſingen*, *Leige*, *Trent*, *Brix*, and *Bazil*, of which, *Oſnaburgh* belong'd to the then Brother of King *George* I. late Duke of *York*. *Vienna* is a Biſhoprick under the Archbiſhop of *Saltsburg*.

But beſides the Biſhops, there are other Eccleſiaſtical Princes who have Voices in the Diet; as the great Maſter of the Teutonick Order, the Abbots of *Fulda*, *Hirſesfield*, *Murbach*, *Kempten*, *Corbray*, *Prum*, *Stabel*, *Ludors*, the Grand Prior of *Malta*, the Provoſts of *Elvang*, and *Bereſſolaguden*, with ſeveral others of inferior Rank.

CHAP. VIII.

Of the Dukes, and other Degrees of Nobility and Gentry in Germany; *and of the Imperial Cities, and Hanſe towns.*

THE antient *Germans* had their Leaders, Dukes, or Generals formerly, as practiſed in other Parts of *Europe* now; and altho' ſome Authors affirm, that they laid down their Poſts or Employments as ſoon as the Service they were choſen for was accompliſh'd, yet certain it, that the Dukes, General, or grand Leaders, appointed afterwards by the *Romans*, were inveſted with a Power not much inferior to Sovereignty; but their Acquiſitions extending but little to the Eaſtward of the *Rhine*, the antient Form of Government was retain'd there as before until the *Franks* ſubdu'd them, and then they divided all *Germany* into Provinces, which were govern'd each by its reſpective Dukes, who were entruſted with both civil and military Affairs, and were aſſiſted in the Adminiſtration by their proper Counts or Deputies.

These Dukes were generally of ſome noble Family, and ſo frequently ſucceeded by their eldeſt Sons if there was no material Objections, that they came at laſt to inſiſt upon Hereditary Succeſſion, and refus'd to pay Homage to the *German* Emperors; and from hence has riſen the great Number of independant Princes in the Empire.

Counts. The Counts are of various Ranks or Dignities, as, 1. The Simple Count, ſo call'd from his being Lord of only one ſmall Caſtle or Territory. 2. Counts *Palatine*; they have an Additional in their Dignity from the Relation they bear to the Emperor's Court; for the Word *Palatinus* ſignifies an Officer of the Houſhold, and the Perſon that bears that Title, either has it annex'd to the Name of ſome Place or Territory, as Count *Palatine* of the *Rhine*, &c. or appropriated only to the Perſon that bears the Title without any Term annex'd. 3. Counts of the Empire made by Patent; which when done, is commonly in Conſideration of ſome Service perform'd. 4. Margraves or Marqueſſes, ſignifying Keepers of the Marches or Boundaries of any Kingdom or Province, as the Word Marches is underſtood in *England*, or more particularly in *Wales*. 5. Landgraves, as the Landgrave of *Heſſe*, &c. they are the ſupreme Governors of ſome particular Diſtrict. 6. Burgraves, or the Governor of ſome Town or Fort; the Word *Burg* in *High Dutch* ſignifying a Wall'd-Town, Caſtle, Fort, or ſome ſtrong Place.

Barons. The next Degree of Nobility, is Barons, or free Lords, as the Word imports; it is ſometimes underſtood to amount to no more than a Lord of a Mannor in *England*, or a Lord in *Scotland*; but ſometimes a Baron is the ſame as a Count for Dignity and Authority, and differs only in Name and the Ceremony of being inveſted in their reſpective Territories.

Knights. The Knights of the Teutonic Order are of little Repute at preſent; the other Knights are dubb'd by the Emperor with the Ceremony of ſtriking them lightly upon the Shoulders with a naked Sword, and ſaying to each of them, *Eſto Miles Dei & Sancti Stephani.* A Gentleman is underſtood much the ſame as in *England*, being ſuch as from the Blood of their Anceſtors, the Favour of their Prince, or their own Merit or Succeſs, are advanc'd to higher Circumſtances than their common Neighbours. *Gentlemen.*

Imperial Cities. The firſt Riſe of the *Imperial* Cities, was occaſion'd by the frequent Neceſſities the Emperor was under for Money to carry on the Wars or o-

other Occasions; and to procure those Supplies, he borrow'd large Sums of the wealthy trading Towns; and in Lieu of the Money so borrow'd, he requited them with Grants and Priviledges, making them free States, and independant of the Governors of those Provinces in which they stood; and now they exercise Sovereign Power, make Laws, coin Money, raise Forces, *&c.* only acknowledging the Emperor as Supreme. But as those Cities are dispers'd in several Parts of the Empire, I shall give an Account of their Names when I treat of the respective Provinces in which they stand.

Hanse-towns.

The Hanse-towns are distinguish'd from the rest by that Name from the Word *Hanse* or *Anse*: It is originally a *Dutch* Word, and signifies a Town near the Sea-Shore, as the first Hanse-towns were. But what is now understood by Hanse-towns, is not all the Towns so situated, but those of them, which about the Year 1200 or 1300, entred into a strict Alliance for the Advancement of Trade, and their mutual Defence; and these for near two hundred Years engross'd the greatest Part of the Trade of *Europe*. There were about fifty of those Cities, divided into four Circles, which were distinguish'd by the Names of their respective Capitals, *viz. Lubeck*, *Cologn*, *Brunswick*, and *Dantzick*, but *Lubeck* was the Capital of all the four; and hence it is, that the Seal of *Lubeck* is the general Seal of all the Hanse-towns. This City had an Advocate at the *Imperial* Chamber at *Spire*, and took care of the Interest of all the Hanse-towns, with a Power of summoning all their Members when it was thought necessary, or that their joint Interest required it.

The Port-towns they chiefly resorted to, were *London*, *Narva*, *Bruges*, and *Bergen*; they apply'd themselves so close to Trade, that they became both rich and powerful, and had the greatest Fleet belonging to any Government in that Part of the World. But as other Nations improv'd in Navigation, and engag'd more in Trade, their Monopoly declin'd of Course after about two hundred Years flourishing. And now their Union is dissolv'd, though several of the Hanse-towns, as *Dantzick*, *Lubeck*, and *Hamburgh*, have still a considerable Trade; but they are every one in its respective Interest, and independant of one another.

CHAP. IX.

Of the Description of Austria, *particularly of the City of* Vienna, *Capital, being the Metropolis of* Germany, *and the Imperial Seat; with a Description of the several Provinces contained in this Circle.*

THE Circle of *Austria* taken in its full Extent, contains not only the Arch-dukedom of *Austria* itself, but the Dutchies of *Styria*, *Carinthia*, *Carniola*, the Counties of *Goretz*, *Cilley*, and *Tyrol*, with the Bishopricks of *Brixen* and *Trent*, whose Descriptions follow. And *Austria* understood in this Extent, is bounded by *Bohemia* and *Moravia* on the North, and by *Hungary* on the East; on the South by the Republick of *Venice*, and by *Bavaria* on the West. This is the antient *Pannonia Superior*, which the *Romans* after they had quitted the *Boiarii*, took Possession of, and annex'd it to the Dukedom of *Bavaria*; but the Emperor *Otho* first erected it into a Marquisate, and *Rodolph* I. was the first that created his eldest Son, whose Name was *Albert*, Arch-duke of *Austria*. And from the Time that *Austria* was erected into an Arch-duchy, it increas'd in Grandeur every Day. For then it was that *Carinthia*, *Styria*, *Tirol*, and *Alsatia*, were added to it; and when *Maximilian* of *Austria* was married with *Mary* of *Burgundy*, the seventeen Provinces of the *Low Countries* and the *French* County were added to his Dominions; and when his Son *Philip* married *Jane* of *Spain*, a great Part of *Spain*, with *Naples*, *Sicily*, and the *Spanish* Dominions, devolv'd upon the House of *Austria*.

Austria proper.

Austria proper, or the Arch-dukedom so call'd, is divided into *Upper* and *Lower Austria*; the latter is so call'd from its being lower down the *Danube* than the other; it is separated from the *Upper Austria* by the River *Ense*, which falls into the *Danube* near a City of the same Name.

Chief Towns.

Among the chief Towns in *Lower Austria*, *Vienna* is the Principal; as being not only Capital of the Province, but Metropolis of the Empire; of which take the following brief Description:

VIENNA or *Wien*, is situate on the South Side of the *Danube*. The River *Wien*, from whence the Place takes its Name, passes by the City on the East Side of it, and falls into the *Danube* a little below it. The City within the Walls is not three *English* Miles in Circumference. It has held out several Sieges against the *Turks*, the last of which was in the Year 1683. when the Place being reduced to great Extremity, was reliev'd by *John Sobieski* King of *Poland*. It has at other Times defended itself bravely against the *Turks*; but it is become such hard Work to come at it for some time past, that they have not of late attempted it.

The Houses are generally of Stone, and five or six Story high, and it may be said, three or four Story deep, having so many Cellars one under another. The Emperors Palace consists of three Courts, two magnificent ones very richly furnish'd, and the other less, as being the Apartments for the Pages. Here are Churches and Convents of *Carmelites*, *Franciscans*, and *Benedictines*, but the Church of the *Augustin* Friars is most admired, its Model being taken from that of the Holy House of *Loretta*. There stands before one of the Jesuits Colleges, a Pedestal of white Stone, and upon it a Column of Copper, with the Image of the Virgin *Mary* upon the Top of it; and thereon are several Inscriptions, intimating, that *Austria* was dedicated to her Patronage. Here is also a *Scotch* Convent, those People frequently resorting hither in their Pilgrimage to *Jerusalem*; and one of their Saints being murder'd in this County, was crown'd with the Honour of Martyrdom because he suffer'd in that Pilgrimage, and thereupon this Convent was built. The Church of St. *Peter* is only valu'd for its Antiquity, but the Church of St. *Stephen* is the most

most beautiful and magnificent of any in the City; the Steeple is 465 Feet high, the Windows darkned with abundance of curious Painting upon the Glass. In this Church are several Monuments of Princes and great Men, and near one of the Doors, is a Stone in the Wall, which they endeavour to make Travellers believe was one of those with which *Stephen* was ston'd to Death: It is very smooth, and they tell us, it is become so by the Curiosity of the Credulous to touch and rub it, in memory (I suppose) of the cruel Execution which it help'd to perpetrate.

The University of *Vienna* excells many of its Neighbours, both for Antiquity, Number of Students, and their Accommodation and Priviledges. It was founded by *Albertus* III. There are four Ranks or Divisions of Students, *viz.* the Class of *Austria*, of the *Rhine*, of the *Hungarians*, and of the *Saxons*; which last includes *England*, *Scotland*, and *Ireland*: For in the University, as well as in the Town, are People of almost all Nations, as *Greeks*, *Transilvanians*, *Sclavonians*, *Turks*, *Tartars*, *Hungarians*, *Croatians*, *Germans*, *Polanders*, *French*, *Italians*, *English*, &c. in their respective Habits; so that by travelling hither, a Person has an Epitome of all *Europe* to converse with.

Library. The *Imperial* Library at *Vienna* contains above fourscore thousand Books; but it is said, their Manuscripts in *Hebrew*, *Syriack*, *Arabick*, *Turkish*, *Armenian*, *Coptick*, and *Chinese*, are not to be parallel'd in the World; and of them more especially a *Greek* Manuscript of the New Testament, written upon Purple in Letters of Gold fifteen hundred Years ago. Here are also many thousands of Coins and Medals, *Greek*, *Roman*, and *Gothick*; besides such a vast Collection of Curiosities, that a Description of them makes a large Book in *Folio*.

The Suburbs of *Vienna* are larger than the City, the chief of which is *Leopolstat*; it is on the other Side of the *Danube* from *Vienna*. Here are most of the Nobility and Quality's Houses, being sumptuous Buildings. There is a little Plain as well as the River between *Vienna* and *Leopolstat*.

It does not appear from History about what time this City was founded, but the *Romans* had a Fortress on or near where *Vienna* now stands; it was call'd *Vindomina*. And what makes it believ'd that *Vienna* is built upon the same Spot of Ground where that Fort stood, is, 1. The Resemblance between the Names *Vindomina* and *Vienna*; and, 2. Because of the many *Roman* Antiquities yet to be seen in and about *Vienna*. But whenever this City was founded, it was but a naked Place till about the Year 1192. when the Marquess of *Austria* wall'd it round, by the Help of the Money which he receiv'd for the Ransom of King *Richard* I. of *England*, whom he surpriz'd, and made Prisoner, in his Return home from the *Holy Land*.

Fruitfulness. It to the Fruitfulness of the Soil we add the Navigation of the *Danube*, it will not be difficult to allow it to be a plentiful Country; for there are above thirty Sorts of Wine to be had at *Vienna*, either of the Growth of *Germany*, or imported from *Hungary* or *Italy*, besides tolerable good Beer. They have Sheep and Oxen from *Hungary*, and the Frontiers of *Turky* upon Occasion; but *Austria* itself produces Store of Cattle, and the Flesh of wild Boars is esteem'd a delicious Dish, as well as the Hunting of it is excellent Diversion, if not one of the chief. They have Hares, Partridges, and Pheasants, as in *England*, besides other Game unknown to us. The *Danube* affords plenty of Fish, as Carp, Tench, Trout, &c. and a Fish call'd Scheiden, better than our Salmon; but their largest Fish call'd Hausons, about twenty Feet long, taste like our Sturgeon, and are supposed to come out of the *Black Sea* up the *Danube*. They have Oysters, Oranges, and Lemons, and several Sorts of Fruit from *Venice*.

The Frost in the Winter time is so severe upon the *Danube*, and at *Vienna*, that they take their Diversion upon the Ice in Sledges of different Shapes, drawn by one Horse, a Man sitting on the Sledge behind to guide him. At *Vienna*, they have Magazines of Naval Stores, and Men of War fitted out against the *Turks*, notwithstanding it is so far from the main Ocean.

2. *Baden* is a noted Town in *Lower Austria*; it is so call'd from the natural Baths which spring there, and occasion a great Resort of Gentry and others to the Place; and it is said, cures most Distempers of the Head. It is a neat little City and surrounded by a Wall. 3. *Hamburgh*, in the Eastermost Parts of *Austria*, on the South Side of the *Danube*, and about thirty Miles to the Eastward of *Vienna*: It was the Metropolis of *Austria*, and the Seat of the Duke, but it is now reduc'd; but produces such Plenty of Corn and Wine, that they transport Quantities to other Countries. 4. *Tulin*, about twenty Miles to the Westward of *Vienna*; it is an antient Place but decay'd, and at present but poorly accommodated with Provisions. 5. *Krembs*, *Cremesia*, on the North Side of the *Danube*, and forty Miles West of *Vienna*; it is a large well traded Town, it has two Fairs in a Year, to which abundance of Merchants from *Germany*, *Hungary*, and *Poland*, repair.

Chief Towns of *Upper Austria* are, 1. *Lyntz*, or *Lyncia*, the Capital on the South Side of the *Danube*, and an hundred Miles East of *Vienna*; but on the North Side of the River it has a Suburb, their Communication being maintain'd by a Bridge over the *Danube*. In this Suburb the Emperor has a Palace, which occasions a vast Resort of the *Austrian* and other Nobility, who frequently spend their Summer there; and hither the Emperor retired during the Siege of *Vienna*. It has a spacious Market-place, and the Buildings are mostly of good Stone.

2. *Ense*, on the River *Ense*, falls into the *Danube* about eighty Miles to the Westward of *Vienna* on the South Side, some think it was built on the same Spot of Ground where *Laureacum* (some time the Seat of the *Roman* Emperors) once stood. It was formerly an independant County, but *Rodolph* I. purchas'd it, and annex'd it to the Duchy of *Austria*.

CHAP.

CHAP. X.

Of Styria, Cilley, Carinthia, Carniola, *and* Windis-Marſh; *alſo of* Tyrol, Brixen, *and* Trent.

STYRIA, or *Staymark*, including alſo the County of *Cilley*, is bounded on the North by *Auſtria*; by *Carinthia* and *Carniola* on the South; on the Eaſt by *Hungary* and *Sclavonia*, and on the Weſt by *Saltzburg*. It is divided into the *Upper* and *Lower Styria* by the River *Muer*, which runs through that Dutchy.

Lower Styria.

THE Chief Towns in *Lower Styria*, are, 1. *Gratz*. the Capital on the Bank of the River *Muer*, about eighty Miles to the Southward of *Vienna*; it is ſtrongly built and well fortifyed, and defended by a Caſtle, in which is the Duke's Palace. 2. *Rabersburg*, another ſtrong Fortreſs on the River *Muer*, about twenty eight Miles to the Eaſtward from *Gratz*. 3. *Pettaw* on the River *Drave*, thirty Miles South Eaſt of *Gratz*, formerly a *Roman* City, and now a Biſhop's See under the Archbiſhop of *Saltsburg*, but a declining Place. 4. *Marksburg*, on the River *Drave*; it was the Capital of the County, but reduc'd ſince it fell into the Hands of the Family of *Auſtria*.

Cilley.

THE County of *Cilley*, lies between the Rivers *Save* on the South, and *Drave* on the North. The chief Town is *Cilley*, an old ſtrong Place; it was once a Capital of a Territory, which was govern'd by its own Earls; but the *Auſtrians*, in whoſe Hands it now is, have depriv'd it of that Priviledge, and united it to *Styria*; but it is ſuppoſed to have been a Place of ſome Note, by Reaſon of the many *Roman* Antiquities yet found there.

Upper Styria.

THE chief Towns in *Upper Styria* are, 1. *Judenburg*, on the River *Muer*, fifty Miles Weſt of *Gratz*; it is a handſome Town, and therein is a Palace belonging to the Dukes of *Styria*. 2. *Iſenartz*, ſo call'd from the Iron Mines and Forges, ſaid to produce Steel enough to ſupply all *Germany*. They were firſt diſcover'd in the Year 712. and though it has been wrought upon above a thouſand Years, yet it ſtill produces near, if not quite, as great a Plenty of Oar as ever. This Town is ſituate upon the Banks of the River *Saltza*, about twenty four Miles North Eaſt from *Judenburg*.

Iron Mines.

Lower Styria, produces Corn, Wine, Fruits, Fiſh, and Veniſon in great Plenty. *Upper Styria* is more mountainous, but it feeds Plenty of Sheep, which afford them good Wooll, while the fruitful Valley produces Store of good Graſs, with which they feed large Heads of Cattle, generally black; and the Air is very healthy. This Country produces no Wine, and but very poor Beer, which laſt is their common Drink; but the Quality have a ſharp, thin Wine brought out of *Lower Styria*.

THERE is a Struma, or Swelling, that ſeems to be peculiar to this Country; only their Throats and Chins, both of Men and Women, ſwell to ſuch a monſtrous Degree, that from their Ears downwards to their Breaſts, are near as broad as their Shoulders; but this though common to the Poor, yet it ſeldom affects the Rich, which makes ſome attribute it to the great Quantities of Snow-water which they drink; the Rich, who live better, frequently eſcaping the Misfortune.

OF CARINTHIA.

CArinthia is bounded on the North by *Styria* and *Saltsburg*, and on the Eaſt, by *Styria*; by *Carniola* on the South, and by *Tyrol* on the Weſt; it abounds with barren Mountains, but plentifully water'd with Rivers and Lakes, among which firſt, is the River *Drave*, which runs through this Country and receives other Rivers into it.

CHIEF Towns are, 1. St. *Veit*, ſo call'd, as it is ſaid, from a Saint of that Name, who preach'd the Goſpel here during the Perſecution under *Dioclefian*. It is in a plentiful Vale, at the Confluence of the Rivers *Wilitz* and *Glan*, South from *Euſe*, and South-weſt from *Gratz* about eighty Miles. 2. *Gurk*, a Biſhop's See, eight Miles North of St. *Veit*. 3. *Lavemund*, a ſmall City and a Biſhop's See, under the Archbiſhop of *Saltsburg*; it is ſituate in a pleaſant Valley ten Miles Eaſt from *Styria*. 4. *Clagenfort*, ſaid to be the prettyeſt Town in *Carinthia*; it is about ten Miles from St. *Veit*; it is a Wall'd Town, of a ſquare Form, adorn'd with handſome Piazzas, and a beautiful Fountain in the Middle.

CARNIOLA, *and* WINDIS-MARCH.

THESE two conſider'd as one Dutchy, are bounded on the North by *Carinthia* and *Cilley*; on the Eaſt by *Croatia*, and on the South by the Mountains which ſeparate it from the Territories of *Venice*. It is divided into *Upper* and *Lower Carniola*, the *Windiſmarch*, and the County of *Goritia*. Chief Towns of *Upper Carniola* are, 1. *Laubach*, the Capital of *Carniola*. It ſtands upon the River *Laubach*, which falls into the River *Save*, ten Miles below *Laubach*: It ſtands thirty Miles to the Northward of *Trieſte*, a Sea Port in the Nothermoſt Part of the Gulf of *Venice*, and now belonging to the Emperor. *Laubach* is a Biſhop's See, a populous City, and well defended by a ſtrong Caſtle. 2. *Crainburg*, on the River *Save*, twenty Miles North Weſt of *Laubach*; and, 3. *Biſhofslack*, by ſome call'd *Lack*, about ten Miles South of *Crainburg*.

IN *Lower Carniola*, the chief Towns are, 1. *Zirknitz*, an inconſiderable Place, but remarkable for a Lake being near it ſo large, as from the Name of the Place to be call'd the *Zirknitzer* Sea, but otherwiſe call'd *Lacus Circonienſis*: It is about ſixteen *German* Miles long, and eight broad, encompaſs'd with Mountains on every Side. It ebbs quite dry every Year in *July*; and at the Bottom and Sides of it, are then ſeen ſeveral Holes into the Ground, by which it is ſuppos'd the Water retires; and when the Water is gone, the Graſs immediately grows, and the Soil is ſufficiently hard for Cattle to graze and eat up the Paſturage; which, for about a Quarter of a Year continues dry; and when the Water is gone, the Country People take up Plenty of Carp, Tench, Eels, *&c.* in the Mud with their Hands only; and yet when the

the Water returns, the Lake is as well ſtock'd with Fiſh the next Year, as it was in the preceding. About *September*, the Water returns into the Lake through the Holes and Cracks abovemention'd, with ſuch Violence, that it flies up to the Height of four or five Yards till the Lake grows full and theſe Spouts diſappear; but though the Inhabitants young and old affirm, that they never knew the Lake to miſs of this annual Ebbing and Flowing, yet none of them pretend to give a natural Reaſon for it. But, 2. Another Town in *Lower Carniola* is *Oberlaback*, about ſixteen Miles to the Weſtward of *Lauback*, only remarkable for a Trade in *Italian* Goods, which are from hence diſpers'd over all the Provinces of *Germany*.

Windis-Marſh. In *Windis-Marſh* the chief Towns are, 1. *Mething*, near *Croatia*, thirty five Miles South Eaſt of *Cilley*, and twenty five Eaſt of *Zirknitz* Lake; but now remarkable for nothing but its ruinous Condition by the frequent Plunders of the *Turks*. 2. *Rudolphsworth* or *Newſtat*, on the River *Gurk*, twelve Miles North Weſt of *Mething*, famous for producing the beſt Wine in the Country.

Goritia. *Goritia* is a ſmall Diſtrict of *Friuli* belonging to the Emperor; (but the Reſt of *Friuli* belongs to the *Venetians*.) The chief Town is *Gortz* or *Goritia*, twenty Miles North of the Gulf of *Venice*; it belong'd to the Emperor, and was taken by the *Venetians* in the Year 1608, but the Emperor retook it the next Year, and holds it in Poſſeſſion to this Time.

Trieſte, a Sea Port now belonging to the Emperor, is at the Bottom of a Bay in the Northermoſt Part of the Gulf of *Venice*; it is a ſmall Town, but a Biſhop's See. The Emperor would gladly have made it a free Port, but it ſeems ſcarce to deſerve that Priviledge, being an unſafe Harbour, and not fit to receive Ships of Burthen. It belong'd to the *Venetians*, but the Emperor took it in the Year 1507. and has poſſeſs'd it ever ſince.

Sr. *Veit-am-Flaum* is in *Iſtria*, a *Venetian* Province, but now ſubject to the Houſe of *Auſtria*, and annex'd to the Emperor's Dominions. It ſtands thirty Miles South Weſt of *Methin*, and upon the River *Flaum*, which falls into the North Part of the Gulf of *Venice*. This and *Trieſte* were the two Ports by which the *Imperialiſts* thought to eſtabliſh a Trade with the *Mediterranean* by way of the Gulf of *Venice*.

Carniola affords Plenty of Corn and Wine, and is well water'd by Springs and Rivulets; but eſpecially the *Save*, the *Lauback* and the *Gruck* runs through it. The Original Inhabitants are ſaid to be the *Carni*, a *Scythian* Colony, who were ſubdu'd by the *Romans* under *Auguſtus*; but the preſent Inhabitants are compounded of *Germans*, *Italians*, and *Sclavonians*; but the *High Dutch* Language prevails in Acts of State, Law, Proceedings, *&c.* *Windiſmarſh* is a mountainous barren Country, and the Inhabitants ſpeak the *Sclavonian* Language without any Mixture of the *German*.

Of TYROL *and* BRIXEN.

THE antient *Rhætia Superior*, now call'd *Tyrol*, is bounded on the North by *Bavaria* and Part of *Suabia*, and on the Eaſt by *Carinthia* and *Friuli*; by the *Griſons* and *Trent* on the South, and on the Weſt by *Switzerland*; and is divided into *Tyrol Proper*, the Biſhoprick of *Brixen*, and the Diſtricts of *Merum*, *Pludentz*, *Bregentz*, *Feldkirk*, and *Montfort*.

Inſpruck. Chief Towns in *Tyrol Proper*, are, 1. *Inſpruck*, the Metropolis, and Seat of the antient Counts and preſent Governor of *Tyrol*. It ſtands in a pleaſant Valley on the River *Inn*, and is from thence call'd *Inſpruck*. It is about ſeventy Miles North of *Trent*, and eighty South Weſt of *Saltsburg*. The beſt Buildings are in the Suburbs, which are ſeparated from the City by a River. The Cathedral and the Palace are beautiful Buildings; and as it is an Ambition in ſome Meaſure to make great Collections in Rarities both in Nature and Art, ſo here are to be ſeen Agats, Chriſtal, Coral, Jaſpers, Hyacinth, Turcois Stones, Lumps of Virgin Gold and Silver, *&c.* with the Arms of the Houſe of *Auſtria* curiouſly repreſented in a Coat of Diamonds and Rubies; and alſo another Collection at the fine Fort and Palace of *Ombras*, the Summer Retirement of the Arch-duke, where there is a large Volume of the Deſcription and Explanation of Rarities there to be ſeen. Other Towns are, 2. *Hall* or *In'thal*, upon the River *Inn*, ten Miles to the North Eaſt of *Inſpruck*. It has its Name from the famous Salt-works there. 3. *Tyrol*, an antient Caſtle from which the Country takes its Name; but it is of little Note at preſent.

Brixen. In the Biſhoprick of *Brixen* is the Capital of the ſame, ſituate on the Banks of the River *Eyſach*, about thirty Miles South Eaſt of *Inſpruck*. The Biſhop is a Count of the Empire, and holds a Court; but there is an Appeal to the Court at *Tyrol*. The little Diſtricts of *Meran*, &c. abovemention'd, have each of them a Capital, bearing the Name of the Diſtrict; but ſo obſcure, that a Deſcription of them would be of little Uſe.

Of TRENT.

THE County of *Trent* may be ſaid to be ſituate among the *Alps*, being bounded by *Tyrol* on the North, on the Eaſt and South by the Territories of the State of *Venice*, and by the Country of the *Griſons* on the Weſt. It is about ſeventy Miles from Eaſt to Weſt, and fifty from North to South. The chief Towns are, 1. *Trent*, or *Tridentium*, ſituate upon the River *Adige*, about ſeventy Miles South Weſterly of *Inſpruck*. It is a ſmall but wall'd City; it is moſt noted for the Coucil held there, call'd therefore the Council of *Trent*, which held from the Year 1545, to the Year 1563; wherein the Pope obtain'd the *Romiſh* Doctrine to be eſtabliſh'd and confirm'd. *Council of Trent.* 2. *Poſen*, ſituate alſo on the River *Adige*, about twenty five Miles North of *Trent*; this is a great Rendezvouz of *German* and *Italian* Merchants, where they traffick with their Merchandize, eſpecially at the four Fairs, which are here held annually. 3. *Noveredo*, a little City, of Note only for its Trade in Silk. The Country of *Trent* produces Wine and Oyl, Cattle, and Fruit; but they have very little of any Sort of Grain.

It is to be obſerv'd, although *Auſtria* be deem'd one of the Circles of the Empire, it is only ſubject to its own Prince, and not affected by any Acts of the Diet or General Laws of the Empire; for the Emperor *Charles* V. Arch-duke of *Auſtria*, who began to reign *Anno* 1519. decreed that *Auſtria* ſhould be a perpetual Fee of his Family, which no future Emperor ſhould deprive them of: That the Duke of *Auſtria* ſhould be the moſt Intimate Councellor of the Empire; and that no Matters of State ſhould be tranſacted without his Knowledge; with many other Priviledges and Immunities which are reſerv'd to the Houſe of *Auſtria* to this Day, independant of the Dignity of being Emperor of *Germany*.

CHAP. XI.

Of the Circle of BAVARIA.

IN the Circle of *Bavaria*, I include not only the Dominions of the Duke, but alſo the Territories of the Archbiſhop of *Saltsburg*, the Biſhops of *Paſſau*, *Ratisbon*, and *Treyſinghen*, with ſeveral other Lands. The Boundaries of *Bavaria* have been variouſly extended, but the Modern *Bavaria* is bounded on the North by *Franconia*, *Voitland*, and *Bohemia*; and on the Eaſt by *Bohemia* and *Auſtria*; on the South by *Carinthia*, *Brixen*, and *Tyrol*; and on the Weſt by *Suabia*. It is about two hundred Miles from North to South, and about an hundred and twenty from Eaſt to Weſt. The chief Rivers with which it is water'd are, 1. The *Danube*. 2. The *Lech*. 3. The *Inn*. 4. The *Amber*. 5. The *Iller*. 6. The *Saltz*. 7. The *Nab*. And 8. The *Iſar*.

Bavaria conſiſts of three Parts, *viz.* the *Upper* and *Lower Bavaria*, and the *Upper Palatinate*. The chief Towns in the Circle of *Bavaria* conſider'd in this Extent are, 1. *Munich* or *Munchen*, ſituate on the River *Iſar*, between ſixty and ſeventy Miles North of *Inſpruck*. It is a Town though not large, conſiſts of the moſt beautiful Buildings of any in *Germany*, both with Reſpect to the Electoral Palace, the Churches, Noblemen's Houſes, *&c.* The Town is wall'd round and fortify'd after the modern Way; but it is a Town of no great Trade, only the Reſidence of the Prince occaſions a great Concourſe. The Emperor has an Apartment in the Palace; the great Hall of which is an hundred and eighteen Feet long, and fifty two Feet broad, adorn'd with vaſt Numbers of curious Hiſtory Paintings; ſacred Hiſtory on one Side, and prophane on the other; every Hiſtory has a Latin Inſcription in Verſe under it, amongſt which, the following is under the Hiſtory of *Suſannah*:

Munich.

Caſta Suſanna placet, Lucretia cede Suſannæ;
Tu poſt, illa mori maluit ante Scelus.

IN the Parlour of Perſpectives are Pieces of the moſt curious Workmanſhip; but the Hall of Antiquities exceeds all the Reſt; for therein are an hundred and ninety two Buſts, and four hundred other Pieces of exquiſite Workmanſhip and great Antiquity; and in the Palace, beſides the rich Furniture, is an incredible Number of Pearls, Diamonds, Rubies, and other precious Stones. The whole Palace is lin'd or incruſted with Marble or Cement, ſo like it, that a Stranger cannot diſtinguiſh it from it.

Ingolſtat. 2, *Ingolſtat*, on the North Bank of the *Danube*, forty Miles to the Northward of *Munich*, and thirty to the Weſtward of *Ratisbon*. It is a ſtrong Town, but poor and not populous. *Donawert.* 3. *Donawert*, twenty five Miles Weſt of *Ingolſtat*, and twenty four North of *Ausburg*. It is ſituate on the South Bank of the *Danube*. It is no ſtrong Place of itſelf, but the Fortreſs of *Schellenburgh*, which is near it, defended it ſo ſtrongly in the Year 1704. againſt the Duke of *Marlborough* and the Confederate Army, that nothing but their Reſolution and a ſuperior Number could have made the Duke of *Bavaria* retire, as he did, under the Cannon of *Ausburg*. *Amberg.* 4. *Amberg*, the Capital of the *Upper Palatinate*; it ſtands on the Bank of the River *Vils*, thirty Miles to the Northward of *Ratisbon*. It is a ſtrong Place and enjoys large Priviledges; but the chief Employments of the Inhabitants are to forge, and make Utenſils of the Iron and other Minerals which are dug out of the adjacent Mountains; and with theſe they ſupply other Parts of *Germany*. *Neuma* 5. *Newmark*, on the Bank of the River *Sultz*, thirty Miles North of *Ingolſtat*. Their chief Employment is in Iron-work. 6. *Sultzbach*, five Miles Weſt of *Amberg*. Here a Prince of the Houſe of *Newburgh* has a Palace, and takes upon him the Title of Duke of *Newburgh*, *Bavaria*, &c. *Ratisbon* 7. *Ratisbon*; it ſtands where the *Regen* falls into the *Danube*, which is about ſixty Miles to the Northward of *Munich*. It is the only free *Imperial* City that is in the Elector of *Bavaria*'s Dominions. It is pleaſantly ſituate, large, populous, and well built, and fortify'd with a double Wall. The Diet ſits in a large upper Room hung with Tapeſtry. The *Imperial* Throne is richly cover'd with Gold and Silver Tiſſue, Velvet, *&c.* and the Seats of the Members are adorn'd in proportion to their Dignity. Here is a famous Stone Bridge croſs the *Danube* of fifteen large Arches: It is one thouſand and ninety one Feet, or above three hundred and ſixty Yards in Length, and twenty three Feet broad, with three handſome Towers upon it. This City is govern'd by its Magiſtrates, and is not ſubject to the Duke of *Bavaria*. The *Lutheran* is the eſtabliſh'd Religion, only the Biſhop is allow'd to ſay Maſs in the Cathedral once a Week. There is Plenty of Wine, Corn, and other Grain, and alſo of Cattle; and their Situation upon and near ſo many navigable Rivers on one Hand, and the vaſt Concourſe to the Diet on the other, occaſions a brisk Trade.

Paſſaw is about ſixty Miles to the Eaſtward of *Ratisbon*, where the River *Inn* falls into the *Danube*; whereby the Town is divided into three Parts and form a Noble City. It is naturally ſtrong, being ſurrounded with Rocks or Rivers on all Sides. The common Houſes are of Wood, but the publick Buildings are of Stone, very magnificent. In this City the Peace was concluded between the Emperor *Charles* V. and the Proteſtant Princes, in the Year 1552. by which the *Lutherans* were to enjoy the free Exerciſe of their Religion. The Biſhop of *Paſſaw* is Sovereign of the Country for twenty Miles to the Northward of *Paſſaw* and of the *Danube*.

Landſhut, the Capital of *Lower Bavaria* and Reſidence of the Elector's Lieutenant. It ſtands on the River *Iſar*, thirty Miles South of *Ratisbon*, almoſt in the Middle of the Elector's Dominions. Here was formerly a Palace of the Dukes of *Bavaria*, and it is ſtill a very handſome City; and the Tower of the Church is the higheſt in *Germany*.

Newburg, the Capital of a County of the ſame Name, ſtands on the South Side of the *Danube*, fifteen Miles Weſt of *Ingolſtat*. This Diſtrict extends along the *Danube* near forty Miles, and therein is the Town of *Hochſtet*, about twelve Miles to the Weſtward of *Donawert*, famous by the Victory of the *Germans*, *Engliſh*, and *Dutch*, againſt the *French* and *Bavarians* in a Battle here, in the Year 1704; in which, as in ſeveral other Caſes, although the *Engliſh* had a large Share in the Charge and Hazard, yet the Emperor reap'd the Advantage.

Bur

Salzburg. But not to enumerate Places of little Note, I ſhall now come to the Arch-biſhoprick of *Saltzburgh*, it being accounted a Part of the Circle of *Bavaria*. It has the Dutchy of *Bavaria* on the North, *Upper Auſtria* on the Eaſt, and *Tyrol* on the South and Weſt. Chief Towns are, 1. *Saltzburg*, on the River *Saltz*, ſixty Miles Eaſt of *Munich*: It is a very fine City, and has an exceeding magnificent Cathedral, to which the Arch-biſhop's Palace is not inferior. The Town has a good Trade, eſpecially in Salt, of which the neighbouring Pits produce great Plenty; and from thence probably the Town takes its Name.

Hallen. 2. Another Town in this Country is *Hallen*, being likewiſe upon the Banks of the River *Saltza*, about eight Miles to the Southward of *Saltzburg*. Here are a great many poor People continually employ'd about the Salt-pans. The Inhabitants tell us, that in the Year 1573, there was found in a Salt-pit here, ſeveral hundred Fathoms deep in the Earth, a hard Rock of Salt, which being broke, there was in the Midſt of it, an entire Human Body, with its Limbs, Hair, and Cloaths, found and uncorrupted; and not only ſo, but by the Antiquity of the Dreſs, it ſeem'd to have been there for ſome Ages. I ſhall not undertake to determine how Nature perform'd ſuch an extraordinary Piece of Work; but if we allow the Fact, which is neither impoſſible nor improbable, it is not unlikely but that this Perſon might by ſome Accident fall into the Salt-pit, and the Salt congealing and petrifying about the Body, might be ſolid enough to reſiſt the external Air; and by that Means entirely preſerve the Body and the Cloaths upon it from Corruption.

This Country, beſides Salt, affords Copper, Iron, and ſome Silver; and a little above the City is the *Gaſtein Bath*, a very hot Mineral Spring. There are alſo many excellent Quarries; in one of which is found Stone little inferior to Jaſper. This Country extends about ſeventy Miles from Eaſt to Weſt, and fifty from North to South; the Arch-biſhop is abſolute Sovereign there; and as to his Religion, (if it may be call'd Religion) we need not be at a Loſs to know what it is; the poor diſtreſs'd Proteſtants there being ſo many living Teſtimonies, that his tender Mercies are Cruelty; witneſs the *Saltzburg* Emigrants, (as they are now call'd) who are forc'd to quit their Habitations and Eſtates to fly for Refuge into Proteſtant Countries; and who with us, feel the happy Effects of the ſettling the Crown of *England* upon the Proteſtant Succeſſion in the Houſe of Hanover.

Although *Bavaria* is enrich'd with a plentiful Soil, to which we may add a good Trade, by Means of the *Danube*, and many other navigable Rivers paſſing through it, yet the Natives are poor in the Midſt of this Plenty by the Elector's monopolizing the beſt Part of the Traffick to himſelf. He will not allow his Subjects to import Salt from *Auſtria*, *Saltzburg*, or any Dominions; or to buy any that is imported except of himſelf. And as to the Corn, his Agents buy it up for him, no Perſon daring to ſell it to any other; and then he, or his Agents for him, retail it to the People. Nor dare any brew or ſell ſtrong Beer but his Factors; they may indeed brew a Sort of ſmall Beer for their own Uſe, but dare not ſell any. The chief Advantage they have, is by their Herds of Swine, of which they may keep as many as they pleaſe, which they feed in the Woods at little Charge.

The Deer, wild Hogs, and other Game, the Peaſants make free with; for although there are Laws againſt it, yet they are ſeldom regarded or put in Execution, which makes the Poor make more Uſe of them; Corn, Beer, and Salt, being at exceſſive Rates, that they are not able to purchaſe them.

Revenues. These Monopolies very much enhance the Arch-biſhop's Revenues, to which we may add the Tolls on the Rivers, the Cuſtoms of Merchandizes, and the Income of his own perſonal Eſtate. And as for Forces, the Country is ſo populous, that he may always have as many Men as he is able to pay, notwithſtanding that his Revenues are ſo large, that he generally keeps up a ſtrong Force in Times of Peace. The Archbiſhop of *Saltzburg* is ſo high a Station, as to be Co-Director with the Elector in the Affairs of the Circle of *Bavaria*.

CHAP. XII.

Of the Circle of Franconia.

Franconia derives its Name from its antient Inhabitants the *Franks*; but whether they borrow'd that Appellation from *Francus* a great Commander among them, or from *Franken*, which in that Language ſignifies a free People, I ſhall not determine; but I rather incline to believe the latter.

Franconia, as now underſtood, is bounded on the North by *Heſſe* and *Thuringia*; and on the Eaſt by the Palatinate of *Bavaria*; by *Suabia* on the South, and on the Weſt by the Palatinate of the *Rhine*. The principal Rivers are the *Main*, the *Tauber*, the *Reduit*, the *Almutz*, the *Peguitz*, and the *Saal*; which laſt waters the Country where the *Salique Law* was made, which excludes the Females from the Succeſſion. This Country affords tolerable Plenty of Corn and Wine. It contains the Biſhopricks of *Wurtzburg*, *Bamberg*, and *Aichſtat*, the Diſtrict belonging to the Maſter of the *Teutonick Order*; as alſo of *Coburg*, *Schwartzenburg*, *Caſſel*, *Henneberg*, *Erpach*, *Wertheim*, and *Holach*. The Marquiſates of *Culembach* and *Anſpach*, with the Imperial or free Cities of *Frankfort*, *Nuremburg*, *Rotemburg*, *Schwemfurt* *Weinſheim*, and *Weiſſemburg*.

Wurtzburg. *Wurtzburg* or *Herbypolis*, is the Capital of the Biſhoprick of *Wurtzburg*, and of all the Circle or Dukedom of *Franconia*. It ſtands on the River *Main*, ſixty Miles to the Eaſtward of *Frankfort*. There is a Stone Bridge three hundred Paces long over the *Main* in the Middle of the Town. The Biſhop's Palace ſtands on a Hill above the Town, and affords a beautiful Proſpect of a plentiful Country. It is computed that the Biſhop has as much of the Country under his Juriſdiction, as contains above four hundred Towns and Villages. He is as abſolute as a Sovereign Prince in his own Dominions.

Bamberg. *Bamberg*, Capital of its own Biſhoprick, is forty Miles North Eaſtwards of *Wurtzburg*. This Biſhop's Territories are ſixty Miles in Length, and forty in Breadth, beſides ſeveral Caſtles and Royalties in *Carinthia* and other Places in *Germany*. There is a Cathedral, a Biſhop's Palace, a Jeſuits Church, &c. but none of them are remarkable for exquiſite Beauty or Workmanſhip.

Aich-

Aichstat. *Aichstat* is the Capital of the Bishoprick of that Name. It is about twelve Miles North West of *Ingolstat*; its Bishop is a Temporal Prince; his Principality is about thirty Miles in Length, but not half so much in Breadth.

Note, *All these three Bishops are Princes of the Empire, and have Seats in the Diet.*

Margentheim. The chief Town of the District belonging to the Master of the *Teutonick Order* is *Margentheim* or *Mariendal*, a small City on the River *Tauber*, above twenty Miles West of *Wurtzburg*, the Residence of the Great Master of the *Teutonic Order*, (since the Order was driven out of *Prussia*) and Capital of his Territory. This Master is always one of the Princes of the Empire, and hath one of the first Seats in the Diet next after the Electors. Those Knights are always of a noble Extraction; for they cannot be admitted Knights of that Order, except they can prove their Nobility for sixteen Descents both by Father and Mother's Side.

Cullembach *Cullembach*, the Capital of that Marquisate, stands on the River *Main*; it is about twenty five Miles North East of *Bamberg*. It is subject to the two Branches of the House of *Brandenburg*, viz. *Cullembach* and *Bareith*, both which are Princes of the Empire; and the Marquess of *Cullembach* and Bishop of *Bamberg* are joint Directors of the Circle of *Franconia*.

Bareith. *Bareith* is fifteen Miles South East of *Cullembach*.

Anspach. *Anspach* is the Capital of its Marquisate, which is subject to the House of *Brandenburg*. It is about twenty five Miles South West of *Nuremburg*; the Country belonging to it, is about fifty Miles long and twenty broad. The County of *Holach* is between *Anspach* and *Hall*. The County of *Cassel* lies between the Bishoprick of *Wurtzburg* and the County of *Schwartzenburg*; it is about twenty five Miles long and seven broad. Chief Town is *Cassel*.

There are other Counties in this Dukedom, as *Schwartzenburg*, between *Anspach* and *Bamberg*. This Count is a Prince of the Empire. Also *Wartheim*, West of *Wurtzburg*, where the River *Tauber* falls into the River *Main*. Also *Erpach*, between the *Lower Palatinate* and the Archbishoprick of *Mentz*. The chief Town of the same Name is situate on a small River forty three Miles to the Westward of *Wurtzburg*.

Henneberg The County of *Henneberg* is bounded by the Territories of the Abby of *Fulda* on the North, and by *Thuringia* on the East; on the South by the Bishoprick of *Bamberg*, and on the West by the Diocese of *Wurtzburg*. It is a populous fruitful Country. Chief Towns are, 1. *Meiningen*, 2. *Shlewsingen*, 3. *Coberg*. In the Castle of this City *Martin Luther* was imprison'd; and during his Confinement, he compos'd several Hymns, which the *Lutherans* sing to this Day: In one of which, he extols the Happiness of Imprisonment, or suffering for the Cause of Religion.

Frankfort. In *Franconia*, the Imperial or free Cities are, 1. *Frankfort*, so call'd from its being a Ford, by which the *Franks* used to pass the River *Main* in their Incursions against the *Saxons*. It is situate about twenty Miles to the Eastward of *Mentz*, in about fifty Degrees of North Latitude. The River runs through the Town, and over it is a handsome Stone Bridge. It is a large and populous City of great Trade, which is vastly improv'd by the Navigation of the *Main* and the *Rhine*, and by two Fairs held Yearly in *March* and *September*, continuing three Weeks each, in which they deal mostly in Books and Horses. The Streets of the Town are broad, the Houses built of a Sort of red Stone, or plaister'd over and colour'd red in imitation of it. St. *Bartholomew*'s Church, where the Emperor is usually elected, is a magnificent Building, as is the Emperor's Palace, and also the Town-House and the Castle. In the Town-House or Guild-Hall, is kept the *Golden Bull*, which contains the Rules and Directions for the Election of an Emperor. (*See Chap.* VII.) The City of *Frankfort* is govern'd by its own Magistrates, being a Prætor or Mayor, twelve Burgomasters, fourteen Aldermen, and forty two Counsellors, all chosen by the Companies of Tradesmen. There is a Senate consisting of three Benches; on the first the Aldermen, on the second the Lawyers, or those learned in their Laws and Customs; and on the third the Tradesmen. The Magistrates and most of the Inhabitants are *Lutherans*; and though the *Roman Catholicks* are possess'd of the Cathedral, yet they are not allow'd to make any publick Processions through the Town, but go to a Village about three Miles off to their publick Worship. The *Jews* are pretty numerous, and have a Synagogue allow'd them; but they do not live so rich and grand as they generally do in *England*; but are employ'd in such servile Drudgery, as quenching Fires, *&c.* when any happen in the City or Suburbs. Govern ment. Religion

The Territories of *Frankfort* extend Northward to *Weteraw*, and to the County of *Hanaw* on the East; to the Landgravate of *Darmstat* on the South, and on the West to the Arch-bishoprick of *Mentz*. The Country is mostly cover'd with Woods and Vineyards, which latter occasions a great Employ among the Poor in making Wine; great Quantities of which they transport to other Countries. Several Protestants retired from *England* to *Frankfort* in the bloody Reign of Queen *Mary*, and had a Church allow'd them; so willing were they to encourage the Protestant Religion.

Between *Bamberg* on the North, and *Ingolstat* on the South, and forty Miles distant from each, is *Nurenburg*, near the Middle of *Germany*. It is situate on a Plain, and is seven Miles in Circumference, being encompass'd with a Wall and Towers after the Veteran Method of Fortification. The Streets are large and well pav'd; the Houses are built of hewn Stone five or six Story high; the Market-places and Squares are spacious, and adorn'd with Fountains. The Town being wall'd round, and the River *Pegnitz* running through it, there are twelve large Arches in the Wall to receive it into the Town; and it is evacuated out of the Town in the same Manner. It is not navigable, but it turns a great many Mills for Corn, Iron, Paper, *&c.* This City is very populous; and of an Inland Place not situate near the Sea or some navigable River, it may be said to have the best Trade of any in *Europe*. Here are exquisite Artists in Iron, Steel, Wood, Alabaster, *&c.* and so plenty, that their Goods and Toys may be bought very cheap; and indeed most of the ingenious Performances which we have from *Holland*, or of the *Dutch* any where, are made at and about *Nurenburg*, though the *Dutch* have the Credit of them, and their Ingenuity is applauded in Performances they were never capable of; Only *they have been so Ingenious* as to find out where they were made, and *Impose* them upon others as their own. Nurenburg

In this City is kept the *Regalia* us'd at the Emperor's Coronation, as is the *Imperial* Crown with which *Charlemain* was crown'd, his Mantle, Globe, and Sword, the Scepter and *Imperial* Cloak, Gloves and Buskins cover'd with Plates of Gold.

The *Lutheran* is the establish'd Religion, only the Roman Catholicks are allow'd to perform their Devotion in the *Lutheran* Church when they have done; and the *Calvinists* have not so much Privilege as that, for they are not allow'd any Place of publick Worship, only at a Church about three

three Miles out of the Town, and ſuffer the *Lutherans* to baptize their Children.

The Juriſdiction of *Nurenburg* extends about twenty Miles. Chief Towns in it are, 1. *Altorf*, an Univerſity about twelve Miles from *Nurenburg*. 2. *Burthan*. 3. *Herſprach*: All theſe were formerly Parts of the *Upper Palatinate*, and taken by the *Nurenburghers* in the Year 1504.

4. Another *Imperial* City is *Rotenburg*, on the River *Tauber*, thirty Miles to the Weſtward of *Nurenburg*, but not noted for any thing but being a neat compact Town. 5. *Schweinfurt*, twenty ſix Miles North Eaſt of *Wurtzburg*, a City neither large nor populous. 6. *Winſcheim*, a little *Imperial* City on the River *Arſch*, ſixteen Miles to the Northward of *Rotenburg*. 7. *Weiſſenburg*, in the Biſhoprick of *Aichſtat*, twenty eight Miles South of *Nurenburg*. Theſe are all the free *Imperial* Cities that are in the Circle of *Franconia*.

CHAP. XIII.

Of Saxony *in General.*

SAXONY conſider'd under its preſent Limitation, and known by the Circles of *Upper* and *Lower Saxony*, is bounded on the North by the *Baltick* Sea, *Denmark*, and the *German* Ocean; by *Poland* and *Sileſia* on the Eaſt; on the South by *Bohemia* and *Franconia*; and on the Weſt by *Weſtphalia*. It lies between fifty and fifty five of North Latitude.

The *Saxons* were a prevailing plundering People, inſomuch that they were a Terror to the *Romans* by their frequent Expeditions by Sea, and no leſs upon the Coaſts of *Britain*, *France*, and *Spain*, who were oblig'd to maintain ſtanding Troops to defend themſelves againſt their Incurſions: And when the *Saxons* became formidable, they were join'd by *Jutes*, *Angles*, and other Tribes; all of which ſtill went under the Name of *Saxons*. They firſt infeſted the *Britiſh* Shoar about the Year 370, but found no Reſt or Settlement here, till they were invited hither by *Vortigern*, about the Year 480, of which, *See a further Account when we come to the Hiſtory of* England.

In *Upper Saxony* is included, 1. The Dutchy of *Saxony*. 2. The Marquiſate of *Miſnia* and *Voigland*. 3. The Marquiſate of *Luſatia*. 4. The Dutchies of *Sax Mersburg*, *Sax Naumburg*, and *Sax Altemburg* 5. The Principality of *Anhalt*, and County of *Barby*. 6. The Province of *Thuringia*. Theſe are moſtly ſubject to the Elector of *Saxony*; but beſides theſe, there are in *Upper Saxony*, the Marquiſate and Electorate of *Brandenburg*, the Dutchy of *Magdeburg*, the Principality of *Halberſtat*, and the Dutchy of *Pomerania*; but theſe are moſtly under the Dominion of the Elector of *Brandenburg* now King of *Pruſſia*. The chief Rivers in *Upper Saxony* are, 1. The *Elbe*, which having water'd the Cities of *Prague*, *Dreſden*, *Wittenburg*, and *Magdeburg*, glides down to *Hambugh*, and thence into the *German* Ocean. Other Rivers are, the *Sala*, which falls into the *Elbe* between *Wittenburg* and *Magdeburg*; the *Elſter*, the *Unſtruch*, the *Spree*, the *Havel*, and the *Neiſſe*, beſides others of leſs Note.

Saxony Proper, which gives the Title of Duke to the Elector of *Saxony*, is but of a ſmall Extent; being bounded on the North by the Principality of *Anhalt*, and on the Eaſt by *Luſatia* and Part of *Brandenburg*; by *Miſnia* on the South, and by the Landgravate of *Thuringia* and County of *Mansfield* on the Weſt. The Country yields good Wheat and ſome Wine. Here are Mines of Silver and other Metal, but Fuel is very ſcarce.

Chief Towns of *Saxony Proper* or the Dutchy of *Saxony* are firſt, *Wittenburg* on the *Elbe*, forty Miles North of *Leipſick*. The Town has but one long Street, and is not remarkable for any thing but the Univerſity, of which a merry Traveller gives the following Character:

At Wittenburg *a Man is ſure to meet*
Hogs, Soldiers, Whores, and Scholars in the Street.

2. *Hall Saxonum* on the River *Sala*, about forty Miles South Weſt of *Wittenburg*. Here the *High Dutch* is ſpoken in its Original Purity. The Salt-works here yield a great Revenue to the Elector of *Brandenburg* their Sovereign. 3. *Quedlinburg*, thirty five Miles North Weſt of *Hall*, remarkable for a Nunnery there, whoſe Abbeſs is Sovereign of the Place, has a Repreſentative in the general Diet, and is always a Princeſs of the Houſe of *Saxony*. There are other Towns of leſs Note, and not worth a particular Deſcription.

The ſecond Diviſion of *Upper Saxony* is *Miſnia*, bounded on the North by *Upper Saxony*, and on the Eaſt by *Luſatia*; by *Bohemia* on the South, and by *Thuringia* on the Weſt. The principal Rivers are the *Elbe*, the *Mulda*, the *Pleiſs*, and the *Black* and *White Eſter*. Chief Towns are 1. *Dreſden*, the Capital of *Saxony*, and the Reſidence of the Elector. The City is large and populous, about forty Miles South Eaſt from *Leipſick*. It is a wall'd City, fortify'd after the modern way; and ſo ſtrong, that the late reſolute King of *Sweden* did not think fit to make any Attempt upon it even when he was Maſter of all the reſt of the Country. The River *Elbe* runs through it, and divides it into the new and old City, which are join'd by a fine Bridge of ſeventeen Arches. In the new Town is the Palace, which contains many beautiful Apartments for which it is admir'd; as the Hall of it is for fine Painting, eſpecially of People of moſt Nations drawn in their reſpective Habits; but the chief Curioſities are (beſides many other things) many artificial Works in Coral, Agate, and Mother of Pearl; alſo a Purſe of incombuſtible Linnen, unpoliſh'd Topazes ten Inches in Diameter, and Emeralds of one Inch as they grow in the Rock. Alſo many things perform'd by Clock-work, as a Horſeman riding, a Ship under Sail, a Crab crawling on the Table, *&c.* and even the Stables are no leſs to be admir'd for their Magnificence and Curioſity. In the Arſenal was lately no leſs than four hundred Pieces of Braſs Cannon, but the Number is now reduced by the late Inroads of the *Swedes* in the late War.

Miſnia

Dreſden Capital of *Saxony*.

2. *Leipſick*, a fine, well built, and populous City, ſituate at the Confluence of three ſmall Rivers, *Elſter*, *Pleſſa*, and *Parda*; or it may rather be ſaid, where the two laſt, which are ſmall ones, fall into the *Elſter*, which is more conſiderable, and retains its Name till it falls into the *Elbe* between *Wittenburg* and *Magdeburg*. *Leipſick* is about forty Miles Northweſt of *Dreſden*; it is a Place of great

Leipſick

Trade, chiefly at the three annual Fairs, *Chriſtmas*, *Eaſter*, and *Michaelmas*. The Church of Saint *Nicholas* is ſaid to be the fineſt *Lutheran* Church in *Germany*. Here is an Univerſity, but there are but four Colleges in it. The *High Dutch* Language is ſpoke here in great Purity.

Freiburgh. 3. *Freiburgh* is about twenty Miles South Weſt of *Dreſden* near the River *Mulda*, in an exceeding pleaſant Situation. It is wall'd round, has handſome Streets, and a ſpacious Market-place. The Elector's Palace is a ſumptuous Building, as is the Church of St. *Peter*. A great Part of the Town

Mines. ſtands upon a Silver Mine, which is dug hollow in Arches to ſupport the Surface, under which they dig the Mines to come at the Ore. There are ſeveral other Mines near this Place, but eſpecially three; one of them is call'd the *High Hill*; this is two hundred Fathoms deep. Another they call the *Prince of Heaven*; this has produc'd Ore, of which an hundred Weight has afforded ſixty five Pounds Weight of Silver, but generally only from half an Ounce to an Ounce and an half in the Pound; and its commonly obſerv'd, that where the Strata or Vein of Ore is thinneſt, *viz.* not above two Inches thick, it is the richeſt. It is ſaid that this Mine ſince the firſt opening of it, has yielded Silver to the Value of above an hundred Million Sterling; and that the Elector's annual Revenue ariſing from thence, amounts to above one hundred and thirty thouſand Pounds Sterling clear of all Charges. The third Mine is the *Neck-breaker*, about eighty Fathoms deep; it produces Lead, Copper, and Silver, but they work chiefly for the laſt. There is alſo a rich Sulphur Ore, amongſt which, ſome ſmall Quantities of Copper and Silver Ore are found. It is dangerous working in theſe Mines by Reaſon of the Damps which ſometimes prove fatal to the Miners, as does the Duſt which is drawn into their Lungs with their Breath, and throws them into frequent Conſumptions. The Money coin'd at *Freiburgh* is equal in Allay and intrinſick Value to our Sterling; but no other Money in *Germany* comes near it for Fineneſs; but is of ſo deep an Allay, that it is a much baſer Metal than our *Engliſh* Standard.

4. *Meiſſen*, formerly the Capital of *Miſnia*, ſituate upon a River of the ſame Name; but now remarkable for nothing but an antient Palace belonging to the Elector, but otherways of little Note. Beſides theſe, there are the Towns of *Plawen*, *Mulberg*, &c. but being Places of which we find nothing worth Notice in News or Hiſtory, they are ſcarce worth a Deſcription in this Catalogue.

Luſatia. 3. *Luſatia* is bounded on the North by *Brandenburg*, and on the Eaſt by *Sileſia*; by *Bohemia* on the South, and by the Dutchy of *Saxony*, or *Saxony Proper*, and *Miſnia* on the Weſt. Principal Rivers are, the River *Spree*, which runs down to *Berlin* and the *Neiſſe*. It is in ſome Parts barren and ſandy, and others ſo full of Moraſſes and Bogs, that it ſcarce produces Corn enough to ſupply the Inhabitants; but they have Plenty of Veniſon and Fiſh, and alſo of Wood. Chief Towns are, 1. *Bautzen* on the River *Spree*, about thirty Miles Eaſt of *Dreſden*; but having been almoſt demoliſh'd by the *Swedes*, it makes but a ſmall Figure at preſent. 2. *Gorlitz*, upon the River *Neiſſe*, about twenty five Miles to the Eaſtward of *Bautzen*. The chief Manufacture of this Place is making and dying Linen Cloth, the other Towns are of little Note.

Sax Mersburg, &c. 4. UNDER the fourth Diviſion I ſhall include *Sax Mersburg*, *Sax Naumburg*, and *Sax Altemburg*, of which, 1. *Sax Mersburg* was a Biſhop's See, the Town about eighteen Miles North Weſt of *Leipſick*; but there is little remarkable but an old Cathedral. 2. *Sax Naumburg* is the Capital of a Biſhoprick; the Town is ſituate on the River *Sala*, twenty five Miles South Weſt of *Leipſick*. 3. *Sax Altemburg*, the chief Town or Capital is *Altemburg*; it is now ſubject to the Duke of *Sax Gotha*.

5. Fifthly, The Principality of *Anhalt*, and the County of *Barby*; the Prince of *Anhalt* is one of the moſt antient Families in *Germany*. The chief Towns are, *Zerbſt*, *Brenberg*, and *Deſſau*; but there is nothing remarkable in any of them, except that the Prince has a Palace at each of them, at each of which he reſides alternately at his Pleaſure.

6. Sixthly, The Landgravate of *Thuringia*, and the County of *Manſfeldt*, on the South Side of the *Hercynian* Foreſt. The chief Rivers are the *Sala*, the *Werra*, the *Unſtruch*, the *Jera*, and the *Leina*. This County affords Plenty of Corn and ſome Wine, good Salt-pits, and ſome, but little, Silver and Copper.

CHIEF Towns of *Thuringia* are, 1. *Erfurt*, on the River *Jera*, Sixty Miles South Weſtward from *Leipſick*. It is a very conſiderable City, and us'd to vye with *Cologn* for Beauty, Trade, and Wealth. Here are ſeveral magnificent Structures, as a Caſtle, ſeveral Churches and Abbies, an Univerſity, &c. and to it belongs a large Territory, containing ſeveral Baronies, and between ſixty and eighty Villages; all which were ſubject to the Archbiſhop of *Mentz*; but upon their embracing the *Lutheran* Religion, they revolted to the Elector of *Saxony*, which occaſion'd a War between them; but it was agreed by a Treaty, that ſeventeen Villages ſhould be transferr'd to the Elector of *Saxony*; and that *Erfurt* and its Dependencies ſhould remain to the Archbiſhop of *Mentz*; and upon this Foot it remains to this Day. 2. *Weimar*, about thirty Miles Eaſtward of *Erfurt*; it is the Capital of a Dutchy, and gives Title to a Prince of the Family of *Saxony*. It has a great Trade in Wine. 3. *Jena*, on the River *Sala*, twenty three Miles Eaſtward of *Erfurt*, remarkable only for its Univerſity. 4. *Gotha*, the Capital of a Dutchy of the ſame Name. It is about thirty Miles to the Weſtward of *Erfurt*; the Natives here are chiefly employ'd in cultivating and preparing Wood, of which this and the adjacent Country affords great Quantities; and with this Advantage, that inſtead of impairing, it fattens and improves the Land. There are other Towns of leſs Note, as *Mulhauſen*, a ſmall *Imperial* City, *Orlamund*, *Tomenberg*, *Eiſenach*, Capital of a Dutchy. It gives Title to another Prince of *Saxony*. *Marchſul*, the Reſidence of the Dukes of *Sax Gotha*, *Sunderhauſen*, the Capital of *Schwartzburg*, *North-Hauſen*, the Capital of *Hoenſtein* and *Stolberg*, Capital of a Territory of the ſame Name.

ANOTHER Territory is *Manſfeld*, lying on the *Hercynian* Foreſt, between *Anhalt* on the North, and *Thuringia* on the South. This Country affords Plenty of Minerals, amongſt which there is a Sort of black glittering Salt call'd by the Natives *Scheiffer-ſtones*, which being melted, yield both Copper and Silver. When they have extracted the Copper, they work it over again to fetch out the Silver, of which every hundred Weight of Copper affords ten or twelve Ounces. There is a remarkable Lake in this Territory in the Neighbourhood of *Eiſleben*, which abounds with ſeveral Sorts of Fiſh and other Water Animals, as Frogs, Water-Rats, and the like; all which are lively depicted in theſe *Scheiffer-ſtones* by fair Copper Strokes through the very Body of the *Scheiffer-ſtone*. I do not undertake to give the true philoſophical Reaſon for this ſympathetical Repreſentation of one in the other, but the Poſſibility of the Truth of it may eaſily be allow'd, if we conſider that in our own Country, *viz.* near *Alderly* in *Glouceſter-*

ſhire,

ſhire, and alſo on the Tops of ſome Mountains not far from *Richmond*, are found Plenty of Stones exactly reſembling Cockles, Oyſters, *&c.* alſo above the High Water Mark at Sea Side near *Whitby* in *Yorkſhire*, are found Stones exactly like Serpents quoil'd about like a Rope with the Tails innermoſt. Alſo a little to the Southward upon the ſame Coaſt, and between *Whitby* and *Scarborough* are found Plenty of round Stones, which being tenderly broke, there are found in them Serpents of Stone wreath'd up, but moſtly without Heads; but as this Digreſſion proves, that there may ſuch Sportings or Miracles of Nature be ſeen in our own Country, it may ſerve to prove the Poſſibility at leaſt and Probability too of things as ſurprizing to be ſeen elſewhere.

The Counts of *Mansfield* are Princes of the Empire, of a very antient Family, and have no great Dependance on the Elector of *Saxony*. Chief Towns of the County of *Mansfield* are, 1. *Mansfield*, which gives Name to the County and Title to its Count. It is about five Miles North Weſt of *Eyſleben*; but it is now only an old ruinous Town, and remarkable for nothing but its Dignity abovementioned. 2. *Eyſleben*, ſo call'd from the Iron Ore dug there, which the Natives call'd *Eyſen*. *Martin Luther* was born here in the Year 1483. and died at this ſame Place in the Year 1564. aged 81. This Town is but ſmall, and ſtands about fifteen Miles North Weſt of *Hall*. The principal Trade of this Town is imply'd in the Name of it, *viz.* Iron. Other Towns of leſs Note are, *Wipra*, *Aruſtein*, *Querfort*, &c. but they are but obſcure Places and ſcarce worth a Deſcription.

The Revenues of the Elector of *Saxony* are ſaid to exceed that of any *German* Power, except the Emperor himſelf; for it is ſuppos'd to amount to above five hundred thouſand a Year rais'd from the Corn, Wine, Beer, *&c.* in his Dominions, beſides his Demeſne Lands, and the Revenues ariſing from the Mines, *&c.*

Auguſtus, the late Elector of *Saxony*, beginning to have a Proſpect of being elected King of *Poland* about the Year 1696, endeavour'd to qualify himſelf for that high Station; and as one material Article in the *Pacta Conventa* is, *That the King of* Poland *ſhall be a Roman Catholick*, [See *Article* XI. of the *Pacta Conventa* in *Chap.* VII. of the Hiſtory of *Poland*, *pag.* 369.] ſo he renounc'd the Proteſtant Religion and embrac'd Popery, accordingly as his Son the preſent Elector of *Saxony* has done ſince with the ſame View.

The Elector of *Saxony* is great Marſhal of the Empire, and as ſuch, has the Guard of the City where the Diet aſſembles. His Titles are, Duke of *Saxony*, *Juliers*, *Cleve*, *Berg*, *Eugers* and *Weſtphalia*, Arch-Marſhal, and Elector of the Empire, Landgrave of *Thuringia*, Margrave of *Miſnia*, and of *Upper* and *Lower Luſatia*, Count and Prince of *Henneberg*, Count of *La Mark*, *Ravensburg* and *Barby*, and Lord of *Ravenſtein*; and bears the reſpective Arms belonging to all the abovemention'd Titles.

CHAP. XIV.

Of the North Part of Upper Saxony; *containing* Brandenburg, Magdeburg, Halberſtat, Pomerania, *and the Iſland of* Rugen.

THE Territories now propoſed to be treated of as above, are moſtly ſubject to the King of *Pruſſia* as Elector of *Brandenburg*; and as taken together, are bounded on the North by the *Baltick* Sea, and by *Poland*; on the Eaſt by *Sileſia*, &c. on the South and on the Weſt by *Lower Saxony*.

Brandenburg is a Marquiſate, or by ſome *the Marquiſate* by way of Eminence, as being the Northermoſt Bounds or Marches of the *German* Empire. It is bounded by *Mecklenburg* and *Pomerania* on the North, and by *Poland* on the Eaſt; on the South by Part of *Upper Saxony*, and by *Brunſwick* and *Lunenburg* on the Weſt. The chief Rivers are, the *Elbe*, the *Oder*, the *Havel*, the *Spree*, and the *Wart*; and as the *Oder* falls into the *Baltick*, and the *Elbe* into the *German* Ocean, they have cut a Canal from one to the other, whereby the Communication is maintain'd between the two Seas; and Goods are convey'd by Water between the *Baltick* and *Hamburgh* or the *German* Ocean without paſſing the *Sound*, or paying the Duties required of Ships that paſs that Way.

This Country does not afford Abundance of Corn, but that Defect is ſupply'd by the common Granary of *Poland*; but they have Plenty of Sheep, as alſo of Deer and other Veniſon, but ſcarce of Black Cattle and no Wine, except a ſour unpleaſant Sort. They have no Salt but what is brought by Water. Their Mines of Silver and Copper yield but very little of their reſpective Metals; and in ſhort they are but a poor miſerable Sort of People. *Calviniſm* is the chief prevailing Religion among them, eſpecially at *Koningsburg* and *Frankfort* upon *Oder*; but the generality of the Inhabitants of *Brandenburg* are *Lutherans*.

Brandenburg.

Towns of moſt Note in the Marquiſate of *Brandenburg* are, 1. *Brandenburg*, in the Midſt of a Morals on the River *Havel* or *Hamel*, which runs through the Town. It is about twenty ſix Miles Weſtward from *Berlin*: It was once the Metropolis of the Marquiſate, whoſe Name it yet bears; but it is ſuch a wretched poor Place, that was it not for a Lake in the Neighbourhood which affords them Plenty of Fiſh, they could ſcarce ſubſiſt.

Berlin.

2. *Berlin*, ſituate in a plentiful Country on the River *Spree*, forty Miles to the Weſtward of *Frankfort* upon *Oder*. It is the Capital of the Marquiſate, and the uſual Reſidence of the Elector of *Brandenburg*, who is now alſo King of *Pruſſia*. It ſtands upon the River *Spree*, but has a Suburb on the other Side of the River called *Coln*, though (like *London* and *Southwark*) they are both underſtood by the Name of the Capital, *Berlin*; and what contributes very much to the Trade and Riches of this Capital, is, that it ſtands upon the Canal above-mention'd between the *Elbe* and the *Oder*; ſo that it not only has a Communication both with the *German* Ocean and the *Baltick*, but alſo all Goods that are convey'd by that Paſſage, are obliged to go through *Berlin*. The Gentry of *don* have of late affected to imitate the Faſhion is Town in a new-faſhion'd Sort of Chariots, w ch are thence called Berlins.

Frankfort.

3. *Frankfort upon Oder*, ſo call'd to diſtinguiſh it from *Frankfort on the Maine*. It ſtands (as its Name imports) on the River *Oder*, about forty Miles

Miles Eastward of *Berlin*. It was a Hans Town, and an Imperial City, but now subject to the Marquis of *Brandenburg*. The Town is divided into two Parts by the River *Oder*, over which is a wooden Bridge. The Town has a tolerable Trade, especially at the annual Fairs, but not like what it has formerly had. Other Towns in this Marquisate are not remarkable, except *Potsdam*, and that only for the King of *Prussia*'s having a Palace there.

Magdeburg.

Magdeburg is a Dutchy bounded on the North by *Mechlenburg* and *Brandenburg*, by *Upper Saxony* on the East, on the South by *Anhalt* and *Halberstat*, and on the West by *Brunswick*. The River *Elbe* divides this Territory into two Parts, the eastermost abounds in Wood and Forests, and the other in Corn and Grain, but with this Remark, that which of these one of them hath the other wants. The chief City is *Magdeburg*, call'd in some antient History *Parthenopolis*. It stands on the Banks of the *Elbe*, about seventy Miles to the Westward of *Berlin*. *Edgitha*, Daughter of *Edmund* the *Saxon*, King of *England*, enlarg'd and beautify'd it, and prevail'd with the Pope to make it an Archbishoprick, and the Archbishop was Primate of all *Germany*. The Bust of this generous Empress is still to be seen in the Cathedral Church, with eighteen Casks of Gold by her, which Quantity it is said the Improvement and Privileges of this City cost her. It was a very large City, but destroy'd by the Imperial General Count *Tilly*, in the Year 1631. who of forty thousand Inhabitants then in the City, massacred all, except four hundred only, for embracing the *Lutheran* Doctrine. He also demolish'd all the Houses and Churches, except the Cathedral, which is now a sumptuous Building, and had in the Popish Times (as Dr. *Nicholson* says) forty nine noble Altars. In *Magdeburg Luther* had his Education, and here were the first Institution of Tilts and Tournaments, by the Emperor *Henry*, sirnamed the *Fowler*, about the Year 930. but although those bold Engagements were accounted the Effects of Valour at the first Institution of them, yet they were found of such destructive Consequence (seventeen Gentlemen of *Franconia*, and nine of *Hesse*, being kill'd upon the Spot) that they were abolished.

Halberstat.

Halberstat is a Principality lying between *Magdeburg* on the North, and *Anhalt* on the South, and between *Saxony* on the East, and *Hildesheim* on the West. The chief Town is *Halberstat*, on the River *Hotheim*, about thirty Miles South West of *Magdeburg*. Here is said to be the largest Inn, with the best Accommodations of any in *Europe*. *Lutheranism* is the established Religion here. There is at *Gruningen*, a Tun, in imitation of, or rather intended to out-vye, that of *Heydelburg*; this containing near a thousand Hogsheads of Wine, whereas that at *Heydelburg* (of whose Description hereafter) contains but two hundred Tuns, or eight hundred Hogsheads. This Country abounds in Corn, and produces Plenty of Venison.

Pomerania is bounded by the *Baltick* on the North, and by *Polish Pomerelia* on the East; by *Brandenburg* on the South, and by *Mecklenburg* on the West. Its chief Rivers are the *Oder*, the *Pen*, the *Roga*, the *Persant*, the *Wiper*, the *Stolpe*, the *Rekenitz*, and the *Bante*. The *Rekenitz* runs between *Pomerania* and *Mecklenburg*, and forms a large Lake near *Damganten*, which empties itself into the *Baltick* at *Dans*. The *Oder* divides itself into several Branches soon after its entring *Pomerania*, and forms several Islands, after which it falls into the *Baltick* at the Islands of *Usedom* and *Welling*, which two Islands lying in the Mouth of it makes it form three Channels, where it falls into the Sea, and all navigable, so that Ships may go through any of them to *Stetin*. *Pomeren* contains several Lakes, and but few Mountains, it being low marshy Ground; the Lakes afford Plenty of Fish and Water-Fowl, but they have Scarce of Corn, and no Mines, except some few of Iron.

Division.

Eastern and Western *Pomerania* are separated by the *Oder*; the Eastern is subdivided into the Districts of *Pomerania*, *Casuben*, and *Vendosin*, or *Wenden*. *Havel*, or the Western, contains the Districts of *Stetin*, *Wolgast Galskow*, and *Bardt*, with the Islands of *Rugen*, *Usedom*, and *Welling*.

The Dukedom of *Pomerania* has undergone many Revolutions, but western *Pomerania* has of late remain'd in the quiet Possession of the *Swedes*, till the late King of *Sweden*'s Defeat at *Pultowa*, when the King of *Prussia* taking the Advantage of his Distress, seiz'd *Stetin*, and the Islands of *Usedom* and *Welling*, and the *Danes*, assisted by the *Prussians*, *Poles*, and *Moscovites*, took *Stralsund*, *Manstrand*, and *Rugen Island*; but in the Year 1720. the *Danes* were obliged by a Treaty of Peace to restore what they had taken from the *Swede*; but *Stetin*, the Isles of *Usedom* and *Welling*, and the Countries adjoining to the *Oder*, were confirm'd to the King of *Prussia* as Elector of *Brandenburg*, who then had them in Possession, so that he has now a free Communication with the *Baltick* by the River *Oder*, which when the *Swede* had *Stetin* and the Islands of *Usedom* and *Welling*, he could not have the Advantage of, without their Leave.

Chief Towns.

Chief Towns of Western *Pomerania* are, 1. *Stetin*, the Capital, and formerly one of the Hans Towns on the West Side of the River *Oder*, about forty Miles South from the *Baltick* Sea, and seventy North from *Berlin*. It is a large populous City, and has a good Trade, but inferior to what it formerly had. The *Swedes* had it in Possession till the King of *Prussia* work'd them out of it by a Stratagem, about the Year 1713. persuading the Citizens to admit his Forces into the Town, that he might secure it for them against the *Moscovite*; but when he had once got Possession, he secured it for himself, and never would quit it since, as above observed.

2. *Stralsund*, on the Coast of Western *Pomerania*, over-against the Island of *Rugen*, where the Channel is about a Mile broad. It is a good Harbour, and the Town well built and fortified. They have a great Trade for Corn, which they export abroad. The *Danes*, assisted by the *Russians* and *Saxons*, took *Stralsund* in *November* 1715. but were oblig'd to relinquish it to the *Swede* in the Year 1720. in whose Possession it now continues. 3. *Gripswald*, a small Harbour, about thirty Miles South East of *Stralsund*. 4. *Wolgast*, upon the *Oder*, about five Miles from the *Baltick*, and fifteen to the Eastward of *Gripswald*. It was formerly the Capital of a Dutchy, and is now a very good Harbour. 5. *Bandt*, twelve Miles to the Westward of *Stralsund*; but of it, and several other Towns, we have only the Names, and nothing remarkable.

Rugen.

The Island of *Rugen* is now in Possession of the *Swedes*. It is a large Island, but much wash'd away by the Sea, and less than it formerly was; but it is yet about thirty Miles over; but the Creeks and Bays run so far into it, that scarce any Part of the Land is above two or three Miles from the Sea, or some Branch of it. The chief Town is *Bergen*, and contains about four hundred Houses, but is not considerable in any Particular. The Island affords Plenty of Corn, Sheep, black Cattle, good Horses, and the largest Geese in *Europe*. Their Seas and Lakes yield Plenty of Fish, although they have so many Creeks and Bays in the Island, they make little Use of them, but make use of *Stralsund* only as their chief or rather their only Sea-Port.

The Succession of their Princes formerly is deliver'd with so much Uncertainty, as renders the

the whole disputable, only the *Danes* took it in the Year 1678. and restor'd it in the Year 1679. to the *Swede*, who has the present Possession of it.

Chief Towns

Chief Towns in Eastern *Pomerania* are, 1. *Cammin*, on a Branch of the *Oder*, five Miles from the *Baltick*, and thirty five North of *Stetin*. 2. *Colberg*, at the Mouth of the River *Pensant*, near the *Baltick*, about twenty Miles North East of *Cammin*. The Salt-Pits near this Place afford the King of *Prussia* a good Revenue. Other Towns not remarkable for any Thing particular, or worth a Description, I shall not trouble the Reader with.

Succession.

As to the Family of the present Elector of *Brandenburg* (now King of *Prussia*) the Emperor *Henry* I. having conquer'd this Country about the Year 927. gave the Government of it to *Sigefride*, Earl of *Rengenheim*, on condition that he should defend the Marches, that is, guard the Limits or utmost Bounds of the Empire, against the Insults and Inroads of the *Sclaves*; and hence, as Defender of those Marches, he was call'd Marchgrave, or Margrave, or, as the Word is now express'd, Marquess of *Brandenburg*, and from him it descended successively to several others, but only during the (then) Emperor's Pleasure, till about the Year 1162. *Albert* Prince of *Anhalt* was constituted Hereditary Marquis of *Brandenburg*, and it continued in his Family for sixteen Descents, the last of which was *Sigismund*, King of *Hungary*, and *Bohemia*, who succeeding to the Empire, sold the Marquisate of *Brandenburg* to the Duke of *Moravia*, and he mortgag'd it to the Marquis of *Misnia*; but the Emperor redeem'd it, and sold it to *Frederick*, Burgrave of *Horemburg*, *Anno* 1417. from whom the present King of *Prussia*, as Elector of *Brandenburg*, derives his Pedigree.

Frederick, the last Elector of *Brandenburg*, was proclaim'd and crown'd King of *Prussia* in the Year 1700. and died in *February* 1712-13. when his only Son *Frederick-William*, the present King of *Prussia*, succeeded; and as to the present State of *Prussia*, although it is neither the most populous, nor the most fruitful Country of any of the *German* Powers, yet it is the largest, except that of *Austria*, and as flourishing a Province as any in all *Germany*, which, as it cannot be imputed to the Fruitfulness of the Soil, it is attributed to their encouraging of foreign Trade, and profitable Manufactures, among which that of the woollen is now so improv'd, that they furnish most Part of the Empire of *Russia* with woollen Cloth, which was formerly a considerable Branch of the *English* Trade there.

Forces of the King of *Prussia*.

The King of *Prussia*'s Troops amount to near eighty thousand regular Forces, a surprizing Charge for a Country that is none of the most productive; but we may consider that he lets them out upon occasion, and that commonly to those who will give him the most for them; so that he not only makes them maintain themselves, and gets Money by them too, but also makes himself formidable, and is now counted as an Ally by both the Imperial Powers of *Germany* and *Russia*, who have offer'd very advantageous Proposals to him, to bring him over, each to their respective Interest; and as they are thus courted, and commonly well paid, his maintaining such a numerous standing Army is not so burthensome to his Subjects as where they are not only paid out of the Substance of the Subjects, but employ'd only to keep them in awe too.

CHAP. XV.

Of the Circle of Lower Saxony, *containing the Dutchies of* Mecklenburg, Lawenburg, Holstein, Hanover, Brunswick, Lunenburg, Bremen, *and* Verden.

Boundary

THE Circle of *Lower Saxony*, (exclusive of *Magdeburg* and *Halberstat* before treated of) is bounded to the Northward by the *German* Ocean, *Denmark*, and the *Baltick* Sea, and on the East by *Brandenburg* and *Pomerania*; by the Landgrave of *Hesse* on the South, and by *Westphalia* on the West. The chief Rivers are the *Elbe*, the *Weser*, the *Aller*, the *Hamma*, the *Hemon*, the *Leme*, the *Oker*, and the *Eldt*.

The first Subdivision of *Lower Saxony*, as above-mention'd, is *Mecklenburg*, bounded on the North by the *Baltick* Sea, and on the East by *Pomerania*; on the South by *Brandenburg*, and on the West by *Lunenburg* and *Saxe-Lawenburg*. It produces Plenty of Corn and Fruits, especially Apples, and their Lakes abound with Fish and Water-Fowls. The most remarkable Towns in the Dutchy of *Mecklenburg* are,

stock.

1. *Rostock*, an Imperial City and Hans Town, situate at the Mouth of the River *Warna*, which falls into the *Baltick*, between thirty and forty Miles to the Westward of *Stralsund*, and about as much to the Eastward of *Wismar*. It is a large City, containing many thousands of well-built Houses; and whether by Chance or Choice they made so much Use of the Number seven is uncertain, but it is observed, that there is a spacious Market-place, from and to which seven large Streets lead, and in which they terminate and center. There are seven handsome Gates towards the Land, seven Bridges over the River *Warna*, for a Communication between the several Parts of the Town; seven great Doors to the Cathedral Church, seven Towers in the Town-Hall; and, indeed, some other sevens of so little Consequence, that they seem to proceed rather from Affectation than Order. Here is a large University, founded in the Year 1419. by *John* and *Albert*, cotemporary Dukes of *Mecklenburg*.

Warnemund.

2. *Warnemund*, upon the same River *Warna*, (from whence it takes its Name) and about seven Miles below *Rostock*, being the Port-Town for Ships that cannot come up so high as *Rostock*. 3. *Wismar*, to the Westward of *Rostock* as before observ'd, and between thirty and forty Miles to the Eastward of *Lubeck*. It is a very good Harbour. It was first built, as suppos'd, out of the Ruins of the antient City of *Mecklenburg*, about the Year 1250. and about sixteen Years afterwards was improv'd both in Largeness and Beauty, and is now extremely populous. It was accounted one of the chief Hans-towns; and in this Harbour all the Men of War belonging to that Body were laid up. It is now in the Possession of the *Swedes*, but its Walls and Fortifications are demolish'd according to the Conditions upon which it was deliver'd to them in the Year 1720. 4. *Swerin*, situate on a great Lake call'd the *Swerin* Sea, about fifteen Miles

South of *Wismar*. And, 5. *Gustrow*, a well fortify'd Town to the Southward of *Rostock*, and upon the same River.

Religion. LUTHERANISM was establish'd here in the Year 1550. by Duke *John Albert*, who demolish'd the Abbies and other religious Places of the Roman Catholicks, and apply'd their Revenues to other Uses.

Charles Leopold, the present Duke of *Mecklenburg*, charging his first Wife with being wantonly dispos'd, he put her away and married the Dutchess Dowager of *Courland*, Niece to the late *Czar*, in the Year 1716.

Lawenburg. THE Dutchy of *Sax Lawenburg* is bounded by *Holstein* on the North and West; by *Mecklenburg* on the East, and by *Lunenburg* on the South. The River *Elbe* runs quite through it. The chief Town is of the same Name, *Lawenburg*; it stands where the River *Stegnitz* falls into the *Elbe*, about thirty Miles South of *Lubeck*, and about forty Miles South East of *Hamburg*. It is but a small Town but very populous, and has a good Trade. I do not find any other Town of Note in this Dutchy. The last Duke of *Lawenburg*, *Julius Francis*, dy'd without Male Issue in the Year 1689. and the Duke of *Lunenburg* succeeded to the Possession of it; and at his Death it devolv'd upon the Elector of *Hanover*.

Holstein. *Holstein Proper* has been already described in *Chap.* I. of the History of *Denmark*, *Pag.* 418; but I then omitted the Description of those two noted Places, *Hamburg* and *Lubeck*; some not reckoning them to belong to *Holstein* probably, because they have freed themselves from the *Danish* Yoke; but he yet continues his Pretensions to those Places, and imposes Laws and Taxes upon them, insomuch, that at the Writing hereof, he has made Prizes of some *Hamburg* Ships, and pretends a Privilege so to do till they gratify his Demand.

Hamburg is one of the Hans-Towns, and a very considerable one: It stands on the River *Elbe*, partly upon Islands, and partly upon the main Continent, on the North Side of the River, about forty Miles South West of *Lubeck*, and sixty North East from *Bremen*. It is disputed whether *Hamburg* be within the Limits of *Stormaria*, a Province of *Holstein*; but however the Territories belonging to *Hamburg*, and adjoining to it, lie in *Stormaria*; and although those Territories are but small, yet they contain several Villages, Gentlemen's Palaces, and good Buildings.

A GREAT Part of *Hamburg* stands upon small Islands in the River *Elbe*; betwen which, as well as between them and that Part of the Town that stands upon the North Shore, there is as at *Venice*, a Communication by Bridges; but the Islands are generally so low, that in some extraordinary high Tides, their Houses are damag'd or quite demolish'd; but this watery Situation makes them naturally more strong and more difficult of Access by an Enemy. And for the North Part of the Town, which stands upon the Continent, it is secur'd from the Lands by regular Fortifications and good Walls. The Streets are wide, but crooked; the Buildings most of Brick and very high. Ships from all Parts of *Europe* trade hither; and from hence Merchandize is dispers'd all over the Empire. But as for their own Manufactures, if I may so call it, the chief is Beer; the Brewing of which employs abundance of People, as well as the transporting of it into all the neighbouring Countries is an advantageous Trade; it being valued equal with Wine. The greatest Part of their Provisions, are either brought down the Water to them from *Germany*, or imported from abroad; but their own Rivers produce Plenty of Fish, as their Gardens do of Greens, Roots, and Fruits; and are very delightful as well as profitable; and as for their Navigation, large Ships may come up to the very Walls to load or unload; but the largest indeed anchor at *New Mills*, abou four Miles below the Town, to lighten Part of their Loading when coming up, or going down, there to take in the last of their Loading; when they go down loaden, the Goods being convey'd in smaller Vessels between the *New Mills* and the Town. The Tide flows about sixteen Miles above *Hamburg*, which is in all about Ninety Miles from the Sea, which I have reason to believe is as far as the Tide flows up any River in *Europe*.

THE publick Buildings of this City are St. *Peter*'s Church, formerly a Cathedral when *Hamburg* was an Archbishoprick. Also the Churches of St. *Nicholas*, St. *Jacob*, St. *Catherine*, and St. *Michael*, where a Register is kept of what is distributed weekly to the Poor of the respective Parishes. They have Hospitals and Infirmaries well endow'd, for the Relief of Poor, Sick, and Lame; also for Orphans, disabled Seamen, and their Families; and Free-Schools, where the Children of poor Citizens are both instructed, cloath'd, and put out Apprentices, sent to the University, or fitted for some other Business.

Hamburg is a free Imperial City, independant of any but the Emperor; they having both the Legislative and Executive Power lodg'd in them. And as to the Pretensions of the *Dane* to the City of *Hamburg*, the Emperor *Otho* IV. who began his Reign *Anno* 1208. being a weak Prince, was soon depos'd; [*See the Succession of the Emperors in the History of* Germany, *Chap.* IV. *Pag.* 480.] and in his Reign it was, that *Waldemar* Duke of *Sleswick* took *Hamburg*; and as it were, rent it from the Empire: And *Waldemar* being afterwards advanc'd to the Throne of *Denmark*, gave the Government of *Hamburg* to *Albrecht* Earl of *Orlemund*; and he again return'd his Right to the Citizens for fifteen hundred Marks of Silver. And thus *Hamburg* became once again a free independant City and State; and might be said to continue so if it was not that the Duke of *Holstein*, and King of *Denmark* are perpetually renewing their Claim; and in Lieu thereof, endeavouring to impose Taxes, and extort Sums, which the *Hamburgers* will by no means submit to pay; for which Reasons, the Kings of *Denmark*, as Dukes of *Holstein*, have sometimes appear'd before *Hamburg* with a numerous Army; and at other Times block'd up the Mouth of the River *Elbe*, taken their Ships, and obstructed their Traffick; but there are so many of the *European* Powers concern'd in the *Hamburg* Trade, that they have hitherto contributed their Interest to preserve the Liberties of this free City from being swallow'd up by the *Dane*.

Religion. THE Establish'd Religion at *Hamburg* is *Lutheranism*; nor are any other Sect of Protestants, much less of Papists, tolerated here, except in the Chapels of foreign Ministers; and that only for themselves and Domesticks, no Inhabitant of the City being suffer'd to resort thither, notwithstanding that both the King of *Prussia* and the *States General* have presented Memorials to favour at least a Toleration for the *Calvinists*; but what they receiv'd for Answer was, That as to Trade, the *Calvinists* enjoy'd the same Privileges as the *Lutherans*, but that neither *Calvinists*, *Jews*, nor *Roman Catholicks*, should be allow'd the publick Exercise of their Worship.

Lubeck *Lubeck* is the chief of the Hans-Towns, and an *Imperial* City, situate on the River *Trave* in the Dutchy of *Holstein*. It is ten Miles from the *Baltick Sea*, about forty Miles North East from *Hamburg*, and as many West from *Wismar*. *Travemund*, at the Mouth of the River, is the chief Port for great Ships belonging to *Lubeck*, and is a very good Harbour. *Lubeck* for the Beauty and Uniformity

mity of its Building, the Pleaſantneſs of its Groves and Gardens, *&c.* is not inferior to the handſomeſt City in the North of *Germany*. The Streets are broad and ſtreight, the Houſes moſtly built of Brick; and from the publick Reſervoir, the Water is convey'd to every Citizen's Houſe. There are twenty Churches with high ſpire Steeples. The Cathedral is a fine Piece of Architecture. *Lubeck* was but an inconſiderable Borough till it was enlarg'd and beautify'd by *Adolph* Earl of *Holſtein*, in the Year 1140. but is now a free *Imperial* City. The Biſhoprick of *Lubeck* has been enjoy'd by Proteſtant Princes ever ſince the Year 1561. and is ſaid to be the only Proteſtant Biſhoprick in *Germany* that has not been ſtripp'd of the Revenues and Privileges belonging to it: The other *Lutheran* Biſhops are rather Super-intendants than Biſhops, and have little to diſtinguiſh them from the inferior Clergy except Precedency.

BRUNSWICK *and* HANOVER.

BRunſwick and *Hanover*, including the Principality of *Grubenhagen*, and the Counties of *Blackenburg* and *Renſtein*, as being ſubject to the ſame Princes, are bounded on the North by *Lunenburgh*, and on the Eaſt by *Magdeburg* and *Halberſtat*; by *Heſſe Caſſel* on the South, and by the River *Weſer* on the Weſt. This Country was formerly deem'd a Part of the *Hercynian* Foreſt, and yet produces Plenty of Wood, eſpecially Pine and Fir. Their Mountains abound with Mines of Silver, Copper Lead, Vitriol, Brimſtone, Quick-ſilver, and Copperaſs. The Natives are generally of a large Size, and uſed to coarſe Fare, and hard Lodgings. Their common Food is dry'd Hogs-fleſh and a Sort of coarſe Bread, which, as a *French* Traveller expreſſes it, is fitter for Horſes than Men. The principal Rivers are the *Weſer*, the *Lena*, the *Innerſte*, and the *Ocker*. Chief Towns are,

1. *Brunſwick*; it ſtands on a Plain on the Banks of the River *Ocker*, ten Miles North of *Wolfembuttle*, and near ſixty South of *Lunenburg*, and in Latitude fifty two Degrees twenty five Minutes North. It was a free *Imperial* City and a Hanſ-town; but the Inhabitants after a hard Struggle for their Liberties, being over-power'd by the Dukes of *Brunſwick*, the Merchants and trading Men have forſaken the Place; and it is now a declining City, and of ſo little Trade, that Mum and Butter are almoſt the only Commodities they deal in. The Town inclines to a ſquare Form; 'tis about two Miles in Circumference, and the River *Ocker* runs through the Middle of it. The Palace and the Town-Houſe are ſumptuous Buildings, and the private Houſes tolerably handſome. They make a Sort of Mum call'd Ship Mum, ſuch as comes to *England* and other Parts of *Europe*; but the other is thin and weak, and is uſed as Drink by the common Inhabitants. The better Sort is reckon'd ſcarce fit to drink till it has purg'd itſelf at Sea. It is made of Barley with a ſmall Mixture of Wheat, and well hopp'd. The Dukes of *Brunſwick* claim the ſole Sovereignty of the City, and preſcribe abſolute Laws to the Inhabitants as they think proper.

Wolfembuttle. 2. *Wolfembuttle* ſtands on the River *Ocker*, ten Miles to the Southward of *Brunſwick*. It is a ſtrong Place, both by Art, as being well fortify'd, and by Nature, as being in a marſhy, watry Country. It was formerly the Seat of the Dukes of *Brunſwick*, above twenty of whom lie now interr'd in the new Church there, which is an elegant Building. The Palace where the preſent Duke of *Wolfembuttle* reſides, has a Library, ſaid to contain one hundred and twenty four thouſand Volumes; and is thought to be one of the beſt Collections in *Germany* of printed Books. This Library was founded by *Auguſtus* the famous Duke of *Brunſwick Wolfembuttle*; a Prince, of whom it is ſaid, that he excell'd all his Predeceſſors in Learning and Knowledge.

Hanover. 3. *Hanover*, the Capital of the Dukedom of *Calenburg*, ſituate on the River *Leina*. It ſtands between forty and fifty Miles to the Weſtward of *Brunſwick*, and thirty South of *Zell*. The Houſes, except ſome few of Stone, are moſtly Timber and Clay. The Caſtle is on one Side of the Town near the Wall, and in it is the Elector's Palace. The principal Churches are thoſe of St. *James* and the *Holy Croſs*. The Town is tolerably populous and well fortify'd. It was an *Imperial* City and a Hans-town when their Trade flouriſh'd; but now their only Trade, or rather Manufacture, is a Sort of a ſweet muddy Beer call'd Bruhane, which they ſell to ſome of the neighbouring Villages.

Helmſtat. 4. *Helmſtat*, twenty four Miles to the Eaſtward of *Wolfembuttle*, remarkable only for its Univerſity, built *Anno* 1576.

5. *Hamelin*; it ſtands at the Confluence of the *Hamel* and the *Weſer*, as ſtrong a Fortreſs as any in the Duke of *Brunſwick*'s Dominions.

Grubenhagen. The Principality of *Grubenhagen* comes next under our Conſideration: The Name in *High-Dutch* ſignifies a Grove or Foreſt, this being Part of *Hartz Foreſt*, or *Sylvia Hercynia*, mention'd by *Julius Caſar* in his Commentaries; and hence we have in other Parts of this Book call'd this the *Hercynian Foreſt*, or at leaſt a Part of it. It lies to the South Weſt of the Dukedom of *Brunſwick*, and has ſeveral valuable Mines in it; as Silver, Copper, and Lead; alſo grey Vitriol and Atramenſtein, of which, beaten and boil'd together, the green Vitriol is made. Here is alſo Gedien Vitriol, which hangs out of the Rocks like Iſicles, and may be uſed without purifying. Alſo blue Vitriol made out of the Copper Ore, and white Vitriol made out of Lead Ore. Likewiſe Miſa, a Mineral of the ſame Colour and Nature as common Brimſtone. And, laſtly, Brimſtone; from whence the *Flos Sulphuris* drops and afterwards coagulates like Iſicles; but the chief Mines of this Country are,

1. *Rammelsburg*, in a high Mountain near the City of *Goſlar*, diſcover'd *Anno* 972. another great Vein of Ore was diſcover'd *Anno* 1045. but the chief Mine belonging to the Princes of *Brunſwick*, is at *Zellerfield*, diſcover'd *Anno* 1070. Here the Overſeer of the Mines keeps his Court every *Saturday*, and pays his Workmen. The Capital of *Grubenhagen* is *Eimbeck*. There are other Towns, but of ſmall Note; for as the Inhabitants are moſtly Miners and live under Ground, there is no great Care taken to build them many handſome Houſes above Ground.

Blackenburg. The Counties of *Blackenburg* and *Renſtein* lie between *Halberſtat* and *Anhalt*. The Mountains here afford Plenty of Iron Ore. This Country abounds with old Forts and Caſtles, but ſo decay'd and ruinous, that there are few of them worth Notice, only for their ruinous Marks of Antiquity. They are moſtly built upon the Top of craggy and inacceſſable Rocks; but none of them inhabited but one, call'd the *Blackenburg*, which the Duke of *Wolfembuttle* made a Palace of for his own Reception during the hunting Seaſon. The old Caſtle of *Reinſtone* is now remarkable for nothing but its being all cut out of one entire Stone. *Reinſtone.* The *Imperial* City of *Goſlar*, though independant of the Dukes of *Brunſwick*, is reckon'd with his Dominions, becauſe it is ſurrounded by them. The Inhabitants are moſtly Miners, their Employment

ment being either in digging, cleansing, tempering, or vending Minerals, or the Metals which are extracted from them.

The present Elector of *Brunswick*, who is now *George* II. King of *Great Britain*, was Son of His late Majesty *George* I. King of *Great Britain*, and Grandson to *Ernest Augustus*, (who succeeded his Brother *John Frederick* Bishop of *Osnaburg* in this Dutchy in the Year 1679.) by the Princess *Sophia*, Daughter of *Frederick* V. Elector *Palatine*, and of the Princess *Elizabeth*, Daughter of *James* I. K. of *Great Britain*. Duke *Ernest* had Issue, *George Lewis*, late Elector and King of *Great Britain*, born *Anno* 1660. and succeeded his Father in the Dutchy of *Brunswick Anno* 1698; and having married *Sophia Dorothy*, the only Daughter of his Uncle *George William*, and Duke of *Lunenburg Zell*, that Dutchy also devolv'd upon him in the Year 1705.

In the Year 1692. Duke *Ernest Augustus*, the Father of His late Majesty *George* I. was created the ninth Elector and Arch-Standard-bearer to the Empire; but the Duke of *Wirtemburg* claiming the latter, the Emperor *Joseph* in Lieu of it, conferr'd the Title of Arch-Treasurer on the Elector of *Brunswick*; and on *June* 30. 1708. he was created the ninth Elector, as succeeding his Father *Ernest Augustus*, who was the first Elector of that House. I shall not descend any further into the Line of King *George* II. but defer that till I have Occasion to speak of the Royal Family of *Great Britain*.

Arms. King *George* II. besides his Arms as King of *Great Britain*, bears the Arms of *Brunswick*, *Lower Saxony*, *Lunenburg*, *Reinstone*, *Blackenburg*, and *Bremen*; which last is a Field Gules, a Key Argent, to shew (as our Author interprets it) that they can open or shut the Passage of the River *Weser* as they see fit.

The House of *Brunswick* was till of late in three Branches; but we have seen *Zell* and *Hanover* united in the Person of King *George* I. by his Marriage, and thereby succeeding to the Dutchy of *Zell*; but *Wolfenbuttle* still remains separate, and in a different Interest too from that of *Hanover*; as we found in the Year 1702. when Queen *Anne* proclaim'd War against *France*; for the joint Dukes of *Wolfenbuttle*, *Rodolphus* and *Ulrick*, who were Brothers, join'd in with *France* against *England* and the Confederates; whereupon the Dukes of *Zell* and *Hanover* (then two distinct Persons, but in the same Interest) march'd against them, and brought over *Rodolph* to their Party; but *Ulrick* being strongly attach'd to the *French*, they excluded him from his Share of the Regency; whereupon he renounc'd the Protestant Religion in the Year 1709. and prevail'd upon his Grand-daughter, the present Empress of *Germany*, to turn Roman Catholick also.

LUNENBURG *and* ZELL.

THE Dukedom of *Lunenburg*, including *Zell*, is bounded by the River *Elbe* on the North, and on the East by *Brandenburg* and *Magdeburg*; by *Brunswick* on the South, by *Bremen* and Part of *Westphalia* on the West. It is mostly a barren, sandy Country; but their Forests abound in wild Hogs, Deer, and other Venison. The principal Rivers are the *Elbe*, the *Ilmenaw*, and the *Jetze*.

Chief Towns are, 1. *Lunenburg*, on the Rive *Ilmenaw*, about thirty Miles South East of *Hamburg*, and forty South of *Lubeck*. It is near two Miles about, but much longer one way than the other. Here is the Palace of the Duke of *Zell*, but we do not find any thing remarkable in it; but there is a very fine Bridge over the River. There are great Quantities of Salt made from the Salt Springs here, which afford good Employment for the Poor and a Revenue to the Sovereign.

2. *Zell*, the usual Residence of the late Dukes of *Lunenburg*. It stands at the Confluence of the two Rivers, *Aller*, and *Fubse*, about forty Miles South of *Lunenburg*, and thirty North of *Hanover*. 3. *Bardewick*, which at present is but a decay'd Place. There is also, 4. *Ultzen*, between *Lunenburg* and *Zell*. And, 5. *Harburg* on the other Side the *Elbe*, over against *Hamburg*. And lastly, *Walstrode*, near the Confines of *Verden*; the Trade of this Place consists chiefly in Wool, Beer, and Wax.

When *George William* late Duke of *Lunenburg* and *Zell* dy'd, the Dominions devolv'd upon K. *George* I. in the Right of his Wife; and from him they descended to his eldest Son *George* II. the present King of *England*. *Lutheranism* is the Religion generally profess'd in these Dominions.

BREMEN *and* VERDEN.

THE Dutchy of *Bremen*, including *Verden*, is bounded by the *Elbe* towards the North, the Territories of *Lunenburg* toward the East; on the South West by the River *Weser*, and on the West by the *German* Ocean. The Country is generally either barren Sand or Morals, except near the Banks of the *Elbe* and the *Weser*, where there are some fruitful Meadows. The *Danes* got Possession of those Territories in the late Wars, and afterwards transferr'd them to the Elector of *Brunswick* for a Sum of Money, to whom they were afterwads confirm'd by *Sweden* in the Year 1720. and so continue to this Day.

Chief Towns of this Dutchy are, 1. *Bremen*, seventy Miles North of *Zell*, and as many South West of *Hamburg*. It is not a Town of any great Trade by Sea, by Reason of the great Banks of Sand which the Floods throw up in the River; and because Ships of Burthen cannot come up to the Town, they have a Custom-House near the River, six Miles below the Town. *Bremen* was a free *Imperial* City, and a Hans-town; but since the *Swedes* besieg'd it, and depriv'd them of many of their antient Privileges, their Trade has declin'd. Here was one of the most considerable Universities in *Germany*. The chief Commodities exported from hence are Timber, Wool, and Minerals. They excell in dressing Leather and Cloth. They export great Quantities of Fish taken at Sea; and in the River *Weser*, and within the Walls of the Town, are such Numbers of Salmon and Lampreys taken, that they export great Quantities, being only pickled or Smoak-dry'd.

2. *Verden*, formerly a Bishop's See. It stands upon the River *Aller*, near where it falls into the *Weser*, about thirty Miles to the Eastward of *Bremen*. It is not remarkable for any thing but being the Capital of a small Territory, which lies round it. 3. *Stade*, about fifty Miles North East of *Bremen*, and twenty four West of *Hamburg*. It stands on the River *Zwinga*, which falls into the *Elbe* not far below the Town, where is a good Fort and so convenient a Harbour, that will admit of such large Ships, that some think it stands more convenient for the *German* Trade than *Hamburg*. 4. *Buxtehude*, on the River *Este* on the *Elbe*, fifteen Miles West from *Hamburg*. It is noted chiefly for the Plentifulness of its Markets and the Fruitfulness of the Country about it, insomuch that *Hamburg* is supply'd with most of its Provisions from thence.

CHAP.

CHAP. XVI.

Of the Circle of Swabia, Suabia, *or* Suevia; *as containing the Dutchy of* Wirtemburg, *the Marquisate of* Baden; *and also the* Imperial *Cities of* Ausburg, Ulm, *&c.*

Suabia. SWABIA is bounded on the North by *Franconia*, and by the Dutchy of *Bavaria* on the East; on the South by the County of *Tyrol*, and the Mountains of *Switzerland*; and on the West by *Alsatia*. In speaking to the several Divisions of this Circle, I begin with the Dutchy of *Wirtemburg*:

Wirtemburg. THIS Dutchy is bounded on the North by the Palatinate of the *Rhine* and *Franconia*, and on the East by the Bishoprick of *Ausburg*; by the Principality of *Furstenburg* on the South; and on the West by *Baden*. The Length and Breadth near equal, *viz.* about seventy Miles. Chief Towns are,

Chief Towns. 1. *Stutgard*, the Capital of the Dutchy, and Residence of the Duke. It stands near the Banks of the River *Neckar*, about forty Miles East of *Baden*, and as many South of *Heidelburg*. The Duke's Palace is a noble Building, and the Gardens about it very fine; but the private Houses are poor wooden Buildings: However, the famous Baths here occasion a great Resort to the Place. 2. *Tubingen*, twenty Miles to the Southward of *Stutgard*; but at present, remarkable for nothing but the University. 3. *Retling*, about twelve Miles South East of *Tubingen*, of which we find little at present worth Notice. 4. *Hailbron*, or the *Fountain of Health*, so call'd from the Virtues of its Medicinal Waters. It stands on the River *Neckar*, twenty eight Miles North of *Stutgard*. The Country here is fruitful and populous, as is the rest of the Dukedom. It contains sixty Cities, an hundred and fifty great Towns, six hundred and forty Villages; and as to its Produce, their Mountains abound with Vines, their Valleys with Corn and Cattle, their Forests with Game, and the Bowels of the Earth with rich Mines; and in short, nothing is here wanting, that can afford either Profit or Pleasure.

THE Dukes of *Wirtemburg* have so great a Power in civil and criminal Affairs, that there lies no Appeal from their Courts to the *Imperial* Chamber. The supreme Court is at *Tubingen*. The Right of Primogeniture is establish'd at *Wirtemburg* as in the rest of *Germany*; the Succession being continued in the eldest Son, the Younger having small Appendages and the Daughters Portions in Money. There are several Branches of the Family, as *Wirtemburg*, *Stutgard*, *Newstadt*, *Montbeliard*, *Teck*, *Barnstadt*, and *Weilting*; but none of them sit in the *Imperial* Diets but the Dukes of *Stutgard* and *Montbeliard*; and they are at present both Protestants.

THE Marquisate of *Baden* is bounded on the North by the Palatinate of the *Rhine*, and on the East by the *Black Forest*; by *Switzerland* on the South, and by the *Rhine*, which divides it from *Alsatia*, on the West. Chief Towns are,

1. *Baden*, the Capital of the Marquisate so call'd, from the Multitude of hot Baths near it, which is said to amount to near three hundred. It is about five Miles from the Eastern Banks of the *Rhine*, twenty Miles North East of *Strasburg*, and twenty five South of *Heidelburg*. It stands upon mountainous rocky Ground, which makes the Streets very uneven. The Baths issue from Rocks of Salt, Allum, and Brimstone, and are scalding hot, and taste strong of those Minerals; one of them is call'd the *Kettle*, because it boils as violently as if it stood over a hot Furnace. The Marquis's Palace and the Castle, are the only publick Buildings in this Place. 2. *Durlach*, on the River *Pfintz*, twelve Miles North of *Baden*, and about the same Distance South from *Heidelburg*. It gives Title to the Marquis of *Baden-Durlach*, whose Palace is a very magnificent Building. The Streets are straight and regular, and the Houses stately and uniform. The stately Library, and the Coins, and Medals in the Marquis's Cabinet, are very valuable. 3. *Stolhoffen*, five Miles South West of *Baden*, famous for the Lines thrown up here for the Defence of the Empire. 4. *Kehl*, or *Fort-Kehl*, on the East Side of the *Rhine*, taken from the Emperor at the Beginning of the present War between *France* and the Emperor. There are other Places of less Note which have formerly been rank'd among the chief Towns on Account of the Antiquity of their Castles or Palaces, as having given Title to some of the antient Princes of *Baden*; but not at present any otherwise remarkable in History.

THE Marquisate of *Baden* is a populous and fruitful Country, abounding with Corn and Wine, and such Plenty of Wild-Fowl and Venison in the Forests, that they are ordinary Food for the common People. There is Plenty of Fish in the Rivers *Rhine*, *Ense*, *Wirmbz*, and *Phintz*, and Plenty of Chesnuts in their Woods; and with them they feed excellent Bacon. Here is Plenty of Marble of all Colours, and some Agate, and Abundance of free Stone, by which means they can build good Houses at a small Charge. The Country produces so much Hemp and Flax, that they export great Quantities of it into other Countries.

Of the Imperial *Cities*; *and first of*

Imperial Cities. Ausburg. AUSBURG, or *Augusta Vindelicorum*, so call'd from *Augustus Cæsar*, in whose Time the *Romans* planted a Colony here. It stands on the Western Confines of *Bavaria*, sixty Miles South West of *Ratisbon*, and on the South Side of the *Danube*. It is a large populous City, and is commonly reckon'd the Capital of *Suabia*. Here are many noble Fountains adorn'd with Brazen Statues of antient Heroes, and many other valuable Monuments of Antiquity. The Cathedral, the Town-Hall, and the two Arsenals, are sumptuous Buildings; and in one Hospital there is an hundred and sixty Houses form'd into four cross Streets, and inhabited by poor People who have yearly Pensions settled upon them. The *Papists* and *Lutherans* are so near an Equality in this Town, that the Magistracy consists of near an equal Number of each, *viz.* in the Senate, twenty three *Roman Catholicks*, and twenty two *Lutherans*; and in their common Council, an hundred and fifty of each. The executive Power is in the Senate, and the Legislative in the two Bodies, *viz.* the Senate and common Council, united as in one Body.

Ulm. 2. *Ulm*, on the North Bank of the *Danube*, where it meets the River *Iller*, whose united Waters make the River *Danube* navigable from thence downwards, for Vessels of considerable Burthen. It is about forty Miles West of *Ausburg*. *Ulm* is a large populous City, but the Cathedral is the most admired for its Magnificence, not having its equal in *Germany*, except at *Strasburg*. They have a great Trade with *Bavaria* and *Austria*, whither they export Linen Cloth and Cottons; and import from thence Corn, Salt, and Iron, by the *Danube*. The Reform'd Church was establish'd here, about the Year 1529. and now the Magistrates and most of the Inhabitants are *Lutherans*.

Bibrach. 3. *Bibrach*, stands on the River *Russ*, twenty Miles South of *Ulm*. Here is also a noted hot Bath. The Magistracy here is equally divided between Protestants and Papists, and the Inhabitants a Mixture of both.

4. *Bucaw*, ten Miles South West of *Bibrach*. Here is a Nunnery, whose Abbess is always a Princess of the Empire, and has a Vote in the Diet by her Proxy.

5. *Memmingen*, a large City on the River *Bach*, seventeen Miles South East of *Bibrach*.

6. *Leutkirk*, a little City twelve Miles South West of *Memmingen*; a great Thorough-fare from *Italy* to *Germany*.

7. *Kempten*, one of the most antient Cities in *Germany*, about fifteen Miles South of *Memmingen*, on the abovemention'd Road from *Italy*. The chief Manufacture here is the Weaving of Linen.

8. *Isne*, twelve Miles to the Southward of *Kempten*. They have neither Corn, Wine, nor Cattle, in their neighbouring Country; most of what they sow is Beans, Rape-seed, and Flax, and a few Oats. Their Supplies of Corn come from other Parts of *Germany*, or from *Italy*.

9. *Lindaw*, stands partly upon the Continent, and partly upon an Island in the Lake of *Constance*, they being united by a Stone-Bridge near three hundred Paces long. Here, as in *Bucaw*, is a Nunnery whose Abbess is a Princess of the Empire.

10. *Bergentz*, on the Lake of *Constance*, five Miles South East of *Lindaw*; but now a Place of no great Note.

11. *Ravensprug*, twenty Miles South of *Bucaw*.

12. *Altorf*, two Miles from *Ravensprug*.

13. *Waugen*, ten Miles North East of *Lindaw*.

14. *Constance*, on the South West Part of the Lake of the same Name, in about Latitude forty seven Degrees, about twelve Miles West of *Bucaw*. The Lake of *Constance* is above twenty Miles in Length, and eight or ten in Breadth. The *Rhine* runs through it with such a Current that the Waters do not mix. *Constance* is a well built populous Town, and has a good Trade by the Navigation of the Lake and the *Rhine*. The Bishop of *Constance* is a Prince of the Empire. In the Year 1414. three Popes, *viz. John*, set up by the *Italians*, *Gregory* by the *French*, and *Benedict* by the *Spaniards*, pretending to the infallible Chair, the Emperor *Sigismund* call'd a Council, lest so much Infallibility in different Interests should at last make a Schism in the Church: They were all summon'd to attend the Council, but none but *John* appear'd; and he perceiving that he was more likely to be made a Prisoner than a Pope, fled to *Friburg*, where he was taken, brought back, and committed to Prison; and the other two though absent, were brought under the same Sentence; but however infallible they thought themselves, they were glad to keep out of the way of what further Misfortunes they might apprehend.

THIS done, *Martin* V. was elected Pope; and in his Time, and at the noted Council of *Constance*, Dr. *John Wickliff* and his Doctrines were condemn'd as Heretical, and his Bones order'd to be dug up and burnt forty Years after his Death. It was also by Order of this Council, that *John Huss* and *Jerome* of *Prague* were executed. [*See Chap.* IV. *of* Bohemia, *Pag.* 470.] It was observed that while this Council of *Constance* lasted, there were in this little City, four Patriarchs, twenty nine Cardinals, three hundred and forty six Archbishops and Bishops, five hundred and sixty four Abbots and Doctors, ten thousand secular Princes and Noblemen, four hundred and fifty common Whores, and three hundred and twenty Fidlers. —— but,

15. *Buchorn*, situate on the same Lake of *Constance*, twenty Miles North West of *Lindaw*. It is but a small City, but has a Trade by Water upon the Lake of *Constance*, by Vessels passing with Merchandize between *Suabia* and *Switzerland*. *Buch.*

16. *Uberlingen*, a City also upon the same Lake of *Constance*, twenty seven Miles North West of *Lindaw*, and the Residence of the antient Dukes of *Suabia*.

THERE is likewise belonging to the Circle of *Suabia*, the Marquisate of *Burgaw* on the South Side of the *Danube*; also the Landgravate of *Nellenburg*. The chief Town is of the same Name, twelve Miles North West of *Uberlingen*; also the County of *Holienberg*. The *Brisgaw*, the chief Towns of which are, 1. *Friburg*, a strong populous Place, thirty Miles South of *Strasburg*, and now subject to the Emperor. 2. *Old Brisac*, on the East Side of the *Rhine*; so call'd by Way of Distinction from *New Brisac*, built lately by the *French*, over against it on the West Side of the *Rhine*. It is thirty Miles South of *Strasburg*, and ten West of *Friburg*.

THE four forest Towns in *Suabia* are, 1. *Rheinfield* upon the *Rhine*, twenty eight Miles South of *Brisac*. 2. *Sechingen*, an Island in the *Rhine*, eight Miles East of *Rheinfield*. 3. *Lausenburg*, through which the *Rhine* runs. It is seven Miles East of *Sechingen*. And, 4. *Walhust*, on the Conflux of the *Schult* and *Rhine*. *Forest Towns.*

IN the Principality of *Furstemburg*, the chief Town, being of the same Name, stands on the South Bank of the *Danube*, thirty five Miles East of *Brisac*. The first Spring or Head of the *Danube* is in this County. There are also the Counties of *Sulz* on the Confines of *Zurick* and *Schaffhausen* in *Switzerland*; *Emes*, about ten Miles to the Southward of *Bregentz*; *Montford*, to the Southward of *Emes*; *Walburgh*, South of *Ravensprug*; *Conigzek* or *Koningsech*, which gives Title to the Count so called. It is North West of *Walburg*. *Kirkburg*, whose Capital of the same Name lies to the Southward of *Ulm*. The County is about eighteen Miles long and eight broad. *Counties.*

OF Principalities there are, 1. *Mindelheim* in *Algow*, between *Ausburg* and *Kempten*. This gave the Title of Prince to the late Duke of *Marlborough*, with which he was honour'd upon his Victory over the *French* at *Hochstet*. It is also continued to the Heir of that Family, who is thereby entitled to a Seat in the *Imperial* Diet. The Capital, call'd also *Mindelheim*, is about twenty five Miles South of *Ausburg*. 2. *Hohenzollern*, between the Principality of *Furstemburg* and the Dutchy of *Wirtemburg*. The chief Place is *Hechingen*, between the *Danube* and the *Neckar*, eight Miles South of *Tubingen*. 3. *Oetingen*, is between the Marquisate of *Anspach* and the Dutchy of *Neuburg*. Chief Town is *Oetingen*, on the River *Wernitz*, fifteen Miles North West from *Donawert*. *Principalities.*

CHAP.

CHAP. XVII.

Of the Circle of the Upper Rhine; *as containing the Landgravates of* Hesse, Wetteravia, Alsatia, *and the Dutchy of* Lorrain.

THE Circle of the *Upper Rhine* consists of three Parts, *viz.* 1. The Landgravates of *Hesse* and *Wetteraw*. The Landgravate of *Alsatia*. And, 3. The Dutchy of *Lorrain*.

Hesse, as including *Wetteraw*, is bounded on the North by *Brunswick*, and on the East by *Thuringia*; by the River *Main* and *Franconia* on the South, and by the Bishopricks of *Mentz* and *Treves*, and the Palatinate of the *Rhine*, on the West. Its Length and Breadth are equal, *viz.* about a hundred Miles.

This Country is in some Parts of it fruitful in Corn and Wine. They have Plenty of Sheep, and those yielding such fine Wool, that sometimes even the *English* buy it, as equal, if not preferable, to their own. Much of the Northern Part of it is cover'd with Woods, which are well stock'd with Deer and other Game. And in their Mountains are Mines of Copper and Lead, which yield both Profit to the Subject, and a good Revenue to the Sovereign.

The Christian Religion was first planted here about the Year 730. and *Lutheranism* was establish'd in the Year 1509. and continued so with some Struggles with the *Calvinists*, till *Amelia Elizabeth*, Mother and Guardian to *William* VI. with a powerful Army, compell'd the Natives of *Hesse* to profess *Calvinism*, about the Year 1666. which continues generally to this Day.

Their Language is indifferently *High* and *Low Dutch*, occasion'd by its Situation between *Upper* and *Lower Saxony*; *High Dutch* being spoken in its greatest Perfection in the former, and *Low Dutch* in the latter.

Hesse is divided into, 1. *Hesse Proper*. 2. *Wetteraw*. In *Hesse Proper* are, 1. The Landgravate of *Hesse Cassel*. 2. That of *Hesse Darmstat*. 3. The County of *Waldeck*. 4. The Territories of the Abbeys of *Fuld* and *Hirschfield*. 5. The County of *Solms*. And, 6. The *Imperial* Cities of *Wetslar* and *Gidburg*.

In *Hesse Proper*, the chief Towns are, 1. *Cassel*, the Capital and Seat of the Landgrave or Prince. It stands on the River *Fulda*, in Latitude fifty one Degrees odd Minutes, forty Miles South East of *Paderborn*. The Streets of this City are large and spacious, but the Houses are mostly built of Timber. Their chief Trade is in Wool and woollen Manufactures. The Palace, which is a small Space from the Town, is not only strong, but is so advantageously situate for a Prospect, that sixty large Towns in the adjacent Country may be seen from its Walls.

2. *Marpurg*, on the River *Lon*, forty Miles South West of *Cassel*, and the same Distance North East from *Frankfort* upon the *Maine*. Here is the supreme Court of Justice, and one of the best Universities in *Germany*. 3. *Darmstat*, the Capital of that Landgravate, and usual Residence of the Landgrave of *Hesse Darmstat*. It is fifteen Miles South of *Frankfort* upon the *Maine*, and ten Miles to the Eastward of the *Rhine*. 4. *Catzenellebogen*, ten Miles East of *Nassaw*, and twenty North West from *Mentz*. 5. *Smalcald*, fifty Miles South East of *Cassel*, considerable for the Iron Mines in its Neighbourhood, which employ abundance of Smiths and other Artificers in Iron, who make Iron Ware here, which is vended all over the Empire. 6. *Schwalbach*, ten Miles North of *Mentz*, famous only for its Baths; from one of whose Springs, Streams of Sulphur, Vitriol, and other Minerals, rise, with a Steam sufficient to suffocate any Person who holds his Head over them; and yet the Water itself is so cold, that they cool their Bottles of Wine in it in the Summer time. 7. *Embs*, another Town famous for Baths, impregnated with Allum, Sulphur, Vitriol, and Iron. 8. *Rotenburg* on the River *Fulda*, thirty Miles South East of *Cassel*. These are the most remarkable Towns in *Hesse*.

The County of *Waldeck* lies between *Paderborn* on the North of it, and some of the Provinces of *Hesse* on the South. It affords Corn and Wine to supply the Natives, also Sheep and Venison. The chief Town is *Waldeck*, thirty Miles North of *Marpurg*. Other Towns of less Note are *Wildenburg*, *Corbach*, and *Eyenburg*. *Waldeck.*

The Territories of the Abby of *Fuld*, sometimes call'd the County of *Buchen*, is a rich Country about thirty Miles to the Northward of *Hanaw*. The chief Town is *Fuld*, upon the River *Fuld*; it stands forty Miles to the Eastward of *Marpurg*. It is such a noble Monastery, and so well endow'd, that it may be worth the following brief Account of it. It was founded about the Year 744. and afterwards endow'd with large Privileges by several Emperors. The Abbot is not only a Prince of the Empire, but takes place at the Emperor's Feet in all the General Diets. He is Lord both of the Town and Country about it, and Primate of all the Abbots in *Germany*, being entirely independant upon all but the Pope himself. The great Church dedicated to St. *Boniface*, by whom this Monastery was founded, is a very magnificent Structure, and shews very much of good antient Architecture. They have amongst other Antiquities, three Manuscripts, containing the new Testament, the four Evangelists distinct, and a Treatise of the Trinity; which, as the Tradition goes amongst them, were all written by the said St. *Boniface*. The Monastery of *Hirchfield*, about twenty Miles North of *Fuld*, and upon the same River, was accounted one of the most noble Structures in *Germany*, and the Territories about twelve Miles square; but at the Reformation, the Revenues were secularis'd or apply'd to temporal Uses; being transfer'd to the Landgraves of *Hesse*, who enjoy them to this Day. The County of *Solmes* is on the South of *Hesse Marpurg*. The chief Town is *Solmes*, fifteen Miles South West of *Marpurg*; to this Place the *Imperial* Chamber was mov'd, after the *French* destroy'd *Spire*. Abby of *Fuld.*

Wetteraw is bounded by *Hesse Proper* on the North, the County of *Reineck* on the East, the River *Maine* on the South, and the *Rhine* on the West. It affords Plenty of Corn and Wine; the Counties of *Hanaw* and *Nassaw* take up the greatest Part of it. The former of which is bounded on the North and East by the Territories of the Abby of *Fuld*, and on the West by the Dominions of *Nassaw*. The chief Town is *Hanaw*, ten Miles to the Eastward of *Frankfort*. It is a strong Town, and has a good Trade. *Wetteraw.* *Hanaw.*

The

Nassaw. THE County of *Nassaw*, as including the additional Counties of *Welburg*, *Idstein*, *Wisbaden*, *Dillenburg*, *Beilstein*, *Glecburg*, *Stegen*, and *Hadamar*, affords Corn, Wine, Venison, fat Cattle, and Mines of Iron, Lead, Copper, and other Metals; insomuch that at *Frenduburg* is made most of the Steel used in the *German* Empire. Amongst other Towns in *Nassaw*, the chief is *Nassaw*, or *Nassovia*, twelve Miles South East of *Coblentz*, and eight East of the *Rhine*, formerly the Seat of the first Branch of the Family of *Nassaw*.

THERE are four Branches of the House of *Hesse*, viz. *Hesse Cassel*, *Hesse Darmstat*, *Hesse Rhinfield*, and *Hesse Homburg*. The Branch of *Darmstat*, and also that of *Homburg*, are *Lutherans*; that of *Rhinfield*, *Papists*; that of *Hesse Cassel* were always zealous *Calvinists* till the Time of the present Landgrave of *Hesse Cassel*, now King of *Sweden*, who for the Sake of that Crown renounc'd *Calvinism*, and swore to promote *Lutheranism* with the utmost Zeal.

Family of Nassaw. THE Family of *Nassaw* is a very antient Family, of which the late King *William* III. was a Branch; descended from one *Otho*, whose Son *Henry*, about the Year 1190. added *Dillenburg*, *Wisbaden*, and *Idstein*, to the Territories of his Grandfather *Walleren*, which was the antient Name of the Family of *Nassaw*, being but the Name of the Castle or Palace where the eldest Branch resided. But from *William Walleren* it was, that the second Branch of *Nassaw Orange* came, which ended in King *William* III. he dying without Issue. From the said *Walleren* also descended *John* of *Nassaw*, who establish'd the Protestant Religion in his Territories. From him descended the late Prince of *Nassaw Friesland*, whom King *William* III. made his Heir, and whose Son is now married to the Princess Royal of *England*.

Alsatia. *Alsatia* is bounded by the County Palatine of the *Rhine* on the North; by the River *Rhine*, which separates it from *Suabia*, on the East; by *Switzerland* on the South; and by the Dutchy of *Lorrain* on the West. And after a hard Struggle between the *Germans* and *French*, it is now entirely in the Possession of the latter. The Soil of *Alsatia* is exceeding rich, producing Plenty of Corn and Wine. The Hills are cover'd with Chesnut Groves, and the Valleys and Plains are so many fruitful Meadows and Pastures; besides which, the Bowels of the Earth afford rich Mines of Copper, Lead, and other Minerals; to which if we add the Agreeableness of the Climate, and the Conveniency of the River *Rhine*, it must be allow'd to be a most delightful Country. It is divided into *Upper* and *Lower Alsace*, so call'd according to their Situation on the upper or lower Part of the *Rhine*; and first of *Lower Alsace*.

Lower Alsace. IN *Lower Alsace*, the chief Towns are, 1. *Strasburg*, in Latin *Argentoratum*. It stands at the Meeting of the Rivers *Ill* and *Brensch*, which about a Mile below, fall into the *Rhine*. It is in Latitude 48 and 49 Degrees. It had a good Trade, and the free Exercise of their (*Lutheran*) Religion till it fell into the Hands of the *French*, who have ruin'd its Trade and suppress'd their Religion. The only Improvement they have made is in its Fortifications, which is in their own Defence, and to secure Possession of it to themselves. It is a large Town, and several Branches of Rivers run through it; over which are beautiful Bridges to maintain a Communication between one Part of the Town and another. It is a Bishop's See under the Archbishop of *Mentz*. The *Roman Catholicks* were expell'd out of it, excepting one little Church that was allow'd them; and it continu'd in the Hands of the Protestants above an hundred Years; but when the *French* took it, the *Roman Catholick* Religion was establish'd, tho' to this Day the Protestant Religion is tolerated there. The Rarities of this Place are so remarkable, that they ought not to be omitted.

Admirable Clock. BESIDES the admirable Contrivance of the publick Granaries, Store-Houses, Arsenal, Wine-Cellars, Stad-House, &c. the Cathedral deserves a particular Description; for which I shall quote *Of. Schadæus*, who gives the following Account of it. The Height of the Tower is four hundred eighty nine Feet, or an hundred sixty three Yards; and has a Pair of folding Brass Gates at the West End. In the Cathedral is a great Clock, where is a Celestial Globe, with all the Motions of the Planets, fixed Stars, &c. and behind it is a perpetual Almanack, upon which a Statue points at the Day of the Month. There is an artificial Cock crows the Hours, which are immediately afterwards struck on a Bell by an Angel; and near that stands another Angel with an Hour-Glass in his Hand, who turns the Glass as soon as the Clock strikes; and besides the Clock striking the Hours, the Quarters are struck against the Bell in the following Manner: The first Quarter is struck by a Child with an Apple; the second by a young Man with an Arrow; the third by a full aged Man with a Tip-Staff; and the fourth (just before the Clock strikes) by an old Man with his Cane. On the Out-side of the Church are shewn the Increase and Decrease of the Moon, with the Motion of the Sun through the Signs of the Zodiack, and other Curiosities so valuable, that the Author from whom this Account was quoted, thought it worth his while to write a Treatise, containing only a Description of the Curiosities of this Cathedral.

Strasburg. *Strasburg* was confirm'd to *France* by the Emperor in the Year 1714. on Condition that Fort *Kehl* at the other End of the Bridge, and on the East Side of the *Rhine*, should be yielded up to the Emperor, which was done accordingly; tho' in the Beginning of the War, which is subsisting between *France* and the Empire at the writing hereof, in Relation to the Dispute between *Stanislaus* and *Augustus*, as to their respective Rights to the Crown of *Poland*, the *French* Forces attack'd and took Fort *Kehl*: But as for the Consequences of the War, and which way the Crown of *Poland* will be settled, Time only must determine; and then it may probably become a Part of the Appendix to this History rather than a Part of the History itself. But other remarkable Towns are

2. *Zabern*, fifteen Miles North West of *Strasburgh*. And, 3. *Haguenaw*, ten Miles West of the *Rhine*, and fourteen to the Northward of *Strasburg*. It was taken by the *French*, and being since confirm'd to them by the Treaty of *Westphalia*, continues now in their Possession. 4. Fort *Lewis*, on an Island in the *Rhine*, almost over against *Baden*. It was built by *Lewis* XIV. and confirm'd to him afterwards *Anno* 1714. 5. *Weissenburg*, belonging to the *French*; it is ten Miles West of the *Rhine*, and sixteen North of *Haguenaw*. 6. *Landaw*, ten Miles North East of *Weissenburg*. It was taken and retaken five or six times by the Emperor and the *French* alternately; but last taken by the *French* in the Year 1713. and confirm'd to them afterwards by the Treaty of *Rastat*.

Upper Alsace. CHIEF Towns in *Upper Alsace* are, 1. *Colmar*, yielded to the *French* by the Treaty of *Munster*. It is about Eight Miles West of *Brisac*, and thirty South of *Strasburg*. It is suppos'd to stand upon the same Ground, and upon the Ruins of the antient *Argentuaria*, which was conquer'd by the Emperor *Gratian Anno* 378. and destroy'd by *Attila* the *Hun*. 2. *New Brisac*, built by *Lewis* XIV. on the West Side of the *Rhine*, over against *Old Brisac*; of which before. 3. *Marback*, fourteen Miles South West of *Colmar*. 4. *Mulhausen*, fif-

teen

teen Miles South West of *Colmar*. 5. *Hunningen*, built by *Lewis* XIV. on the *Rhine*, half a League below *Basil*. 6. *Pfird*, the Capital of *Suntgow*, thirty Miles South of *Colmar*, and ten West of *Basil*; but now confirm'd by the Emperor to the *French* by the Treaty of *Westphalia*.

THE rest of the Circle of the *Upper Rhine* is comprehended in the Dutchy of *Lorrain*, which is bounded by the Dutchy of *Luxemburg* on the North, and by *Alsatia* and the Dutchy of *Deux-ponts* and the Palatinate on the East; on the South by *French Comté*, and on the West by *Champaigne*. Here are Plenty of Mines of Silver, Copper, Lead, and Iron; but most of the last; and Salt-Springs are so plenty, that it is said they afford the Duke a Revenue of two hundred thousand Crowns a Year. The chief Rivers are, 1. The *Maes* or *Meuse*. 2. The *Mosselle*. 3. The *Sar*. 4. The *Meurte*. 5. The *Saome*. 6. The *Selle*. 7. The *Voloy*. And, 8. The *Maidon*.

Lorrain is divided into three Parts. 1. *Lorrain Proper*. 2. *Bar*, or *Bar-le-duc*. 3. *French Lorrain*, containing the Bishopricks of *Metz*, *Toul*, and *Verdun*. *Lorrain* has been alternately subject to the Emperor and the *French*; but as the *French* were obliged by the Treaty of *Ryswick* in the Year 1697. to restore the greatest Part of it to its proper Sovereign, and the Duke of *Lorrain* is a Prince of Empire, it is most proper to treat of it as belonging to *Germany*.

Chief Towns. THE chief Towns in *Lorrain Proper* are 1. *Nancy*, the Capital of the Dutchy, in near forty nine Degrees North Latitude. It is about thirty Miles South of *Metz*, and sixty to the Southward of *Strasburg*. It is divided into the old and new Town; of which the latter is the larger and much the best built. 2. St. *Nicholas*, a large open Town, six Miles South East of *Nancy*, remarkable chiefly for the Crouds of Pilgrims that resort thither to pay their Devotion to St. *Nicholas*, who they say was Bishop of *Myra* in *Lycia*, and a great Opposer of the *Arrian* Heresy at the Council of *Nice*. These are in the Baliwick of *Nancy*. There are other Towns in the Baliwicks of *Vauge*, *Vandervange*, and the re-united Country; but we read little of them in Geographical History except their Names.

Bar. THE Dutchy of *Bar* is now join'd to, and reckon'd a Part of, *Lorrain*. The chief Town is *Bar-le-duc*, the Capital of the Country, about forty Miles West of *Nancy*. It is a handsome well built City, and has a Collegiate Church, and a Seminary for Students.

French Lorrain comprehends the three Bishopricks of *Metz*, *Toul*, and *Verdun*. Chief Towns are, 1. *Metz*, the Capital of *French Lorrain*, at the Confluence of the *Mosselle* and *Selle*, twenty five Miles North of *Nancy*: Formerly it was an *Imperial* City, but reduc'd by the *French*, and confirm'd to the *French* King by the Treaty of *Munster*. The Roman Catholick Religion is the establish'd Religion, only the Protestants are indulg'd with Toleration.

THE chief Town in the Bishoprick of *Toul* is of the same Name. It stands ten Miles to the Westward of *Nancy*. It is a Bishop's See under the Archbishop of *Triers*. It is a large Place, but fortify'd only by a single Wall.

Verdun is a Bishoprick; the chief Town is of the same Name, and the Bishop of that Diocese is a Prince of the Empire.

Duke of Lorrain's Titles. THE Titles of the Dukes of *Lorrain* are, Duke of *Lorrain* and *Mercœure*, Duke of *Calabria*, *Bar*, and *Guelderland*, Marquis of *Pontamousson* and *Nomeny*, Count of *Province*, *Vaudemont*, *Blamond*, *Zutphen*, *Saar*, *Warden* and *Salm*. His Dominions are, the Dutchies of *Lorrain* and *Bar*; the Marquisate of *Pontamousson*; the Counties of *Blackenburg*, *Falkenstein*, *Donnerberg*, *Clermont*, and *Bielstein*; the Provostship of *Kummelberg* and *Hattenburg*, and the County of *Salm*.

CHAP. XVIII.

Of the Circle of the Lower Rhine; *as consisting of the Palatinate of the* Rhine, *and the Archbishopricks of* Mentz, *or* Mayence, Triers, *and* Cologne.

THE Palatinate of the *Rhine*, (as supposing the Bishopricks of *Spire* and *Worms*, and the Dutchy of *Deuxponts* included) is bounded on the North by the Archbishopricks of *Mentz* and *Triers*; and on the East by *Franconia* and *Suabia*; and by *Alsatia* and *Lorrain* on the South and West. It is call'd the *Lower Palatinate* to distinguish it from the *Upper*. As for its general Character, it may be said to consist of two Extremes: First, as to its being happy in its Soil and Produce as to Wine, Grain, Fruits, Game, Fish, Metals, Minerals, *&c.* which by the Conveniency of Water-Carriage, makes the Trade exceeding commodious. But this happy Situation and Product meets with this Allay, that all those agreeable Circumstances make it so much the Object of the Desire of covetous contending Powers, and in some Measure even the Seat of War between the Empire and *France*; and upon the Prevalency of the latter, the Protestant Religion suffers severely. And during the last Series of Years, the poor zealous Protestants have at every Peace been deserted by their (pretended) Brethren, and themselves left as a Prey to the voracious Roman Catholicks, whose tender Mercies to them have always been downright Cruelty. Indeed in the Midst, or rather towards the latter End, of this dismal Cloud they have long labour'd under, here is at last a Glorious Monarch appears for their Relief, I mean *GEORGE* II. our present Most Gracious Sovereign; who in some Part of his Dominions in *America*, has provided a Place of Refuge for them call'd by his own Name; and which it is to be hop'd will be perpetuated in the latest Annals of Time, upon the account of its being made a Sanctuary or *Asylum* for those distress'd Followers of their Redeemer.

Chief Towns Heidelburg THE chief Towns in the Palatinate are 1. *Heidelburg* on the River *Neckar*, forty Miles South of *Frankfort*, and twelve North East from *Spire*; in Latitude forty nine Degrees odd Minutes. The Town is not large, nor at present very populous; but the Palace is a handsome Building. But what is most taken Notice of, is the monstrous Wine-Fat, commonly call'd the Tun of *Heidelburg*, which stands in an Out-House near the Palace; and was made, or rather built by *Charles Lodowick* Elector of *Palatine Anno* 1664. of which take the

following Description, which may be worth the reading and Imitation of any who value themselves upon such a monstrous Curiosity.

The Tun of Heidelburg. It contains eight hundred Hogsheads *English* Measure. Instead of Hoops, it is encompass'd with large Trees of Timber, like the Bildge Timbers of a Ship, upon which are several Inscriptions painted and carv'd. On one Side there is a handsome Stair-Case leading to the Top of the Tun, consisting of three and forty Steps; at the Top of which is a large Gallery set round with Ballisters for Conveniency of walking round it. — This Respect they pay to the Tun, because Wine is one of the most profitable Branches of their Trade near the *Rhine* and the *Danube* and the Countries adjacent.

This indeed puts me in mind of a Tun or Cask very much talk'd of in *London*; the making of which might probably be occasion'd by the Veneration that the Proprietor pays to strong Beer; but when my Curiosity led me to enquire into the Capacity of this *London* Cask, I find by the best Information that I can get, that the most it contains, is but one hundred and sixty three Barrels; which at thirty six Gallons to the Barrel, and a Barrel and an half to the Hogshead, makes not quite one hundred and nine Hogsheads, which is not one seventh Part of the Content of the Tun of *Heidelburg*; except some Difference in the Measure between our Beer and their Wine should help to compensate for the Difference between the Concave Solidity of the two Casks.

The Elector's Library here was esteem'd one of the best in *Europe*, both for the Choice and Number of Books, especially Manuscrips in *Hebrew*, *Greek*, *Latin*, *Chaldean*, *Arabick*, *Indian*, *Russian*, *Tartarian*, *Italian*, *French*, *German*, and *Bohemian* Languages. But when the unfortunate King of *Bohemia* was defeated about the Year 1622. by the *Spanish* and *Bavarian* Forces, they plunder'd the Library, destroy'd some of the Books, and carried the rest to the *Vatican* or to the *Imperial* Library at *Vienna*. This City was again taken and plunder'd by the *French Anno* 1683, and again in the Year 1692. at which last Time it was almost entirely demolish'd; and the Inhabitants being mostly Protestants, were used with such Barbarity, as nothing less than Roman Catholick Cruelty could ever have exercis'd.

Manheim. 2. *Manheim*, situate near where the River *Neckar* falls into the *Rhine*, and twelve Miles North West of *Heidelburg*. It was burnt by the *French*, and its Fortifications demolish'd; and yet the Elector lately built here a magnificent Palace, and made it his Residence. There are several others, once Towns of Note; but by the Incursions and Barbarities of the *French*, they are now reduc'd only to *Traerbach*, a strong Fortress on the *Mosselle*, which was once taken by the *French Anno* 1702. but restor'd to the Elector *Palatine* at the last Peace, and is now in his Possession; but at this Juncture, it would be a difficult Question to answer, as to how long the *French* will let him remain in peaceable Possession of it.

Spire. The Bishoprick of *Spire* lies on both Sides of the *Rhine*, and is surrounded by the Territories of the Elector of *Palatine*. The chief Town is *Spire*, on the West Side of the *Rhine*, twelve Miles South East of *Heidelburg*, and eight North of *Philipsburg*. It is a Bishop's See and a populous Town, but not strong. This is the highest Court of Justice in the Empire; there lying an Appeal from any of the Princes Courts to this, but none from this to any, while this Place continu'd in its Grandeur. But upon the Destruction of this Place, this Court was remov'd to *Wetzlar*.

Philipsburg. 3. *Philipsburg*, on the East Side of the *Rhine*, at the Mouth of the River *Saltza*. It is ten Miles to the Southward of *Spire*. It has been taken and retaken by the Emperor and the *French*; but last taken by the *French* at the Beginning of the present War, which upon so slight an Occasion as the Election of a King of *Poland*, has put almost all *Europe* in a Combustion; and *Philipsburg* was almost one of the first Places that participated of the *French* Fury, as soon as they could form any Pretence to break through their Bounds and attack the Emperor's Dominions.

Worms. The Bishoprick of *Worms* lies also on both Sides of the *Rhine*, and to the Northward of that of *Spires*. It is a small Bishoprick. The chief Town is *Worms*, on the West Bank of the *Rhine*, twenty five Miles North of *Spire*. It was almost destroy'd by the *French Anno* 1693; and though some Part of it is rebuilt, yet it may rather be said that they have made the best of a bad Bargain, than that they have repair'd their Loss; for in the ruinous, and otherwise waste Spaces within the Walls, they have planted Vines, which afford two or three thousand Hogsheads of Wine every Year.

Deux-Ponts. The Dutchy of *Deux-Ponts* is surrounded by the Palatinate. The chief Town is *Deux-Ponts*, forty Miles South West of *Worms*. It is a little well built City, and takes its Name of *Deux-Ponts* from the Bridges over two Rivers upon which it stands.

Religion. *Lutheranism* and *Calvinism* have so eagerly contended against each other in this Dutchy, that their Debates, which doubtless they call Religious, have weaken'd them so much, that it has contributed very much towards the letting in of Popery like an Inundation upon them. *Frederick* Duke of *Simmeren*, first introduc'd *Calvinism* into the *Palatinate*; and dying *Anno* 1576. he was succeeded by *Lewis* V. as great a Bigot to *Lutheranism*, as his Father had been to *Calvinism*. After him his Son *Frederick* succeeded *Anno* 1583, but he dying in the Year 1610. was succeeded by *Frederick* V. who married *Elizabeth* Daughter to *James* I. King of *England*; but he being advanc'd to the Throne of *Bohemia*, to which the Emperor *Ferdinand* had before been elected, the Emperor and *Spain* jointly attack'd him, and he losing the Battle at *Prague*, and with that the Crown of *Bohemia*, his Fortune declin'd at once, and the Emperor and the Electoral College depriv'd him of all his own Hereditary Territories and Dignities, and he was forc'd to fly with his Consort the Princess *Elizabeth* to *Holland* for Refuge. (*See Chap.* III. *of* Bohemia, *Pag.* 469.) The present Elector *Charles-Philip*, succeeded to the Electorate *June* 8. 1716. he has had three Wives, but has no Issue by any of them, except a Daughter married to the Prince of *Sultzbach*.

Mentz. The Remainder of the Circle of the *Lower Rhine* contains the Archbishopricks of *Mentz*, *Treves*, and *Cologn*. These are Spiritual Electorates, and take the Precedence of the six Temporal ones; and of these the Elector of *Mentz* is the chief, and appoints the Time and Place for a new Election to supply a Vacancy of the *Imperial* Throne. When that happens, he is Arch-chancellor of *Germany*, and Visitor of the Aulick Council of *Vienna*. And in short, the Princes and States when agriev'd, apply to him for Redress.

The Archbishoprick of *Mentz* is bounded on the North by *Wetteraw*, and on the East by *Franconia*; by the Palatinate on the South, and by the Electorate of *Treves* on the West. The chief Towns are,

1. *Mentz*, or *Mayence*, situate near the Mouth of the River *Maine*, where it falls into the *Rhine*. It is twenty Miles West of *Frankfort* on the *Maine*, and fifty North of *Spire*. It is a large and populous Town, but not strong. The Elector's Palace

and other publick Buildings are handſome; but the Streets are narrow, and the private Houſes mean. Proteſtants are permitted to trade and reſide here, but are not allow'd the free Exerciſe of their Religion. They claim the Invention of Gunpowder and Printing; but it is generally allow'd, that the former was known in *Oxford*, and the latter in *Holland*, before they were known in *Mentz*. 2. *Bingen*, at the Conflux of the *Rhine* and *Nabe*, ſixteen Miles to the Weſtward of *Mentz*, once a Roman Fortreſs, and ſince an *Imperial* City; but now ſubject to the Dean and Chapter of *Mentz*.

In the *Rhingaw*, which extends about twenty Miles along the Banks of the *Rhine*, are, 3. *Elfold*, fifteen Miles Weſt of *Mentz*. 4. *Erbach*; here are the Tombs of the old Counts of *Naſſaw*, and of ſome of the Archbiſhops of *Mentz*. This Country of *Rhingaw* abounds ſo with the beſt Vines every where between and among the Towns, that it looks like one continu'd City interſpers'd with Streets of Houſes among Gardens and Vineyards, all within its Territories. There are ſeveral other Towns, of whom we find little remarkable but their Names. The Elector's Revenues are reckon'd to amount to an hundred thouſand Pounds Sterling a Year.

Trier. The Electorate of *Triers* lies between *Veteravia* on the Eaſt, and the *Auſtrian Netherlands* on the Weſt. The South and Weſtern Parts of it are mountainous, barren, and cold; but near the *Rhine* and the *Moſelle* it is pleaſant, fruitful, and populous. Chief Towns are *Triers*, or *Treves*, the Capital. It ſtands on the River *Moſelle*, in near fifty Degrees of Latitude, about ſixty Miles to the Weſtward of *Mentz*, and as many to the Southward of *Cologn*. This Place has been alternately in the Hands of the *French* and Confederates; and by the frequent Plunders on both Sides, it is now neither large nor populous.

Mentz. 2. *Coblentz*, at the Conflux of the *Rhine* and *Moſelle*, fifty Miles North Eaſt of *Triers*, and about forty South Eaſt of *Cologn*. Its Situation at the Meeting of the two Rivers draws it near a Triangular Form; two of whoſe Sides are waſh'd by theſe two Rivers, and the third is defended by a Wall and Fortifications after the modern Way. Its convenient Situation for Navigation has procur'd it a good Trade, which conſiſts chiefly in Corn, Wine, Wood, and Iron. The Houſes are well built, and the Streets uniform. There is a Stone-Bridge over the *Moſelle*, and a Bridge of Boats over the *Rhine*; and on the oppoſite Side of the *Rhine*, there is a Caſtle which commands the Town, and the Navigation of both the Rivers to or from it. This Caſtle is on the Top of an Hill, at the Bottom of which, ſtands the Elector's Palace.

Meyne. 3. *Meyne*, fifteen Miles Weſt of *Coblentz*. It gives Name to a large Territory about it. Other Towns mention'd by Geographers are *Cochin*, *Saffich*, *Boppart*, *Engers*, *Bernaſtle*, *Oberweſel*, *Cell*, or *Zell*, St. *Vendal*, *Sarbrug*, *Limburg*, *Montroyal*, *Ulmen*, St. *Maximin*, *Phaltz*, *Witlich*, and *Prum*. The Revenues of the Elector of *Triers* are computed at near an hundred thouſand Pounds a Year.

The Electorate and Archbiſhoprick of *Cologn* lies on the Weſt Side of the *Rhine*, between the Dutchy of *Cleves* on the North, and the Electorate of of *Triers* on the South. The Country abounds with Corn, Wine, and all other Neceſſaries of Life. The Archbiſhop has ſeveral other large Territories in *Weſtphalia*, and other Parts of the Empire, and is reckon'd more rich and powerful than the other two Spiritual Electors, tho' he allows them the Precedence.

The chief Towns are, 1. *Cologn* or *Colen*, the Capital of the Electorate. It is built in Form of a Creſcent, near the Weſtern Bank of the *Rhine*, in about Latitude fifty one Degrees, about forty Miles North Weſt of *Coblentz*. It is poorly fortify'd, but is one of the largeſt, handſomeſt, and moſt populous Cities in the Empire. Beſides what it is built upon, there is three hundred Acres of Ground planted with Vines all within the Walls, which are ſo ſpacious, that they contain four and twenty Gates, of which, thirteen are towards the Land, and eleven towards the *Rhine*. It has large Streets, two ſpacious Market-places, eleven Collegiate Churches, nineteen Pariſh Churches, (beſides the Cathedral) thirty Chapels, twelve Monaſteries, twenty two Nunneries, four large Hoſpitals, and a *Lutheran* Church. Here it was that King *Charles* II. of *England*, ſpent the two laſt Years of his Exile before his Reſtauration.

The Elector has two Palaces in this City, tho' his general Reſidence is at *Bon*. The Convent of the *Carmelites* is a ſumptuous Building, inſomuch that there was held a Congreſs of Ambaſſadors, Plenipotentiaries from moſt of the Powers in *Europe*, in the Year 1673. The Inhabitants are moſtly Roman Catholicks, and of the Proteſtants, the *Lutherans* only are allow'd a Church in the City, as intimated above; but the *Calviniſts* are forc'd to go two Miles on the other Side of the *Rhine* to their publick Worſhip at a Village call'd *Mutheim*.

2. The next City in Dignity to *Cologn* is *Bon*; it ſtands on the Bank of the *Rhine*, ten Miles to the Southward of *Cologn*. Here the Elector has a Palace, and uſually reſides. From its happy Situation it is ſuppos'd to take its Name from the Latin Word *Bona*.

3. *Andernach*, eight Miles to the Northward of *Coblentz*. Here the two Electorates of *Cologn* and *Triers* are bounded from each other; and here the Elector of *Cologn* has a Cuſtom-houſe. The Elector of *Cologn* is alſo Biſhop and Prince of the Dioceſe and Territory of *Hildeſheim*, which is ſurrounded by the Dominions of the Elector of *Brunſwick*. The chief Town is *Hildeſheim*, fifteen Miles South Eaſt of *Hanover*, and twenty five South Weſt of *Brunſwick*.

Elector's Titles. The Elector of *Cologn's* Titles are, Archbiſhop of *Cologn*, Arch-Chancellor of the Empire in *Italy*, Prince Elector of the Holy Roman Empire, Biſhop of *Hildeſheim*, *Munſter* and *Paderborn*, Adminiſtrator of *Berchtolſgaden*, Duke of *Engern* and *Weſtphalia*, Duke of the *Upper* and *Lower Bavaria*, &c. This Elector crowns the Emperor, unleſs the Coronation be perform'd in the Dioceſe of *Mentz*, or in the Dioceſe of *Triers*.

CHAP.

CHAP. XIX.

Of the Circle of Westphalia; *as comprehending the Dutchy of* Westphalia, *the Bishopricks of* Leige, Munster, Paderborn *and* Osnaburg; *the Dutchies of* Juliers, Cleves *and* Berg; *the Principality of* Minden; *the Counties of* Marck, Ravensburg, Lippe, Schawenburg, Hoye, Diepholt, Oldenburg, Delmonhorst, Embden, Bentheim, Tecklenburg, Pyrmont, Lingen *and* Steinfort, Corbey Abbey; *and the Imperial Towns of* Aix la Chapelle, Dortmond, *&c.*

THE Circle of *Westphalia* is bounded on the North by the *German* Ocean, and on the East by *Lower Saxony*; by *Hesse* on the South, and by the *Netherlands* on the West. The principal Rivers are the *Weser*, the *Emes*, the *Lipee*, the *Roer*, the *Aa*, and the *Hunt*. Travellers in general give this Country but a dull Character, as affording no better than coarse Bread, hard Lodging, long Miles, and dirty Roads; that they who travel in Post-waggons, as they call them, travel very few Miles in a Day.

Westphalia Proper, or the Dutchy of *Westphalia*, lies between *Munster* on the North, and *Veteravia* on the South; *Hesse* on the East, and the Dutchy of *Berg* on the West. It is mountainous and woody, but the Valleys afford Corn and Pasturage enough to supply the Inhabitants, who are not very numerous. The chief Towns are, 1. *Arusburg* on the River *Roer*, about fifty Miles North East of *Cologn*. Here is a fine Castle which is frequently the Residence of the Elector, especially in the Hunting Season. 2. *Werle*, a pleasant Town between the *Roer* and the *Lippe*. Here the supreme Court of Justice is held for *Westphalia*, for which Reason it is sometimes call'd the Capital of the Dutchy. There is also *Gesek*, near the Banks of the *Lippe* and *Brilon*, near the Head of the River *Aloens*.

Liege. THE Bishoprick or Diocese of *Leige* is bounded on the North and West by *Flanders* and *Brabant*; on the East by *Limburg*, and by *Luxemburg* and Part of *France* on the South. The Country affords Plenty of Corn and Pasture. They have also Mines of Lead and Iron, and Quarries of Marble; but more remarkable for affording great Quantities of Brimstone and Vitriol. Chief Towns are, 1. *Liege* the Capital; it stands on the River *Maes*, about twelve Miles South of *Maestricht*, and in Latitude near fifty one Degrees. It is a populous City, but the Buildings are mostly of Wood; and the Streets have generally a clear Stream runs through the Middle of them. In this City and Suburbs are above an hundred Churches. The Cathedral is built with red Stone, and the Bishop's Palace is a magnificent Building; and in short it is said, that no City either in *France* or *Germany* can compare with it for fine Churches, Convents, and other sumptuous Buildings for religious Uses.

Sir *John Mandeville.* IN the Monastery of St. *William*, without the Walls of this City, lies the Remains of that famous *English* Traveller Sir *John Mandevile*; who after having seen most of the remarkable Cities in the World, preferr'd *Liege* to them all, and chose to finish his Travels and his Life in this Place: And near his Tomb are placed his Saddle, Spurs, and Knife, with a *French* Inscription, which in *English* runs thus: *You who pass over me, for the Love of God pray for me.*

THE Elector of *Cologn*, who was also Bishop of *Liege*, deliver'd it up to the *French* in the Beginning of King *William*'s Wars; but the Duke of *Marlborough* took it in the Year 1702. The *French* besieg'd it in the Year 1705; but the Confederates returning suddenly from the *Moselle* to its Relief, obliged the *French* to raise the Siege. It is stil'd an *Imperial* City, but the Bishop is Sovereign of the City and Diocese, though he cannot impose any Taxes of the three Estates as they are call'd, *viz.* the Clergy, Gentry, and Commons. The Bishop of *Liege* is one of the most considerable Ecclesiastical Princes in *Germany*, having within his Diocese or Principality, fifty two Baronies, eighteen wall'd Towns, and four hundred Villages very populous, which yield him an Annual Revenue of three hundred thousand Ducats.

Tongres. 2. *Tongres* or *Tongren*, on the River *Jecker*, ten Miles North of *Liege*. It was a very considerable Town in the Time of the *Romans*; at which Time there was a Roman Way or Road pitch'd from *Tongres* to *Paris*, near two hundred Miles in Length: Some of that Road is yet to be seen. It was a Bishop's See before *Liege* was, but the Bishoprick was remov'd from thence to *Maerstricht*, and from thence to *Liege*, where it now is. It is now a delining Town at present, not remarkable for either Strength or Grandeur.

Hoy. 3. *Hoy*, on the East Side of the *Maes*, twelve Miles South of *Liege*. In this Neighbourhood are such Plenty of Iron Mines, that they are the chief Employment of the Inhabitants. It is a fortify'd Town, and has a Castle, but was taken by the *French* in the Year 1693. and re-taken by the Confederates in the Year 1703. It is now subject to the Bishop of *Liege*.

Bullen. 4. *Bullion* or *Bullen*, on the River *Semay*, forty Miles West of *Luxemburg*. It is the Capital of the Dutchy of *Bullen*, whose Duke, *Godfrey*, who was also Bishop of *Liege*, (*Bullen* giving the Title of Duke to that Bishop) was therefore call'd *Godfrey* of *Bullen*; but he sold this Inheritance to the Bishop of this See, to enable himself to raise Forces to carry on the War against the Infidels in the *Holy Land*; in which he succeeded so well, that in three Years time he conquer'd *Jerusalem* and a great Part of *Palestine*; and was thereupon crown'd the first Christian King of that City and Territory; in which his Modesty was so remarkable, that after his Conquest in fighting our Saviour's Battles in the Cause of Christianity, he could not be prevail'd upon to wear a Crown of Gold in *Jerusalem*, where his Master had worn a Crown of Thorns.

Dinant. 5. *Dinant* is a fortify'd Town, thirty Miles South West of *Liege*, and twelve South of *Namure*. Its Manufactures are chiefly in Brass and Iron.

6. *Franchemont*, the Capital of a Marquisate, subject to the Bishop of *Liege*; but it is now only

an

an open Village, and not remarkable for any thing but the Lead Mines near it.

Spa or Spaw.

7. The *Spaw* or *Spa* in a Bottom, enclos'd with Hills and craggy Mountains, fourteen Miles South East of *Liege*, chiefly famous for its Mineral Waters, ſo much in Vogue in *London* at preſent, that the Retailers of it ſeem to contend about who ſells the beſt. And as it is now ſo much in Uſe amongſt the Nobility and Quality, it may not be amiſs to give the following Account of the Number and Quality of the Fountains, with the moſt proper Seaſons for filling the Bottles, *&c.*

Fountains at Spa.

The Fountains are four in Number; their Water in general taſtes of Iron, and is purgative; and when boyl'd, grows turbid, and at laſt, of a reddiſh Colour. But as to their Names and particular Qualities, the firſt is call'd *Geronſter*: It is in the Middle of a thick Wood, two Miles South of *Spa*. It is the beſt kept, and built up with Stone with a Pavilion over it, ſupported by four Stone Pillars; and near it ſtands a little Houſe for the Conveniency of thoſe that reſort to it. This Spring hath a ſtrong ſulphurous Smell, and ſometimes cauſes vomiting; but this, like the reſt, works chiefly by Urine. The ſecond Spring is call'd *Savviniere*, two Miles East of *Spa*. Its Waters are much of the ſame Quality with the former, but operate not ſo ſtrongly or effectually. The third is call'd *Tonnelet*; it riſes in a Meadow near *Spa*. It is more ſtrongly impregnated with Nitre than the reſt; but is very cold both in the Mouth and Stomach. The fourth is *Pohunt*: It is in the Middle of the Village of *Spa*. It is at this they take up moſt of the Waters they ſend abroad into Foreign Parts. It is embelliſh'd with a fine Stone Building, over which is an Inſcription, expreſſing the Virtues of the Water; and from this Spring, vaſt Quantities of Water are ſent abroad to all Parts of *Europe*. The beſt Seaſon for filling thoſe Waters, is either in the Heat of Summer or in the hardeſt Froſts. The reaſon of this appears plain; for in the Drought of Summer when other Springs have ſcarce Water to ſupply themſelves, the *Spaw* can then produce no Water but what is pure and genuine from its own Source; and ſomething of the like Nature may be ſaid as to the hard froſty Weather in Winter, when the Water upon the Surface of the Earth, is congeal'd by Froſt, and not capable of penetrating through the Pores of the Earth, to mix with the original *Spaw Water*, and if I may ſo ſay, adulterate it; and when the Water is thus pure and ſimple, it is the moſt ſtrong, briſk, and ſparkling. The Water is heavier Quantity for Quantity, than *Tunbridge* or *Iſlington*, and yet lighter than common Water.

Munſter

The Biſhoprick of *Munſter* lies on both Sides of the River *Ems*, between *Benthem* on the North, and *Marck* on the South; and between *Oſnaburg* on the Eaſt, and the Dutchy of *Cleve* on the Weſt. It is a barren Country, only it produces as good Bacon as any in *Weſtphalia*; it is exported all over *Europe*, and bears a greater, and ſometimes double the Price of any other. The chief Town is,

Chief Towns.

Munſter, the Metropolis of *Weſtphalia*, ſituate on the River *Aa*, in Latitude fifty two Degrees, and about ſeventy Miles to the Northward of *Cologn*. The Town is generally built of free Stone. The Cathedral is a noble Building. The Biſhop's Revenue is reckon'd at an hundred and fifty thouſand Pounds a Year. The Roman Catholick is reckon'd the eſtabliſh'd Religion, but the Proteſtants have been pretty numerous ſince the Reformation.

The Treaty of *Weſtphalia* was concluded here in the Year 1648. In this Treaty was eſtabliſh'd the Proteſtant Religion in thoſe Parts of the Empire where it was profeſs'd, which put an End to a War of thirty Years ſtanding, *viz.* from the Year 1618. to the Year 1648. between the united Powers of the Proteſtant Princes of *Germany* and the *Swede* on one Side, and the Emperor and the Popiſh Princes on the other; and indeed, all Treaties ſince, ſeem to have had an Eye to this, ſo far as the Religion of the Empire is concern'd. The Occaſion of the Emperor's coming to this Treaty with the *Swede*, ſeems to have been, becauſe the *Swedes* had been engag'd in War with *Germany* eighteen Years, in which Time they had taken an hundred ſtrong Towns in the Empire. And having gain'd this Advantage of the Emperor, they at this Treaty, procur'd the Dutchies of *Bremen*, *Verden*, Weſtern *Pomeren*, the Iſle of *Rugen*, and the City of *Wiſmar*, to be confirm'd to them. There are other Towns of leſs Note in this Biſhoprick, but we do not read much of them in Geographical Hiſtory, except their Names and Situation.

Paderborn.

The Biſhoprick of *Paderborn* is next in Order, and is bounded on the North by the County of *Lippe*, and on the Eaſt by the Dutchy of *Brunſwick*; by the County of *Waldeck* on the South, and by *Weſtphalia* on the Weſt. It is remarkable chiefly for the Variety of Salt Springs and other Fountains. The Tranſactions of the Royal Society publiſh'd in *December* 1665. give an Account of a Spring in this Territory, which is loſt twice in twenty four Hours, and at its Return, makes a great Noiſe, and throws out ſuch a Quantity of Water, and with ſuch Force, that it turns three Mills not far from its Source or Spring. But there is another Fountain of a Nature ſo ſurprizingly remarkable, that if I had not the Authority of the Philoſophical Tranſactions for *January* 166⅝. for the Deſcription of it, I ſhould be at a Loſs to give Credit to it. The Spring is call'd *Methorn*, and may rather be call'd two Springs; which though not two Foot aſunder, yet one is limpid, bleuiſh, luke-warm, and bubbling; and contains Sal-Armoniac, Ochra, Iron, Allum, Vitriol, Sulphur, Nitre, and Orpiment. The other is cold as Ice, turbid and whitiſh, much ſtronger in Taſte, and heavier than the former. It is impregnated with Orpiment, Salt, Nitre, Iron, and ſome Sal-Armoniac, Allum and Vitriol. If Water-Fowls drink it and have not immediate Relief, they quickly die; but common Salt will prolong their Lives, and Vinegar will recover them. It is obſerv'd of ſome who have died immediately after the drinking of this Water, or rather ſuppos'd to be kill'd by it, their Lungs are found to be quite ſhrivel'd up, and yet it is a perfect Cure for People troubled with Worms. There is alſo another Spring about twenty Paces from the former two; it is of a greeniſh Colour, very clear, and its Taſte is a Mixture of ſour and ſweet; and from its Weight is ſuppos'd to proceed from the original Fountain with the other two, as being of the ſame ſpecifick Gravity, though by ſome Accident in its Paſſage, its Taſte and Colour are made to differ.

Springs of a ſtrange Quality.

Paderborn.

This Biſhoprick was founded by *Charles* the Great, about the Year 780. It is but a barren Soil, only they have Plenty of Hogs-Fleſh, and alſo of Deer and other Veniſon. The Capital Town is *Paderborn*, ſo call'd from the Head or Source of the River *Pada*, which riſes with a violent Torrent near the Cathedral of this City, and falls into the *Lippe* near *Neinhus*. When *Charles* the Great conquer'd this Country, whoſe Inhabitants were Pagans, he cauſed the moſt of them to be baptiz'd at this Fountain. The City of *Paderborn* is about fifty Miles South East of *Munſter*. It is a large, populous, and well fortify'd Town. The Elector of *Cologn* is Biſhop of *Paderborn*; the eſtabliſh'd Religion is that of the Roman Catholick. 2. *Lippeſpring* is another remarkable Town,

ſtanding on the River *Lippe*, five Miles North of *Paderborn*. It is ſo call'd from the noted Source or Spring of the River *Lippe*, which ariſes near this Place in ſo large a Stream, that it is ſix or eight Paces broad, and turns three or four Mills before it leaves the Town. 3. *Warburg*, ſituate on the River *Dymel*, eighteen Miles South East of *Paderborn*. The Country is fruitful, and produceth Plenty of Iron and Lead. 4. *Lude*, twenty five Miles North East of *Paderborn*, remarkable only for its *Holy Well*, which in Times of Superſtition was very much admired for Cures reported to be preformed by it.

Oſnaburg The Biſhoprick of *Oſnaburgh* lies to the Northward of *Munſter*. It is reckon'd one of the moſt fruitful Parts of *Weſtphalia*; its Biſhop is a Count of the Empire; it was the firſt Biſhoprick founded by *Charles* the Great. After the Reformation, *Lutheraniſm* prevail'd here; but it was agreed by the Treaty of *Munſter*, (ſometimes call'd the Treaty of *Weſtphalia*, and by others the Treaty of *Oſnaburg*) that this Biſhoprick with its Territories and Revenues, ſhould be enjoy'd alternately by a Proteſtant and a Papiſt; and that the Proteſtant Biſhop ſhould always be a Prince of the Houſe of *Brunſwick*, in Lieu of the Principality of *Halberſtat* having been transferr'd from that Houſe to the Houſe of *Brandenburg*. When they have a Popiſh Biſhop, he is Suffragan to the Archbiſhop of *Cologn*; but the Proteſtant Biſhop is only a Temporal Prince, having little but his Title to denominate him an Eccleſiaſtick.

Chief Town. The chief Town or Capital, is *Oſnaburg*, or *Oſenbruck*, ſo call'd from a Bridge over the *Oſe*; at that Place this River *Oſe* divides *Oſnaburg* into the New and Old Town. The Cathedral, with the Church and Monaſtery of the *Dominicans*, are in the Poſſeſſion of the Roman Catholicks. Theſe are in the Old City, and they have alſo the Collegiate Church of St. *John* in the new City; but the Proteſtants have the great Parochial Church of St. *Mary* in the Old City; and both Proteſtants and Papiſts have a Voice in the Election of Magiſtrates. Here his late Majeſty King *George* I. was born *May* 28. 1660. his Father *Ernſt Auguſtus* being then Biſhop and Prince of *Oſnaburg*. And here he dy'd in the Night of the tenth of *June* 1727. and ſome ſay he dy'd in the very Room where he was born.

Juliers. The Dutchy of *Juliers* is between the *Maes* and the *Rhine*, and lies between *Guelderland* on the North, and *Limburg* on the South. It is a plentiful Country for Corn, Cattle, Paſture, and Wood; but what it is chiefly remarkable for, is a fine Breed of Horſes, and a Sort of Wood for dying, which is gather'd here in great Quantities. Chief Towns are,

1. *Juliers* or *Gulick*, ſaid to be founded by *Julius Cæſar*, and to take its Name from him. It ſtands on the River *Roer*, about twenty five Miles Weſt of *Cologn*. It is a neat fortify'd Town, and in it is the Palace of the antient Dukes.

Aix la Chapelle *Aix la Chapelle*, a large *Imperial* City, fifteen Miles South Weſt of *Juliers*. It is called in *French*, *Aix la Chapelle*, from a Chappel in the great Church much reſorted to by Popiſh Pilgrims, out of a profound Veneration they have for a Parcel of Relicks lodg'd there. The Town may be divided into City and Suburbs, the former being encompaſs'd by a Wall of three Quarters of a League round having ten Gates. The Suburbs, if they may be ſo called, are alſo encompaſs'd by a Wall about a League and an half in Circumference; and in this, there are eleven Gates. There are ſome Rivulets run thro' the Town, which contribute to the keeping it ſweet and clean, and turn ſeveral Mills. There are alſo many publick and private Fountains, and having Plenty of good Stone Quarries, they furniſh them with Materials for many magnificent Buildings, of which the Stadt-houſe and the Cathedral are the chief. The Stadt-houſe is three Stories high, and adorn'd with the Statues of all the Emperors ſince *Charles* the Great. The two loweſt Stories are divided into ſeveral Partitions, but the uppermoſt is one entire Room, an hundred and ſixty two Feet long, and ſixty Feet broad. Here the new elected Emperor uſed to entertain the Electors and Princes of the Empire at their Coronation; it being here that the Emperor receiv'd his firſt Crown, which was Iron, as he did his ſecond at *Milan*, which was Silver; and laſtly, his third, which was Gold, at *Rome*. In this Hall, are many fine Paintings of curious Workmanſhip. There are in this Hall ſeveral Relicks much reſorted to by the ſuperſtitious Roman Catholicks; as the Virgin *Mary*'s Gown, wherein ſhe was dreſt at the Incarnation of our Saviour. The Cloth which was girt about our Saviour when he ſuffer'd, being of very coarſe Linen. Alſo a Piece of Cord, with which he was bound, &c. Theſe Things indeed the cunning Prieſts may make the credulous ignorant People believe; but they have engroſs'd no more of my Belief, than to put me in Mind of a Piece of News I lately read, which tells us, that the preſent Pope examin'd the Roman Calendar, to try if he could find a Saint of his Name [*Corſini*;] and finding one St. *Andrew Corſini*, he dedicated a magnificent Chapel to him, and enrich'd it with Ornaments and Relicks at a plentiful Rate, the Cardinals and Princes endeavouring to out-vye each other in making preſents to his Holineſs of Relicks, worthy to be depoſited in ſo ſacred a Place; but his Holineſs expreſſing a Deſire amongſt other Things, to have a Piece of the original Croſs depoſited amongſt the Relicks on the Altar, an Emulation aroſe in his Courtiers to procure it for him; and in a ſhort Time, as much Wood was ſent in under that Denomination from different Hands (and doubtleſs unknown to one another) as would have built the whole Chapel. [*See* Daily Advertiſer *Jan.* 29. 1734.] And it is as probable, that the Gown and Piece of Linen above-mention'd may be at *Aix la Chapelle*, as that there ſhould be Timber enough to build a magnificent Chapel in the Croſs which *Simon* the *Cyrenian* could carry upon his Back.

Waters of Aix la Chapelle. But what is moſt worthy our Obſervation in *Aix la Chapelle*, is the hot Baths ſo much reſorted to, not only by the Neighbourhood, but by the Nobility and Gentry of *England for Recovery of their Health*; three of which are within the inner Wall, *viz.* the Emperor's Bath, the little Bath, and the Bath of St. *Quirinus*. Theſe Baths riſe ſo hot, that they are forc'd to let them cool twelve Hours before they can uſe them. But thoſe that riſe without the inner Wall, are not ſo hot, but their Smell is more offenſive; and their Waters when in the Ciſterns, are not tranſparent. Here is alſo a Fountain of warm Water, which is much drank in Summer's Mornings. There is alſo a Village call'd *Porcetum*, taking its Name from the Drove of wild Hogs, which formerly frequented the neighbouring Woods. There is a fine cool Rivulet runs through this Village; and on each Side of it are hot Springs, which are convey'd by Pipes into fourteen Houſes, and form eight and twenty Baths. The Waters of theſe Springs are clear and pleaſant, and of no offenſive Smell, but much better than thoſe at *Aix*; for thoſe at *Porcetum* require eighteen Hours cooling before they can be endured to be uſed. Near this Place are ſeveral Mines of Lead, Coal, Vitriol, Sulphur, and Calmey, or *Lapis Calaminaris*, with which laſt they make Braſs, by mixing twenty eight

Mines of Lead.

Pounds

Pounds of the beſt *Swediſh* Copper with an hundred Pounds of Calmey. (And to this ſome ſay, they add ſome broken Pieces of Braſs, and ſome of the Droſs of both Minerals; but theſe two laſt Ingredients being put in, is more to ſave them from being waſted, than for their being any way eſſential to the making the new Metal, as is the Caſe with our Plummers, Goldſmiths, or any that work in caſt Metal. Nor can it be poſſible that Pieces of Braſs are abſolutely neceſſary to the making of Braſs, it having been impoſſible to procure Braſs to aſſiſt in making the firſt Braſs that ever was made. The Copper and Calmey they melt in Crucibles over a hot Furnace twelve Hours, and then putting eight of theſe Crucibles into one, they let the droſſy Part boil over, it being the lighteſt; the pure heavy Metal ſubſiding; and when the Droſs is gone, they pour the pure liquid Metal into a Frame of Stone, and run it into Plates or Webs, as we do Sheet-Lead. But doubtleſs, when the Droſs boils over, ſome of the pure Metal flies out with it, which is the Occaſion of putting the Droſs into the Crucible again to prevent Waſte, and not on Account of the Droſs being a neceſſary Ingredient in producing the next Crucible of Braſs.

I HAVE ſeen a Liſt of the Names of Diſtempers that theſe Waters cure; but as ſo many Diſtempers are therein mention'd that few are omitted, I ſhall decline inſerting their Names, but leave every Perſon to judge of their Virtues by their own Experience, or by the Credit of the Report of thoſe who have try'd them.

eligion. POPERY is the eſtabliſh'd Religion in *Aix*, but Proteſtants that go to drink the Waters or otherwiſe, are not only ſuffer'd to reſide here and ſpend their Money, but are allow'd the Uſe of a Church in the Neighbourhood when they celebrate Divine Service.

THE Dutchies of *Cleves*, *Juliers*, and *Berg*, were ſubject to the ſame Sovereign till about the Year 1609. But upon the Death of the laſt Duke, *John William* who left no Iſſue Male, the Emperor *Rodolph* II. granted theſe Dukedoms, together with the Counties of *Marck* and *Ravenſpurg*, and the Barony of *Ravenſtein*, dependant upon them, to the Houſe of *Saxony*; with a Proviſo however, for ſaving the Rights of all other Claimants. And in the Reign of the Emperor *Charles* V. the Elector of *Brandenburg*, the Duke of *Newburg*, the Duke of *Deux-Ponts*, and the Marquels of *Burgow*, having all married Siſters, or Siſter's Daughters, of the laſt Duke *William*, claim'd their Shares in the ſaid Territories; but the Elector of *Brandenburg*, and the Duke of *Newburg* taking Poſſeſſion of theſe Countries by Force of Arms, the other Powers declin'd their Pretenſions, and it was at laſt agreed, that *Juliers*, *Berg*, and *Ravenſtein*, ſhould be poſſeſs'd by the Duke of *Newburg*, and the Elector of *Brandenburg* ſhould have the Dutchy of *Cleve*, with the Counties of *Marck* and *Ravenſpurg*; and they each of them remain to this Day in Poſſeſſion of theſe their reſpective Shares, and every one aſſumes an empty Title to the whole.

y of THE Dutchy of *Berg* is bounded on the North by the County of *Marck*, and on the Eaſt by *Weſtphalia*; by *Cologn* on the South and by the *Rhine*, which ſeparates it from the Dutchy of *Juliers*, on the Weſt; extending near fifty Miles along the Banks of the *Rhine*, and in ſome Places about twenty Miles broad. The Country is neither fruitful nor populous. The chief Town or Capital of the Dutchy is *Duſſeldorp*, a large Fortify'd Town near the Eaſtern Bank of the *Rhine*, twenty five Miles to the Northward of *Cologn*. It ſtands where the River *Duſſel* (from whence it takes its Name) falls into the *Rhine*. The Duke or Elector's Palace, with other publick Buildings, make a handſome Appearance to the River. Alſo the Collegiate Church of Saint *Martin's* is a handſome Fabrick, where are the Tombs of the antient Dukes of *Berg* and *Juliers*. Their chief Trade is in Corn, but not of their own Product; for they import it from the *Low Counnries*, and export it to *Cologn*, and other Places in *Germany*. The Lordſhip of *Ravenſtein* is a ſmall Barony between *Gelderland* and *Brabant*; it is ſo call'd from the Caſtle of *Ravenſtein*, a Fort on the *Maes*, four or five Miles below *Grave*. *Ravenſtein*

THE Dutchy of *Cleve* lies on both Sides of the *Rhine*, between the *United Provinces* on the North, and the Dutchy of *Juliers* on the South. Chief Rivers are, 1. The *Rhine*, which paſſes through the Middle of it. 2. The *Roer*, which riſes in the County of *Marck*, and falls into the *Rhine* between *Duysburg* and *Rohroot*. 3. The *Lippe*, which riſes in *Weſtphalia*, and falls into the *Rhine* near *Weſel*. And, 4. The *Nierſe*, which riſes in the Dukedom of *Juliers*, and falls into the *Maes* near *Genep*. Chief Towns are,

1. *Cleve*, between the *Rhine* and the *Maes*, about twelve Miles South Eaſt of *Nimeguen*, and ſixty North Weſt of *Cologn*. It is not a large City, but is well peopled. On the Weſt Side of this Town lies the Park of Prince *Maurice* of *Naſſau*, ſo much admired for the Water-works, Canals, and Grottoes in it; above which is a high Hill call'd *Sternburgh*, from whence *Utrecht* may be ſeen, tho' at fifty Miles Diſtance, beſides forty more Cities and great Towns. But what is moſt worth Obſervation is, that from the ſaid Hill proceed twelve Viſtoes, at the End of each of which there is a fine City. The Elector of *Brandenburg* (the preſent King of *Pruſſia*) is Sovereign of this Country, and the Religion that he encourages is *Calviniſm*; but moſt of the Churches are poſſeſs'd by Roman Catholicks.

2. *Embrick*, on the Eaſt Side of the *Rhine*, to the Northward of *Cleve*, now but a poor Place.

3. *Gennep*, at the Conflux of the *Nierſe* and *Maes*, ten Miles South of *Cleve*, near the Borders of *Gelderland*. It was a large fortify'd Town, but now much declin'd in Trade, Strength, and Beauty.

4. *Weſel*, on the Eaſtern Bank of the *Rhine*, near the Mouth of the River *Lippe*, twenty five Miles South Eaſterly from *Cleve*. It was one of the largeſt and moſt populous Towns in the Dutchy, till it was ſo harraſs'd by the *French* in the late Wars.

5. *Duisburg*, on the Borders of *Cleve* and *Berg*, fifteen Miles North Weſt of *Duſſeldorp*; it had formerly a great Trade, which is now chiefly removed to *Frankfort*.

THE County of *Marck* belongs alſo to the Elector of *Brandenburg*; it is the largeſt County in *Weſtphalia*, ſituate between the Rivers *Lippe* and *Ruer*. Chief Towns are, 1. *Hamm*, twenty five Miles South of *Munſter*. It produces Plenty of Corn and Flax; but its chief Trade, or rather Buſineſs at preſent, is the Entertainment of Travellers; it being a common Stage for Travellers from *Cleve* and the *Netherlands*, to *Brandenburg* and *Brunſwick*. 2. *Werden*, on the River *Roer*, ten Miles North Eaſt of *Duſſeldorp*, remarkable only for curing and tranſporting great Quantities of Bacon. 3. *Soeſt*, an *Imperial* City, and the largeſt in *Weſtphalia* except *Munſter*. It contains ten Pariſhes, and is under the Juriſdiction of the Archbiſhop of *Cologn*. *Dortmond* is ſaid by ſome to be the Capital of *Marck*. It is a ſmall but populous City on the River *Empſter*, thirty five Miles to the Southward of *Munſter*. The King of *Pruſſia* claims the Sovereignty of it. *Marck*.

THE County of *Ravenſburg* lies between *Oſnaburg* on the North, and *Lippe* on the South. It be- *Ravenſburg*

belongs to the Elector of *Brandenburg*, as does alſo the Dutchy of *Minden*, which was given him with *Halberſtat*, and ſome other Territories, by the Treaty of *Munſter*, *Anno* 1648. Chief Town is, 1. *Minden* the Capital, ſituate on the Weſt Banks of the *Weſer*, thirty five Miles Eaſt of *Oſnaburg*. It was a large rich City and a Biſhop's See at the Reformation, but ſecular'd at the Treaty of *Munſter*, and the Revenues of the Biſhoprick appropriated to the Uſe of the Elector of *Brandenburg* its Sovereign, under the Title of Duke of *Minden*.

Minden.

Lippe.

Lippe, is a little County betwcen the Dutchy of *Weſtphalia* and the County of *Ravensburg*. Chief Towns are, 1. *Diethmond*, where the eldeſt Branch of the Family reſides. It is but a ſmall Place, and has little Trade, but what is occaſion'd by the Reſidence of the Court. 2. *Lippe* upon the River *Lippe*, twenty Miles Weſt of *Paderborn*. Its chief Trade is in Timber and Plank, for building Ships and Barges on the *Rhine*. 3. *Lemgow*, on the River *Pega*, fifteen Miles North of *Paderborn*. It is in a plentiful Country abounding with Corn.

Pyrmont

The County of *Pyrmont*, whoſe chief Town is of the ſame Name, ſixteen Miles to the Eaſtward of *Lemgow*, is famous only for its Mineral Waters, which cauſe a great Reſort thither, and are exported to moſt Parts of *Europe*. The County of *Ritburg* is now annex'd to that of *Lippe*.

Schawenburg

The County of *Schawenburg* is ſurrounded on all Sides, except the Weſt, by the Dominions of *Brunſwick*. It affords Plenty of Corn and Paſture; and is well water'd with the *Weſer*, the *Hammel*, the *Awe*, the *Caſpaw*, and the *Exter*, and *Stenhuddeſee* Lake, of five Miles long and two broad; yields Plenty of Fiſh, eſpecially Perch. They have Plenty of Salt, Timber, Coals, Allum, Chalk, Veniſon, and Free-ſtone ſo good, and ſo plenty, that it is exported to *Holland*, *Flanders*, and other Places. The chief Place is *Schawenburg*, on the Eaſt Side of the River *Weſer*, ſixteen Miles Eaſt of *Minden*. The County of *Hoy* on the North Side of *Minden*, belongs to His preſent Majeſty of *Great Britain*, as Duke of *Brunſwick* and *Lunenburg*; as does alſo the County of *Diepholt* on the Eaſt Side of the County of *Munſter*. The Counties of *Oldenburg* and *Delmonhorſt*, lie Weſt and South Weſt from *Bremen*; but they do not contain any Thing worth particular Notice.

Oldenburg and Delmonhorſt

The County of *Embden*, by ſome call'd Eaſt *Friſland*, has *Oldenburg* on the Eaſt, and the *German* Ocean on the North. It was made a Province of *Germany* by *Charles* the Great. Chief Towns are, *Embden* the Capital, near the Mouth of the River *Ems* or *Ems* in *Dollart* Bay, about ſixty Miles to the Weſtward of *Bremen*. It is a populous City, and has a commodious Harbour, and a good Trade. And here the *Engliſh* had a Mart for Cloth, till upon ſome Diſguſt it was remov'd to *Hamburg*. 2. *Aurich*, ten Miles North Eaſt of *Embden*. Here are annually ſeven great Fairs for Cattle. Here is held the ſupreme Court of Judicature for the whole County.

Bentheim

The County of *Bentheim*, lies between the *United Provinces* on the North, and *Steinfort* on the South. The chief, or rather the only Town of any Note, is *Bentheim*, the Seat of their Counts, about thirty Miles North Weſt of *Munſter*. The County of *Steinfort* lies to the Southward of *Bentheim*. Chief Town is *Bechſtenfort* on the River *Aa*, fifteen Miles North Weſt of *Munſter*.

Lingen

The County of *Lingen* lies on the Eaſt of *Bentheim*. The chief Town is *Lingen* on the River *Ems*, forty Miles North of *Munſter*. The County of *Tecklenburg* lies on the Weſt of *Oſnaburg*, but is ſubject to the Counts of *Bentheim*. The Capital of the ſame Name with the County is a large open Town, about ten Miles to the Weſtward of *Oſnaburg*.

Tecklenburg

The Abbacy of *Corbey*, lies between *Paderborn* on the Weſt, and the River *Weſer* on the Eaſt. The Town of *Corbey* where the Abbey is, ſtands on the Bank of the *Weſer*, twenty five Miles to the Eaſtward of *Paderborn*. This with the whole Territory is ſubject to the Abbot, who is a Prince of the Empire.

Corbey

The Circle of *Burgundy*, containing the ſeventeen Provinces of the *Netherlands* and the *Franche County*, being no ſubject to other Princes, and independant of the Empire, ſhall be ſpoke of in its Place hereafter; and yet as it was one of the ten Circles of the Empire, I ſhall inſert it in the following Abſtract of the Matriculation, to ſhow what it amongſt the Reſt contributed in Forces, or Money in Lieu of them, towards the Defence or Support of the Empire.

The Matriculation-Book is a Regiſter kept by the Chancellor of the Empire, the Elector of *Mentz*, containing the Names of all the Princes and States who are Members of the Empire, with the Time of their Inveſtiture, the Forces and Treaſure every one is obliged to contribute for the Defence or Support of it, as alſo the Admiſſion of all Perſons into Honours or Offices, or any Thing elſe material, relating to the Affairs of the Empire.

An Account of what Forces, or Money in Lieu of them, every Circle was obliged to contribute towards the Defence and Support of the Empire; wherein obſerve, That every *German* Florin is forty Pence Sterling, which is double the *French* Florin or Livre.

	Horſe.	*Foot.*		*Flor.*
The Circle of *Auſtria*	174	907	or	5714

A DESCRIPTION OF THE *NETHERLANDS.*

CHAP. I.

Of the Netherlands *in general; with an Account how the seven* United Provinces *were first form'd into a distinct State separate from the other ten.*

THE next that falls under our Consideration in our Progress to the Westward, is the seventeen Provinces of the *Netherlands*, or *Low Countries*, so call'd from their low Situation at the Mouths of several great Rivers: The Maritime Provinces of which, were like one continu'd Morass, till drain'd of late Years by those numerous People who retir'd hither for Shelter from their oppressing and persecuting Princes.

Boundaries

THESE Provinces are bounded on the North by the *German* Ocean; and on the East by the Circle of *Westphalia*, the Bishopricks of *Triers* and *Liege*, and the Dutchies of *Cleves* and *Juliers*; by *France* and *Lorrain* on the South, and by the *British* Seas and Part of *France* on the West and South-west. This Country in its full Extent, reaches from the Borders of *Picardy* on the South, to the Mouth of the River *Emes* on the North, all along that Sea Coast.

Belgia.

THIS is the antient *Belgia*, so call'd from the *Bellovaci*, who it is supposed were the most considerable People here when *Cæsar* wrote, and probably had the Dominion of the Rest of those Provinces; but they were afterwards divided between *Gaul* and *Germany*. Those on the South West of the *Rhine* to the former, and those on the North East to the latter; but those on the South West of the *Rhine*, were with the Rest of *Gaul* subdu'd to the Obedience of the Roman Empire by *Julius Cæsar*; and afterwards the *Batavi*, the *Hollanders* and *Zealanders*, submitted also in Form, but were look'd upon rather as Allies than Subjects. When the *Franks* in *Germany* establish'd a new Kingdom in *Gaul*, these Provinces were united to it at first; but when *France* and *Germany* were separated, most of them fell to *Germany*.

THE Northern Nations having broke in upon the *Roman* Empire, and extended themselves beyond the *Rhine*, they by their Marches and Counter-marches so walled that Tract of Land now called the *Low Countries*, in their Passage through them to greater Conquests, that the Inhabitants neglected the Cultivation of their Ground, and supported themselves by Hunting and Violence rather than by Labour and Industry; which indeed was in vain, when the Fruits of their Endeavours were either destroy'd upon the Ground, or reap'd by others before they could have any Benefit of it themselves. And by this Means in Process of Time, their low Ground became Marshes, and the higher Ground Forests or wild Commons; insomuch that *Flanders*, which included most of the Provinces belonging to *Gaul*, was for many Years before *Charles* the Great, one continu'd Forest; and *Holland*, then call'd *Batavia*, being an Island made by the Branches of the *Rhine*, was then only a great Marsh or Fen, and reckoned to belong to *Germany*, because it was first planted by the *Catti*, an antient People of *Germany*. But this Island in all Probability chang'd its Inhabitants and Customs by the Incursions of the Northern Nations, but chiefly of the *Danes* and *Normans*; from whose Countries, Language, and Manners, the Names and Customs of *Holland* and *Zealand* seem to be deriv'd.

WHEN the *Franks* had conquer'd *Gaul*, they gave most of the Lands among the Generals and other Officers; upon one of whom they bestow'd a great Part of the *Low Countries*, and gave him the Title of *Forester* of *Flanders*. This Office continuing through several Descents, they in a great Measure suppress'd the Robbers and Banditti, who infested the Country, and brought the Inhabitants to some Measure of Civility. After this, *Flanders* was made a County, and the Title of *Forester* was chang'd to that of *Count* or *Earl*; the Succession still continuing in the same Line as when they were call'd *Foresters*.

ANOTHER Constitution which those Northern People establish'd wherever they gain'd Dominion, was erecting three Estates or Orders, *viz.* Nobility, Clergy, and common People, under the limited Sovereignty of one Person, with the Title of King, Prince, Duke, or Count; which Government continued till the *Spaniards* endeavour'd to subvert it. Several other Privileges were granted to the Cities and inferior Districts of this Country by their Princes; such as the Choice of their Magistrates, civil Judicature, and Exclusion of all Foreigners from Places of Trust or Profit, an Exemption from all Taxes and Impositions but what were agreed to by the States, and their Princes also agreed amongst themselves never to introduce foreign Troops among them.

THE Provinces which enjoy'd these great Privileges and Immunities, were, 1. *Brabant*. 2. *Limburg*. 3. *Luxemburg*. 4. *Guelderland*, every one of these was a Dukedom. 5. *Flanders*. 6. *Artois*. 7. *Hai-*

7 *Hainault.* 8. *Holland.* 9. *Zealand.* 10. *Namur.* 11. *Zutphen.* These were Earldoms. 12. *Friezland.* 13. *Mechlin.* 14. *Utrecht.* 15. *Overyssel.* 16. *Groningen.* These were call'd Lordships. And, 17. *Antwerp*, was call'd a Marquisate of the *Holy Roman Empire.* These in Processes of Time, by Deaths, Conquests, Inter-marriages, Contracts, or the like, became all united under one Head; and were from thence, as at this Day, call'd the seventeen *United Provinces.*

They were first united in the House of *Burgundy*, under *Philip* surnam'd the Good, about the Year 1430. He enjoy'd the Provinces with his respective Titles to them, of Duke of *Brabant*, Earl of *Flanders*, &c. as above recited. He was succeeded by his Son *Charles Anno* 1467. on whom devolv'd the Dutchies of *Guelderland* and *Zutphen*; but *Charles* being kill'd in a Battle against the *Switzers Anno* 1475. left Issue only one Daughter, *Mary*, who was married to *Maximilian* of *Austria*, Son to the Emperor *Frederick* III. to whom he succeeded *Anno* 1482. *Maximilian* and *Mary* had *Philip*, who married *Joan*, the Daughter and Heiress of *Ferdinand* and *Isabel*, King and Queen of *Spain.* Their Son *Charles* succeeded to the Dutchy of *Burgundy* (of which the *Low Countries* were a Part) in the Right of his Father, *Anno* 1506. He afterwards, *Anno* 1516. succeeded to the Kingdom of *Spain* in the Right of his Mother, and to the Empire *Anno* 1519. by the Name of *Charles* V. [*See* Germany, *Chap.* IV. *Pag.* 481.] making the abovemention'd Countries an additional Circle, by the Name of the Circle of *Burgundy*; which with the Circles of *Franconia*, *Bavaria*, *Suabia*, the *Upper Rhine*, *Westphalia*, *Lower Saxony*, *Upper Saxony*, *Austria*, and the *Lower Rhine*, before mention'd, may be call'd the ten Circles of the Empire.

These Provinces being extremely well situate for Trade, increas'd their Correspondence, and extended their Commerce far and near; insomuch that by Degrees, *Bruges*, *Ghent*, and *Antwerp*, became the great Marts of *Europe.* But in Time their Prosperity was in some Measure eclips'd; as by *Charles* the Hardy, when engag'd in a War against *France.* He brought his auxiliary *Switzers* among them, who demanding larger Taxes than they had paid formerly or were willing to pay, occasion'd Murmuring and Discontent among them. The Emperor *Maximilian* also brought *German* Troops among them into the *Low Countries*, on Pretence of defending them, or rather securing them against *France*; as did the Emperor *Charles* V. with his *Spaniards*, *Germans*, and *Italians*, on the like Pretence; but he being well belov'd for his generous Temper, and being a Native, and vers'd in their Customs, *&c.* they did not express much Dislike either at the Number of foreign Troops kept up in the *Low Countries*, or at the Taxes which were levy'd to maintain them.

In this contented Situation he resign'd his Dominions, leaving the *Low Countries* to his Son *Philip* II. But *Philip* soon determin'd to retire to *Spain*, and leave the *Low Countries* to the Care of a Vice-Roy, though it had till the Time of *Charles* V. been the constant Residence of their Princes. But *Philip* being a *Spaniard* born, would not lose an Inch of his Height or Pride; and although he could not reach arbitrary Power, yet even when in *Flanders*, he took none but only *Spaniards* into his Council, and continued his *Spanish* and *Italian* Forces on Foot, and insisted upon Supplies for their Maintenance, after the Peace was concluded with *France*, in the same Manner as when the Wars continued; by which Means he soon ceas'd to be belov'd by his Subjects, whilst he on the other Hand thinking himself above taking notice of the Grievances of so inconsiderable a People, which created in them so great a Dislike against his Person and Administration, as rendred them ripe for a Revolt from his Government.

William the (then) Prince of *Orange*, finding King *Philip* inclin'd, or rather resolv'd, to go to *Spain*, and trust the Government of the *Netherlands* with a Regent, immediately propos'd to King *Philip*, to have *Christiana* Dutchess of *Lorrain* advanc'd to that great Trust; he hoping to marry her Daughter, and by that Means to procure himself to have the Direction of the Government: But he miscarried in both; for King *Philip* constituted the Dutchess of *Parma*, who was his Sister, Regent of the *Netherlands*; and as to the Match, he never could be prevail'd upon to consent to the Match of the Prince of *Orange* with the Dutchess of *Lorrain's* Daughter; and these Disappointments so irritated him, that his Mind was set upon nothing so much as meditating Revenge.

On the other hand, the Counts *Egmont* and *Hoorn*, and many of the Nobility, were very much disturb'd to see the *Spaniards* promoted to the most profitable Posts, and influencing all his Councils; as were his Clergy, for his taking away the Revenues of the Abbeys, and endowing fourteen new Bishopricks of his own erecting with their Revenues. Another Occasion of Disturbance, was many of the *Flemings* renouncing the Popish Religion; some of them embracing *Luther's* Doctrine, some *Calvin's*, some the *Anabaptists*, &c. which *Charles* V. first, and his Son *Philip* after him, endeavour'd to extirpate under the Name of Heresies; in order to which he propos'd the setting up a Court of Justice like that of the *Spanish* Inquisition; wherein the Reputation, Estates, and Lives, were in the Hands of merciless and mercenary Priests, who could punish any upon Suspicion, without letting them know either the Crime that they were to suffer for, or the Person by whom they were accused.

About this Time a religious War broke out in *France*, and at this same Time was the bloody Persecution of the Protestants in *England* in Queen *Mary's* Reign; upon both which Occasions, Numbers of Protestants from both Places fled to the *Netherlands* for Shelter, and carrying their Fortunes along with them, they found an agreeable Welcome and gain'd many Proselytes; which so nettled the Judges of the Inquisition, that they exerted their utmost Authority to suppress the Growth of Protestantism by the severest Punishments. And this the more terrify'd the *Flemings*, because in this Court none of their Privileges could protect them, nor could the Intercession of the Grandees, or even the Indulgence of the King, stand them in any Stead.

Philip II. being gone into *Spain*, the Regency and Council play'd their Severities against the Heretics as they call'd the Protestants; which being complain'd of to the King, he would not remit any Thing of the Rigour he had order'd to be exercis'd against them. And it was suppos'd that he and *Charles* IX. of *France* had agreed between themselves to extirpate all Protestants out of their Dominions.

When the *Flemings* and the other Protestants among them found their Case thus desperate, they came to a Resolution to oppose the *Spanish* Court to the utmost of their Power; in order to which they enter'd into an Association which they called a Compromise, in which they engag'd themselves to suppress the Inquisition, and to stand by each other in the Defence of their Religion. The Heads of them met at *Brussels*, and deliver'd a Petition to the Regent; praying that the Proclamation against their Religion might be recall'd:

An Insurrection.

She

She courteously promis'd them to know the King's Pleasure in the Affair, but in the mean time they were represented to her by some of her Parasites as *Gueses*, or Beggars; but they finding the King inexorable in Point of Religion, would not be put off any longer, but assembled in a tumultous Manner, and plunder'd the Churches, broke down the Images, &c. But the Regent having rais'd some Troops, she partly by Threats, and partly by fair Words, perswaded some of them to make their Submission to the King; and those that refus'd, were either exemplarily punish'd or forc'd totly into foreign Countries.

The Regent endeavour'd to perswade his Catholick Majesty to come in Person into the *Netherlands*, as supposing that his Presence might bring them to Obedience; but instead of fair Means or any Redress of their Grievances, he sent the Duke *D'Alva* with a Body of veteran Troops from *Italy* to the *Netherlands*, where he took the Earls of *Egmont* and *Hoorn* into Custody as Ring-leaders of the late Insurrection, and as such charg'd them with high Treason. He then erected a Court of Justice, consisting of twelve Judges for the Trial of those Criminals, as they were call'd; amongst which, the Prince of *Orange* and some other Lords were summon'd; who not appearing, they were declar'd Traytors, and their Estates confiscated; which so terrify'd the Inhabitants, that many of them were glad to escape into foreign Countries.

In the mean Time, the Prince of *Orange* had rais'd a considerable Force in *Germany*, with which he dispatch'd his Brother *Lewis* into *Friezland*, where he defeated the Governor of that Province; but *D' Alva* having secur'd the Earls of *Hoorn* and *Egmont* by beheading them, he march'd against *Lewis*; and having routed his Troops, fell upon the Prince of *Orange*, who had invaded *Brabant*, and entirely dispers'd his Forces, and levy'd unreasonable Taxes upon the Inhabitants; which while he was doing, he receiv'd Advice that the exil'd *Flemings* had turn'd Privateers; and with twenty four Ships, commanded by the Earl of *March*, had taken the City of *Brill* in *Holland*, and that many other Towns in *Holland* had revolted from the *Spaniards*; for notwithstanding *D' Alva's* Success by Land, he had made no Provision for the Security of the Sea Coast.

The revolted Towns chose the Prince of *Orange* for their General, and swore Allegiance to him as Stadtholder, who was assisted by Privateers from *England* and *France*; insomuch, that in four Months Time they made up a Fleet of an hundred and fifty Sail, who had their Rendezvouz at *Flushing*, and distress'd the *Spaniards* more than all the Forces by Land.

About this Time the Earl of *Bergh* took several Places in *Guelderland*, *Friesland*, and *Overyssel*; and *Lewis* of *Nassau*, with the Help of the *French*, surpriz'd the City of *Mons*. *D' Alva* re-took *Mechlin* and *Zutphen*; he also took *Naerden* and *Haerlem*, but used the poor Victims with such Barbarity, that the *Spanish* Court thought fit to call him home about the Year 1573.

Lewis Requesens was then entrusted with the Government of the *Netherlands*, and found the City of *Middleburgh* besieg'd by the Prince of *Orange*. *Requesens* sent a Fleet to its Relief, but they were soon destroy'd, and the City surrendred to the Prince of *Orange*.

In this Confusion and Disorder those Provinces of the *Netherlands* continu'd, till the Duke of *Parma* was made Regent, and confirm'd therein by the King of *Spain*. He took *Maestricht*, and by Treaty, brought the Provinces of *Artois*, *Hainault*, and the *Walloon Flanders*, to a Submission to the King of *Spain*. Whereupon the Prince of *Orange*, who perceiv'd so much Difference in Points of Religion, that he despair'd of ever uniting all the Provinces of the *Netherlands* in one Confederacy) apply'd himself chiefly to the Provinces of *Holland*, *Freizland*, *Zealand*, *Guelderland*, and *Utrecht*, over whom he had the greatest Influence; and having procur'd an Assembly of their Deputies or Representatives at *Utrecht*, in the Year 1579. they form'd an Alliance or Confederacy among them, which afterwards obtain'd the Name of the Union of *Utrecht*, and was the Foundation of that State, which is at present known by the Name of the *United Provinces*; and in this Union were afterwards included the Provinces of *Overyssel* and *Groningen*.

The Terms upon which the Union was founded were, That these seven Provinces should be so united, as never to be separated or divided by Testament, Donation, Exchange, Sale, or Agreement; but yet to reserve every one their respective Rights, Liberties, and Customs. And if any Differences should arise in any one of the Provinces, the Rest should not interfere any farther than as Mediators to an Agreement. They also bound themselves to assist one another with their Lives and Fortunes against any Attempts that might be made by any one of the Provinces upon any of the Rest, on Account of Sovereignty, Religion, &c. It was also agreed, that all the frontier Towns included in the Union should be fortify'd at the Charge of the Province in which they were situated; but where new Fortresses were to be erected, it should be done at the publick Charge of all the *United Provinces*; and that the Royal Revenues should be employ'd in their common Defence. That all the Inhabitants of the Provinces, from eighteen to sixty, should be muster'd and disciplin'd; and that neither Peace or War should be concluded, or any Taxes levy'd, without the Consent of all the Provinces. And that all Differences that should arise on any such Occasion, should be submitted to the Stadtholder, to be determin'd. And as to Religion, a free Toleration was to be allow'd, and no Person to be call'd to Account as to his Perswasion. It was also agreed, that the *States* should assemble as usual; and if they should differ in the Interpretation of those Articles, the final Determination should be referr'd to the Stadtholder.

But notwithstanding all this Precaution, in order to an unshaken Establishment, these *United Provinces* were reduc'd to such Distress, that the miserable Condition of their State was represented on a Medal, by a Ship without Sails or Rudder, left to the Mercy of the Waves, with this Inscription, *Incertum quo fata ferant.* Their Epithet then, was not Hogen Mogen, *but the poor distressed States of* Holland.

The Original of the United Provinces

At the same Time the Emperor was mediating a general Peace in a Treaty at *Cologn*, which the Prince of *Orange* endeavour'd to destroy in the *Embryo*; assuring himself, that if that Peace should be effected, the *Spaniards* would meditate, and sooner or later execute, Revenge upon him and his Party. The preventing of which, wholly depended upon the confirming and establishing the Union above-mention'd. In order to which, he prevail'd with the *United Provinces* to renounce all Allegiance to his Catholick Majesty; and as an Inducement to this Revolt, he reminded them how the King of *Spain* had violated the Privileges which he had sworn to grant and continue to them. And further observ'd to them, a Stratagem which the King of *Spain* had endeavour'd to put in Execution, which was to perswade them to chuse the Duke of *Alenson* for their Sovereign; he having first made a secret Treaty with the said Duke, That if he could bring him into Possession, they were to share the *Netherlands* between them

them. And this perfidious Deſign of the King of *Spain* to betray the *Netherlands*, ſo exaſperated the States of *Holland*, *Zealand*, and *Utrecht*, that they agreed to make the Prince of *Orange* their Soveriegn; and had certainly affected it, if his Death had not prevented it.

THE Duke of *Alenſon* having now little leſs than regal Dignity confer'd upon him, and the *Spaniards* having now beſieg'd *Cambray*, in the Year 1581 he rais'd the Siege, and fluſh'd with this Succeſs, he caus'd himſelf to be proclaim'd Duke of *Brabant* and Earl of *Flanders* at their reſpective Capitals of *Antwerp* and *Ghent*: But this being little better than bare Titles, he reſolved, by the Help of ſome of his *French* Troops, to ſurprize *Antwerp*; but they were expell'd with conſiderable Loſs, as they were in the like raſh and ill-concerted Attempts at ſeveral other Places, though they had better Succeſs at *Dunkirk* and ſome other Places, which amounted to nothing conſiderable. Theſe Diſappointments threw the Duke of *Alenſon* into ſuch Confuſion, that he return'd to *France*, and dy'd in a little time afterwards, and the Duke of *Parma* retook the Towns of *Dunkirk*, *Newport*, and ſeveral other Places, which had declared for the Confederates, and *Ypres* and *Bruges* ſurrender'd, and ſubmitted to him without giving him the Trouble of ſtriking one Stroke.

BUT in the Year 1584 the United Provinces receiv'd a fatal Blow, by the Death of the Prince of *Orange*, who was aſſaſſinated in his Palace at *Delft* by *Balthazar Gerhard*, a *Burgundian*; whereupon the States of *Holland* made his younger Son Prince *Maurice* their Stadtholder, though he was but ſeventeen Years of Age, and the Earl of *Hohenloe* was conſtituted his Lieutenant; but ſo wretchedly were the States of *Holland*, &c. reduced, that they offer'd their Sovereignty of their Provinces to the King of *France*; but he being involv'd in a Civil War, could not aſſiſt them, much leſs defend them; ſo that the Duke of *Parma* taking the Advantage of their Diſtreſs and Weakneſs, reduc'd *Antwerp*, *Ghent*, *Bruſſels*, and ſeveral other Places, to Obedience to King *Philip*, which ſo terrified the United States, that they ſent to implore Help of Queen *Elizabeth* Queen of *England*, in the moſt ſubmiſſive Terms, and offer'd her the Sovereignty of the *Netherlands*, in Lieu of her Protection.

THE Queen would not ſo far engage with them as to accept of the Sovereignty of the *Netherlands*, but ſhe agreed to aſſiſt them with Five Thouſand Foot and a Thouſand Horſe, provided that they, together with the Forces of the States, ſhould be commanded by an *Engliſh* General: Alſo that ſhe would pay her own Forces in Time of War, but ſhe would be repaid in Time of Peace in the following Manner, *viz.* that the Expence of the firſt Year's War, ſhould be repaid in the firſt Year's Peace, and the reſt in four Years afterwards; and that in the mean Time *Fluſhing*, the Iſland of the *Brill*, with the Caſtle of *Ramekin* and the *Halberen*, ſhould be deliver'd up by Way of Security, as cautionary Towns, to be reſtor'd to the States again as ſoon as the Money ſhould be repaid; that equal Number of Ships for their common Defence ſhould be fitted out by both Nations, but be commanded by the Admiral of *England*, with ſome other Articles leſs material.

PURSUANT to this Stipulation, the Queen ſent ſome Troops over to the *Low Countries* under the Command of Sir *John Norris*; but her Favourite the Earl of *Leiceſter* ſoon got that Commiſſion countermanded, and that Command conferr'd upon himſelf, under the Title of *General of the Queen of* England's *Auxiliary Forces*. The *Dutch* receiv'd him with all Marks of Honour and Eſteem, and gave him the Title of his *Excellency*, which encourag'd his Ambition ſo far, that he hop'd ſoon to have the Command and ſole Government of their State, and began to act as if that had really been the Caſe; but he ſoon found himſelf deceiv'd, for in every thing that they diſlik'd, he was contradicted by a Deputation of the States, which when he reſented, they complain'd to the Queen of *England*, alledging that he acted as if he intended to be abſolute, and uſurp the Dominion of their Country.

NOTWITHSTANDING the ſmall Difference and Jealouſies between *Leiceſter* and the States, our *Engliſh* Auxiliaries, being ſent over for their Defence and Aſſiſtance, deliver'd them in a great Meaſure from any Apprehenſions of being ſubdu'd by the *Spaniards*, and conſequently gave them an Opportunity to improve their Foreign Trade, and to encreaſe their Shipping at Home, as well as to extend their Commerce Abroad; and now they begun to retrieve themſelves from their Indigence, and to have Ambition enough to change their Character from *Poor Diſtreſſed* to *High and Mighty States of Holland*.

THESE Complaints coming frequently to her Majeſty, ſhe check'd *Leiceſter* for aſſuming a Power ſhe never intended him, *viz.* the Sovereignty, which ſhe herſelf had refus'd when offer'd her; however, ſhe continued to aſſiſt the States with Men and Money againſt the *Spaniards*, who were ſo diſturb'd at her aſſiſting and ſupplying the States as above, that they reſolv'd to invade her Dominions, and in the Year 1588 they provided a Fleet ſo formidable, that like their wonted Ambition, they call'd it the *Invincible Armada*; but Queen *Elizabeth*, being appriz'd of their Deſign, was the rather willing to aſſiſt the States, that they might do the ſame by her, in Caſe the intended Deſcent of the *Spaniards* ſhould be put in Execution, which accordingly was done, and her Caution prov'd of great Uſe; for when the *Spaniſh* Fleet came upon the *Engliſh* Coaſt, the *Dutch* Ships join'd the *Engliſh* Fleet, and aſſiſted in deſtroying their Grand Fleet, which had been the Care and Expence of many Years. As for the Earl of *Leiceſter*, he was ſo diſturb'd that he could not gain his intended Authority over the *Dutch*, but muſt be contradicted by a clownish People, that he had no Reſpect for, that he reſigned his Command and return'd Home to *England*.

WHEN *Leiceſter* had reſign'd, and was return'd Home, the States created Prince *Maurice*, Son to the late Prince of *Orange*, their Generaliſſimo; and he being entirely confided in by the *Dutch*, and ſupply'd with Money and Recruits by the *Engliſh*, he begun to act with Succeſs againſt the *Spaniards*, and in the Year 1590 he took *Breda* by Stratagem, and in the next Year he reduc'd ſeveral other Places. In the Year 1592 that great *Spaniſh* General, the Duke of *Parma* dy'd; whereupon the *Spaniſh* Forces grew mutinous, and the *Dutch* taking the Advantage of their Diviſions, advanc'd their Conqueſts, with little Oppoſition, taking ſeveral Places; and in the ſame Year 1592 they reduc'd *Groningen*, which made the *United Provinces* more entire and ſecure from the Attacks of Enemies from that Quarter.

IN the Year 1596 King *Philip* made *Albert* Arch-Duke of *Auſtria*, Governor of the *Netherlands*, and gave him his Daughter *Iſabella Clara Eugenia* in Marriage, and with her, as a Dowry, he gave *Burgundy* and the *Low Countries*, thinking by this Means to draw the *Hollanders* and the other Confederate Powers over to their Allegiance; but the *Hollanders* having taſted the Sweets of Sovereignty, as well as the Advantage of Trade, and from diſtreſs'd Subjects, being become a High and Mighty State, were not to be allured by an Artifice to loſe the Dominion and Freedom they had

with so much Difficulty acquir'd; and they were the more resolute in maintaining themselves in this free State, from the vast Success they began to meet with in their Attacks of the *Spanish* and *Portuguese* Settlements in the *Indies*; where they found so immense a Treasure, that they grew exceeding rich, though at War with one of the most powerful Monarchs in *Europe*.

The *Spaniard* finding them grow so rich and powerful, and fearing they might grow mischievous in Proportion, they propos'd a Treaty of Peace; but the *Dutch* rejected it, and would scarce hearken to any Terms except the Arch-Duke would first declare that he acknowledg'd them a free independant State; and then he was obliged to condescend to send his Plenipotentiaries to the *Hague*, where they were receiv'd with vast Coolness and Indifferency; for they were not at all inclin'd to treat about Peace, when they had enrich'd themselves so much by plundering their Neighbours; and by their Acquisitions especially in the East, in Times of War; though indeed, War was but an Excuse for them to plunder, with a better Pretence of Authority; for rather than not gratify their voracious Temper, they could plunder as well those that were at Peace with them, and their best Benefactors too: Witness, their Usage of the *ENGLISH* at *AMBOYNA* and other Places, when entirely at Peace with them. [*See the History of the* Oriental Islands, *Chap.* XV. *Pag.* 117.]

But notwithstanding their Haughtiness, there was one Consideration or two help'd to humble them, and one was the growing Greatness of the *French* King; who, if he should make a Conquest of the *Spanish Netherlands*, might next be a troublesome Neighbour to them. And the *Hollanders* being at War with the *Spaniards*, made the *Spaniards* less able to defend the *Spanish Netherlands*; which, if conquer'd, open'd a Way for the *French*, like an Inundation, to flow in upon the *Dutch*. The other was, that Prince *Maurice*, who was their Generalissimo, and exceedingly belov'd, and whose Father was assassinated for his Services to the *States*, might probably, under these Considerations, aspire to the Sovereignty of the Country. These Considerations of continuing the *Spaniard* in a Capacity to defend their own Dominions in the *Netherlands*, and the reducing of Prince *Maurice* from that exalted Pitch of Dignity which he had acquired easily, induced the *Dutch* to make a Truce with the *Spaniards* for twelve Years, and the rather, because neither Party lost by it; for the *Dutch* were to be treated as a free State, and each Party was to remain in the Possession of what Territories they had already taken.

Thus we have seen the Original and Progress of this State, which at first was, in Comparison, like confused Atoms form'd into regular Matter; and yet even then, continued for some Time poor, distressed, and despised; but in the Space of fifty Years, arriv'd to that Pitch of Grandeur, as to rival some of the most formidable Powers in *Europe*, and to dispute the Dominion of the Sea even with *Britain* itself, which first rais'd them from deep Obscurity, and defended them from Destruction by their Enemies. When this is consider'd, together with their barbarous Usage of the *English* at *Amboyna* and other Places in the *East Indies* as above mention'd; and if to this we add their Pyratical Manner of dealing with the *English* at the first Beginning of the *Greenland* Fishery; where they made a Property of the *English* Discoveries and Trade by plain Force; [*See the History of* Greenland, *Chap.* III. *Pag.* 443.] I say, when these Things are rightly consider'd, we may speak of the late acquir'd Grandeur of the *Dutch*, without having much Occasion to boast either of their Gratitude or Justice to their best Benefactors.

CHAP. II.

Of the Situation and Extent of the United Provinces *of the* Netherlands. *Also of their Seas, Harbours, Lakes, Rivers, Dikes, and Canals; and of the Air, Wind, Seasons; and of the Distempers incident to the Inhabitants.*

THE seven *United Provinces* are, *Holland*, *Zealand*, *Friezland*, *Groningen*, *Overyssel*, *Gelderland*, and *Zutphen*, together with *Utrecht*. They are bounded on the North and West by the *German* Ocean, and on the East by *Westphalia*; and by *Flanders*, *Brabant*, and the Dutchy of *Cleves* on the South. The Breadth and Length are near equal, *viz.* an hundred and fifty Miles, but this is not all Land; for in this Space is contain'd the *Zuydersee*, which lies between *North Holland* and *Overyssel*; which, with other Seas and Lakes, takes off a considerable Quantity of the Land contain'd in that Space.

The Rivers in *Holland*, and the Sea upon its Coast are in many Places higher than the Land within, and kept off only by Banks made for that Purpose. But the Original of that prepostrous Appearance is uncertain; some say that *Holland*, excluding the Lakes and Rivers, was all marshy Ground, and gain'd by calling up Banks, draining, &c. but others think it has been formerly all firm Land, and by Earthquakes, Inundations, and the like, have been overflow'd and lost, and again by Industry, regain'd; and by banking, preserv'd in the Condition as they appear at this Day. And as it is observ'd that the *Zuyderzee* was never mention'd by the *Romans*, it is supposed that in their Time it was low, marshy Land, like the Rest; and has since by the Violence of the Waves been wash'd away and overflow'd, and so became a Sea, as it now is; and that the Islands ranging before the *Texel*, were once a Part of the main Continent, till the violent Waves prevailing over the lower Parts of the Land, and washing it away, left the higher Land standing, which by the Sea breaking in between, became the Islands that we now see.

The chief Rivers in *Holland* are, 1. The *Rhine*, which has been described as far as *Skenkenschans*, where it enters this Country. [*See* Germany, *Chap.* I. *Pag.* 473.] Here it is divided into two Branches, one of which is still call'd the *Rhine*; and running by *Arnheim*, it meets. 2. The *Leck*, and continues its Course to *Schoonhoven*, and joins the *Maes* a little above *Rotterdam*. 3. The *Waal*, another Branch of the *Rhine*, where it parts at *Skenkenschans*. It runs by *Nimiguen* and *Bommel* to *Gorcum*; and joining the *New Maes*, it passes Rivers.

by

by *Dort*, and joining the *Leck* and the ſmall *Iſſel*, runs down to *Rotterdam*, and is afterwards call'd, 4. The *Maes*, and falls into the Ocean near the *Brill*. 5. The *Yſſel*, which riſes in *Weſtphalia*, and running by *Deventer*; it parts *Gelderland* from *Overyſſel*, and falls into the *Zuyderſee* near *Campen*. 6. The *Scheld* riſes in *Picardy*, runs by *Cambray*, *Valenciennis*, and *Oudenard*, to *Ghent*; where it joins the *Lis*, and falls down to *Dendermond* and *Antwerp*; a little below which, *viz.* at *Santoliet*, it is divided into two Branches, the Eaſtern and Weſtern *Scheld*, or *Hont*, which divides *Flanders* from *Zealand*, and falls into the Sea at *Fluſhing*. The other is the Eaſtern *Scheld*; it runs by *Bergenopzoom*, and falls into the Sea with a rapid Torrent between *Tolen* and South *Beverland*.

The *Zuyderſee* is bounded with the Land on all Sides but the North, upon which are the Iſlands of the *Fly*, the *Schelling*, and the *Ameland*. On the Eaſt of it are the Provinces of *Friezland* and *Gelderland*; and on the South is *Utrecht* and Part of *Holland*; on the Weſt is the *Texel*, and the Reſt of *Holland*. It is about ſeventy Miles long, and between thirty and forty broad, but ſhallow; and the Navigation thereof extremely difficult.

The Dikes or Banks to keep out the Sea, are generally ſeventeen Ells thick at the Bottom, and about ſeven Ells high, (accounting three Quarters of a Yard to an Ell.) The Side towards the Land is made as ſtrong as Wood and Stone can make them, and that Side towards the Sea is cover'd with Matts, Ruſhes, and Sea-Weeds; and ſometimes with Canvas or Sail-Cloth, to prevent the Sea waſhing away the Earth, with which they are fill'd up; and yet notwithſtanding all their Care, they ſometimes ſuffer ſeverely by Inundations, occaſion'd by the breaking of their Banks, as in the Year 1530 a great Part of *Zealand* was overflow'd; and in the Year 1568 it flow'd ſo high as to cover ſome of the Iſlands of *Zealand*, drown'd a great Part of the Coaſt of *Holland*, and almoſt all *Friezland*; ſwallow'd up ſeventy two Villages, and deſtroy'd twenty thouſand People in *Friezland* only; and the Reſt were ſaved by getting up to the Tops of Trees, Houſes, or high Hills. And the like happen'd in the Years 1655 and 1665 at which laſt the Gates and Fortifications of *Naerden* were demoliſh'd, and a ſtrong Rampart of Stone, call'd the *Aſs's Back*, was driven away in a Moment, and a Hole, thirty ſix Feet deep left in the Place where it ſtood. It would be needleſs to repeat the innumerable Inundations which have happen'd there; but it may be well worth while to obſerve, in how ſhort a Time they repair their Dikes, and drain their floating Country by the Help of Wind-Mills; of which they have great Plenty for that Purpoſe. And indeed it is very ſurprizing to ſee, how after the greateſt Floods, when Part of the Coaſt and Country ſeems irrecoverably loſt, they do with incredible Expedition throw out the Water, and repair their Dikes, and make the Country recover much the ſame Face as it had before.

There are but very few good Harbours in *Holland*, in Compariſon to the vaſt Trade they have, and the Plenty of Ships of their own, as well as the great Reſort of Shipping from other Places. The beſt Harbours indeed are *Fluſſing*, *Helvoetſluys*, and *Rotterdam*: For *Amſterdam*, although it may be ſaid to be one of the greateſt trading Ports in *Europe*, yet it is one of the moſt incommodious Havens; and upon ſuch, ſhallow Water, that Ships of any great Burthen cannot come at it but at high Water; nor can Veſſels of great Burthen come up to it at all without diſcharging all, or a great Part of their Loading.

But notwithſtanding their great Art in draining, there are many and very conſiderable Lakes in the *United Provinces*; the chief of which is *Harlem Meer*, which extends almoſt from *Amſterdam* to *Leyden*, being ſixteen or eighteen Miles long, and eight or nine broad. This Lake continually gains and encroaches upon the Land that encloſes it, which has occaſion'd a Propoſal for the draining of it, but it has not yet appear'd practicable; and the rather, becauſe the Ground lies ſo low, that it is much eaſier to cut Canals, and make new Conveyances by Water, than it is to drain the Ground, or remove the Lakes and Canals that Nature has originally form'd; theſe being now ſo common, eſpecially with a little Improvement, that there is ſcarce a Town or Village, nay, a good Farm-houſe, but what has a Canal cut up to it, upon which Boats or ſmall Veſſels ſail to their reſpective Places; and the white Sails of the Veſſels appear at a ſmall Diſtance, as if they were ſailing through the Woods, or upon the Land, (the Canals lying ſo low, and being ſo narrow, as not to be ſeen till you come very near them) which affords a very agreeable Proſpect.

The Seas, Rivers, and Canals, afford Plenty of Fiſh of their reſpective Kinds; but as for Herrings, Oyſters, and many other Sorts of Shell-Fiſh, they are obliged to the Seas upon the *Britiſh* Coaſt for; and, like their wonted Behaviour in the *Eaſt Indies*, *Greenland*, &c. already treated of in this Book, they make no Conſcience as to whoſe Property it is, if they can but engroſs the Benefit.

It may be thought ſurprizing, that the Froſts ſhould be ſo much more ſevere and of longer Continuance in *Holland* than in *England*, though much in the ſame Latitude, and the Eaſt and North Eaſt Winds more cold and pinching there than here; but this is eaſily accounted for when we conſider, that thoſe Winds come over a long Tract of frozen Continent directly to *Holland*; but is moiſtened and ſoftened by the Vapours of the Sea before it arrives at us in *England*. And this is the Reaſon that their Harbous are commonly ſhut up by the Froſt in the Winter Time when ours are open.

It is not ſo much imputed to Induſtry as to Neceſſity, that they keep their Houſes and Streets ſo clean; for if they did not, the Moiſtneſs and Fogginеſs of the Air, occaſion'd by their marſhy Situation, would cauſe [illegible] breathe to corrupt and become infectious, as appears by the Rotting and Corruption which their Metals contract, and the ſudden Mouldineſs of their wooden Veſſels, &c. if not almoſt perpetually rubb'd and kept clean. And yet notwithſtanding this Care, it is generally obſerved that they are not a long-liv'd People, which doubtleſs is in a great Meaſure owing to the Groſſneſs of the Air, as abovemention'd. But ſome add as another Reaſon, the little Care they take of their Sick; and this ſome impute to their abſolute Belief of Predeſtination, and that *if the Perſon be ordain'd to die, it is in vain to uſe any Means to preſerve or prolong Life.* I might add indeed, that if their Belief of Predeſtination be ſo abſolute as to exclude all Means for Preſervation of Life, Victuals and Drink would in this Caſe be rendred as uſeleſs as Phyſick; but if their Opinion of Predeſtination allow of Means proper to be uſed to attain the End or Deſign appointed, it becomes conditional, and conſequently cannot be abſolute. But another Reaſon which ſome aſſign for the Neglect of their Sick, is their eager Purſuit of Trade and Buſineſs; as if that was to be preferr'd to every Thing, and even Life itſelf. And another Thing that may probably contribute to the Shortneſs of their Lives, may be their eating ſo much ſalted and dry'd Fleſh and Fiſh, and drinking ſo much Brandy and Geneva; to which if we add their un-

unactive Way of travelling, which is moſt commonly perform'd without walking, or riding on Horſe-back, *viz.* by being drawn upon the Canals by Water in cover'd Boats in the Summer, and upon the Ice in Winter; either of which Motions gives but little Exerciſe to the Body; and doubtleſs theſe Circumſtances of Situation, Eating, Drinking, Exerciſe, *&c.* muſt contribute to the filling them full of groſs Humours. But let whatever be the Cauſe of it, the natural Shortneſs of their Lives may be eaſily inferr'd from the Remarks of Sir *William Temple*, who endeavouring to prove that the *Hague* is the beſt Air in *Holland*, aſſigns as a Reaſon for his Opinion, that he never ſaw two Men above ſeventy Age; which by his Way of expreſſing it, intimates that few there arrive at that Age.

CHAP. III.

Of the particular Provinces and chief Towns; and of their Buildings, Furniture, &c.

THE Province of *Holland* is the chief of all the ſeven, and in ſome Reſpects equal to the other ſix. It extends from the *Texel* on the North, to *Brabant* and *Zealand* on the South; and from the *Zuyderſee* and *Utrecht* on the Eaſt, to the *German* Ocean on the Weſt; but it is divided into South *Holland* and North *Holland* by the River *Y* or *Ty*. Chief Towns in South *Holland* are,

1. *Amſterdam*, the Capital of *Holland* and the ſeven Provinces. It is more properly call'd *Amſteldam*, as ſtanding upon the River *Amſtel*, which runs North through *Amſterdam*, and falls into the River, or rather Arm of the Sea call'd *Ty*, which is on the North Side of *Amſterdam*; and for a large, but not very deep or commodious Harbour, the Place where it ſtands is a Moraſs or Bog, and the Foundation is laid upon Piles of Timber drove into the Ground. The firſt authentick Account that we meet with in Hiſtory, is, that about the Year 1300 it was a poor Fiſher's Village, and that in little more than forty Years, it was increas'd to a conſiderable Town on the Eaſt Side of the *Amſtel*; and about the Year 1400 there began to be Buildings alſo on the Weſt Side of the *Amſtel*; and in the Year 1482 it was become ſuch a conſiderable Place, that Princeſs *Mary* of *Burgundy* encompaſs'd it with a ſtrong Wall. In the Year 1585 it was further enlarged, and became the chief Town of Trade in thoſe Provinces. And in 1656 it was ſurrounded with a new Wall, and it is now ſuppoſed to ſtand upon about half as much Ground as *London* and *Weſtminſter*. The Houſes are generally of Brick or Stone, the Streets neatly pav'd, with Canals in the Middle of many of them, with handſome Rows of Trees on the Sides of them, and Stone Bridges over them.

THERE are ſometimes fifteen or ſixteen hundred Veſſels in the Harbour intended for the *Baltick* only, beſides all others bound to, or come from other Places; and yet notwithſtanding the Place is ſo populous, there is not above thirteen Churches belonging to the *Calviniſts*, which is the eſtabliſh'd Religion there. There is alſo one *Engliſh* Church, two *French*, and one *High Dutch*, but all Presbyterians, and their Preachers maintain'd by the Government. The Papiſts have private Chapels or Meeting-houſes. They have alſo a Square in the Town inhabited by Nuns, but they may leave their Cloiſters and marry when they pleaſe. The Roman Catholick Religion is of all others the leaſt encourag'd here, inſomuch that their Chapels are ſometimes ſhut up. It is ſuppos'd by Computation, that the *Jews*, *Armenians*, *Lutherans*, Anabaptiſts, Quakers, and *Engliſh* Independants, make up a third Part of the Town; the Roman Catholicks another, and the Presbyterians (the eſtabliſh'd Religion) the other third Part of the Town.

THEIR Churches are for the moſt Part handſome Buildings, eſpecially that of St. *Catherine*'s, which though burnt down in the Year 1645, yet is ſince rebuilt, and is now a magnificent Structure. The Painting of the Windows is excellently fine; the Pulpit, for Carving and other Workmanſhip, is accounted a Maſter-piece of its Kind; and the Organ is ſaid to be the largeſt and beſt in *Europe*, and is ſupported by marble Pillars. The Partition between the Church and the Chancel is all of poliſh'd Braſs kept very clean and bright.

THE Stadt-houſe is an oblong Building of free Stone; the Front extends two hundred and eighty two Feet, and the Breadth and Depth is two hundred and thirty Feet. There is above thirteen thouſand vaſt Piles of Wood drove into the Ground to make a ſolid Foundation. There is abundance of fine carv'd Work about it, eſpecially that in the Middle of the Front over the Cornice, which is of fine Marble, eighty two Feet long, and eighteen Feet high; where the City of *Amſterdam* is repreſented by a Woman with *Neptune* on her Right Hand, and two Sea Nymphs offering her the Fruits of the Earth; on her Left, are two *Nayades* preſenting her with Laurels and Palms; and before her, two Tritons dancing and ſounding their Horns. There are other curious Embelliſhments; one in particular is an *Atlas*, bearing a Globe of ten Feet Diameter, and ſeveral other Emblematical Figures. In the Middle of the Building is a handſome round Tower, which riſes fifty Feet above the Roof; and in it there is a fine Chime of Bells, for they cannot be call'd a Ring of Bells, becauſe in any Part of the *Low Countries* they never ring their Bells out as in *England*, but chime all Manner of Tunes on their Feſtivals and rejoicing Days.

THE Burghers Hall in the Stadt-houſe is an hundred and twenty Feet long, fifty ſeven broad, and ninety eight high, and is pav'd with fine Marble; and on the Top of the Houſe are eight large Ciſterns of Water, with Pipes laid from them to every Room in the Houſe in Caſe of Fire; to prevent which, the Chimneys are lin'd with Copper. There is upon a Pedeſtal a Latin Inſcription, importing, that the firſt Stone of this Building was laid *October* 28. 1648. but ſome obſerve that it is not yet finiſh'd, and impute that Delay to their Belief of an old Prophely, that when their Stadt-houſe ſhall be finiſh'd their State ſhall begin to decline; but let every Reader regard that as he pleaſes.

THERE are many other publick Buildings in *Amſterdam*, as the Admiralty-Office, the Exchange, the *Eaſt India* Houſe; alſo Hoſpitals for Widows, Orphans, and even Baſtards too; and for Sick, Aged, and Mad-men; the Houſe of Correction, Work-houſe, *&c.* that it is ſaid, that in

their

their Hospitals, and Buildings of that Kind, there are not less than twenty thousand People maintain'd; and most of their Buildings of that Kind are very grand, as it is indeed in many Cases in *London*; witness, *Bethlem*, St. *Thomas*'s, &c. and for the Maintenance, they oblige the Play-houses to pay half their Gains; also Rope-dancers, Puppet-players, Juglers, &c. pay one third of their Income to the Poor; also every Person that passes through a Gate after Candle-light pays a Penny to that Fund. They have also Poors-Boxes hung at almost every House in the City, which every one as they are dispos'd put Money in; but especially upon a great Sale of Goods, or a good Bargain, or the like, they express their Gratitude by putting Money into one or other of these Boxes; and the Deacons go about once a Quarter to take the Money out of them and deposit it in a proper Place. There are also, twice a Week, Men deputed to go round the City with a Bell to ask Charity for the Maintenance of those Hospitals; and if all this falls short, the Defect is supply'd out of the publick Revenue.

The next is *Haerlem*, twelve Miles to the Westward of *Amsterdam*; between it and the Sea from it is about four Miles to the Eastward. The Buildings are of Brick, the Streets wide and straight, and Canals in the Middle of many of them as at *Amsterdam*. The Cathedral Church is now esteem'd the largest and most beautiful in *Holland*. Their chief Manufactures are Silk, Velvet, and Linen, in which last they excel. Here dwelt *Laurence Coster*, to whom the *Dutch* would gladly ascribe the Invention of *Printing*; but the Citizens of *Mentz* in *Germany* dispute it with them. [*See Chap.* III. *of* Germany.] To the Southward of this Town lies the Lake call'd *Haerlem Mer*, which extends almost as far East as *Amsterdam*, and South as *Leyden*; but it is shallow and dangerous for the Passage-Boats, which was the Occasion of their cutting Canals from *Haerlem* to *Amsterdam* and *Leyden*; by way of which, People can travel with all the Ease and Safety imaginable.

Rotterdam is accounted the chief Town for Trade next to *Amsterdam*. It stands on the North Side of the *Maes*, about thirty Miles to the Southward of *Amsterdam*. It is a large populous City, and commodious for Trade, the Canals bringing the Ships up to their very Doors. And, which is another great Advantage, the River *Maes*, by which the Ships come up from the *Brel* to *Rotterdam*, is much sooner open and free from Ice than the River *I* that leads to *Amsterdam*; for which Reason, the *British* Merchants frequent this Port much more than that; insomuch, that when the Frost has been over, and the River open, there has been above three hundred *British* Vessels sailing out of the *Maes* in one Fleet.

The Town is built mostly of Brick; the Streets are broad and well pav'd. There are four *Dutch* Churches, one *English*, (where the Service is perform'd according to the Church of *England*) and one Kirk of *Scotland*. There are great Numbers of *British* Subjects residing at *Rotterdam*; and here is also a Stadt-house, Exchange, Admiralty-Office, *East India* House, &c. all very handsome Buildings. From the Top of the great Church may be seen the *Hague*, *Delft*, *Leyden*, *Dort*, and most of the great Towns in *South Holland*; the Ground being generally low, and the Sight not intercepted by Hills and Mountains as in most other Countries.

Leyden, four Miles East of the Ocean, and eighteen Miles South of *Amsterdam*. It is a large, neat, and pleasant Town; the Buildings beautiful and magnificent, the Streets broad and clean, with Canals in the Middle of them planted with Trees. The City is surrounded by a Wall, and regularly fortify'd. In the Middle of the Town is a round Stone Tower six hundred and ten Feet in Circumference, and ascended by fifty Steps. It is observ'd that *Leyden* hath eight Gates. It is divided into twenty three Wards, which are subdivided into ninety lesser Parts. It stands upon thirty Islands. It has twenty four Canals, an hundred and eighty Streets, ninety five Bridges; and upon the Walls are forty handsome Towers.

They have many large Hospitals; that of the Orphans only, maintains no less than nine hundred Children. The three principal Churches are, St. *Peter*'s, *Pancras*, and the New Church. The *States General* founded an University here in the Year 1575. The Schools are in a large Brick Building of three Story high; in the uppermost of which, was the Printing-House of Elzevir, so famous for Printing, that his Name is frequently made use of to this Day with respect to Printing, that is done upon extraordinary good Letter. There are about two thousand Students belonging to this University, but they board mostly in the Town. They are no way distinguish'd by their Habits, but only at Lectures, and when they preside in publick Disputations, and then they wear Gowns. They have excellent Manuscripts in their Library; and their Anatomy-Theatre is said to exceed that at *Padua*, having Skeletons of all Sizes and Kinds, and Variety of Mummies, particularly one of an *Egyptian* Prince eighteen hundred Years old, with Pagan Idols, and Relicks, and Habits of People of the most distant Countries. The principal Manufactures of *Leyden* are woollen Cloth and Camblet. Their Garden-Stuff is so much valu'd, that it is carried as far as *Amsterdam*, and the Ground so rich, that their Gardens yield four or five Crops in a Year, and are reckon'd worth two hundred and fifty or three hundred Pounds an Acre. They have an Officer call'd the *Dikegrave* in the *Reinland House*, whose Business it is (with the Assistance and Advice of his Associates) to take care of the Repairs of the Banks, Dykes, and Canals in the District of *Rhineland*, of which *Leyden* is the Capital.

The *Hague* comes next under our Consideration, which some call a Village, because it has no Walls; but if it is a Village, it may with good Reason be call'd the most considerable of that Denomination. It is nine Miles South West of *Leyden*, fourteen North West of *Rotterdam*, and two Miles from the Sea. It is encompass'd with fine Meadows and Groves, amongst which, is a fine Seat call'd *The House in the Wood*, belonging to the Prince of *Orange*. The *Hague* is govern'd by its own Magistrates, and has all the Privileges of a City of *Holland*, except that of sending Representatives to the *States*. Here the *States General*, and the Council of State, always assemble; and here are held the supreme Courts of Judicature. Foreign Ministers reside here and have their Audience; and here all publick Affairs are transacted, which draws Multitudes of People hither, and creates a vast Trade.

The Palace is a handsome Building of Brick, making two Angles of a Square; in the Middle is a spacious Hall, and in this Place was an Apartment for the late Princes of *Orange*, the Chambers of the *States General* and Provincial, and of the Council of State. On the West Side of the Palace is a large Plain regularly planted with Trees, which some, not without Reason, compare to St. *James*'s Park at *London*. This Plain is surrounded with magnificent Houses; one of which every City of the *United Provinces* have for their respective Deputies. But what is something remarkable, there are but two Churches in the

Hague, one call'd the Old Church, being an handſome antique Building; the other a new round Building, a Faſhion pretty much in Vogue of late with the *Dutch*; they having lately built other Temples in the ſame Form. On the North Side of the *Hague* is a Walk from the *Hague* to *Scheveling* by the Sea Side, where King *Charles* II. embark'd for *England* at his Reſtoration. About ten Miles to the Southward of the *Hague* is *Houſlaerdyke*, a Palace of the late Prince of *Orange*. Two Miles from the *Hague* is the Village of *Ryſwick*, where the Prince had another Palace: Here was the Treaty of Peace between the Confederates and the *French*, *Anno* 1697. call'd therefore the Treaty of *Ryſwick*.

Delf. *Delf*, or *Delft*, is ſix Miles South-Eaſt of the *Hague*, and eight Miles North-Weſt of *Rotterdam*. The Streets of this Place are ſpacious, with Canals running along the Middle of them, and Trees planted on each Side of them; the Town is about two Miles in Circumference, and is encompaſs'd by an old Wall. This Place is famous for Earthen Ware, call'd therefore Delf-Ware, and is eſteem'd the beſt, next to *China*-Ware: But the Town is in general, more remarkable for Silence and Quietneſs, than for Hurry of Buſineſs, and is rather a fit Retirement for wealthy Gentlemen, than a Place of Concourſe for Merchants and Trading People. Here is a Stadt-Houſe, and an Arſenal, the Magazine of which blew up in the Year 1654, but it has ſince been rebuilt, and made more magnificent than it was before it was burnt. There are but two Churches in it, the old and the new; in the new Church is the Tomb of *William*, the firſt Prince of *Orange*, who was aſſaſſinated in this City. *Delfs Haven* lies between this City and *Rotterdam*, having a Communication with both by a Canal cut for that Purpoſe; it is ſtrongly fortify'd, and has three Banks to defend it againſt Inundations.

Dort. *Dort*, the Capital of the *Bailiwick* of *Dort*, is fourteen Miles South-Eaſt of *Rotterdam*. This City, with it's Diſtrict, became an Iſland by an Inundation, in the Year 1421, which demoliſh'd the Banks of the *Maes* and *Merwve*, and deſtroy'd fourſcore Villages, and twenty or thirty thouſand People, beſides drowning a large Tract of Land between *Dort* and *Brabant*; but the Water that deſtroy'd the Land about it is it's greateſt Security; for it ſtands between the *Maes* and the *Merwve*, and the Lake *Biesbos* encloſes it on the South and Eaſt. It is a large populous City; the Houſes high, and built of Brick; the Streets broad, and well pav'd: Here in the Year 1619 was held a Synod, call'd therefore the Synod of *Dort*. The *Britiſh* Merchants have two Churches in this City it being the Staple for their Cloth, as well as for *Rheniſh* Wines, and other Commodities brought down the *Rhine* and the *Maes*.

Gertrudenburg ſtands on the South Side of the Lake *Biesbos*, twelve Miles South-Eaſt of *Dort*, and ten Miles North of *Breda*: It belongs to the Houſe of *Orange*. It is naturally ſtrong, having Marſh on one Side, and on the other the River *Merwve*, which is here of a vaſt Breadth.

Gertrudenburg.

Gouda. *Gouda*, or *Tergow*, is ſituate at the Conflux of the Rivers *Gow* and *Iſſel*, twelve Miles North-Eaſt of *Rotterdam*. It is a handſome, large, ſtrong City; and the rather, becauſe the Ground about it lies ſo low, that they can lay all under Water if they ſhould be attempted by an Enemy.

Naerden. *Naerden*, twelve Miles Eaſt of *Amſterdam*, and fifteen North of *Utrecht*. It was taken by the *Spaniards* in the Year 1572, and after the Inhabitants had ſurrendred, the *Spaniards* ſummon'd them to the Market Place, and cut them to pieces in cold Blood; which inhuman Uſage the *Dutch* ſo reſented, that they irreconcileably meditate Revenge to this Day.

Williamſtadt, ſo called becauſe it was built by *William* I. Prince of *Orange*, and now belongs to the Family of that Houſe: It ſtands on the Water, call'd the *Roodvaert*, which ſeparates the Iſland *Voorn* from the Continent, and ſecures the Communication between *Holland* and *Zealand*. This *Voorn* is one of the principal Iſlands at the Mouth of the *Maes*, and on the South Side of it ſtands the City call'd

The Briel. The *Briel*, a fortify'd Town; twelve Miles Weſt of *Rotterdam*, and near the Sea, at the Entrance of the *Maes*. It is an old, but regular Building; a pretty good Harbour, and has a tolerable Trade; but it is here, as in moſt other Harbours that lie at the Entrance of a navigable River, the Towns higher up, on the ſame River, have the greater Trade, as being ſituate more in the Heart of the Country, and conſequently having a Communication with the Country round them; whereas Towns upon the Sea Coaſt have the Country but on one Side of them, and the Sea on the other; thus it may be obſerv'd, that *Newcaſtle*, upon the River *Tine*, ſome Miles up in the Country, is the chief Town for Trade upon that River; and *Stockton* upon the River *Tees*, ſeven or eight Miles up in the Country, is a Town of much more Trade and Shipping, than the now decaying Town of *Hartlepool* by the Sea Side near the *Tees* Mouth; and for the ſame Reaſon *Rotterdam* and *Dort*, lying higher up in the Country, have a much better Trade than the *Briel*. This was the firſt Town which revolted from the *Spaniards*, ſome of the Reſt following their Example. This was one of the cautionary Towns which the *States* deliver'd into the Hands of Queen *Elizabeth*, in Lieu of the Expence ſhe was at to defend them againſt the *Spaniards*. However, the peaceable King *James* I. kindly reſtor'd it to them again, for what Reaſon I know not, or what Obligation he found himſelf under to do it, if we read their Behaviour to the *Engliſh* in the *Eaſt Indies*. [*See Chap.* XV. *of the Deſcription of the* Oriental Iſlands, *eſpecially Pag.* 122, 123, and 124.] The Iſland upon which the *Briel* ſtands is call'd the *Voorn*. It is a fruitful Iſland, eſpecially for Corn, and is about twenty Miles in Length, and ſix in Breadth.

Helvoetſluys ſtands on the ſame Iſland of *Voorn* that the *Briel* is upon, and about four Miles to the Southward of it. It is reckon'd as ſafe a Harbour as any in the Country; the largeſt of the *Dutch* Men of War come up into the Middle of the Town; and here the *Engliſh* Packet generally takes in the *Holland* Mail; but it is a Place of no great Trade, for the Reaſons above-mention'd, with Reſpect to the *Briel*, the Merchants chuſing rather to have the Ships come higher up into the Country to load and unload, to ſave the Trouble of putting the Goods into other Veſſels.

Helvoetſluys.

Sommerſdyke is the Capital of the Iſland of *Overflackee*, which is to the Southward of the *Voorn*, and the next Iſland to it; but it is but a declining Town. This, as well as ſome other decaying Towns or Places of ſmaller Note, are ſcarce worth a particular Deſcription.

Sommerſdyke.

NORTH-HOLLAND.

THE Part of the Province call'd *North-Holland*, is that to the Northward of the River *Y* or *I*. The chief Towns are,

1. *Hoorne*, about twenty Miles North of *Amſterdam*, on the Coaſt of the *Zuyderſee*. The Product of this Part of the Country is chiefly Butter and Cheeſe, which they export to ſeveral Parts of *Europe*.

2. *Enck-*

2. *Enckhuyſen*, ten Miles North East of *Hoorn*, a Town of great Building and Shipping, and has a great Trade to the *Baltick* and in the Herring Fishery. There are other Towns, as *Medemblick*, *Alcmaer*, *Saanredam*, *Edam*, and *Purmer*; which two laſt Places, with the Country about them, was gain'd out of a large Lake, and is now call'd the *Purmerent*, as was the *Beemſter*, a Plot of Ground of ſeven or eight thouſand Acres, beſides other large Tracts of Land; and alſo all the Northermoſt Part of this Province is defended, from the Sea by a vaſt Mole, form'd by Beams of Timber driven into the Ground, and the Spaces between them fill'd up with vaſt large Stones and Cement.

Between the Ocean and the *Zuyderzee* lie ſeveral Iſlands; as the *Texel*, the *Ulie*, and the *Schelling*. Theſe Iſlands help very much to break the Violence of the Ocean, which would otherwiſe be very boiſterous, eſpecially when the Wind is at Northweſt.

Zealand. The ſecond of the ſeven Provinces is *Zealand*, or *Sealand*, ſuppos'd to be ſo call'd, as being ſo many Iſlands encompaſs'd by the Sea; as is the Caſe with an Iſland in the *Baltick* of the ſame Name, where *Copenhagen* ſtands. This Province contains eight Iſlands, *viz. Walcheren*, *South Beveland*, *North Beveland*, and *Wolferdyke*; on the Weſtern, *Scheld*, and *Schowen*, *Duvelland*, *Tolen* and *Oreſand*; on the Eaſtern, *Scheld*. This whole Province, including the Seas and Channels that ſeparate the Iſlands, lies between the Ocean on the Weſt, and *Brabant* on the Eaſt, and has the Iſlands of *Holland* on the North, and *Flanders* on the South. The principal of thoſe Iſlands is *Walcheren*, at the Mouth of the *Scheld*. Its North and Weſt Coaſt is waſh'd by the *German* Ocean. The chief Town is,

Middleburgh. 1. *Middleburgh*, ſo call'd as being near the Middle of the Iſland. It is a rich and populous City, and a Sea-port, having a Canal, by which good Merchant Ships can come up into the Middle of the Town. The Streets are broad and well pav'd, the *Stadt-houſe* and other publick Buildings are magnificent; and the Churches, of which are no leſs than twenty, are beautiful Fabricks. The Town is encompaſs'd with a Moat, a Wall, and other Fortifications. It was once a Biſhop's See, but has now loſt that Dignity, and the Palace with the Revenues are now converted to ſecular Uſes.

Rammekin. 2. *Rammekin*, at the Mouth of the Harbour of *Middleburgh*, once a conſiderable Place, but has undergone the Fate of the *Briel*, &c. before-mention'd, *viz.* has declined, as *Middleburgh*, that lies higher up towards the Middle of the Iſland, has improv'd.

3. *Flaſhing*, a good Harbour on the South Side of the Iſland, five Miles South of *Middleburgh*; it is a good Harbour, and a Place of good Trade, and well defended. 4. *Ter Vere*, three Miles North of *Middleburgh*, and *Armuyden* at the Entrance of *Middleburgh* River, which is now a decay'd Harbour.

The next Iſland on the Eaſt of *Walcheren* is South *Beveland*, about fifteen Miles long, and ſeven or eight Miles broad. The chief Town is *Ter Goes*, on the North Part of the Iſland. To the Northward of South *Beveland*, between it and North *Beveland*, is the Iſland of *Wolferdyke*; it is a ſmall Iſland, and has only a few inconſiderable ſmall Villages upon it. To the Northward of *Wolferdyke* is the Iſland of *North Beveland*, now in a great meaſure laid deſolate by Inundations. To the Northward of *North Beveland* is the Iſland of *Schowen*, fifteen Miles long, and ſix broad; but it was much larger till it was waſh'd away by the Sea. The chief Town is *Zurikzee*, a tolerable Harbour, and a Place of ſome Trade; alſo *Brouwerſhaven*, on the North Part of the Iſland, five Miles North of *Zirikzee*. The chief Subſiſtance depends upon Fiſhing and Husbandry. There is alſo *Bomence*, a ſtrong Fortreſs, two Miles to the Eaſtward of *Brouwerſhaven*, and over againſt *Goree*. There are alſo the Iſlands of *Duvelland*, *Tolen*, and *Oreſand*, but no Towns of Note upon them. Theſe Iſlands of the Province of *Zealand* are generally fruitful in Corn and Paſture; the Natives are chiefly employ'd in the Fiſheries, and though they have little or no Manufacture among them, yet they are a wealthy People; but their low Situation with Reſpect to the Sea, makes the maintaining of their Banks very chargeable, and the Air unwholſome.

Friezland. The third of the *United Provinces* is *Friezland*, bounded on the North by the Ocean, and on the Eaſt by *Groningen*; by *Overyſſel* and Part of *Zuyderzee* on the South, and by the other Part of the *Zuyderzee* on the Weſt. This Province is ſubdivided into *Weſtergo*, *Oſtergo*, and ſeven Wolden Towns. In *Weſtergo* are, 1. *Franaeker*, four Miles Eaſt of the *Zuyderzee*, and eight Weſt of *Leewarden*, a handſome ſmall Place, but not of any great Trade. 2. *Harlingen*, about five Miles Weſt of *Franaeker*; it ſtands upon the Coaſt of the *Zuyderzee*; it is pretty ſafe from the Attacks of Enemies, it being eaſily laid under Water upon Occaſion.

3 *Leuwarden* is a fortify'd Town, eight Miles to the Eaſtward of *Franaeker*; it is the beſt City in the Province, and the Reſidence of the Stadt-holder (when they have one,) and of the ſovereign Council, and is now the Reſidence of the preſent Prince of *Orange*, and his Conſort the Princeſs Royal of *England*; it is a Place of Trade, but what it is chiefly admir'd for, is it's fine ſumptuous Buildings, handſome Streets and Bridges, and the fine Gardens about it.

4. *Doccum*, ten Miles North-Eaſt of *Leewarden*, a Place of ſome Strength and Trade; but what is chiefly taken Notice of in it, is a fine Bridge, under which a Veſſel may paſs with her Maſts up. There is alſo *Bolſwaert*, *Staveren*, and the Iſlands of *Ameland* and *Shiermonikoge*, in the Ocean North of *Friezland*, but no good Harbour, or any thing worth noting in any of them.

This Country is ſo immerged in the Water in Winter Time, that they are forced to go from Town to Town by Cauſeways or Banks; but either by their Induſtry, or the Heat of the Sun, it is generally dry in Summer, and a great deal of good Arable and Paſture Land appears. Their Firing is chiefly Turf or Peat, which is either the Surface of their morally Ground, or dug out of Pits in it, and is ſo impregnated with a ſort of bituminous Matter, that it often takes Fire without any viſible Cauſe but the Heat of the Sun, and has burnt for ſeveral Leagues, till ſome Canal or Lake has interpos'd, and ſtopp'd it's Progreſs.

Groningen. The Province of *Groningen* and the *Omlands* is bounded by the *German* Ocean on the North by *Embden*, or Eaſt *Friezland* in *Germany* on the Eaſt; on the South by *Overyſſel*, and on the Weſt by *Friezland*, now deſcribed. Chief Towns are, 1 *Groningen*, at the Confluence of the two Rivers *Aha* and *Huneſus*, thirty Miles Eaſt of *Leuwarden*, and twenty South-Weſt of *Embden*; it is a large fortify'd Town, and by Canals cut they have a Communication with the Ocean and the Neighbouring Countries, and by that Means drive a briſk Trade with *Germany*; it is but two Miles in Circumference, but the Ground within the Walls is not all built upon, there being ſeveral large Gardens, Orchards, and Canals, which interſpers'd with Streets and ſumptuous Buildings, render the whole exceeding pleaſant.

2 *Dam*, the Capital of the *Omlands*, twelve Miles

Miles North-Eaſt of *Groninger*, a large Town but not wall'd; and 3. *Winſboten* a Fortreſs near the *Dollart* Bay; it is ſeventeen Miles Eaſt of *Groningen*, and twelve South of *Dam*, with ſeveral other Forts which lie on the Frontiers, which ſecure the *United Provinces* from any Attack on the *German* ſide.

Over Yſſel The next in order is the Province of *Over Yſſel*, which is bounded on the North by *Groningen* and *Friezland*, and on the Eaſt by *Munſter* in *Germany*; it has *Zutphen* on the South, and the *Zuyderſee* on the Weſt; it is divided into *Iſſeland*, *Twente*, and *Drente*. Chief Towns are.

1 *Deventer*, on the River *Yſſel*, ſeven Miles North of *Zutphen*, a large and populous City, and a Place of pretty good Trade; it was a Biſhop's See, but the *Dutch* aboliſh'd the Biſhoprick, and ſequeſter'd the Revenues to ſecular Uſes. What is moſt remarkable here is the Tower of *Norembug*; it is round in Form, the Walls ſeventeen Foot thick, and ſo large as to contain a a Garriſon of ſeveral thouſand Men; there are alſo the Towns of *Swoll*, *Campen*, and *Haſſalt* in *Iſeland*, and in *Twente* are the Towns of *Oldenſail* *Otmerſan*, and *Enſbeden*; and in *Drente* are the following Towns, of which the Capital is *Coverden*; it ſtands on the Confines of *Benthem* in *Germany*; it is naturally ſtrong, being ſituate upon an unpaſſable Moraſs, and commands the Paſs from *Munſter* in *Germany* into *Groningen* and *Friezland*, by which Means it is a Place of great Importance; the other Towns in *Drente* are *Mepple*, *Vollenhaven*, *Steenwick*, *Swarte*, *Sluce*, and *Blockzyl*.

Gelderland, The Province of *Gelderland* has formerly been divided into *Dutch* and *Spaniſh Gelderland*; the firſt of which is bounded by the *Zuyderſee* and *Overyſſel* on the North, the Biſhoprick of *Munſter* on the Eaſt, on the South by *Brabant* and the Dutchy of *Cleves*, and on the Weſt by the Provinces of *Holland* and *Utrecht*; it is divided into three Diſtricts, *Veluwe*, *Betuwe* (or *Batavia*) and the County of *Zutphen*.

The Veluwe The *Veluwe* is the Northermoſt Part of this Province, and is ſituate between the *Yſſel*, the *Zuyderſee*, and the *Rhine*. Chief Towns are 1 *Arnheim*, on the Banks of the *Rhine*, about thirty Miles South from the *Zuyderſee*; it is a large fortify'd Town, and in a wholeſome Air (when compar'd with other mooriſh Places in *Holland*) and is therefore inhabited by the beſt of Quality; and the Order and Neatneſs of the Buildings add very much to the Agreeableneſs of the Place. Ten Miles North-Eaſt of *Arnheim* is the Palace of *Dieren*, belonging to the late King *William*; and about ſeven Miles to the Northward is the Palace of *Loo*, in the middle of the *Welwe*, which being in a pleaſant Situation, was the Place of Retirement for that Prince, when publick Affairs would permit. 2. *Harderwicke*, on the South Eaſt Coaſt of the *Zuyderſee*, now a very declining Place, becauſe of the Sea waſhing it away. 3. *Nimguen*, on the River *Waal*, a Branch of the *Rhine*, Ten Miles South of *Arnheim*; it is a populous Place, with wide Streets, neat Houſes, with ten Churches, a handſome Stadthouſe, and two Hoſpitals in it. In the Year 1608 a navigable Canal was dug from hence to *Arnheim*, each of the two Cities contributing equally to it. 4. *Schenſkenſonce*, a ſtrong Fortreſs, at the parting of the *Rhine* and the *Waal*. This Fort commands both the Rivers, and is one of the principal Paſſes between *Germany* and the *United Netherlands*. There are other Places of leſs Note as *Tiel*, *Bommel*, &c. on the South Side of the *Waal*: Theſe are the chief Towns of *Betuwe* or *Batavia*, the Seat of the ancient *Batavi*, ſo often mention'd in *Roman* Hiſtory.

Zutphen. In the County of *Zutphen* is the City of the ſame Name, and Capital of the County; this City is on the River *Yſſel*, fifteen Miles North of *Arnheim*; the River *Berkel* runs through the Town, and divides it into the Old and New Town, between which there is a Communication maintain'd by two Bridges over the *Berkel*. The great Church is a ſumptuous Building, in which there is a brazen Font of curious Workmanſhip. There are the Remainders of an old Palace, and near it a high Brick Tower, of a Pyramidical Form, one of the greateſt Oraments of the City. In this County of *Zutphen* are alſo the Towns of *Doesburg*, *Groll*, &c. which laſt is a conſiderable Paſs from *Germany* to the *Low Countries*. *Zutphen* has good Meadow and Paſture Ground, where they feed plenty of lean black Cattle, brought from *Denmark* and the North of *Germany*, and fat them for a Market; other Parts afford good Corn.

Spaniſh Gelderland (now call'd *Auſtrian* and *Pruſſian Gelderland*) is bounded on the North by the Dutchy of *Cleves*, and by the Electorate of *Cologne* on the Eaſt; on the South by the Dutchy of *Juliers*, and on the Weſt by the Biſhoprick of *Liege*. The chief Towns are *Gelder*, *Raremond*, *Venlo*, *Wachtendonck*, *Stralen*, and *Stevenſwaert*. Having thus given a brief Deſcription of ſix of the *United Provinces*, viz. *Holland*, *Zealand*, *Friezland*, *Groningen*, *Overyſſel*, and *Gelderland*, I come to the ſeventh and laſt, which is

Utrecht, bounded on the North by *Holland* and Part of the *Zuyderſee*, and by *Gelderland* on the Eaſt and South, and on the Weſt by the South Part of *Holland*; it's Length and Breadth is nearly equal, viz. about twenty five Miles. Chief Towns, or I may rather ſay the chief Town, is *Utrecht*, the ancient *Antonina*, ſuppos'd to have been a *Roman* Colony; it ſtands on the Channel of the *Old Rhine*, twenty five Miles South-Eaſt of *Amſterdam*, and about as many North-Eaſt of *Rotterdam*; it is a large, populous, well built City, with Canals in the principal Streets, and is a Place of vaſt Reſort by Perſons of Diſtinction: There are two principal Canals, the *Vaert* and *Gracht*, which run the Length of the whole City, and over them are no leſs than thirty five Bridges. The Buildings on the Banks of the new *Gracht* are very magnificent; the Market-place is large and beautiful, and ſeveral handſome Streets center in it; and without the Town are beautiful Walks adorn'd with Rows of Trees, which the *Engliſh* call the Mall, in alluſion to thoſe in St. *James*'s Park *London*. The great Church, which was formerly a Cathedral, has a Tower of four hundred and ſixty Steps in height; from whence there is noble Proſpect of the adjacent Country, there being no leſs than fifty wall'd Towns to be ſeen from thence. Their Univerſity is in a flouriſhing Condition, abundance of Foreigners, *Engliſh* amongſt the reſt, reſorting thither for Education, and to take up their Degrees, which are more eaſily obtain'd here than at home; but Degrees taken up in *Holland* are not in ſo great Repute as thoſe taken up in *England*. The Students wear their ordinary Habits, and board in Town at private Lodgings; there being but few, if any, endow'd Colleges, as in our Univerſities of *Oxford* and *Cambridge*.

There are alſo the Towns of *Amersfort*, *Wick de Duerſtede*, *Rhenen*, and *Montfort*, but of no great Signification at preſent; only about *Amersfort* is ſuch good arable and Paſture Ground, that the chief Employment of the Inhabitants is Husbandry, Grazing, and Tillage; and to the Southward of the Town is *Soeſdyke*, a fine Hunting Seat belonging to the late King *William*, in a Foreſt of Ten Miles long and five broad, and abounding with great Variety of Game.

The Province of *Utrecht* is one of the moſt beautiful and healthful Provinces of the *United Netherlands*,

Netherlands, it being upon natural firm Ground, and not a Quagmire borrow'd, and gain'd out of the Sea, as a great Part of the *United Provinces* is. The Province of *Utrecht* was entirely subject to the *French*, and *Lewis* XIV. kept his Court in the Capital in the Years 1672 and 1673; but the *Germans* coming to the Assistance of the *Dutch*, expell'd the *French*, and made him glad to withdraw his Garrisons from the Towns he had taken, to defend his own Frontiers against the Attacks of the *Dutch*.

Buildings. I SHALL finish this Chapter with this general Account of their Buildings in *Holland* and the other *United Provinces*. Their Buildings are mostly of Brick, and differ little from those in *England*, only the Ground Floor bears the largest Dimensions, and every Story less and less; probably because at best their Foundation is marshy and rotten, and will not bear a weighty Superstructure. Their Kitchens and ordinary Rooms are frequently lin'd with *Dutch* Tiles instead of Wainscot, which notwithstanding looks exceedingly neat. They adorn their Rooms more with Pictures than Hangings; they often use Stoves instead of Chimnies, so that in the coldest Weather a Man may be as hot as in a Bagnio, and yet no Fire to be seen. In their ordinary Lodgings they have Cupboards, or Cabbins, in the Sides of the Room, like those in the Sides of a Ship, and so high from the Ground or Floor, that they require little Ladders or Steps to get up to them. And in their Inns, or Places of publick Entertainment, there are often six or more of these Cabbins together, where the Travellers must all tumble in Hand over Head; for a Person must either be of extraordinary Quality, or pay an extravagant Price, to have a Room to himself. But yet some of the best and most fashionable Places of Entertainment have Lodging and Furniture much the same as with us in *England*, and their Kitchen Utensils of Brass, Iron, *&c.* are kept extraordinary bright, and sometimes muffled up in Woollen, to preserve them from rusting; and their *China* and earthen Ware are rank'd in most exact Order in their Houses. Their Children's Cradles are slung by four Ropes like a weighing Scale, and hung at the End of a Pole like a Turner's Pole; by which Means, and the Help of a Nurse, they dance up and down, and rock the Children to sleep, without that hobbling Noise that is made by our Cradles here in *England*.

CHAP. IV.

Of the Persons and Habits of the Dutch; *also of their* Genius *and Tempers, Vices and Virtues; and of their Diet, Entertainment, Diversions, Roads, Carriages, and Way of Travelling.*

IT might be thought needless to give any Description of the Persons of the *Dutch*, by reason of their Vicinity to us, and being of the same Species with our selves; and yet as there is some thing in their Persons or Shape different from us, and peculiar to themselves, I should not do Justice to this History, if I did not give them their true Description.

THE *Dutch*, both Men and Women, are generally tall and strong; but have a gross Shape, nor is their Motion less disagreeable, for they move so heavily and aukwardly, that they are easily distinguish'd from the airy Motion of the *English*, *French*, *Spaniards*, or indeed from the Inhabitants of almost any other Nation. The Features and Complexions of the better Sort are tolerable, but as the generality of the labouring Part are mostly employ'd at Sea, or upon the Water, they are very much tann'd, which, added to their ordinary Shape, makes them make but a very indifferent Figure. They affect a plain Dress, except some of their Officers, who, as near as they can, endeavour to imitate the *French* Fashions. The Coats of the common Men have neither Shape nor Plaits, and their long Pockets are set as high as their Ribs; but the Women's Coats are so short, that they come no lower than the middle of their Legs, a Dress which would scarce be deem'd modest in *England*. They have no Curiosity in their Head-dresses, some only tying up their Hair with two or three black Knots, and when they go out, throw a Hood over them and then they are dress't; but some of them of late affect a *French* Dress, which in Time may probably prevail as much there as it does in *England*. They have their Musick-houses, and Ladies of Pleasure to frequent them, and these are commonly dress't in a Sort of Waistcoat and Jacket, something like the Riding-habits worn by the Women in *England*; but that Dress, added to a *Dutch* Shape, reduces the Women to an odd Sort of a Figure.

Genius. As to their Genius, Sir *William Temple*, before he falls upon that Subject in general, divides them into five Classes; 1. Boors, Husbandmen, or Labourers; 2. Watermen and Seamen; 3. Merchants and Tradesmen; 4. Renteneers, who live on the Rents and Incomes of the Estates left them by their Ancestors; and, 5. Gentlemen, and Officers of the Army. The Boors are industrious; but slow, both in Motion and Understanding; not to be ruffled, but rather perswaded: They are generally plain and honest, seldom aspiring much higher than their present Acquisitions in the World, and hence content to feed upon Roots, Herbs, Milk, *&c.* making what they have been brought up to, the Rule of their Living.

Seamen. THE Seamen that have seen more of the World, are (instead of being more polite) more surly and unmannerly; and our Author adds, that *as for their Valour, it is rather passive than active, they not being a very enterprizing People*; but as for this last Description of them, I must crave my Author's Pardon, if I suspend my Belief of it till I find some Reason to fall in with it; for I think their Acquisitions and extensive Trade in almost all Parts of the known World, proves them to be (or at least to have been) not only attempting, but prevailing People; but whether to impute it to their *Valour*, or rather to their *Baseness* and *Cruelty*, let the Affair of *Amboyna*, the *Banday* Islands, *&c.* be perpetual Testimonies.

THEIR trading People, whether Merchants or Mechanicks, are a little sharper in their way of Dealing; but they may rather be call'd crafty than polite, being cunning to take Advantage of the Oversight or Ignorance of those they deal with,

with, and thinking every Thing lawfully their own, that they can engross to themselves by any Artifice without downright Violence, or even with it rather than fail, as has been instanc'd above.

THE Rentencers live frugally, but delight in good Education, and chiefly in studying the civil Law, which they go to study at the Universities of *Leyden* and *Utrecht*, after they come from the Schools; and when they have finish'd their Studies, and if their Parents are able, they are sent abroad to *England*, *France*, &c. not often to *Italy*, and less to *Spain*, because they chiefly study their own Laws, to qualify them for their own Magistracy, the civil Officers of State being generally compos'd of such.

THEIR Gentry and Nobility are not very numerous in these Provinces, especially in *Holland*, having been much extinguish'd by their War with *Spain*; but the Nobility and Gentry that yet remain, generally affect the *French* Air and Dress, their Talk, Diet, and, as far as they can, their Gallantry, but mimick it very awkwardly, which is doubtless in some Measure owing to their Frugality, as being willing to initiate the most airy Fashions, but not prodigal enough to be at the unnecessary Expence of them, because they have such excessive Taxes laid upon them; and besides, they take more Delight in the Beauty and Convenience of their Canals, Bridges, Buildings, the Strength of their Towns, Commodiousness of Travelling, &c. than in the Fopperies of those, who, to the last Penny of Money or Credit, would act the Part of a Courtier without either the Credit, Principle, or Pocket of a good honest Country Farmer; and in this indeed, their Calculations are admirably exact, for no Person undertakes any Building or Contrivance, whether Canals, Causways, Bridges, &c. till he is first sure that he is prepar'd with both Men and Materials to finish the whole at the Time appointed; only to this general Rule there is this one Exception that I know of, and that is, that the *Stadt-house* of *Amsterdam* is not yet finish'd; but this, some merrily compare to St. *Paul*'s Church at *London*, as being design'd to be so magnificent a Building, that it may be improv'd by every Age or Fancy; but there are others as wise as the rest, who think that the Trade of *Amsterdam* will decline as soon as the *Stadt-house* is finish'd, as was the Case at *Antwerp*; and if so, it is to be suppos'd, that the *Dutch*, who upon other Occasions, have pursu'd their own Interest without any Regard to other People's Properties, will always leave that last Stone unlaid, which is so ominous as to their future Interest.

THEY are generally reckon'd a neat, clean People, of which Sir *William Temple* gives us this Proof from his own Experience. I shall give it in his own Words. He being at *Amsterdam*, and entertain'd at one of the chief Burgo-Master's Houses, he being then Ambassador in *Holland*, had contracted a great Cold, which occasion'd his spitting very much; which a good handsome Girl observing, attended in the Room with a clean Cloth in her Hand to wipe the Floor and clean it after him; at which, Sir *William* express'd some Uneasiness at the Trouble he gave; whereupon the Master of the House told him, that if his Wife had been at home he would not have escap'd so well, for she would probably have turn'd him out of Doors for daubing her House, and that without any Regard to his Dignity as an Ambassador; and told him moreover, that there were two Rooms in the House kept so clean, that he himself never set Foot in them, nor he believ'd never any Body else, except now and then to clean them.

THERE are other Instances of the extraordinary Cleanliness of the *Dutch*; of which although to instance in a great Number, would be too large a Digression, yet one may be proper instead of many. It was an Observation of the Secretary of *Amsterdam*, who being in a House, and looking out at the Window, saw one of the Magistrates come to the Door of the House over against him, to pay a Visit to the Mistress of the House. Upon knocking at the Door, a lusty Maid Servant came to open it; and he telling her his Business, and finding that the Mistriss was at home, offer'd to step in; but the Maid observing that his Shoes were not very clean, repuls'd him, to prevent his dirtying the Rooms; but not being willing to prevent the intended Visit, she turn'd her Back towards him; and taking his Arms over her Shoulders, took him upon her Back, and carried him cross two Rooms to the Foot of the Stairs that went up to her Mistress's Chamber, where she set him down, and made him stay till she fetch'd him a Pair of Slippers; which he having put on, she told him he might walk up to her Mistriss, for she was in her Chamber. *An Instance of the Dutch Cleanliness*

THE common labouring People, or poorer Sort of Husbandmen, live mostly upon Roots, Herbs, Milk, Pulse, and the like; but the middling, or rather better Sort, when compar'd with the meanest, live something better; for about *November* they purchase Beef for the Winter, being one Ox, or more, for a Family, or perhaps two Families an Ox between them, according to the Number of People and the Masters Ability. Some Part of this they salt and smoak-dry, as in some Places in *England*, and eat it with Bread and Butter, and Sallad. Some they pickle, (or corn as we call it) and put it down in a powdering-Tub in large Pieces; one of which is generally dress'd on a *Sunday*, and what is left on that Day, comes to the Table every Day the Week following as long as it lasts, with some additional Dishes of Greens or other Garden-Stuff that the Season affords, which is generally very plenty with them. *Bologna* Sausages, pickled Herrings, and such relishing Victuals, are much admired by them; and when they eat fresh Fish, they chuse to have their Butter oyl'd; and some of our *English* residing there, affirm, that after having been us'd to that Sort of Cookery, they think it preferable to well melted Butter. They seldom use Anchovies in their Sauce, notwithstanding that they so much admire Things salt and relishing. Their Cheese and Butter are extremly good, and the latter they so much admire, that they scarce move from home without a Box of Butter in their Pockets. They use great Numbers of Oysters, which they with their wonted Modesty fetch from our *Kentish* Coast without any Regard to Liberty or Property. They have Plenty of good Beer, Wine, and Brandy; and as for Geneva, it is so much in Request among them, that half a Pint of Geneva and a Roll, is reckon'd a delicious Breakfast for a strong labouring Man. *Diet.*

THEY Use the common Diversions of Billiards, Chess, and Tennis, as with us; but they are not so much for Games of Chance as they are for more profitable Diversions, as the Shooting of Wild-Geese and Ducks in Winter, and Angling in Summer; and in the Severity of the Frost, their Sledges and Skates are both their Diversion and their Exercise, both to recreate themselves and to keep themselves warm. The Swiftness of their Skating is incredible, no running Horse being able to keep pace with them. And the Women come not short of the Men, for they not only skate for Pleasure, but skate to Market with their Baskets and Bags of Goods. Brandy is another

other Play much uſed when the Earth is cover'd with Ice and Snow, and they ſeldom play for any Thing but Drink; and in Summer, Multitudes of People are continually walking along the Banks of fine Canals well planted with Trees; and at the End of every Walk is a Tavern, embelliſh'd with all tempting Varieties, as Summer-houſes, Grottos, Muſick, *&c.* Theſe, with good Wine, Fruits, and Cakes, make the Entertainment ſo diverting, that ordinary working People will ſtrain very hard for an Opportunity to regale themſelves now and then with thoſe Entertainments.

As it has been obſerv'd, that ſome Part of the Country abounds much more with Canals than with good Roads, I ſhall now obſerve, that their Way of travelling is moſtly in cover'd Boats drawn by Horſes, which go along by the Edge of the Canal at the Rate of about three Miles an Hour, and at the Pay of a Penny a Mile, with the Liberty to carry a Portmantua or Proviſions along with him. You are in theſe Veſſels ſecur'd from the Weather, nor do they undergo any ſenſible Motion, ſo that one may read or converſe in them as well as in a Houſe aſhore, and may go to almoſt any Town any Day, and to ſome Towns oftener than once a Day. There is a Bell rings at certain Times, juſt when they take Paſſengers in, and after that they will not wait a Minute, though they ſee a Paſſenger a coming. They always pay for their Paſſage beforehand; for as ſoon as ever the Paſſengers are ſet down in the Boat, there is a Man comes to collect the Fare; and if an Accident happens that he cannot carry you to your Journey's End, you muſt procure your Paſſage ſome other Way, and be at a freſh Charge.

Their Canals and Bridges are kept in extraordinary Repair, as are alſo their Highways, which makes Carriage cheap, and conſequently their Goods can be afforded cheaper, which is a great Encouragement to Trade, and to Foreigners to come to furniſh themſelves at their Markets.

CHAP. V.

Of the Government of the United Provinces, *and of the* States General *and* Provincial, *with the Government of their Cities, as ſo many diſtinct Republicks.*

THE *United Provinces* are a Confederacy of many independent States; for not only every Province is abſolute in itſelf, and independant of any other Province or Power of any kind, but there are in each Province ſeveral Republicks independant of each other, and which are not bound by the Decrees or Acts of the States of the Province, except ſuch Acts be firſt ratify'd by each particular City or Republick, which ſends Deputies or Repreſentatives to the Provincial Aſſembly.

But then as thoſe Provinces or Republicks having no Dependance upon one another, makes them more abſolute within themſelves, this Power veſted in ſo many particular Bodies, makes the Power of the States General leſs abſolute; for they of themſelves can neither make Peace nor War, enter into new Alliances, nor raiſe Money, without the Conſent of every Province; nor can any of thoſe Provinces do the ſame without the Unanimous Conſent of every City or Republick in that Province which hath a Voice in that Aſſembly. In civil Caſes indeed there ſometimes lies an Appeal from the Courts of Juſtice in the City to the Provincial Courts of Juſtice, but in criminal Matters there lies no Appeal, nor can the States of the Provinces themſelves puniſh or pardon an Offender, or any way exerciſe Juriſdiction within any of the Cities or Republicks of the Province, but by the Courts and Officers of the Place where the Thing is to be put in Execution.

But although, as above, every Province, as alſo every City or Republick, is independant of the reſt, yet as their ſeveral Forms of Government are ſo nearly alike, it will be needleſs to trouble the Reader with particulars of them all, but I ſhall rather inſtance in ſome of the chief of them, from whence may be form'd a tolerable Judgment of the reſt; and firſt of the Province of *Holland*, which may not only be deem'd the Principal, but in point of Trade, Riches, Forces, and great Towns, may be eſteem'd equal to all the reſt taken together.

The Voices of the States of *Holland* are now nineteen, which may be divided into three Claſſes; the firſt is that of the Nobility and Gentry, which is altogether look'd upon as but one Voice, and that the firſt in order; the next in the ſix Cities, which at firſt were the only ones that had Voices, *viz. Dort*, *Haerlem*, *Delft*, *Leyden*, *Amſterdam*, and *Tergow*, ſix Voices. Laſtly, the twelve Cities, which *William* of *Naſſaw*, their firſt Stadtholder, added, *viz. Rotterdam*, *Gorcum*, *Schiedam*, *Schonhoven*, *Briel*, *Alcmaer*, *Horne*, *Enchuyſen*, *Edam*, *Monnikdam*, *Medenblick*, and *Permeren*; which make in all nineteen Voices: The laſt eighteen are deem'd of equal Force or Authority; ſo that the little Town of *Permeren*, as to the Voice of it's Repreſentatives, is of as much Validity as that of *Amſterdam*, though *Amſterdam* is ſaid to contribute almoſt as much to the Publick Expence as all the reſt of the Cities of the Province.

The Nobility ſubſtitute eight or nine of their Number to repreſent the whole; and when one of thoſe Repreſentatives dies, they chuſe a Succeſſor, to keep up their Number; and tho' all their Voices is but as one of the nineteen, yet they are in great Power with Reſpect to Civil, Military, and Eccleſiaſtical Poſts and Power; and this gives them ſuch an Influence over the reſt, that though they have but one Voice, yet that being the firſt, it ſtrongly byaſſes the reſt, inſomuch that having heard their Voice, one may very often give a great Gueſs at the Reſult of the whole. The Grand Penſionary (like the Speaker of the Houſe of Commons in *England*) ſits with them, and delivers their Sentiments; and although it is not in his Power to determine any thing againſt a Majority, yet if that Majority do not fall in with him, he has a Power to poſtpone an Affair of the utmoſt Importance, and perhaps ſometimes by that Means worry the oppoſite Party into a Compliance.

The States of *Holland* generally aſſemble at the *Hague* four times in a Year, *viz.* in *February*, *June*, *September*, and *November*, in the three firſt

first of which they fill up vacant Offices, renew the Farming of the Taxes, regulate Differences between Towns, &c. and in *November* they consider of the Charge, Forces, &c. allotted by the States General as the Proportion of this Province for the ensuing Year.

The Chamber of Accounts manages the Revenues of the Province, and disposes of the Demesne Lands of the States of the Province; but their Revenue is seldom apply'd to publick Use, except upon urgent Necessity, the original Design of it being to relieve superannuated Officers and Magistrates, that those who have spent their Time in the Service of the Publick may have an honourable Retreat, and a comfortable Subsistance in their old Age; and this they observe so strictly, that I never heard of any Gentleman's Footman, or favourite Servant, that was reduc'd to participate of the Benefit.

Friezland. The Governmen of the Province of *Friezland* differs very much from that of *Holland*; it consists of four Members, *viz.* the Quarter of *Ostergo*, *Westergo*, *Seven Wolden*, and the Towns of the Province. The Quarter of *Ostergo* contains eleven Bailages, that of *Westergo* nine, and that of *Seven Wolden* ten, each Bailage containing twelve or fifteen Villages, or little more or less. The Towns which send Members are eleven, and every Bailage sends two, and these compose the Assembly of the States Provincial, which disposeth of all vacant Offices, chuses the nine Members who compose their Council of State, and the twelve Judges, *viz.* three for every one of the four Quarters, to determine civil Cases or Appeals; as also criminal Causes, this being the only Court in *Friezland* authoriz'd for that Purpose, tho' in *Holland* every Town has the Determination of criminal Matters vested in their own Magistrates.

Groningen &c. The Government of *Groningen* and *Overyssel* is much like that of *Friezland*; and that of *Gelderland*, *Zealand*, and *Utrecht*, like that of *Holland*, or at least without any material Difference.

The Nobility of *Zealand* having been much impaired in their War with *Spain*, and the (then) Prince of *Orange* being Proprietor of the Marquisates of *Flushing* and *Terveer*, this Prince alone represents that Part of the States of the Province, and as such bears the Title of sole Noble of *Zealand*, by virtue of which he has the first Place and Voice in the Assembly of the States there, as also in their Council of State, and Chamber of Accounts; and as Sovereign of *Flushing* and *Terveer*, he constitutes the Magistrates; and it may be said disposes of the Votes of these two Towns as well as of those of the Nobility, and there are but six Towns which send Deputies to the Assembly of the Province of *Zealand*.

States General The Body of the States General themselves are compos'd of the Representatives of the seven Provinces, and were compos'd of about eight hundred Persons; but this great Number made their Debates tedious and confus'd, and therefore they assembled but seldom, and substituted the Council of State to act in their stead when absent, and only summon'd a new Assembly of the States upon extraordinary Occasions, till the Earl of *Leicester* resign'd the Government of these Provinces; ever since which the Provincial States, by their Representatives, assemble, under the Name of the *States General*, and all the Members of the State have seldom, if ever, been assembled since that Time. The States General assemble and sit at the *Hague*, where they give Audience to Ambassadors, and exercise all other Acts of Sovereignty as one Man; but subordinate to them, are the Council of State, the Admiralty, and the Treasury; every one of which act in their proper Spheres in Matters of less Moment.

No Stadtholder, Governor, or Military Officer, can sit and vote among the States General; and to do justice to every Province, they change the President of the Assembly once a Week, and every Province severally takes it's Turn to appoint a new President. The States sit at a Table sufficient to hold about thirty Persons, (the Number of the Members when all present;) the President sits at the Middle of the Table, on one Side; the Ambassador that is to have an Audience, sits over against him on the other Side; and the Secretary at one end of the Table. Matters of less Moment are determin'd by a Majority, but if Peace or War, Foreign Alliances, or coining of Money, or the Priviledges of any Province, or the like, is propos'd in these Assemblies, every Province must concur before any thing can be determined.

The Council of State consists of Representatives from the several Provinces; of which *Holland* sends three; *Gelderland*, *Zealand*, and *Utrecht*, each of them two; and *Friezland*, *Groningen*, and *Overyssel*, each of them one; which is twelve in all, every one presiding in their Turns; and the Stadtholder, or Governor of the *United Provinces*, (when there is one) gives the decisive Voice in Matters of great Consequence.

At the Expiration of every Year, the Council of State delivers to the States General an Estimate of the Expences for the ensuing Year, which is demanded of the States Provincial, paying their respective Shares in the following Proportion, *viz.*

For every hundred Pound Sterling that is to be raised, there is paid by the Province of

	l.	*s.*	*d.*
Gelderland	7	0	0
Holland	42	0	0
Zealand	13	0	0
Utrecht	8	0	0
Friezland	17	0	0
Overyssel	5	0	0
Groningen and the *Omlands*	8	0	0
	100	0	0

The next Office of Dignity is the Court of Admiralty, which, when the States General and Council of State have concluded what Number of Ships, and what Force, is necessary to be fitted out, have the sole disposing of all Maritime Affairs, as to the Choice and Equipment of Ships, appointing Officers, manning and victualing the Ships; they have also the Recognizance of Piracies and all other Crimes committed at Sea; but in most other Cases it being much the same with our Admiralty in *England*, I shall not enlarge any further upon it. *Admiralty.*

The Princes of *Orange* have, since the seven Provinces were united, borne a great Share in the Government of them, and had indeed the most essential Part in framing and constituting the Government. Prince *William* I. of *Nassaw* was Governor of *Holland* and *Zealand* in the Time of *Charles* V. and his Son *Philip* II. of *Spain*, and was universally esteem'd by all the other Provinces, who unanimously elected him their Stadtholder, ever since which they have always had a Head under some Title or other, their Power being always made subservient to their Laws. This Prince had the Command of all their Forces by Sea and Land, as Admiral and Captain General, &c. and thus it continued till the Time of the Death of the late King *William*'s Father, when the Province of *Holland* influenc'd the rest of the Provinces so far as entirely to suppress the Office of Stadtholder, sharing that Authority among the several Magistrates of the State, as it continues to this Day.

CHAP. VI.

The Modern History of the United Provinces, *commencing with the Year* 1609 *when a Truce was concluded with* Spain; *with a brief Account of the Princes of* Orange *which were their Stadtholders.*

MONARCHY and a Republican Form of Government, have been severally espous'd and contended for by People of different Opinions ever since the Foundation of the *Dutch* State. *William* Prince of *Orange*, who was their first Stadtholder and Captain General of the *United Provinces*, notwithstanding that he contributed so faithfully and successfully towards the rescuing them from *Spanish* Tyranny, had privately form'd a considerable Party, who were ready to compliment him with the Sovereignty of these Provinces, if he had not been basely cut off by Assassination; [*See* Chap. I.] which when *Barnevelt* Pensioner of *Amsterdam* saw, he prevail'd upon the *States* to chuse *Maurice* the second Son of the deceas'd Prince their Stadtholder, (his eldest being disqualified by his being bred a *Roman* Catholick;) but *Maurice* had not long enjoy'd his Dignity, till some of the Creatures about him, envying the Intimacy that was between him and *Barnevelt*, began to insinuate to him that *Barnevelt* was the most likely Person of any to defeat his Designs of Sovereignty, which induced Prince *Maurice* to look upon *Barnevelt* as a dangerous Enemy, and to endeavour to suppress him accordingly; in order to which, he endeavour'd to dissolve and invalidate the last Treaty with *Spain*, which *Barnevelt* had taken so much Pains to bring to a Conclusion, which still increas'd their mutual Animosity.

ABOUT this Time, viz. about the Year 1608, some Religious Disputes arose between *Arminius* and *Gomar*, both Professors of Divinity at *Leyden*, the former asserting the Doctrine of Free-will, as the latter did that of Predestination; they both gain'd abundance of *Proselytes*, and both Opinions were so strenuously defended by their respective Advocates, that it became not only the Subject of common Conversation, but the Discourse of Schools and Pulpits; whereupon the *States* appointed a Conference to be held at the *Hague* between *Arminius* and *Gomar*; but after a few hot Arguments they parted, without coming to any Determination in favour of either Opinion, at which the common People were still more rigorously divided into Parties, the Magistrates and principal Burghers siding with *Arminius*, and the Soldiers, Clergy, and Common People (who were all generally in the Interest of Prince *Maurice*) adhering to *Gomar*.

Arminius dy'd in the Year 1609; whereupon his Disciples drew up an Account of their Tenets, and presented it to the *States General*, therein calling themselves *Remonstrants*, the contrary Party then assuming the Character of *Contra Remonstrants*: *Barnevelt* was a Follower and Espouser of the former; so that now their Dispute was not only religious (if such Disputes may be call'd so) but national too. Prince *Maurice* did not with any heat espouse either Party, but yet observing that *Barnevelt* had join'd the Magistrates and Burghers attended with the *Arminians*, and observing at the same Time that the Soldiers, Common People, and Clergy, took Part with *Gomar*, he join'd his Interest with theirs and became a *Gomarist*; and for the Sake of raising an Interest against *Barnevelt*, he became a *Contra Remonstrant*, and charg'd *Barnevelt*, that as a *Remonstrant* he was likewise in the *Spanish* Interest, and that he was endeavouring to introduce Popery and Slavery again; upon which *Barnevelt* was himself under a Necessity to publish Papers in Vindication of his own Reputation and Character. These Disturbances, under Pretence of Religion, so exasperated the *States General*, that they forbid the Clergy to treat of the Doctrine of Predestination in publick, which was a very great Mortification to Pr. *Maurice* and his Adherents.

ABOUT the Time of this Disturbance the *Dutch* sent to *James* I. King of *England*, offering to pay him part of the Money due to *England*, for the Auxiliary Troops lent them in the Reign of Queen *Elizabeth*, and for which they had given the *English* the Possession of the Cautionary Towns, by way of Security; but this Moiety of Money they offer'd to pay only upon Condition that King *James* would evacuate the said Cautionary Towns, (the whole Security for a Part of the Debt,) and the cunning *Barnevelt*, not ignorant of King *James*'s flexible Temper, follow'd his Argument till he got him persuaded, or surpriz'd, into a Promise of delivering them up. This some impute partly to an easy Temper in King *James*; but the Truth is, he was then but in ill Terms with his Parliament, which the cunning *Dutch* being not quite ignorant of, took the Advantage of his Want of Money, the easier to draw him to this pernicious Bargain, whereby, to the great Joy of the *Dutch*, the *United Provinces* were quite disengaged from all Obligations to the *English*, notwithstanding the Service we had done them, when they were not able to defend themselves; and however inadvertently King *James* might be drawn into this Bargain, his Ministry was very much blam'd for it, and he himself so much repented his suffering himself to be drawn into it by *Barnevelt*, that he meditated his Ruin, and combined with Prince *Maurice*, jointly to put that Design in Execution; which was a Design very acceptable to Prince *Maurice*.

THE Differences about Religion between the *Arminians* and the *Gomarists* still increasing, Pr. *Maurice* with a strong Force of his own Party march'd through the Provinces, banish'd the *Arminian* Preachers, and displac'd their Magistrates, and fill'd up the Vacancies with those of his own Party. Thus he reform'd (as he call'd it) the Cities of *Nimeguen* and *Zutphen*, they having declar'd for the *Arminians*, as had also the Cities of *Campen* and *Arnhem*; but he reform'd them by Force, or (as a certain Author says) dragoon'd them into better Manners, and restor'd the Preachers of the *Calvinists* to their Pulpits. Thus Prince *Maurice* march'd to pursue his Conquest against the *Arminians*, still going towards *Utrecht*, he receiv'd the News of the Death of his elder Brother *Philip William* Prince of *Orange* by Birth. This obliged Prince *Maurice* to return with all Speed to the *Hague* to settle the Affairs of the Deceas'd, who dying without Issue, left *Maurice*

the Principality of *Orange* and the Reſt of his large Poſſeſſions.

In the mean Time, *Barnevelt* finding the contrary Party increaſe and grow too ſtrong for him, eſpecially now when their Leader was advanc'd to be Prince of *Orange*, he publiſh'd an Apology for himſelf, repreſenting to them the Services he had done the Republick and the like, which had ſuch Influence upon them, that they took him into their Protection, while the Prince of *Orange* purſu'd his Reformation both in the Church and in the Magiſtracy, disbanding the *Arminian* Garriſons, depoſing their Magiſtrates, and on ſome, inflicting Impriſonment, Baniſhment, *&c.*

The Prince of *Orange*, reſolving to ſtrike while the Iron was hot, proceeded next to ſeize ſuch Perſons as had been moſt active to oppoſe his Sovereignty; and here his Eye was chiefly fix'd upon *Barnevelt*, amongſt many others, charging them with inciting Commotions at *Utrecht*, entering into Conſpiracies againſt the *States General*, and being Popiſhly affected, and the like.

The King of *France* endeavour'd to reconcile thoſe Differences, but the Prince of *Orange* oppos'd, and found Means to diſappoint his Endeavours; and like an arbitrary Prince, continued to diſplace the Magiſtrates, *&c.* that were not of his Party. In *Rotterdam*, where the *Arminians* prevail'd moſt, he took from them their three Churches, and gave them to the *Gomariſts*, his own Party, and baniſh'd the moſt conſiderable of the *Arminian* Preachers, without any Regard to *John Wytenbogart* himſelf, though formerly one of Prince *Maurice*'s chief Favourites.

Upon this the *States* of *Holland* demanded the Releaſe of *Barnevelt* and others of his Party, but in vain; and *Ledenberg* of *Utrecht*, then in Cuſtody, expecting no Quarter, laid violent Hands upon himſelf in Priſon, and thereby prevented his being expos'd to a publick Execution. The *French* King continu'd to uſe his Intereſt in favour of *Barnevelt*, but to no purpoſe; for the King of *England* joining Prince *Maurice*, render'd all Attempts againſt him ineffectual. And now moſt of that Party, who had been the chief Sticklers againſt a National Synod, being baniſh'd, confin'd, or otherwiſe ſuppreſs'd, a Convocation was aſſembled at *Dort*, to which they invited the Divines of the reform'd Churches in *Europe* to ſend their Deputies; and in the mean Time, Provincial Synods were held to agree upon Points to be diſputed in the National Synod, and to appoint Deputies to repreſent them there. The *Arminians* obſerving ſome Practices uſed in the Provincial Synods, which by ſome partial Arguments therein uſed, ſeem'd to tend only to the excluding them from the National Synod, the *Gomariſts* proteſted againſt it; and by the Influence of the Prince of *Orange*, they procur'd the Baniſhment of many more of the *Arminian* Preachers; and at the ſame Time, the *States General* diſpatch'd Letters to the King of *Great Britain*, the *French Huguenots*, the *Swiſs Cantons*, *Geneva*, &c. to ſend their reſpective Deputies to the National Synod; and they all repair'd thither accordingly, except the *Brandenburghers*, and the *French Huguenots*. The chief Reaſon of the Abſence of the latter, is imputed to the *French* having eſpous'd the Cauſe of *Barnevelt*, and of the *Arminians* in general.

The Synod being open'd, (which was in *November* 1618.) the Members were given to underſtand, that they were not to be treated with by way of Conference, but muſt look upon themſelves as being ſummon'd before their Judges; and for that Reaſon, they were to withdraw as ſoon as they had propos'd Reaſons for their Tenets, and Arguments in Defence of them. The *Arminians* thought this a Piece of Partiality, and a Hardſhip upon themſelves, and declar'd that they could not acknowledge this Synod to be a legal Aſſembly, the Judges themſelves being of a Party. And thus with religious Bickerings on both Sides, they ſpent ſome Time to little Purpoſe. However, at laſt they ſettled their Canons relating to the Doctrines of Predeſtination, Election and Reprobation, Free-will, Grace, Perſeverance, *&c.* and having condemn'd the *Arminian* Doctrine of Free-will, *&c.* ſet up their Opinion as a Rule of Faith in all the *Calviniſt* Churches in *Europe*; and from this Time, the other Extream of abſolute Predeſtination prevail'd.

The *Gomariſts* having thus gain'd the Aſcendant, began to conſider what Judgment they ſhould paſs upon the Perſons of the *Arminians*; but that Propoſal was rejected, it being thought ſufficient, that the *Arminian* Tenets ſhould be publickly renounc'd, and their Preachers depos'd, and render'd incapable of any Eccleſiaſtical Functions or Benefices. And they being thus ſuppreſs'd, the unwearied Prince of *Orange* took the utmoſt Advantage of this Opportunity to compleat the Deſtruction of *Barnevelt* and his Party; in Order to which, he procur'd twenty ſix Judges to be appointed by the *States General*, all of them being Perſons previouſly devoted to his Service, who paſs'd Sentence of Death upon *Barnevelt*, for his having defended, and afterwards attempted, to tolerate the *Arminian* Doctrine. This Sentence occaſion'd great Diſcontents and Murmurings, and made ſuch a Noiſe in the World, that the *French* Ambaſſador deſir'd inſtantly an Audience of the *States*; but being deny'd it, he ſent a Letter to them to demand in his Maſter's Name, that they ſhould not ſhorten the Life of that antient Miniſter; but that avail'd nothing; for *Barnevelt* was beheaded next Day in the Court of the *Hague*, over againſt the Prince of *Orange*'s Apartment, the Prince himſelf being a Spectator to this Tragedy, which himſelf had been at ſo much Pains to bring about. *Fame de la.*

The People ſo much blam'd the Prince's Severity in this Execution, that he thought it prudent to mitigate the Sentence of *Hoogebert* and *Grotius*, who were condemn'd to perpetual Impriſonment, the latter of which eſcaped by a Stratagem; for he having obtain'd Leave to have a Trunk of Books brought to him and carry'd back as he ſaw Occaſion, when the Frequency of its Paſſage by the Centry had worn off all Suſpicion, his Wife lock'd him in the Trunk, and he was carried off to *Gorcum*, and from thence to *Antwerp*, from whence he eſcap'd to *Paris*, where the *French* King allow'd him a Penſion of a thouſand Crowns a Year. And to make his Eſcape the leſs ſuſpected, and prevent his being purſued, his Lady ſtaid behind in his Apartment, lying upon her Husband's Bed, and in his Night-Gown and Cap, under a Pretence of its being *Grotius*, and that he was ſick; this ſhe continu'd ſome few Days without any Suſpicion of a Fraud, till her Husband was eſcap'd quite out of Danger, and then ſhe follow'd him to *France*, where they both, and many of their Party met with a kind Receprion, and were allow'd Liberty of Conſcience.

On *March* 27. in the Year 1625. K. *James* I. dy'd; and on *April* 23. the ſame Year, dy'd Pr. *Maurice*; upon whoſe Decaſe, the Provinces of *Gueldres*, *Holland*, *Zealand*, *Utrecht*, and *Overyſſel*, choſe his Brother *Frederick Henry* their Stadtholder, Captain General, and Admiral; but the Province of *Gronningen* conſidering that *Ernſt Caſimir* had been Stadtholder of *Friesland*, and Lieutenant to Prince *Maurice*, they choſe him for their Stadtholder.

At the ſame Time that Prince *Frederick Henry* was advanc'd to the Sovereign Dignity, the *Spaniards* were maintaining the Siege of *Breda*; and he willing to ſignalize himſelf in an Attempt to relieve the Town, miſcarried; and inſtead of having the Satisfaction to raiſe the Siege, had the Mortification to ſee it ſurrender'd to the *Spaniards* the firſt *June* after his Acceſſion.

This new Prince of *Orange* was not ſo inveterate againſt the *Arminians* as Prince *Maurice* had been, but put a Stop to the Perſecution againſt them, and declared himſelf favourably in reſpect of *Grotius*, then in *France*, as above obſerv'd. And as a further Inſtance of Encouragement, the Kings of *Denmark* and *Sweden* invited the *Arminians* to ſettle in their reſpective Dominions. Thoſe who fix'd in *Sweden*, ſettled at *Gottemburg*; and thoſe who went to *Denmark*, fix'd at *Gluckſtat* on the North Bank of the *Elbe* below *Hamburg*; *Frederick*, Duke of *Holſtein*, aſſign'd them a Tract of Land on the Banks of the River *Eyder*, upon which they built a City, and call'd it after the Donor, *Fredericksburg*.

In the Year 1629. the Prince of *Orange* took *Herlogensboch* and *Boiſleduc* from the *Spaniards*; and in 1632. he took *Venlo*, *Ruremond*, and *Maeſtricht*; and afterwards *Limburg*, and *Orſay*; and in 1633. he reduc'd the Fortreſs of *Rhimberg*. The *Spaniards* upon this prepar'd to reſiſt the *Dutch*, and if poſſible to retake the Places they had loſt; whereupon the *Dutch* enter'd into an Alliance with *France* in the Year 1634, jointly to purſue the Conqueſt of the *Netherlands*, with an Agreement, that when that Country ſhould be conquer'd, the Provinces of *Luxemburg*, *Namur*, *Hainault*, *Cambray*, and Part of *Artois*, ſhould belong to the *French*, and the reſt of the *Spaniſh Netherlands* to the *Dutch*; purſuant to this, the *French* King order'd Marſhal *Chatillon* to join the Prince of *Orange* in *Brabant*, with twenty thouſand Foot, and ſeven thouſand Horſe; which the *Spaniards* hearing of, march'd to prevent their Conjunction, but were utterly defeated; whereupon *Chatillon* march'd to *Maeſtricht*, and join'd the *Dutch* Army, which together made an Army of fifty thouſand Men, over all of whom the Prince of *Orange* was to be Generaliſſimo by Contract; but here a Demur intervened, for the *Dutch* conſider'd that if any ſuch Conqueſt ſhould be made, and the *French* ſhould have Poſſeſſion of the ſtipulated Part of the Conqueſt, the *French* might be more troubleſome Neighbours than the *Spaniards* had been; and this Suſpicion was rather confirm'd, becauſe *Chatillon*, the Commander of the *French* Forces, was Brother-in-Law to Cardinal *Richlieu*, Prime Miniſter of *France*, who had before endeavour'd to ſurprize the City of *Orange*. The Prince of *Orange* and the *States*, reſolv'd neither to fall out with the *French* General, nor do any thing in conjunction with him; whereupon the Prince of *Orange*, as Generaliſſimo, led the *French* Forces a Wild-goole Chace; and by Marches and counter Marches, and Want of neceſſary Proviſions, he ſo harraſs'd and tir'd the *French* Troops, that after a Seaſon ſpent, and nothing done, of about thirty thouſand *French* which came out of *France* for the *Netherlands*, not above four thouſand return'd to carry the News of the Loſs of ſo many without any Conqueſt made, or ſo much as a Blow ſtruck.

But Cardinal *Richlieu* being ſurrounded with domeſtick Enemies, and afraid that he might need the Aſſiſtance of the *States General*, was forced to ſtifle his Reſentment, and renew his Alliance with the *Dutch*; and in order to ingratiate himſelf further into the Prince of *Orange*'s Favour, order'd the *French* Ambaſſador to give him the Title of Highneſs whenever he addreſs'd him; which Title became ſo cuſtomary, that he and his Succeſſors have retain'd it ever ſince. And upon this new Alliance, they rejoin'd their Forces, and enter'd upon a new Expedition; and in the Year 1637. the Prince retook the City of *Breda*; but the *Spaniards* took *Venlo* and *Ruremond* which the *Dutch* made little or no Advantage of. The Year 1638. their Succeſs againſt the *Spaniards* was very conſiderable; as follows.

The *Swedes* having for ſome Time harraſs'd the Empire, and ſtill continuing to do ſo, the Emperor *Ferdinand* the third, prevail'd upon the *Spaniards* to fit out a powerful Fleet, to join the *Danes* againſt the *Swedes*, hoping thereby to divert the *Swedes* from any further Depredations in the Empire, and lay them under a Neceſſity of withdrawing their Forces from thence to employ them in their own Defence; and the Fleet being equipp'd accordingly, they reſolv'd firſt to touch upon the Coaſt of *Zealand*, to encourage their Forces in the *Spaniſh Netherlands*; and accordingly the *Spaniſh* Admiral *Don Antonio Oquendo*, ſail'd from the *Groyn* with ſixty ſeven Men of War, and twenty thouſand Men, in *July*, and was to be join'd by fourteen Sail more from *Dunkirk*; of which the *Dutch* getting Intelligence, and imagining, by the extraordinary Preparations that were making at *Dunkirk*, that the chief Deſign of the *Spaniards* was againſt them, they order'd Vice-Admiral *Tromp* to obſerve their Motions; who, on the ſixteenth of *September* at Night, fell upon one of their Squadrons, which was ſeparated from the reſt, near *Dunkirk*, and entirely diſperſed them; but the *Spaniſh* Admiral bearing down to their Aſſiſtance the next Morning, boarded the *Dutch* Admiral, but was ſo warmly receiv'd by *Tromp*, that he was forced to quit him again, and would have been glad to ſave himſelf if he could; but *Tromp* purſuing him, ſunk him, with a thouſand Men aboard, after which the Fleets were ſeparated by a Fog, but the *Dutch* being join'd by eleven Men of War, fell upon the *Spaniards*, in the middle of the Night, and drove them into the *Downs* for ſhelter, and there being thirty *Engliſh* Men of War riding there, they protected the *Spaniſh* Fleet from the Fury of the *Dutch*; but the *Dutch* look'd upon this as an Infringement of the Peace between *England* and *Holland*, for the *Engliſh* to protect the Enemies of the *Dutch*. *Tromp* complain'd to King *Charles* the firſt, then King of *England*, who having enough upon his Hands in his own Civil Wars between him and his Subjects, and expecting no leſs than an Inſurrection in his own Dominions, did not think fit to break with the *Dutch*, nor yet with the *Spaniards*, but keep his Friends about him, as not knowing which he might have Occaſion for firſt, and ſo ordered his Admiral in the *Downs* to ſtand neuter, and to forbear all Hoſtilities againſt the *Dutch*.

Tromp having thus Succeſs, receiv'd a powerful Reinforcement from the *Dutch*, with an Order to attack not only the *Spaniards* but the *Engliſh* alſo, in caſe they ſhould attempt to aſſiſt the *Spaniards*; and when the *Spaniards* were thus aſſur'd to be depriv'd of all Aſſiſtance from the *Engliſh*, they took the Advantage of a thick Fog, thinking by that Opportunity to make their Eſcape; but *Tromp* hearing of it, overtook them with near a hundred Men of War, and burnt, ſunk, or took, moſt of the *Spaniſh* Fleet, amongſt which was a *Portugueſe* Galleon of fourteen hundred Tons, eighty Guns, and eight hundred Men. Twenty of the *Spaniſh* Men of War were alſo run aſhore in the *Downs*, and in ſhort their whole Fleet was ſo ſcatter'd, that only eight of them eſcap'd to *Dunkirk*. The *Dutch*

in all this Engagement loſt but two Ships, and about fourſcore Men.

THE *French* and the *Dutch* were now united both in one Intereſt and Deſign, though they acted in ſeparate Bodies againſt the *Spaniards*, by whom Count *Henry Erneſt* of *Naſſaw*, Governor of *Friezland*, was kill'd in an Engagement, and ſucceeded in his Government by his Brother *William Frederick*; but the Prince of *Orange*, who was Stadtholder of the other Provinces, was Governor of *Groningen* and the *Omlands*; and in the Year 1641. he married his Son *William* to the Princeſs *Mary*, Daughter of King *Charles* I. the young Prince coming over into *England* to conſummate the Marriage.

IN the Year 1642. died Cardinal *Richlieu*, who, during his Adminiſtration, had been a good Friend to the *Dutch* in aſſiſting them againſt the *Spaniards*, but that did not make any Alteration as to the Affairs between the *French* and the *Dutch*; but their Alliance was continu'd and ſtrengthen'd, and the *French* agreed to give them the Title of *High and Mighty*, and to furniſh them with twelve hundred thouſand Livres, and to attack ſome conſiderable Places in *Flanders*; and in Conſideration thereof, the *Dutch* engaged to have forty Men of War on the Coaſt, to ſupport their Land Force, and not to make Peace, or to come to any Terms with *Spain*, without the Concurrence of the *French*.

THE Succeſs of the *French* and *Dutch* was ſo great, that Admiral *Tromp* by Sea, and the Troops by Land, took *Gravelin*, *Sas Van Ghent*, &c. Thus the *French* went on, enlarging their reſpective Frontiers at the Expence of the poor *Spaniards*; and in the Campaign in 1645, the *French* took *Mardike*, *Bourbourg*, *Bethune*, and *Armentiers*; but the Prince of *Orange*, though he miſcarried in an Attempt againſt *Antwerp*, yet, before the Year was at an End, he took *Hulſt* in *Flanders*, the Capital of the Country of *Waes*.

IN the mean Time the *French* attack'd *Dunkirk* by Land, while the *Dutch* Fleet block'd it up by Sea, and they ſoon took it; and in *March* 1647, the Prince of *Orange* dy'd, and his Son *William* II. ſucceeded him as Stadtholder; but he began to be jealous of the *French*, leſt their Succeſs in conjunction with the *Dutch*, might terminate in the *French* Intereſt; whereupon, notwithſtanding their Engagements to the *French*, they made a ſeparate Peace with *Spain* at *Munſter*, in the Year 1648, which was therefore call'd the Peace of *Munſter*.

Prince of *Orange* dies. *William* II. ſucceeds.

THE *United Provinces* now enjoying a profound Peace, propoſed to reduce their Forces, which ought certainly to be the Conſequence of a ſettled Peace; but the very Reaſon that induced them to reduce their Forces, (*viz.* a Time of Peace) induced him to keep up a *Standing Army*; which they apprehending, to be a Sign of his aiming at Arbitrary Power, they, as a free People, oppoſ'd it the more; as remembring the Attempts that his Uncle Prince *Maurice* had made to obtain an abſolute Sovereignty. They therefore made an Act of State, for diſbanding Part of the Army, which the Prince and his Party oppoſed; but thoſe who were for it immediately quitted the *Hague*, and then the Act of State for diſbanding a Part of the Army paſs'd in the affirmative, becauſe there was no Body to hear thoſe who oppoſ'd it. Whereupon he apply'd himſelf to the ſeveral Cities in *Holland* for their Intereſt to keep up a ſtanding Army; but all in vain, they looking upon it as an Encroachment upon their Liberties; and the City of *Amſterdam* forbad him to come there with any ſuch Propoſal, which ſo exaſperated him, that he meditated Revenge, and order'd a Body of Troops to inveſt the City privately; but when the Project was to be put in Execution, which was to be by Night, the Rain and Darkneſs interfered; by which Means, ſome of them loſt their Way, and the whole Body of them were ſeparated; and the Town being appriz'd of the Deſign, open'd their Sluices, and drowned the circumjacent Country, and by that Means put an End to his Deſign of attacking them, and made it impracticable.

WHILE the Prince was contriving which way to retrieve the Honour he had loſt by this Diſappointment, he was taken ill at the *Hague*; his Sickneſs prov'd the Small Pox, of which he dy'd *November* 6. 1650; and the Liberty that he had taken to have a Standing Army maintain'd in a Time of Peace, and that contrary to the Reaſon, Inclination, or Intereſt of the Republick, made his Death leſs regretted, and even ſome of the Clergy in their Pulpits did not ſtick to aſcribe his Death to the juſt Judgment of God, and look'd upon it as a Deliverance to themſelves from the Apprehenſions they were under.

ABOUT a Week after the Death of *William* II. his Son *William* III. was born, who afterwards was firſt Stadtholder of the *United Provinces*, and then *William* III. King of *Great Britain*. When the Prince of *Orange* dy'd, the *States General* ſeem'd reſolv'd not to have any Stadtholder, from a Conſideration, that the late Attempts of the Princes of *Orange* for abſolute Sovereignty, was a Sort of an Encroachment upon their Liberties and Properties; and as a Teſtimony of their Abhorrence of Arbitrary Power, they diſbanded a conſiderable Part of the Army.

DURING the Inter-Regnum, if it may be ſo call'd, between the Murder of King *Charles* the firſt, and the Reſtoration of King *Charles* the ſecond, *England* was a ſort of a Common-Wealth, King *Charles* and his Brother *James*, Duke of *York*, being then driven into *Holland*; and though they were well receiv'd by their Brother and Siſter the Prince and Princeſs of *Orange*, yet the *States* took ſome Umbrage at it, intimating that their reſiding in *Holland* would be very inconvenient in the preſent Situation of Affairs; and ſo intent were the *States* upon ſending them out of their Territories, that the Prince of *Orange* had much ado to prevent it; and what yet contributed more to exaſperate the Faction, Dr. *Doriſlaus*, one of the Regicides, was ſent Envoy to the *Hague*, to propoſe an Alliance between the two Republicks. (One would think indeed that a Nation ſo populous as *England* might have found ſome one Perſon more proper to have ſent as an Envoy to the *States*, than one that had embru'd his Hands in the Blood of his Sovereign.) However, he being at Supper with ſome Company, ſome Gentlemen enter'd the Room with their Swords drawn, and one of them dragg'd *Doriſlaus* from the Table, ſtabb'd him to the Heart, ſaying, *Thus dies one of the* **Regicides**; which done the Gentlemen put up their Swords, and quietly withdrew, (no Perſon attempting to detain them) and left the Company to ruminate upon the whole Affair, and give their various Sentiments upon it.

THIS Accident made the *Dutch* very uneaſy, and the rather leſt *Cromwel* ſhould demand Satisfaction for the Murder of his Envoy, and ſhould magnify that Difference to make it amount to a Breach of the Law of Nations, and occaſion a Demand of King *Charles* being remov'd from the *Hague*, which accordingly happen'd ſoon after; and the Prince of *Orange* dying much about the ſame Time, all this contributed but very little or nothing from that Quarter towards King *Charles*'s Reſtauration, but rather increas'd the intending Animoſities.

But in the Year 1651 *Oliver* ſent two Ambaſſadors over to the *States*, to propoſe an offenſive and defenſive Alliance between *England* and *Holland*: The *States* receiv'd the Ambaſſadors with all Marks of Reſpect, but the Populace abuſed them, by pelting their Servants with Stones and Dirt, and crying *Long live King* Charles *and the Prince of* Orange. St. *John*, one of the Ambaſſadors from *England*, had ſo little Regard for King *Charles*, that meeting his Brother the Duke of *York*, (afterwards King *James* II.) in the Walks of the *Voerhout* at the *Hague*, he refuſed to give him the way, or ſalute him; whereupon the Duke pull'd off his Hat to him, but told him he ought to pay more Reſpect to the King's Brother. St. *John* anſwer'd, that he knew no Sovereign but the Parliament of *England*, and reflected groſly on the Royal Family; whereupon the Duke's Attendants attack'd the Ambaſſador and his Servants Sword in Hand, and by the Aſſiſtance of moſt of the Gentlemen then in the Walks, made the Ambaſſador St. *John* glad to eſcape, and take Shelter in his own Houſe.

The *States* of *Holland*, who both then and ſince have been willing to ſtand neuter to ſave Charges, when any other would do the Work for them, and conſidering what might be the Conſequence of their harbouring the Duke of *York* at the *Hague*, deſired him to retire to *Hounſlaerdike*, a Seat belonging to his Siſter the Princeſs *Dowager* of *Orange*; and he being retired they ſent to St. *John*, the *Engliſh* Ambaſſador, to expreſs their Concern for the Affront given him; but he on the other Hand continued ſo highly to reſent it, and repreſented it in ſuch Terms to his Maſters in *England*, that he and his Fellow Ambaſſador were ſoon recall'd.

Upon this Reſentment, the *Engliſh* Parliament began to conſider how to ſuppreſs the *Dutch* Trade, and advance their own; and in order to this, they made an Act call'd the *Act of Navigation*, whereby all Foreigners were prohibited from importing any Merchandize into *England*, except what every Perſon brought to *England* was the Product of his own Nation. This touch'd the *Dutch* more ſenſibly than any other Part of *Europe*, becauſe the Country naturally and originally produces little or nothing, and conſequently their Trade with *England* was quite cut off, their Buſineſs at Sea having rather been to be the common Carriers of *Europe*, than to trade with any Part of their own Product; and ſo ſtrict were the *Engliſh* in the Execution of this Law, that they took all Opportunities of ſearching the *Dutch* Ships, and making Prizes of them, when they found thoſe prohibited Goods aboard.

The *Dutch*, ſeeing the Severity of the *Engliſh*, ſent four Ambaſſadors to capitulate with the *Engliſh*, but were peremptorily anſwered with the following Demands.

1. That they ſhould pay the Arrears of Tribute due for Fiſhing on the *Engliſh* Coaſt.

2. That they ſhould reſtore the Spice Iſlands taken in the *Eaſt-Indies*.

3. That thoſe who had aſſiſted in the Murder of the *Engliſh* at *Amboyna* and *Banda*, ſhould be brought to Juſtice.

4. That Satisfaction ſhould be made for the Murder of *Doriſlaus*, the *Engliſh* Envoy at the *Hague*. And

5. That Reparation ſhould be made for the Damages ſuſtain'd by the *Engliſh*, in *Ruſſia*, *Greenland*, &c. by the Encroachments of the *Dutch*, which would amount to an immenſe Sum, and which the *Dutch* readily conjectur'd was more than they were willing, if not more than they were able to pay, made them apprehend that a War with *England* was unavoidable, and accordingly gave Orders for fitting out a large Fleet of Men of War, to be ready upon any Occaſion.

War with the *Dutch*.

The *Engliſh* not apprehending that the *Dutch* durſt engage in a War with them, they only fitted out a ſmall Squadron, with common Orders, to guard the Coaſt, without any particular Inſtructions in caſe of a Rupture. But the *Dutch* Admiral *Van Tromp* with a Fleet of forty two Men of War, had Orders to ſail to the Coaſt of *England*, and not to ſtrike to the *Engliſh* as uſual; and accordingly he came into *Dover* Road in *May* 1652. Admiral *Blake* being there with twenty ſix Men of War under his Command, and perceiving the *Dutch* did not ſtrike to the *Engliſh* as uſual, gave him three Guns; whereupon *Tromp* hung out a red Flag, and bearing down directly upon the *Engliſh* Admiral, gave him a Broadſide; upon which an obſtinate Fight enſued, and laſted till Night parted them: One of the *Dutch* Ships were taken, and another ſunk, but the *Engliſh* loſt neither Ship nor Officer; however Admiral *Blake* did not think fit to renew the Fight the next Morning at ſo great a Diſadvantage, but withdrew to refit and reinforce his Squadron, that he might be able to give his Enemies a warmer Reception.

The firſt Fight.

After this the *States* ſent to the Parliament of *England* to make them believe that Admiral *Tromp* had attack'd the *Engliſh* contrary to their Knowledge or Orders, and pretended to make Propoſals for compromiſing the Difference; but the *Engliſh* would not hearken to them, as concluding that the *Dutch* muſt have ſome Deſigns in View, when they had fitted out a Fleet of a hundred and fifty Men of War, without any viſible Neceſſity, and had attacked our Fleet in our own Seas, and upon our own Coaſt, without paying the uſual Acknowledgement of ſtriking to them. This gave the *Engliſh* Reaſon to believe that the *Dutch* had a Deſign to uſurp from the *Engliſh* the Dominion of the Sea, which the *Engliſh* ſeeing, were reſolv'd to guard againſt it.

Upon this Reſolution the *Engliſh* order'd Admiral *Blake* to ſail to the Northward, and attack the *Holland* Fiſhing-Buſſes, and the twelve Men of War, their Convoy; moſt of which they took and made Prizes of, and return'd Home; and Sir *George Aſcough* being ſent with another Squadron to the Southward, met a Fleet of *Dutch* Merchant-men between *Dover* and *Calais*, and took or deſtroy'd moſt of them; and proceeding from thence down the Channel to the Weſtward, he met ſixty *Dutch* Men of War, and about thirty Merchant-men, off of *Plymouth*, where he attack'd them, though he had but thirty Ships of the Line. They fought till Night parted them, and then the *Dutch* made off by the Favour of the Night; and the *Engliſh* Admiral having receiv'd Damage in his Rigging, could not carry Sail to purſue them, as he would otherwiſe have done.

These Succeſſes of the *Engliſh* ſo terrify'd the *Dutch*, that they were not only afraid to attack the *Engliſh*, but glad to go North about to eſcape them, rather than run the Hazard of meeting an *Engliſh* Squadron in the Channel; and yet notwithſtanding all their Precaution, they loſt ſix *Eaſt-India* Ships, valued at four Millions of Livres; alſo thirty five of their *Portugal* Fleet, and many other Veſſels. King *Charles* the Second being now at *Paris*, and finding the *Engliſh* and *Dutch* were come to an open Rupture, made an offer to the *Dutch* Ambaſſador to join what Intereſt he had with theirs, and to go in

Perſon on Board their Fleet; but the *Dutch* at the ſame Time inclining to make Peace with the *Engliſh*, and ſuppoſing that their entertaining King *Charles* aboard of their Fleet might at that Juncture be look'd upon as a ſort of Hoſtility, and might hinder the Progreſs of the intended Accomodation, they refuſed his Offer, and declin'd taking him aboard.

Van Tromp about this Time, upon ſome Diſguſt taken, reſign'd his Command, and *De Witte* ſucceeded him in the Command of the Grand Fleet, who attack'd Admiral *Blake* on the Coaſt of *Kent*, *October* the 28; but Admiral *Blake*'s Forces attack'd the *Dutch* Rear Admiral, boarded and took him, ſunk two more of their Men of War, and one they blew up; whereupon the *Dutch* retir'd, and the *Engliſh* purſu'd them to their own Coaſt.

Another Fight.

In this War the *Swedes* declar'd for the *Engliſh*, and the *Danes* for the *Dutch*. The latter agreed to ſend twenty Men of War to the Aſſiſtance of the *Dutch*, provided they would reſtore *Van Tromp* to his Command, as Admiral; which being readily comply'd with, he was ſent out with eighty Men of War, and two Fire-Ships, and met with Admiral *Blake* in the *Downs*, with between forty and fifty Sail, and a terrible Engagement enſued, on the 29 of *November* 1652; and the *Dutch* took two of the *Engliſh* Men of War, ſunk three, and burnt one; and on the other Side one of the *Dutch* Flag-Ships was blown up. This Odds in the Loſs encouraged the *Dutch* ſo much, that *Tromp* put a Broom at his Topmaſt Head, intending to have it underſtood thereby, that he could ſweep the *Engliſh* out of the Sea whenever he pleas'd.

A third Fight.

But before this Triumph had continued a Quarter of a Year, it was ſoon eclips'd; for Admirals *Blake*, *Dean*, and *Monk*, with eighty Sail of Men of War, lay extended croſs the Channel over againſt *Portland*, to wait for *Tromp*, who was ſent with ſeventy ſix Men of War to convoy three hundred Sail of Merchant Ships; and on the Eighteenth of *February* 1653 *Blake* accordingly diſcovered the *Dutch* Ships; whereupon a bloody Battle commenced, which held three Days; in which Time *Van Tromp* working his Squadron in between his Merchant Ships and the *Engliſh* Men of War, they made a running Fight towards the Coaſt of *Holland*, but loſt eleven of their Men of War and thirty Merchant Ships, the *Engliſh* loſing only one of their Ships in all the Engagement.

A fourth Sea Fight

On the Second of *June* 1653 the *Engliſh* and *Dutch* Fleets met again, between *Dover* and *Calais*; the *Engliſh* conſiſted of a hundred Sail, commanded by *Dean* and *Monk*, both on Board one Ship, and the *Dutch* were equal, or rather ſuperior, in Number to the *Engliſh*, and commanded by *Van Tromp*, *De Witte*, &c. They engag'd about Noon, and at the firſt Broadſide Admiral *Dean* was ſhot in two by a Cannon Ball; but *Monk* notwithſtanding continued the Fight ſo vigorouſly, that before the Evening the *Dutch* bore away; but next Morning the *Engliſh* came up with them again, which drove the *Dutch* into ſuch a Confuſion, that when *Tromp* made a Signal for the Line, their Diſorder made them uncapable of regarding it; whereupon *Tromp* fired at ſome to compel them, and ſent his Boat aboard of others to perſuade them, to Courage and Order, but all in vain; ſo that they were forced to retire to their own Flats, the *Engliſh* having taken eleven of their Ships, ſunk ſix, and blown up two, themſelves at the ſame Time having ſuffer'd very little Damage.

Fifth Sea Fight

The *Dutch* not yet quite caſt down, fitted out a Fleet of a hundred and twenty five Sail in leſs than a Months Time, commanded by *Tromp*; and on the Twenty-ninth of *July* he met with the *Engliſh* Fleet upon the Coaſt of *Holland*, under the Command of Admiral *Monk*; upon which a fierce Engagement enſued, wherein the reſolute *Monk* order'd his Officers neither to give nor take Quarters, which made the Battle extremely bloody, and ſo it prov'd to *Van Tromp*; for he was kill'd by a Muſket Ball as he walk'd the Quarter-Deck with his Sword drawn; and as he dropp'd, *De Witte* aſſum'd the Command as Admiral, and maintain'd the Fight till the Evening; in which Time ſeven and twenty *Dutch* Men of War were burnt and ſunk; none being taken, by reaſon of the *Engliſh* Admiral's Orders not to give or take Quarters; for which Reaſon thoſe that would have ſurrender'd, and become advantageous Prizes, were burnt or ſunk. The *Engliſh* loſt a great many Men, but loſt only one Ship, and had two or three more diſabled.

The *Dutch* were now very much embarraſs'd, not only with this bad Succeſs at Sea, but alſo with the loſs of Foreign Trade, and the Vexation of inteſtine Broils at Home; for as to the former, the *Engliſh* had taken no leſs than ſeven hundred Sail of their Ships; and as to the latter, the *Orange* Party, to induce them to have a Stadtholder, inſinuated that all their Confuſion and ill Succeſs was owing to their not having a Governor or Supreme at the Head of them. In this Diſtraction, they ſent to their Plenipotentiaries at *London*, to make up a Peace with *England*, almoſt upon any Terms; and *Cromwel* having now as it were beat them into a Compliance with his own Mind, he ſeem'd at a Diſtance to condeſcend to their Propoſal of Peace, with this private View, that if he had brought them to court his Friendſhip, they might be aſſiſting to him to maintain his uſurp'd Government; and both Parties inclining to Peace, they concluded a Treaty in the Year 1654, in which the *Dutch* engag'd themſelves,

1. To renounce King *Charles* the Second's Intereſt.

2. To ſtrike to the *Engliſh* at Sea.

3. To bring ſuch of their Subjects to Juſtice as had been concerned in the Barbariaics at *Amboyna*, if any of them were living, and to make Reſtitution for all the Damages the *Engliſh* had ſuſtain'd by their Means, in their Foreign Trade, for thirty Years paſt.

But, beſides theſe Articles, *Cromwel* demanded that the *States* ſhould exclude the Prince of *Orange*, (who was Grandſon to King *Charles* the firſt) and all his Poſterity, from being Stadtholders, Governors, Admirals, or even Captains of Men of War; to which the *States* agreed, ſo far as this Excluſion related to the Deſcendants from the Daughter of King *Charles* the firſt, and no further; however moſt of the Superior Military Officers were ſuppreſt, only the Lieutenant General, and the Major General of the Horſe, and if a Body of Troops were to be aſſembled on any Occaſion it was to be commanded by the eldeſt Colonel.

Cromwel thinking he could now perſuade the *Dutch* almoſt to what he pleas'd, propoſed a Union, and to reduce both the Common-Wealths under one Form of Government; but the *Hollanders* were as cunning as he, and readily apprehended that he intended to have himſelf plac'd at the Head of this new United Government. He then offer'd to join with them in a League, offenſive and defenſive, againſt the Church of *Rome*; but this his Cloak of Religion was alſo ſo thin that the *Dutch* could eaſily ſee through it, and concluded, that this his Pretence of promoting the Intereſt of *Chriſt*, was only with a View

The ſixth Sea Fight.

at

at the Bottom to enlarge his own Dominions, and eſtabliſh his own Intereſt abroad. The *Dutch* were the wrong People for him to endeavour to delude with the ſame Bait, with which they had often, and ſometimes in vain, attempted to catch others.

In the Year 1658. the *Engliſh*, in conjunction with the *French*, laid Siege to *Dunkirk* and took it, the *Engliſh* keeping the Poſſeſſion of it. This was a ſad Mortification to the *Dutch*, to ſee the *Engliſh* (whom they lov'd juſt as far as it anſwer'd their own Intereſt, and no farther) become Maſters of both Sides the Channel between *England* and *France*; but on the Third of *September* this ſame Year 1658, *Cromwel* dy'd, and left *England* in ſuch Confuſion, that the *Dutch* had little to fear from that Quarter.

In this Confuſion, the *Engliſh* Subjects began to wiſh for the Reſtoration of King *Charles* II. and though the *Dutch* had entred into a Confederacy with *Cromwel* againſt the *Stuarts* Family, yet finding it out of their Power to prevent his Return to *England*, they choſe to approve of it rather than provoke the Propoſers of it: Whereupon, as ſoon as his Majeſty was arrived at *Breda*, they ſent a Deputation of the *States* to compliment him, and to invite him to take up his Reſidence at the *Hague*, till he ſhould embark for *England*; and accordingly he came to the *Hague* *May* 16. 1660. where he was magnificently entertain'd, and had Preſents made to him to the Amount of above an hundred thouſand Pounds; and in ſhort, he was careſs'd with the higheſt Compliments by thoſe very Perſons, who a little before had entred into an Alliance againſt him with *Cromwel*, his mortal Enemy, to exclude all his Blood from the Stadtholderſhip, or any high Station in the *United Provinces*. And after they had careſs'd him with more florid Compliments than ſincere and hearty good Wiſhes, he embark'd at *Schevelling*, where a Squadron of Men of War, under the Command of Admiral *Montague*, conducted him to *England*, where he arriv'd on the Twenty-ninth of *May* 1660.

Some time after King *Charles*'s Reſtauration, a Miſunderſtanding happen'd between the *Engliſh* and the *Dutch*, which amounted to a Rupture; and though different Reaſons for it are given by different Perſons and Parties, yet the following are aſſign'd as three of the moſt ſubſtantial.

1. They detain'd the Iſland of *Poloroon* in the *Eaſt-Indies*, contrary to ſeveral ſolemn Treaties and Engagements to deliver it up; whereby we were entirely deprived of the Spice Trade, at leaſt of the Nutmegs and Mace, the moſt valuable Branch of it. 2. They had ſeiz'd ſeveral Ships and their Cargoes, and made the Men Priſoners. 3. They kept Guard-ſhips upon the Coaſt of *India* and *Africa*, to prevent other *European* Nations trading there; and by theſe Methods, had endeavour'd to monopolize the Trade of thoſe Places to themſelves, and exclude the *Engliſh*.

Upon this Provocation, the *Engliſh* commiſſion'd a Fleet under the Command of the Duke of *York*, as Lord High Admiral, which rendezvous'd at *Spit-head* in *November* 1664. The *Dutch* upon this, kept cloſe in their Ports; whereupon the *Engliſh* intercepted an hundred and thirty of their Merchant-Ships in the Channel, and made them Prizes; but this was done by way of Reprizal for the *Dutch* taking the *Engliſh* Ships and Forts upon the Coaſt of *Africa*, there being as yet no open War between the *Engliſh* and *Dutch*. However, the *Engliſh* Merchants ſo reſented the Uſurpations of the *Dutch*, that they advanc'd his Majeſty an hundred thouſand Pounds, and afterwards repeated the ſame Sum at his Majeſty's Requeſt; which the Parliament took ſo well, that they voted the King five and twenty hundred thouſand Pounds, to be rais'd in three Years Time, to carry on the War againſt the *Dutch* with the utmoſt Vigour. And accordingly the War between *England* and *Holland* was proclaim'd, *March* 4. 1664-5. Whereupon the *French* not only adviſed, but aſſiſted the *Dutch* againſt the *Engliſh*; but the unanimous and undaunted *Engliſh*, regardleſs of the united Threats of their Enemies, aſſembled their Grand Fleet, conſiſting of an hundred and eight Men of War and fourteen Fire-ſhips, which they divided into three Squadrons. The Red, commanded by the Duke of *York*, Lord High Admiral; the White, by Prince *Rupert*; and the Blue, by the Earl of *Sandwich*. They ſtood over to the Coaſt of *Holland*; but the *Dutch* not daring to face them, the *Engliſh* took a great Number of rich *Dutch* Merchant-Ships, and ſo return'd to their own Coaſt.

The *Dutch* having waited for the Abſence of the *Engliſh*, took this Opportunity to join their *Amſterdam* and *Zealand* Fleets; which, all together, amounted to an hundred and three Men of War and eleven Fire-ſhips, commanded by the *Dutch* Admiral *Opdam*, and under him *Cortenaer*, Vice-Admiral of the *Maeſe*, *Evertſon*, Vice-Admiral of *Zealand*, and *Van Tromp*, (Son of the famous *Van Tromp*) Vice-Admiral of *Amſterdam*. On the Second of *June* 1665. the *Dutch* and *Engliſh* Fleets came within Sight of one another; but the *Dutch* (remembring what ill Succeſs they had that Day twelve Years, *viz.* on the Second of *June* 1653. as before obſerv'd) declin'd fighting till next Day, *June* the third; when about four in the Morning, the Duke of *York* engaged Admiral *Opdam* ſo cloſe, that (by what Means is not certainly known) the *Dutch* Admiral was blown up, and himſelf and all the Ship's Company loſt; and at the ſame Time three *Dutch* Ships which ſeconded their Admiral, were, in the Confuſion caſt foul of one another; and ſo entangled together by their Maſts, Yards, and Rigging, that before they could get clear, an *Engliſh* Fire-ſhip burnt them all. There was in this Engagement eighteen *Dutch* Men of War taken, and fourteen burnt or ſunk, and eight thouſand of their Men kill'd or taken Priſoners. The *Engliſh* loſt but one Ship, and about a thouſand Men; but among them were ſeveral Perſons of Diſtinction, as the Earls of *Falmouth*, *Marlbrough*, and *Portland*; the Lord *Muskerry*, Mr. *Boyle*, Rear Admiral *Sanſon*, and Sir *John Lawſon*, with others of leſs Note.

The *Engliſh* Fleet put to Sea again on the Fifth of *July*, but the *Dutch* Fleet kept out of the way; however, in their way home, they took eight *Dutch* Men of War, with two *Eaſt-India* Men, which were valu'd at a Million Sterling, beſides twenty other Merchant-Ships; and a few Days after, the *Engliſh* fell in with fourteen *Dutch* Merchants, moſt of which they took, as they did alſo four Men of War their Convoy.

At the ſame Time, the Biſhop of *Munſter* (encouraged by the *Engliſh*) fell upon the *Dutch* by Land, and took moſt of the Towns on the River *Yſel*; but by the Aſſiſtance of the *French*, they expell'd him out of their Territories, and made him ſubmit to a ſeparate Peace without conſulting his Ally, the King of *Great Britain*, tho' he had ſupply'd him with large Sums of Money to carry on his War againſt the *Dutch*.

This happen'd in the Year 1665. when the Plague was fatal to *England*; and at the ſame Time both the *French* and the *Danes* engaged in the *Dutch* Intereſt againſt *England*; and to this we may add, that *England* was not true to itſelf, for there was a Party, that not only kept up a Correſpondence

pondence with the *Dutch*, but actually enter'd into their Service; but all these Misfortunes did not deter the *English* from maintaining their War against the *Dutch*.

THE *English* Fleet put to Sea again, under the Command of Prince *Rupert*, and General *Monk*; and on the First of *June* 1666 the *Dutch* with above ninety Sail were at Anchor near *Newport*; which the *English* perceiving, attack'd them, though inferior in Number, and after a smart Engagement for three or four Days, they retired each to their own Coast, the *Dutch* having lost fifteen Men of War, and the *English* ten; the rest of the Ships on both Sides were miserably shatter'd.

BEFORE the End of *July* both Fleets were recruited and augmented to about a hundred Sail on a Side, and the next Engagement the *English* destroy'd twenty Sail of the *Dutch* Men of War, and pursuing them to their own Coast, burnt a hundred and fifty Sail of their Merchant Ships in their own Harbours, and burnt the Town of *Brandaris*, in the Island of *Schelling*; upon which the *Dutch* Populace grew very mutinous, as finding that all their Charges, and Taxes, and fitting out Fleets, amounted to nothing against such an invincible Enemy as the *English*. However, the Admiralty, to keep up the Spirits of the People, fitted out a Fleet the latter End of *August* to join the *French*; but Prince *Rupert* intercepted it, and not only prevented their joining, but in their Attempt so to do, he took a *French* Ship of a thousand Ton, which Loss and Disappointment made the rest glad to retire to their respective Harbours.

THE *Dutch* Commonalty were so enraged to be at such a perpetual Charge to no Purpose, that they were ready to break out into a Rebellion, and five of the seven *United Provinces*, now *united*, to cry out for Peace, declar'd they would no longer contribute to such an unsuccessful War. The *Dutch* to satisfy the enraged Populace, executed some of the Sea Captains for Cowardice or Breach of Orders; but in the Middle of this Combustion, *viz.* the second of *September* 1666, and a Day or two following, the greatest Part of the City of *London* was burnt to the Ground; and if we consider the tender Mercies of the *Dutch*, which at *Amboyna*, *Poloroon*, and other Places where they got us in their Power, were severe Cruelties; and if we further consider that they were then at War with, and never strong enough to obtain an honourable Satisfaction of us; I say when these Things are consider'd, we may leave the Reader to conjecture who were the Authors of that fatal Conflagration, without any Necessity of the *Papists*, or any Denomination of *Protestants* falling out about it.

THE *Dutch* having in some Measure gain'd their Point, first by the Desolation occasion'd by the Plague in 1665, and then by the Fire in 1666, took this Opportunity to make Propofals of Peace to the *English*, which were accordingly agreed upon; and upon this, the *English* supposing they had no Enemies to fear, were remiss in fitting out their Fleet as they had done before; but the *Dutch* continuing to regard their usual self Interest more than Honour or Honesty, sail'd with a Fleet of seventy Men of War to the *Nore*, took *Sheerness*, and detach'd a Squadron up the River *Medway* as high as *Chatham*, and burnt three or four first and second Rate Men of War, which were lying there unrigg'd, and brought off the *Hall* of the Royal *Charles*; but in this Expedition they lost two or three of their own Men of War, which being pilotted by *English* Renegadoes who where not acquainted with the River *Medway*, ran a-ground, and the *Dutch* not daring to stay to attempt to get them off, set them on Fire to prevent the *English* making Prizes of them. In the mean Time the Citizens of *London*, under Apprehensions that the *Dutch* might make the same Progress in the *Thames* as they had in the *Medway*, sunk fourteen or fifteen Ships in the River, to block up the Channel, and erected Batteries upon the Banks, to prevent their sailing up; and thus they continued in Acts of Hostility offensive, and defensive, till the Peace concluded at *Breda* put an End to the Dispute.

English Men of War burnt at *Chatham*.

BUT the Insolence of the *Dutch* continued to that Degree, that they attempted to be Lords of the Ocean, and as such, they in a very unmannerly way, insulted the Subjects of *Great Britain*, *France*, and *Portugal*, in their *East-India*-Trade, as if they had a right to engross it all to themselves; which the *French* King perceiving, endeavour'd to dissolve the Alliance between *England* and *Holland*, which he not only brought about, but managed a further Project that he had in View, which was to form an Alliance with *England* against *Holland*, in order to over-ballance the Power, and suppress the Insolence, of that usurping State.

PURSUANT to this Treaty with *France*, both Kingdoms declar'd War against *Holland* in *March* 1672. and in *April* following the Duke of *Monmouth* join'd the *French* with six thousand *British* Troops in the *Low-Countries*; and with this Army, consisting of an hundred and twenty thousand Men, divided into three Bodies, attack'd the *United Provinces* in three different Places, while the Bishops of *Munster* and *Cologn* attack'd them in a fourth; and they in two Months Time over-run the three Provinces, *Gelderland*, *Overyssel*, and *Utrecht*, with their great Towns, some of which were deem'd impregnable. Thus notwithstanding the Vanity of the *Dutch*, and their ambitious Inscriptions stamp'd on their Medals, as if all the Sea and Land had been their own, yet when attack'd, they made but a miserable Defence, and submitted so entirely to their Enemies, that the *French* King kept his Court at *Utrecht* this Summer.

AT the same Time, the *Dutch* Admiral *Ruyter*, with above an hundred Sail of Men of War, attack'd the united Fleet of *England* and *France* in *Solbay* on the Coast of *Suffolk*; but the Duke of *York*, with the *English* Fleet under his Command, gave the *Dutch* such a hot Breakfast, that they were glad to retire to their own Coast.

THE common People enraged at this ill Success, arraign'd the Conduct of their Magistrates, and unanimously imputed their ill Success to the Want of a Stadtholder; and in this they went so far, that they threatned the State if they were not redress'd, and their Proposal of having a Stadtholder comply'd with; whereupon the two *De-Wits*, *Cornelius* and *John*, notwithstanding their late Grandeur, were forc'd to submit and resign the Power they had so artfully assum'd, and suffer the Repeal of their late Edict, in which they had excluded the Prince of *Orange* from being Stadtholder, or indeed from having any Share in the Government; but by the Repeal of this Edict, he was restor'd to his former Dignity.

AND now the Designs of the aspiring Ministers the *De-Wits* began to appear in their proper Colours, and they were charg'd with betraying their Country to the Enemy, and one of them was stabb'd in the Street by some of the enrag'd Multitude, but not mortally, so that he escap'd at that Time; but *Cornelius* being charg'd afterwards with a Conspiracy against the Prince of *Orange*'s Life, he was sentenced to be banish'd, and his Brother the Pensioner going with a grander Equipage than the Populace thought was proper

proper to be allow'd to fetch a State Criminal from Prison to Banishment, they arose and knock'd down both the Pensioner and his Brother the Prisoner, as they came down Stairs, and afterwards tore them to Pieces, and taking out their Hearts cut them in small Morsels, and distributed them up and down among their Friends. The Actions of the exasperated Multitude were so much approv'd of, that they were never call'd to account for what they had done.

The *Dutch* now began to sue for Peace, tho' at the same Time they maintain'd a War by Sea, as if they had the Vanity to think that they could bring the *English* to Terms with Sword in Hand; and three more Sea-Fights happen'd between the *English* and *Dutch* that Summer, *viz. May* 28. *June* 4. and *August* 11. in all which the *English* beat the *Dutch*, and made them glad to escape to their own Coast. During this War, the *English* took the Island of *Tobago* in the *West Indies* from the *Dutch*.

In the Year 1673. the *French* King finding the Charge of maintaining his Acquisitions in the *United Provinces*, he extorted large Sums of the Inhabitants of the great Towns, and so retreated with his Army out of the *Dutch* Territories; and the three Provinces of *Gelderland*, *Overyssel*, and *Utrecht*, were re-united to the rest, and the Dignity of Stadtholder and Captain General, was confirm'd to the Prince of *Orange*, and settled upon his Heirs male.

About this Time a Peace was concluded between *England* and the *United Provinces*, wherein the *Dutch*, rather than undergo any more of the *English* Discipline, agreed to acknowledge to the *English* the Right of the Flag at Sea, and to pay to his *British* Majesty eight hundred thousand Patacoons, which is near two hundred thousand Pounds; which by the way, seems to me to be a plain Proof, that they had suffered severely by the War, or else they would scarce have bought a Peace so dear of those whom they had so little Respect for.

When the *Dutch* had thus settled Affairs with *England*, and thought they had nothing to fear from that Quarter, they thought themselves strong enough to engage the *French* both by Sea and Land, and accordingly fitted out a Squadron under the Command of their Admiral *Ruyter*, to attack *Martinico* and other *French* Settlements in the *West Indies*, while *Van Tromp* made a Descent upon *Normandy* in *France*: But both these Attempts prov'd abortive, and they return'd without Success; and, to add to their Misfortunes, they suffer'd very much this Year by Storms and Inundations.

In the Year 1675 the *French* took *Liege*, *Dinant*, and *Huy*, from the *Dutch*; and in 1676 they took *Condé*, and put all the Inhabitants to the Sword except about twelve hundred. They also took *Bouchain* that Year; and although the Prince of *Orange* laid Siege to *Maestricht*, then in Possession of the *French*, he was forc'd to raise the Siege, after he had continu'd it two Months. The *French* also in the Year 1677. took *Valenciennes*, *Cambray*, and St. *Omars*; and these made the *States* weary of the War and of their ill Success.

After the Campaign in 1677 was ended, the Prince of *Orange*, afterwards K. *William* III. of *England*, made his Court to the Princess *Mary*, Daughter of *James* Duke of *York*; to which Match King *Charles* agreed, the Prince being his Sister's Son, and the Princess his Brother's Daughter. And on *November* 4. the Marriage Ceremony was perform'd at St. *James*'s by the Bishop of *London*. The P. of *Orange* married

This Affair being compleated, the Prince of *Orange* represented to King *Charles* the weak Condition of the *Spanish Netherlands*, and Danger of their falling into the Hands of the *French*; whereupon King *Charles* agreed, that unless *France* would restore to the Emperor and the Duke of *Lorrain* what they had taken from them, and to the *Spaniards*, the Towns of *Aeth*, *Charleroy*, *Oudenard*, *Courtray*, *Tournay*, *Condé*, and *Valenciennes*, he would join the Confederates, and compel *France* to come into his Measures; and he rais'd an Army accordingly. But the *Dutch*, according to their wonted Integrity and publick Spirit, having got the Allies set to work, made a separate Peace for themselves, which very much damp'd the Success of the next Campaign; and the *French* King at the Head of a great Army march'd into the *Low Countries*, and took *Ghent* and *Ypres* in a Months Time; but King *Charles* sent twenty thousand Men into *Flanders*, and put a Stop to his Progress. And had the *Dutch* continu'd the War in conjunction with their Allies, they might all have had ample Satisfaction for their Losses; but the *Dutch* made separate Terms advantageous to themselves, without any Regard to the Interest of their Allies who had assisted them in their greatest Distress.

CHAP. VII.

Treats of Monmouth's *and* Argyle's *Rebellion and Defeat, and the Continuation of the Life of* William *Prince of* Orange; *his Expedition to* England, *his Landing at* Torbay. *Of King* James's *Abdication; and of the Declaring and Crowning the Prince and Princess of* Orange, *King and Queen of* England.

THE Peace of *Nimeguen* was sign'd in the Year 1678. soon after which, the *States General* sent an Embassy to the Court of *France*, insisting, that their Ambassadors should be receiv'd with the same Marks of Honour as those from Crown'd Heads; whereupon they were for some Time not only deny'd the Honour, but refus'd Audience too; but the *French* King, upon a second Consideration, comply'd with their Demand, probably for politick Reasons; for he still having his Eye upon the *Spanish Netherlands* and *Alsace*, thought he might well afford them such a Compliment if that would induce them to stand Neuter, while he pursu'd his Conquests in those Territories.

The *French* King, in the Year 1680. propos'd to the *States*, that they should enter into a Defensive Alliance with him, which the *States* did not seem to be much against; but the *British* Minister at the *Hague* declar'd, that if that was

brought about, his Master could not look upon it as any other than intended against him, and used Arguments against it, that the *States* entirely declin'd it.

The *French* made perpetually such Encroachments upon the *Rhine*, that the Emperor, for the Security of his Frontiers, entred into an Alliance with the *States* and *Sweden*; at which the *French* King was so exasperated, that he seiz'd the Principality of *Orange* in *France*, and detain'd it in his own Possession, notwithstanding the Remonstrances of the *English* as well as the *Dutch* to the contrary.

While the *English*, jointly with the *Dutch*, were disputing with the *French* King, as to the Illegality of his new Acquisitions, and *England* was using its utmost Interest in Defence of the *Dutch*, and their Property in *Europe*; those, our grateful and dear Allies, were at the same Time robbing and plundering us in *Asia*, and seizing our Settlements and Factories in *India*. They cunningly waiting an Opportunity in a Time of Peace, which doubtless they were sensible was the Time to find us the least guarded. This Time they took the Advantage of to seize our Port of *Bantam* in *Java*, though they were at the same Time imploring our Assistance and Protection against their Enemies in the Western Parts of *Europe*.

The *Dutch* seize *Bantam*.

In the Year 1684. the Duke of *Monmouth*, natural Son of King *Charles* II. and the Earl of *Argyle*, being fled into the *Low Countries*, and hearing of the Death of King *Charles*, and the Accession of King *James* II. they jointly contrived to raise an Insurrection, one in *Scotland* and the other in the West of *England*; and for that End, bought up great Quantities of Arms and Ammunition in *Holland*. But King *James* being appriz'd of the Design, requir'd the *States* to deliver them up; whereupon the Duke of *Monmouth* retired to *Brussels*; but he returning afterwards to *Holland*, he and *Argyle* prepar'd for their intended Expedition. *Argyle* being first ready embark'd on *May* 2. 1685. for *Scotland* and the *Orkneys*, and there met with a cold, or rather a warm Reception; for his Secretary and Surgeon being ashore, were both seiz'd and sent to *Edinburgh*, and *Argyle* finding himself pursu'd by the King's Forces, fled towards *Glasgow*; but despairing of an Escape, he run into a Bog up to the Neck, and was there knock'd down and taken Prisoner on the Seventeenth of *June*, and was beheaded the thirtieth of the same Month at *Edinburgh*, where *Rumbald* was also executed by the Halter for being concern'd with others in the *Rye-House* Plot.

Monmouth and *Argyle*.

But notwithstanding, *Argyle*'s Miscarriage, the Duke of *Monmouth* hired a Man of War of thirty two Guns, with three small Vessels, and Arms for five thousand Men, for his intended Expedition against *England*. The Prince of *Orange* begining to have a distant View of the Crown of *England*, both he and the *States* were very averse to *Monmouth*'s Design, not so much for *England*'s Safety, as from a Supposition, that if *Monmouth* should succeed, it might for ever destroy the Hopes of the Prince of *Orange* mounting the Throne of *England*. Whereupon the *States* sent over the six *English* Regiments which had been in their Service, to the Assistance of King *James* and the Defence of his Kingdoms.

Monmouth's Landing.

On the Eleventh of *June*, he with his small Squadron appear'd before *Lyme* in *Dorsetshire*, where he landed with not above an hundred Men, and set up his Standard in the Market-place at *Lyme*, and caused his Declaration to be read, in which he charged King *James* (to whom he gave only the Title of Duke of *York*) with Usurpation and Tyranny, with assassinating the Earl of *Essex*, and even with poisoning his Brother the late King *Charles*. He declared, he would pursue the said Duke of *York* as a mortal Enemy, and endeavour to have Justice executed upon him, *&c.* at which, Numbers of the Populace came over to him, and his small Army increas'd from less than an hundred to a considerable Number.

On the other hand, King *James* acquainted both Houses of Parliament with the Duke's Landing, and they attended his Majesty with an Address, promising to stand by him with their Lives and Fortunes. They then pass'd a Bill of Attainder of High-Treason against the Duke, and desired his Majesty to set a Reward of five thousand Pounds upon his Head. In the mean Time, the Duke marching from *Lyme* to *Taunton Dean*, by the Way his Army was increas'd to five or six thousand Men. And here he assum'd the Title of King, and was proclaim'd accordingly.

On the Twenty First of *June* he advanc'd to *Bridgwater*, the Militia generally either flying before him or coming over to him, but few or none opposing him; and those that would, durst not, the Country seeming more enclined to the Duke than the King, till his Majesty sent down a Body of regular Troops, commanded by the E. of *Feversham* and L. *Churchill*, who totally defeated the Duke on the Sixth of *July* 1685. The Duke himself made his Escape; but on the Eighth of *July* he was found in a Ditch, hid under some Fern in a very disconsolate Condition; and being taken, was brought Prisoner to *London*; and that Day Week that he was taken, he was beheaded on *Great Tower Hill*.

This Scene being thus closed, and no Insurrection in *England* now to be feared, the *English* Ambassador at the *Hague*, presented repeated Memorials to the *States*, to complain of their taking *Bantam*, and to solicit the Restitution of it; but all in vain; the Honourable *Dutch* considering more what Advantage it was of to them than what just Property they had in it. He demanded also, that Dr. *Burnet*, and some other Conspirators against K. *James*, should be deliver'd up to Justice, they being then shelter'd in *Holland*. But the *Dutch* being now concerting Measures for an Insurrection in *England*, and the Doctor being in this Case a fit Tool for their Purpose, the *States* would not comply with the Demand, probably, lest he should make some Discovery of their Intrigues; only the six *British* Regiments that had been lent to the *States*, they sent back upon Demand.

But on the other hand, King *James*'s Male-Administration in *England* gave the *Dutch* still more Encouragement to hope to succeed in an Invasion of *England*; for King *James* had alienated the Hearts of his Protestant Subjects from him, by introducing Popish Officers in to Places of Trust and Profit, both in Ecclesiastical, Civil, and Military Employments. This Management of King *James*, laid the People of *England* under dreadful Apprehensions that Popery and Slavery were approaching; and so many of King *James*'s Schemes tending that way, they began to be confirm'd in a Belief of the Prince of *Wales*'s Illegitimacy, and that it was only a Contrivance to keep *Mary* Princess of *Orange* from any View of succeeding to the Crown of *England*.

But it is to be suppos'd, that the cunning *Dutch* had still further Views; for being conscious how barbarously they had used the *English* at *Amboyna*, *Banda*, &c. as has been largely treated of in the former Part of this Book, it was to be supposed King *James* would endeavour to make Reprisals, and recover in the several Parts of the *East Indies*, what the voracious *Dutch* had so unjustly taken from the *English*. Whereas the *Dutch* thought it

if they could give us a King, it was to be hop'd they ſhould never more be reproach'd with their Encroachments upon the *Britiſh* Trade and Property in the *Eaſt-Indies*. And indeed had King *James* been faithful to his Coronation Oath, and the Intereſt of the Proteſtant Religion in *England*, there had been no Occaſion for his Abdication, or for us to diſpenſe with the Loſs of any Part of our Trade, Property, or Intereſt, for the Security of our Religion.

ANOTHER View that the *Dutch* might have in taking the Advantage of King *James*'s Male-Adminiſtration, (for I never affirm'd that all their Attempts were grounded ſincerely upon the Intereſt of the true *Proteſtant* Religion) might be that if the Prince of *Orange* was once plac'd at the Head of the *Britiſh* Forces, he would doubtleſs endeavour to defend their Frontiers againſt *France*, and perhaps enlarge them too, at whoſe Expence ſoever it might happen.

KING *James* beginning to be apprehenſive of an Invaſion from *Holland*, (and the *Engliſh* at the ſame time being apprehenſive of the precarious Condition of their Religion and Liberties,) he began to impoſe illegal and unpopular Things upon his Subjects, and they in return, grew Malecontents, and ready to reach forth their Hands to the firſt Competitor. This Diſcontent amounted to ſuch a height that the Soldiers and Sailors began to deſert, and in ſhort the Prime Miniſter and others of the Council, many of the Biſhops, Nobility, and Gentry, as alſo the Generals and Admirals, join'd in an Invitation to the Prince of *Orange* to come over to defend them from Popery and Slavery, and ſecure their Religion and Liberty.

IN this great Undertaking, the Emperor and moſt of the *German* Princes, with the Kings of *Sweden*, *Denmark*, and *Spain*, and even the Pope himſelf, were ready to ſupport him; an apprehending that as King *James* ſhew'd ſo many Marks of Favour to the *Roman Catholicks*, he might be inclined to unite his Forces with thoſe of *France*, and then the next Attempt would be to reduce all the Powers of *Europe* to the Mercy of *Lewis* XIV. To prevent which, the Prince of *Orange* and the *States* reſolv'd to attempt a Revolution in *England*, and in order thereto, fitted out fifty Men of War, and five hundred Tranſports, for the Expedition; and beſides the Compliment of Sailors, embark'd fourteen or fifteen thouſand of their beſt Troops aboard the ſaid Fleet; and leſt the King of *France* ſhould take the Advantage of the Abſence of the ſaid Troops, they were ſupply'd by Forces from *Sweden*.

KING *James*, who did not want Intelligence of all thoſe Preparations againſt him, began to think how he might retrieve the Affections of his Subjects; which he by his Male-Adminiſtration had loſt, and the firſt Step that he took, was was to reſtore the Biſhops to their Authority and Privileges: He alſo reſtor'd the Charter of *London*, and ſeveral Corporations, which he had taken from them; he diſplac'd moſt of the *Popiſh* Officers and Magiſtrates that he had advanc'd, and degraded the Prime Miniſter, by whoſe Advice he had been precipitated into thoſe deſtructive Meaſures.

BUT all this formal Reſtitution came too late, and the concurrent Circumſtances proved it be the Effect of Neceſſity rather than Choice, and made no Alteration either in the Affections of the *Engliſh* Subjects, or in the Prince of *Orange*'s Reſolution; for he embark'd his Forces, and publiſh'd a Declaration, dated *October* the tenth, 1688; charging King *James* with Male-Adminiſtration, and impoſing a pretended Prince of *Wales* upon the Nation, &c. and declaring, on the other hand, that his Expedition was intended to procure a free Parliament, to whom he would refer the Enquiry into the Legitimacy of the pretended Prince of *Wales*, to reſtore the Conſtitution of the Government to its antient legal State, and to ſecure the People againſt Popery and Arbitrary Power.

THE Prince having aſſembled a Fleet of fifty Line-of-Battle Ships, twenty five Frigates, and as many Fire-Ships, and between four and five hundred Tranſports, on board of which he embark'd ten thouſand Horſe, and four thouſand Foot, on the Nineteenth of *October* he ſet ſail from the *Briel*, being accompany'd by ſeveral Noblemen and Perſons of Quality. The Prince himſelf was in a thirty Gun Frigate, ſtation'd in the Center of the Fleet; his Flag at the main Top-maſt Head was the Arms of the Prince and Princeſs, the Motto, *The Proteſtant Religion and Liberties of* England. They had been but a few Hours at Sea, till a Storm drove them back to *Helvoetſluys*; but on the Firſt of *November* they put to Sea again, and the Prince, with the greateſt Part of his Troops, landed in *Torbay Nov.* 5. 1688. Prince of Orange lands.

THE Prince being ſafely landed, advanc'd on the Eighth of *November* to *Exeter*, but the People were a little ſhye of joining him, (the Duke of *Monmouth*'s late Miſcarriage making them ſo cautious,) that he did not think proper to proceed any further, till he had fully uted Means to find how the Country ſtood affected; and ſuch cool Returns of Intelligence were brought him, that it began to be a private Debate whether he and his Forces ſhould not reimbark and return to *Holland*.

BUT a Week's time alter'd the Face of Affairs; for on the Fifteenth of *November* great Numbers of the neighbouring Gentry came in, who propos'd to enter into an Aſſociation with the Prince, never to ſeparate till their Religion and Liberties were ſecured to them by a free Parliament, &c. This Inſtrument being drawn up, and ſign'd by the Nobility and Gentry about the Prince, it was ſent to *Oxford*, and ſeveral other Places, where it was ſign'd, and at the ſame time there were Inſurrections in moſt Parts of the Kingdom in the Prince's Favour.

KING *James* obſerving this general Defection, or Revolt, through the whole Kingdom, went down to *Salisbury*, to try if his Preſence would animate his Troops againſt the Prince of *Orange*; but to his great Surprize, the Earl of *Faverſham* his General acquainted his Majeſty, that although they would have ſtood by him to the laſt of their Blood and Fortunes upon any other Occaſion, they could not in Conſcience ſerve againſt the Prince, who was come to procure a free Parliament for the Security of their Religion and Liberties. The next Day the Lord *Churchil*, the King's chief Favourite, with the Duke of *Grafton*, and many of his Officers and Soldiers, went over to the Prince. The King finding himſelf thus deſerted, return'd to *London*, accompany'd by *George* Prince of *Denmark*, the Duke of *Ormond*, and others of the firſt Quality as far as *Andover*; but there they alſo forſook him; and when he arriv'd at *White-Hall*, which was *November* 26. he found his Daughter, *Anne* Princeſs of *Denmark*, had alſo withdrawn herſelf; all which griev'd him ſo much, that he was heard to ſay at the Entering of his Apartment, *God help me, my own Children have forſaken me.*

IN this Diſtreſs he ſummon'd a Parliament, and by the Advice of what Members were then preſent, he granted a Pardon to all who had join'd the Prince, either before or ſince his Landing; adding, that he would depute ſome Lords to treat with the Prince about an Accommodation, with a Promiſe, that he would immediately diſ-

charge

charge all *Roman Catholicks* from all Places of Profit or Truſt; and the Marqueſs of *Haliſax*, the Earl of *Rocheſter*, and the Lord *Godolphin*, were commiſſion'd to treat with the Prince of *Orange* accordingly; and when this Affair came to be debated, the Prince demanded,

1. That all Papiſts ſhould be diſarm'd, and remov'd out of all Employments or Places of Truſt.

2. That all Proclamations againſt him or his Adherents ſhould be recall'd.

3. That the Tower of *London*, and *Tilbury Fort*, ſhould be put into the Hands of the City of *London*.

4. That if his Majeſty remain in *London* during the Sitting of Parliament, the Prince may alſo be there with an equal Number of Troops, *&c.* and that Part of the publick Revenue be apply'd for the Subſiſtance of the Troops.

The Popiſh Party dreaded the Meeting of a Proteſtant Parliament, as concluding that Reprisals would be made upon them for paſt Miſcarriages; and the King apprehending that ſuch Reſtrictions would be laid upon him that he would be little more than a Cypher in the Government, and relying on the *French* King to reſtore him to his former Dignity, he choſe to retire to *France*, in hopes to recover his Fortune, and return again with Honour. And in Purſuit of this Scheme, he ſent his Queen, and his ſuppos'd Son, an Infant, about half a Year old, (being ſaid to be born the Tenth of *June* before) to *Calais*, and the following Night, the King took water at *White-Hall*; and in croſſing the *Thames*, he threw the Broad Seal into the River, which ſome afterwards took as an Evidence of his Abdication.

The Prince of *Orange* being in the Weſt of *England* when King *James* went away, the Officers of the Army then in Town met at *Whitehall*, and ſent an Expreſs to the Prince of *Orange* to invite him up, and to aſſure him they would aſſiſt the Lord-Mayor in keeping the City quiet till his Arrival. At the ſame Time the Archbiſhop of *Canterbury*, with ſeveral Lords, Spiritual and Temporal, aſſembled at *Guildhall*, and ſignified to the Lord Mayor, that they had agreed to apply to the Prince of *Orange*, and to aſſiſt him in obtaining a Free Parliament; and that they would, in the mean Time, endeavour to preſerve the Peace of the City, by diſ-arming Papiſts, and otherwiſe ſuppreſſing the contrary Party; they alſo took the Keys of the Tower from Colonel *Skelton*, and gave them to the Lord *Lucas*, (one of the Prince's Party) at which the Prince was pleas'd extremely.

At the ſame time the Mob aſſembled, and demoliſh'd the Maſs-Houſes, and plunder'd the Houſes of *Roman* Catholick Perſons of Quality, particularly thoſe of the *Spaniſh* and *Florentine* Ambaſſadors, where many rich *Roman* Catholicks had lodg'd their beſt Effects; they alſo fell upon Lord Chancellor *Jefferies*, and had pull'd him to Pieces, had not he been ſecured in the Tower, at his own Requeſt.

The Earl of *Feverſham* being now at *Uxbridge* with the Army, and hearing of King *James*'s withdrawing, diſbanded the Army, and turn'd them out of Pay on a ſudden; by which they became deſtitute of proper means of Subſiſtance, and committed many Irregularities to procure neceſſary Supplies.

The King by this time being got as far as *Feverſham*, on the Coaſt of *Kent*, was there detain'd by contrary Winds, or ſome other Accident. The Officers, Seamen, and even Fiſhermen too, ſearch'd the Veſſels that came that way; and under a Pretence of ſearching for Popiſh Prieſts, they pillaged the Paſſengers; and the Veſſel that King *James* was in happen'd to fall into their Hands, and they plunder'd him of four hundred Guineas, and ſome Seals and Jewels that he put a greater Value upon than ordinary: But when they found who he was they return'd him all the Plunder again. However, the King diſtributed the Gold among them, and thank'd them for the Jewels, *&c.* that they had return'd to him. After this they conducted him to an Inn in the Town, where he ſent for the Earl of *Winchelſea*, who was then at his Seat in that Neighbourhood; who coming to him, prevail'd upon the King not to proceed on his Voyage, but to return to *London*; and the Privy Council, hearing where he was, ſent for him to return; whereupon he return'd to *London*, and was receiv'd with Illuminations, Ringing of Bells, and other Demonſtrations of Joy, as if he had return'd from ſome glorious Expedition; which kind Reception of the King was doubtleſs very ſurpriſing to the Prince of *Orange*, and what might increaſe the Surprize, was, that the King ſent the Earl of *Feverſham* to invite him to St. *James*'s Palace; which the Prince reſented, as thinking that he could go to St. *James*'s without the King's Invitation, and thereupon he made the Earl of *Feverſham* Priſoner, and ſign'd an Order for King *James* to remove out of the Palace at *Whitehall* the Seventeenth Inſtant, and order'd the *Dutch* Guards to take Poſſeſſion of the Poſts about *Whitehall* that Night by Force, if the King's Guards did not reſign without making the leaſt Reſiſtance; and they reſign'd accordingly.

When the *Dutch* Guards had thus taken Poſſeſſion of *Whitehall*, (though the King himſelf had not quitted it) three Lords were ſent by the Prince to the King, with a poſitive Order to leave *Whitehall*, and retire to *Ham*; the King readily comply'd as to quitting *Whitehall*, but deſired that *Rocheſter* might be the Place aſſign'd for his Retirement, to which the Prince agreed, but deny'd the King his own Guards or Coaches to convey him by Land, but compell'd him to go by Water to *Graveſend*, notwithſtanding the Rigour of the Seaſon, it being in the Winter 1688; all which the King ſubmitted to.

At the ſame Time, and ſome ſay on the ſame Day, that the King left *London*, the Prince appear'd in publick, and receiv'd the Compliments of the Nobility, Gentry, and City, and of the whole Populace; who, as a Teſtimony of their Zeal for the Prince, plunder'd the Houſes of all Papiſts in general, both Gentry, Nobility, and foreign Miniſters; and the King finding no hopes of retrieving his declining Fortune, took the Opportunity of a dark Night, and went on board of a Ship provided for him on the Morning of the twenty third of *December*, and was ſoon landed in *France*, to the great Joy of both Parties, both his own Friends, who were glad of his Safety, and of the Party of the Prince, who, on the other Hand, were as glad to be rid of him.

The Prince of *Orange* began now to act as ſupreme, and, by the Advice of about ſixty Lords and a hundred and fifty Commoners, beſides *Scotch* Nobility and Gentry, he ſent Letters to the Lords Spiritual and Temporal, and to the ſeveral Counties, Univerſities, Cities, Boroughs, *&c.* directing them to chuſe Members to repreſent them in Parliament; the Notice of the Elections to be publiſh'd in Churches, and the Parliament to meet at *Weſtminſter January* the twenty ſecond 1688-9.

King *James*, after his Arrival in *France*, ſtill expreſs'd a Deſire of being recall'd, as appear'd by his writing to the Privy Council, and intimating to them, that he had taken away all Cauſes of

of Diſcontent, and redreſs'd the Grievances which the Prince of *Orange* had alledged as the Cauſe of his Invaſion. That he deſired nothing more than a Free Parliament, and, in ſhort, he propoſed, or at leaſt pretended, to conform to what they ſhould deſire for the Liberty and Security of the Religion and Properties of his People; and with theſe Promiſes he likewiſe ask'd their Advice concerning his Return to *England*; but all his Promiſes and Propoſals were now too late, the burnt Child dreads the Fire, and not much Regard is paid either to his Propoſals or Promiſes.

THE Prince of *Orange* having thus got Footing, he attempted to aſſume the ſole Government to himſelf, excluſive of his Conſort, *Mary* Princeſs of *Orange*, but that the Parliament would not agree to; but on the Thirteenth of *February*, 1668-9, they declar'd *the Prince and Princeſs of* Orange *to be King and Queen of* England *during their Lives, and the Life of the longer Liver of them, but that the ſole Exerciſe of the Regal Power be only in, and executed by, the ſaid Prince of* Orange; and after their Deceaſe to the Heirs of the ſaid Princeſs of *Orange*; but in Default of ſuch Iſſue to Princeſs *Ann* of *Denmark* and her Heirs; and in Default of ſuch Iſſue to the Heirs of the ſaid Prince of *Orange*; and, purſuant to this Declaration, the Prince took upon him the Title and Authority of King.

BUT all the Diſpute was not yet over; for the Archbiſhop of *Canterbury*, with the Biſhops of *Glouceſter*, *Ely*, *Norwich*, *Bath and Wells*, and *Peterborough*, refuſed to take the Oaths to King *William*; and about the Middle of *March* the Royal *Scotch* Regiment of Horſe, and a great Part of *Dunbarton's* Regiment, declared for King *James*, and march'd towards *Scotland*; but a Detatchment of the *Dutch* being ſent after them, they brought them back Priſoners to *London*; and the Malecontents being thus ſuppreſs'd, and all Things tollerably quiet, on the Eleventh of *April*, 1689, the Prince and Princeſs of *Orange* were crown'd King and Queen of *England*, &c. but it it was ſome Months before they were ſo generally own'd in *Scotland*, till King *James's* Intereſt declined, and his Party was routed, and King *William* and Queen *Mary* continued in the peaceable Poſſeſſion of the Throne; where we will leave them till we come to treat of *England*, the Remainder of their Hiſtory being moſt proper to be handled under the Denomination of their being King and Queen of *England*.

CHAP. VIII.

Of the Nature of the Soil, and the Produce of the Country, as to their Plants and Animals; with an Account of their Fiſhery, &c.

IT has been obſerv'd before, that the Land of *Holland* is upon a low flat, and has numberleſs Canals cut for Conveniency of a Communication by Water; only the Weſtern Coaſt next the Sea, is high ſandy Banks, as if Nature had ordain'd it for the Defence of the Country; but this ſandy Soil produces little but Herbage for the Rabbits, and ſerves them to make Burrows for their ſhelter; and as they are not very ſteep towards the Sea, there are very pleaſant Tracks, which afford an exceeding pleaſant Proſpect towards the Sea, and the Ships ſailing along the Coaſt.

THE Country within theſe barren ſandy Coaſts is either arable or rich Paſture, except where it is marſhy rotten Ground, where they dig up a ſort of a Turf, call'd in the North of *England* Peat, which is excellent Firing when dry; their Meadow or Paſture is generally drown'd, or overflow'd in the Winter Time; but when, by the Approach of the Sun in the beginning of Summer, aſſiſted by Windmils, and other Machines for draining the Ground, it begins to dry, the Water leaves a fat Slime behind it, which makes it exceeding fruitful; which gives them an Opportunity of making vaſt Quantities of as good Cheeſe and Butter as any in *Europe*. They have pretty good Plantations of Hemp and Flax, but they have ſo much Shipping, that they are nevertheleſs fore'd to fetch Supplies of Hemp from *Germany* and the *Baltick*. They have ſcarce any Timber, except in the Provinces of *Utrecht* and *Gelderland*, where high and low Lands, Woods, and Champaign, are interſpers'd as in *England*.

THEY delight in Gardens, Orchards, and Flowers; they have no Minerals; their common Grain is common Wheat, Buck-Wheat, Rye, Peaſe, Barley and Beans. Their Cattle are very large, and thoſe that give Milk afford great Quantities. They have tame Fowls as in *England*, and of Wild-Fowls the Stork is the moſt familiar, like our Swallows, for it builds on the Tops of their Chimneys, but is about the bigneſs of our Heron; and they are as tender of hurting or abuſing them as we in *England* are of the Swallows or Robin-red-breaſts, as thinking it ominous to do them any Damage; when their young Brood is able to fly, they, along with the old ones, take their Flight about the beginning of *Auguſt*, (as ſome think to *Africa*, or ſome warmer Country,) and return again in *February*. There are likewiſe Geeſe, Ducks, and other Water Fowls; as alſo Patridges, Snipes, Quails, Pigeons, &c. Their River Fiſh is Salmon, Perch, Trout, Jack, and Eels. Their Sea-Fiſh Haddocks, Soles, Haberdine, Sturgeon, Mackerel, Smelts, Crabs, and other Shell-Fiſh; but Oyſters are ſcarce upon this Coaſt.

The three great Fiſheries.

THE three grand Fiſheries of *Holland*, are the Herring-Fiſhery, the Whale-Fiſhery, and the Cod-Fiſhery; in which laſt Branch, the Herring-Fiſhery alone, the *Dutch* in *De Witte's* Time employ'd no leſs than a thouſand Sail, from twenty four to thirty Ton; and ſince that they employ ſtill larger Veſſels, *viz.* from thirty to fifty Ton, and as many of them. The Number of Sailors employ'd in the Fiſhing Trade, and in the Buſſes and other Veſſels that are employ'd to carry and diſperſe them to moſt Parts of *Europe*, in this Trade, amongſt the reſt, makes thoſe maritime Provinces become ſuch Nurſeries for Seamen; of which Faculty it is now reckon'd, by a moderate Computation, that there are no leſs than fourſcore thouſand Hands employ'd.

The Manner of their fiſhing for Herrings.

AS to their Manner of fiſhing for Herrings, the Buſſes are ſent out three times a Year, of which the firſt is begun on Midſummer Day, when they begin their fiſhing on the Coaſt of *Scotland*

of Diſcontent, and redreſs'd the Grievances which the Prince of *Orange* had alledged as the Cauſe of his Invaſion. That he deſired nothing more than a Free Parliament, and, in ſhort, he propoſed, or at leaſt pretended, to conform to what they ſhould deſire for the Liberty and Security of the Religion and Properties of his People; and with theſe Promiſes he likewiſe ask'd their Advice concerning his Return to *England*; but all his Promiſes and Propoſals were now too late, the burnt Child dreads the Fire, and not much Regard is paid either to his Propoſals or Promiſes.

The Prince of *Orange* having thus got Footing, he attempted to aſſume the ſole Government to himſelf, excluſive of his Conſort, *Mary* Princeſs of *Orange*, but that the Parliament would not agree to; but on the Thirteenth of *February*, 1668-9, they declar'd *the Prince and Princeſs of* Orange *to be King and Queen of* England *during their Lives, and the Life of the longer Liver of them, but that the ſole Exerciſe of the Regal Power be only in, and executed by, the ſaid Prince of* Orange; and after their Deceaſe to the Heirs of the ſaid Princeſs of *Orange*; but in Default of ſuch Iſſue to Princeſs *Ann* of *Denmark* and her Heirs; and in Default of ſuch Iſſue to the Heirs of the ſaid Prince of *Orange*; and, purſuant to this Declaration, the Prince took upon him the Title and Authority of King.

But all the Diſpute was not yet over; for the Archbiſhop of *Canterbury*, with the Biſhops of *Glouceſter*, *Ely*, *Norwich*, *Bath and Wells*, and *Peterborough*, refuſed to take the Oaths to King *William*; and about the Middle of *March* the Royal *Scotch* Regiment of Horſe, and a great Part of *Dunbarton*'s Regiment, declared for King *James*, and march'd towards *Scotland*; but a Detatchment of the *Dutch* being ſent after them, they brought them back Priſoners to *London*; and the Malecontents being thus ſuppreſs'd, and all Things tollerably quiet, on the Eleventh of *April*, 1689, the Prince and Princeſs of *Orange* were crown'd King and Queen of *England*, &c. but it it was ſome Months before they were ſo generally own'd in *Scotland*, till King *James*'s Intereſt declined, and his Party was routed, and King *William* and Queen *Mary* continued in the peaceable Poſſeſſion of the Throne; where we will leave them till we come to treat of *England*, the Remainder of their Hiſtory being moſt proper to be handled under the Denomination of their being King and Queen of *England*.

CHAP. VIII.

Of the Nature of the Soil, and the Produce of the Country, as to their Plants and Animals; with an Account of their Fiſhery, &c.

It has been obſerv'd before, that the Land of *Holland* is upon a low flat, and has numberleſs Canals cut for Convenieney of a Communication by Water; only the Weſtern Coaſt next the Sea, is high ſandy Banks, as if Nature had ordain'd it for the Defence of the Country; but this ſandy Soil produces little but Herbage for the Rabbits, and ſerves them to make Burrows for their ſhelter; and as they are not very ſteep towards the Sea, there are very pleaſant Tracks, which afford an exceeding pleaſant Proſpect towards the Sea, and the Ships ſailing along the Coaſt.

The Country within theſe barren ſandy Coaſts is either arable or rich Paſture, except where it is marſhy rotten Ground, where they dig up a ſort of a Turf, call'd in the North of *England* Peat, which is excellent Firing when dry; their Meadow or Paſture is generally drown'd, or overflow'd in the Winter Time; but when, by the Approach of the Sun in the beginning of Summer, aſſiſted by Windmils, and other Machines for draining the Ground, it begins to dry, the Water leaves a fat Slime behind it, which makes it exceeding fruitful; which gives them an Opportunity of making vaſt Quantities of as good Cheeſe and Butter as any in *Europe*. They have pretty good Plantations of Hemp and Flax, but they have ſo much Shipping, that they are nevertheleſs fore'd to fetch Supplies of Hemp from *Germany* and the *Baltick*. They have ſcarce any Timber, except in the Provinces of *Utrecht* and *Gelderland*, where high and low Lands, Woods, and Champaign, are interſpers'd as in *England*.

They delight in Gardens, Orchards, and Flowers; they have no Minerals; their common Grain is common Wheat, Buck-Wheat, Rye, Peaſe, Barley and Beans. Their Cattle are very large, and thoſe that give Milk afford great Quantities. They have tame Fowls as in *England*, and of Wild-Fowls the Stork is the moſt familiar, like our Swallows, for it builds on the Tops of their Chimneys, but is about the bigneſs of our Heron; and they are as tender of hurting or abuſing them as we in *England* are of the Swallows or Robin-red-breaſts, as thinking it ominous to do them any Damage; when their young Brood is able to fly, they, along with the old ones, take their Flight about the beginning of *Auguſt*, (as ſome think to *Africa*, or ſome warmer Country,) and return again in *February*. There are likewiſe Geeſe, Ducks, and other Water Fowls; as alſo Patridges, Snipes, Quails, Pigeons, &c. Their River Fiſh is Salmon, Perch, Trout, Jack, and Eels. Their Sea-Fiſh Haddocks, Soles, Haberdine, Sturgeon, Mackerel, Smelts, Crabs, and other Shell-Fiſh; but Oyſters are ſcarce upon this Coaſt.

The three great Fiſheries.

The three grand Fiſheries of *Holland*, are the Herring-Fiſhery, the Whale-Fiſhery, and the Cod-Fiſhery; in which laſt Branch, the Herring-Fiſhery alone, the *Dutch* in *De Witt*'s Time employ'd no leſs than a thouſand Sail, from twenty four to thirty Ton; and ſince that they employ ſtill larger Veſſels, *viz.* from thirty to fifty Ton, and as many of them. The Number of Sailors employ'd in the Fiſhing Trade, and in the Buſſes and other Veſſels that are employ'd to carry and diſperſe them to moſt Parts of *Europe*, in this Trade, amongſt the reſt, makes thoſe maritime Provinces become ſuch Nurſeries for Seamen; of which Faculty it is now reckon'd, by a moderate Computation, that there are no leſs than fourſcore thouſand Hands employ'd.

The Manner of their fiſhing for Herrings.

As to their Manner of fiſhing for Herrings, the Buſſes are ſent out three times a Year, of which the firſt is begun on Midſummer Day, when they begin their fiſhing on the Coaſt of *Scotland*

Scotland and *Shetland*, and this Trade they hold till *September*, when the Busses come home to *Holland* to unload; and then come over to the Coast of *England*, and, without regard to Right or Property, fall in with our *Yarmouth* Fishery, upon the Coast of *Norfolk* and *Lincolnshire*, and near the Mouth of the *Humber*, and here they can frequently make two Trips a Year, the Season not being over till about *November*.

I SHALL not enter into a particular Calculation of the annual Profit the *Dutch* make by the Herring Fishery, because the best of what can be done of that kind, is but grounded upon a probable Supposition; however, those who have undertaken to make a just Calculation, tell us, that they make two Millions Sterling a Year, clear of all Expences, besides the Advantage to the Mechanicks employ'd in making Nets and Casks, and also in salting, curing, and packing the Herrings, *&c.* added to that grand Article of building and making Rigging for the Ships employ'd in that Trade, and their cunning, but just, Method of employing their own Natives in all their own Business, without a new-fangled Way of employing Foreigners, and letting their own Natives suffer for want of Employment. These Things are doubtless an infinite Advantage to *Holland*, in employing their own Natives, and keeping their Cash to circulate amongst themselves; and this may doubtless give some less cautious Nations reason to envy the Prosperity of the *Dutch*.

BUT it may be objected, that if the *Dutch* make such a prodigious Advantage of the Herring Fishery, why cannot the *English* do the same, or more? Their Situation is as near, and they seem in all Respects to have as good an Opportunity as the *Dutch*, or rather better, to make an Advantage of this Trade. But what is commonly answer'd to this is, that *we do not understand the right Method of curing Herrings so well as they do, and that therefore ours cannot come to a Market till theirs are all sold.* But, by way of Reply, I must beg leave to think that, except we affect this Ignorance, or for *political*, or other Reasons, indulge ourselves in it, we have little Reason to think that this grand Secret is so peculiar to them, as if it was beyond the Reach of an *English-man* to comprehend it. Indeed if we have not Ambition enough to equal, or exceed them, though it was in our Power, we may resign the Honour to them, and own ourselves oblig'd to them; as might probably be the Case in our late Whale Fishery; where a Ship was not thought well fitted out without *Dutch* Harponiers, *&c.* which was, in other Words, putting our Success into the Hands of the *Dutch*. And I think our late *Greenland* Trade in the Whale Fishery, as carried on by the South-Sea-Company, has proved the fatal Consequence of it. I hope the few that now use the Trade will employ *English-men*, (Harponiers and others) and not give both our Interest and Reputation away.

SOME add indeed, that, considering their Industry and Ingenuity in first importing Timber from *Germany*, and then cutting it with their Saw-Mills, *&c.* they can build Ships cheaper than we. I would answer, I humbly conceive that *England* affords as good Timber, or better, than any in *Holland*, and this Island has so many navigable Rivers, that the Conveyance of it from Place to Place cannot be so dear as in a main Continent, where Water-Carriage cannot be had. Our Plenty of Brooks for Water-Mills, and our Ascents and rising Grounds for Wind-Mills, give us as good, if not a better, Opportunity for sawing of Timber by those Machines than they have in *Holland*; and if they find so great an Advantage in it as is suggested, I am surpriz'd that the *English* do not follow their Example, since they were not before them in the Invention.

BUT I allow that our Plenty of Timber, and their Scarcity of it, may be a great Reason for their Herring Trade in the *Baltick* exceeding ours, and that very much; for when they carry Herrings there they can load back with Corn and Timber; both which Articles come to a good Market there, as being scarce; but these Goods, being the native Product of *England*, would not turn to any Account if brought from abroad. So that if the *English* should carry Herrings to the *Baltick* they would have no Advantage but what the Freight of Herrings produced, which would not answer the Charge.

BUT what I account one of the best Articles in their Herring Trade is the Rivers *Rhine* and *Maes*, by which they supply all the Country at some Distance, on each Side of both; for they run through the *United Provinces*, and maintain a compleat Communication between the Sea and the Land, on, or at some Distance from, the Banks of both these Rivers by way of *Holland*: And what still further encourages the Herring Trade there, is, their taking the product Merchandize and Manufactures of those Countries in return; and hence it is that many Toys and Curiosities are had so cheap at *Holland*; for were they to sell them at prime Cost they would be equal to ready Money in the Herring Trade, and what they get more is an additional Advantage.

THE next Branch is the Whale Fishery. These Water Animals afford Oil and Whale-bone, which turns out to such Advantage, that if a Ship catch but one Whale they do not think it a losing Voyage. The Whale-bone grows in the Mouth of the Whale, under the Tongue, and on each Side of it; but I shall not enlarge here upon the Whale-Fishery, that having been largely treated of in the History of *Greenland*. The Whale Fishery.

THE third Branch of their Fishery is that for Cod, which they take chiefly upon a Sand-Bank between *England* and *Holland*; where they employ yearly about three hundred Vessels, from forty to sixty Tuns Burthen, call'd Doggers, from whence the Bank upon which they fish is call'd *Dogger's Bank*. But in this the *English* participate with them, so that, strictly speaking, it cannot properly, or in a peculiar Manner, be call'd the *Dutch* Fishery. Cod Fishery.

THE fourth and last, as well as least, Branch of their Fishery, is their Inland or River Fishery. This consists of all Sorts of Fresh-water Fish, great Quantities of which, besides their own Consumption, they salt up and send abroad: And however inconsiderable this Branch may seem to be, yet Sir *Walter Raleigh*, so long ago as his Time, computed, that of pickled and salted Fish the *Dutch* did not export less than three hundred Thousand Tun a Year; and Monsr. *De Witt* afterwards computed this Exportation at four hundred Thousand Tun a Year. This not only amounts to a considerable yearly Income of itself, but as they are exchanged for foreign Merchandize, the Fish is not only sold, but it serves instead of ready Money, and (like their Spices) may be look'd upon as so much Treasure: And some will further add, that these two Articles alone are of as great Advantage to the *Dutch* as the Mines of *Potosi* are to the *Spaniards*.

CHAP.

CHAP. IX.

Of the Manufactures and Foreign Trade of the Dutch.

THE *Dutch* are at preſent reckon'd a very ingenious induſtrious People, but it is not only, or chiefly to this, that their great Proficiency in a great many Manufactures is to be aſcribed; for although they have made themſelves Maſters of ſeveral Branches, formerly peculiar to other Places, ſome to one and ſome to another, yet the general Reaſon is, that when the Mechanicks of ſeveral Neighbouring Countries, as *Flanders*, *France*, and *England*, were driven from thence by their bigotted Princes, they retired to *Holland*, and ſet up their reſpective Trades and Callings, which the *Dutch* readily agreed to, as foreſeeing that, by ſuch a Collection of ingenious Men in different Faculties, they might improve themſelves as much as if they had travell'd into thoſe Countries, and rather more, becauſe in this Caſe the Improvements were brought among them, and made common; whereas, had ſome of them travell'd for it, none but the Perſon, or Perſons, that travell'd, could have been immediately advantaged. And the *Dutch* granted this general Aſylum to thoſe diſtreſs'd People, that they might by that Means ſtrengthen their Hands againſt their formidable Enemies the *Spaniards*; and, in order thus to encourage Strangers, they proclaim'd Liberty of Conſcience, and made it the fundamental Article of their Union; the People upon this Encouragement, flying to *Holland* for Shelter from their tyrannical Princes, and the *Dutch* receiving them, that they might upon Occaſion aſſiſt them againſt the *Spaniards*. And by this Collection of ingenious People from all Parts, and not by the Ingenuity of the *Dutch* themſelves, Arts and Manufactures were cultivated in *Holland* to the Pitch they are now arriv'd at.

EVERY Province or great Town, *&c.* has generally ſome Manufacture in ſome Meaſure peculiar to it, or at leaſt, in which they excell their Neighbours; as for Inſtance, *Harlem* excells other Places for the fine white Linnen, which we commonly call *Holland*, *Harlem* being in that Province. This Place is alſo ſo noted for whitening Linnen, that they have great Quantities ſent from *Germany* and other Places to be bleach'd. This Place is alſo noted for its Manufactures of fine Silks and Gauzes, flower'd Velvets, Gold and Silver Brocades, and other rich Stuffs.

Leyden is famous for the woolen Manufacture; here they make the fineſt broad and narrow Cloths, Serges and Cambletts: But when I ſay *Leyden* is famous for the woolen Trade, I only mean when compar'd with other Places in *Holland*; for their woolen Manufacture is far inferior to that of *England*. They have their Wool from *Spain*, *Germany*, and *Turky*, and ſome from *England*, *Scotland*, and *Ireland*, but that is clandeſtinely.

IN *Delft* is made that fine Earthen Ware in imitation of *China* Ware, which is call'd *Delft* Ware from the Name of the Place where it is made.

Sardam, three Miles from *Amſterdam*, is the moſt noted Place in *Holland* (ſome ſay in the known World) for Ship-building, and prodigious Quantities of Timber are lodg'd there for that purpoſe. *Enchuyſen* is noted for Herrings; *Hoorne* for the beſt Cheeſe in *North Holland*, and for it's Refineries of Salt.

BUT in *Amſterdam* almoſt all theſe Manufactures are carried on; for here they weave Broad Cloth, Woolen and Hair Stuffs, Silks, Gold and Silver Stuffs, and all ſorts of Ribbon. Here they make Morocco, Shammy, and gilt Leather, and many other Sorts. Dying is none of the leaſt of their Manufactures, if I may give it that Name. Here are Refineries for Sulphur, Salt, Sugar, yellow Wax, *&c.* They have Mills for ſawing Timber, poliſhing Marble; alſo Rape Mills, Fulling Mills, *&c.* as in *England*.

IN making Sail-Cloth, they out-do *England* and all the reſt of their Neighbours; inſomuch, that according to the Sailors Phraſe, it wears like a Board; and while it is new, it is ſo ſtiff and hard, eſpecially when wet, that it is very hard Work for the Mariners to furl the Sails. As for Printing and Letter-Founding, moſt Hiſtorians give them very much the Preference to *England*, and ſeem to aſſign ſome Reaſons for it; but I muſt own I can give no Reaſon for their ſaying ſo, except it is becauſe they writ before Printing and Letter-Founding was brought to that Perfection in *England* that it is now. Indeed, the Time was, when there was no ſuch good Letter or Types to be had in *England* as was in *Holland*; and then Neceſſity drove our Printers to *Holland* to buy Types, if they would have them fine and good; but I am of Opinion, that that is not the Caſe at preſent, having Reaſon to think, that within theſe few Years, there has been as good Letter or Types caſt in *London* as any in *Holland*. I do not know indeed what may be the Sentiments of thoſe who prefer Foreigners before their own Countrymen, or *Dutch* Performances before *Engliſh*, purely becauſe they are *Dutch*, when otherwiſe our own Money might circulate amongſt ourſelves.

Letter Founding.

AS to their Foreign Trade, it conſiſts of ſeveral Branches; and briefly, firſt, from *Norway* they import vaſt Quantities of Fir, both Deals, Timber, Maſts, and Yards; alſo Pitch, Tar, Stock-Fiſh, Furs, Skins, Pot-Aſhes, and dry'd Fiſh: And although their Exports come not near the Value of their Imports, yet they carry to *Norway* great Quantities of Wine, Brandy, Vinegar, Tobacco, Spices, Salt, Cheeſe, Drapery, both Linnen and Woolen, and Haberdaſhery Wares. As to their Way of diſpoſing of their Goods imported from *Norway*, they have ſuch a Vent for their Fir, Timber, *&c.* to the Southern Countries of *Europe*, and that at ſuch a conſiderable Profit, that they commonly employ every Year two or three hundred Ships, of four or five hundred Ton each, in their *Norway* Navigation.

Foreign Trade of the *Dutch*. *Norway*

THE Trade they had with *Ruſſia* was formerly carried on pretty much by the Ports of *Livonia*, as *Riga*, *Revel*, and *Narva*; but when the *Engliſh* diſcover'd the Paſſage into the White Sea, the Trade was remov'd to *Archangel*, till the late Czar remov'd the chief Part of the *Ruſſia* Trade to *Peterſburg*, at the Bottom of the Gulf of *Finland*; but after his Death the Trade to *Archangel* was open'd again, and is now carried on at all the Ports above mention'd. As the *Engliſh* were the firſt that diſcover'd the Way to *Archangel*, the *Ruſſian* Princes granted them large-

Trade with *Ruſſia*.

large Privileges peculiar to themselves, exclusive of all other Nations; but the *Dutch*, by bribing the *Russian* Minister, and the false and scandalous Representation they made of the *English* Nation at the *Russian* Court, soon work'd us out of our Privileges, and sent thither ten Ships to our one.

THE Goods they import from *Russia*, are Flax, Hemp, Pitch, Tar, Linseed, Honey, Bees-Wax, Furs, Skins, *Russia*-Leather, Fir, Timber, Tallow, Pot-Ashes, Caviere, and Linnen; and to *Russia* they export Spices, Pickled-Herrings, Tobacco, Drugs for Dying, and for Physick; Wine, Brandy, Oil, Vinegar, Fruit, Sugar, and Woollen Manufactures; Gold and Silver Stuffs, Silks, Ribbons, Haberdashery, Hard-Ware, Toys, Hats, Soap, and Paper; but the *Moscovites* having a more intimate Communication than formerly with *Persia*, *India*, and *China*, they can furnish themselves cheaper with Silk and Hard-Ware from thence than the *Dutch* can afford it; so that that Trade is almost dropp'd, as is the Iron Trade, since the *Czar* establish'd Foundaries and Forges of his own, and got Workmen to make Swords and small Arms, and to cast great Guns, Bombs, *&c.* of his own.

Trade with *Denmark* and *Sweden.*

From *Denmark* the *Dutch* have little, except their large lean Cattle, which they feed in their rich Pastures: But from *Sweden* they import a deal of Iron, Steel, and Copper, with some Fir, Pitch, and Tar; and carry in Exchange, Spices, Drugs, Salt, Fruit, Sugar, Wine, Brandy, Silk, Linnen and Woolen Manufactures, but not so many Herrings as to *Russia*.

Trade with *Pomerania*, &c.

FROM *Pomerania* and *Mechlenburg* the *Dutch* import all kind of Grain, coarse Wool, Timber, *Silesia* Linnen, Skins, Leather, Honey, Wax, and Flax. From *Dantzick*, *Konngsburgh*, and *Memel*, (which are the chief Ports for shipping Goods from *Poland* and *Livonia*) the *Dutch* import Corn, Leather, Furrs, Timber, Pipe-staves, Pot-ashes, Wax, Hemp, Flax, Amber, Quicksilver, Saltpetre, Sulphur, Pitch, and Tar. And from *Libaw*, the chief Port in *Courland*, they import Grain, Timber, and Linseed, and carry their own Manufactures, before described, in Exchange. But the *Prussians* have of late so much improv'd their own Manufactures, especially those of Linnen and Woolen, as have also the *German* and other Northern Princes, that the *Dutch* fall far short of the Call for those Goods which they formerly had.

BUT I shall not enlarge upon the Trade of the *Dutch* with other Nations, as to their Imports and Exports, for what they import must of Necessity be the Produce of some other Countries, and will be (or has already been) treated of under that Head, in speaking of that respective Country. And as most of their Exports are first imported by them, it can be but the same, or only differ according to the different Call of different Countries for the respective Commodities that the *Dutch* Warehouse can supply them with. I shall only observe that in their Trade with *Germany*, the Ballance runs much in favour of the *Dutch*; who bring a great deal more Specie from *Germany* than they carry thither. They have lost much of their Trade with *Flanders*; and in *France* the Ballance of Trade runs against them, their Importations thence being much more than their Exportations thither, and they are forced to pay the Ballance in Treasure.

THE *Dutch* have a great Trade to *Smyrna* and some other Ports in *Turkey*, from whence they bring raw and spun Silk, and several Kinds of *Turkey* Leather, *&c.* and carry in Exchange *Russia* Leather, and their Spices, which they have made themselves Masters of in the *East-Indies*, and their Cochineal, *&c.* which they have elsewhere. No wonder if the *Dutch* are call'd the common Carriers of *Europe*, or rather of the World, when they make a Trade out of so many Branches of foreign Commodities, and have so little of their own Produce; making a Trade of carrying other Countries Goods from Place to Place, and what they want from other Countries, besides the small Matter their Country produces, they pay for in ready Specie.

THEY import from *England* Woolen, Coals, Lead, *&c.* of which more when we come to speak of *England* and its Exportations; and we receive from them Sail-Cloth, fine Hollands, *&c.* And though their importing much more from us than we do from them, makes the Ballance of Trade fall much in our Favour, yet it is to be hoped it will do much more so when our Colonies are brought to greater Perfection, either in the Linnen, Hempen, or Silk Trade, our Poor employ'd by the Produce of our Dominions, and our Coin, or Specie, more closely confin'd to circulate amongst ourselves.

THE *Dutch East-India* Trade is managed by a Company, and it is observed that so many of the States of *Holland* being also Members of the *East-India* Company, they prefer their Relations and Friends to the most important Posts and Places of Trust in that Part of the World, and in the Fleets they send thither, which gives them a great Opportunity of advancing themselves and Families. It is not long ago that one of these *Dutch* Governors in *India* was, for some Fraud or Misdemeanor, fined a hundred thousand Pounds, and yet it was thought that he came well off, and saved a vast deal of Money by the Bargain. What may those save then who are never call'd to account at all, but when they have enriched themselves by private Trading, or other clandestine Dealings, come home to their own Country, and spend the Remainder of their Days in Ease and Plenty.

CHAP. X.

Of the Revenues of the Dutch, *and how they are rais'd; of their Taxes, ordinary and extraordinary; and of their Forces by Sea and Land; also of their Coin, Weights, and Measures.*

IN Order to settle the Taxes that are to be levy'd, the Council of State draw up every Winter an Estimate of the Expences of the ensuing Year, and present it to the States General, who signify to the several Provinces their respective Shares in it; the annual Amount is generally between two and three Millions Sterling in Times of Peace. Their Land Forces consist of twenty five thousand Men, *Switzers*, *Scots*, and other Foreigners, as well as national Troops.

And

And they have commonly about fifty Men of War in Commiſſion, to anſwer any Occaſion; whether to protect their Fiſhery, or their Merchants Trade, *&c.* and there are commonly fifty or ſixty Sail unrigg'd; and all theſe as Occaſion requires, are repair'd and maintain'd out of that publick Money, and the reſt is employ'd in paying the Salaries of the Officers of State, Ambaſſadors, and publick Miniſters, and in entertaining Foreign Princes, and their Miniſters and Attendants, and other accidental Charges.

But beſides the Forces above mention'd, they are oblig'd to keep Troops in the Barrier Towns of the *Auſtrian Netherlands*, it having been ſtipulated in a Treaty, concluded *November* 15 1715 between the Emperor and the *Dutch*, that they ſhall jointly maintain, in the ſaid *Netherlands*, thirty, or at leaſt twenty five thouſand Men; whereof the Emperor to have three fifths, and the *Dutch* two, and upon any Appearance of a War, the ſaid Body to be augmented to forty thouſand Men, and maintain'd and ſupported in the above mention'd Proportion; and that if it broke out into a real War the Force ſhould be increas'd, in the ſame Proportion, to what Number both Parties ſhould agree upon; and, in conſideration of the Expence of the *States* in maintaining their Troops in the Barrier Towns, the Emperor agreed, that the *States* ſhould have out of the Revenues of the *Auſtrian Netherlands* five hundred thouſand Crowns *per Annum*.

Taxes. As to the Taxes, whereby the ſeveral Provinces raiſe their reſpective Quotaes, they are divided into ordinary and extraordinary; the ordinary are common in Times of Peace or War; as 1. A Duty upon Salt, levy'd upon every Family, in proportion to the Salt they are ſuppos'd to conſume. 2. A Duty upon Beer, of twenty Pence a Barrel, but here ſmall Beer is excluded, and pays nothing; but *Engliſh*, *German*, or Foreign ſtrong Beer imported, pays a much higher Duty; and the Retailers of Beer alſo pay an additional Exciſe of twenty Pence a Barrel. The other Taxes are rais'd as follows:

	l.	*s.*	*d.*
French Wine by the Stoop (our Gallon or thereabouts)	0	0	6
Vinegar by the Barrel,	0	9	0
Spaniſh Wine by the Gallon,	0	1	0
Spaniſh Brandies by the Gallon,	0	0	10
Butter by the Barrel of 320 Pounds,	0	6	0
Eating-Oil by the Pipe,	0	8	0
Fiſh-Oil by the Pipe,	0	4	0
Wax and Tallow Candles 100 Weight,	0	0	8
Turf for Firing by the Tun,	0	0	1½
Coals from *Engl.* or *Scotl.* by the Tun,	1	10	0
Lead by the hundred,	0	0	5
Wood one Shilling in eight,			
Silver and Gold Stuffs, by the Yard or Ell,	0	1	0
Engliſh Cloth, one third the Value.			
Tapeſtry-Hangings, and other Houſhold Goods, one ninth the Value.			
Wheat ground in *Holland*, by the Laſt	6	6	0
Rye,	3	3	0
Barley or Oats,	1	15	0
For all Cattle, Sheep, or Hogs, that are kill'd, one ſeventh of the Value			
For every Horned Beaſt above three Years old, by the Month	0	0	3
For every Horſe	0	0	2
Herrings and Salt-fiſh, (if ſold to private Citizens) each Panier	0	1	8
Every Retale Fiſhmonger, for Salmon and Sturgeon, one ninth the Value.			
Tobacco by the Pound	0	0	10
Soap by the Barrel	0	11	0
Every Cart or little Boat pays by the Year	0	1	8
Every Coach by the Year	0	10	0
All Farms and Lands 1 *l.* in ſixteen.			
Land ſown or planted, pays by the Month while the Crop is upon it for every Acre	0	0	4
Every Houſe Yearly pays one Eighth of its Rent.			
Every Servant by the Head	0	1	8

All Immoveables, as Eſtates in Land and Houſes, and under which they (for a Reaſon not eaſily underſtood) include Ships, to pay a fortieth Part of the Price when ſold or alienated.

A Duty upon Stamp-Paper according to what is written thereon.

And many other Taxes, which indeed include ſo much, that there is ſcarce any Thing in the Country but what there is a Duty upon.

But beſides theſe common Charges, they have additional ones in Time of War, as

1. Poll-Money, twenty Pence a Head.
2. Chimney-Money, twenty Pence a Hearth.
3. The Land-Tax, the two hundredth Penny, or ten Shillings every hundred Pound.

And upon Inundations, or additional Repairs of the Dykes, *&c.* when neceſſary, but eſpecially the draining of the Country when overflow'd, there are additional Taxes impoſed in proportion to the Charge. Thus in *Rhinland* for Inſtance, though it has but little Communication with the Sea, yet it lying ſo low that even their own Lakes are Receptacles of Water ſufficient to overflow the Country if not drain'd or exhauſted in Time, to prevent this, every Acre pays two Shillings a Year, which they call Acredge-Money, beſides an additional fifteen Pence an Acre more, in, or after the Winter, towards draining the Snow or Rain-Water off their Lands, which had deſcended from the Mountains. They alſo pay a Shilling an Acre towards High-ways, Cauſways, Foot-paths, *&c.*

But we muſt not forget the *Dutch* Forces in the *Eaſt-Indies*, whereby they maintain that uſurp'd Right or Property which they have now made themſelves Maſters of. It is ſaid that they can fit out a Fleet of forty Men of War at *Batavia*, and muſter an Army of thirty or forty thouſand Men there. Some indeed queſtion the Truth of this, and ſpeak very diminutively of both their Naval and Military Force there; but what Inducement we have to ſay ſo I know not; for we neither found them too weak to inſult us in our own Poſſeſſions, nor now to maintain them when they have got them from us. They have now the Satisfaction of enjoying what was once ours; and I think we ſhould never inſult them upon the Account of Weakneſs of their Force, when contrary to all Juſtice, they have left us no Satisfaction, except that of complaining of their barbarous Uſage.

But to wave this Subject, and fall more immediately upon that of their Forces in *Holland*. When the *Dutch* were apprehenſive of a Rupture with the Emperor, they increas'd their ſtanding Forces to near fifty four thouſand Men, *viz.* four thouſand ſix hundred and twelve Horſe, two thouſand four hundred Dragoons, and forty ſix thouſand nine hundred and fourteen Foot; which with their Militia, compoſe a very formidable Army. And their Fleet is now conſiderably augmented; and in order to keep their Sailors from Deſertion, they have made it Death for them to enter into foreign Service.

Besides this the *Dutch* are much ſtrengthen'd by their Alliances, and by the ſtrong Towns they are poſſeſs'd of in the *Auſtrian Netherlands*, which makes their preſent Situation of Affairs much more agreeable than in any of the preceding Times. They have not only an Army of between fifty and ſixty thouſand Men in their own Pay, but it was ſtipulated by the Treaty of *Hanover*, that *Great Britain* and *France* ſhould aſſiſt them with their Forces if there ſhould happen to be a Rupture with the Emperor.

Coins. As to their Coins, they have Gold Ducats, Gold Ducatoons, and Half-Ducatoons, Rix-dollars, Half and Quarter Rix-dollars, Florins, Schillings, Four-Penny, Two-Penny, and Penny Pieces; alſo Dents, or Doits, and Pennings, of which ſix make a Stiver, or Penny, and three Doits make one Stiver; twenty Stivers make one Florin, or Guilder; fifty Stivers make one Rix-dollar, ſixty three Stivers make one Ducatoon; fifteen Guilders is a Gold Ducatoon, and five Florins five Stivers make a Gold Ducat. The Coins of *England*, *France*, and *Germany* paſs here for their original Value. The *French* Lewis-d'Or goes for about nine Guilders, or a hundred and eighty Stivers, and the *French* Crown for about fifty Stivers; but the *Dutch* Stiver is more than an *Engliſh* Penny, five Stivers being about Six-pence *Engliſh*, and twenty Stivers, or a Guilder, being worth two Shillings *Engliſh*.

Amſterdam is the chief Bank of *Holland*; but Bank. there are ſeveral Mints or Places of coining Money, as, *Arnheim* in *Gelderland*, and *Dort* in *Holland*; alſo *Hoorn*, *Enckuyſen*, *Middleburg*, *Utrecht*, *Lewarden*, *Deventer*, *Compen*, &c.

Their Weights are the Pound, a hundred of Weights. which make a Quintal, which is near our hundred Weight, but more exactly a hundred and eleven Pounds *Engliſh*, or, according to ſome, a hundred and eight Pounds.

Their uſual Meaſure is the Ell, one hundred Meaſure. and thirty four of which make a hundred Yards *Engliſh*; ſo that their Ell is near our twenty ſeven Inches, or three Quarters of a Yard.

The Shepel, or *Dutch* Buſhel, by which they ſell their Corn, *&c.* a hundred and three of them make fourſcore *Engliſh* Buſhels, which Quantity is call'd a Laſt with them as well as with us.

CHAP. XI.

Of the Language, Learning, and Univerſities of the Dutch; *alſo of their Liberal and Mechanick Arts; and of their Religion, Marriages, and Funerals.*

Language. The Language of *Holland*, and other Parts of the *United Provinces*, is a Dialect of the *German*, or *High Dutch*; and this Language has been treated of in the Deſcription of *Germany*; but the *French* has prevail'd ſo much, that it is become the current Language amongſt the *Dutch* Quality as well as in other Courts of *Europe*.

Learning. As to the State of Learning, it is generally obſerv'd that Mechanicks are preferr'd to Liberal Arts; and the Wonder is not great, if we conſider that moſt of their Country was firſt gain'd, and is now preſerv'd, by mechanical Induſtry. They have two Univerſities, which ſome of our own Natives are ſo generous in the Paiſe of, as to prefer them to our own in *England*; but I ſhall leave the impartial Reader to judge whether this Opinion ariſes from the Excellency of their Univerſities beyond ours, or from an Affectation that we have to foreign Novelties, without firſt being acquainted with the Excellency of our own; or, perhaps, the Cheapneſs of living, and the little trouble there is in taking up Degrees may be a great Inducement to ſpeak in their Paiſe.

University of *Leyden*. The Univerſity of *Leyden* was founded by the States in the Year 1674. The Schools are one Pile of Brick Buildings, three Story high, and two Rooms on a Floor, the Uppermoſt of which was *Elzevir*'s Printing-Office. The Number of Scholars in this Univerſity is about two thouſand; but there are but two Colleges in the Univerſity, the Students living in private Lodgings in the Town. None but Profeſſors wear Gowns, and that only when they read Lectures, or preſide at Diſputations, others performing their Exerciſes in Cloaks; the Auditory ſit cover'd at Lectures and Diſputations. The States allow every Profeſſor two or three hundred Pounds a Year, beſides what he has from his Auditors, who in this Caſe are look'd upon as Pupils, and pay him accordingly for being amitted to Lectures and Diſputes. There are no Degrees conferr'd in the Liberal Arts but Maſter and Doctor in each Faculty, and thoſe that are matriculated, or enter'd in the Regiſter of the Univerſity, enjoy large Privileges. The Rector is choſen by the States annually, on the Eighth of *February*, New-Stile, that being the Anniverſary of the Dedication of the Univerſity; and he only enjoys the Title of *Magnificus*. There are three Curators, aſſiſted by the four City Conſuls, who have the Cyndick, or Recorder, for their Council. The Senate is compoſed of twelve Profeſſors, viz. three in each Faculty, Divinity, Law, Phyſick, and Hiſtory; but they are ſometimes augmented under divers Limitations. All Cauſes between the Scholars, whether Civil or Criminal, are determin'd by the Rector and Aſſiſtors. In the Anatomy Theatre are abundance of Skeletons of all Sizes, Mummies, Minerals, alſo Habits of ſeveral Countries. They ſhew here a Man's Bladder containing two Gallons, and the Mummy of an *Egyptian* Prince, ſaid to be eighteen hundred Years old.

University of *Leyden*. The Univerſity of *Utrecht* was found by *David* Biſhop and Prince of *Burgundy*, who firſt Univerſity of *Utrecht*. erected a publick School about the Year 1459, which might be ſaid to be the Beginning of its being a Nurſery of Literature; but it was not erected into an Univerſity till the Year 1636. It is ſtill under the Government of the Civil Magiſtrates, who determine all Cauſes among both Profeſſors and Students, and puniſh Offenders according to their Demerit. This Library has more printed Books than that of *Leyden*, but *Leyden* excells in the Number of Manuſcripts.

There is good Painting, Engraving, Carving, and Muſical-Inſtrument-making perform'd here; but impartial Travellers tell us, that the beſt of their Performances is upon Work of which they have a Copy, or Specimen, from ſome

other Nation, or, in other Words, if they excell in any Thing it is in Imitation rather than Invention.

Religion

UPON the first Establishment of the Protestant Religion in the *Low Countries* it was agreed, that the publick Profession should be *Lutheranism*, but with a Toleration, however, for those of a different Opinion; but by the Union of *Utrecht*, 1579, each Province was impower'd to establish such a Religion in their respective Limits as should be thought most conducive to the Welfare of the said Province, but still provided that there should be no Compulsion in Matters of Conscience. But in the Year 1583 the States General agreed that *Calvinism* should be the establish'd Religion, for the following political Reasons: *First*, Because their chief Supporters in *England*, *France*, and *Germany*, were *Calvinists*; *Secondly*, Because the *Calvinists*, of all other Protestants, were the most inveterate against the *Spaniards*, the grand Enemies of the *Dutch*; and, *Thirdly*, Because by establishing *Calvinism* the Power and Jurisdiction of the Clergy would be suppress'd, and there would be no Ecclesiastical Authority to clog and fetter the Civil Power. These might have been three material Articles if they had concurr'd or been foreseen in the Choice of a Stadtholder, or Civil Magistrate; but if these Considerations directed their Choice, it would seem, that any other Religion, that would best have answer'd those political Ends, would have serv'd as well. But this was not the only Advantage; for their seizing the Goods and Possessions of the Churches and Abbeys, and applying their Income to the publick Revenue, gave it a vast Increase, and prov'd very useful in their Infant Government, which now only excepted *Roman* Catholicks from the Protection of their Laws; and yet even these are in a Manner tolerated by the Connivance of their Officers, who upon certain Payments from every Family, allow the Exercise of the *Roman* Catholick Religion in their respective Jurisdictions.

BUT the Bulk of the People are yet *Calvinists*, and the Power is lodg'd in their Hands. How far that Power may be exercised in allowing the *Roman* Catholicks the Exercise of their Religion I know not; but this we may observe from authentick History, that the Deputies of the General Synod complain'd to the States General, in the Year 1725, that the Number of *Roman* Catholicks was increas'd to three hundred and fifty thousand since the Year 1650.

THE *Calvinists* being now the establish'd Church, are govern'd by a Presbytery, among which there is an Equality, except in those who by the common Consent, or by a Majority, are chosen to preside. Particular Congregations are under the Direction of their Ministers, Elders, and Deacons; but all Censures and Degradations, and what concerns Religion in general, is determin'd in their Synods, Provincial or General. The Ministers receive their Stipends from the Magistrates of the City or Town where their Cure lies, and are seldom, if at all, allow'd a Plurality of Livings. As the Tythes and Church Lands have been seiz'd by the States, the *Dutch* Clergy depend entirely on the Magistracy, and if their Preaching gives them any Offence the Way they use to shew their Resentment, is, by sending the Preacher a Pair of Shoes and a Staff; which is something like a Ceremony we use in *England*, when we find a Person troublesome, *Sir, if you please, the Door is open*; each of them intimating, that the Person to whom the Compliment is offer'd, is desired to march off, and indeed, in *Holland*, the Ceremony is a Command to march off, and they dare not dispute it.

IN the great Churches in *Holland* they very much affect Organs and Singing of Psalms. Collections for the Poor are usually made in Sermon-time; a Purse and a Bell being fasned to the End of a Pole, and carried about by the Deacon, who is a kind of an Overseer for the Poor. They fall very far short of the Presbyterian Dissenters in *England* for keeping the Sabbath, for they make no Conscience of travelling on that Day by Boat or Waggon, or of buying or selling, only with this Difference, that they confine themselves to smaller Matters in the way of buying and selling, but never restrain themselves from any Diversion on the Sabbath-Day.

Marriages.

WHEN a Marriage is proposed, and both Parties with their Friends agreed and determin'd about the Choice, that Agreement is deem'd so sacred, that it is not to be receded from, and is accounted equal to Marriage itself, except the very Ceremony; and such a Stress do they lay upon this Agreement, which they call the Espousal, that they scarce make any Scruple of living together as Man and Wife afterwards, and it is not thought any Surprise to see the Women pregnant before the Marriage is solemniz'd. But there are in some of the great Towns, Commissaries for Matrimonial Cases, who take the Names of the Persons to be married, and see that they have the Consent of their Parents or Guardians; and, lest any Thing should be managed clandestinely, the Banns are publish'd three Times before the Marriage, as is yet done in *England*, except where, by Virtue of a little Money for a Licence, this commendable Custom is dispens'd with.

Burials.

THE *Calvinists* do not practise the reading of any Funeral Ceremony at the Grave of the Deceas'd, or ring any Bell, either at the Death or Interment; only there is a Person, like a Beadle or Sexton, who gives notice to the Neighbourhood to attend the Corpse to the Grave, which is sometimes three or four Days after the Party's Decease; and, in some Places, there is a Penalty upon those that neglect to perform this last Office to their deceas'd Friends.

THERE is in some Places a certain Time of the Day appointed for the Weddings to be perform'd, as also for the Burials, but not at all Places at the same Time of the Day, but some in the Forenoon, and some in the Afternoon, and at different Hours. But at a Funeral, if the Corpse is not brought at or before the Hour proposed, they forfeit a certain Sum for every Hour afterwards, which is apply'd to the Use of the Poor. And for this Reason a great many, that are not only willing to be charitable, but ambitious that the World should know it too, chuse to trespass upon the Time limitted, that they may not only distribute but display their Charity.

THE Papists and *Lutherans* think it not right if they have not a Bell rung at the Death and Interment of their deceas'd Friends, and put a great Value upon having them buried in consecrated Ground, if not in the Churches themselves; and the Government make the best Advantage of this their Inclination, and make them pay dear for it; and, in short, the *Dutch* will tolerate any Rites, how superstitious soever they are reckon'd, if they are but paid for their Indulgence.

A DESCRIPTION OF THE AUSTRIAN and FRENCH *NETHERLANDS.*

CHAP. I.

Of the Situation and Extent of the Auſtrian *and* French Netherlands; *containing the Ten Provinces, the Remainder of the Seventeen, which were not included in the Union of* Utrecht; *with a Deſcription of their Seas, Harbours, Rivers, Canals, Air, Climate,* &c.

The Ten Provinces

THOSE Ten Provinces which were ſeparated from the Seven, now call'd the *United Provinces*, are now ſubject to the Houſes of *Auſtria* and *France*; and are,

1. The Dutchy of *Brabant.*
2. The County of *Flanders.*
3. The County of *Artois.*
4. The County of *Hainault.*
5. The County of *Cambreſis.*
6. The County of *Namur.*
7. The Dutchy of *Luxemburg.*
8. The Dutchy of *Limburg.*
9. The Marquiſate of *Antwerp*, or of the Holy Empire.
10. The Lordſhip of *Malines*, or *Mechlin.*

THESE Ten Provinces as ſeparated from the other Seven, call'd the *United Provinces*, are bounded on the North by the Sea, and the ſaid ſeven *United Provinces*; by *Germany* on the Eaſt; on the South, by *Lorain*, and Part of *France*; and on the Weſt, by another Part of *France* and the *Britiſh* Ocean.

Harbours

ALL their Sea Coaſt lies between *Graveling* and *Sluys*; and their only Ports are *Gravelin*g, *Dunkirk*, *Newport*, *Oſtend*, and *Sluys*; the two laſt are the beſt Harbours, but none of them are fit to receive Ships of any great Burthen.

THE chief Rivers that run through theſe ten Provinces are, the *Maes*, the *Scheld*, the *Lys*, the *Lieue*, the *Aa*, the *Sambre*, the *Dyle*, the *Demer*, the *Scarpe*, and the *Deudre*; and not to mention thoſe that have been already deſcribed, the *Lieue* riſes near *Middleburg* in *Flanders*, and falls into the *Scheld* at *Ghent.* The *Aa* riſes in *Artois*, and paſſing by St. *Omars*, becomes two Branches; and re-uniting itſelf again near *Graveling*, it falls into the Sea a little below. The *Sambre* riſes in *Hainault*, and joins the *Maes* at *Namur.* The *Dyle* riſes in *Brabant*, and in its Paſſage receives the *Demer*, which riſes from two Springs in the County of *Liege.* The *Scarp* riſes from two Springs in the Province of *Artois*, which uniting near *Arras*, flows to *Douay* and *Marchiennes*, and falls into the *Scheld* a little below *Amand.* The *Dender* riſes in *Hainalt*, not far from *Condé*, and falls into the *Scheld* at *Dendermond.* The chief Canals in this Country are thoſe of *Bruſſels*, *Ghent*, and *Middleburg.*

THERE are few or no Springs in this flat Country, eſpecially in that Part near the Sea, though in the Hilly Part, and Places further up in the Country, there are Springs as in other Countries.

Foreſts

THIS Country was formerly famous for fine Woods and Foreſts, of which there is yet ſomething to be ſeen, but they are generally now alter'd for the better; being generally clear'd, and converted into populous Towns, Villages, and Fields of arable Lands and Paſture. Of theſe Foreſts the chief is that of *Ardenne*; which, in *Ceſar*'s Time, was the largeſt in all *Gaul*, it beginning at the *Rhine*, and extending through the Country of *Triers* to the Territories of *Tournay*, on the one Side, and, on the other Side, as far as *Rheims* in *Champaign*, being about five hundred Miles in Length; the thickeſt Part of what is now left of it, is between *Thionville*, on the Eaſt Borders of *Luxemberg*, and the City of *Liege*, which is about thirty Leagues; which Tract contains ſeveral Villages, the chief of which is *St. Hubert*, which ſtands about the Middle of it.

2. THE Foreſt of *Mormant*, in *Hainault*, which begins near *Quefnoy* and reaches ſeveral Leagues towards *Vermand*; but here are ſeveral Towns and Villages interſpers'd and great Quantities of Charcoal made.

3. THE Woods of *St. Amand* and *Hainault*, extending from the Limits of *French Flanders*, near *St. Amand*, to *Valenciennes*; but this was cut down by Order of the *French* King.

4. THE Foreſt of *Faigne*, beginning near *Avelnes*, in *Hainault*, and extending as far as *Mezieres*, in *Champaign*, which is about ſixteen Leagues.

5. THE Foreſt of *Soigny*, near the City of *Bruſſels*, ſaid to contain fourſcore thouſand Acres

6. MORE

6. MEERDALE, near *Louvain*; alſo *Zaventerloo*, between *Louvain*, *Bruſſels*, *Vilvord*, and *Grootenhaut*, near *Tournhoot* in *Brabant*; and to theſe we may add *Marlaigne* near *Namur*; alſo *Niepe*, which begins near the Confines of *Artois*, and extends to the River *Lys*, and is the principal Foreſt in *Flanders*: There is alſo the Foreſt of *Nonna*, which begins near *Ypres*, and extends to the Northward. *Poodsberg*, on the Confines of *Flanders* and *Hainault*; a large Foreſt, and was formerly a Part of the Foreſt of *Ardenne*. And laſtly, *Williams's Wood*, in *Artois*, near *Renty*.

CHAP. II.

Of the particular Provinces in the Auſtrian *and* French Netherlands; *and of the chief Towns therein contain'd.*

Boundaries.

IN my further Progreſs toward the South-weſt, into the *Auſtrian Netherlands*, the Dutchy of *Brabant* falls next in my Way; and in this is included *Antwerp*, or the Marquiſate of the Holy Empire, which is bounded by *Holland* on the North; by *Guelderland*, and the Biſhoprick of *Liege* on the Eaſt; on the South by *Hainault* and *Namur*; and on the Weſt by *Flanders*; and contains about ſeventy Miles from North to South, and ſixty from Eaſt to Weſt. The Air is generally healthful, and the Country fruitful, except the Northern Part of it; and as to their Soil and Husbandry take the following Account.

Soil and Husbandry.

Brabant is for the moſt part good, but *Flanders* is better; in which the richeſt Land lies between *Dunkirk* and *Bruges*, and continues about forty *Engliſh* Miles in length, and contains rich Meadows, and Plenty of as fine Wheat and Barley as any in *Europe*: But between *Bruges* and *Ghent*, which is about twenty four Miles, the Soil is not ſo good; and between *Ghent* and *Antwerp*, is only a gravelly, barren Soil, producing little but Heath and Broom, and the like, if not cultivated; and between *Antwerp* and *Holland*, the Soil is much the ſame; except, that though it is barren for Grain and Graſs, it is excellent Ground for Flax; inſomuch that one Acre of their Flax is worth four Acres of others; and not only ſo, but after the Flax is pull'd, it produces a Crop of Turnips; and in *April* following, they ſow the ſame Land with Oats and Clover-ſeed, and harrow it ſoftly only with a Buſh dragg'd over it; and while the Oats grow and ripen, the Graſs grows; and when the Oats are cut down, the Graſs makes good Paſture till *Chriſtmas*; and in the following Year they have three Crops of Clover; the firſt at the Beginning, and the ſecond at the latter End of *June*, and the laſt in *Auguſt*; and for other Parts of their Heath-Ground, they plant ſome with Hops, Fruit-Trees, and other Trees, which they have brought to great Perfection in this Soil, otherwiſe naturally barren.

Divided.

Brabant is divided into four Quarters, *viz.* the Quarters of *Louvain*, *Antwerp*, *Bruſſels*, and *Boſſeduc*. Chief Towns in the Quarter of *Louvain* are, 1. *Louvain*, the Capital. 2. *Tilmont*. 3. St. *Tron*. 4. *Leuve*. 5. *Dieſt*. 6. *Gemblours*. 7. *Halen*. 8. *Sichen*. 9. *Judoigne*. 10. *Hannue*. 11. *Landen*. 12. *Ramellies*.

Louvain.

1. *Louvain* is ſituate on the River *Dyle*, about fifty Miles North Eaſt of *Bruſſels*, and twelve South Eaſt of *Mechlin*; the Walls are ſix or ſeven Miles in Circumference, but ſcarce one third of the Ground within them is built upon, but is planted with Vineyards, or cultivated for Graſs or Corn. It ſurrendred to the Confederates in the Year 1706, after the Battle of *Ramellies*, without making any Defence. The Caſtle ſtands on the Top of a Hill, ſurrounded with fine Gardens and Vineyards, and has a beautiful Proſpect over a pleaſant Country, and ſtands in fine Air, which was the Reaſon of its being the Reſidence of their antient Earls.

WITH Reſpect to Manufactures, it is ſaid, the Weaving-Trade is the chief; it having been ſo popular, that there was not leſs than four thouſand Maſter-Weavers in the City at once; but their Trade declines very much of late, but yet they deal in fine Linnen, *&c.*

THE Univerſity was founded about the Year 926. The Students in Divinity do conſtantly wear Gowns and Caps, but the other Students wear them only at the publick Exerciſes. There are forty three Colleges; four for the Education of Youth, and the reſt for thoſe of riper Years. The Degrees taken up here, are thoſe of Maſter, Licentiate, and Doctor; the Licentiate is allow'd to chuſe his own Coat of Arms, and immediately commences Gentleman. The Governor of the Univerſity is ſtiled Rector, and is choſe every half Year, and has full Juriſdiction over the Scholars. There is another Officer call'd the Promoter, who inflicts Puniſhments upon Offenders, and gives Judgment in criminal Caſes, and ſometimes in Death itſelf; but theſe Sentences are often bought off. The Faculties in which they take up Degrees here are, 1. Divinity. 2. Canon-Law. 3. Civil-Law. 4. Phyſick. And, 5. Of Arts.

THE Town-Houſe of *Louvain* is an antient magnificent Building, as is alſo the *Jeſuits* Church, whoſe Library is ſaid to be the beſt in the *Auſtrian Netherlands*, on account of the great Number of valuable Manuſcripts it contains. About two Miles from *Louvain* is the Duke of *Arſcot*'s Palace of *Heverly*; the Walks that lead to it are much admired by Travellers, being delightfully ſhaded with Lime-Trees and the like; but the Palace itſelf is in a decaying Condition, and more valued for Antiquity than Beauty. In the Chapel here, they ſhew a Piece of Money, which is ſaid to be one of the thirty Pieces which *Judas* had for betraying our Saviour: And indeed ſome Circumſtances prove the Probability of it; for it is about the Weight of an *Engliſh* Shilling, and has *Tiberius*'s Effigie on one Side, and on the Reverſe, a Flower reſembling a Lilly.

THE other Places are not ſo remarkable as to deſerve a Deſcription in this Hiſtory, except *Landen*, about five Miles from *Leuve*, remarkable for a Victory gain'd by the *French* over the Allies in the Year 1693. And *Ramellies*, eleven Miles North of *Namur*, famous for the Victory obtain'd over the *French* by the Allies in the Year 1706.

Antwerp.

THE ſecond Quarter of *Brabant* is *Antwerp*, whoſe chief Town is *Antwerp*, or the Marquiſate of the Empire, ſituate on the Eaſt Bank of the *Scheld*, twenty five Miles North of *Bruſſels*, and thirty North Weſt of *Louvain*. The Town lies in Form of a Creſcent or half Moon, in low, fen-

ny Ground. The *Scheld* here is twenty Feet deep; and the *Ude*, at the new and full of the Moon, flows and ebbs above twelve Feet, and Ships of Burthen can lade and unlade at the Keys. The City is about seven Miles in Circumference, encompass'd with a beautiful Wall; the Top of which is said to be an hundred Feet broad, and well planted with Trees. There are thirteen strong Gates, eight of which stand towards the Water, and have their respective Keys or Wharfs, where Vessels lade and unlade. The Citadel is a Pentagon of five Royal Bastions, and is on the South Side of the City on the Banks of the *Scheld*; it is about a Mile in Compass, and stands at some small Distance from the City. The Streets of *Antwerp* are broad and regular, the Buildings magnificent, and the whole, beautiful and uniform. The Cathedral is a handsome Structure; in it there are sixty six Chapels and Altars, and the Steeple is deem'd an exquisite Piece of Architecture; from which may be seen in a clear Day, the Cities of *Ghent*, *Mechlin*, and *Louvain*; as also the Island of *Zealand*. The Stadthouse is a fine Building; the *English* had once an Exchange here peculiar to themselves; but there is now one common to all Nations, as ours at *London* is, which stands at the Concourse or Meeting of four principal Streets. The Printing-House is said to be the best in *Europe*, furnish'd with an hundred different Sorts or Founts of Letters; whereof amongst the rest, two are *Syriac*, ten *Hebrew*, nine *Greek*, forty seven *Roman*, &c.

About the Year 1568, *Antwerp* was supposed to contain about two hundred thousand Inhabitants; but the *Dutch* afterwards making themselves Masters of the Island of *Zealand*, which lies at the Mouth of the *Scheld*, they turn'd the Course of Trade to *Amsterdam* and other Places in *Holland*; and that, with their Civil Wars, and the Oppressions of the King of *Spain*, all contributed to lessen the Trade of *Antwerp*.

Antwerp was made a Bishop's See by Pope *Paul* IV. who lived in the Time of *Mary* Queen of *England*; it and was done at the Request of *Philip* King of *Spain*. He assign'd to it seven Towns, and an hundred and forty four Villages for the Verge of its See.

Breda. *Breda* is the next Town in Dignity. It is about thirty Miles North Easterly from *Antwerp*, and as many to the Southward of *Rotterdam*. It is a large and populous City, and regularly fortified. It is a Barony, comprehending seventeen Villages, the Inheritance of the Princes of *Orange*. The great Church is a magnificent Structure, and is the only Building that I find taken notice of in our modern History.

Brussels. The third Quarter of *Brabant* is *Brussels*, whose chief Town is of the same Name, and is the Capital of *Brabant* and of the *Austrian Netherlands*. It stands on the River *Senne*, twenty five Miles South of *Antwerp*, and thirty South East of *Ghent*, in a pleasant fruitful Country. It is about six Miles in Circumference, and surrounded with a Wall and other Fortifications, but not strong, which was the Reason that it surrender'd to the Allies in the Year 1706. immediately after the Battle of *Ramellies* without any Resistance; and indeed, the Fortification is too large to make it strong, except it had a vast Number of Men in proportion.

In the Year 1696. the Marshal *Villeroy* came before it with a very numerous Army, while K. *William* was at the Siege of *Namur*; and though Prince *Vaudemont* lay within the Walls with thirty thousand Men to defend it, yet the Stadthouse, and above two thousand other Houses were demolish'd, as also several Churches, by the Enemies Bombs, and their firing red hot Bullets into the Heart of the Town; and the City lying upon the Declivity of a Hill, it was the more expos'd to the Fire of the Enemy that lay before it; so that in about forty eight Hours, it was reduc'd to a Heap of Rubbish. It was afterwards rebuilt with great Advantage; but in the Year 1708. the Duke of *Bavaria* attack'd it, while the Confederates were employ'd at the Siege of *Lisle*; but the Duke of *Marlborough* marching immediately to its Relief, the Enemy found themselves under a Necessity to withdraw with Precipitation.

In this Town are several Abbeys, Monasteries, and other Buildings. The Country brings forth Abundance of Fruit, and Timber-Trees, and is well supply'd with Water by Fountains, Canals, and Rivulets. The River *Senne* runs through the City and falls into the *Scheld*, but there is a navigable Canal of near twenty Miles in Length, by which a Communication is maintain'd with *Antwerp* and other Places: This Canal was a Work of incredible Labour, they being obliged to level a Mountain to effect it. *Brussels* is a populous City, has large handsome Streets, spacious Market-places, and elegant uniform Buildings, and especially since the Bombardment, more than before.

Brussels is commonly the Residence of the Regent of the *Austrian Netherlands*, and of the Nobility and People of Distinction. Here is also held the High Court of Chancery, and the Assembly of the States of all the Provinces. The Palace is an antient Building in the highest Part of the Town. Whatever Stews or Baudy-houses may be allow'd, yet they seem to have some Sense of the Sin; for amongst other religious Houses, there is one for penitent Whores. There are Hospitals for the Sick, and some for the Entertainment of Strangers and Travellers, who are allow'd all Necessaries for three Days *gratis*. There is one also for foundling Children. Near the Palace is a Piece of Ground wall'd in, containing a Park, Aviary, Grotto, Canals, Water-Works, and Flower-Gardens; in which last, the Natives of *Brussels* are very curious. The Stadthouse is a noble Building, and has over it a Brazen Statue of St. *Michael* the Guardian Angel of the City, being fifteen Feet high. Fountains and Gardens of Flowers are common amongst the poorest People in *Brussels*.

The fourth Division of *Brabant* is *Bois-le-duc*. The chief Town of the same Name is situate on the Banks of the *Dromele*, about thirty five Miles North East of *Antwerp*. The Town stands on a rising Ground in the Middle of a large Marsh, which in Winter time is so full of Water, that the Town cannot be approach'd but by Causeways; and upon them are built Forts and Redoubts to secure those Passes or Avenues which lead to the Town. It lies in the Way from *Breda* to *Grave*. There are several fine navigable Canals run through the Town. Their Houses are generally Timber. They have Canals in all the principal Streets, over which are fifty Stone Bridges. Ten of the principal Streets lie in Form of a Star, and terminate in the Market-place. The chief publick Buildings are the Stadthouse and St. *John*'s Church, the former built after the Model of that at *Amsterdam*.

Their chief Manufactures are Linnen, Woollen, Cutlery-ware, and Needles. The Magistrates are two Prætors or Burgo-masters, who take cognisance of Civil and Criminal Cases; but there is a supreme Tribunal at the *Hague*, to which there lies an Appeal from this and all other Cities in *Brabant* subject to the *Dutch*.

Maestricht is on the West Side of the *Maes*, having a Suburb on the other Side call'd the *Wick*. It

It is about twelve Miles to the Northward of *Liege*, and thirty East of *Louvain*. It is call'd *Maestricht* from its being a Ferry over the *Maes*; the Word *Tricht*, signifying a Boat or Ferry in the *Dutch* Language. The Town is about four Miles in Circumference, but not very populous. The Stadthouse is after the Model of that at *Amsterdam*. There are three *Dutch* Churches, but the greatest Part of the Inhabitants are *Roman Catholicks*, who have a Convent of Monks, and another of Nuns, in the Place. It is now in Possession of the *Dutch*, to whom it was restored at the Peace of *Nimeguen*, in the Year 1679.

Mechlin

The little Province of *Mechlin*, lies in the middle of *Brabant*, and is surrounded by it on every Side; it is not above ten Miles long, and five broad; the only Place of any Note is the City of *Mechlin*, which lies between *Antwerp*, *Louvain*, and *Brussels*, from each of which, it is distant about twelve Miles; it is a handsome City, the Streets spacious and neat; the Town is divided into several Islands, by the Branches of the River *Dyle*, or artificial Canals that run through it, over which are abundance of Bridges: It surrendred to the Allies after the Battle of *Ramellies*, without making any Defence; there are seven Parishes in the Town, and as many beautiful Churches. The Cathedral is a sumptuous old Building; Pope *Paul* IV. erected this Place into a Bishoprick, in the Year 1559. Here is held a great Council, consisting of a President and sixteen Senators, to which high Court, all Appeals are brought from those Provinces, which continue under the Dominion of the House of *Austria*.

Tanners and Weavers are the chief Handicraft Trades in this Place. They are also famous for making Guns and casting Bells; but they are most admired for their fine Lace, known to us by the Name of *Mechlin* Lace.

Flanders

The Province of *Flanders* is bounded on the North by the Sea and the River *Scheld*, and on the East by *Brabant* and Part of *Hainault*, and on the South by another Part of *Hainault* and *Artois*, and on the West by another Part of *Artois* and the Ocean; being about seventy Miles from East to West, and sixty from North to South. This Province is generally flat and level, but is reckon'd the most fruitful Spot of Ground in all *Europe*; and what renders it still more delectable, is, the fine Canals, regular Plantations of Trees, the many beautiful Cloysters, Towns, and Villages, which stand so thick, that we no sooner leave one but we are at another; but this Country does not afford any Plenty of good Wine. The Country breeds large Cattle, especially Horses, which our Nobility use, and distinguish by the Name of *Flanders* Horses. The chief Towns in *Dutch Flanders* are

1. *Sluys*, one, and the most commodious, of the five Ports in *Flanders*; it is about ten Miles North-East from *Bruges*. The *Dutch* being Masters of *Sluys*, *Bruges* could have no Communication with the Sea without their Leave, till the *Spaniards* cut a navigable Canal from *Bruges* to *Ostend*. *Sluys* is but a small Town, not above a Mile in Circumference, and a Place of little Trade at present. 2. *Sas van Ghent*, or the Port of *Ghent*, about twelve Miles North of *Ghent*; it is in Possession of the *Dutch*, who can cut off the Communication between *Ghent* and the Sea when they please. 3. *Cadsandt*, an Island at the Mouth of the *Scheld*, over against the *Walcheren*, about nine Miles long, and four Miles broad, on which is a Fort of the same Name, by which the *Dutch* secure their Communication between *Zealand* and *Flanders*. There are some other Places of less Moment, but none of any great Consequence in the Hands of the *Dutch*, except what relates to their Barrier.

Austrian Flanders

The most noted Places in *Austrian Flanders* are, 1. *Ghent*, the Capital of that Province; it stands on four navigable Rivers, *viz.* the *Scheld*, the *Lys*, the *Lyene*, and the *Mourwater*; it is about thirty Miles North-West from *Brussels*; it is surrounded by a Wall and other Fortifications, ten or twelve Miles in Circumference; but though the Town is large, yet not one half of the Ground within the Walls is built upon, there being many Gardens, and Fields too, within the Walls. The Town is divided into six and twenty Islands, by Canals and Branches of Rivers that pass through it, over which there are in all near a hundred Bridges; the Streets are wide, and well pav'd, the Market-Places spacious, and the Houses are mostly of Brick, and well built.

The publick Buildings are the Stadthouse and the Cathedral, both handsome Buildings; in the latter of which is an Image of white Marble, with one Head and three Faces. There are seven Parish Churches, and fifty five Monasteries and Nunneries; amongst which there is one *English* Nunnery: Here was born that famous *John* Duke of *Lancaster*, call'd therefore *John* of *Gaunt*. There are on the Bridge, call'd *Dogebrack*, two Images, representing a Son beheading his Father, the Occasion of which is, A Father and his Son were both condemn'd to dye, but it was granted to them, that if they could so agree between themselves, he that would execute the other should be pardon'd; and the Father being advanc'd in Years, and not having long to live by the Course of Nature, he prevail'd with his Son to be the Executioner, and save his own Life; to which his Son with Reluctancy agreed; but as he was going to give the fatal Stroak, the Sword broke in his Hand, which being look'd upon as a Miracle, to forbid the Execution, they were both pardon'd, and those Images set upon the Bridge in Memory of the Miracle.

Manufactures

The Silk and Woolen Manufactures flourish in this Place as well as the Linnen, and they have a great Trade in Corn. *Ghent* is a Bishop's See, under the Archbishop of *Mechlin*, and the Provincial Court is held here; but there is Appeal to that of *Mechlin*. The *French* took Possession of *Ghent* and other Towns in *Flanders* on the Death of *Charles* II. of *Spain*, but it surrendred to the Allies upon the Defeat of the *French* at *Ramellies*, in the Year 1706; and in the Year 1708 the *French* surpriz'd it, and threw in an Army to defend it; but the Allies invested it near *Christmas*, and notwithstanding the advanc'd Season, compell'd them to surrender and quit it.

Bruges

Bruges is twenty four Miles North-West of *Ghent*; it is about four or five Miles in Circumference, surrounded by a Wall and other Fortifications; it has a spacious Market-Place, in which six of the Principal Streets center; there is a Cathedral, seven Parish Churches, six Monasteries and Nunneries; amongst which last one for *English* Nuns, and a College of Jesuits; it is said to have been once a Place of the greatest Trade of any in *Europe*, most Countries that had any Trade or Commerce having Agents or Factors here, particularly the *English*, who made it their Staple for Wool; and as it has a Communication with the Sea by a Canal to *Ostend*, it has still a good Trade. Their Manufactures are chiefly Woolen Cloath and Stuffs, Linnen, and Tapestry, and the like.

Ostend is ten Miles to the Westward of *Bruges*,

ges; it is the beſt Harbour in *Flanders*, except *Sluys*; it ſtands on a Moraſs, which Situation, with it's Fortifications, render it one of the ſtrongeſt Towns in *Flanders*; the Place is not very large, but it is regularly built, and the Streets well pav'd. *Oſtend* was but a ſmall Village; it's firſt beginning to become famous was in the Year 1601, when it was defended by the *Engliſh* and *Dutch* againſt the *Spaniards*, and in the Year 1604. The *Spaniards* had in that three Years loſt ſeventy thouſand Men before it. The *French* got Poſſeſſion of it, upon the Death of *Charles* II. King of *Spain*, but the Confederates took it after the Battle of *Ramellies*, and it is now ſubject to the Houſe of *Auſtria*.

Newport *Newport*, another of the five Ports of *Flanders*, lies by the Sea ſide, eight Miles South-Weſt of *Oſtend*, and fifteen Weſt of *Bruges*; it is at the Mouth of a ſmall River, and is a good Harbour for ſmall Veſſels, but it is a Place of no great Trade; the Houſes are generally built of Wood, and for a Subſiſtance, they depend chiefly upon the Fiſhing Trade.

Dendermond. *Dendermond* ſtands where the River *Dender* falls into the *Scheld*, as the Name *Dendermond* implies; it is twelve Miles Eaſtward of *Ghent*; it is a ſtrong Fortreſs, and the more ſo, becauſe they can lay all the Country about them under Water when they pleaſe; it is one of the Barrier Towns; the Garriſons conſiſt of an equal Number of *Dutch* and *Germans*; it ſurrendred to the Allies in the Year 1706, after the Battle of *Ramellies*.

Audenard. *Audenard* is ſituate on the River *Scheld*, fourteen Miles South of *Ghent*. 'Tis a large, well fortify'd Town; the River runs through it, and divides it in two Parts; it is ſurrounded by plain pleaſant Meadows, except a Hill on the South ſide, which commands the Town; the Streets are wide and handſome, and the Buildings good, and ſeveral fine Churches and Monaſteries are in the Place; it has a good Trade in Tapeſtry and fine Linnen, and is the Capital of a Chatellany, which contains three and thirty Villages; the *French* laid Siege to it in the Year 1708, but the Allies gave them Battle, gain'd a compleat Victory, and beat the French from the Place.

Courtray *Courtray*, on the River *Lys*, twenty ſix Miles South-Weſt of *Ghent*; it is ſtrong by Art and Nature; it is defended by a good Citadel, is a populous Place, and both Linnen and woolen Manufactures flouriſh here.

Menin. *Menin*, a little but well fortify'd Town on the River *Lys*, five Miles to the Southward of *Courtray*; it was taken by the Allies in the Year 1706; and is now one of the Towns Barrier againſt *France*.

Tournay. *Tournay* is on the River *Scheld*, which runs through the Town, and divides it in two Parts; it is about the middle between *Ghent* and *Cambray*, and about thirty Miles from each; it is a large, populous, well built City, and a Place of good Trade; and while it was in the Hands of the *French*, they put it's Fortifications in a good Condition; but what contributed to the Strength of the Place was, the Mines, which, when the Allies were before it in the Year 1709, blew up hundreds, or rather thouſands, of them at a Blaſt; for when they had with the utmoſt Difficulty and Hazard made themſelves Maſters of as ſtrong Works as ever were contriv'd, and the *French* could not maintain them any longer, they ſet fire to the Mines, and blow'd up whole Regiments of brave Fellows at a Time, who fell again in a Shower of broken Limbs and ſhatter'd Carcaſes. Theſe Mines conſiſt of vaſt ſubterraneous Vaults, more like Terras Walks than Mines. In the Center of the Citadel there is a Well, the Surface of whoſe Water is fifty Foot below the Mouth of the Well, and juſt above the Water, are the beautiful Balconies that lead to thoſe deſtructive Caverns above mention'd. (This Deſcription of thoſe Mines, we had from a *Britiſh* Gentleman that view'd them.)

The City contains ten Pariſhes, and as many beautiful Churches, beſides fine Convents, and Cloyſters; there is a magnificent Cathedral adorn'd with Braſs and Marble Monuments, beſides other Antiquities, which they think very valuable; as for Inſtance, there is an excellent Piece of Painting, of the crowning of our Saviour, done by the famous *Rubens*, ſaid to be of ineſtimable Value; there is alſo another Picture of the Nativity, and other fine Paintings.

King *Henry* VIII of *England* beſieg'd *Tournay* in the Year 1513, and built the old Citadel; but upon a Treaty of Marriage, between the Dauphin, and the Princeſs *Mary*, it was deliver'd up to the *French* again. The *Spaniards* made themſelves Maſters of it in the Year 1581, and the *French* again ſurpriz'd it in the Year 1667; but the Allies took it from them in the Year 1709, and it is now one of the *Dutch* Barrier Towns. This Town was famous for the woolen Manufacture; but at preſent the Linnen only prevails, and engroſſes the chief Buſineſs of the Place.

Beſides theſe, there is *Ypres*, on the River *Ypre*, ten Miles Weſt of *Menin*. *Fort Knoque* on the River *Iſſer*, fifteen Miles to the Northward of *Ypres*; and *Furnes* on the River *Colus*, about ten Miles Eaſt of *Dunkirk*; but they are not remarkable, only for being the Barrier Towns between the *Dutch* and *French*.

In *French Flanders*, the chief Towns are, *Liſle*, or *L'Iſle*, *Dunkirk*, *Mardyke*, *Graveling*, *Doway*, and ſome others of leſs Note, of which in Order. *French Flanders*

L'Iſle is ſo call'd, becauſe it ſtands on a Moraſs, and was once ſurrounded with Water, which is now drain'd off; it ſtands on the River *Deule*, twelve Miles Weſt of *Tournay*; it is a large, populous, well built City, defended by a Citadel, and ſo well fortify'd, that it coſt the Allies more Men to take it than any one Town in *Flanders* the laſt War; it is the Capital of *French Flanders*, and, from it's flouriſhing Trade, and fine Buildings, is call'd little *Paris*. The Citadel is a Maſter-Piece in Fortification; and the Stadthouſe, and Church of St. *Peter*, are elegant Buildings. The Silken and Linnen Manufactures are arriv'd at great Perfection here, and they are become famous for Camblets. The *French* took it in the Year 1667, and built the Citadel, enlarg'd it's Fortifications, and made it the Center of the Trade of *French Flanders*; it was taken by the Allies on the twenty ſecond of of *October* 1708, and the Citadel on the eleventh of *December* following; but was ſurrendred up to the *French* at the Treaty of *Utrecht*, on the Account of their demoliſhing *Dunkirk*; becauſe from that Port they uſed to infeſt the *Engliſh* Seas in Time of War, both with their Privateers, and their Men of War. *Liſle*

Dunkirk is a Harbour on the Sea Shore, twenty five Miles North-Eaſt of *Calais*, and twenty five South-Weſt from *Oſtend*. The Harbour and Fortifications of the Place ſerv'd for a Neſt of Pirates in the late Wars, in the Time of *Lewis* XIV. which was the Occaſion of the *Engliſh* and *Dutch* inſiſting upon having its Fortifications demoliſh'd, at the Treaty of *Utrecht*; and both the Harbour and Walls of the City were entirely raz'd, and made like the Ruins of a good Harbour, rather than a Harbour itſelf. *Dunk*

Mardyke, a little Town upon the Coaſt, about a League South-Weſt of *Dunkirk*; this *Mar*

Place the *French* thought to fortify, to anſwer the End of *Dunkirk*, alledging, that if they were oblig'd to demoliſh *Dunkirk*, yet they were not thereby forbid to fortify another Place; but upon the Threats of the *Engliſh* Court, they were oblig'd to lay that Project aſide, after they had made ſome conſiderable Progreſs in it.

Gravelin is at the Mouth of the River *Aa*, ten Miles South-Weſt of *Dunkirk*; it is one of the five Ports of *Flanders*, but not capable of receiving Ships of great Burthen.

Gravelin.

Doway ſtands on the River *Scharpe*, twenty Miles South of *L'Iſle*; it is a large populous Town; the Allies took it from the *French* in the Year 1710, but the *French* retook it in the Year 1712, when the *Britiſh* Troops were ſeparated from thoſe of the Allies, when they refuſed to accept of a Peace upon the Terms propoſed by *England*. The chief Manufacture of this Place is Worſted Camblets.

Doway.

The Province of *Artois*, or *Arras*, is bounded by a Part of *Flanders* on the North, and by *Hainault*, and another Part of *Flanders*, on the Eaſt; and by *Picardy* on the South, and Weſt. Their Manners, Habit, and Language is moſtly *French*, the Province having been conquer'd by that King, and confirm'd to him by the *Spaniards*, at the *Pyrenean* Treaty, *Anno* 1659. Chief Towns in *Arras* or *Artois*, are,

Province of Artois.

1. *Arras*, the Capital of the Province, called antiently *Atrebatum*; it ſtands on the River *Scharpe*, twenty five Miles South-Weſt of *L'Iſle*, and twenty South-Weſt of *Doway*; it conſiſts of two Parts, of which one is the City, and the other the Town, but both ſurrounded by the ſame Wall, and fortify'd after the modern Way. It is a Biſhop's See, and the Cathedral a magnificent Structure. In a Chapel here the Prieſts ſhew a Wax Taper burning, which they pretend was ſent from Heaven, and does not conſume; they have alſo a Pot of Manna, which, they pretend, came the ſame Way as the Taper did; and this is expos'd in a dry Seaſon when they pray for Rain. It is a handſome Town, and famous for the beſt Tapeſtry, thence call'd *Arras*; it belongs to the *French* ever ſince the Year 1640.

Arras.

2. St. *Omar*, fifteen Miles South-Eaſt of *Calais*, and twenty South of *Dunkirk*. The Trade of this Place is much improv'd, by Means of a navigable River or Canal, from it to *Gravelin*, by which it has a Communication with the Sea.

St. Omar.

The Province of *Cambray*, is bounded by *Hainault* on the North and Eaſt, by *Picardy* on the South, and by *Artois* on the Weſt. Chief Town is

Province of Cambray.

Cambray, a large well built City, on the River *Scheld*, not far from the Head of it; about ſixteen Miles South-Weſt of *Valenciennes*; it's regular Fortifications, and the Opportunity of laying it under Water upon Occaſion, renders it one of the ſtrongeſt Places in thoſe Parts: Here are nine Parith Churches, three Abbies, and ſeveral other religious Houſes and Hoſpitals. The Stadthouſe ſtands in a ſpacious Market-Place, where moſt of the Streets center; the chief Manufacture of this Place, is a fine *Cambray* Linnen, called Cambrick, from the Name of the Place; it has been an Archbiſhoprick ever ſince the Year 1559. The *Spaniards* were Maſters of it, till the Year 1667, and then it was taken by the *French*, and confirm'd to them by the Treaty of *Nimeguen*.

Cambray.

There is alſo the Town of *Chateau Cambreſis*, and *Crevecaur*, but they are not now worth particular Deſcription.

Chateau Cambreſis. Crevecaur.

The Province of *Hainault* is bounded on the North by *Flanders* and part of *Brabant*, and by another part of *Brabant* and the County of *Namur* on the Eaſt. On the South by *Cambreſis*, *Picardy*, and *Champaign*, and on the Weſt by the River *Scheld*, which ſeparates it from the Province of *Artois*; the chief Rivers are the *Scheld*, the *Sambre*, the *Dender*, and the *Haine*; in this Province are Mines of Lead and Iron, and ſeveral Quarries of Marble; the chief Towns are in two claſſes, firſt thoſe in poſſeſſion of the *French*, and ſecondly thoſe that are in the hand of the Emperor.

Province of Hainault.

And firſt of thoſe belonging to the *French*. The chief are,

1. *Valenciennes*, the Capital of *Hainault*, ſituate on the River *Scheld*, which runs in ſeveral Canals through the ſeveral parts of the Town, and the principal Streets of it. It is about ſixteen Miles North Eaſt from *Cambray*, and eighteen South Weſt from *Mons*; it is a large well built and ſtrongly fortify'd Town, and (what adds to its ſtrength) it may be overflow'd at Pleaſure; and as the Land is ſo low and ſubject to be overflow'd, the late *French* King cauſed a noble Cauſeway to be thrown up from *Valenciennes* to *L'Iſle*, and ſo to *Ypres*, near fifty Miles in length. Their Houſes are moſtly built of Wood, their chief Manufactures are Silk and Linnen; it belongs to the *French*, being firſt taken by them in the Year 1677. and afterwards confirm'd to them at the Treaty of *Nimeguen*.

Valenciennes.

2. *Bouchain* is alſo on the River *Scheld*, ten Miles South-Weſt of *Valenciennes*. The *French* took it from the *Spaniards* in the Year 1676, and it was confirm'd to the *French* by the Treaty of *Nimeguen*. The Allies took it from the *French* in the Year 1711, but the *French* retook it in 1712, after the *Britiſh* Troops had ſeparated from thoſe of the Allies.

Bouchain.

3. *Condé*, where the River *Haine* falls into the *Scheld*, about ſix Miles North-Eaſt from *Valenciennes*, not remarkable for any Thing, but that of giving Title to a Prince of the Houſe of *Bourbon*.

These three are in the Hands of the *French*; thoſe that follow, are in the Poſſeſſion of the Emperor.

4. *Mons*, twenty ſix Miles South-Weſt of *Bruſſels*, and thirty ſix Weſt of *Namur*; it is a ſtrong handſome Town, the Capital of the *Spaniſh Hainault*; with ſpacious Streets and Market-Places. This is a Biſhop's See, and here the Parliament, or Provincial Council aſſembles, and receives Appeals from the reſt of the Towns of *Brabant*, under the Emperor's Dominion: The Allies took it from the *French* in the Year 1709, after the Battle of *Malplaquet*; and it was afterwards confirm'd to the Emperor by the Treaty of *Utrecht*.

5. *Ath*, ſituate on the *Dendre*, twelve Miles North-Weſt of *Mons*; it is but a little Town, but ſo well fortify'd, that it has more than once endured a long Siege againſt an Army of a hundred thouſand Men; it was confirm'd to the Emperor by the Treaty of *Utrecht*, and now remains in his Poſſeſſion.

6. *Halle*, on the utmoſt Confines of this Province, eight Miles South of *Bruſſels*, and twenty North of *Mons*; it is pleaſantly ſituated upon the River *Saine*, or *Sin*, but it is a Place of no great Importance at preſent.

The Province, or County of *Namur*, has *Brabant* on the North, the Biſhoprick of *Liege* on the Eaſt, and *Hainault* on the South and Weſt; there are in this County ſome good Mines of Lead, Iron, and Coals, with Veins of Marble, and great Store of foſſile Nitre, and they have plenty of Wood for the uſe of their Iron Works.—Chief Towns are

Province of Namur.

Namur. 1. *Namur*, ſituate at the Confluence of the *Maes* and the *Sambre*; it is thirty ſix Miles Eaſt of *Mons*; it is of a circular Form, and lies in a Bottom, between two Hills; the greateſt Part of the Town is on the North Side of the *Sambre*, and on the other Side is a ſteep Mountain, on which the Caſtle ſtands, which is a magnificent Building, and reckon'd one of the ſtrongeſt Forts in *Europe*; for though the Rock on which it ſtands be not very ſteep, yet its Approaches are fortify'd with the greateſt Art, and at the Top are ſeveral good Springs of Water. It is a Biſhoprick under the Archbiſhop of *Cambray*; there are beſides the Cathedral, nine or ten handſome Churches: The Jeſuits College exceeds that at *Antwerp* for Magnitude, Structure, and Beauty, being ſupported by wreath'd Columns of red Marble of the *Doric* Order finely vein'd, and near a Yard and a half Diameter, with fine Baſes and Corniſhes in Proportion. The Allies took it from the *French* in the Year 1695, and it is at preſent one of the *Dutch* Barrier Towns; the States of the Province aſſemble here; but there lies an Appeal from thence to the ſupreme Court at *Mechlin*.

Charleroy 2. *Charleroy* ſtands near the *Sambre*, fifteen Miles Weſt of *Namur*; it is a ſtrong Fortreſs, and is now in the Emperor's Poſſeſſion.

Charlemont. 3. *Charlemont*, a ſtrong Place on the top of a high Hill, at the bottom of which runs the River *Maes* or *Meuſe*. It is about twenty Miles to the Southward of *Namur*, fortify'd by the Emperor *Charles V. Anno* 1555.

Province of Luxemburg The Province or Dutchy of *Luxemburg*, is bounded on the North by the Dutchy of *Limburg*, and Biſhoprick of *Liege*; by the River *Moſelle*, which ſeparates it from the Archbiſhoprick of *Treves* or *Triers* on the Eaſt; on the South, by the Dutchy of *Lorrain*; and on the Weſt, by the River *Maes*, which divides it from the Counties of *Namur* and *Champaign*. This Province is divided into two Parts, *Famenne*, and *Ardenne*. *Famenne*, which is the Northermoſt, is a fruitful Soil, yielding Plenty of Corn and Wine; but *Ardenne*, which is next to *France*, is a more barren Soil; the lower Ground produces Woods abounding with Game, and the Mountains produces Mines of Iron and Copper. The Language and Manners of the *French* are the moſt prevailing here, as laying contiguous to that Kingdom; but the *Dutch* is pretty much ſpoke in the Northern Parts of it. It was confirm'd to the Emperor at the Treaty of *Utrecht*, in the Year 1713. Chief Towns of the Dutchy of *Luxemburg* are,

1. *Luxemburg*, the Capital of the Province, twenty Miles South Weſt of *Treves*, and an hundred South Eaſt of *Bruſſels*. The Town is ſtrong, but not large, or well built. There is a Monaſtery of *Franciſcans* here; and in the great Church are the Tombs of *John* of *Luxemburg* King of *Bohemia*, and of Count *Mansfield*, Governor of the *Spaniſh Netherlands*; but there is no publick Building worth a Traveller's Notice. *Luxemburg*

2. *Thionville*, on the North Side of the *Moſelle*, fourteen Miles to the Southward of *Luxemburg*. It is a ſtrong, well built Town, but has been often alternately in the Hands of the *French* and *Spaniards*.

The Province of *Limburg* is bounded on the North and Eaſt by the Dutchy of *Juliers*, and on the South by *Luxemburg*, and on the Weſt by the Biſhoprick of *Liege*. It is about thirty Miles from North to South, and twenty five from Eaſt to Weſt. Here is good Arable and Paſture-Ground, Plenty of Wood, good Iron-Mines, but no Wine in the Province. The chief Town is *Limburg*, on the River *Vſe*, fifteen Miles South Eaſt of *Liege*, and twelve to the Southward of *Aix la Chapelle*. It is a ſmall Town of only one broad Street; and as it ſtands upon a ſteep Rock, and has but one Paſſage to it, it is almoſt inacceſſible by an Enemy. This is the only Town of Note in the Province belonging to the *Imperialiſts*; the other three, viz. *Dalem*, *Roldue*, and *Fauquemont*, or *Falkenburg*, are now in Poſſeſſion of the *Dutch*; but as they are now in Ruins, and of little Note, I cannot think them worth a particular Deſcription.

CHAP. III.

Of the Trade, Manufactures, and Navigation, of the Auſtrian Netherlands; *with an Account of their Religion, Government, Forces, and Revenues; and the Order of their Nobility, Gentry, &c.*

HAVING already hinted of the Trade and Manufacture of each Province in the Deſcription of its reſpective Province, I ſhall only obſerve in general upon that Subject, that before the Revolt and Union of the ſeven Provinces, the woollen Manufactures were in great Eſteem as a beneficial Branch of Trade; for hither the *Engliſh* ſent moſt, if not all, their Woollen to be made into Cloth; the Reaſon indeed was, becauſe at that Time of Day, we could not manufacture that Commodity ſo well as they. But as Divine Providence can bring Good out of Evil, ſo their ſuperſtitious Bigotry to Popery, and their barbarous Uſage of the poor Proteſtants, (a natural Conſequence of the former) occaſion'd ſome of their beſt Mechanicks to fly for Shelter to *England* for the Sake of their Religion; and not only willing, but glad, and thankful, to be employ'd in our woolen Manufactures for the Sake of Bread and the free Exerciſe of their Religion; by which Means the manufacturing of Wool into Cloth, &c. was as it were brought into our Mouths at a ſmall Expence, and our Charity to thoſe diſtreſs'd Proteſtants ſoon became our Advantage as well as theirs; and in this Caſe our Gain was their Loſs; for when by that Means we had got the way of manufacturing our own Wool, they by that means loſt all that Buſineſs; whereupon they ſow'd vaſt Quantities of Flax, and the Soil of the *Low Countries* being extremely proper for that Commodity, and being an ingenious People, they ſoon became great Proficients in the making of Linnen and Lace, in which they excel all Nations in *Europe*; as witneſs their *Holland* and *Cambray* Linnen, call'd after the Names of their reſpective Places, Holland and Cambrick; alſo their *Flanders* Lace, *Mechlin* Lace, *Bruſſels* Lace; of all which Linnens and Lace, *England* in ſelf makes a great Conſumption; and paying for them generally in Treaſure, they turn out to them to a very good Account. And though we might formerly exchange our *India* Goods for their Manufactures, which might be of ſome Advantage to us, yet that

that Branch of our Trade is now block'd up, ſince they have fallen into ſuch a large Share of the *Eaſt India* Trade themſelves. But what not only creates, but highly increaſes the Surprize, is, that when they have ſerv'd us as they have done, not only in the *Eaſt Indies*, and eſpecially the Spice Trade, but alſo in the Fiſhery as before treated of, that they ſhould require our Defence and Protection in their extravagant Pretences, while they ſtand by as idle Spectators in the Quarrel, and ſuck in Money by their continual Trade with all the Nations at Variance.

INDEED, if we look upon them in a proper Light, *viz.* as the common Carriers of *Europe*, (the chief Employment of their Shipping being not to export their own Goods, but to trade with thoſe of foreign Nations) we may then obſerve, that our Affectation of Novelty is a good Article in their Favour. For if to promote our own Trade and home Manufactures, we thought it proper to prohibit the wearing of *India* Silks and Calicoes, might it not equally tend to the promoting our own Manufactures, to prohibit *Cambray* Linnen, commonly known by the Name of Cambrick; as alſo *Mechlin*, *Bruſſels*, or any *Flanders* Lace? Is not the Linnen of *Scotland*, and of late of *Ireland* too, ſo near that of *Holland*, and in ſuch a fair way of improving if encourag'd, as to be ſufficient to induce us to encourage the Manufactures of thoſe our own Dominions rather than affect thoſe abroad, which ſo little, if at all exceed ours, and probably would not at all exceed it if we encourag'd our own as much as we do ſome foreign Manufactures? But if nothing but foreign Manufactures will go down with the Ladies and Perſons of Quality, (and as it is at preſent, nothing will go down with the Chamber-maids and common Women-ſervants but ſuch as their Ladies or Miſtreſſes wear,) no Wonder if our own Manufactures, however induſtriouſly improv'd, are ſtagnated and diſcourag'd; and it is to little purpoſe to complain of a Decay of Trade while we ſend our Money abroad to encourage the Trade of other Nations, though our own Manufactures, eſpecially that of Silk, equals if not exceeds any Nation in the World; and the chief Argument that our Mercers have to recommend their Silks to ſome Sorts of Appetites, is to aſſert them *to be of foreign Make*. What an immenſe Treaſure at this time iſſues out of *England* for Hollands, Cambricks, Lace, and clandeſtinely foreign wrought Silks, while the general Complaint at home is Want of Employment.

BUT to break off from this Article of Trade, the Religion of the *Auſtrian Netherlands* falls next under our Conſideration, which being generally *Roman Catholick*, we ſhall not need to ſpend time about a Deſcription of it here; only I ſhall obſerve that their Adminiſtration of Eccleſiaſtical Government is much milder here than in ſome other Popiſh Countries. The Inquiſition does not exert its Authority here ſo much as in *Spain* and *Portugal*, and the Proteſtants live very eaſy amongſt them.

AFTER the Peace of *Utrecht*, the Emperor by Conſent of all the Princes and States concern'd in the laſt War, was acknowledg'd Sovereign of all thoſe Provinces; and in him (or his Viceroy) and the Convention of the States of the reſpective Provinces, is the Legiſlative Power lodg'd; and by that Authority, Laws are enacted, Money levy'd, &c. but nothing of that kind can be done without the unanimous Conſent of the whole Aſſembly, which conſiſts of, 1. The Biſhops and dignify'd Clergy. 2. The Nobility and Gentry. 3. The Deputies or Repreſentatives of the chief Towns. Theſe meet at *Bruſſels*, except thoſe of *Luxemburg* and *Guelders*, who have an antient Priviledge, that they cannot be ſummon'd out of their reſpective Provinces; nor do the States of the ſeveral Provinces which meet at *Bruſſels*, aſſemble in one Houſe, but each apart, and make diſtinct Laws for their reſpective Provinces, as well as general Laws for the whole.

THE Regent or Viceroy of the *Auſtrian Netherlands* is aſſiſted by three Councils; the firſt is call'd the Council of State, where War, Peace, and foreign Alliances, are conſider'd; alſo Ambaſſadors receive their Inſtructions and diſpatches. 2. The Privy Council, whoſe Members are appointed by the Regent. The Preſident of this Council is the Keeper of the Great Seal. 3. The Council of Finances, which ſuper-intends the publick Revenue.

BUT beſides this Regent or Viceroy, every Province hath its peculiar Governor, (but all ſubject to the Regent,) and every Province has a Court of Juſtice for civil Cauſes; but from thoſe civil Courts in each Province, there lies an Appeal to the Grand Council at *Mechlin*, and in criminal Caſes, the Provoſt of each Province with his Aſſociate, has the Determination of them, with this Reſtriction, however, that he is accountable to the Grand Provoſt who reſides at *Bruſſels*, the Capital of the *Auſtrian Netherlands*.

As for the Forces of the *Netherlands*, I ſhall refer the Reader to the Account of the Forces of the *United Provinces*, and the Stipulation between the Emperor and the *Dutch*, for maintaining them. [*See Chap.* X. *of the* United Provinces.] Forces.

AFTER the Revolt of the ſeven Provinces from the reſt, the Revenues of the other ten were not ſufficient to defray the Charges of the civil Government; but ſince their Trade has been reviv'd, and they have had ſuch a vaſt Demand for their fine Linnen and Lace, they are not now ſo burthenſome to the Emperor as they were to *Spain*. Moſt of their Revenues ariſe either from the Demeſne Lands or the Cuſtoms; and if there be an extraordinary Tax to be rais'd, it is demanded of the States of the reſpective Provinces. And although Denials in this Caſe are not frequent, yet there muſt be the unanimous Conſent of every Member before thoſe Supplies can be granted.

WHAT Advantage the Emperor has obtain'd by the Conqueſt of the *Netherlands*, conſiſts rather in Strength than Riches; for the Forces jointly maintain'd by the *Imperialiſts* and the *Dutch* in this Country, and the many ſtrong Fortreſſes they are poſſeſs'd of, will enable them at any time to give *France* a conſiderable Diverſion on this Side, and will in all Probability keep *France* within due Bounds.

THE Nobility and Gentry of the *Auſtrian Netherlands*, eſpecially in *Luxemburg*, are much more numerous than in the *United Provinces*; they moſt of them have Palaces in or near the capital City, and their Country Seats are generally Caſtles wall'd and moated round, and thence call'd *Chateaus*. The principal Order of Knighthood is that of the *Golden Fleece*, of which there are fifty Knights, who generally are Perſons of the firſt Rank and Quality. Nobility.

HAVING thus finiſh'd the Seventeen Provinces, it would fall naturally in my way to take *Switzerland* in my Progreſs to *Italy*; but as *Italy* is now the Scene of ſo much Action, and the Subject of People's Expectation, I think it may be more entertaining and agreeable to the Reader to paſs over directly to *Italy*, and give a Deſcription of it full, and take *Switzerland* in my way back to *France*, *Spain*, &c.

A DESCRIPTION

Of the Several

PROVINCES

OF

ITALY.

CHAP. I.

Of the Situation and Extent of Italy; *alſo of the Air, Seas, Lakes, Rivers, Springs, Mountains, and Woods; with ſome general Remarks on the Genius, Temper,* &c. *of the modern Inhabitants.*

ITALY was known of old by the Names of *Heſperia*, *Saturnia*, *Latium*, *Auſonia*, *OEnotria*, and *Janicula*; but I don't find that Authors agree as to the Original of it's preſent Name, *Italy*; but as it is univerſally known by that Name, the moſt probable Conjecture as to it's Original, is, that it was ſo call'd from *Italus*, an antient King of the *Siculi*, who leaving their Iſland, came into this Country, and poſſeſſing themſelves of the middle Part of it, they call'd the whole after the Name of their Prince, *Italia* or *Italy*.

It is obſerv'd, that *Italy* very much reſembles a Boot, or Leg, with Part of the Thigh, and extends in Length North-Weſt and South-Eaſt; *viz.* from the Foot of Mount St. *Barnard*, one of the *Alps*, to the City of *Otranto*, on the South-Eaſtermoſt Point, or Extremity of the Heel of the Boot, ſix hundred Miles in a direct Line, not regarding Aſcents, Deſcents, or winding and curving Roads, *&c.* *Italy* including all the Provinces, which will hereafter be deſcrib'd as belonging to it, is bounded on the North and North-Weſt by the *Alps*, which ſeparates it from *France*, *Germany* and *Switzerland*; on the Eaſt by the Gulf of *Venice* or the *Adriatick* Sea; by the *Ionian* Sea and *Faro* of *Meſſina* on the South, and by the *Tuſcan* or *Tyrhenean* Sea, and Part of *France*, on the Weſt.

Air. The Air in *Italy* is various, not only with reſpect to the Climates or different Latitudes, but according to the different Face of the Country; for upon the *Apennine* Mountains it is exceeding cold, but upon the South Side of them it is exceeding hot, by Reaſon of the Heat of the Sun, and it's refracted Rays, which increaſe the Heat to Exceſs: The North Side of the *Apennine* Mountains are cooler and more healthful than the Provinces on the South, but not ſo univerſally but that the Rule admits of ſome Exception, there being ſome Provinces there, that have their Turns of being unhealthful, as will be ſeen hereafter.

Seas. The Seas that waſh the Banks of *Italy*, are, the *Adriatick* or Gulf of *Venice*, on the Eaſt, or North Eaſt; the *Ionian* Sea on the South, or South-Eaſt; and the *Tyrhenean* Sea on the Weſt; but that has been ſpoke of before in the Boundaries of *Italy*.

Lakes. The principal Lakes are, *Major*, *Lugano*, *Como*, *Iſeo*, and *Garda*, all in the Dutchy of *Milan*, and *Perugia*, *Vulſin*, and *Bracciano* in *Tuſcany*; and thoſe of *Fucin*, *Fundi*, *Caſtello*, *Gandolpho* and *Calano*, in the *Campania* of *Rome*.

Rivers. Of their Rivers the chief are, 1. the *Po*; this is the antient and famous *Eridanus* of the Poets, ſo much taken notice of by them for the Fall of *Phaeton* into it. The *Po* riſes in the *Alps*, and having croſs'd *Piedmont*, the *Montferrat*, the *Milaneſe*, and *Mantuan*, &c. it falls into the Sea in the Gulf of *Venice*, by ſeveral Mouths between *Venice* and *Ravenna*. 2. The *Teſin* riſes in Mount *Adula* one of the *Alps*, and having paſs'd through the Lake of *Major*, it falls into the *Po* near *Pavia*. 3. The *Adda*, which having croſs'd the Lake *Como*, falls into the *Po* at *Cremona*. 4. The *Oglio*, which riſes in the Lake *Iſeo*, and joins the *Po* near *Mantua*. 5. The *Mincio*, which running through the Lake *Garda*, paſſeth by *Mantua*, and afterwards falls into the *Po*. 6. *Tanaro* riſes in the *Piedmont*, and falls into the *Po*, at *Baſſignano*. 7. The *Adige*, which riſes in the Mountains of *Tyrol*, runs by *Trent* and *Verona*, and falls into the *Adriatick* Sea, to the Southward of *Venice*. 8. The *Arno*, which riſes in the *Apennine* Hills, paſſes by *Florence*, and *Piſa*, and falls into the *Tuſcan* Sea near *Leghorn*. 9. The laſt, and not the

the leaſt remarkable River, is the *Tiber*; which alſo riſes in the *Appenine* Mountains, paſſeth by *Rome*, and falls into the Sea at *Oſtia*.

BESIDES thoſe Rivers, there are abundance of ſmall Springs, which riſe in the *Appenine* Hills, and collecting themſelves by Degrees, in the Valleys, they form ſmall Brooks, and ſome fall into the *Tuſcan*, others into the *Adriatick* Sea; and ſome of them are convey'd by Aqueducts of Brick or Stone to *Rome*, at a vaſt Expence; as muſt be the Caſe, if we conſider at what a vaſt Diſtance from it they riſe.

Mountains. THE chief Mountains of *Italy* are, the *Alps*, the *Apenine*, and the noted *Volcano Veſuvius*. The *Alps* are the Northern Boundary of *Italy*, and is a long Chain, or Ridge of Mountains; which, though exceeding high, and cover'd with Snow in Winter Time, yet in Summer they afford good Paſture to the very Top, and in other Places there is good arable Land, upon ſuch Declivities and Precipices, where one would think it impoſſible for a Plough to go.

THE *Apennine* are a Chain of Mountains, which run the whole Length of the Country, from *Provence* in *France*, to *Modena* and *Florence*, and ſo towards *Urbino*, and near the *Adriatick* Sea.

THESE Mountains are generally well cover'd with Woods, and pleaſant Groves; of which we have the following Remark, elegantly expreſs'd in *Lucan*, and tranſlated into *Engliſh* Verſe, by the celebrated Mr. *Addiſon*, as follows:

In Pomp the ſhady Apennines *ariſe,*
And lift th' aſpiring Nation to the Skies.
No Land like Italy, *erects the Sight,*
By ſuch a vaſt Aſcent, or ſwells to ſuch a Height.
Her num'rous States the tow'ring Hills divide,
And ſee the Billows riſe on either Side.
At Piſa *here the Range of Mountains ends,*
And here to high Ancona's *Shore extends:*
In their dark Womb a thouſand Rivers lie,
That with contin'd Streams the doubled Seas ſupply.

THE Southermoſt Part of *Italy* is alſo very mountainous, and thoſe ſome of them exceeding high. I happen'd in my Travels, to be at *Regio*, in the Southermoſt Part of *Italy*, on the Eaſt Shore of the *Fare* of *Meſſina*, on the twenty ninth of *Auguſt*, in the Year 1718, and knowing that the Moon was that Evening to be totally eclips'd, with a Continuance of above an hour and a half total, the whole Eclipſe continuing above three Hours and three Quarters; and as I knew the Moon would riſe in *Italy*, (though not in *England*) before the Eclipſe begun, my Curioſity led me to go, with two or three more in Company, to the Top of the neareſt high Mountain to ſee the Moon riſe, and the Eclipſe begin, as thinking that the Top we ſaw was the Summit of the whole; but when we had with Difficulty attain'd the Top of that Mountain, there was another appear'd beyond it, as high above us as that which we had aſcended appear'd firſt; ſo that it prov'd a very laborious Task to aſcend the Top of one of the higheſt Mountains, much more of ſo many as they appear'd one after or behind another. The Aſcent was the Work of a whole Afternoon, and the Deſcent was the Work of the greateſt Part of the Night, which put me in Mind of the Relation which *Silius Italicus* gives of *Hannibal*'s March over the *Apennine* Mountains, and which may not unjuſtly be apply'd in this Place.

From Steep to Steep we did advance with Pain,
In Hopes at laſt the topmoſt Cliff to gain;
But ſtill by new Aſcents the Mountain grew,
And a freſh Tott preſented to our View.

BUT not to forget the famous Mount *Veſuvius*, it is about ſix Miles to the South-Eaſtward of *Naples*, famous for it's fiery ſulphurous Eruptions. and although it is ſix Miles diſtant from *Naples*, yet the Mountain is ſo high, and the *Volcano* ſo near the Top of it, that in a dark Night, and eſpecially in rainy Weather, (for then it burns with the moſt Fury) it caſts a Light into the City of *Naples* ſufficient to read a large Print, and ſeems as if it was not above half a Mile or a Mile off. I have ſeen it from *Naples* in a ſtormy dark Night, ſometimes almoſt quite dark, as if the Fire was almoſt extinguiſh'd; and on a ſudden, like the breaking of a Bubble, or as if the Fire had been pent or confin'd, break out with a terrible light Flame, to a ſurprizing and even incredible Height.

AS to the Manners of the *Italians*, they are generally complaiſant and obliging, obſerving a Medium between the *French* Air and Lightneſs, and the *Spaniſh* ſtarch'd affected Gravity; and indeed this Remark is made upon the *Italians*, that although they have the choiceſt of Wines and that in a great Plenty, yet they are *the ſobereſt People that are to be found in the Chriſtian World*; *nor is there any thing like Luxury to be ſeen at the Tables even of the Great*, &c. This Remark I had from an eminent Author; but as I have made my Remarks upon thoſe Parts of *Italy* where I my ſelf have been, I am oblig'd in Juſtice to confirm his Report; and whether their abſtemious Way of Living, may contribute to the Excellency of their Genius, and perhaps their Voice too, yet this we know, that the very Name of an *Italian Singer*, is a vaſt Step at this Time of the Day to give a Sanction to his Performances. But be that how it will, all Travellers allow them to be Men of great Wit, and to have a vaſt Genius, for Arts and Sciences; Muſick, Poetry, Painting, Sculpture, Architect, &c. are their favourite Studies; and at this Time of the Day, it is generally agreed, that no Nation upon the Face of the Earth excells them.

THE Nobility and Gentry very much affect magnificent Buildings, and fine Furniture; of which not the leaſt Part is their Collections of Pictures, Statues, Hangings, and Ornaments; and they are equally fond of ſplendid Equipages, and a great Train of Servants, that may equal, if not exceed their Ability. They make ſuch a Diſtinction between City and Country, that they think it derogates from the Dignity of the Family, if a Perſon is born in the Country; and therefore thoſe even of the beſt Rank, that have their Seats and Habitations in the Country, commonly ſend their Wives into ſome conſiderable City to lie-in. There are Academies or Societies of Virtuoſi in almoſt every Town; who at their publick Meetings, entertain each other with Rhethorical, Moral, or Philoſophical Diſcourſes.

THE Deſcription of their Perſons and Features ought not to be omitted, as being both very agreeable; and ſo much Pains do the Females take to render themſelves very engaging, that let Heaven give them a good Shape and Features, they will take care to give themſelves good Complexions. Their Hair is generally inclin'd to black, which Colour they ſeem to like, but towards *Genoa* they affect yellow Hair, that being the favourite Colour at *Genoa*; and as for their Dreſs, they commonly affect the *French* or *Spaniſh* promiſcuouſly, according to what Kingdom they are in the Intereſt of, but Black is generally their favourite Colour.

CHAP. II.

Of the ſeveral Diviſions of Italy *in general, and it's Subdiviſions in particular; beginning with Upper or Northern* Italy, *and firſt of* Savoy.

ITALY is comprehended under three Diviſions, *viz. Upper Italy, Middle Italy*, and *Lower Italy*.

Upper Italy is the Northermoſt, and contains, 1. The Principality of *Piedmont* and *Savoy*. 2. The Dutchy of *Montſerrat*. 3. The Territories of *Genoa*. 4. The Dutchy of *Milan*. 5. The Dutchy of *Parma*. 6. The Dutchy of *Modena*. 7. The Dutchy of *Mantua*; and, 8. The Territories of *Venice*.

Middle Italy contains the Territories belonging immediately to the Pope, and is, for that Reaſon, ſometimes call'd the *Lands of the Church*.

Lower Italy contains the Southermoſt Part of *Italy*, or Kingdom of *Naples*; in which is included *Calabria*, as bounded by the *Ionian* Sea, and the *Fare* of *Meſſina*.

I SHALL firſt begin with the King of *Sardinia*'s Dominions, *Upper Italy*; which extends in Length from the Lake of *Geneva*, to the Port of *Nice*, beyond *Marſeilles* in the *Mediterranean*; being about a hundred and eighty Miles from North to South, but of uncertain Breadth; in ſome Places a hundred Miles over, in others not above forty; this includes *Piedmont* and *Savoy*, of which I ſhall firſt treat of.

SAVOY.

THIS Province on the *French* Side of the *Alps*, is by ſome reckon'd to be out of *Italy*, but as it is contiguous to *Piedmont*, and the reſt of the King of *Sardinia*'s Dominions in *Italy*, this is the moſt proper Place to give a Deſcription of it. It is bounded on the North by the Lake and Territories of *Geneva*, and on the Eaſt and South by *Piedmont*, from which it is ſeparated by the *Alps*, and by *Dauphiné* in *France* on the Weſt.

Savoy contains ſeven Provinces; 1. The Dutchy of *Savoy*, or *Savoy Proper*. 2. The County of *Geneva*. 3. The Dutchy of *Chablais*. 4. The Barony of *Feſſigny*. 5. The County of *Tarantaiſe*. 6. The County of *Maurienne*. And, 7. The Dutchy of *Aouſt* or *Aoſta*.

Chief Towns.

CHIEF Towns in the Dutchy of *Savoy*, or *Savoy Proper*, are, *Chambery*, and *Montmelian*; the former was antiently the Reſidence of the Dukes of *Savoy*, and is the Place where the Parliament of the Province ſtill aſſembles, but it has loſt much of its antient Grandeur; and *Montmelian* is a little, but now inconſiderable Town, on the River *Iſere*, twelve Miles South-Eaſt of *Chambery*, but not worth any particular Deſcription.

Geneva.

THE County of *Geneva*, lies to the Weſtward of *Savoy Proper*; its chief Town is *Annecy*; it is thirty Miles North of *Chambery*, and is a large neat Town, and has been the Reſidence of the Biſhop of *Geneva*, ſince the Proteſtants expell'd him from that City.

Chablais.

THE Dutchy of *Chablais* is on the South Side of the Lake of *Geneva*: Chief Towns are *Thonon*, *Ripaille*, and *Evian*; but there is little remarkable in them, except that in *Ripaille* there is a Convent of *Carthuſians*, who have a large Foreſt cut out into Walks, extremely thick and gloomy, and, as Mr. *Addiſon* obſerves, very ſuitable to the Genius of thoſe for whom it is intended; the *Viſtoes* are of a great Length, and terminate upon the Lake of *Geneva*. One Side of the Walk there is a near Proſpect to the *Alps*, which from thence ſhow themſelves broken into ſo many Steps and Precipices, that they poſſeſs the Mind with a pleaſant Horror, and form an irregular, miſhapen, frightful Proſpect, which at that Diſtance is much more entertaining (I mean to have the Proſpect at a Diſtance without Danger) than to be in the Danger without the Proſpect.

THIS Convent belong'd formerly to the Hermits of St. *Maurice*, and in their canonical Hiſtory, (if I may ſo call it) is famous for the Retreat of *Amadeus* Duke of *Savoy*, afterwards *Felix* the Fifth; who, after a glorious Reign, took upon him the Habit of an Hermit, and retired to this ſolitary Spot of his Dominions; where he had not been half a Year, till he was choſen Pope by the Council of *Baſil*; but his Election being diſputed he reſign'd his Intereſt, and retired to his Hermitage. It would ſeem the Popes had not then attain'd to Infallibility, for if they had, he would ſcarce have been ſo eaſily expell'd; and if Infallibility made ſuch a Figure in the World at that Time of the Day, what muſt become of it now, when People know better.

BESIDES what has been already deſcribed, there are the Barony of *Feſſigny*, the County of *Tarantaiſe*, the County of *Maurienne*, and the Dutchy of *Aouſt*; but the Manners, Cuſtoms, Products *&c.* are ſo much like what follows, in the general Deſcription of the Country, that to fill up Time and Room with a particular Deſcription of each, would be altogether needleſs.

Air.

THE Air of *Savoy* is colder than that of *Italy*, as being upon the *Alps*, or on the North Side of them. Their chief Rivers are the *Iſere*, the *Arche*, and the *Arve*; and the Lakes, thoſe of *Bourget*, and *Annecy*. The principal Mountain is Mount *Cennis*, which though reckon'd the higheſt of all the *Alps*, has a Road over it, and divides *Savoy* from *Piedmont*. The Aſcent of this Hill, or rather Chain of Hills, is both troubleſome and dangerous, on account of the narrow Paſſages on the Brinks of high Precipices; where if the Beaſt the Traveller rides upon ſhould happen to ſtumble, he falls at leaſt half a Mile before he reaches the Bottom. And in this Caſe, all they have to truſt to, is the Mules they ride upon, who being uſed to thoſe tickliſh Paths, are commonly very ſure footed. On the Top of this Mountain is a Plain about two Leagues over, at the End whereof (which is at the Frontiers of *Piedmont* and *Savoy*, where they join) is an Inn, and a little Chapel, where they bury People that are frozen to Death, or ſmother'd in the Snow.

Tem

THE general Deſcription of the Temper of the People in *Italy*, may ſerve for thoſe of *Savoy*; but the moſt induſtrious People here in a plentiful Country, are nevertheleſs miſerably

poor, owing only to the deſpotick Power of their Princes and great Lords, whoſe Vaſſals, rather than Tenants or Subjects, the common People are; they not being allow'd a Subſiſtance out of the Lands they cultivate. And ſo ſcarce is Corn, that Travellers are glad upon the Road to put up with a Glaſs of Wine and a few Cheſnuts; and from this their Poverty it is, that we ſee ſo many *Savoyards* become Travellers, and in other Countries ſubmit to be Chimney-ſweepers, Raree-ſhow-men, *&c.* almoſt all over *Europe*; and yet they travel with this Advantage, that having been uſed to ſuch miſerable Living at home, if they can put up with the ſame Sort of Living in their Travels in a plentiful Country, they may ſave Money in their Travels to carry home; and a ſmall matter will make them rich among thoſe who live ſo miſerably poor. One of them, as a modern Traveller informs us, ſet up a Shop and lived grand with three hundred Guineas that he got in *England*, by going about with a Raree-ſhow: That three hundred Guineas was a vaſt Eſtate there.

Product. THE Country produces Wine, Apples, Pears, and other Fruit, but little Corn; but they have large Herds of black Cattle, Goats, Hogs, Veniſon; and their Woods and Mountains abound with wild Fowl, as does their Lakes and Rivers with Fiſh. The Bears, Foxes, Hares, and Patridges, on the Top of the *Alps*, are white, as in *Ruſſia* and *Greenland*. Here are large Woods of Fir-trees, which afford Maſts, Pitch, and Tar for Shipping; and they have ſome Oak-timber. There are Plenty of Walnuts and Cheſnuts, which is a great Part of the Food for poor People, as well as Hogs. Here are ſome Marble and Stone Quarries, and Coal-pits; and in ſeveral Places, Mineral Waters, and Hot Baths, of which thoſe at *Aix*, near *Chambery*, are moſt frequented. There are alſo Salt-pits near *Tarantaiſe*, and ſome Salt-fountains which afford good white Salt. In *Foſſigny* there are good Allum-mines; and in the Valley of *Aouſt*, there is a good Sort of Sand for making Chryſtal Glaſſes.

CHAP. III.

A Deſcription of PIEDMONT.

Situation and Extent. *PIEDMONT* is ſo call'd from its Situation at the Foot of the Mountains call'd the *Alps*. It is bounded on the North by the Valley of *Aouſt*, and Part of the Dutchy of *Milan*; and on the Eaſt by *Montferrat*, and another Part of *Milan*; by the County of *Nice*, and Territories of *Geneva*, on the South; and by *Dauphiné* and *Savoy* on the Weſt. It extends about a hundred Miles from North to South, and ſeventy Miles from Eaſt to Weſt.

Diviſion. IT is divided into eight Provinces. 1. *Piedmont proper*. 2. The Marquiſate of *Suza*. 3. The Marquiſate of *Saluzza*. 4. The County of *Aſti*. 5. The Lordſhip of *Vercel*. 6. The Principality of *Maſerano*. 7. The Marquiſate of *Ivrea*. And, 8. The Valleys of the *Vaudois*.

IN *Piedmont* proper, the chief Towns are,

1. *Turin*, the Capital of the King of *Sardinia*'s Dominions in *Italy*, and is ſaid to be the *Auguſta Taurinum* of the Antients. It ſtands near the Confluence of the Rivers *Doria* and *Po*. The Town is about three Miles in Circumference, and is indeed admir'd for its ſpacious Squares, Piazzas, broad Streets, and magnificent Buildings, but chiefly the King's Palace; which for the Beauty of the ſeveral Apartments, the Richneſs of the Furniture, the Paintings, the Cabinet of Curioſities, and the Library, is ſaid to be almoſt beyond Parallel. The Palace of the Prince of *Carignan*, the Cathedral, and the Jeſuits Chapel, are much admir'd. There is likewiſe a pretty Building of black Marble, call'd the *Chapel of the Holy Handkerchief*, which, according to Tradition, was built in Memory of a compaſſionate Virgin, who ſeeing our Saviour carrying the Croſs, upon which he was to be Crucify'd, ſhe reach'd him her Handkerchief; with which having wip'd his Face, he return'd it to her again; which when ſhe receiv'd, ſhe found his Picture Imprinted upon it in the moſt lively Colours; and in Memory of this Relick this Chapel was built, and call'd by the Name of the *Chapel of the Holy Handkerchief*.

THE Fortifications of *Turin* are fine. The Citadel is a regular Pentagon, and ſo ſtrong that the *French* in the Year 1706. after a Siege of ten Weeks found themſelves obliged to retire with only that poor Revenge, that when they could not gain the Town they deſtroy'd the Olives, Vines, and all the circumjacent Groves, Viſtoes and Walks, and the Avenues to the Town, which ſtands in one of the moſt pleaſant Plains in *Europe*.

Turin is an Archbiſhop's See, and here an Univerſity was erected in the Year 1405. and it is ſaid to be as polite a Court as any in *Europe* for Dancing, Riding, and Martial Exerciſe. Our *Engliſh* Travellers give a very good Account of the Generoſity and Hoſpitality of the Inhabitants of *Turin*, even beyond moſt Places in *Italy*; but this Report is to be believ'd at Diſcretion; for it is not always juſt, to give a good, or an evil Report of a Town or Country in general, purely upon the particular good or bad Uſage, or the Prejudice of ſome particular Perſon.

THERE is one valuable Conveniency, and that is a Rivulet which paſſes along by the upper Side of the City, and can upon any Occaſion be let down by Sluices into the Town to clean the Streets, and lay the Duſt; but the Cleanneſs of the Town, and Magnificence of its Building, can ſcarce compenſate for their ſhatter'd Windows, where Paper commonly ſupplies the Place of Glaſs; and that ſo frequently breaks with the Concurrence of Wind and Moiſture, that the ragged Papers in their Windows ſpoil the Beauty of the whole Fabrick.

UPON a pleaſant Mount without the Town is the *Capuchin* Cloyſter, from whence there is a moſt agreeable Proſpect of the Town and the adjacent Country. The Royal Palace of *La Venerie* is about three Miles out of the Town, and that of the *Valentin* upon the Banks of the *Po*, is about a Mile from the Town. However the *French* and the King of *Sardinia* may at preſent have patch'd up a Confederacy, yet it is certain, that in the two laſt Wars, the barbarous Ravages of the *French*, has inſpired that People with ſuch an Abhorrence and Deteſtation of them, as is not eaſily forgot.

Mondovi

Moudovi is esteem'd the second City of *Piedmont*, and next in Dignity to *Turin*. It stands upon an Eminence, at the Foot of the *Apennine* Mountains, about forty Miles South of *Turin*. It is a large, beautiful, populous City, and a Bishop's See, Suffragan to the Archbishop of *Turin*.

Chivazzo is a strong Place, situate on the River *Po*, about twelve Miles North of *Turin*. It was taken by the *French* in the Year 1705, but surrendred to the Duke of *Savoy* the next Year on the raising the Siege of *Turin*.

Pignerol stands on the River *Chiese*, about sixteen Miles South West of *Turin*. It is upon the Frontiers of *France*, and was once in their Possession, and reckon'd a Part of that Kingdom; but the King of *France* being obliged to restore it to the Duke of *Savoy* in the Year 1696, he to make it of as little Value as possible, demolish'd the Fortification; but the Duke of *Savoy* has since put it in a good Posture of Defence.

Susa. The Marquisate of *Susa* lies at the Foot of the Mount *Cenis*, and is bounded by *Dauphiné* in *France* on the West, and by *Piedmont proper* on the East. The only Town of Note is *Susa* on the River *Doira*, twenty Miles North West of *Turin*. It is a Place of great Importance to the King of *Sardinia*, as being a Pass out of *France* into his Country. When the *French* took it in the Year 1704. they demolish'd the Citadel; but it being given up to the Duke of *Savoy* at the Treaty of *Utrecht*, he repair'd its Fortifications, as he did those of his other frontier Garrisons.

Saluzza. The Marquisate of *Saluzza* lies between *Piedmont proper* and *Dauphiné*. It contains about thirty Miles from East to West, and twenty from North to South. In this Province the River *Po* rises at the Foot of Mount *Vesul*. The chief Town is *Saluzzo*, which stands upon an Eminence at the Foot of the *Alps*, about a Mile from the Banks of the *Po*, and twenty Miles South West from *Turin*. It is a Bishop's See, Suffragan to *Turin*. There is a magnificent Cathedral. There is also a Castle, but it is old and decay'd, and of little Importance at present.

The County of *Asti* lies on the East Side of *Piedmont proper*, and is about thirty Miles from North to South, and twenty from East to West. The chief Town is *Asti*. It stands on the River *Tanaro*, about twenty five Miles to the Eastward of *Turin*. It is a large, strong, populous Place. It has a Citadel and a Castle, and is the See of a Bishop, Suffragan to the Archbishop of *Milan*.

The Lordship of *Vercil* lies to the Northward of *Montferrat*. The chief Town is *Vercil*, situate on the River *Sessa*, near the Frontiers of *Milan*, and about forty Miles North East of *Turin*. It is a Bishop's See, Suffragan to *Milan*. It was taken by the *French* in the Year 1705; but they being obliged to restore it again upon the raising of the Siege of *Turin*, demolish'd the Fortifications and quitted the Place.

The Valley of *Vaudois* is bounded on the East, North, and West, by *Piedmont proper*. The chief Town of Note is *Lucern*, about six Miles to the Southward of *Pignerol*. *Perusa* is the Capital of another fruitful Valley. It is about four Miles to the Northward of *Pignerol*. The Natives are call'd *Waldenses*, from one *Peter Waldo*, a Merchant of *Lyons*; who about the Year 1160, began to exclaim against the Errors of the Church of *Rome*, and gain'd abundance of Proselytes, for which he was expell'd the Territories of *France*; and with great Numbers of his Opinion, settled in these Valleys, where they remain'd undisturb'd for some Years. But the late Princes of the House of *Savoy*, have since endeavour'd, both by fair Means and foul, to bring them over to the Church of *Rome*: And in order thereunto, persecuted them so vigorously, that many of them fled for Refuge into *Switzerland*; where about four thousand of them took up Arms, and form'd themselves into Regiments, and ventur'd to return to their own Country in a hostile Manner, under the Command of one *Arnaud* a celebrated Preacher, and one *Turel* a Mason, who defeated several Troops of the *French* and *Savoyards*; and by the Intercession of K. *William*, they had Liberty to return and enjoy the free Exercise of their Religion. But the Duke of *Savoy* making a separate Treaty with *France* in the Year 1696, the *French* insisted upon the banishing of those of them who would not conform to the Superstition of the Church of *Rome*, and this occasion'd a fresh Persecution; but the Duke of *Savoy* breaking with *France* in the Year 1703, took the *Waldenses* again into his Favour, and employ'd them in Defence of his Country against *France*, which had the desired Success, and was a lucky Turn of Favour both to them and to their Prince.

Rivers. The principal Rivers of *Piedmont* are the *Po*, the *Tanaro*, the *Stura*, and the *Duria*. This Country lies between the *Alps* and the *Apennine* Hills, but is not so mountainous as *Savoy* and *Genoa*. It is a pleasant, fruitful Province. It abounds in Corn, Wine, Fruit, Rice, Cattle, and all Kind of Fowls, wild and tame; also Cheese, Silk, Flax, Hemp, and Minerals; but the Hail is sometimes so violent there, that their Crops are in a great measure destroy'd when ready to be gather'd in. But in plentiful Years, they export such Quantities of Corn, Rice, Cattle, Silk, &c. that it raises a greater Revenue to its Prince than any Country in that Part of the World of its Dimensions.

CHAP. IV.

Of the Counties of Nice, Tende, Broglio; *and the Principalities of* Oneglia, Barceloneta, *with the Dutchy of* Montferrat.

I SHALL next proceed to what may properly be call'd the King of *Sardinia's* Dominions, exclusive of the Dukedom of *Savoy*, and shall first begin with the County of *Nice*; which lies between *Saluzzo* on the North, and the *Mediterranean* Sea on the South, and between *Genoa* on the East, and *Broglio* and *Provence* on the West. The Country is mountainous, and produces but little Corn, but Plenty of Wine and Oil. The chief Towns are *Nice* and *Villa Franca*.

Nice stands on the North Shore of the *Mediterranean*, on a pleasant Plain, at the Foot of the *Alps*, ten Miles to the Northward of *Antibes*, and sixty to the Southward of *Pignerol*. It has a strong Castle, standing upon a Rock, which

which commands both the Town and the Harbour; the Prince's Palace, the Jesuits Chapel, and the Cathedral are handsome Buildings; the common Houses are generally lofty, and the Streets regular; but it suffer'd very much in the late War, and at last, when the *French* found they could not hold it any longer, they demolish'd the Fortifications; but when it was yielded to the King of *Sardinia*, at the Treaty of *Utrecht*, he was allow'd to repair the Fortifications.

Villa Franca. *Villa Franca* is on the same Shore, and only about five Miles Eastward from *Nice*. It is a good Harbour, and defended by two Forts. This Town was also taken by the *French* in the late Wars, but was yielded to the Duke of *Savoy* (being King of *Sardinia*,) at the ensuing Peace.

Tende. The County of *Tende* lies between *Genoa* on the East, and *Nice* on the West. The chief Town is *Tende*, at the Foot of the *Apennine* Mountains; it is about thirty Miles to the Eastward of *Villa Franca*; it hath a Castle for its Defence.

Broglio. Some reckon the County of *Broglio* a Part of *Nice*; it has *Barcelonetta* on the North, *Nice* on the East, and *Provence* in *France* on the South and West. The chief Town is *Broglio*, on the Frontiers of *Provence*, about thirty Miles to the Northward of *Nice*.

Oneglia. The Principality of *Oneglia* is encompass'd by the Territories of *Genoa*, except on the South Side, which is bounded by the *Mediterranean*. The chief Town is *Oneglia*; it stands by the Sea Side, about seventy Miles South-East of *Turin*: It is a populous Place of good Trade, and the Country about it abounds in Oil and Fruit.

The Valley of *Barcelonetta* lies between *Nice* on the East, and *Provence* on the West. The chief Town is of the same Name with the Province, and is about fifty Miles North-West of *Nice*: This Province was restor'd to the *French* King at the Peace of *Utrecht*, by which Treaty, the King of *France* transferr'd to the Duke of *Savoy*, (King of *Sardinia*) the Valley of *Pragenas*, with the Forts of *Exilles*, and *Fenestrelles*, and the Valley of *Oulx*, *Sezane*, *Bardonache*, and *Chatteau Dauphiné*, and all about the Water which comes from the *Alps*, on the Side of *Piedmont*, which he had possess'd himself of during the War; and, in Answer to that, the Duke of *Savoy* yielded to the *French* King, the Valley of *Barcelonetta* and its Dependencies: So that the Summit of the *Alps* and the Mountain were to be Boundaries between *France*, *Piedmont*, and the County of *Nice*, with this Condition, that the Plains upon those Mountains should be divided; and that Side of the River towards *Dauphiné* and *Provence*, should belong to *France*, and that Side towards *Piedmont* and *Nice* should belong to the Duke of *Savoy*, then King of *Sardinia*.

The King of *Sardinia*'s Dominions, which lie to the Eastward of *Piedmont*, are the Dutchy of *Montserrat*, the *Alexandrin*, the *Vigevano*, the *Lomeline*, and the *Milanese*; of which briefly in Order,

Montserrat. The Dutchy of *Montserrat* has *Verceil* on the North, *Alexandrin* on the East, *Genoa* on the South, and the County of *Asti*, on the West. The Capital of *Montserrat* is *Casal*, or *St. Yas*; it stands on the Banks of the *Po*, in a fine Plain about thirty Miles to the Eastward of *Turin*; it is a strong and populous Town, and a Bishop's See, suffragan to the Archbishop of *Milan*.

Alexandrin. The *Alexandrin* has *Genoa* and *Milan* on the South and East, and *Montserrat* on the North-West. The chief Town is *Alexandria*, ten Miles South-East of *Casal*, and forty South-West of *Milan*; the River *Tanaro* runs through it; it is a Bishop's See, under the Archbishop of *Milan*.

Vigevano. *Vigevano* is to the Westward of *Milan*; and the chief Town, of the same Name, is situate on the River *Tesin*, about twenty Miles South-West of *Milan*; it is a Bishop's See, suffragan to *Milan*.

Lomelin. The *Lomelin* lies to the Southward of *Vigevano*. The chief Town is *Valenza*, near the *Po*, on the Confines of *Montserrat*; it is a little fortify'd Town, but not so material as to deserve a particular Description.

These four last are pleasant fruitful Countries, water'd by the River *Po*; they produce Corn, Wine, and Oil, and are a valuable Addition to the King of *Sardinia*'s Dominions.

Government. The Administration of the Government, in the King of *Sardinia*'s Dominions, is in the Hand of a Council of State, in which the King presides, and next to him are the Princes of the Blood, and below them six Counsellors of State, the principal Secretary, the Clerk of the Council, and other Officers. There is also a Council of Finances, or Court of Exchequer, for each Province, consisting of two Presidents, a Comptroller, a Secretary, and other Officers: There is likewise a Chamber of Accounts, to which belong three Presidents, three Chevaliers of Accounts, sixteen Masters of Accounts, a Treasurer General, two Secretaries, a Comptroller, *&c.*

There are three Senates; one for *Savoy*, which sits at *Chamberry*; the Senate of *Piedmont* sit at *Turin*; and the Senate for *Nice* is held at that Capital; but as the King of *Sardinia* is absolute, they are subject to his Controul, and though common Matters are referr'd to them, yet in weighty Affairs, or where the Goverment is concern'd, they are not empower'd to make Decrees and Edicts, but only serve to record those made by the Prince.

CHAP. V.

An Abstract of the History of Savoy *and* Piedmont; *with an Account of the King of* Sardinia's *Family, Revenues, Forces, Titles, Interest, and Pretensions.*

THE antient Inhabitants of *Savoy*, were the *Allobroges*, the *Centrones*, the *Nantuates*, *Caroelli*, and other barbarous People; for so the *Romans* call'd them, till they were reduced to their Obedience by *Tiberius Varro*, and *Augustus*, who form'd them into a Province; but when the Empire was over-run by the Northern Nations, *Savoy* participated of the common Fate, and was subject sometimes to one, sometimes to another. The *Burgundians* incorpo-

rated it with the Kingdom; they eſtabliſh'd themſelves in Part of *Gallia*, *Celtica*, and *Gallia Narbonenſis*; but after the Diſſolution of the *Burgundian* Kingdom, it came into the Hands of *Berold*, the Son of *Hugh*, Duke of *Saxony*, who going into *Italy* with his Uncle the Emperor *Otho* III. about the Year 999. was made Governor of this Country, and at laſt obtain'd the Sovereignty of it, and was ſucceeded by the Perſons, and in the Order following:

Humbert, the Son of *Berold*, ſucceeded his Father *Anno* 1027.

Amadeus, the Son of *Humbert Anno* 1048.

Odo, Brother of *Amadeus*, 1050.

Amadeus II. Son of *Odo*, 1080.

Humbert II. Son of *Amadeus*, 1095.

Amadeus III. Son of *Humbert* 1103.

Humbert III. Son of *Amadeus*, 1149.

Thomas, Son of *Humbert*, 1186.

Amadeus IV. Son of *Thomas*, 1233.

Boniface, Son of *Amadeus*, 1253.

Peter VII. Son of Count *Thomas*, ſucceeded 1263.

Philip his younger Brother, the eighth Son of Count *Thomas*, 1276.

Amadeus V. the Son of *Thomas*, ſucceeded to the Prejudice of his Brother *Philip*'s Children, 1284.

Edward, Son of *Amadeus*, 1323.

Aimon his Brother, 1329.

Amadeus VI. Son of *Aimon*, 1343.

Amadeus VII. his Son, 1383.

Amadeus VIII. his Son, was made a Duke by the Emperor *Sigiſmund*; and *Lewis* of *Savoy*, who was alſo Prince of *Piedmont*, dying without Iſſue, the ſaid *Amadeus* ſucceeded, 1391.

Lewis, his Son ſucceeded upon his Father's Reſignation. This *Amadeus* VIII. is the ſame that was ſpoke of Chap II. in the Deſcription of *Repaille*; who retir'd from his Palace, and took upon him the Habit of an Hermit, and was choſen *Pope*, &c. He reſign'd the *Popedom*, and was ſucceeded by this Son *Lewis*, 1434.

Amadeus IX. Son of *Lewis*, 1465.

Philibert, Son of *Amadeus*, 1477.

Charles his Brother ſucceeded his Aunt, Queen *Charlotte*, in the Kingdom of *Cyprus*, 1482.

Charles-John Amadeus, Son of *Charles*, ſucceeded, 1490.

Philip II. Son of *Lewis*, 1496.

Philibert II. the Son of *Philip*, ſucceeded, 1497.

Charles III. Son to *Philip* II. 1504.

Emanuel Philibert, his Son, 1553.

Charles Emanuel, his Son, 1580.

Victor Amadeus I. his Son, 1630.

Francis Hyacynthus, his Son, 1637.

Charles Emanuel II. his Brother, 1638.

Victor Amadeus II. his Son, ſucceeded his Father in *June* 1675. being then but nine Years old.

Charles Emanuel III. Duke of *Savoy* and King of *Sardinia*, was born *April* 27. 1701.

In the Year 1717. the King of *Spain*, ſent the Marquiſs *de Lede* with ſix or ſeven thouſand Men to make a Deſcent upon *Sardinia*, though it had been yielded up to the Emperor by the Treaty of *Utrecht*. The following Year the ſame General invaded *Sicily*, with ſeventeen or eighteen thouſand Men, and moſt of the great Towns open'd their Gates to him, and ſubmitted to King *Philip* of *Spain*; whereupon the Emperor, *Great Britain*, and *France*, entred into an Alliance, which the *States General* coming into, obtain'd the Name of the *Quadruple Alliance*, engaging themſelves to ſee all the Articles of the Peace of *Utrecht* perform'd, except in what they ſhould agree to alter; and upon this Admiral *Byng* was ſent to the *Mediterranean* with a Fleet of twenty two Men of War; and indeed this one Thing the *Dutch* did, they added one to the *Tripple Alliance*, and ſo procur'd it the Name of the *Quadruple Alliance*. But when our Forces expected to be join'd by fourteen *Dutch* Men of War, they were in no Haſte to come near us, but took care to keep out of the way, and leave us to try our Fortune without them; and yet no Thanks to our *Dear Allies*, we took twelve of the *Spaniſh* Men of War, and burnt three, without the Loſs of one Ship to the *Engliſh*.

In one of the Articles of the Treaty of *Utrecht*, it was ſtipulated, That whereas the Ceſſion of *Sicily* to the Houſe of *Savoy* was made only for rendring the Peace more laſting and ſolid, and not on the account of any Right the King of *Sicily* had thereto; therefore the Princes who made the ſaid Treaty for the Repoſe of *Italy*, thought fit to annul that Article of the ſaid Treaty that related to *Sicily*, and to demand, that the King of *Sicily* ſhould reſtore the ſaid Iſland and all its Dependencies to his Imperial Majeſty; who in Return, was to yield to the King of *Sicily*, the Iſland and Kingdom of *Sardinia*, but with this Reſerve, that the Reverſion of the ſaid Kingdom of *Sardinia* ſhould devolve upon the Crown of *Spain* upon Default of Heirs male in the Houſe of *Savoy*. The Emperor alſo acknowledg'd the Right of the ſaid King of *Sicily* to ſucceed to the Crown of *Spain*, whenever King *Philip* or his Poſterity ſhould fail of male Iſſue; but ſtill with Condition, that no Prince of the Houſe of *Savoy* ſucceeding to the Crown of *Spain*, ſhould at the ſame Time poſſeſs any Part of the Continent of *Italy*.

The King of *Spain*, not able to hold out againſt the Allies, agreed to evacuate *Sicily* and *Sardinia*, and allow the Emperor's Title to one, and the King of *Sardinia*'s to the other; and in ſhort, he agreed to accede to the *Quadruple Alliance*, though neither the Kings of *Spain* or *Sardinia* were over and above ſatisfy'd with the Terms of it.

The Revenues of the King of *Sardinia*, is computed at about five hundred thouſand Pounds Sterling a Year; and is ſo abſolute in his Dominions, that he can augment them at his Pleaſure.

He is obliged to have a good Body of Forces even in Times of Peace, to garriſon his frontier Towns againſt the *French* and *Milaneſe*. He is always very cautious how he is drawn into a War, either with *France* or the Emperor; but when he muſt declare for one or the other, he takes care to make a ſafe Bargain, and to have ſuch Sums and Penſions advanc'd, that he does not much burthen his Kingdom or his Subjects.

CHAP.

CHAP. VI.

Of the Territories and Coaſt of GENOA.

THIS Country was antiently call'd *Liguria*, but now *Genoa*, and may properly be call'd the Coaſt of *Genoa*, it being a long Slip by the Sea Side, in Length from the River *Var* to the *Magra*, about an hundred and fifty Miles, and not above twenty, or in ſome Places not above ten, in Breadth, from the *Mediterranean*; on the South to the *Alps* and *Apennine Hills*; on the North it has the *Milaneſe*, and *Parma* on the Weſt, North, and North Eaſt; and by the Dutchy of *Florence* on the Eaſt. The *Alps* and *Apennine* Hills ſeparate the *Genoeſe* from the Countries of *Nice*, *Piedmont*, and *Montſerrat*.

THESE Hills lying to the Northward of it, and the Sea to the Southward, makes the Air much warmer than in the neighbouring Countries on the North Side of the Mountains. The Coldneſs of the Weather in Winter, and the Heat and Draught in Summer, makes the Tops of the Mountains perfectly bare, without either Wood or Herbage; but the Bottoms and South Sides are well planted with Vines, Olives, Mulberries, and other Fruit-trees, but little Corn; nor do their Seas produce much Fiſh.

Manners. THE Character that Mr. *Addiſon* gives of the *Genoeſe* is, that they are a cunning, induſtrious People, and more inured to Hardſhip than the reſt of the *Italians*. This Mr. *Addiſon* imputes to the Barrenneſs of their Country; for he ſays, nothing makes Men's Wits ſharper than Want; but that does not ſeem to be the only, nor the chief Reaſon, but the rather, becauſe People of all Capacities, nay, even the Nobility and Gentry, apply themſelves to Trade; ſo that it is downright Practice that makes them ſharp in Converſation and Bargaining; and indeed as the poorer Sort have the moſt immediate Need to be ſharp, in this Caſe it may be ſaid, that nothing makes a Man ſharper than Want.

THE Quality and better Sort of People in *Genoa*, generally wear black. There are but few that wear Swords. But notwithſtanding the Heat of the Country, yet they generally wear Cloaks when they go out, and then they are ready dreſt. But the poor Sort of People, what by Poverty and the Heat of the Weather, eſpecially in Summer, almoſt make a ſhift without any Cloaths at all. The middling People affect ſome the *French*, ſome the *Spaniſh* Modes; the Women who affect the *Spaniſh* Dreſs, wear large Farthingales, the Men broad Hats, Hanging-ſleeve-Doublets, ſtrait Breeches, and Leathern Belts.

Moſt of the Cheif Towns. THOSE of the Cheif Towns in the *Genoeſe* that are worth the Reader's Notice, I ſhall deſcribe in the following Order:

1. *Genoa*, a fine Sea-Port upon the Sea Side, in Form like a Creſcent, about ninety Miles North Weſt of *Legborn*. The Houſes are lofty, and beautifully painted on the Out-ſide, which afford a very agreeable Proſpect to thoſe who approach them from the Sea. The Harbour is large and deep, but lies much expoſed to the South Weſt Wind, though they have built a little Mold which ſecures their Galleys and ſmall Veſſels from the Violence of the Weather, as well as from Enemies; but if the large ones cannot defend themſelves, they lie expos'd to both; of which the *French* took the Advantage when their Fleet came before it in the Year 1684. when they deſtroy'd a great Part of the Heart of the Town; but the Out-ſide, or back Part did not receive much Damage. Moſt of the Streets and the Houſes being generally ſix or ſeven Story high, incommodes the Streets very much both for Air and Light, eſpecially the lower Rooms. Although the Buildings are generally of Brick or Stone, yet the Walls are generally plaiſter'd over and painted, and the Roofs Fret-work. Mr. *Addiſon* tells us that the new Street is a double Range of Palaces from one End to the other, built with an excellent Fancy, and fit for the greateſt Princes to inhabit. They are generally richly adorn'd with Marble, and of four or five of them, all the Front is intirely Marble; and theſe contriv'd to ſuch Advantage for a Proſpect, that a Stranger would think the Town all built of Marble. There are five or ſix Streets of great Breadth, with very magnificent Houſes, as they alſo are in ſome of the Suburbs. There is a Continuance of beautiful Palaces along the Shore fronting the Sea, which as the Ships approach, make the Town appear much larger than it is. It is ſurrounded by a Wall and other Fortifications. The Streets being moſtly too narrow for Coaches, the Quality chiefly uſe Chairs and Litters to ſupply the Place of them.

THERE are in *Genoa* about thirty Pariſh Churches, twenty Colleges, beſides a Number of Convents and religious Houſes; the Towers, Steeples, and Turrets of which, add a great Ornament to the Town as it appears from the Sea. They delight much in having fine Gardens upon the flat Roofs of their Houſes and in their Balconies. The Cathedral is a large Building, but many of the Churches in *Italy* are much more beautiful; but the Church of the *Annunciation* is the fineſt in *Genoa*, built at the ſole Charge of the Family of *Lomellini*: The Roof is finely gilded, the Pillars are Marble, and the Walls moſt exquiſitely painted. The Altars are magnificent, and adorn'd with fine Pictures. There are three other handſome Churches, thoſe of St. *Cyr*, St. *Matthew*, and St. *Mary* of *Carignan*.

OF the Duke of *Doria*'s Palace, take the following Deſcription from Mr. *Addiſon*. It takes up all the Ground from the Sea Side to the Top of the Hills. In the lower Part of it is a magnificent Gallery, an hundred and twenty Paces long. The Pillars and Pavement are both of black and white Marble; and beyond this, is a fine Garden adorn'd with Mountains and Statues. The higher up the Hill, the Rooms of the Palace are more magnificent; and as for the Furniture, the Bedſteads are Silver, the Tables Jaſper, Alabaſter, Agate, or Silver; of which there is one of Silver weighs twenty four thouſand Crowns. There is one Room hung with Tapeſtry, in which are wrought the Figures of the Great Perſons the *Doriam* Family has produc'd. Nor can any Houſe in *Europe* ſhew a longer Line of Heroes, who have preferr'd the Good of their Country to all other Views. In ſhort, the Palace of *Doria* is fill'd with Statues, Buſts, Baſs Reliefs, and the moſt exquiſite Paintings. The firſt Hall is in Form of a Portico, and the Wall all

cover'd

cover'd with Pictures; and beyond this is a fine Garden on the Top of the Hill, upon which is a beautiful Summer-House; also Fountains, Grottoes, Statues, *&c.*

THERE are also the Palaces of *Durazzo*, *Palavicino*, *Spinola*, *Baldi*, *Grimaldi*, *Lomellini*, and *Turfis*; but the *Villa Imperiale* excels them all. Also the *Doge*'s Palace for Magnificence, Beauty, and Materials, is a famous Building; and if the *French* Author is to be credited, it is not to be conceiv'd how many Beauties may be discover'd with one single Cast of an Eye in the new Street at *Genoa*, and with Admiration cries out all, *All is enchanting! All Astonishing!* When we have view'd one of these Palaces, we think nothing can excel it; and yet the Beauty of the next will make us forget what we before so justly admired; but with this I must conclude the Description of the Beauty of the Buildings of *Genoa*, and leave the Reader to admire what I have not room to express.

Genoa has been an Archbishop's See ever since the Year 1132. though it is not a University; but there is an Academy of Wits, where young People improve themselves in composing Orations, Poems, *&c.* They encourage and trust Judicial Astrology so much, that *Veryard* relates, that being at *Genoa*, he saw a Woman have a Stage in one of the great Streets like a Mountebank's-Stage, hung round with Globes, Spheres, Schemes, and Mathematical Instruments. She made a Speech in Favour of her Skill in telling Fortunes, inviting them to come to her House to be satisfy'd of the Truth of it; and in the mean time, as a Specimen of her Skill, had a Speaking Trumpet about twelve Feet long, the broad End of which was fitted to her Mouth, and the other End fitted to be clapp'd to a Person's Ear; and with this she whisper'd to several of the Spectators, who affirm'd, that what she said was wonderfully true; but as no body could tell what she said but those to whom she whisper'd, and they might be Confederates too, it could scarce induce any Person of Sense to give Credit to such Pretenders.

THERE are some other Towns, but of much less Note; I shall only give a Hint of what is most remarkable, and worth the Reader's Notice in any of them, as follows:

Sarzana — *Sarzana* is by the Sea Side, about thirty Miles South West of *Genoa*. It is one of the largest Towns in those Territories. It is a Bishop's See, Suffragan to the Archbishop of *Milan*, and remarkable for the Birth of three Popes, viz. *Gregory* VII. *Julius* II. and *Sixtus* IV.

Final — *Final* is about forty Miles South West of *Genoa*; it is the Capital of a Marquisate, and stands by the Sea Side. The *Imperialists* sold it to the Republick of *Genoa*, who now have it in Possession. It is defended by a Castle and two Forts, and may be reckon'd a tolerable good Harbour amongst so many indifferent ones.

Albenga — *Albenga* is on the same Coast, about twenty Miles South West of *Final*; a decaying Place, but a Bishop's See, Suffragan to *Genoa*.

Oneglia — *Oneglia*, Capital of the Territory of the same Name, about sixty Miles South West of *Genoa*. This belongs to the King of *Sardinia*.

St Remo — St. *Remo*, fifteen Miles to the Westward of *Oneglia*. It stands partly on a Plain by the Sea Side, and partly upon a rising Ground further from the Sea. Here grows abundance of Oranges and Lemons, and other delicious Fruit; as also several Plantations of Palm-trees, a Thing very scarce in other Parts of *Italy*.

Vintimilia — *Vintimilia*, above thirty Miles to the Westward of *Oneglia*. It has an antient Castle, and is a Bishop's See, Suffragan to *Milan*, but a decaying Place, and not in any Thing else considerable.

Monaco is upon the same Coast, about ten Miles South West of *Vintimiglia*. It is the Capital of a little Principality belonging to the Family of *Grimaldi*, about ten Miles long, and three broad. It is supposed to be the *Herculis Monaci Portus* of the Antients. It is a Harbour, and defended by a Castle. It belongs to the *French*, and the Prince is a Peer of that Realm. *Mona.*

To the Eastward of *Genoa* is *Repallo*, in a little Bay about sixteen Miles from *Genoa*, famous for the excellent Oil the Country about it produces. *Repallo*

TWENTY five Miles South East from *Genoa* is *Lavagne*, a Town of small Note at present. *Lavagn*

Sarzana is about sixty Miles South East of *Genoa*, and about three Miles from the Mouth of the River *Magra*. It is the Eastern Boundary of the State of *Genoa*. It is a populous Town, of good Trade, and a Bishop's See, Suffragan to *Rome*. *Sarzana*

Porto Venere is about seven Miles from *Sarzana*. It is a good Harbour, and defended by a Fort. *Porto*

THE Legislative Power of the Republick of *Genoa* is lodg'd in the great Council or Senate. The Administration of Government is committed to the *Doge* or *Duke* for the Time being, with the following Councils.

1. The Council call'd the *Seigniory*. 2. That call'd the *College*. 3. An Assembly stil'd the *Council*. 4. An Assembly compos'd of *Seigniory* and *College* together.

THE Great Council call'd the Senate, consists of *Seigniory* and *College*, and four hundred Noblemen and principal Citizens, annually elected out of the Freemen. They must not be less than twenty five Years of Age, and must be such as have been register'd four Years at least, and lastly, not have been of this Council before; and of such select Members, three hundred, with the Members of the *Seigniory* and *College*, make a *Quorum*. If four Parts in five of this Senate agree to the enacting of any new Laws, it has the same Force as if they were all unanimous; and also in the levying of Taxes, and disposing of some of the principal Offices.

THE *Seigniory* consists of the Duke and twelve other Members, such as have been five twelve Years, and then they can hold that Place but two Years; which being expired, they cannot be re-elected till five Years be expired after their quitting. By this *Seigniory* Ambassadors have their Audience, Dispatches sent to, and receiv'd from, foreign Courts, *&c.* And sometimes when they cannot agree in their Sentiments, they call the *College* to their Assistance, and sometimes the *Council* also; and then the Matter (which is commonly in Affairs of the highest Importance) is determin'd by a Majority of Voices.

THE *College* consists of eight Members, who hold that Place and Title two Years; but those who have enjoy'd the Office of Duke, are afterwards Procurators for Life. These manage the Revenue, farm out the Lands of the State, and buy and sell for the Republick.

THE *Doge* is oblig'd to reside in the Palace the two Years that he holds his Office; he must be an Inhabitant of the City fifty Years, no Bastard, and one that has an Estate sufficient to support his own Dignity. His Business is to propose Matters to be debated by the Senate and Council. When his two Years are expired, he retires to his own House, and remains private for eight Days, till they have examin'd into his Conduct during his Administration; and if it is approved, he is made a Procurator during Life; but if not, he is look'd upon and proceeded against as a Criminal. *The*

THE

THE Doge is complimented with the Title of *His Serenity*; the Senators are entitled their *Excellencies*, the Nobility *Illuſtrious*. The Nobility have their Titles from ſuch Lands or Seigniories as they poſſeſs, or have purchas'd.

THEIR Naval Strength is very inconſiderable at preſent. Their Fleet, which was formerly ſo ſucceſsful over the *Venetians*, *Turks*, &c. and ſettled Colonies in *Aſia*, is now reduc'd to ſix Gallies; they thought indeed to have added four more, but the *French* King forbid them at their Peril, and accordingly they were oblig'd to deſiſt. Their Land Forces, in Times of Peace, is not above four or five thouſand, and in Time of War about twenty thouſand. The ordinary Revenue is not above two hundred thouſand Pounds a Year; but if that will not anſwer, the Great Men are nevertheleſs tax'd according to their Wealth; what they poſſeſs in the Emperor's Dominions, in *Naples* and *Milan*, is commonly tax'd higher than the Natives. There is a Bank at *Genoa*, whoſe Fund is a Part of the publick Duties, which are appropriated to pay the Debts of the Republick.

THE Crown of *Spain* is vaſtly indebted to this Republick, for Money borrow'd by *Philip* II. to fit out the great Armada againſt *England*, and other Sums taken up ſince, for which they continue to pay Intereſt. The *Genoeſe*, in Conſideration of the Barrenneſs of their own Country, in plentiful Years buy up, and lay in a Stock for three or four Years, to live upon in a bad Year, and then live upon the old Store, and by this means the Neceſſaries of Life are never dear.

THE chief Manufactures in *Genoa* are Silks, Taffataes, Velvets, Brocades, and other rich Stuffs; alſo Wine, Oil, Citrons, Lemons, Anchovies, dry'd Sweetmeats, *Parmeſan* Cheeſe, and ſeveral Kinds of Drugs uſed in Phyſick; and Paintings are ſent from hence to other Parts of *Europe*.

THIS Country, the antient *Liguria*, with the reſt of *Italy*, fell ſubject to the *Romans*; and *Mago*, the Brother of *Hannibal*, having taken and deſtroy'd their Capital of *Genoa*, the *Romans* ſent *Lucretius* to rebuild it, during the Conſulate of *Scipio* and *Nepos*. Upon the Fall of the *Roman* Empire, *Genoa* became ſubject to the *Lombards*; afterwards they erected a Government of their own, but were ſo unſteady in their Choice of a Form of Government, that they rendered themſelves obnoxious to frequent Revolutions. Sometimes the People choſe a Head, and inveſted him with ſovereign Power. Immediately the Nobles would depoſe him, and form a Republican Government of their own; and when weary of that, they would put themſelves under the Protection of ſome neighbouring Prince; and by-and-by renounce his Authority. And thus they were ſucceſſively ſubject to the Archbiſhop of *Milan*, the *French*, the Marquis of *Montſerrat*, the Duke of *Milan*, and again to the *French*; and in the Intervals they choſe Counts, Conſuls, and Captains of their own. At length *Andrew Doria*, about the Year 1528, ſettled their Republick in the Form it now is, which was thus brought about.

THE *Genoeſe* putting themſelves ſometimes under the *French*, and ſometimes under the *Spaniard*, as their Safety or Intereſt lay, *Andrew Doria*, a Native of this Republick, and one of the greateſt Admirals and Generals of his Time, who had alternately ſerv'd both the *French* and *Spaniſh* Armies, had the Policy to play one of theſe Powers againſt the other, and that with ſuch Succeſs, that he involv'd them in ſuch Differences between themſelves, that he quite diſentangled the *Genoeſe* from any Obligation to, or Dependance upon, either of them, and then erected a Free State, according to the Model above-mention'd. They, as it were in Point of Gratitude, offer'd to make him their abſolute hereditary Prince, without any Limitation; but he, more tender of their Liberties than his own Dignity, not only refus'd it, but procur'd an Act of State, that neither he, nor any of his Deſcendants, nor any other Family, that ſhould grow rich and powerful in the Commonwealth, ſhould ever be admitted to any Office or Share in the Government, leſt they ſhould uſurp ſovereign Power. But in the Midſt of all *Doria*'s, it happen'd, about the Year 1547, a popular Citizen, but a politic deſigning Man, did, by his charitable Benevolences to the Poor, and a pretended Zeal for the publick Good, ſo influence the People, and inſinuate himſelf into their Favour, that he carried all before him; he prevail'd with the Citizens to impriſon the principal Senators, under a Pretence of Male-Adminiſtration; and as *Doria* was the only Perſon that could prevent his Deſign, he, by fair Promiſes and ſome Performances, got the People ſet againſt him, and then ſoon made himſelf Maſter of the Capital of *Genoa*; and then going to take Poſſeſſion of the Fleet in the Harbour, he thought his Work would be done; and indeed ſo it prov'd, but in a Way contrary to his Expectation; for walking along a Plank, from one Ship to another, and being loaded with his Armour, which he had on, he ſlipp'd off the Plank, dropp'd into the Sea, and ſunk downright; which put his Party into the utmoſt Confuſion, and of which *Doria* took the Advantage, ſet upon the Rebels, and diſpers'd them, and ſo fix'd the Commonwealth again upon the Foundation he had ſet it upon when he firſt undertook it.

Fieſco's Body being afterwards found, the Senate order'd it to be carried ſeveral Leagues to Sea, and with the utmoſt Ignominy and Contempt thrown into it; that his Eſtate ſhould be confiſcated, his Palace demoliſh'd, and that no Houſe ſhould ever be built upon that Spot of Ground, that its Ruins may remain a Monument of his Treachery, as it is to be ſeen to this Day. But, on the other Hand, the fine Marble Statues of *Doria*, and of his Nephew, who was kill'd in oppoſing the Uſurper *Fieſco*, ſtand one on each Side of the Stairs going up to the Senate-Houſe, to keep up the Memory of their generous Actions in Defence of the Liberties of the *Genoeſe*.

AFTER this ſecond Deliverance by Prince *Doria*, they made a Regiſter of all the free Citizens, and found five hundred and twenty-four antient Families of noble Extraction, and four hundred and eighty-ſeven other Families of conſiderable Citizens. And theſe two Sorts only are term'd free Citizens; and 'tis only them, and their Deſcendants, that have a right to be regiſtred as Freemen; and that with this Limitation, that they muſt be ſuch as have not been any way infamous, or exerciſed any mechanick Trade within three Years of their Election. All the reſt of the Inhabitants, either of the City, or in the Territories belonging to the Republick, are ſtill not free, and have no Share in the Government. But though a free Citizen is not to follow any mechanick Employment, yet they may buy, ſell, or go to Sea as Merchants, or negociate any other Buſineſs, only not work upon mechanick Buſineſs, or keep open Shop. And this we are to add, that this Seignory, the College, and Council in Conjunction, have a Power of electing annually, in *January*, of the Citizens that are not free, any Number not exceeding ten, to be regiſtred and added to the Number of free Citizens; and the Inhabitants who are not free, are not excluded from ſerving in ſome of the Places of Profit and Truſt in the Commonwealth.

CHAP. VII.

Contains a Description of the Dutchy of MILAN.

Situation and Extent.

THE Dutchy of *Milan* is bounded on the North by *Switzerland* and the Country of the *Grisons*, and on the East by the Territories of *Venice*, and the Dutchies of *Mantua* and *Parma*; by the *Appenine Hills* on the South, and by *Montserrat* and the King of *Sardinia*'s Dominions on the West. Its longest Way is from North to South, about eighty Miles, and its Breath about sixty, from East to West. It is well water'd with fine Rivers, as the *Po*, the *Tesin*, the *Adda*, and the *Sessia*. The chief Lakes are those of *Maggiore*, *Lugano*, and *Como*.

Rivers. Lakes.

THE Air and Climate are very agreeable, and the whole Country is one fruitful Plain, interspersed with Towns, Palaces, Convents, *&c.* which makes it a most desirable Place, but more of that in the Description of the several Parts or Divisions of it, under their respective Names; which are as follow: 1. *Milanese Proper*; 2. the *Pavese*; 3. the *Lodesan*; 4. the *Cremonese*; 5. the *Comasco*; 6. the County of *Anghiera*; 7. the Valleys of *Sessia*; 8. the *Novarese*; 9. the *Vigevanois*; 10. the *Lomelline*; 11. the *Alexandrin*; 12. the *Tortonese*; and, 13. the Territories of *Bobbio*.

Milanese Proper.

1. OF *Milanese Proper*; the chief Town is *Milan*, or, as some call it, *Milan the Great*, from its large Dimensions, Multitude of Inhabitants, Magnificence of its Temples and Palaces, the Valuableness of its Manufactures, and the Extensiveness of its Commerce; it stands about fifty Miles North from *Genoa*, sixty five West from *Mantua*, and about two hundred and fifty North-West from *Rome*. The City is of a round Form, encompass'd with a Wall about ten Miles in Circumference, in which are ten Gates. The Cittadel is a large Hexagon, that commands the Place, and is look'd upon as one of the strongest Fortifications in *Italy*. The Streets of the Town are broad and clean, the Squares spacious, and the Houses lofty. It contains two hundred and thirty Churches; there are also forty Convents of Men, and fifty of Women. Dr. *Burnet* infers, from the Vastness of the Town, the Noblenes of the Buildings, and the surprizing Richnes of the Churches and Convents, that it is a very wealthy Place. It is supposed to contain about three hundred thousand Souls.

THEIR principal Manufactures are those of Silk Brocade, and other rich Stuffs. They are very much admired for their Steel and Iron Ware, and fine Chrystal Works, but especially the last; and their Artificers of all kinds are such fine Artists, that they have engross'd the Trade of *Italy*. The Women go abroad, and have more Liberty to enjoy themselves than in many other Countries.

Buildings.

THE publick Buildings most taken notice of are, 1. The Cathedral, a magnificent *Gothick* Structure, about five hundred Foot in Length, and two hundred in Breadth. Dr. *Burnet* observes, that the Pavements and the Walls, inside and outside, and the Roof, are all of Marble. The Roof is supported by a hundred and sixty Marble Pillars, each of them three Fathom in Compass; they stand in ten Rows. There are in the Church two noble brazen Pulpits, each of them running round a large Pillar like a Gallery, and supported by huge Figures of the same Metal. Just under the Cupola lies the Body of St. *Carlo*, or *Charles Borromeo*, once Archbishop of this See, in a great Chrystal Case, of an immense Value. The Plate and other Presents made to this Saint are of a prodigious Value; some Services for the Altar are all of massy Gold, and set with Jewels; others are so finely wrought, that the Fashion is said to be equal to the Value of the Metal. The Account of some of the Antiquities of the Church of St. *Ambrose* we shall suspend our Belief of; they look too much with an Air of Superstition to gain Credit among the Generality on this Side the Water. Of other Buildings, the great Hospital is best worth Notice; it is a magnificent Structure; in it are entertain'd four thousand infirm People, having a Revenue of seventy thousand Crowns a Year. About two Miles from *Milan* stands a Building, which gives such an Eccho, that, as Mr. *Addison* says, he discharg'd a Pistol in the Place, and the Sound was return'd fifty-six Times, the first Repetitions follow'd very thick, but as the Sound decay'd, it follow'd more slow in Proportion.

Govern ment.

THE Civil Government of *Milan* is lodg'd in the Senate, consisting of Prelates, Doctors of Law, and Gentlemen of the Country, but they are controul'd by Prince *Eugene* of *Savoy*, the Emperor's Vicar-General, to whom the Viceroys of *Naples*, *Sicily*, and other Territories in *Italy*, when in the Emperor's Hand, are accountable. The Vicar-General also appoints the President of the Senate, Magistrates, Commissaries, Officers of the Treasury, *&c.* The Governor of the Town of *Milan*, and that of the Cittadel, are different Persons, and independant of each other. *Milan* is an Archbishop's See, and they have a Tradition that their first Prelate was St. *Barnabas*. Here, as in other Towns, is an Academy of Wits, who at their publick Meetings entertain each other with Rhetorical, Moral, or Philosophical Discourses, and sometimes with Politicks, especially where something of a witty Turn is requir'd in the Answer. The ill Treatment they had from the *French* in the last War has confirm'd their Aversion to that Nation, and induced them so readily to submit to the *Austrian* Government after the Victory at *Turin* in the Year 1706.

Pavese.

BUT the second Subdivision of the *Milanese* is the *Pavese*, which lies to the Southward of *Milanese Proper*. It affords plenty of Corn, Wine, and the most delicious Fruit. The chief Town is *Pavia*, on the Banks of the River *Tesin*, four Miles North of the *Po*, and twenty South of *Milan*; it was the Capital of the *Lombards* Kingdom till that Monarchy was destroy'd by the Emperor *Charlemain*. There is nothing extraordinary in the Buildings of this Place; the Church of St. *Peter*, with the Monastery adjoining, are handsome Structures, but not remarkable for any thing, except that in this Monastry the Corpse of St. *Austin* is said to be interr'd, in a Tomb of white Marble, and is visited to this Day with abundance of Devotion. The Cathedral is a heavy old *Gothick* Building; however, *Pavia* is a Bishop's See, and said to be one of the richest in *Italy*, and depends immediately upon the Pope.

THE

Lodesan. The third Subdivision of *Milan* is the *Lodesan*; it abounds in rich Pasture, and Herds of Cattle, and is famous for its fine Cheese. The chief Town is *Lodi*, near the River *Adda*, twenty Miles South-East of *Milan*, but not taken notice of by Travellers, any further than as it is a large and well-built Town, and a Bishop's See.

Cremonese. The *Cremonese*, the fourth Subdivision, is to the Eastward of the *Lodesan*, and is separated from it by the River *Adda*. It abounds in Corn, Wine, Flax, and Fruit. The chief Town is *Cremona*, on the North Side of the *Po*; it is about forty-five Miles South-East of *Milan*; it is five Miles in Circumference, and well built, with spacious Squares and wide Streets, but neither populous nor rich; it is defended by a Castle and other Fortifications; but in the Year 1702, it being then in the Possession of the *French*, Prince *Eugene* penetrated into it by a subterraneous Passage, and surprized the Commander of the *French* Garrison, the Marshal *Villeroy*, in his Bed, and retired with his Prisoner, but did no other Execution, the *Irish* Regiments in the Garrison making a brave Defence, and the *German* Forces of Prince *Eugene*'s Party losing their Way, could not come up in Time to his Assistance; however, this, and other Successes of the brave Prince *Eugene*, so mortify'd the *French*, that they quitted the *Milanese* in the Year 1707.

Comasco. The fifth Subdivision is *Comasco*, to the Northward of *Milanese Proper*. The chief Town is *Como*, at the South End of the Lake *Como*, about twenty-five Miles to the Northward of *Milan*; it is a populous strong Town, and a Bishop's See. The Lake *Como* is about thirty Miles long, and three broad; the River *Adda* runs through it.

Anghiera. *Anghiera* is the sixth Subdivision, situate on each Side the Lake *Maggiore*. The chief Town *Anghiera* stands on the East Side of the said Lake, about thirty Miles North-West of *Milan*, but Geographers have not thought it worth a particular Description.

Novarese. The *Novarese* lies to the Westward of *Milanese Proper*: The chief Town is *Novara*, about thirty Miles to the Westward of *Milan*, a small fortify'd Town, and a Bishop's See, Suffragan to *Milan*.

Tortonese. The *Tortonese* lies to the Southward of *Milan*; the chief Town is *Tortona*, about thirty Miles South-West of *Milan*; it is a Bishop's See, Suffragan to *Milan*.

Bobbio. The District of *Bobbio* lies to the Southward of the *Pavese*: The chief Town is *Bobbio*, a Bishop's See, Suffragan to *Genoa*, but for nothing else remarkable.

The Valleys of *Sessia*, the *Lomellina*, and the *Alexandrin* having been yielded to the King of *Sardinia*, and treated of in the Description of his Territories, I shall forbear to say any more of them here.

Abstract of the History of *Milan.*

The Dutchy of *Milan* was inhabited by the *Insubres*, till it fell under the Dominion of the *Romans*, but upon the Decline of the *Roman* Empire it was possess'd by the *Goths*, till they were expell'd by the *Lombards*, a People of *Germany*, about the Year 572. *Milan* was the greatest Part of the Kingdom of *Lombardy*, which continued about two hundred Years; but *Didier*, the last King, being taken Prisoner, and the Monarchy destroy'd by *Charlemain*, the Emperors of *Germany* afterwards appointed the Governors of the *Milanese*, who, in process of time, assum'd so much Authority, as to call themselves Lords of *Milan*. About the Year 1395, *John Galeas* was the first that was honour'd with the Title of Duke, and being succeeded by his two Sons, who dy'd without any Lgitimate Issue, several Princes laid Claim to the Dutchy of *Milan*, among the rest, the Emperor *Frederick* IV. *Alphonsus* King of *Naples*, *Lewis* Duke of *Savoy*, *Charles* Duke of *Orleans*, and the Republick of *Venice*; whereupon the *Milanoise* for some Time took the Government into their own Hands, and about the Year 1468 put themselves under the Government of *Francis Sforza*, one of the greatest Generals of his Time, who had married the base Daughter of their last Duke. *Lewis* XII. King of *France*, Son to the Duke of *Orleans*, and Great-Grandson of *John Galeas*, the first Duke of *Milan*, abovemention'd, reviving his Pretensions to the *Milanese*, march'd an Army thither, and in less than a Month reduc'd it to his Obedience, obliging the then Duke, surnamed *Lewis the Black*, to fly for Refuge into *Germany*; but the *Milanoise*, weary of *French* Tyranny, soon recall'd him; but he was betray'd by a *Swiss* Soldier in his Service, taken Prisoner by the Enemy, and dy'd in Captivity; but *Maximilian*, the Son of the said *Lewis*, assisted by the *Swiss*, drove the *French* out of the Country; but *Francis* I. reinforcing his Troops, obtain'd a signal Victory over the *Milanoise* and *Swiss*, and oblig'd *Maximilian* to quit the Government. *Francis Sforza*, the Son of *Maximilian*, assisted by the Emperor and the Pope, was restor'd to his Dutchy about the Year 1521, and at the Treaty of *Cambray*, 1529, the *French* King relinquish'd his Claim to the *Milanese*. Upon the Death of *Francis Sforza* II. Duke of *Milan*, *Anno* 1536, the Emperor *Charles* V. granted the Investiture of the Dutchy to his Son *Philip* II. King of *Spain*, whose Successors enjoy'd it from his Death till the Year 1706, when the *French* and *Spaniards* evacuated the *Milanese*, and the rest of the *Spanish* Dominions in *Italy*, which by the following Treaty of Peace, in the Year 1714, were yielded to the Emperor.

Revenues and Forces.

The Revenues of the Dutchy of *Milan* are computed at three hundred thousand Pounds a Year; and their Forces about thirty thousand Men.

CHAP.

CHAP. VIII.

Contains a Description of the Dutchy of Mantua; *also of the Dutchy of* Modena, *with* Mirandola, Reggio, *and other small States, dependant on* Modena; *also of the Dutchy of* Parma, Placenza, *&c.*

Boundaries.

THE Dutchy of *Mantua* is bounded on the North by the *Bresian* and *Veronese*, and Part of the Territories of *Venice*; and on the East by another Part of the Territories of *Venice* and the *Ferrarese*; by *Modena* and *Mirandola* on the South; and by the *Cremonese* on the West; this Dutchy is about fifty Miles in Length, but at most not above thirty in Breadth, and in some Places not a quarter so much. The chief Towns are,

Mantua.

1. *Mantua*; it stands in the Middle of a Lake, or Morass, form'd by the River *Mincio*, about fourscore Miles East of *Milan*, and not much more South-West of *Venice*; it is in a very unhealthy Situation, especially in a hot Season, as lying in the Middle of such a Quagmire; that on the Side of *Cremona* there is a Causey, of three hundred Paces long, over the Morass, before you can arrive at the firm Land; and on the North Side of it there are two Causeys of five or six hundred Paces each, with Forts and Draw-Bridges upon them to prevent the Attacks of Enemies, it being impossible to approach it but by those Causeys, by Reason of it's boggy Situation. The Town is between four and five Miles in Circumference, and is suppos'd to contain fifty thousand Inhabitants; it has but poor Walls and Fortifications, they trusting to the impassible circumjacent Bog for their Defence; there are large Streets and spacious Squares. Eighteen Parish Churches there are in the Town, but we do not find any thing to be admired in the Buildings; it has, however, a good Trade, especially the Silk Manufacture bears a great Character, by the Name of *Mantua Silk*, which Silk being first wrought into those Female Dresses call'd Mantua's, might probably give the first Rise to those Names for those Womens Garments call'd Mantua's. It is said any foreign Silk is easier imitated than that of *Mantua*. This Bishoprick is independant of any but the Holy See, and owns no other Superior.

Luzara.

Luzara is fifteen Miles South of *Mantua*, but not remarkable for any thing, except a Battle fought near it between the *French* and *Spaniards* on the one Part, and the *Imperialists* on the other, in the Year 1702, and then the Success was so equal, that both Sides claim'd the Honour of the Victory.

Guastalla.

Guastalla is about twenty Miles South of *Mantua*; it is the Capital of a Dutchy of that Name.

History of *Mantua.*

THE Dutchy of *Mantua*, about the eleventh Century, erected a Government of their own, but afterwards losing the Liberty they had once been Masters of, they were subject to several Tyrants, as they, and others too, stil'd them; till *Lewis de Gonzaga*, from whom the late Duke deriv'd his Pedigree, depos'd the last Tyrant in the Year 1328, and became Vicar of the Empire, and as such had the Sovereignty of the *Mantuan* confer'd upon him: His Successors enjoy'd the Titles of Lords of *Mantua* till the Year 1435, when the Emperor gave them the Title of Marquis; and afterwards *Charles* V. confer'd the Title of Duke on *Frederick* II. This Branch held the Dutchy till the Year 1627, when *Vincent* II. dying without Issue, his Cousin, *Charles Gonzaga*, Duke of *Nevers* in *France*, by the Assistance of *Lewis* XIII. obtain'd the Sovereignty of this Dutchy. His Grandson, *Ferdinand Charles* IV. the last Duke, adhering to the *French* King in the late War, was proscrib'd by the Emperor, who seiz'd the Dutchy as a Forfeit, and the Duke dying in the Year 1708, and leaving no Issue, the Emperor still keeps it in Possession.

THE Country of *Mantua* abounds in Corn, Fruits, Flax, Silk, and excellent Pasture, but it does not produce much Wine. The annual Revenue of the late Duke was computed at three hundred thousand Crowns and upwards, besides what he drew from *Montserrat*. The other Branches of the Family of *Gonzaga* are, the Princes of *Guastalla*, *Bozola*, *Castiglione*, and the Earl of *Novellara*, but they are at present content with the Emperor's Government, and have not yet thought fit to lay Claim to the Dutchy of *Mantua*.

MODENA.

UNDER this Head of *Modena* I include the Dutchies of *Mirandola* and *Reggio*, with the Marquisate of *Scandiano*, the Principalities of *Corregio* and *Carpi*; and these, taken together, are bounded on the North by the *Mantuan*, and on the East by *Bologna*; by the *Appenine Hills*, which separate it from *Tuscany*, on the South; and by the *Parmesan* on the West; it is about sixty Miles from North to South, and fifty from East to West. The chief Town is *Modena*; it stands upon a Canal, in a pleasant Plain, about forty Miles to the Southward of *Mantua*, and twenty North-West of *Bologna*. The antient *Mutina* stood near this Place, and some say *Modena* was built out of the Ruins of it, and indeed I think the Similitude of Names contributes pretty much to the Credit of the Assertion; it is not a strong Place, nor are the Buildings so fine as in many other Places in *Italy*, the Streets are narrow and dark, and indeed nothing there is much to be admired.

Soil

THE Soil about *Modena* is rich, but the Taxes and Impositions are so exorbitant, to support a splendid Court, that the industrious Inhabitants are poor in the Midst of Plenty; for it abounds in Corn, Wine, Pasture, Cattle, and all manner of delicious Fruit. *Modena* is the See of a Bishop, Suffragan to *Bologna*, and is the Residence of the present Duke *Reginald*, Duke of *Modena*, *Reggio*, and *Mirandola*.

Mir

Mirandola is the Capital of the Dutchy of the same Name, about twenty Miles to the Northward of *Modena*. It, with *Concordia*, was purchas'd by the Emperor about the Year 1711. The Revenues of this Dutchy is about two thousand Pounds a Year.

Re

Reggio is the Capital of the Dutchy of *Reggio*; it stands about fifteen Miles North-West of *Modena*;

Modena; it is a populous trading Town, handsomer and better built than *Modena*, and subject to the same Prince. Their Buildings are not to be admired, when compar'd with others in *Italy*. It is a Bishop's See, Suffragan to *Bologna*.

Corregio. *Corregio* and *Carpi* are Capitals of their respective Principalities, but not worth a Description in History.

History of Modena. *Modena* was a *Roman* Colony, but destroy'd by *Marcus Antonius*. The *Lombards* re-built the City, and made it a Part of their Kingdom. It was afterwards a free State under the Emperor, but is now possess'd by *D'Este*. The present Duke *Reginald* above mention'd, was born 1655. and made Cardinal Deacon in 1686. but after his Brother's Death he threw off the Purple; and about the Year 1696. married *Charlotte*, the Daughter of *John Frederick* Duke of *Hannover*, by whom he had *Benedicta-Ernestina-Mary*. She was born in the Year 1697. and married to Prince *Anthony* of *Parma*. Also 2. *Francis Mary*, Hereditary Prince of *Modena*, born in the Year 1698. he married the second Daughter of the late Duke of *Orleans*, and had two Sons by her. 3. *Amalia Josepha*; and 4. *John-Frederick-Ernest*. The Duke of *Modena* is absolute in his Dominions; and though the Governors or Judges determine criminal and civil Affairs, yet the last Appeal, if it come to an Appeal, is submitted to the Judge himself.

The Duke of *Modena*'s Revenues are about an hundred thousand Pounds a Year. *Mary* the late Queen of *England*, Wife to King *James* II. was Sister to the Duke of *Modena*; and consequently if the Chevalier *de St. George*, commonly call'd the *Pretender*, was the legitimate Son of the said Queen *Mary*, he was Nephew to the Duke of *Modena*; but these Enquiries do not fall under our Observation.

P A R M A.

THE Dutchy of *Parma*, including *Piacenza*, with the States of *Bassetto*, and *Laudi*, all which are under the same Prince, lies between the *Cremonese* on the North, and *Genoa* on the South; and between *Reggio* on the East, and the *Pavesan* on the West; it is about sixty Miles long, and thirty Miles broad. The chief Town is *Parma*, the Capital of the Dutchy, situate on the River *Parma*, which divides the Town in two Parts, as *London* and *Southwark*. But there is a Communication maintain'd by three Bridges; and indeed it is common when we hear of a Capital City, where a large River runs through it, the next Thing spoke in Honour of that Place, is to speak of the Number of Bridges, by which the Communication between both Sides of the Water is carried on. Thus it was spoke to the Honour of *Rome*, that it once had eight Bridges over the *Tyber*; and at *Leyden* in *Holland*, there are at this Day ninety five Bridges, *&c.* Such Numbers of Bridges, where a City stands upon Islands, as is the Case of *Leyden*, or where a River runs through the City as at *Rome*, and several other Places, renders the Communication between one Part and another much more commodious. Indeed, to this general Rule there is an Exception in the famous City of *London*, where there is but one Bridge; and the Inhabitants seem rather to make Use of the *Thames* as a Defence to keep People from them, than otherwise, by their being so afraid to have another Bridge, when there is but one already for the Communication between the great Cities of *London* and *Westminster* on one Side, and the Borough of *Southwark*, and Counties of *Surry*, &c. on the other. Indeed if it is in Favour of the Watermen, and to make Work for them, it is a Wonder that that Argument did not prevail to prevent the Building of the present *London* Bridge. But I can only let it end in a Surprize to consider, that there is but one Bridge belonging to two such populous trading Cities, as those of *London* and *Westminster*. But to return to *Parma*.

Parma. THE City is of a circular Form, about three Miles in Circumference. It is a strong Place, defended by a Citadel and other Fortifications. The Buildings are regular, and the Streets broad and straight; it is about thirty Miles North West of *Modena*, and sixty North East of *Genoa*. The Cathedral is a magnificent Building, surrounded on the Outside by several Ranges of Pillars, and the Cupola finely painted. St. *John*'s Church is a fine Piece of Architecture, as is the Duke's Palace, much admir'd for its Theatre and fine Gallery, which Mr. *Addison* affirms to be the most spacious in *Europe*; and so admirably contriv'd, that from the Depth of the Stage, the Words may be distinctly heard to the furthest Part of the Audience; and if the Voice be elevated never so much, there is no Echo to cause any Confusion, or disturb the articulate Sound. There are no Boxes in it, only Benches riling gradually as in an Amphitheatre; and the Pit between the Benches and the Stage is sometimes three Feet deep with Water, which doubtless is a vast Help towards conveying the Voice from the Stage to the Auditory, by its being reflected up from the Surface of the Water to the People. And what makes it more agreeable, is the little gilded Boats; that with the Lights and Glasses that are about, form a very agreeable Scene. The Gallery is hung round with fine Pictures; and on the Inside, are Tables, Cabinets, and Works of Amber and Chrystal, and other Pieces, admired for their Contrivance and Value And next to this Room is another, furnish'd with Inscriptions, Medals, Busts, and other Pieces of Antiquity. The Gardens are admired for the fine Walks, Grottoes, Fountains, Cascades, Statues, *&c.*

THE University was founded in the Year 1509. where they learn all Manner of Exercises as well as Sciences. *Parma* is the See of a Bishop, Suffragan to *Bologna*; it is a Place of good Trade, especially in Cheese, which they dispose of to almost all Parts of *Europe*.

Piacenza or *Placentia*, is about thirty Miles North West from *Parma*; it stands in a fruitful Plain, water'd with Rivulets, and is about half a Mile from the *Po*. It is larger than *Parma*; it is defended by a Wall, a Citadel, and other Fortifications. The Duke of *Parma* has a Palace here; the Buildings are handsome and regular, and the Squares large, but all exceeded by many in *Italy*. It is a Bishop's See, Suffragan to *Bologna*. Their Trade consists chiefly in Cheese, as at *Parma*; the Country about them consisting of as rich Pasture-Ground as any in *Italy*.

BESIDES these, there are *Bassetta*, sixteen Miles North East of *Piacenza*, and *Borgo St. Domino*, the same Distance South East of the same Place; but Travellers have not thought them worth a particular Description.

THE Dutchies of *Parma* and *Piacenza* are in a fine Air and a fruitful Soil; they abound in Cattle of all Kinds, and the Wool of their Sheep is as good as any in *Italy*. And besides the best of Cheese, they have good Oil, Wine, Corn, Rice, and Fruit. They have a delicious kind of Mushrooms, call'd *Truffles*, without Stem or Root, that grows within the Ground. They have also some Mines of Silver and Copper, but not very rich.

As to the History of this Country, the *Tuscans* were the first Inhabitants of it that we hear of.

The *Romans* settled a Colony here above an hundred Years before our Saviour's Time; but when the *Roman* Empire began to decay, this Country fell under the Power of those who invaded *Italy*, and became a free State, when it was deliver'd from the *Roman* Yoke. It was successively govern'd by the Western Emperors, the *Pope*, the *Venetians*, *Milanois*, and *French*. Pope *Julius* II. who began in the Year 1503. reduc'd it again to the See of *Rome*; and afterwards Pope *Paul* III. created his natural Son *Peter-Lewis-Farnese* Duke of *Parma* and *Piacenza* about the Year 1545. But the Emperor disputed his Title till the Emperor's natural Daughter was married to *Octavio Farnese*, the Son of *Peter-Lewis Farnese*; and this confirm'd the Dutchy in that Family, but with this Limitation, that the Emperor looks upon it as a Fief of the Empire, and revertible to him on Failure of Male-Issue. Whereas on the other Hand, the *Pope* claims it as a Fee of the *Holy See*; and as such, extorts ten thousand Crowns a Year of the Duke of *Piacenza*.

But in the present Situation of Affairs, it may not be amiss to give a Genealogical Abstract of the Succession of the *Farnesian* Family; and to go no further back, *Edward Farnese*, Duke of *Parma*, in the Year 1690. married *Dorothy-Sophia* of *Newburg*, Sister to the Elector *Palatine*, and the Empress Mother, and to the Queen Dowager of *Spain*. He died in the Year 1693. having had Issue by his Princess, a Son named *Alexander*, who died in his Infancy, and a Daughter named *Elizabeth*, born in the Year 1692. and married to *Philip* V. King of *Spain* in 1714. Prince *Francis Farnese* succeeded his Brother *Edward* in the Dutchy of *Parma*, and in the Year 1695. married his Widow the Princess *Dorothy-Sophia*, Mother to the Queen of *Spain*.

In the Year 1718. the *Quadruple Alliance* was form'd, and so call'd, because it was compos'd of four Powers, *viz. Great Britain*, the Emperor, the *French*, and the *States General*. It was therein stipulated, that to prevent a War in *Italy*, in Case the Great Duke of *Tuscany*, or the Duke of *Parma* and *Placentia*, or their Successors, should die without Male-Issue, the States and Dutchies, possess'd by the Great Duke of *Tuscany*, and the Duke of *Parma*, (they being Fiefs of the Empire) should descend to the Queen of *Spain*'s first-born Son, and to his Male-Issue, &c. provided that none of the said Dominions should ever be in the Possession of a Prince, who should be at the same Time King of *Spain*; nor should the King of *Spain* be Guardian to any that should be put in Possession of the said Dominions.

The Great Duke of *Tuscany* died in the Year 1723. and was succeeded by his Son; but more of this in the Description of *Tuscany*. In the Year 1725. there was a Treaty between the Emperor and the King of *Spain*, in which the Dutchies of *Parma* and *Tuscany* are confirm'd to the eldest Son of the Queen of *Spain* in Case of Defect of Male-Heirs in the Families of *Parma* and *Tuscany*.

The annual Revenue of this Dutchy is about Rec
an hundred thousand Pounds; and as for his Forces, he finds not much Occasion for vast Numbers; for the Jealousies his Neighbours entertain of one another, gives every one of them enough to do, without attempting to invade his Property.

CHAP. IX.

Contains a Description of the Dutchy of Tuscany *or* Florence; *and of the Republick of* Luca *or* Lucca.

THE Dutchy of *Florence* or *Tuscany*, is bounded by the Territories of the *Pope* on the North, the East, and South East, and by the *Tuscan* Sea on the South West; and on the North West by the Territories of *Genoa* and *Modena*; it is near a square Form, the Length and Breadth about an hundred Miles each. But though it is such a large Tract of Ground, and the Dominions of his *Holiness*, yet it is so much of it among the *Apennine* Hills, and that even the barrenest Part of them too, it cannot be said to be either fruitful or pleasant. The Air is very sharp on these Hills, and but few Inhabitants are to be found upon them; but between them are large and fruitful Valleys, which, as they are interspers'd with Towns and Villages; and these view'd from the Tops of the barren Mountains, afford a most beautiful Prospect. And the Fruits ripen much sooner here, and come to greater Perfection than on the North Side of the *Apennine* Hills. Here is a fruitful Plain, which runs quite cross the Country, from *Arezzo* on the East, to *Pisa* at the Sea Side on the West, fourscore Miles. It is water'd by the River *Arno*, and abounds with Corn, Wine, Oil, Oranges, Citrons, Figs, and all manner of delicious Fruit; also Chesnuts are very plenty; and for Mulberries for their Silk-worms, no Country is better stor'd. Chief Rivers are the *Arno* and the *Ombro*, both which runs South West into the *Tuscan* Sea. This Country is divided into the *Pisan*, the *Florentin*, and the *Sienese*.

The *Pisan* is bounded by the *Florentin*, and Pis
the Republick of *Lucca* on the North and East, and by the *Tuscan* Sea on the South West. The chief Towns, *Pisa*, *Legborn*, and *Volterra*.

The City of *Pisa* stands on the River *Arno*, thirty six Miles West of *Florence*, and about six from the *Tuscan* Sea; it is the largest Town in *Tuscany* except *Florence*, and is well fortify'd. The Town is divided in two Parts by the River which runs through it, and it being pretty broad, there are three good Bridges over it, one of which is Marble. There is a commodious Key, but the Mouth of the River is so choak'd up, that it is only navigable for smaller Vessels. The Streets are broad, straight, and well pav'd. The Cathedral is a fine Building, the Roof is supported by seventy six Marble Pillars of different Colours, and the Brazen Doors are exquisitely wrought; and though some have made the unwary Travellers believe those Doors did belong to *Solomon*'s Temple, yet the Work upon them seem to intimate the contrary, it representing the Annunciation, Birth, and Passion of our Saviour. Here is a leaning Tower in a Cylindrical Form, an hundred and eighty five Feet high; some say it is the Height of it makes it seem to lean, but Mr. *Misson* tells us it is Fact, for that he try'd it with a Line and Plummet; but still they differ about

about the Cauſe of its leaning, ſome aſſerting that the Architect did it of purpoſe, as a Proof of his Skill and Art, but the above-mention'd Gentleman tells us, that the Foundation is ſunk on one Side more than on the other, which makes it lie along.

Piſa is an Archbiſhoprick and an Univerſity; it was once ſuch a flouriſhing Republick, that it diſputed the Sovereignty of thoſe Seas with the *Venetians* and *Genoeſe*; they reduc'd the City of *Carthage*, and aſſiſted the Chriſtian Princes againſt the Infidels in the *Holy Land*; but being ſubdu'd by the *Florentines*, and the Seat of the Government remov'd, their Trade went to decay, the Harbour went to ruin, their Buildings out of repair, the Town depopulated in Compariſon to its antient Grandeur, and the Trade transferr'd to

Leghorn, or *Livorno*. This was but an inconſiderable Village till the Great Duke, *Ferdinand* I. enlarg'd and beautify'd it, and endow'd it with ſuch Immunities and Privileges as invited foreign Merchants from all Parts to trade and ſettle there. It is ſixteen Miles to the Southward of *Piſa*, and is one of the beſt Harbours in *Italy*, and very ſtrong; but they are at a great Charge to cleanſe the Harbour, and keep it from choaking up, which is done by the Help of Engines that are always at work, and would be very chargeable, if many of the Great Duke's Slaves were not employ'd; and they have this Advantage alſo, that with the Sand and Soil which they take up in the Harbour, they fill and dry the marſhy Ground about them, and at once find the Benefit of firmer Land, as well as a more wholſome Air. As to the Town itſelf it is not large, but the Streets are broad and ſtrait; the Great Square is one of the largeſt and moſt beautiful in all *Tuſcany*; the Buildings are generally regular, and painted on the Outſide.

The Duke of *Tuſcany* reaps a vaſt Advantage by this ſingle Town; for though it is call'd a free Port, and may well be reckon'd ſo with reſpect to ſome others, for the Duties that Foreigners pay are inconſiderable, only out of what they purchaſe there goes a proportionable Gabel, as it is call'd there, or Tax to the Government, and ſo out of what is ſold; as for Inſtance, the very Ice-Merchant here pays above a thouſand Crowns a Year to the Government, for his Privilege of ſelling Ice, and the Tobacco Merchant ten thouſand; the Great Duke has alſo a Privilege of ſelling the Ground to build upon, that has not been built upon before, which brings him in great Sums of Money. The foreign Merchandize landed at *Leghorn*, and from thence diſpers'd up into the Country, are tax'd highly as ſoon as they leave *Leghorn*; and thoſe Country Goods ſent down to *Leghorn*, as Wines, Oils, and Silks, wade through abundance of Duties and Impoſitions before they arrive at *Leghorn*, in Order for Exportation; but this enhances the Price to the Merchant, and he advances the Price in proportion to his Cuſtomers; ſo that in ſhort, the Advantage goes into the Great Duke's Coffers, and comes out of the Pockets of the Conſumers of the Goods, and does not any other way effect Trade at all. But one Thing I muſt not forget in the Trade of *Leghorn*, and that is, That the Ships of *England*, *Holland*, &c. frequently touch at *Leghorn*, both in their outward and homeward bound Paſſage, and barter the Goods which they brought for a Market, for the Goods which they can have there; as for Inſtance, the *French* Barks come loaden with Wine from *Languedoc*, &c. to *Leghorn* for a Market, and the Homeward bound Ships from *Turkey*, at the ſame Time, call at *Leghorn* to be ſupply'd with thoſe Neceſſaries; and as it is a free Port, they pay no Duty, except they land the Goods, and to prevent that, they do not land them at all, but make Warehouſes, or rather Retale-Shops, of their Barks, and when they have ſold their Cargoes, go home for more.

There is upon the Key a Marble Statue of *Ferdinand* I. with four brazen Figures at his Feet, repreſenting ſo many *Turkiſh* Slaves attempting to run away with a Galley, and were for that Crime executed in this Place. There are two Sorts of Slaves here; the firſt are *Turks* or *Moors*, taken at Sea, or elſe Criminals condemned to the Galleys for Miſdemeanors; the other are voluntary Slaves, who, rather than work, will be Slaves for a Maintenance, but ſuch commonly make themſelves Slaves for a limitted Time, which being expired they have their Liberty; and even thoſe who are in the Time of their Slavery, when the Galleys are laid up, follow their reſpective Trades; and thoſe who have no Trades, ſell Wine and other Proviſions; ſome of them advance their Fortunes by that Means ſo much, that they would not quit their Slavery if any Friend would purchaſe their Liberty, for when they once get a little above the World, and can advance a little Money to the Captain, he will find means to excuſe them.

Volterra is the See of a Biſhop, Suffragan to *Rome*; but I do not find any thing remarkable as to its Buildings, &c. but what is common; but about ſixteen Miles to the Weſtward of this Place are the Lakes called *Il Bagno al Morbo*; they are ſmall Lakes of a prodigious Depth, from which the Water bubbles as if it boil'd, and ſends forth ſtrong ſulphureous Streams, (ſome ſay ſo ſtrong as to kill the Birds that fly over it,) ſo hot, as to boil Meat ſooner than in a Cook's Copper when boiling. *Volterra.*

The Dutchy of *Florence*, ſometimes call'd the *Florentine*, lies between the *Bolognois* North, and the *Sienneſe* South, and between *Ancona* on the Eaſt, and the *Piſan* on the Weſt. The chief Town is

Florence, thirty ſix Miles to the Eaſtward of *Piſa*, and a hundred and twenty North of *Rome*. It is in a moſt deſirable Situation, having beautiful Hills on three Sides of it, full of Villages, Country-Seats, Gardens, Groves, &c. till the Woods of Olives, riſing gradually to the Northward, ſeems as it were loſt in the *Appenine Hills*; and towards the Weſt lies that rich Valley, water'd by the River *Arno*, which extends as far as *Piſa* at the Sea-ſide. This Valley abounds in Corn, Wine, and all Manner of delicious Fruit. *Florence*

The City of *Florence* is of a circular Form, about ſix Miles in Circumference, and well defended by three Citadels, and other Fortifications. The River *Arno* runs through the City, but the Communication is maintain'd by four Bridges; the Streets are ſtrait, and well-pav'd; and it is little, if at all, inferior, to the City of *Rome* as to its Buildings, whether publick Palaces or private Buildings; and in general, the Place is ſo agreeable, that it has acquir'd the Epithet of *Florence the Fair*; but it is not without its Defects, and material ones too. One is, that they have no Glaſs in their Windows, and the ſhatter'd Paper, which ſupplies its Place, makes a very dull Appearance in their lofty, and otherwiſe beautiful Palaces, and other Buildings. Another Fault is, their Streets and Squares are too narrow, in Proportion to their lofty Edifices; but this latter may be diſpens'd with better than ſeeing the ragged Paper hang out at the Windows of a Palace.

The

Palace. THE Great Duke's Palace is a noble Pile, adorn'd with Statues and Busts of excellent Workmanship; and the Cathedral is a magnificent Structure, being not only cover'd on the Outside, but pav'd too with Marble of divers Colours. The Church is four hundred and eighty Feet long, and three hundred and eighty Feet high to the Top of the Cross, after the Model of St. *Peter's Rome*, or St. *Paul's London*.

THE Product of this Place is Wine, Oil, Fruits. Their Manufactures, are wrought Silks, Gold and Silver Stuffs. The Diversions used here, are, among the rest, the Combat of wild Beasts; as Lions, Leopards, Tygers, wild Boars, Bears, and Wolves, which are let out of their Dens into a spacious Court, surrounded by high Walls, where the Spectators sit to see the Sport; which, when over, they drive the fierce Animals back into their Dens by a terrible wooden Machine, in the Form of a green Dragon, roll'd in upon Wheels, with two lighted Torches through the two Eyes; which at the first Appearance, soon sends them to their respective Dens. Another Sport is Horse-racing, but without Riders; but the Means they use to make them run, is by throwing a broad Piece of Leather over each Horse, stuck with sharp-pointed Irons, like the Rowels of a Spur, which, as the Horse moves, claps against his Side; and either through Use, or the Fright, makes him push forwards as our Race-Horses, with the best of Riders upon their Backs. But besides this way of Racing, they have on the twenty fourth of *June* every Year, the *Roman* Races in the Piazza *di Sancta Maria Novella*, with fine open Chariots, drawn by a Pair of Horses each. The Great Duke assists at this Diversion. There are two fine Marble Obelisks in the Square; they drive four times round them with all the Speed they are capable of; and he that performs the Course soonest, gains the Prize, which is commonly a Piece of fine Brocade.

Pratolini. *Pratolini* is five Miles North of *Florence*; here the Great Duke has a magnificent Palace; in the Gardens of which, not to enumerate all other Curiosities, there are certain Statues playing upon Musical Instruments; others working at a Forge, Organs playing, Birds chirping, Frogs croaking, Statues walking, and all put in Motion by Water: And to add to the Diversion, there is conceal'd, Spouts, by which, when the Curiosity of Strangers lead them to see the Gardens, they can, by turning a Cock, half drown the inquisitive Spectators for their Diversion.

THERE are other Places whose Names are mention'd in Geographical History, but not being noted either for Situation, Trade, or any thing else that is worth Observation, I shall proceed to

Siennese. THE *Siennese*; it lies between *Florence* on the North, and the Pope's Territories on the South, and has the *Tuscan* Sea on the South West. Its Length and Breadth are near equal, *viz.* about sixty Miles. The chief Town is

Sienna, it stands six Miles to the Southward of *Florence*, upon an Eminence in a fruitful Country; it is of a triangular Form, about four Miles in Circumference, surrounded by an old Wall, and commanded by a Citadel; it is in a decaying Condition, but the Streets are neatly pav'd with Bricks. The great Square in the middle of the City is surrounded with a Piazza, where they run Races as at *Florence*, with Machines drawn by Horses. They have also Horse-Races every Year on the second of *July*, run by fourteen Horses, which are brought from as many Parishes, by Riders richly dress'd in different Colours, with the Arms of their respective Parishes on their Habits; the Horses dress'd up with the utmost Splendour, and their Hoofs gilt; they run for a Piece of rich Brocade, which is purchas'd at the joint Charge of the Parishes whose Horses run; and the Horse that comes in first, gains the Prize.

THERE is a very fine Cathedral, adorn'd with several Statues, particularly of the three Popes born in this Place, *viz. Alexander* III. *Pius* II. and *Alexander* VII. The other Buildings are the great Hospital, the House of *Pius* II. the Pillar with the brazen Wolf upon it; some say in Memory of the Wolf, which as some say suckled *Romulus* and *Remus*, the Founders of this City. *Sienna* is an Archbishop's See, and an University, both for Sciences and Manly Exercises. It is the common Residence of Foreigners, who desire to learn *Italian*, not only for the pleasant Situation, but for the Purity of the Language as spoke here.

Castiglione is a small Town on the Frontiers of the Pope's Territories. It stands on a Lake of the same Name, forty five Miles South East of *Sienna*, and fifty North of *Rome*.

Tuscany, or the antient *Tyrhennia*, was formerly divided into twelve small Principalities, each of them govern'd by its respective Sovereign, till it fell under the Dominion of the *Romans* with the rest of *Italy*; and afterwards participated of the Fortune of that Empire, being over-run by the *Goths* and other Northern People. The City of *Florence* in particular, was destroy'd by them, and re-built about two hundred and fifty Years afterwards by *Charles* the Great. It remain'd for some Time under the Jurisdiction of the Emperors of the West; but during the Struggles between them and the Pope of *Rome* for Dominion, the principal Cities of *Italy*, as *Florence*, *Pisa*, and *Sienna*, threw off their Subjection to both, and erected such Governments in their respective Territories as they thought fit, or could agree upon: But those Forms of Government being in so many Hands, were liable to many Mutations, till some of the most popular Men in *Florence* assum'd the Government of that City. These were frequently depos'd by other aspiring Citizens, who would admit of no Superior, till at last the House of *Medicis* got the Government fix'd in their Family, and now continues Sovereigns of most Part of *Tuscany*, and have reduc'd the Republicks of *Pisa* and *Sienna* under their Dominions.

THE first Rise of the Family of *Medicis*, was by the Means of *John* of that Name, who about the Year 1410. by flattering the Populace, and pretending to defend them against the Oppressions of the Nobility, procured the sovereign Power to be put into his Hands; but the absolute Power was attain'd by Degrees, and with a Mixture of Policy; for Pope *Pius* V. first conferr'd the Title of *Great Duke* on *Cosmo de Medicis*, in the Year 1570. and crown'd him with his own Hands at *Rome*; ever since which Time, the Pontifs have look'd upon the Dukes of *Tuscany* as their Vassals; though at the same Time, the Emperor claims *Tuscany* as a Fee of the Empire, with a Power of disposing of it in Default of Male-Issue in the *Medicean* Family, which occasion'd the Treaties mention'd in the History of *Parma*, for preventing a War in *Italy*. The Pope resented this Proceeding of the other Powers of *Europe*, in taking upon them to dispose of the Territories of *Tuscany*; but they insisted upon it, that *Don Carlos*, the Son of the Queen of *Spain*, should succeed to *Tuscany* in Case the present Grand Duke should die without Issue.

Note,

Note, Don Carlos *is (at the writing hereof) upon his Attempt of reducing* Sicily, *and has made some Progress therein; but the Result being yet precarious, as well as the Determination of the Affair of the Rival Kings of* Poland, *the Reader shall be furnish'd with a farther Account of both, as well as of other depending Affairs, in a Supplement to this whole History, as soon as Time shall give us the Opportunity.*

THE Great Duke is so arbitrary, that he hath not so much as a Privy-Council, but his own Will is a Law, and is sufficient to give Authority to any Act himself pleases; and Governors, or any other Officers, are appointed or degraded at his Pleasure entirely. His Revenues are computed at five hundred thousand Pounds a Year, besides his Treasure in Bank, and the Benefit of trafficking with it as a Merchant. To this we may add, his frugal way of living as another Article to make him a wealthy Prince. Indeed, if he may be said to be extravagant in any thing, it is in his Buildings, Furniture, Gardens, Collections of Antiquities, and other Curiosities of Art and Nature.

BESIDES the Territories above-mention'd, belonging to the Grand Duke of *Tuscany*, that Prince is possess'd of Part of the Island of *Elba*, the Marquisate of *Scansano*, the *Città del Sole* in *Romania*, and some other Places.

THE other Parts of *Tuscany* contain, 1. The Territories of the Republick of *Lucca*. 2. The State *Delli Presidii*, possess'd by the *Spaniards*. 3. The Principality of *Piombino*. 4. The *Domain* of the House of *Cibo*. And, lastly, the Marquisate *de Fos di Nova*.

THE Territories of *Lucca* lie upon the Coast of the *Tuscan* Sea, to the Northward of *Pica* and *Leghorn*. The chief Towns are, 1. *Lucca*. 2. *Via Reggio*. 3. *Correglia*. And, lastly, *Castiglione*.

THE City of *Lucca* stands near the River *Secchia*, ten Miles to the Northward of *Pisa*, and twelve Miles to the Eastward of the *Tuscan* Sea. It is of an oblong Form, about three Miles in Circumference, encompass'd by a Wall, and defended by eleven Bastions. The Walls are planted with Trees so high, or the Buildings so low, that the Town is all hid by the Trees, except the Steeple of the Cathedral, as we approach the Place. This Cathedral is a large, handsome Fabrick; in it, there is a Crucifix of Cedar, richly cloath'd, with a Crown upon its Head, enrich'd with precious Stones and other curious Ornaments.

THE Legislative Power is lodg'd in the Senate, which is compos'd of about two hundred and twenty of what they call Noblemen; but why they call them so is uncertain, for they have no Honours or Benefits annex'd to them, and they generally follow their respective Trades. This Senate is divided into two Parts, who sit alternately six Months.

THE Revenues of *Lucca* are about thirty thousand Pounds a Year; and as to their Forces, it is said they can raise ten or twelve thousand Men upon Occasion. No Traveller is admitted into the City but at one particular Port; and there they take their Arms from them before they enter the City, not suffering so much as any Man to wear a Sword in the Street. This is a Bishop's See, subject immediately to the Pope. Their Manufactures consist chiefly in Gold and Silver Stuffs. Their Olives and Oil are very much esteem'd. They have Plenty of Wine; but Corn is so scarce that the common People generally eat Chesnuts instead of Bread, as they do in many Parts of *Italy*. *Viareggio* is a small Port, ten or twelve Miles to the Westward of *Lucca*, and maintains the Communication between that Country and the *Tuscan* Sea.

Delli Presidii is subject to the *Spaniards*; it lies to the Southward of *Lucca*, and upon the *Tuscan* Shore. The chief Towns are *Orbitello*, and *Porto Hercole*; the first is situate on the *Tuscan* Coast, at the Foot of the Mount *Argentaro*, thirty Miles North West of *Civita Vecchia*, and about as many to the Eastward of the Island of *Elba*: The latter, *viz. Porto Hercole*, is a large Town and Harbour on the *Tuscan* Sea, six Miles to the Southward of *Orbitello*. It is defended by a strong Castle, but there is nothing else belonging to it that is worth a particular Description. *Delli Presidii.*

THE Principality of *Piombino* lies along the Coast of the *Tuscan* Sea, between *Orbitello* and *Leghorn*. The chief Town is *Piombino*, about thirty five Miles South East of *Leghorn*. It is a strong Fortress and Harbour, subject to the *Spaniards*.

THE *Domain* of the House of *Cibo* lies between *Genoa* on the West, and *Val de Maire* on the East. It is now subject to *Tuscany*. Chief Towns are *Massa* and *Carara*.

Massa stands on the little River *Lavenza*, about twenty Miles North West of *Lucca*, and four Miles from the *Tuscan* Sea. It is a little well built Town, and was formerly the Residence of a Prince.

Carara is five Miles North West of *Massa*; it is near this Place that the fine white Marble is dug up, which is reckon'd the best in *Europe*; but I do not find that the Place is noted for any thing else.

THE Marquisate *de Fos di Nova* is a small Territory North West of *Massa*; it belongs to the Family of *Malespina*. The chief Town is also call'd *Malespina*, and situate about eight Miles to the Northward of *Carara*.

A DESCRIPTION OF THE REPUBLICK OF *VENICE.*

CHAP. I.

Of the Situation and Extent of the Territories of the Republick of Venice; *as also of the Air, Climate, Seas, Rivers, Soil, and Product.*

ALTHOUGH the Republick of *Venice*, and the Pope's Dominions, are all in *Italy*, yet I shall speak of them under their distinct and proper Heads or Divisions; and in that respect shall first treat of the *Venetian* Dominions in *Italy*, which are bounded on the North by the Country of the *Grisons*, *Trent*, and *Tyrol*; by *Carniola* and the Gulf of *Venice* on the East; on the South, by *Mantua* and *Ferrara*; and on the West, by the Dutchy of *Milan*: Those Dominions contain about an hundred and eighty Miles from East to West, and an hundred Miles from North to South at the East End, but far short of that Breadth at the West End.

The Territories of *Venice* are a Part of the antient *Lombardy*; in the In-land part of which, is as healthy an Air, and as happy a Climate, as any in *Europe*, but not so upon the Sea-Coast. There is no Sea washes the *Venetian* Shore but the *Adriatick*, call'd therefore the Gulf of *Venice*; which is an Arm of the Sea, which comes up from the *Ionian* Sea, between *Otranto* in *Italy*, and the Island of *Corfu* on the Coast of *Turky*, and extends itself between four and five hundred Miles to *Venice*; which therefore gives Name to it as above observ'd.

Some Authors tell us, there is a regular Tide in the Gulf of *Venice*, and that it ebbs and flows twice in twenty four Hours; that the perpendicular Height between the high and low Water Mark at *Venice* is about four Feet; and that it is govern'd by the Moon as in *England*. I must own I cannot contradict the Assertion, nor prove a Negative where the Affirmative is asserted; and the rather, because I never was at *Venice*, or any where in the *Adriatick* Sea; but it is the common Sentiments of most Mariners that trade to the *Mediterranean*, that there is no regular Tide any where in the *Mediterranean*. And although I never was in the Gulf of *Venice*, yet I have been at *Naples*, *Reggio*, and other Places upon the West Coast of *Italy*, for several Weeks together; as also upon the Coast of *Sicily*; and have made it my Business to observe diligently whether there was any regular Tide, but could never observe any. Dr. *Burnet* and several other Travellers intimate, as if *Venice*, which is situate upon several Islands, were in Danger of being join'd to the Continent, by reason of the Canals which lie between those Islands and the Shore, as also between one and another, being in process of Time choak'd up, and the Sea abandoning those Shores. But Mr. *Addison*, who was curiously inquisitive into that Particular at *Venice*, tells us, they are not at all apprehensive of any such Thing. But more of this in the Description of *Venice*.

Of all the Seas that water the Coast of *Italy*, there is none abounds with such Plenty of Fish as the Gulf of *Venice*.

The chief Rivers are the *Po*, the *Piava*, the *Adige*, the *Sile*, the *Lavenza*, the *Taglimento*, and the *Brenta*, all which fall into the *Adriatick* Sea; and besides these, the Country is well water'd with Lakes, of which the principal is the *Garda*, which is about thirty Miles long, and twelve broad; and the *Isea*, fifteen Miles long and three broad.

It is as pleasant, level, and fruitful a Country, as any in *Italy*. It abounds both in good arable and [illegible] Land, with Vineyards, and Plantations of Mulberries, &c. but especially upon the Road between *Verona* and *Padua*, which is planted thick with White Mulberry-Trees in Squares, which do not only furnish great Quantities of Food for Silk-worms with their Leaves, but are so plenty, that they feed the Swine and Poultry with their Fruit; and these Trees also serve to make Stays for the Vines, which with their Bunches of

of Grapes, hang all along like Garlands from Tree to Tree; and within the several Squares enclosed by those rich and beautiful Hedges are Fields of Corn, which in these hot Countries ripens much better in the Shade of Mulberry Trees, than if it was expos'd to the open Sun; but yet it is too cold for their Oranges and Citrons in the Winter Time; for which Reason they are forced to cover them; but to the Southward of the *Apennine* Mountains there is no Occasion to use those Precautions.

In the *Venetian* Territories they have plenty of Cattle of all kinds, which are mostly either grey or white; but their Hogs are generally black, and better Meat than in *France* or *England*; which is imputed to their living much upon a delicious Root call'd Truffles, as also on the Husks of the press'd Grapes, Mulberries, &c. The Sheep of the *Paduan* afford a good Sort of Wool, little inferior to ours in *England*; they have as great Plenty of Fish and Fowl, and all Manner of Game, as any where in *Italy*; and yet Travellers complain much of their ill Diet; but as Strangers do not taste the Victuals till they are dress't, the Meanness of their Victuals may rather be imputed to their Way of Dressing, than to the Ingredients of which they are compos'd; and farther, this Report of their ill Diet; may rather proceed from the Ordinariness of the Victuals eaten upon the Road, than from that eaten at Entertainments in Gentlemen's Houses; the former doubtless toss'd up at as cheap a Rate as possible, that the Inn-Keeper, whose Dependance it is, may get the more by it; and that is the very Case in the Inns upon the Road in *England*; but the Gentry I suppose there, as well as here, having no such View of Advantage, but only of Honour and Reputation to their Country and Families, think the Charge well bestow'd, if it answers that noble and generous End; and I cannot help observing here, that when Travellers intend to give an impartial Account of a Country, they should be cautious from what Sort of Peoples Actions or Report they take this Account, for it would be as unjust and partial to decry the Character of a whole Country, for the unmannerly Behaviour of the Vulgar in it, as it would be to cry up a Country, and make it an Earthly Paradise, because the Traveller had been generously receiv'd, and handsomely accomodated by some of the most polite of the Inhabitants, and had never given himself an Opportunity of conversing with, or sounding the Temper of the Vulgar: But whatever may happen at the little Caravanseraes upon the Road, yet at the Inns and Places of Entertainment in the great Towns, every Person of what Country soever, whether *French*, *English*, or any other Nation, may have their Victuals dress't in their own Way; and therefore out of such good Materials, they can make better Victuals than the Inn-Keepers upon the Road can afford to make of the same at the common Prices of Travellers. The Husbandmen and poor People eat a coarse Sort of Bread in *Italy*, as in almost any Part of *Europe*, but People of Condition have fine Flower, and keep their own Cooks, and can have their Provisions dress't, and made up with what Ingredients and in what Forms they please.

CHAP. II.

A Description of the Provinces, and Chief Towns subject to the Venetians *in* Italy.

THESE Provinces are thirteen. 1. *Dogado*, or the Dutchy of *Venice Proper*. 2. The *Padonano*. 3. The *Polesino de Rovigo*. 4. The *Veronese*. 5. The *Brescian*. 6. The *Bergamasco*. 7. The *Cremasco*. 8. The *Vicentin*. 9. The *Trevisana*. 10. The *Feltrino*. 11. The *Bellunese*. 12. The *Cadorino*, and 13. Part of *Friuli*.

The *Dogado*, or Dutchy of *Venice*, properly so called, contains most of the Sea Coasts in the East Part of *Italy*, with the Islands, Lakes and Marshes of *Venice*; it extends from the Mouth of the River *Adige* in the South, to the Province of *Friuli* on the North; it is a narrow Tract of Land, almost fourscore Miles in length, but not extending any where above ten or twelve Miles in Breadth from the Sea Westward. The Capital is the famous City of *Venice*, of which take the following Description.

Venice described. *Venice* is situate near the Bottom or North-West Part of the *Adriatick* Sea, call'd therefore the Gulph of *Venice*, as has been before observ'd; the Ground upon which it stands, is called the *Lagunes*, a Sort of a Marshy Ground upon the Coast of *Italy*; which by the Encroachment of the Sea, was by several Channels divided into Islands, upon which the Fishermen of *Padua* built their Hutts, and by drawing their Business thither made it their Habitation; but in the fifth Century, when the *Goths* and *Vandals* overran *Italy*, several considerable Families of *Padua*, *Aquileia*, and other neighbouring People, observing the advantageous Situation of these Islands, and that no Enemy could approach them, either by Sea or Land, they retired hither with their Effects and settled here, and becoming a Community, they at last began to form this great City of *Venice*, which as to its present Situation, may be thus described.

The *Lagunes* abovemention'd are divided into Islands by small Channels, the deepest of which are too shallow for Vessels of any considerable Burthen; and those small Channels are so narrow, that they are forced to mark them out with Stakes, to direct to the deepest Water; and yet they are so apt to choak and fill up, that the Government is at a great Charge to keep those Channels open, and navigable, by Mills and other Engines. On the East Side of *Venice*, between it and the *Adriatick* Sea, there is a Bank called the *Lido*, about forty or fifty Miles in Length, which breaks the Fury of the Easterly Winds from *Venice*; but there are some small Channels through that Bank out of the *Adriatick* Sea to *Venice*, but so difficult and shallow, that if they had not Buoys and other Sea-Marks, for Direction, their own Pilots could scarce find the Way into them; and so this may impute, in a great Measure, the Strength and Safety of *Venice*. It is true the Islands are so situate before *Venice*, that if the Channels between them were navigable, yet the Islands on each

Side

Side of thoſe Channels might be eaſily put in ſuch a Poſture of Defence, as to withſtand a very ſtrong Naval Force; and they have likewiſe this Advantage of an Enemy by Land, that the *Lagunes*, upon which *Venice* ſtands, though ſurrounded with Moraſs and Water, yet it is never ſo hard frozen as to bear any Weight; ſo that in ſhort, if any Place in *Europe* can be ſaid to be ſo, *Venice* may be ſaid to be impregnable by Sea and Land, and it would be as difficult to ſtarve them as to take the Town, becauſe among the many Channels, which run between the Iſlands upon which *Venice* ſtands, the Fiſh come up in Shoals to their Doors, or up the Streets in the Canals, which paſs by their Houſes.

Deſcription of the City.

But this natural Strength of *Venice* is not more to be admired than its preſent Beauty, and the Contrivance of its Situation; and as it is in that, and other Reſpects, the Wonder of *Europe*, the Reader will excuſe me, if I intrude a little upon his Patience, to give this Place a particular Deſcription; for when ſuppos'd to be ſeen at a Diſtance, it may be ſaid to be one of the fineſt Towns in the Univerſe, riſing out of the Water; and as it is not ſurrounded with Woods or Mountains, its magnificent Palaces and lofty Towers appear in full View, on which Side ſoever you approach it; for there are not only no Trees, but there is no Wall, either to encompaſs it, or to intercept the Sight; for their being ſurrounded by Sea, is what they have to truſt to for their Defence; nor have they any Need of a Wall, any farther than as high as the waſhing of the Sea, to ſave themſelves and their Houſes from the Fury of the Waves.

It is commonly reported, that *Venice* ſtands upon ſeventy two Iſlands; but they that have been more curious and exact in the Survey of the Place, affirm, that it ſtands not upon leſs than two hundred Iſlands, if according to the common Acceptation of the Word, every Piece of Land may be call'd ſo, that is ſurrounded and ſeparated from all other Land by Canals of Water. The Figure of the Town is irregular, divided into two Parts by the Grand Canal, which runs thro' the Town in Form of an S. The Town is ſaid to be eight Miles in Circumference, if taken by the Corners and Windings of the Buildings; and as for the Number of Inhabitants, it is as much diſputed, ſome making three hundred thouſand, and others, not above an hundred and thirty thouſand.

Canals.

The Canals are ſo numerous, and the Iſlands upon which the Town ſtands are ſo ſmall, that a Perſon may go almoſt to any Part of the Town by Water as well as by Land; but then the great Number of Canals would deſtroy the Communication between one Part of the Town and another, if that Inconvenience was not remedy'd by a vaſt Number of Bridges, of which there are no leſs than four hundred and fifty, all built of Stone, by which the Communication is maintain'd between all Parts of the Town. The chief Bridge is call'd the *Rialto*; it is over the Middle of the grand Canal; it has but one Arch, which is a Segment of a Circle, about one third of the whole Circle. The Abutments of the Bridge, or the Extremities of the Ends of the Arch, are ninety Feet aſunder, and conſequently the Middle of the Arch is twenty ſix Feet high; it is built of a coarſe Sort of white Marble; it has Rails on each Side, and two Rows of Houſes along the Middle, whereby it forms three Streets, one between the two Rows of Houſes, and one on each Side, between the Houſes and the Rails; the middle Street is the broadeſt, and has Shops facing one another, as upon *London* Bridge; the two Streets between the Backſide of the Shops and the Rails being narrower, or rather like Galleries for a Proſpect upon the Water, than Streets. The reſt of the Bridges have no Rails or Battlements, and being pav'd with hard, ſlippery Stones, it makes the Paſſage over them a little dangerous.

The Piazza of St. *Mark* is the fineſt Building in *Venice*, both for Extent and Magnificence of the Buildings about it. The fine Church of St. *Mark*, fronts one Part of the Piazza, and that of St. *Gemiman*; the other, and the Procuratories, which are ſtately Fabricks, run on each Side of it. This Square is four hundred and ſixty ſix Feet in Length, and an hundred eighty three Feet in Breadth. And on the right Hand going up to St. *Mark's*, is another Square, called the *Broglio*, extending as far as the Sea; it is four hundred and ſixteen Yards long, and one hundred and thirty three Yards broad. The *Doge's* Palace ſtands on one Side of it, and the Procuratories on the other. Here the Nobility and Senators walk every Day, before they aſſemble in their reſpective Councils. Theſe Piazzas ſerve for an Exchange, where the Merchants of ſeveral Nations meet, and tranſact their Affairs. Their moſt beautiful Houſes ſtand upon the grand Canal, but none of them have Conveniencies within, bearing any Proportion to the handſome Outſide. Their Furniture is not rich, except their Pictures, which are here in greater Eſteem than in any other Place in *Europe*. Their Rooms are commonly hang'd about, or lin'd with gilt Leather, which upon extraordinary Occaſions, they hang with Tapeſtry, or other valuable Hangings. Their Bedſteads are Iron, to prevent Buggs, or other Vermin lodging in them; and the Bottoms are of Board, like the Floor of a Chamber, upon which they lay ſo many Mattrices for Softneſs, that it may be ſaid to require a Ladder rather than a Step to get upon them. The Streets are pav'd with Brick, or Free-ſtone, and kept very neat, there being no Horſes, Carriages, or ſo much as a Chair, or any thing elſe but People on Foot, that paſs along the Streets, becauſe the Canals are ſo frequent all over the City, and they have Gondolaes, or Boats, commodiouſly fitted up for carrying Paſſengers from one Place to another. This Veſſel is ſo contriv'd, that the Paſſengers ſit in the Middle of it, cover'd as in a Coach, with Glaſſes on each Side; the Gondolier or Boat-Man rows ſtanding and looking forwards, or the ſame Way he rows. It is computed that there are not leſs than ten or twelve thouſand of them, plying at *Venice*; and whereas in *London Hackney* Coaches are as common for conveying ſmall Parcels and Paſſengers by Land, as the Wherries are by Water; (and I may add, that here we have not only Hackney Coaches, but alſo Gentlemen's Coaches, Noblemens Coaches, State Coaches, &c.) theſe Conveyances in *Venice* are all perform'd upon the Water in the ſame different Degrees of Gondolaes; the State Gondolaes, or thoſe of Foreign Ambaſſadors and the like, being diſtinguiſhed for their Magnitude and Grandeur, as our Coaches of thoſe different Ranks are in *England*.

Venice contains ſeventy Pariſhes, and two hundred Palaces fit for the Entertainment of Princes. Their Water is generally bad, except what they have from the Main Continent, or what Rain Water they ſave in their Ciſterns.

Some of the chief Buildings, are the Church of St. *Mark*, ſpoke of before; and next to it the Treaſury, in which they ſhow abundance of real Treaſure; great Part of which was brought from *Conſtantinople*, when the *Venetians* were Maſters of that City; as the Crown, &c.

Cyprus, ſet thick with precious Stones: Armour of beaten Gold, enriched with Jewels of a prodigious Value, Veſſels of Agat, Chryſtal, and entire Emeralds; four Carbuncles, the leaſt weighing ſix Ounces, and a Saphire of ten Ounces, with ſo many other Curioſities, and ſo valuable, that Dr. *Burnet* ſays, he never ſaw ſo great a Treaſure amaſs'd together in any one Place beſides this at *Venice*.

THE Doge's Palace has a beautiful Front, adorned with Marble Pillars of the ſeveral Orders; but the other three Sides have but a mean Appearance. The Chamber of the College is finely painted on the Roof, and in another Room are fine Hiſtory Paintings, but the Repreſentation of Paradiſe in the great Council-Chamber exceeds them all. The Patriarchal Church of St. *peter di Caſtello* is a fine Building, but the Arſenal is a great Curioſity in it; there are Arms for an hundred thouſand Foot, and twenty five thouſand Horſe, with all proper Accoutrements, and two thouſand four hundred Pieces of Cannon; but Mr. *Addiſon* upon a narrower Inſpection, thinks the firſt Account too large, but gives the following Account of it. He ſays the Arſenal is an Iſland of three Miles in Circumference; it contains all the Stores and Proviſions, which are not actually employ'd, and here are the Docks for their Gallies and Men of War, and moſt of them full, as are alſo the Work-Houſes, for both Land and Naval Preparations, but Abundance of their Arms, are ſo old faſhion'd and clumſy, that they are now of little Uſe.

Perſons, and Habits.

THE Nobility and Gentry of *Venice* are admired for both their Perſons and Behaviour; they are proper, wiſe, and grave, any of them fit to act the Part of an Ambaſſador. The Women are well ſhaped, beautiful, and witty, and alſo of an agreeable Converſation; but they endeavour to heighten and enforce their Complexion, by waſhing and painting; and it is deem'd ſo great an Ornament to be tall, that they add as much as poſſible to their Height by the Heels of their Shoes. The Quality are commonly veil'd, when they are in the Gondola's or Boats; and thoſe of an inferior Rank, when in the Street, are cover'd with a Veil, or Scarf, having no more open than juſt to ſee their Way; but withal, they have this Advantage, that they have not much Occaſion to expoſe themſelves, it being deemed the Husband's Buſineſs there to buy in all Proviſion, and do whatever elſe is to be done without Doors. The Females are ſent to the Nunneries in their Infancy, and never come out till they are married, or take the Veil; and if they are to be married, the Match is commonly made by Friends, or Guardians, the Woman ſeldom ſeeing the Man ſhe is to have till the Hour they are to be married.

THE Uſe of Concubines is ſo generally allowed here, that the Wife generally contents herſelf to allow them, and holds up a good agreeable Correſpondence with them. And ſo tender are they of their Sons, that as ſoon as they obſerve in them any Inclination to the Females, they give ſome of their poor Neighbours ſomething, as they can agree, to let one of their Daughters be his Bed-Fellow; and this they do, as they call it, by Way of Precaution, to prevent his being married in a Hurry, and to a Diſadvantage, or running the Hazard of contracting any nauſeous Diſtemper, by cohabiting with common Women. And when a Marriage Contract, if I may ſo call it, is to be debated by the Friends of the Parties, one of the Articles is, how long they contract for; for even Marriage Contracts are not for Life there, as in *England*, but for ſome Years, and ſometimes for a Month or two, as they can agree. And a late Writer adds, that the lower Claſs of Men, that cannot afford to keep each of them a Woman for their own Uſe, do two or three of them join, and purchaſe, or contract with a Woman in common amongſt them; and there are abundance of Women, ſome ſay whole Streets of common Women, who will receive all Comers, and are ſo willing to be known, that they dreſs in the gayeſt Colours, to diſtinguiſh themſelves from the Dreſs of ſober modeſt People, and to diſtinguiſh what Buſineſs they are of, and ſtand by Dozens at the Doors, to encourage their Cuſtomers.

THE Account which Dr. *Burnet* gives of the Wives of *Venice*, ſeems inconſiſtent with the Account given by other Authors; he ſays, they are bred up in ſo much Ignorance, and converſe ſo little, that they know nothing, but the dull Superſtition of Holidays, and when, like School-Boys, they have got a Holiday, to go to Church, they improve thoſe Days to the beſt Advantage, and tarry out as long as they can form any Pretence for Abſence, and that, in few Words, they are the moſt inſipid Creatures imaginable, *&c.* perhaps Dr. *Burnet* might give himſelf the Opportunity of converſing with ſome ſuch, but I conclude, as above obſerved, that we ought not to give a partial Account of a Country by the Character of either the beſt or the worſt, choſe out to ſerve a Purpoſe, and from thence to form a Character of the whole; for we are told by other Travellers, of undoubted Credit, that the *Venetian* Women are witty, and of ſprightly Converſation; but the Doctor proceeds to tell us, that the firſt Step to Marriage among the *Venetians* is downright Conſummation, without any Preamble, or Preparative; how far the Doctor may have begun to marry, and experienced the Truth of this Aſſertion, himſelf knew beſt.

Diverſions.

THEIR chief Diverſion is at the Carnival, and in that the Entertainment of Maſquerading bears the Bell; in which, beſides thoſe Parts of it, for ſuch Diverſions as are ſcarce worth naming, they are furniſhed with Gaming Tables, *&c.* but if the married Women come there, the Huſband often watches, or ſends his faithful Servants as Spies; but if the Ladies are found out in receiving thoſe amorous Addreſſes, the injured Husbands often employ their Bravo's, or Aſſaſſins; whoſe Buſineſs it is to revenge thoſe Injuries, and procure Satisfaction, if the Life of the Offender can be call'd ſuch; but bleſſed be God, we in *England*, that are Chriſtians, look upon Marriage as an Inſtitution too ſacred to be proſtituted at any ſuch Rate. But, beſides the Maſquerades and Bull-baitings, there is one very agreeable Diverſion, and that is the Races of Gondolaes, or the Barges, rowing for Wagers; the Men improving themſelves in their own Art, in a Manner agreeable to all, and offenſive to none.

BUT there are Inconveniencies attend *Venice*, as the Want of good Cellars for their Wine, occaſions its turning ſour. They have no good Water in the City of *Venice*; but forced to fetch all their Water from the Continent, except what Rain Water they can collect and ſave. A third Inconvenience is the ſtinking of the Canals, in the Heat of Summer, and the unwholeſome Air occaſion'd thereby: Another is the Scarcity of Firing, there being no Room for Wood to grow upon thoſe Iſlands where *Venice* ſtands; they being all built upon, that it creates another Inconvenience, that they have ſcarce Room to bury their Dead; and therefore fine ſpacious Gardens are not to be expected here, nor have they ſuch

ſpacious Courts, Squares, and the like, as is accounted a very great Ornament to moſt other Cities in *Europe*.

Murano. THE Iſland *Murano*, is about two Miles to the Northward of *Venice:* It was in this Iſland, that they improved the Glaſs Manufacture to that Degree, that by Way of Eminency, it was diſtinguiſhed by the Name of *Venice* Glaſs; which while it was a Secret to all but themſelves, brought a conſiderable Profit to the Republick; but declines now the ſame, being equall'd, if not excell'd in *England*.

THE Iſland of *Malamocco*, is two Miles Eaſtward of *Venice*; it has a conſiderable Harbour upon one of the narrow Channels, that leads from the *Adriatick* Sea to *Venice*. There is a Town upon the Iſland of the ſame Name; which was formerly a Biſhop's See, but being ruin'd by Earthquakes and Inundations, the See is removed to

Chiozza. *Chiozza*, a Town which ſtands upon a little Iſland of the ſame Name; about fourteen Miles to the Southward of *Venice*.

THERE are alſo *Torcello*, *Caorle*, and *Grado*, ſmall decaying Places and yet Biſhop's Sees, which only keep up their Names in Hiſtory. *Fuſina* is a little Town on the Continent, to the Weſtward of *Venice*, and about five Miles from it: Here the *Venetians* fetch their freſh Water, that they have from the Shore.

Paduan. THE ſecond Province is the *Paduan*, or *Padonano*, to the Weſtward of the *Dogado*, and of the City of *Venice*; it lies between *Trevijan* on the North, and *Poleſin* on the South; this Country is for its Fruitfulneſs, call'd the Garden of *Italy*, and by ſome the Terreſtrial Paradiſe. The chief Town is the renowned *Padua*, which ſtands on a pleaſant Plain by the River *Brent*, about two and twenty Miles to the Weſtward of *Venice*; it is of a circular Form, and about ſeven Miles in Circumference; it is a Town of great Antiquity, ſaid to be built above four hundred Years before the building of *Rome*: It has been one of the moſt flouriſhing Cities in *Italy*, but ſo much upon the decline at preſent, that not one half of the Ground within the Walls are built upon, and the Houſes now ſtanding are but thinly inhabited; though it is ſaid that in the Time of the *Romans*, this City alone, was able to raiſe a hundred thouſand Men; but now all the Souls in the Place, of all Ages, and of both Sexes, do not amount to thirty thouſand. The Air is good, and there is great Plenty of all Neceſſaries of Life, and the remaining Ruins of ſo many ſtately Palaces, are evident Proofs of the antient Grandeur and Magnificence of the Place.

AS to the City of *Padua*, or I may rather ſay as to what is left of it, the Streets are narrow, and the Houſes high, which makes the low Rooms dark; a double Piazza runs along moſt of the Streets; there are abundance of Palaces in tolerable Repair, inhabited by half ruin'd Nobility, and the Univerſity is ſo fallen to Decay, that of ten Colleges that it conſiſted of, there is but one left, the other being appropriated to other Uſes; however, this has leſſen'd the Number of Scholars, who when numerous, made walking the Streets dangerous; but their Numbers being reduc'd, that Danger is in a great Meaſure over.

Manufacture. THE Manufacture of Cloth, formerly brought a great Revenue to the State; but ſince the *Engliſh* have found Means to furniſh them with that Commodity, their own Trade in it is very inconſiderable. The Fields about *Padua* afford the beſt of Corn, and the Hills the beſt Wine, and Oil, and great Variety of delicious Fruit; the Air and Water are equally good, and nothing makes them unhappy but a Tyrannical Government.

THERE is about five Miles South Weſt of *Padua*, a Village call'd *Albino*, famous for its Medicinal Waters, which are ſo hot, that the Natives ſcald their Hogs in them; there are not any other Towns in the *Paduan* worth a particular Deſcription.

ON the South Side of the *Paduan* lies the *Poleſin de Rovigo*; it is about fifty Miles from Eaſt to Weſt, and twenty from North to South; it is a fruitful Country for Corn and Graſs; it is water'd by the Rivers *Adige* and *Adigeſto*. The chief Towns are *Rovigo*, and *Adria*; the former of which is a well built little Town, twenty Miles to the Southward of *Padua*; and the other, *viz. Adria*, is twelve Miles Eaſt of *Rovigo*, and as many Weſt of the *Adriatick* Sea, which it is ſaid, takes its Name from this Town of *Adria*, which was once a conſiderable City, and a *Tuſcan* Colony, but is now only a poor fiſhing Village.

THE *Veroneſe* lies to the Weſtward of the *Paduan*, and is bounded by the *Mantuan* on the South; it is well water'd by the River *Adige*, and the Lake *de Garda*, which furniſh it with excellent Fiſh; and the Country abounds with Corn, Wine, Oil, Silk, Wool, and Cattle; here is alſo good Marble taken up. The chief Town is *Verona*. *Veroneſe.*

Verona is pleaſantly ſituate on the River *Adige*, which runs through the Town; it is fifty Miles to the Weſtward of *Padua*, and twenty five to the Northward of *Mantua*; it is about ſix Miles in Circumference within the Walls, beſides large Suburbs. The Communication between both Parts of the Town, is maintain'd by four Stone Bridges over the *Adige*; one of which is much admired for its Beauty and Workmanſhip. There are ſeveral noble Palaces, publick Buildings, and Antiquities of Value; but the Houſes are generally low, and the Streets not well pav'd or clean, nor is the Town rich, or populous, or of any great Trade. The Amphitheatre is the moſt curious Piece of Antiquity, the Seats being ſtill entire; but the high Walls and Corriders that went round it, are in a ruinous Condition, and the Area is quite fill'd up to the lower Seat, which was formerly deep enough to let the Spectators ſtand in Safety to ſee the Combats of the Gladiators and wild Beaſts. There are in all, forty four Benches; in the higheſt Round of which, Mr. *Miſſon* counted five hundred and thirty of his Paces, and in the loweſt two hundred and fifty; it would in all have held twenty four thouſand Spectators. The longeſt Diameter of the Area or *Arena* (as they call it) is two hundred thirty three *French* Feet, and the ſhorteſt, above an hundred and thirty ſix Feet; every Step is near a Foot and an half high, and twenty ſix Inches broad. Dr. *Brown* obſerves, that when this Work was entire, the Outſide was as ſplendid as the Inſide, being all of Marble, an hundred and twenty Feet high, and conſiſted of three Rows of Pillars and Arches one above another, which open'd into ſpacious Walks and Porticoes within quite round the Building; and above the three Rows of Arches, there was a handſome Wall with Windows over each Arch, and Pilaſters, over every Pillar beneath; each Row conſiſted of ſeventy two Arches and as many Pillars of a great Height, the upper Row adorn'd with Statues. *Verona.* *Amphitheatre.*

I SHALL conclude this Account of *Verona*, with only obſerving theſe Pieces of Antiquity more, *viz.* the Remains of a Triumphal Arch, which was erected in Honour of *Marius*, on his Victory over the *Cimbri*, in the Territories of *Verona*; and the Ruins of a magnificent Temple dedicated

to

to *Jupiter*; but the moſt valuable of them is, the Cabinet of Count *Moſcardo*, conſiſting of a Gallery and ſix other Rooms, all fill'd with Antiquities, and the greateſt Curioſities in Art and Nature, as Pagan Idols, with the Inſtruments and Utenſils for their Sacrifices; Sepulchral Urns, Buſts, Lamps, Inſcriptions, the Barks of ſeveral Trees which the Antients uſed to write upon before Paper was invented. There are two Trees of black Coral, Pearls, Amethyſts, Saphyres, and a great Variety of other precious Stones; alſo Foſſils, Plants, Fruits, Minerals, and monſtrous Productions, with innumerable Medals and antient Coins, and a vaſt Collection of the fineſt Paintings by the beſt Hands.

When the *Roman* Empire declin'd, *Verona* underwent the common Fate of other Cities in *Italy*; it was taken by the *Goths* and *Lombards*, and afterwards by the Emperors of the Weſt. The *Venetians* took it about the Year 1403. The *Imperialiſts* took it from them in the Year 1509. but the *Venetians* re-took it in the Year 1516, and have kept it ever ſince. *Verona* was famous for being the Birth-place of the Poet *Catullus*, *Pliny* the Hiſtorian, and *Pliny* the Naturaliſt; alſo of *Cornelius Nepos*, and *Vitruvius* the famous Architect.

Lake of Garda. There is alſo a ſmall City call'd *Garda*, but not noted for any Thing except its Situation upon the Coaſt of the great Lake *Garda*, and giving Name to it. This Lake is about thirty Miles in Length, but narrow, eſpecially towards the North End; it is as rough as the Sea itſelf when a hard Gale of Wind happens, which is very frequent here, occaſion'd by the Guſts that come off from the neighbouring Mountains.

Breſcian. The next Province is the *Breſcian*; it lies to the Weſtward of the *Veroneſe* and adjoining to it, between the Country of the *Griſons* on the North, and the *Cremoneſe* on the South; it abounds in Corn, Wine, and Oil, but is remarkable for its Iron-Mines and Works, and for its Plantations of Flax, and its Linnen-Manufacture. It extends to the Side of the *Alps*, and therefore is not ſo level as the reſt of *Lombardy*.

The City of *Breſcia* or *Brixia* ſtands upon the two Rivers, *Mela* and *Garzo*; and although it lies between the Channels of the two Rivers, yet the Branches of them run through the Streets of the Town. It is about thirty Miles to the Weſtward of *Verona*, and thirty five North Weſt of *Mantua*. It is a populous trading Town about three Miles in Circumference, and has a Citadel built upon a Rock to defend it. Their Trade conſiſts moſtly in Linnen, Cheeſe, and Iron-work, particularly Swords and Fire-Arms; the making of which employs abundance of Hands, and they are reckon'd the beſt Armourers in *Italy*. The Women have more Liberty here than in ſome other Parts of *Italy*, for they appear publickly in the Streets and Shops. The People here are better uſed by the *Venetians* than the reſt of the Subjects are, perhaps to prevent their revolting to the *Milaneſe*, of which they were once a Part, and are now a frontier Province.

The *Iſeo* is ſituate on the Eaſt Bank of a Lake of the ſame Name, through which the River *Oglio* runs. The Lake is about fifteen Miles long, and three broad. There are other Towns, but none worth a particular Deſcription.

The *Bergamaſco* lies adjoining on the Weſt of the *Breſcian*, between the *Griſons* on the North, and the *Milaneſe* on the South; it is a rocky Country in general, but lying to the Southward of the *Alps* in a warm Climate, it is tolerably fruitful where the Soil will admit of it. The chief Town is,

Bergamo, is a large City ſituated on a Hill, and ſtrongly defended by a Caſtle. It is thirty Miles to the Weſtward of *Breſcia*, and as many to the Northward of *Milan*. It is a populous Town; and a Place of good Trade; the Merchants of *Germany*, *Switzerland*, and *Italy*, reſorting thither with their Goods at the Annual Fair. The Natives are the moſt clowniſh, and their Dialect the worſt of any in the *Venetian* Dominions; but if they are poliſh'd with good Education, they are as bright as their Neighbours. *Bergamo.*

As to the Government of this Place, it was a Republick, till the Year 1300, about which Time ſome of their leading Men aſſum'd the Government, and it became a Monarchy. In the Year 1419 it was taken by the Duke of *Milan*, and in the Year 1447 they put themſelves under the Protection of the *Venetians*, who kept Poſſeſſion of this Town and Province ever ſince, except about ſeven Years in the Time of *Lewis* XII. that the *French* had it in their Hands. It is obſerv'd, that here, as in other Mountainous Places near the *Alps*, the Natives are much afflicted with Swellings in their Throats, occaſion'd by drinking the Snow-water that deſcends from the Mountains.

Cremaſco joins upon the South Frontiers of the *Breſcian*; it is a well water'd fruitful Country. The chief, and indeed the only Town of Note, is *Crema*, on the River *Serio*, about twenty Miles South Weſt of *Breſcia*, and as much North Weſt of *Cremona*. It is a populous, well built Town, and a Biſhop's See, Suffragan to *Bologna*. The principal Manufacture is that of fine Linnen. *Cremaſco.*

The *Vicentin* is contiguous to the *Paduan*, on the North Eaſt Side of it; and the Soil, Climate, and Product, is much the ſame. The chief Town of this Province is, *Vicentin.*

Vicenza ſtands at the Confluence of ſeveral ſmall Rivers, of which, the chief are the *Bacchiglione*, and the *Rerone*; it is about twenty Miles North Weſt of *Padua*. It is a populous, trading City, about four Miles in Circumference; it contains fifteen Pariſhes. The Buildings are beautiful, and the Squares and Piazzas ſpacious. There is a Theatre in Imitation of the *Roman* Theatres, built by the famous *Palladio*, who alſo built a Triumphal Arch. There is alſo a magnificent Town-Hall, and alſo the Ruins of an antient Theatre, and ſome other eminent Pieces of Antiquity, which are ſufficient Proofs of its antient Grandeur. This Town ſurrender'd to the *Venetians* without any Attempt of a Conqueſt, and for that Reaſon enjoys greater Privileges than many other Cities. The chief Manufacture of this Place is Silk. It is a Biſhop's See, Suffragan to *Aquileia*.

The Marquiſate of *Treviſana* lies on the North Side of the *Paduan*. The chief Town is, *Treviſana.*

Treviſo or *Trevigno*; it ſtands near the River's Side, fifteen Miles North Weſt of *Venice*. It is a well built populous Place, and was the Reſidence of the Marquiſes of *Lombardy*, and is from thence call'd a Marquiſate.

There are alſo other ſmall Provinces, as the *Feltrin*, the *Belluneſe*, the *Cadorin*, &c. but they are ſo inconſiderable that they are not worth a particular Deſcription. I ſhall conclude this Chapter with,

The Province of *Friuli*; it lies between the *Alps* on the North, and the Gulf of *Venice* on the South, and between *Carniola*, a Province of *Germany* on the Eaſt, and another Part of the *Alps* upon the Weſt. What Towns are moſt remarkable are, *Friuli.*

1. *Aquileia*, ſituate on a ſmall River which runs into the Gulf of *Trieſte*, in the North Part of the *Adria-*

Adriatick Sea, about fifty Miles North East of *Venice*; it was formerly a City of great Strength and Fame. It was made the Metropolis of *Italy* by the Western Emperors, but it is now dwindled to a poor Village, inhabited only by Fishermen. It is under the Dominions of the House of *Austria*.

2. *Palma Nova* is a large fortify'd Town, twelve Miles North West of *Aquileia*; it was built by the *Venetians* as a Frontier against *Germany* about the Year 1594. and is yet in the Hands of the *Venetians*.

3. *Udina* is a large and populous Town, four Miles in Circumference, sixteen Miles to the Northward of *Palma Nova*, and subject to the *Venetians*.

4. *Cividad de Friuli* is about ten Miles North of *Palma Nova*, subject to the *Venetians*.

5. *Pontafell* is about twenty Miles North West of *Cividad de Fruili*, a frontier Town, between the Emperor and the *Venetians*, but now subject to the latter.

CHAP. III.

Of the Dominions subject to the Venetians *in* Istria, Morlachia, *and* Dalmatia; *with some Account of the* Venetian *Government*, &c.

Istria. *ISTRIA* is a Sort of a Peninsula, lying on the East, or North East Side of the *Adriatick* Sea; it is bounded by *Carmola*, a Province in the South Part of *Germany* on the North, and on all the other three Sides by the Sea or Gulf of *Venice*; it is about sixty Miles in Length, and fifty in Breadth. It is a woody, mountainous Country, and as such, it is of Value to the *Venetians* upon the Account of the Stone and Timber which they bring from hence, for Timber is very scarce at *Venice*. Chief Towns are,

1. *Capo D'Istria*, situate on a small Island in the Gulf of *Trieste*, but it has a Communication with the Continent by a Bridge for that Purpose. It is about ten or twelve Miles South East of *Trieste*; it is a Bishop's See, Suffragan of *Aquileia*, and is the Seat of the *Venetian* Governor. This is the antient *Egida*, and by some, *Justinopolis*, having been built by the Emperor *Justin*.

2. *Cita Nova*, the antient *Æmonia*; it stands at the Mouth of the River *Quatto*, about twenty Miles South East of *Capo D'Istria*; it is but a poor Place, and thinly inhabited, and yet it is a Harbour and a Bishop's See.

3. *Parenzo* is six Miles to the Southward of *Cita Nova*; but though it hath a good Harbour, it is but thinly inhabited.

4. *Pola*, or the antient *Pata*, almost upon the Southermost Point of *Stiria*; it is a strong Town, and has a good Harbour.

Trieste and *St. Veits* were treated of in the Description of their respective Provinces of *Carinthia* and *Carniola*. *See* Germany.

Morlachia. *MORLACHIA* lies on the East Shore of the Gulf of *Venice*, between *Istria* and *Dalmatia*; it is a Part of the antient *Liburnia*. The *Turks* claim'd it as a Dependant on *Hungary*, but the Inhabitants put themselves under the Emperor's Protection, and so it remains at present, only some Towns on the Coast are subject to the *Venetians*. The chief whereof are *Zeny* and *Novigrad*.

Zeny or *Segna*, is situate on the Sea-Coast, about forty Miles South East of *St. Veit*; it is a pretty Town, with a Castle and Harbour, and is a Bishop's See, subject to the Archbishop of *Spalatto*.

Novigrad stands near a Bay of the Sea, about sixty Miles South East of *Segna*; but Authors and Travellers have not thought it worth any farther Description.

Dalmatia. *DALMATIA* is the Eastern Part of the antient *Illyricum*; it stretches along the Coast of the *Adriatick* Sea near two hundred Miles in Length, and is about thirty in Breadth. It is bounded on the North by *Bosnia* and *Servia*, and on the East by *Albania*; by the Gulf of *Venice* on the South West, and by *Morlachia* on the North West. The Sea Coast belongs to the *Venetians* (except those in the Territories of *Ragusa*) and the Inland Country to the *Turks*. The *Venetian Dalmatia* may be divided into Continent and Islands. On the Continent, the chief Towns are,

Zara, the antient *Jadera*; it is on the East Coast of the *Adriatick* Sea, near two hundred Miles South East of *Venice*. It was formerly the Capital of *Liburnia*, a Province of *Illyricum*; the *Venetians* purchas'd it and *Novigrad*, of *Ladislaus* King of *Hungary*, about the Year 1409, and it is now the Capital of the *Venetian Dalmatia*. It is an Archbishop's See. It is an Island, being quite separated from the Land, but yet so near the Continent, that it is join'd to it by a Bridge; and there is a Castle for its Defence.

Nona or *Ænona*, is about eighteen Miles North West of *Zara*, upon a Promontory that forms a Peninsula. It is a fortify'd Town.

Scardone is thirty five Miles South East of *Zara*, at the Mouth of the River *Kirka*; it is defended by a Castle and other Fortifications, but has been frequently taken and re-taken alternately by the *Venetians* and *Turks*.

Sebenica is a Fortress upon the same Coast, about forty Miles South East of *Zara*; the Castle stands on a steep Rock near the Mouth of the River *Kirka*.

Trau, the antient *Tragurium*, a little Town and Harbour, about thirty Miles South East of *Sebenico*. It is encompass'd by the Sea, and join'd to the Continent by the Bridge.

Spalatto is upon the same Coast, about sixty Miles South East of *Zara*, and ten to the Eastward of *Trau*; it is a strong and populous Town, one of the best Harbours on the Coast, and an Archbishop's See. The Emperor *Diocletian* retir'd hither when he was driven from his Throne.

Those hitherto mention'd in *Dalmatia*, are Bishop's Sees, as are *Catara* and *Badua*; but not farther worth a Description any more than those Towns in *Dalmatia* belonging to the *Turks*, and consequently now in Ruins as to their Trade or Grandeur.

Of the Venetian *Islands.*

CHERSO lies in the Gulf between *Istria* and *Croatia*, ten Miles to the Southward of *St. Veit*; it is a large Island of an hundred and twenty Miles in Circumference, but nothing else in it worth a Description, any more than in the Islands of *Osera*, *Veglia*, *Pago*, *Arbe*, *Gressa*, *Lezina*, *Curzola*, &c. though mostly dignify'd with the empty Name of being a Bishop's See.

But

But the *Venetian* Islands in the *Ionian* Sea, without, and to the Southward of the *Adriatick*, are more worth Notice, as

Corfu. *Corfu*, the antient *Corcyra*; it lies on the West Coast of *Epirus*, and about East of the Gulf of *Taranto* in *Italy*. It is about fifty Miles long, and twelve broad. It is a populous Island, containing two Cities, and near a hundred Villages, and produces Oil, Honey, Wax, Oranges, Lemons, and a great Variety of other Fruits. The chief Towns or Cities above-mention'd are *Corfu*, and *Cassiope*, of which the former lies about the Middle of the East Side of the Island, and is strongly fortified, and a good Harbour. *Cassiope* is also on the same Side of the Island fifteen Miles North-West of *Corfu*. It is a little trading Town, with a good Harbour, about six Miles from the main Continent of *Epirus*.

Maura. The Island of St. *Maura*, the antient *Leucadia*, is almost of a circular Figure, and lies about forty five Miles South East of *Corfu*. It lies upon the Coast of *Achaia*, and separated from it by a Channel, not above half a League broad. It is near a circular Form, and about twenty Miles over; the chief Town of the same Name, stands on the North-East Part of the Island.

Cephalonia. *Cephalonia* is about seven or eight Miles to the Southward of St. *Maura*. It lies off of the Gulf of *Lepanto*, at about twenty Miles Distance. It is about fifty Miles in Length, and twenty five in Breadth. It produces Wine, Oil, Silk, Wool, Honey, and Wax, which the Natives send Abroad, and make a considerable Trade of. The chief Town is of the same Name, in a Bay, on the West Side of the Island.

Zant. The Island of *Zant*, the antient *Zacynthus*, or by some *Illyra*, is about twelve Miles to the Southward of *Cephalonia* and as much to the Westward of the Continent of the *Morea*. It is twenty four Miles in Length, and twelve in Breadth. The most considerable Commodity that this Island affords, is their small Grapes, like our white or green Currants, which when cured and dried, as Raisins are they are frequently mix'd with them in *England* under the general Name of Fruit, but the Original of the Name of what we now call Currants, is Corinths, from the Name of *Corinth* in the *Morea*, the Place where these sort of Grapes were first thus cured, though now few of these sort of Grapes are cultivated any where in the Neighbourhood of *Corinth*; but that sort of Product and Trade increases in this Island, insomuch that *France*, *England*, and a great many other Countries in *Europe*, are supplied with Currants from *Zant*, which amounts to a considerable Trade to that Island. The chief Town is *Zant*. It stands on the East Side of the Island. It is fortified and defended by a Castle, and is of the last Importance to the *Venetians*. There are other Islands, but none of such Consequence as the four mention'd.

Morea. The *Morea* is a Peninsula, and formerly belong'd to the *Venetians*, but was taken from them in the Year 1715. by the *Turks*; and notwithstanding all the Attempts of the *Venetians* to make Reprisals, (as they did indeed, by taking the Towns of *Prevesa* and *Vonima*) they are far short of having got an Equivalent for the Loss of that fine Country the *Morea*.

Of the Government of VENICE.

Before the Islands upon which *Venice* now stands were cultivated and improved, to bear such a famous and populous City as *Venice* now is, they were only inhabited by Fishermen, as has been observ'd before, and then they were under the Jurisdiction of *Padua*, and had a Governor and other Officers from thence; but when the *Goths* and others over-run *Italy*, the Inhabitants fled with their Effects to these Islands, and laid the Foundation of this now great and flourishing City of *Venice*. They were first under the Government of the Consuls or Magistrates of *Padua*, to whom the Soil belong'd; but when by virtue of this Retirement their Wealth increas'd in proportion to their Security, great Numbers of Refugees from all Parts of *Italy* flock'd in to them, whereupon the *Paduans* demanded a Deputy or Representative from every Island, wherein they lodg'd the legislative Power of that Island; but this did not hold long, for one of the most powerful and popular Men of the Islands, or Republick, procur'd the sovereign Power to be conferr'd on him, with the Title of Duke or Doge of *Venice*, as the Title now stands, and has done since that Time; and the Power he assum'd was such, that they who were Representatives, or as it were, Members of Parliament, were divested of all legislative Power, and were only look'd upon as being of his Council; he took or rejected their Advice, as he thought fit, reserving to himself the Privilege of being total and ultimate Lawgiver to the Republick.

But in Process of Time the leading Men of the Republick thinking themselves impos'd upon by the arbitrary Power of the Doge, they endeavour'd to retrieve themselves from this absolute Power of Government, and at last procur'd the sovereign Power to be lodg'd in the most substantial Citizens, and the Government became a Commonwealth, the Doge then retaining no more than the meer Shadow of his antient Authority; and accordingly about the Year 1325. the great Council pass'd an Act for reducing their Number, and vesting the sovereign Power in certain select Families, and their Male Issue, who upon a sufficient Proof of Legitimacy were after the Age of five and twenty introduc'd into this Assembly without any previous Election; and this Body of Men have since their Establishment assum'd the Title of *Noble Venetians*; and their Dignity is now look'd upon as so great, that they think themselves equal, if not above the Electors of the Empire.

The Government consists, 1. of the Doge, or Great Duke. 2. The great Council. 3. The Signory. 4. The Senate. 5. The Council of *Savi*. 6. The Council of the College.

The Doge represents a Monarch in Habit and State, having a purple Robe, and a Cap in the Form of a Mitre, which he never takes off but when the Host is elevated. He cannot go out of the City without leave of the Senate, or if he will go, his Authority ceases as soon as ever his Foot is set upon the Continent, and he is then accounted no more than a *Noble Venetian*; but otherwise he holds his Place for Life, except he commits some Offence against the State, or is superannuated. He presides in the great Council, and other Courts, and sees that the Magistrates perform their Duty, or summons them before the College in case of Neglect.

But besides the Nobility, there are three orders of Knighthood; 1. The Knights of the Golden Star. 2. The Knights of St. *Mark*, a Dignity conferr'd upon those who by Sea or Land have behav'd well, and they have a thousand Ducats a Year annex'd to their Titles; and, 3. The Doge's Knights; they are created by the Doge himself, and it is a Dignity bestow'd upon foreign Officers in their Service.

As to their ecclesiastical Government, the Patriarchs of *Aquileia* and *Venice* share it between

them. The Pope is look'd upon at *Venice* as little more than a temporal Prince, and the Patriarch of *Rome* as a Cypher. The Patriarch of *Venice* is always a *Noble Venetian*, nominated by the State, and confirm'd by the Pope.

Italy is famous for Musick, both vocal and instrumental, as well in their Churches as elsewhere. Vocal Musick is commonly perform'd by Eunuchs, which they castrate in their Youth for that Purpose; for they think a good Voice is a Portion for a Son, because he may get his Bread by singing; and yet even those castrated Persons, when grown up, are as readily admitted into Priests Orders as others; and though their Order is like that of the *Jews*, to have a perfect Man to administer in holy Things, yet it is thought sufficient if he can any way produce Testimonials of his being of the male Sex; and for that Reason the Parents save the Members after Separation, and dry them; and if the Person to whom they belong'd can but produce them, though dry'd in his Pocket, that is sufficient to entitle him, as a Man, to be qualified for that great Office, to be one of their Priests.

Revenue. THE public Revenue of the State, or Republick of *Venice*, is accounted at twelve hundred thousand Pound Sterling a Year, and is liable to be increas'd in Time of War, or any Exigency, when the Government may require it. Their Forces by Sea and Land are computed at twenty four thousand; but they can upon occasion advance very much above that Number. There are none allow'd to be Generalissimo at Sea, but *Noble Venetians*, and they have the Command of the Islands, Ports, and other maritime Places, as well as of the Fleet.

THERE is one particular Officer, call'd the General of the Gulf, that commands the Galleasses and Gallies, and clears the Sea of Pirates, and takes care that the Customs be duly paid, *&c.*

Trade. THE Trade of *Venice* consisted formerly, and even to this Day, in transporting the Merchandize of *Asia* from *Alexandria*, and other Parts of *Turky*, to the several Kingdoms of *Europe*; but that Trade has declin'd very much since the Navigation about the *Cape of Good Hope* was found out, and practis'd. The Manufactures rais'd from their own Produce furnish them with Merchandize to traffick with other Countries; as their raw and wrought Silks of various kinds, Brocades, Gold and Silver Stuffs, Velvets, Damasks, Wine, Oil, Fruit, chiefly Currants, or Corinths, almost peculiar to the Island of *Zant*, as above observ'd; also Allum, Sulphur, *Venetian* Steel, Iron, Copper, woollen Cloth, Glass, Marble, Soap, Rice, Essences, Turpentine, Creme-Tartar, Snuff, and many other valuable, though small Articles. They have used to furnish the *Germans* with their Goods imported from *Turky*; but if the Emperor succeeds in his Project of establishing a Trade in the Gulf of *Venice*, this Trade will be no Branch of Trade to the *Venetians*.

I shall conclude this Chapter, with an Account of the Ceremony of the Doge's espousing the Sea every Year upon *Ascension-Day*, when he is attended by three or four hundred of the Nobility aboard of a *Bucentaur*, which is a noble Galleass, follow'd by a vast Number of Gallies, Barges, and Gondolaes, magnificently adorn'd, with Trumpets, and other Musick. The Captain of the *Bucentaur* always takes an Oath, that he will bring the Vessel back safe and sound, in spite of Wind, Waves, and Tempest; and indeed he does not much expose himself; for if it be never so calm, he never goes above a Mile or two to Sea; and if the Wind blows but very little, the Ceremony is deferr'd; but if the Weather will permit, and they come to a proper Place, the Doge receives a Gold Ring from the Master of the Ceremonies, which he throws into the Sea, over the Stern, saying, *We espouse thee O Sea, as a Mark of our true and perpetual Dominion over thee.* This Ceremony was first begun about the Year 1174. when Pope *Alexander* III. conferr'd the Dominion of the *Adriatick* Sea upon the Republick, and instituted this annual Ceremony of espousing it by a Ring.

A DE-

A DESCRIPTION OF THE Pope's DOMINIONS IN *ITALY.*

CHAP. I.

Of the Situation and Extent of the Pope's *Dominions, and of its ſeveral Diviſions or Provinces; with a particular Deſcription of the City of* Rome.

THE Dominions of the *Pope*, are bounded on the North by the Territories of *Venice*; and on the North Eaſt, by the Gulf of *Venice*, or the *Adriatick* Sea; by the Kingdom of *Naples* on the South Eaſt, and by the *Tuſcan* Sea on the South Weſt; and by the Dutchy of *Tuſcany* on the North Weſt. It is about two hundred and forty Miles from the North Weſt to the South Eaſt; and its general Breadth, is an hundred and forty Miles. The *Pope*'s Dominions are uſually divided into ſeven Provinces. 1. The *Campania* of *Rome*. 2. The Patrimony of St. *Peter*. 3. The Province of *Sabina*. 4. *Umbria*, or the Dutchy of *Spoletta*. 5. The Marquiſate of *Ancona*. 6. The Dutchy of *Urbino*. And, 7. *Romania*, comprehending *Romania Proper*, the *Bologneſe*, and the Dutchy of *Ferrara*.

THE *Campania* of *Rome* is about ſeventy Miles in Length from the North Weſt to the South Eaſt, and forty five in Breadth, from the North Eaſt to the South Weſt; on which Side it is bounded by the *Tuſcan* Sea, and lies between *Tuſcany* on the North Weſt, and *Naples* on the South Eaſt. Of the many conſiderable Places, the chief is the Capital City of *Rome*.

The City of Rome.

AS to the Original of the City of *Rome*, as well as the Time of its firſt Foundation, Authors differ ſo much, and ſo many Fables are entertain'd about both, that the Certainty is loſt, and the Diſputes not worth repeating; however, this we are ſure of, that it is ſituated upon the River *Tiber*, about ſixteen Miles from the *Tuſcan* Sea, in the forty ſecond Degree of North Latitude, and about the thirteenth Degree of Longitude, Eaſt from *London*. It ſtood firſt upon ſeven Hills or Mounts; but it was in Time ſo enlarged, that it extended itſelf over thirteen Hills, but of an eaſy Aſcent. It was of a ſquare Figure, but by degrees ſpread itſelf into an irregular Form; the Walls, including all the Turnings and Windings, were about twelve Miles in Circumference; and ſome account, that if all the Skirts and Irregularities of the Suburbs were taken in, it was not leſs than fifty Miles about; and indeed it would ſeem to require ſuch a large Extent to contain the Number of Inhabitants which ſome have computed to be in it. But as *Rome*, as well as the Capitals of *Greece* and other Countries, have been deſcribed by Hiſtorians, but eſpecially by Poets, in ſuch a romantick and hyperbolical Manner, I ſhall give a Deſcription of *Rome* as it now ſtands.

NOTWITHSTANDING what has been ſaid as to the Circumference of the City within the Walls, it is obſerv'd, that not above one third of the Ground ſo wall'd in is built upon; the reſt being taken up with Vineyards, Gardens, and the like; and what is built upon, is but thinly inhabited. The Natives at this Time are computed at an hundred and twenty thouſand. The chief Part of the Town ſtands on the Eaſt Side of the *Tiber*, but there is about a ſixth Part of the City ſtands on the Weſt, or North Weſt Side of the *Tiber*, and that is call'd the *Traſtevere*. The Courſe of the River where it runs through the Town is nearly North and South. There are five Bridges over the River, twenty Gates in the Walls, and three hundred Towers ſtill remaining.

IT is computed that the preſent *Rome* ſtands fourteen or fifteen Feet higher than the old *Rome*, as being built upon its Ruins. The Town is generally well built, the Streets ſtraight, and adorn'd with abundance of beautiful Palaces, Monaſteries, and Churches, of which laſt, there not leſs than three hundred. The Triumphal Arches, Pillars, Obeliſks, Statues, and Fountains, are of ſuch excellent Workmanſhip, that they add a great Beauty to the whole. Dr. *Burnet* obſerves, that as he enter'd *Rome* by the Gate *del Populo*, he obſerv'd on each Hand a long Viſ-

to

to, or continued Street of Houſes. But here it is to be obſerv'd, that although their publick Buildings be ſumptuous and magnificent, yet their common Buildings are all very poor and ordinary to be in ſo famous a Place.

Rome is well ſupply'd with Proviſions of the beſt, as Veal, and Beef, which is not inferiour to ours in *England*, except the Fleſh of the Buffalo, and that is eat only by poor People and *Jews*, and they hunt or bait it as we do our Bulls before they kill it. Their Pork is excellent, but their Mutton is tough and dry. Their Domeſtick Fowls are plenty, and as good as Turkeys, Hens, Capons, Pidgeons, *&c.* only Geeſe, are ſcarce, but that Defect is ſupply'd with Plenty of the beſt of Wild-fowl and cheap, as Partridges, Woodcocks, Snipes, and alſo all Manner of ſmall Birds; they alſo eat Kites, Buzzards, and ſeveral other Fowls that are not eat in *England*. They have tolerable Plenty of both Sea and River-fiſh, but not ſo cheap as Fleſh. Their Markets afford wild Boar and other Veniſon, but their Deer is much inferior to it. Their Bread is good and cheap, and light, though they uſe no Barm or Yeſt. They have as great Variety of good Wines here as at any Place in *Italy*; but the *Albano* Wine is the moſt uſually drank, and is ſo ſtrong, that it will bear a Mixture of half Water for ordinary drinking. They have abundance of good Wall-fruit, and which is one great Happineſs, they are ſupply'd with Plenty of good Water by their Aqueducts, though ſome of them bring the Water from Springs that riſe thirty or forty Miles from *Rome*; but more of that when we ſpeak of their Aqueducts.

Rome affords ſuch an agreeable Diverſity of Objects and Curioſities, as Theatres, Amphitheatres, Pagan Temples, Triumphal Arches, *&c.* that a complete Deſcription of *Rome* in all its Varieties and Curioſities, would take up ſo large a Space in this our Univerſal Hiſtory of the World, that we cannot expatiate upon them all as to every minute Circumſtance of their Deſcription; but however to make this *A Complete Hiſtory of the World* according to its Title, I ſhall give a brief Deſcription of every Thing material, and yet avoid Prolixity in one to make room for what is neceſſary in the reſt: And firſt, I ſhall begin with,

Theatres. THE Theatres and Amphitheatres that were in the antient *Rome*, of which only the Ruins are now to be ſeen; and (not to mention thoſe entirely in Ruins, of which only the Rubbiſh now remains, and that in ſuch Confuſion, that hardly any Conjecture can be made as to the Shape of them) the *Coliſeo* or Amphitheatre of *Titus* is moſt worth Obſervation: It appears to have been of a round Form without, and an oval within, and was capable of holding eighty five thouſand Perſons. This was formerly a famous Building, not only for its Beauty, but for the Martyrdom of many thouſand *Chriſtians*, who in Times of Perſecution, inſtead of being immediately executed, were reſerved to fight the wild Beaſts in the Amphitheatre to divert the Spectators; where if they overcame, they ſav'd their Lives, or rather poſtpon'd their Death for ſome Time; but if they were overcome they dy'd Victims to their perſecuting Enemies; but ſometimes upon overcoming, they had a free Pardon. Probably the ſame Laws and Cuſtoms might be exercis'd at *Epheſus*, to which St. *Paul* may allude when he ſays 1 *Cor.* xv. 32. *If after the Manner of Men I have fought with Beaſts at* Epheſus *&c.*

Pagan Temples *Pagan* Temples are 1. The *Pantheon*, or Temple of all the Gods, ſo called by thoſe, who are juſtly ſtil'd *Propbane Poets*. It is now dedicated to the Virgin *Mary* and *All Saints*, and is of a circular Form, an hundred and forty four Feet in Height, and as many in Breadth. The vaulted Roof is in the Form of a Cupola, and receives all its Light from a Hole in the Top of about nine Feet Diameter. Its Portico has ſixteen ſmall Pillars of ſpotted or ſpeckled Marble, called *Oriental Granite*, each Pillar being but one Stone; they are all of the *Corinthian* Order, about fifteen *Engliſh* Feet in Circumference. The Door is forty Feet high, and about twenty five broad. This Temple was cover'd with Copper, till Pope *Urban* VIII. took it away to make the four wreath'd Pillars, which ſupport the Canopy of the high Altar in St. *Peter*'s Church; [*He did not rob* Peter *to pay* Paul, *but he robb'd the Virgin* Mary *and all Saints to ſupply* Peter.] and ſo many, or ſo heavy, were the Nails which faſtned the Copper-plates of the Portico, that of them he caſt a great Cannon of two thouſand eight hundred Weight, which ſtill remains in the Caſtle of *St. Angelo* with this Inſcription; *Ex Clavis trabalibus Porticus Agrippæ.* It is obſervable, that this Temple had formerly an Aſcent to it of ſeven Steps, and now there is a Deſcent to it of eleven Steps; from whence it may be juſtly obſerv'd, that *Old Rome* is buried in the Rubbiſh, and that *New Rome* is built upon Ground higher than the *Old* by eleven Steps, or elſe we muſt conclude that this Temple, Foundation and all, is ſunk ſo much.

THERE are alſo other Temples, or rather the Ruins of them, and the Ground where they ſtood; as 2. the Temple of Fortune; 3. the Temple of the Sun, or of *Veſta*; 4. the Temple of *Diana*; 5. the Temple of *Hercules*; 6. the Temple of *Janus*; 7. the Temple of Concord; 8. the Temple of *Saturn*; 9. the Temple of *Antonine* and *Fauſtina*; 10. the Temple of *Romulus* and *Remus*; 11. the Temple of the Sun and Moon (now *New St. Mary's*;) 12. the Temple of Peace, in which was laid up the rich Spoils found in the *Jews* Temple at the Taking of *Jeruſalem*; 13. the Temple of *Jupiter Stator*; but of it there remains only three Marble Pillars; 14. the Temple of *Jupiter Tonans*, or the Thunderer; but of this remains only three Pillars, and thoſe half buried in the Ruins; 15. the Temple of *Faunus* (now a Chriſtian Church;) 16. the Temple of *Hercules Gallaicus*; 17. the Temple of *Bacchus*; and laſtly, another Temple of *Romulus* and *Remus*, dedicated to St. *Theodore*, with a Deſcent of ſeveral Steps, as into the *Pantheon*; but theſe Temples I only name firſt becauſe they are originally Pagan Temples, and ſecondly, there is little appears at this Day but the Remains or Ruins of them.

THE Triumphal Arches ſtill remaining are five, *viz.* 1. that of *Septimus Severus*; 2. that of *Conſtantine the Great*; 3. that in the *Via Sacra*, erected to the Honour of *Veſpaſian* and his Son *Titus*; 4. that of *Galienus*; and 5. another to the Honour of *Septimus Severus* and his Son. Theſe have each of them *Latin* Inſcriptions, generally in *Roman* Capitals, expreſſing the Name of the Perſon to whoſe Honour and Memory they were erected, and ſome of their valiant or otherwiſe excellent Performances or Qualifications. Tri phal And

THE Baths of antient *Rome* have been beautiful Buildings; but no Proofs now remain of them except their Ruins; of which the chief is *Antonine*'s Bath at the Foot of Mount *Aventine*, which though now out of Repair, yet the preſent Walls are vaſtly thick and high; it contain'd ſixteen hundred Seats of poliſh'd Marble for the ſame Number of Perſons to ſit and bathe in ſeparately. Some of theſe Bathing Places were floor'd with Silver; of which Metal the Pipes are made that convey Water to them. Ba

Bur

But the Baths of *Dioclesian* are the moſt famous, as having convenient Room for three thouſand People to bathe at a Time without ſeeing one another. There is alſo to be ſeen, the Remains of the Baths of *Conſtantine*; as alſo thoſe of *Nero*, *Paulus Emilius*, *Agrippa*, &c.

Columns. Of Columns there now remain four:

1. The *Columna Trajana*; it is an hundred and twenty Feet high beſides the Pedeſtal, which is twelve; in all, an hundred and thirty two. It is compos'd of twenty four entire Pieces of white Marble, hollow within, and ſet one upon another, ſo as to form a Concave Pillar with little Windows to let in the Light; and in the whole, it is aſcended by an hundred and twenty three Steps.

2. The Column of *Antoninus Pius*, is an hundred and forty five Feet high *Engliſh* Meaſure, and is aſcended by two hundred and ſix Steps, and enlight'ned by fifty ſix ſmall Windows; it is compos'd of twenty eight entire Pieces of Marble, the Statue of St. *Paul* is now upon the Top of it.

3. The *Columna Roſtrata* is plac'd upon the Wall, at the Foot of the Stairs aſcending to the Rooms of the Capitol; it is not above twelve Feet high, and has no legible Inſcription.

4. The *Columna Miliaria*, ſaid to be the Mark where they began to reckon the Miles from *Rome*, to any other Part of *Italy*; it is a Column of white Marble eight Feet and an half high; and on the Chapiter, there is a Braſs Globe of about two Feet Diameter.

Aque-ducts. But what is as well worth our Notice as any Thing yet mention'd, is their Aqueducts, Fountains, and Reſervoirs, in almoſt every Corner of the City. The old Aqueduct which *Paul* V. reſtor'd, comes from a Collection of Sources, five and thirty Miles from *Rome*, and runs all the way through a vaulted Channel like a River under Ground; and when it comes to the City, it breaks out into five ſeveral Fountains, and ſupplies thoſe ſeveral Parts of the City. The *Aqua Felice* of *Sixtus* V. is brought twenty Miles from *Rome*. There is alſo the Fountain in the *Piazza de Spagna*, another in the *Piazza de Novano*, and others; which furniſh *Rome* ſo plentifully with Water, that almoſt every Houſe has a Fountain which runs continually.

Cata-combs. But amongſt other Antiquities of *Rome*, the *Catacombs* are not to be forgot; they are narrow, ſubterraneous Vaults, with a Variety of Windings and Turnings, like a Maze, or Labyrinth; and run ſo far as to undermine a great Part of the Suburbs of antient *Rome*: They were about the Heighth of an ordinary Man of five Feet and an half, and of Breadth, for two Men to walk abreaſt; not but ſome are of larger Dimenſions. On each Side, are Rows of Graves, with a ſquare Stone or Tile at the Mouth of each of them, with an Inſcription upon the Stone, to ſhew what Martyr, or Confeſſor, &c. was interr'd there. There are yet, Bones found in ſome of them, but the Bodies have generally been remov'd to the Churches as precious Relicks. It is generally believ'd, that the Original of thoſe Caverns proceeded from the Perſecution of the *Chriſtians*; who not being allow'd to exerciſe Divine Worſhip publickly, dug thoſe Caverns for the more free Exerciſe of their Religion, and for celebrating Divine Service; and that they were alſo reſerv'd as Burying-places for Chriſtians, for the ſame Reaſon of Privacy, that they ſhould not be dug up by their Perſecutors.

Tombs. Of the antient Tombs, or Mauſolea in *Rome*, there is yet to be ſeen the Remains of theſe four.

1. The Mauſoleum of the Emperor *Adrian*, in the Caſtle of St. *Angelo*; it was at firſt beautify'd with Statues and Marble Pillars, but they were taken away to adorn ſome of the modern Churches and Palaces; and Pope *Boniface* converted it into a Fortreſs, and ſucceeding Popes have yet further improv'd it. *Alexander* VI. built a long, cloſe Gallery, from the *Vatican* to this Caſtle, through which he might retire on any Inſurrection in the City; becauſe in this Caſtle, is the Magazine of Arms, Ammunition, and Stores of War; and indeed here is the Pope's Treaſury, and here the Priſoners of State are confin'd till further Trial.

2. The Mauſoleum of *Auguſtus*: It may be diſcern'd by its Ruins to have been a famous Structure; but as there is nothing of it remains but the Ruins, it is impoſſible to give any Deſcription of it.

3. The Tomb of *Caius Ceſtius*, which ſtands in the Wall near St. *Paul*'s Gate; it is a ſquare Pyramid, its Baſe is ninety four Feet ſquare, and it is an hundred and twenty Feet high, ending in a Point.

4. The Tomb of *Metella*, the Wife of *Craſſus*, ſtands in the *Via Appia* near St. *Sebaſtian*; it is called alſo *Capo de Bove*, from the Heads of Oxen carved on the Wall; it is a round Building like an old Tower; the Walls are twenty four Feet thick. There were two hundred Oxen ſacrific'd at her funeral Obſequies, which probably might be the Reaſon of ſo many Heads of Oxen being carv'd upon the Wall.

Obelisks. Of Obelisks, the fineſt now in *Rome* ſtands in the Piazza before St. *Peter*'s Church; it is one entire Piece of *Granite*, ſeventy two Feet high, twelve Feet ſquare at the Baſe, and eight at the Top; it weigh'd nine hundred and fifty ſix thouſand, one hundred and forty eight Pounds, and is now above four thouſand Years old. It ſtands upon a Pedeſtal thirty eight Feet high, but conſidering its Weight as above, and the Height of the Pedeſtal, the Thing itſelf is not ſo ſurprizing, as the Difficulty of elevating ſuch a ponderous Body to ſuch a vaſt Height above the Ground.

The Obelisk of St. *John de Lateran*, is the higheſt, and largeſt in *Rome*; it is an hundred and eight Feet high, beſides the Height of the Pedeſtal and Croſs; its Baſe is nine Feet and an half one way and eight the other. There are other Obelisks, as that in the Piazza *del Populo*, that near St. *Mary Maggiore*, &c. and ſome of them of a ſmaller Size, but none of them are now worth a particular Deſcription.

Cirques. The Cirques were ſpacious Structures, in the Form of an half Oval or Semicircle, from whence it is ſuppos'd they took their Names; their Areas were ſo large, that the *Romans* run Races in them in their Chariots or on Horſe-back, round a Meta which ſtood in the Middle. It is ſaid of the *Circus Maximus*, that it would hold an hundred and ſixty thouſand Spectators, all commodiouſly ſeated; doubtleſs it was very large, nor will what is here affirm'd ſeem extraordinary to thoſe who are acquainted with the *Roman* Magnificence.

Bridges. The *Tiber* had formerly eight Bridges over it, but there are now only five remaining, *viz. Ponte di St. Angelo.* 2. *Ponte St. Bartolomeo.* 3. *Ponte Siſto.* 4. *Ponte di Santta Maria.* And, 5. *Ponte di quatro Capi.*

Churches. But the Churches of *Rome* muſt not be forgot, ſo long as St. *Peter*'s continues to be ſuch a magnificent Structure; and the beſt way to communicate an Idea of it to the Inhabitants of this great Metropolis of *London*, is to let them know, that allowing ſome few Exceptions, St. *Paul*'s Church is a lively Repreſentation of St. *Peter*'s at *Rome*, as having been built after its Model; though the Dimenſions are not the ſame, and therefore take the Dimenſions of St. *Peter*'s as follows in Feet and Inches. St. *Peter*'s.

	Feet.	*In.*
The Length of the Outside including the Portico	722	0
The Length within, exclusive of the Portico or Thickness of the Wall	594	0
The Breadth from the North Door to the South Door without,	490	0
The same Breadth within is	438	0
The Breadth of the Body of the Church	86	8
The Height of the Body of the Church	144	0
The outward Circumference of the Dome or Cupola	620	0
The Diameter of the Dome within	143	0
The Breadth of the Front of the Church	400	0
The Height from the Pavement to the Top of the Cross which is over the Ball	432	0
Diameter of the Ball	8	4
The Height of the Statues which are on the Cornice of the Front	18	0
The Height of the Altar	90	0

THE Body of the Church as well as the Cupola, is supported by substantial Pillars like those in St. *Paul's*; but so tarnish'd with the Smoak of the Lamps and Candles, that it does not come up to the Neatness and clean Appearance of it.

OTHER Churches are, the Church of St. *John de Lateran*, built by *Constantine*, after his Conversion to the Christian Faith. Also the Church of St. *Mary Maggiore*, a very beautiful Church; the Back of it is one entire Piece of *Lapis Lazuli*, sixteen Feet high, and twelve broad, with a Space in the Middle: In this Church (if we believe the *Romish* Legends) is a Picture of the Virgin *Mary*, almost cover'd with Jewels, which was painted by St. *Luke* himself.

THERE are other Churches; as the Church of St. *Paul*, about a Mile out of the City; it is in the Form of a Cross, about seven hundred and eighty Feet long, and two hundred and sixty in Breadth, and supported by an hundred stately Marble Pillars. The Doors of this Church are of Brass, of extraordinary Workmanship, containing several Pieces of sacred History finely done in Bass Relief. There is also the Church of St. *Lawrence*, the Church of St. *Sebastian*, the Church of St. *Croce*; these are the chief Churches in *Rome*, that are noted abroad, and visited by Pilgrims.

Hospitals. THERE are in *Rome*, no less than forty Hospitals, some for the Old and Infirm, others for Orphans; some for Fools and Mad-men, like our *Bethlem* in *London*. Some for Pilgrims, some for Women unhappily married, others for decay'd Gentlemen. Some for lewd Women, who having left off their wicked Courses, and being abandon'd by sober People, are left destitute; and there is a very large Hospital for foundling and destitute Children. This last was erected by Pope *Innocent* III. The Occasion of his building this Hospital, was the many Carcasses of dead Children being found in the Bottom of the River *Tiber*, which it was suppos'd was owing to the indigent Circumstances of their Parents. This Hospital has been enlarg'd of late, insomuch that it appears like a little Town. The Dropping of Children is allow'd of here, and the Method is, when any Parents are willing to drop a Child, one, or both of them, or any that they appoint, carry them to a back Wall of the Hospital, where there is a Place made to leave them in; but this they do not do clandestinely, but they ring a Bell, and a Servant comes and takes the Child, asking no Questions, but whether it has been baptiz'd. The Boys are educated by Monks, and the Girls by Nuns, in their different Apartments, till they come to Years of Discretion, and then they are provided for.

EVERY Nation in *Europe*, where the Roman Catholick Religion is profess'd, have their Hospitals for Pilgrims in *Rome*; but besides them, there is that of the *Trinity*, which entertains all indifferently, insomuch that they have sometimes fed fifteen thousand at a Time besides their ordinary Quota.

Their Method of receiving and treating of Pilgrims is thus: Every Evening, those who are newly arriv'd, present themselves before the Officers of the House, and producing their Certificates, are enter'd on the Register, each Person receiving a Medal or Ticket of his Admission. After this they are led into a large Room, where a Priest having read Prayers, washes all their Feet, and dresses those that are hurt with travelling; after which, they are brought into the Refectory, or Dining-room, where having refresh'd themselves, they are conducted to the Dormitory, where every Man has his Bed assign'd him; and the Priest who goes along with them, after Exhortations and Prayers, leaves them to take their Rest.

OF Palaces, the *Vatican* near St. *Paul's* Church comes first under our Consideration. Here the Pope usually resides in the Winter; it is a large, but not regular Building; or as a late Writer says, it is a Heap of good Pieces ill join'd together; and indeed we ourselves need not go far abroad to see a Composition of regular Buildings ill put together and call'd a Palace. But not to insist upon that, the *Vatican* Library is worth our Observation; it is so beautiful a Fabrick, that it is said, it is not capable to admit of any Addition. Palaces

BUT the second of the Pope's Palaces, is the *Quirinal*, where the Pope usually resides in the Heat of Summer. This Palace, though less than the *Vatican*, contains about seventeen hundred Rooms, and is fit to receive the greatest Monarch in the World. Belonging to this Palace, are admirable fine Gardens, where the Walks are planted with Myrtle, Lawrel, and Orange-Trees, and adorn'd with near two hundred Fountains, which perpetually discharge large Quantities of Water. Here is also a Grotto where Organs play, not only to Church Musick, but like an Aviary, with the common Notes of Birds, their Bellows being moved and acted by Water. *Quirinal*

BESIDES these, there is the Palace of the *Apostolick Chancery*, which is by some call'd one of the finest Palaces in *Rome*; but as we find several Authors give superlative Epithets to what themselves admire, I shall content my self with letting the Reader know, that it is a Place of fine Architecture, and furnish'd with Painting, approv'd of by the best Judges.

BESIDES, these are the following Palaces, *viz.* that of *Farnese*, belonging to the Duk of *Parma*; also that of *Giustiniani* near the *Pantheon*. The Palace of *Barbarini*, &c. but though these are adorn'd with fine Embellishments, yet to describe them, would be only repeating what has been said before. I shall therefore pass over to

THE Piazzaes in *Rome*, call'd by the *French* Places, and by the *English*, Squares: are, 1. The *Forum Romanum*, the Place where *Cicero* first made his eloquent Orations, and where afterwards, his Head was set upon a Pike by the Command of *Mark Anthony*. 2. The Piazza *di Pasquina*, so call'd from an old broken Statue, standing against the Wall at the Corner of one of the Streets which opens into this Square, on which are fix'd all the Lampoons and Libels, which we Pi.

in

in *England* call Poſting. And there is another Place call'd *Marphorio*, where the Anſwers to thoſe Lampoons are put up, if they are thought worth anſwering. There are other Piazzaes, but of little Note, except barely for the Name of them.

Roman Ways.

THE Roman High-ways (of which there are a great many in *England* yet to be ſeen) are common there, and were laid every where from City to City; and were ſo well pav'd, that Carriages might go Winter and Summer. The chief of them were the *Via Flaminia*, and the *Via Appia*; the firſt is ſo call'd from a noble Roman that projected it. It was begun to be pav'd in the Year of *Rome* 533, and was afterwards carried by *Veſpaſian* over the *Apennines* to the *Adriatick* Sea, above two hundred Miles. The *Via Appia* led from *Appia* to *Capua* and *Brunduſium*, three hundred and fifty Miles and upwards; from thence ſeveral Ways branch'd out to the South Eaſt Parts of *Italy*. The *Via Appia* goes from *Rome* to *Naples*; it is twelve Feet broad, and made of large Stones; this Cauſway appears by the Date of it, to have laſted above eighteen hundred Years, and is yet in many Places as firm as when firſt made.

CHAP. II.

The Hiſtory of ANCIENT ROME.

I SHALL in this Place endeavour to omit the ſuperſtitious, romantick, poetical, and fictitious Stories and Legends about *Rome*, with which our School-books now abound ſo much, that a Boy can ſcarce be admitted to enter into *Latin* or *Greek*, till he firſt promiſe to believe thoſe ſilly Fables; or that *Rome* or *Athens* were either in another World, or in ſome more than ordinary ſacred Part of this. But not to entertain the Reader with ſuch low and unwarrantable Fictions, I ſhall keep to what we have authentick Hiſtory for; and in the Genealogy of the Kings of *Rome*, ſhall begin with

Romulus, who is ſaid to have begun his Reign about the Year of the World 3300. and having reign'd between thirty ſeven and thirty eight Years, was ſucceeded by *Numa Pompilius*; who after a Reign of three and forty Years, was ſucceeded by *Tullus Hoſtilius* in the Year 3381. who after a Reign of thirty one Years, was ſucceeded by *Ancus Martius Anno* 3412. and although he was firſt advanc'd as a Guardian to *Hoſtilius*'s Children, yet he procur'd himſelf to be declar'd King; and then built the Port of *Oſtia*, at the Mouth of the River *Tiber*; and in the Year 3437. he was ſucceeded by *Tarquinius Priſcus*, who is ſaid to be the firſt *Roman* that ever wore a Crown. He ſubdu'd Part of *Tuſcany*, beautify'd *Rome*, and increas'd the Number of the Senate to an hundred, and the *Roman* Knights to three hundred. In his Reign, the *Gauls* took the Parts of *Italy* on both Sides the *Po*, which is now call'd *Lombardy*; and he dying in the Year of the World 3475. was ſucceeded by *Servius Tullus*, who enlarg'd the City of *Rome*, and order'd that none ſhould bear Arms but wealthy Citizens, which was the Reaſon that the *Roman* Soldiers grew ſo famous; becauſe they fought for their own private Intereſt as well as that of the Publick. This Prince was kill'd by *Tarquin*, ſurnam'd the *Proud*, *Anno* 3521. and by him ſucceeded; but *Tarquin* committed ſuch Acts of Violence and Oppreſſion, that the People hated him, and were willing to embrace the firſt Opportunity of an Advantage againſt him, which they did not long want; for his Son *Sextus* raviſhing *Lucretia*, they endeavour'd to drive *Tarquin* out of the City, and elect *Brutus* and *Colatinus* for their Conſuls or chief Magiſtrates; and the rather, becauſe *Colatinus* was the injur'd Huſband of the raviſh'd *Lucretia*; and in this they ſucceeded, and thus ended the Kingly Power of *Rome*, and the Conſular began, about the Year of the World 3545.

But *Tarquin* was not quite abandon'd, but had many Friends in the City who attempted his Reſtoration, and among the reſt, the two Sons of *Brutus*; but that being timely diſcover'd, they were brought before the Conſuls in order to be try'd, and *Brutus* ſternly demanded of his Sons, what they had to ſay in their own Defence; but they remaining ſilent, he immediately order'd them to be beheaded; and only ſtaying to ſee the Execution done, he left the reſt of the Conſpirators to the Mercy of his Colleague.

But *Tarquin* ſtill found ſome Friends who inceſſantly aim'd at his Reſtoration, and levy'd Forces in order thereto; and with them he laid Siege to the City of *Rome*. The chief of thoſe Beſiegers was *Porſenna*, the King of *Hetruria*, now *Tuſcany*, who had ſuch Succeſs againſt them, that though he did not take the City, yet he reduc'd them ſo far, that they were glad to buy their own Property of him with a Sum of Money, and ſo procur'd the Siege to be rais'd; and beſides paying the Money, he compell'd them to give Hoſtages, not to forge any Arms or Iron-work but what was uſeful in Husbandry. But after all this Succeſs, he (for Reaſons beſt known to himſelf, and now diſputed by Authors) withdrew his Forces and retir'd into *Tuſcany*; and when he was gone, the *Sabines* and *Latins* enter'd into a Confederacy againſt the *Romans*, and waged War againſt them.

But in this War with the *Romans*, the *Latins* and *Sabines* were extremely weaken'd by their own Diviſions, particularly when *Appius* and *Claudius* deſerted to the *Romans*, and carried over with them five thouſand Families at once; and ſoon after this, the *Latins* receiv'd a remarkable Defeat from *Valerius Publicola*. The *Equi* and *Volſci* the braveſt of the *Latins*, ſtill carried on the War with various Succeſs for ſeveral Years; but at Length they were entirely ſubdu'd by *Lucius Quinctius* the Celebrated Dictator, who was taken from the Plow but a little before he obtain'd that ſignal Victory over the *Equi* and *Volſci*.

But the *Veji*, who inhabited the Capital City of *Tuſcany*, contended many Years with the *Romans* for the Empire, till loſing ſeveral Battles in the open Field, they were forc'd to ſhut themſelves up within their own Walls; and after a Siege of ten Years, ſurrender'd to *Camillus* the *Roman* General.

While the *Romans* were thus extending their Conqueſts on one Side of *Tuſcany*, the *Gauls* made an Irruption on the other, laying Siege to the

the City of *Clucium*; whereupon the Inhabitants sent to the *Romans* to interpose in their Behalf. The *Romans* accordingly dispatch'd the three *Fabii*, Persons of the highest Rank, to the *Gauls* as Ambassadors; but though the *Gauls* receiv'd them with the utmost Civility, yet they could not be prevail'd upon to raise the Siege. The Ambassadors thereupon retired into the Town, and encourag'd the Besieged to make a Sally; one of them was afterwards personally engag'd in the Action, which being look'd upon as a Breach of the Law of Nations, was resented in such a Manner by the *Gauls*, that rising from before *Clusium*, they march'd directly towards *Rome*; and in their way, entirely defeated the *Roman* Army about eleven Miles from the City; which put the Inhabitants in such a Consternation, that most of them left the City and retired to the Capitol. The *Gauls* thereupon plunder'd the Town, and set Fire to it, and laid Siege to the Capitol; but being discover'd by the cackling of some Geese, and the brave *Manlius* making a Sally from the Fort, while *Camillus* attack'd them in the Rear with an Army of twenty thousand Men, the *Gauls* were entirely defeated, and most of the Straglers cut off by the Country. *Thus far the* Roman *History*. Some indeed say, that the Capitol was reduc'd to the greatest Extremity by Famine; and that the *Romans* purchas'd their Peace with a great Sum of Money. And certain it is, by the Consent of all History, that the *Romans* had a very narrow Escape; and the City was so miserably demolish'd, that upon the Return of the Inhabitants, it was propos'd to remove to *Veii*, which was ready built, and was provided with all Things to their Hands; but they were diverted from this Design by an Omen, which put them with so much Diligence upon re-building their City, that it was finish'd within the Year.

Soon after this, the *Equi*, the *Volsci*, and other States of *Latium*, enter'd into a new Confederacy against *Rome*, but were defeated by *Camillus*. After this, the *Samnites* being apprehensive of the growing Power of this City, engag'd in a War with the *Romans*, which they maintain'd with precarious Success for fifty Years; but they were then entirely subdu'd by *Papirius Cursor*.

The next Attack was made by the Citizens of *Tarentum* or *Taranto*, on the *Italian* Coast, in the *Adriatick* Sea; and they being not only encouraged, but assisted and supported by *Pyrrhus* King of *Epyrus* and other foreign Powers, frequently defeated the *Romans*, and once in a general Battle, when their Horse were drove into Confusion by the Elephants which *Pyrrhus* brought with him; for they being the first that had been seen in *Italy*, they did not at first know how to encounter them; but a little Practice making them better acquainted with the Manner of dealing with them, they found Means in the next Battle to wound some of them in the Beginning of the Engagement; and when those cumbersome Animals found themselves wounded, they retired in Confusion among their own Troops, and trod their own Forces under Foot, by which Means the *Romans* gain'd an easy Conquest of the Southern Parts of *Italy*, and indeed of all of it, except what was possess'd by the *Gauls*. This happen'd about the Year of the World 3777. and after the building of *Rome*, about four hundred and fifty Years, or as some say, four hundred and seventy six Years.

This War upon the Continent of *Italy* being over, the City of *Messina* in *Sicily* implor'd the Assistance of the *Romans* against the *Carthaginians*, who had invaded the Island, and conquer'd a great Part of it; but the *Romans* sent such a Supply of Assistance, that in the Space of two Years or little more, they drove the *Carthaginians* quite out of *Sicily*; and in further Pursuit of their Conquests, made themselves Masters of *Sardinia* and *Corsica*. This was call'd the first *Punick War*, and happen'd in the Year of the World 3789. and after the building of *Rome* 488.

After this, the *Romans* under the Command of *Regulus* and *Manlius* their (then) Consuls, transported their Forces into *Africa*, and made that the Seat of War; whereupon the *Carthaginians* apply'd themselves to *Xantippus* King of *Lacedemonia* for Assistance, who sent them such a Reinforcement, that they were able to meet the *Romans* in a general Battle; and in the Engagement, kill'd thirty thousand *Romans*, and took fifteen thousand Prisoners, amongst which, was the above mention'd *Regulus* the Consul. But notwithstanding this, the *Romans* recruited and carried on the War in *Africa*; and the better to accomplish their intended Conquests, they fitted out a strong Fleet to intercept the foreign Trade of the *Carthaginians*, and thereby to impoverish, weaken, and deprive them of the Supplies they had from abroad. The *Romans* fitted out a strong Fleet, and though they were not much skill'd in Navigation or Maritime Affairs, yet they entirely defeated the Grand Fleet of the *Carthaginians*, destroying above an hundred of their Ships, and taking almost an hundred more. Thirty two thousand of the *Carthaginians* were kill'd, and thirteen thousand taken Prisoners, which obliged *Carthage* to accept of a Peace upon what Terms the *Romans* pleas'd to prescribe.

Second Punick War. Year of Rome 537. Of the World, 3832.
